"They knew full well that this fugitive must be a bandit; but there is an innate sympathy between the Roman brigand and the Roman peasant and the latter is always ready to aid the former. Vampa, without saying a word, hastened to the stone that closed up the entrance to their grotto, drew it away, made a sign to the fugitive to take refuge there, in a retreat unknown to everyone, closed the stone upon him, and then went and resumed his seat by Teresa. Instantly afterwards four carbineers, on horseback, appeared on the edge of the wood; three of them appeared to be looking for the fugitive, while the fourth dragged a brigand prisoner by the neck. The three carbineers looked about carefully on every side, saw the young peasants, and galloping up, began to question them. They had seen no one.

"'That is very annoying,' said the brigadier; for the man we are looking for is the chief.'

"'Cucumetto?' cried Luigi and Teresa at the same moment.

"'Yes,' replied the brigadier; 'and as his head is valued at a thousand Roman crowns, there would have been five hundred for you, if you had helped us to catch him.' The two young persons exchanged looks. The brigadier had a moment's hope. Five hundred Roman crowns are three thousand lire, and three thousand lire are a fortune for two poor orphans who are going to be married.

"'Yes, it is very annoying,' said Vampa; 'but we have not seen him.'

"Then the carbineers scoured the country in different directions, but in vain; then, after a time, they disappeared. Vampa then removed the stone, and Cucumetto came out. Through the crevices in the granite he had seen the two young peasants talking with the carbineers, and guessed the subject of their parley. He had read in the countenances of Luigi and Teresa their steadfast resolution not to surrender him, and he drew from his pocket a purse full of gold, which he offered to them. But Vampa raised his head proudly; as to Teresa, her eyes sparkled when she thought of all the fine gowns and gay jewellery she could buy with this purse of gold.

"Cucumetto was a cunning fiend, and had assumed the form of a brigand instead of a serpent, and this look from Teresa showed to him that she was a worthy daughter of Eve, and he returned to the forest, pausing several times on his way, under the pretext of saluting his protectors.

"Several days elapsed, and they neither saw nor heard of Cucumetto. The time of the Carnival was at hand. The Count of San-Felice announced a grand masked ball, to which all that were distinguished in Rome were invited. Teresa had a great desire to see this ball. Luigi asked permission of his protector, the steward, that she and he might be present amongst the servants of the house. This was granted. The ball was given by the Count for the particular pleasure of his daughter Carmela, whom he adored.

Carmela was precisely the age and figure of Teresa, and Teresa was as handsome as Carmela. On the evening of the ball Teresa was attired in her best, her most brilliant ornaments in her hair, and gayest glass beads,—she was in the costume of the women of Frascati. Luigi wore the very picturesque garb of the Roman peasant at holiday time. They both mingled, as they had leave to do, with the servants and peasants.

“The _festa_ was magnificent; not only was the villa brilliantly illuminated, but thousands of colored lanterns were suspended from the trees in the garden; and very soon the palace overflowed to the terraces, and the terraces to the garden-walks. At each cross-path was an orchestra, and tables spread with refreshments; the guests stopped, formed quadrilles, and danced in any part of the grounds they pleased. Carmela was attired like a woman of Sonnino. Her cap was embroidered with pearls, the pins in her hair were of gold and diamonds, her girdle was of Turkey silk, with large embroidered flowers, her bodice and skirt were of cashmere, her apron of Indian muslin, and the buttons of her corset were of jewels. Two of her companions were dressed, the one as a woman of Nettuno, and the other as a woman of La Riccia. Four young men of the richest and noblest families of Rome accompanied them with that Italian freedom which has not its parallel in any other country in the world. They were attired as peasants of Albano, Velletri, Civita-Castellana, and Sora. We need hardly add that these peasant costumes, like those of the young women, were brilliant with gold and jewels.

“Carmela wished to form a quadrille, but there was one lady wanting. Carmela looked all around her, but not one of the guests had a costume similar to her own, or those of her companions. The Count of San-Felice pointed out Teresa, who was hanging on Luigi’s arm in a group of peasants.

“‘Will you allow me, father?’ said Carmela.

“‘Certainly,’ replied the count, ‘are we not in Carnival time?’

“Carmela turned towards the young man who was talking with her, and saying a few words to him, pointed with her finger to Teresa. The young man looked, bowed in obedience, and then went to Teresa, and invited her to dance in a quadrille directed by the count’s daughter. Teresa felt a flush pass over her face; she looked at Luigi, who could not refuse his assent. Luigi slowly relinquished Teresa’s arm, which he had held beneath his own, and Teresa, accompanied by her elegant cavalier, took her appointed place with much agitation in the aristocratic quadrille. Certainly, in the eyes of an artist, the exact and strict costume of Teresa had a very different character from that of Carmela and her companions; and Teresa was frivolous and coquettish, and thus the embroidery and muslins, the cashmere waist-girdles, all dazzled her, and the reflection of sapphires and diamonds almost turned her giddy brain.

“Luigi felt a sensation hitherto unknown arising in his mind. It was like an acute pain which gnawed at his heart, and then thrilled through his whole body. He followed with his eye each movement of Teresa and her cavalier; when their hands touched, he felt as though he should swoon; every pulse beat with violence, and it seemed as though a bell were ringing in his ears. When they spoke, although Teresa listened timidly and with downcast eyes to the conversation of her cavalier, as Luigi could read in the ardent looks of the good-looking young man that his language was that of praise, it seemed as if the whole world was turning round with him, and all the voices of hell were whispering in his ears ideas of murder and assassination. Then fearing that his paroxysm might get the better of him, he clutched with one hand the branch of a tree against which he was leaning, and with the other convulsively grasped the dagger with a carved handle which was in his belt, and which, unwittingly, he drew from the scabbard from time to time.

“Luigi was jealous!

“He felt that, influenced by her ambitions and coquettish disposition, Teresa might escape him.

“The young peasant girl, at first timid and scared, soon recovered herself. We have said that Teresa was handsome, but this is not all; Teresa was endowed with all those wild graces which are so much more potent than our affected and studied elegancies. She had almost all the honors of the quadrille, and if she were envious of the Count of San-Felice’s daughter, we will not undertake to say that Carmela was not jealous of her. And with overpowering compliments her handsome cavalier led her back to the place whence he had taken her, and where Luigi awaited her. Twice or thrice during the dance the young girl had glanced at Luigi, and each time she saw that he was pale and that his features were agitated, once even the blade of his knife, half drawn from its sheath, had dazzled her eyes with its sinister glare. Thus, it was almost tremblingly that she resumed her lover’s arm. The quadrille had been most perfect, and it was evident there was a great demand for a repetition, Carmela alone objecting to it, but the Count of

San-Felice besought his daughter so earnestly, that she acceded.

“One of the cavaliers then hastened to invite Teresa, without whom it was impossible for the quadrille to be formed, but the young girl had disappeared.

“The truth was, that Luigi had not felt the strength to support another such trial, and, half by persuasion and half by force, he had removed Teresa toward another part of the garden. Teresa had yielded in spite of herself, but when she looked at the agitated countenance of the young man, she understood by his silence and trembling voice that something strange was passing within him. She herself was not exempt from internal emotion, and without having done anything wrong, yet fully comprehended that Luigi was right in reproaching her. Why, she did not know, but yet she did not the less feel that these reproaches were merited.

“However, to Teresa’s great astonishment, Luigi remained mute, and not a word escaped his lips the rest of the evening. When the chill of the night had driven away the guests from the gardens, and the gates of the villa were closed on them for the _festa_ in-doors, he took Teresa quite away, and as he left her at her home, he said:

“‘Teresa, what were you thinking of as you danced opposite the young Countess of San-Felice?’

“‘I thought,’ replied the young girl, with all the frankness of her nature, ‘that I would give half my life for a costume such as she wore.’

“‘And what said your cavalier to you?’

“‘He said it only depended on myself to have it, and I had only one word to say.’

“‘He was right,’ said Luigi. ‘Do you desire it as ardently as you say?’

“‘Yes.’

“‘Well, then, you shall have it!’

“The young girl, much astonished, raised her head to look at him, but his face was so gloomy and terrible that her words froze to her lips. As Luigi spoke thus, he left her. Teresa followed him with her eyes into the darkness as long as she could, and when he had quite disappeared, she went into the house with a sigh.

20121m

“That night a memorable event occurred, due, no doubt, to the imprudence of some servant who had neglected to extinguish the lights. The Villa of San-Felice took fire in the rooms adjoining the very apartment of the lovely Carmela. Awakened in the night by the light of the flames, she sprang out of bed, wrapped herself in a dressing-gown, and attempted to escape by the door, but the corridor by which she hoped to fly was already a prey to the flames. She then returned to her room, calling for help as loudly as she could, when suddenly her window, which was twenty feet from the ground, was opened, a young peasant jumped into the chamber, seized her in his arms, and with superhuman skill and strength conveyed her to the turf of the grass-plot, where she fainted. When she recovered, her father was by her side. All the servants surrounded her, offering her assistance. An entire wing of the villa was burnt down; but what of that, as long as Carmela was safe and uninjured?

“Her preserver was everywhere sought for, but he did not appear; he was inquired after, but no one had seen him. Carmela was greatly troubled that she had not recognized him.

“As the count was immensely rich, excepting the danger Carmela had run,—and the marvellous manner in which she had escaped, made that appear to him rather a favor of Providence than a real misfortune,—the loss occasioned by the conflagration was to him but a trifle.

“The next day, at the usual hour, the two young peasants were on the borders of the forest. Luigi arrived first. He came toward Teresa in high spirits, and seemed to have completely forgotten the events of the previous evening. The young girl was very pensive, but seeing Luigi so cheerful, she on her part assumed a smiling air, which was natural to her when she was not excited or in a passion.

“Luigi took her arm beneath his own, and led her to the door of the grotto. Then he paused. The young girl, perceiving that there was something extraordinary, looked at him steadfastly.

“‘Teresa,’ said Luigi, ‘yesterday evening you told me you would give all the world to have a costume similar to that of the count’s daughter.’

“‘Yes,’ replied Teresa with astonishment; ‘but I was mad to utter such a wish.’

“‘And I replied, “Very well, you shall have it.”’

“‘Yes,’ replied the young girl, whose astonishment increased at every word uttered by Luigi, ‘but of course your reply was only to please me.’

“‘I have promised no more than I have given you, Teresa,’ said Luigi proudly. ‘Go into the grotto and dress yourself.’

“At these words he drew away the stone, and showed Teresa the grotto, lighted up by two wax lights, which burnt on each side of a splendid mirror; on a rustic table, made by Luigi, were spread out the pearl necklace and the diamond pins, and on a chair at the side was laid the rest of the costume.

“Teresa uttered a cry of joy, and, without inquiring whence this attire came, or even thanking Luigi, darted into the grotto, transformed into a dressing-room.

“Luigi pushed the stone behind her, for on the crest of a small adjacent hill which cut off the view toward Palestrina, he saw a traveller on horseback, stopping a moment, as if uncertain of his road, and thus presenting against the blue sky that perfect outline which is peculiar to distant objects in southern climes. When he saw Luigi, he put his horse into a gallop and advanced toward him.

“Luigi was not mistaken. The traveller, who was going from Palestrina to Tivoli, had mistaken his way; the young man directed him; but as at a distance of a quarter of a mile the road again divided into three ways, and on reaching these the traveller might again stray from his route, he begged Luigi to be his guide.

“Luigi threw his cloak on the ground, placed his carbine on his shoulder, and freed from his heavy covering, preceded the traveller with the rapid step of a mountaineer, which a horse can scarcely keep up with. In ten minutes Luigi and the traveller reached the cross-roads. On arriving there, with an air as majestic as that of an emperor, he stretched his hand towards that one of the roads which the traveller was to follow.

“‘That is your road, excellency, and now you cannot again mistake.’

“‘And here is your recompense,’ said the traveller, offering the young herdsman some small pieces of money.

“‘Thank you,’ said Luigi, drawing back his hand; ‘I render a service, I do not sell it.’

“‘Well,’ replied the traveller, who seemed used to this difference between the servility of a man of the cities and the pride of the mountaineer, ‘if you refuse wages, you will, perhaps, accept a gift.’

“‘Ah, yes, that is another thing.’

“‘Then,’ said the traveller, ‘take these two Venetian sequins and give them to your bride, to make herself a pair of earrings.’

“‘And then do you take this poniard,’ said the young herdsman; ‘you will not find one better carved between Albano and Civita-Castellana.’

“‘I accept it,’ answered the traveller, ‘but then the obligation will be on my side, for this poniard is worth more than two sequins.’

“‘For a dealer perhaps; but for me, who engraved it myself, it is hardly worth a piastre.’

“‘What is your name?’ inquired the traveller.

“‘Luigi Vampa,’ replied the shepherd, with the same air as he would have replied, Alexander, King of Macedon. ‘And yours?’

“‘I,’ said the traveller, ‘am called Sinbad the Sailor.’”

Franz d’Épinay started with surprise.

“Sinbad the Sailor?” he said.

“Yes,” replied the narrator; “that was the name which the traveller gave to Vampa as his own.”

“Well, and what may you have to say against this name?” inquired Albert; “it is a very pretty name, and the adventures of the gentleman of that name amused me very much in my youth, I must confess.”

Franz said no more. The name of Sinbad the Sailor, as may well be supposed, awakened in him a world of recollections, as had the name of the Count of Monte Cristo on the previous evening.

“Proceed!” said he to the host.

“Vampa put the two sequins haughtily into his pocket, and slowly returned by the way he had gone. As he came within two or three hundred paces of the grotto, he thought he heard a cry. He listened to know whence this sound could proceed. A moment afterwards he thought he heard his own name pronounced distinctly.

“The cry proceeded from the grotto. He bounded like a chamois, cocking his carbine as he went, and in a moment reached the summit of a hill opposite to that on which he had perceived the traveller. Three cries for help came more distinctly to his ear. He cast his eyes around him and saw a man carrying off Teresa, as Nessus, the centaur, carried Deianira.

“This man, who was hastening towards the wood, was already three-quarters of the way on the road from the grotto to the forest. Vampa measured the distance; the man was at least two hundred paces in advance of him, and there was not a chance of overtaking him. The young shepherd stopped, as if his feet had been rooted to the ground; then he put the butt of his carbine to his shoulder, took aim at the ravisher, followed him for a second in his track, and then fired.

“The ravisher stopped suddenly, his knees bent under him, and he fell with Teresa in his arms. The young girl rose instantly, but the man lay on the earth struggling in the agonies of death. Vampa then rushed towards Teresa; for at ten paces from the dying man her legs had failed her, and she had dropped on her knees, so that the young man feared that the ball that had brought down his enemy, had also wounded his betrothed.

“Fortunately, she was unscathed, and it was fright alone that had overcome Teresa. When Luigi had assured himself that she was safe and unharmed, he turned towards the wounded man. He had just expired, with clenched hands, his mouth in a spasm of agony, and his hair on end in the sweat of death. His eyes remained open and menacing. Vampa approached the corpse, and recognized Cucumetto.

“From the day on which the bandit had been saved by the two young peasants, he had been enamoured of Teresa, and had sworn she should be his. From that time he had watched them, and profiting by the moment when her lover had left her alone, had carried her off, and believed he at length had her in his power, when the ball, directed by the unerring skill of the young herdsman, had pierced his heart. Vampa gazed on him for a moment without betraying the slightest emotion; while, on the contrary, Teresa, shuddering in every limb, dared not approach the slain ruffian but by degrees, and threw a hesitating glance at the dead body over the shoulder of her lover. Suddenly Vampa turned toward his mistress:

“‘Ah,’ said he—‘good, good! You are dressed; it is now my turn to dress myself.’

20125m

“Teresa was clothed from head to foot in the garb of the Count of San-Felice’s daughter. Vampa took Cucumetto’s body in his arms and conveyed it to the grotto, while in her turn Teresa remained outside. If a second traveller had passed, he would have seen a strange thing,—a shepherdess watching her flock, clad in a cashmere grown, with ear-rings and necklace of pearls, diamond pins, and buttons of sapphires, emeralds, and rubies. He would, no doubt, have believed that he had returned to the times of Florian, and would have declared, on reaching Paris, that he had met an Alpine shepherdess seated at the foot of the Sabine Hill.

“At the end of a quarter of an hour Vampa quitted the grotto; his costume was no less elegant than that of Teresa. He wore a vest of garnet-colored velvet, with buttons of cut gold; a silk waistcoat covered with embroidery; a Roman scarf tied round his neck; a cartridge-box worked with gold, and red and green silk; sky-blue velvet breeches, fastened above the knee with diamond buckles; garters of deerskin, worked with a thousand arabesques, and a hat whereon hung ribbons of all colors; two watches hung from his girdle, and a splendid poniard was in his belt.

“Teresa uttered a cry of admiration. Vampa in this attire resembled a painting by Léopold Robert or Schnetz. He had assumed the entire costume of Cucumetto. The young man saw the effect produced on his betrothed, and a smile of pride passed over his lips.

“‘Now,’ he said to Teresa, ‘are you ready to share my fortune, whatever it may be?’

“‘Oh, yes!’ exclaimed the young girl enthusiastically.

“‘And follow me wherever I go?’

“‘To the world’s end.’

“‘Then take my arm, and let us on; we have no time to lose.’

“The young girl did so without questioning her lover as to where he was conducting her, for he appeared to her at this moment as handsome, proud, and powerful as a god. They went towards the forest, and soon entered it.

“We need scarcely say that all the paths of the mountain were known to Vampa; he therefore went forward without a moment’s hesitation, although there was no beaten track, but he knew his path by looking at the trees and bushes, and thus they kept on advancing for nearly an hour and a half. At the end of this time they had reached the thickest part of the forest. A torrent, whose bed was dry, led into a deep gorge. Vampa took this wild road, which, enclosed between two ridges, and shadowed by the tufted umbrage of the pines, seemed, but for the difficulties of its descent, that path to Avernus of which Virgil speaks. Teresa had become alarmed at the wild and deserted look of the plain around her, and pressed closely against her guide, not uttering a syllable; but as she saw him advance with even step and composed countenance, she endeavored to repress her emotion.

“Suddenly, about ten paces from them, a man advanced from behind a tree and aimed at Vampa.

“‘Not another step,’ he said, ‘or you are a dead man.’

“‘What, then,’ said Vampa, raising his hand with a gesture of disdain, while Teresa, no longer able to restrain her alarm, clung closely to him, ‘do wolves rend each other?’

“‘Who are you?’ inquired the sentinel.

“‘I am Luigi Vampa, shepherd of the San-Felice farm.’

“‘What do you want?’

“‘I would speak with your companions who are in the glade at Rocca Bianca.’

“‘Follow me, then,’ said the sentinel; ‘or, as you know your way, go first.’

“Vampa smiled disdainfully at this precaution on the part of the bandit, went before Teresa, and continued to advance with the same firm and easy step as before. At the end of ten minutes the bandit made them a sign to stop. The two young persons obeyed. Then the bandit thrice imitated the cry of a crow; a croak answered this signal.

“‘Good!’ said the sentry, ‘you may now go on.’

“Luigi and Teresa again set forward; as they went on Teresa clung tremblingly to her lover at the sight of weapons and the glistening of carbines through the trees. The retreat of Rocca Bianca was at the top of a small mountain, which no doubt in former days had been a volcano—an extinct volcano before the days when Remus and Romulus had deserted Alba to come and found the city of Rome.

“Teresa and Luigi reached the summit, and all at once found themselves in the presence of twenty bandits.

“‘Here is a young man who seeks and wishes to speak to you,’ said the sentinel.

“‘What has he to say?’ inquired the young man who was in command in the chief’s absence.

“‘I wish to say that I am tired of a shepherd’s life,’ was Vampa’s reply.

“‘Ah, I understand,’ said the lieutenant; ‘and you seek admittance into our ranks?’

“‘Welcome!’ cried several bandits from Ferrusino, Pampinara, and Anagni, who had recognized Luigi Vampa.

“‘Yes, but I came to ask something more than to be your companion.’

“‘And what may that be?’ inquired the bandits with astonishment.

“‘I come to ask to be your captain,’ said the young man.

“The bandits shouted with laughter.

“‘And what have you done to aspire to this honor?’ demanded the lieutenant.

“‘I have killed your chief, Cucumetto, whose dress I now wear; and I set fire to the villa San-Felice to procure a wedding-dress for my betrothed.’

“An hour afterwards Luigi Vampa was chosen captain, vice Cucumetto, deceased.”

20129m

“Well, my dear Albert,” said Franz, turning towards his friend; “what think you of citizen Luigi Vampa?”

“I say he is a myth,” replied Albert, “and never had an existence.”

“And what may a myth be?” inquired Pastrini.

“The explanation would be too long, my dear landlord,” replied Franz.

“And you say that Signor Vampa exercises his profession at this moment in the environs of Rome?”

“And with a boldness of which no bandit before him ever gave an example.”

“Then the police have vainly tried to lay hands on him?”

“Why, you see, he has a good understanding with the shepherds in the plains, the fishermen of the Tiber, and the smugglers of the coast. They seek for him in the mountains, and he is on the waters; they follow him on the waters, and he is on the open sea; then they pursue him, and he has suddenly taken refuge in the islands, at Giglio, Giannutri, or Monte Cristo; and when they hunt for him there, he reappears suddenly at Albano, Tivoli, or La Riccia.”

“And how does he behave towards travellers?”

“Alas! his plan is very simple. It depends on the distance he may be from the city, whether he gives eight hours, twelve hours, or a day wherein to pay their ransom; and when that time has elapsed he allows another hour’s grace. At the sixtieth minute of this hour, if the money is not forthcoming, he blows out the prisoner’s brains with a pistol-shot, or plants his dagger in his heart, and that settles the account.”

“Well, Albert,” inquired Franz of his companion, “are you still disposed to go to the Colosseum by the outer wall?”

“Quite so,” said Albert, “if the way be picturesque.”

The clock struck nine as the door opened, and a coachman appeared.

“Excellencies,” said he, “the coach is ready.”

“Well, then,” said Franz, “let us to the Colosseum.”

“By the Porta del Popolo or by the streets, your excellencies?”

“By the streets, _morbleu!_ by the streets!” cried Franz.

“Ah, my dear fellow,” said Albert, rising, and lighting his third cigar, “really, I thought you had more courage.”

So saying, the two young men went down the staircase, and got into the carriage.

20131m

Chapter 34. The Colosseum

Franz had so managed his route, that during the ride to the Colosseum they passed not a single ancient ruin, so that no preliminary impression interfered to mitigate the colossal proportions of the gigantic building they came to admire. The road selected was a continuation of the Via Sistina; then by cutting off the right angle of the street in which stands Santa Maria Maggiore and proceeding by the Via Urbana and San Pietro in Vincoli, the travellers would find themselves directly opposite the Colosseum.

This itinerary possessed another great advantage,—that of leaving Franz at full liberty to indulge his deep reverie upon the subject of Signor Pastrini's story, in which his mysterious host of Monte Cristo was so strangely mixed up. Seated with folded arms in a corner of the carriage, he continued to ponder over the singular history he had so lately listened to, and to ask himself an interminable number of questions touching its various circumstances without, however, arriving at a satisfactory reply to any of them.

One fact more than the rest brought his friend "Sinbad the Sailor" back to his recollection, and that was the mysterious sort of intimacy that seemed to exist between the brigands and the sailors; and Pastrini's account of Vampa's having found refuge on board the vessels of smugglers and fishermen, reminded Franz of the two Corsican bandits he had found supping so amicably with the crew of the little yacht, which had even deviated from its course and touched at Porto-Vecchio for the sole purpose of landing them. The very name assumed by his host of Monte Cristo and again repeated by the landlord of the Hôtel de Londres, abundantly proved to him that his island friend was playing his philanthropic part on the shores of Piombino, Civita Vecchia, Ostia, and Gaëta, as on those of Corsica, Tuscany, and Spain; and further, Franz bethought him of having heard his singular entertainer speak both of Tunis and Palermo, proving thereby how largely his circle of acquaintances extended.

But however the mind of the young man might be absorbed in these reflections, they were at once dispersed at the sight of the dark frowning ruins of the stupendous Colosseum, through the various openings of which the pale moonlight played and flickered like the unearthly gleam from the eyes of the wandering dead. The carriage stopped near the Meta Sudans; the door was opened, and the young men, eagerly alighting, found themselves opposite a _cicerone_, who appeared to have sprung up from the ground, so unexpected was his appearance.

The usual guide from the hotel having followed them, they had paid two conductors, nor is it possible, at Rome, to avoid this abundant supply of guides; besides the ordinary _cicerone_, who seizes upon you directly you set foot in your hotel, and never quits you while you remain in the city, there is also a special _cicerone_ belonging to each monument—nay, almost to each part of a monument. It may, therefore, be easily imagined there is no scarcity of guides at the Colosseum, that wonder of all ages, which Martial thus eulogizes:

"Let Memphis cease to boast the barbarous miracles of her pyramids, and the wonders of Babylon be talked of no more among us; all must bow to the superiority of the gigantic labor of the Cæsars, and the many voices of Fame spread far and wide the surpassing merits of this incomparable monument."

As for Albert and Franz, they essayed not to escape from their _ciceronian_ tyrants; and, indeed, it would have been so much the more difficult to break their bondage, as the guides alone are permitted to visit these monuments with torches in their hands. Thus, then, the young men made no attempt at resistance, but blindly and confidingly surrendered themselves into the care and custody of their conductors.

Franz had already made seven or eight similar excursions to the Colosseum, while his less favored companion trod for the first time in his life the classic ground forming the monument of Flavius Vespasian; and, to his credit be it spoken, his mind, even amid the glib loquacity of the guides, was duly and deeply touched with awe and enthusiastic admiration of all he saw; and certainly no adequate notion of these stupendous ruins can be formed save by such as have visited them, and more especially by moonlight, at which time the vast proportions of the building appear twice as large when viewed by the mysterious beams of a southern moonlit sky, whose rays are sufficiently clear and vivid to light the horizon with a glow equal to the soft twilight of a western clime.

Scarcely, therefore, had the reflective Franz walked a hundred steps beneath the interior porticoes of the ruin, when, abandoning Albert to the guides (who would by no means yield their prescriptive right of carrying their victims through the routine regularly laid down, and as regularly followed by them, but dragged the unconscious visitor to the various objects with a pertinacity that admitted of no appeal, beginning, as a matter of course, with the "Lions' Den", the "Hall of the Gladiators" and finishing with "Cæsar's Podium"), to escape a jargon and mechanical survey of the wonders by which he was surrounded, Franz ascended a

half-dilapidated staircase, and, leaving them to follow their monotonous round, seated himself at the foot of a column, and immediately opposite a large aperture, which permitted him to enjoy a full and undisturbed view of the gigantic dimensions of the majestic ruin.

Franz had remained for nearly a quarter of an hour perfectly hidden by the shadow of the vast column at whose base he had found a resting-place, and from whence his eyes followed the motions of Albert and his guides, who, holding torches in their hands, had emerged from a vomitorium at the opposite extremity of the Colosseum, and then again disappeared down the steps conducting to the seats reserved for the Vestal virgins, resembling, as they glided along, some restless shades following the flickering glare of so many _ignes fatui_. All at once his ear caught a sound resembling that of a stone rolling down the staircase opposite the one by which he had himself ascended. There was nothing remarkable in the circumstance of a fragment of granite giving way and falling heavily below; but it seemed to him that the substance that fell gave way beneath the pressure of a foot, and also that someone, who endeavored as much as possible to prevent his footsteps from being heard, was approaching the spot where he sat.

Conjecture soon became certainty, for the figure of a man was distinctly visible to Franz, gradually emerging from the staircase opposite, upon which the moon was at that moment pouring a full tide of silvery brightness.

The stranger thus presenting himself was probably a person who, like Franz, preferred the enjoyment of solitude and his own thoughts to the frivolous gabble of the guides. And his appearance had nothing extraordinary in it; but the hesitation with which he proceeded, stopping and listening with anxious attention at every step he took, convinced Franz that he expected the arrival of some person.

By a sort of instinctive impulse, Franz withdrew as much as possible behind his pillar.

About ten feet from the spot where he and the stranger were, the roof had given way, leaving a large round opening, through which might be seen the blue vault of heaven, thickly studded with stars.

Around this opening, which had, possibly, for ages permitted a free entrance to the brilliant moonbeams that now illumined the vast pile, grew a quantity of creeping plants, whose delicate green branches stood out in bold relief against the clear azure of the firmament, while large masses of thick, strong fibrous shoots forced their way through the chasm, and hung floating to and fro, like so many waving strings.

The person whose mysterious arrival had attracted the attention of Franz stood in a kind of half-light, that rendered it impossible to distinguish his features, although his dress was easily made out. He wore a large brown mantle, one fold of which, thrown over his left shoulder, served likewise to mask the lower part of his countenance, while the upper part was completely hidden by his broad-brimmed hat. The lower part of his dress was more distinctly visible by the bright rays of the moon, which, entering through the broken ceiling, shed their refulgent beams on feet cased in elegantly made boots of polished leather, over which descended fashionably cut trousers of black cloth.

20135m

From the imperfect means Franz had of judging, he could only come to one conclusion,—that the person whom he was thus watching certainly belonged to no inferior station of life.

Some few minutes had elapsed, and the stranger began to show manifest signs of impatience, when a slight noise was heard outside the aperture in the roof, and almost immediately a dark shadow seemed to obstruct the flood of light that had entered it, and the figure of a man was clearly seen gazing with eager scrutiny on the immense space beneath him; then, as his eye caught sight of him in the mantle, he grasped a floating mass of thickly matted boughs, and glided down by their help to within three or four feet of the ground, and then leaped lightly on his feet. The man who had performed this daring act with so much indifference wore the Transtevere costume.

“I beg your excellency’s pardon for keeping you waiting,” said the man, in the Roman dialect, “but I don’t think I’m many minutes after my time, ten o’clock has just struck by the clock of Saint John Lateran.”

“Say not a word about being late,” replied the stranger in purest Tuscan; “’tis I who am too soon. But even if you had caused me to wait a little while, I should have felt quite sure that the delay was not occasioned by any fault of yours.”

“Your excellency is perfectly right in so thinking,” said the man; “I came here direct from the Castle of St. Angelo, and I had an immense deal of trouble before I could get a chance to speak to Beppo.”

“And who is Beppo?”

“Oh, Beppo is employed in the prison, and I give him so much a year to let me know what is going on within his holiness’s castle.”

“Indeed! You are a provident person, I see.”

“Why, you see, no one knows what may happen. Perhaps some of these days I may be entrapped, like poor Peppino and may be very glad to have some little nibbling mouse to gnaw the meshes of my net, and so help me out of prison.”

“Briefly, what did you learn?”

“That two executions of considerable interest will take place the day after tomorrow at two o’clock, as is customary at Rome at the commencement of all great festivals. One of the culprits will be _mazzolato_;3 he is an atrocious villain, who murdered the priest who brought him up, and deserves not the smallest pity. The other sufferer is sentenced to be _decapitato_;4 and he, your excellency, is poor Peppino.”

“The fact is, that you have inspired not only the pontifical government, but also the neighboring states, with such extreme fear, that they are glad of all opportunity of making an example.”

“But Peppino did not even belong to my band; he was merely a poor shepherd, whose only crime consisted in furnishing us with provisions.”

“Which makes him your accomplice to all intents and purposes. But mark the distinction with which he is treated; instead of being knocked on the head as you would be if once they caught hold of you, he is simply sentenced to be guillotined, by which means, too, the amusements of the day are diversified, and there is a spectacle to please every spectator.”

“Without reckoning the wholly unexpected one I am preparing to surprise them with.”

“My good friend,” said the man in the cloak, “excuse me for saying that you seem to me precisely in the mood to commit some wild or extravagant act.”

“Perhaps I am; but one thing I have resolved on, and that is, to stop at nothing to restore a poor devil to liberty, who has got into this scrape solely from having served me. I should hate and despise myself as a coward did I desert the brave fellow in his present extremity.”

“And what do you mean to do?”

“To surround the scaffold with twenty of my best men, who, at a signal from me, will rush forward directly Peppino is brought for execution, and, by the assistance of their stilettos, drive back the guard, and carry off the prisoner.”

“That seems to me as hazardous as uncertain, and convinces me that my scheme is far better than yours.”

“And what is your excellency’s project?”

“Just this. I will so advantageously bestow 2,000 piastres, that the person receiving them shall obtain a respite till next year for Peppino; and during that year, another skilfully placed 1,000 piastres will afford him the means of escaping from his prison.”

“And do you feel sure of succeeding?”

“_Pardieu!_” exclaimed the man in the cloak, suddenly expressing himself in French.

“What did your excellency say?” inquired the other.

“I said, my good fellow, that I would do more single-handed by the means of gold than you and all your troop could effect with stilettos, pistols, carbines, and blunderbusses included. Leave me, then, to act, and have no fears for the result.”

“At least, there can be no harm in myself and party being in readiness, in case your excellency should fail.”

“None whatever. Take what precautions you please, if it is any satisfaction to you to do so; but rely upon my obtaining the reprieve I seek.”

“Remember, the execution is fixed for the day after tomorrow, and that you have but one day to work in.”

“And what of that? Is not a day divided into twenty-four hours, each hour into sixty minutes, and every minute sub-divided into sixty seconds? Now in 86,400 seconds very many things can be done.”

“And how shall I know whether your excellency has succeeded or not.”

“Oh, that is very easily arranged. I have engaged the three lower windows at the Café Rospoli; should I have obtained the requisite pardon for Peppino, the two outside windows will be hung with yellow damasks, and the centre with white, having a large cross in red marked on it.”

“And whom will you employ to carry the reprieve to the officer directing the execution?”

“Send one of your men, disguised as a penitent friar, and I will give it to him. His dress will procure him the means of approaching the scaffold itself, and he will deliver the official order to the officer, who, in his turn, will hand it to the executioner; in the meantime, it will be as well to acquaint Peppino with what we have determined on, if it be only to prevent his dying of fear or losing his senses, because in either case a very useless expense will have been incurred.”

“Your excellency,” said the man, “you are fully persuaded of my entire devotion to you, are you not?”

“Nay, I flatter myself that there can be no doubt of it,” replied the cavalier in the cloak.

“Well, then, only fulfil your promise of rescuing Peppino, and henceforward you shall receive not only devotion, but the most absolute obedience from myself and those under me that one human being can render to another.”

“Have a care how far you pledge yourself, my good friend, for I may remind you of your promise at some, perhaps, not very distant period, when I, in my turn, may require your aid and influence.”

“Let that day come sooner or later, your excellency will find me what I have found you in this my heavy trouble; and if from the other end of the world you but write me word to do such or such a thing, you may regard it as done, for done it shall be, on the word and faith of——”

“Hush!” interrupted the stranger; “I hear a noise.”

“’Tis some travellers, who are visiting the Colosseum by torchlight.”

“’Twere better we should not be seen together; those guides are nothing but spies, and might possibly recognize you; and, however I may be honored by your friendship, my worthy friend, if once the extent of our intimacy were known, I am sadly afraid both my reputation and credit would suffer thereby.”

“Well, then, if you obtain the reprieve?”

“The middle window at the Café Rospoli will be hung with white damask, bearing a red cross.”

“And if you fail?”

“Then all three windows will have yellow draperies.”

“And then?”

“And then, my good fellow, use your daggers in any way you please, and I further promise you to be there as a spectator of your prowess.”

“We understand each other perfectly, then. Adieu, your excellency; depend upon me as firmly as I do upon you.”

Saying these words, the Transteverin disappeared down the staircase, while his companion, muffling his features more closely than before in the folds of his mantle, passed almost close to Franz, and descended to the arena by an outward flight of steps. The next minute Franz heard himself called by Albert, who made the lofty building re-echo with the sound of his friend’s name. Franz,

however, did not obey the summons till he had satisfied himself that the two men whose conversation he had overheard were at a sufficient distance to prevent his encountering them in his descent. In ten minutes after the strangers had departed, Franz was on the road to the Piazza di Spagna, listening with studied indifference to the learned dissertation delivered by Albert, after the manner of Pliny and Calpurnius, touching the iron-pointed nets used to prevent the ferocious beasts from springing on the spectators.

Franz let him proceed without interruption, and, in fact, did not hear what was said; he longed to be alone, and free to ponder over all that had occurred. One of the two men, whose mysterious meeting in the Colosseum he had so unintentionally witnessed, was an entire stranger to him, but not so the other; and though Franz had been unable to distinguish his features, from his being either wrapped in his mantle or obscured by the shadow, the tones of his voice had made too powerful an impression on him the first time he had heard them for him ever again to forget them, hear them when or where he might. It was more especially when this man was speaking in a manner half jesting, half bitter, that Franz's ear recalled most vividly the deep sonorous, yet well-pitched voice that had addressed him in the grotto of Monte Cristo, and which he heard for the second time amid the darkness and ruined grandeur of the Colosseum. And the more he thought, the more entire was his conviction, that the person who wore the mantle was no other than his former host and entertainer, "Sinbad the Sailor."

20139m

Under any other circumstances, Franz would have found it impossible to resist his extreme curiosity to know more of so singular a personage, and with that intent have sought to renew their short acquaintance; but in the present instance, the confidential nature of the conversation he had overheard made him, with propriety, judge that his appearance at such a time would be anything but agreeable. As we have seen, therefore, he permitted his former host to retire without attempting a recognition, but fully promising himself a rich indemnity for his present forbearance should chance afford him another opportunity.

In vain did Franz endeavor to forget the many perplexing thoughts which assailed him; in vain did he court the refreshment of sleep. Slumber refused to visit his eyelids and the night was passed in feverish contemplation of the chain of circumstances tending to prove the identity of the mysterious visitant to the Colosseum with the inhabitant of the grotto of Monte Cristo; and the more he thought, the firmer grew his opinion on the subject.

Worn out at length, he fell asleep at daybreak, and did not awake till late. Like a genuine Frenchman, Albert had employed his time in arranging for the evening's diversion; he had sent to engage a box at the Teatro Argentina; and Franz, having a number of letters to write, relinquished the carriage to Albert for the whole of the day.

At five o'clock Albert returned, delighted with his day's work; he had been occupied in leaving his letters of introduction, and had received in return more invitations to balls and routs than it would be possible for him to accept; besides this, he had seen (as he called it) all the remarkable sights at Rome. Yes, in a single day he had accomplished what his more serious-minded companion would have taken weeks to effect. Neither had he neglected to ascertain the name of the piece to be played that night at the Teatro Argentina, and also what performers appeared in it. The opera of _Parisina_ was announced for representation, and the principal actors were Coselli, Moriani, and La Specchia.

The young men, therefore, had reason to consider themselves fortunate in having the opportunity of hearing one of the best works by the composer of _Lucia di Lammermoor_, supported by three of the most renowned vocalists of Italy.

Albert had never been able to endure the Italian theatres, with their orchestras from which it is impossible to see, and the absence of balconies, or open boxes; all these defects pressed hard on a man who had had his stall at the Bouffes, and had shared a lower box at the Opera. Still, in spite of this, Albert displayed his most dazzling and effective costumes each time he visited the theatres; but, alas, his elegant toilet was wholly thrown away, and one of the most worthy representatives of Parisian fashion had to carry with him the mortifying reflection that he had nearly overrun Italy without meeting with a single adventure.

Sometimes Albert would affect to make a joke of his want of success; but internally he was deeply wounded, and his self-love immensely piqued, to think that Albert de Morcerf, the most admired and most sought after of any young person of his day, should thus be passed over, and merely have his labor for his pains. And the thing was so much the more annoying, as, according to the characteristic modesty of a Frenchman, Albert had quitted Paris with the full conviction that he had only to show himself in Italy to carry all before him, and that upon his return he should astonish the Parisian world with the recital of his numerous love-affairs.

Alas, poor Albert! None of those interesting adventures fell in his way; the lovely Genoese, Florentines, and Neapolitans were all faithful, if not to their husbands, at least to their lovers, and thought not of changing even for the splendid appearance of Albert de Morcerf; and all he gained was the painful conviction that the ladies of Italy have this advantage over those of France, that they are faithful even in their infidelity.

Yet he could not restrain a hope that in Italy, as elsewhere, there might be an exception to the general rule.

Albert, besides being an elegant, well-looking young man, was also possessed of considerable talent and ability; moreover, he was a viscount—a recently created one, certainly, but in the present day it is not necessary to go as far back as Noah in tracing a descent, and a genealogical tree is equally estimated, whether dated from 1399 or merely 1815; but to crown all these advantages, Albert de Morcerf commanded an income of 50,000 livres, a more than sufficient sum to render him a personage of considerable importance in Paris. It was therefore no small mortification to him to have visited most of the principal cities in Italy without having excited the most trifling observation.

Albert, however, hoped to indemnify himself for all these slights and indifferences during the Carnival, knowing full well that among the different states and kingdoms in which this festivity is celebrated, Rome is the spot where even the wisest and gravest throw off the usual rigidity of their lives, and deign to mingle in the follies of this time of liberty and relaxation. The Carnival was to commence on the morrow; therefore Albert had not an instant to lose in setting forth the programme of his hopes, expectations, and claims to notice.

With this design he had engaged a box in the most conspicuous part of the theatre, and exerted himself to set off his personal attractions by the aid of the most rich and elaborate toilet. The box taken by Albert was in the first circle; although each of the three tiers of boxes is deemed equally aristocratic, and is, for this reason, generally styled the “nobility’s boxes,” and although the box engaged for the two friends was sufficiently capacious to contain at least a dozen persons, it had cost less than would be paid at some of the French theatres for one admitting merely four occupants.

Another motive had influenced Albert’s selection of his seat,—who knew but that, thus advantageously placed, he might not in truth attract the notice of some fair Roman, and an introduction might ensue that would procure him the offer of a seat in a carriage, or a place in a princely balcony, from which he might behold the gayeties of the Carnival?

These united considerations made Albert more lively and anxious to please than he had hitherto been. Totally disregarding the business of the stage, he leaned from his box and began attentively scrutinizing the beauty of each pretty woman, aided by a powerful opera-glass; but, alas, this attempt to attract notice wholly failed; not even curiosity had been excited, and it was but too apparent that the lovely creatures, into whose good graces he was desirous of stealing, were all so much engrossed with themselves, their lovers, or their own thoughts, that they had not so much as noticed him or the manipulation of his glass.

The truth was, that the anticipated pleasures of the Carnival, with the “Holy Week” that was to succeed it, so filled every fair breast, as to prevent the least attention being bestowed even on the business of the stage. The actors made their entries and exits unobserved or unthought of; at certain conventional moments, the spectators would suddenly cease their conversation, or rouse themselves from their musings, to listen to some brilliant effort of Moriani’s, a well-executed recitative by Coselli, or to join in loud applause at the wonderful powers of La Specchia; but that momentary excitement over, they quickly relapsed into their former state of preoccupation or interesting conversation.

Towards the close of the first act, the door of a box which had been hitherto vacant was opened; a lady entered to whom Franz had been introduced in Paris, where indeed, he had imagined she still was. The quick eye of Albert caught the involuntary start with which his friend beheld the new arrival, and, turning to him, he said hastily:

“Do you know the woman who has just entered that box?”

“Yes; what do you think of her?”

“Oh, she is perfectly lovely—what a complexion! And such magnificent hair! Is she French?”

“No; a Venetian.”

“And her name is——”

“Countess G——.”

“Ah, I know her by name!” exclaimed Albert; “she is said to possess as much wit and cleverness as beauty. I was to have been presented to her when I met her at Madame Villefort’s ball.”

“Shall I assist you in repairing your negligence?” asked Franz.

“My dear fellow, are you really on such good terms with her as to venture to take me to her box?”

“Why, I have only had the honor of being in her society and conversing with her three or four times in my life; but you know that even such an acquaintance as that might warrant my doing what you ask.”

At that instant, the countess perceived Franz, and graciously waved her hand to him, to which he replied by a respectful inclination of the head. “Upon my word,” said Albert, “you seem to be on excellent terms with the beautiful countess.”

“You are mistaken in thinking so,” returned Franz calmly; “but you merely fall into the same error which leads so many of our countrymen to commit the most egregious blunders,—I mean that of judging the habits and customs of Italy and Spain by our Parisian notions; believe me, nothing is more fallacious than to form any estimate of the degree of intimacy you may suppose existing among persons by the familiar terms they seem upon; there is a similarity of feeling at this instant between ourselves and the countess—nothing more.”

“Is there, indeed, my good fellow? Pray tell me, is it sympathy of heart?”

“No; of taste,” continued Franz gravely.

“And in what manner has this congeniality of mind been evinced?”

“By the countess’s visiting the Colosseum, as we did last night, by moonlight, and nearly alone.”

“You were with her, then?”

“I was.”

“And what did you say to her?”

“Oh, we talked of the illustrious dead of whom that magnificent ruin is a glorious monument!”

“Upon my word,” cried Albert, “you must have been a very entertaining companion alone, or all but alone, with a beautiful woman in such a place of sentiment as the Colosseum, and yet to find nothing better to talk about than the dead! All I can say is, if ever I should get such a chance, the living should be my theme.”

20143m

“And you will probably find your theme ill-chosen.”

“But,” said Albert, breaking in upon his discourse, “never mind the past; let us only remember the present. Are you not going to keep your promise of introducing me to the fair subject of our remarks?”

“Certainly, directly the curtain falls on the stage.”

“What a confounded long time this first act lasts. I believe, on my soul, that they never mean to finish it.”

“Oh, yes, they will; only listen to that charming finale. How exquisitely Coselli sings his part.”

“But what an awkward, inelegant fellow he is.”

“Well, then, what do you say to La Specchia? Did you ever see anything more perfect than her acting?”

“Why, you know, my dear fellow, when one has been accustomed to Malibran and Sontag, such singers as these don’t make the same impression on you they perhaps do on others.”

“At least, you must admire Moriani’s style and execution.”

“I never fancied men of his dark, ponderous appearance singing with a voice like a woman’s.”

“My good friend,” said Franz, turning to him, while Albert continued to point his glass at every box in the theatre, “you seem determined not to approve; you are really too difficult to please.”

The curtain at length fell on the performances, to the infinite satisfaction of the Viscount of Morcerf, who seized his hat, rapidly passed his fingers through his hair, arranged his cravat and wristbands, and signified to Franz that he was waiting for him to lead the way.

Franz, who had mutely interrogated the countess, and received from her a gracious smile in token that he would be welcome, sought not to retard the gratification of Albert’s eager impatience, but began at once the tour of the house, closely followed by Albert, who availed himself of the few minutes required to reach the opposite side of the theatre to settle the height and smoothness of his collar, and to arrange the lappets of his coat. This important task was just completed as they arrived at the countess’s box.

At the knock, the door was immediately opened, and the young man who was seated beside the countess, in obedience to the Italian custom, instantly rose and surrendered his place to the strangers, who, in turn, would be expected to retire upon the arrival of other visitors.

Franz presented Albert as one of the most distinguished young men of the day, both as regarded his position in society and extraordinary talents; nor did he say more than the truth, for in Paris and the circle in which the viscount moved, he was looked upon and cited as a model of perfection. Franz added that his companion, deeply grieved at having been prevented the honor of being presented to the countess during her sojourn in Paris, was most anxious to make up for it, and had requested him (Franz) to remedy the past misfortune by conducting him to her box, and concluded by asking pardon for his presumption in having taken it upon himself to do so.

The countess, in reply, bowed gracefully to Albert, and extended her hand with cordial kindness to Franz; then, inviting Albert to take the vacant seat beside her, she recommended Franz to take the next best, if he wished to view the ballet, and pointed to the one behind her own chair.

Albert was soon deeply engrossed in discoursing upon Paris and Parisian matters, speaking to the countess of the various persons they both knew there. Franz perceived how completely he was in his element; and, unwilling to interfere with the pleasure he so evidently felt, took up Albert’s glass, and began in his turn to survey the audience.

Sitting alone, in the front of a box immediately opposite, but situated on the third row, was a woman of exquisite beauty, dressed in a Greek costume, which evidently, from the ease and grace with which she wore it, was her national attire. Behind her, but in deep shadow, was the outline of a masculine figure; but the features of this latter personage it was not possible to distinguish. Franz could not forbear breaking in upon the apparently interesting conversation passing between the countess and Albert, to inquire of the former if she knew who was the fair Albanian opposite, since beauty such as hers was well worthy of being observed by either sex.

“All I can tell about her,” replied the countess, “is, that she has been at Rome since the beginning of the season; for I saw her where she now sits the very first night of the season, and since then she has never missed a performance. Sometimes she is accompanied by the person who is now with her, and at others she is merely attended by a black servant.”

“And what do you think of her personal appearance?”

“Oh, I consider her perfectly lovely—she is just my idea of what Medora must have been.”

Franz and the countess exchanged a smile, and then the latter resumed her conversation with Albert, while Franz returned to his previous survey of the house and company. The curtain rose on the ballet, which was one of those excellent specimens of the Italian school, admirably arranged and put on the stage by Henri, who has established for himself a great reputation throughout Italy for his taste and skill in the choreographic art—one of those masterly productions of grace, method, and elegance in which the whole _corps de ballet_, from the principal dancers to the humblest supernumerary, are all engaged on the stage at the same time; and a hundred and fifty persons may be seen exhibiting the same attitude, or elevating the same arm or leg with a simultaneous movement, that would lead you to suppose that but one mind, one act of volition, influenced the moving mass.

The ballet was called _Poliska_.

However much the ballet might have claimed his attention, Franz was too deeply occupied with the beautiful Greek to take any note of it; while she seemed to experience an almost childlike delight in watching it, her eager, animated looks contrasting strongly with the utter indifference of her companion, who, during the whole time the piece lasted, never even moved, not even when the furious, crashing din produced by the trumpets, cymbals, and Chinese bells sounded their loudest from the orchestra. Of this he took no heed, but was, as far as appearances might be trusted, enjoying soft repose and bright celestial dreams.

The ballet at length came to a close, and the curtain fell amid the loud, unanimous plaudits of an enthusiastic and delighted audience.

Owing to the very judicious plan of dividing the two acts of the opera with a ballet, the pauses between the performances are very short, the singers in the opera having time to repose themselves and change their costume, when necessary, while the dancers are executing their pirouettes and exhibiting their graceful steps.

The overture to the second act began; and, at the first sound of the leader's bow across his violin, Franz observed the sleeper slowly arise and approach the Greek girl, who turned around to say a few words to him, and then, leaning forward again on the railing of her box, she became as absorbed as before in what was going on.

The countenance of the person who had addressed her remained so completely in the shade, that, though Franz tried his utmost, he could not distinguish a single feature. The curtain rose, and the attention of Franz was attracted by the actors; and his eyes turned from the box containing the Greek girl and her strange companion to watch the business of the stage.

Most of my readers are aware that the second act of _Parisina_ opens with the celebrated and effective duet in which Parisina, while sleeping, betrays to Azzo the secret of her love for Ugo. The injured husband goes through all the emotions of jealousy, until conviction seizes on his mind, and then, in a frenzy of rage and indignation, he awakens his guilty wife to tell her that he knows her guilt and to threaten her with his vengeance.

This duet is one of the most beautiful, expressive and terrible conceptions that has ever emanated from the fruitful pen of Donizetti. Franz now listened to it for the third time; yet its notes, so tenderly expressive and fearfully grand as the wretched husband and wife give vent to their different griefs and passions, thrilled through the soul of Franz with an effect equal to his first emotions upon hearing it. Excited beyond his usual calm demeanor, Franz rose with the audience, and was about to join the loud, enthusiastic applause that followed; but suddenly his purpose was arrested, his hands fell by his sides, and the half-uttered "bravos" expired on his lips.

The occupant of the box in which the Greek girl sat appeared to share the universal admiration that prevailed; for he left his seat to stand up in front, so that, his countenance being fully revealed, Franz had no difficulty in recognizing him as the mysterious inhabitant of Monte Cristo, and the very same person he had encountered the preceding evening in the ruins of the Colosseum, and whose voice and figure had seemed so familiar to him.

All doubt of his identity was now at an end; his singular host evidently resided at Rome. The surprise and agitation occasioned by this full confirmation of Franz's former suspicion had no doubt imparted a corresponding expression to his features; for the countess, after gazing with a puzzled look at his face, burst into a fit of laughter, and begged to know what had happened.

"Countess," returned Franz, totally unheeding her raillery, "I asked you a short time since if you knew any particulars respecting the Albanian lady opposite; I must now beseech you to inform me who and what is her husband?"

"Nay," answered the countess, "I know no more of him than yourself."

"Perhaps you never before noticed him?"

"What a question—so truly French! Do you not know that we Italians have eyes only for the man we love?"

"True," replied Franz.

"All I can say is," continued the countess, taking up the _lorgnette_, and directing it toward the box in question, "that the gentleman, whose history I am unable to furnish, seems to me as though he had just been dug up; he looks more like a corpse permitted by some friendly grave-digger to quit his tomb for a while, and revisit this earth of ours, than anything human. How ghastly pale he is!"

"Oh, he is always as colorless as you now see him," said Franz.

“Then you know him?” almost screamed the countess. “Oh, pray do, for heaven’s sake, tell us all about—is he a vampire, or a resuscitated corpse, or what?”

“I fancy I have seen him before; and I even think he recognizes me.”

“And I can well understand,” said the countess, shrugging up her beautiful shoulders, as though an involuntary shudder passed through her veins, “that those who have once seen that man will never be likely to forget him.”

The sensation experienced by Franz was evidently not peculiar to himself; another, and wholly uninterested person, felt the same unaccountable awe and misgiving.

“Well.” inquired Franz, after the countess had a second time directed her _lorgnette_ at the box, “what do you think of our opposite neighbor?”

20147m

“Why, that he is no other than Lord Ruthven himself in a living form.”

This fresh allusion to Byron5 drew a smile to Franz’s countenance; although he could but allow that if anything was likely to induce belief in the existence of vampires, it would be the presence of such a man as the mysterious personage before him.

“I must positively find out who and what he is,” said Franz, rising from his seat.

“No, no,” cried the countess; “you must not leave me. I depend upon you to escort me home. Oh, indeed, I cannot permit you to go.”

“Is it possible,” whispered Franz, “that you entertain any fear?”

“I’ll tell you,” answered the countess. “Byron had the most perfect belief in the existence of vampires, and even assured me that he had seen them. The description he gave me perfectly corresponds with the features and character of the man before us. Oh, he is the exact personification of what I have been led to expect! The coal-black hair, large bright, glittering eyes, in which a wild, unearthly fire seems burning,—the same ghastly paleness. Then observe, too, that the woman with him is altogether unlike all others of her sex. She is a foreigner—a stranger. Nobody knows who she is, or where she comes from. No doubt she belongs to the same horrible race he does, and is, like himself, a dealer in magical arts. I entreat of you not to go near him—at least tonight; and if tomorrow your curiosity still continues as great, pursue your researches if you will; but tonight you neither can nor shall. For that purpose I mean to keep you all to myself.”

Franz protested he could not defer his pursuit till the following day, for many reasons.

“Listen to me,” said the countess, “and do not be so very headstrong. I am going home. I have a party at my house tonight, and therefore cannot possibly remain till the end of the opera. Now, I cannot for one instant believe you so devoid of gallantry as to refuse a lady your escort when she even condescends to ask you for it.”

There was nothing else left for Franz to do but to take up his hat, open the door of the box, and offer the countess his arm. It was quite evident, by her manner, that her uneasiness was not feigned; and Franz himself could not resist a feeling of superstitious dread—so much the stronger in him, as it arose from a variety of corroborative recollections, while the terror of the countess sprang from an instinctive belief, originally created in her mind by the wild tales she had listened to till she believed them truths. Franz could even feel her arm tremble as he assisted her into the carriage. Upon arriving at her hotel, Franz perceived that she had deceived him when she spoke of expecting company; on the contrary, her own return before the appointed hour seemed greatly to astonish the servants.

“Excuse my little subterfuge,” said the countess, in reply to her companion’s half-reproachful observation on the subject; “but that horrid man had made me feel quite uncomfortable, and I longed to be alone, that I might compose my startled mind.”

Franz essayed to smile.

“Nay,” said she, “do not smile; it ill accords with the expression of your countenance, and I am sure it does not spring from your heart. However, promise me one thing.”

“What is it?”

“Promise me, I say.”

“I will do anything you desire, except relinquish my determination of finding out who this man is. I have more reasons than you can imagine for desiring to know who he is, from whence he came, and whither he is going.”

“Where he comes from I am ignorant; but I can readily tell you where he is going to, and that is down below, without the least doubt.”

“Let us only speak of the promise you wished me to make,” said Franz.

“Well, then, you must give me your word to return immediately to your hotel, and make no attempt to follow this man tonight. There are certain affinities between the persons we quit and those we meet afterwards. For heaven’s sake, do not serve as a conductor between that man and me. Pursue your chase after him tomorrow as eagerly as you please; but never bring him near me, if you would not see me die of terror. And now, good-night; go to your rooms, and try to sleep away all recollections of this evening. For my own part, I am quite sure I shall not be able to close my eyes.”

So saying, the countess quitted Franz, leaving him unable to decide whether she were merely amusing herself at his expense, or whether her fears and agitations were genuine.

Upon his return to the hotel, Franz found Albert in his dressing-gown and slippers, listlessly extended on a sofa, smoking a cigar.

“My dear fellow!” cried he, springing up, “is it really you? Why, I did not expect to see you before tomorrow.”

“My dear Albert,” replied Franz, “I am glad of this opportunity to tell you, once and forever, that you entertain a most erroneous notion concerning Italian women. I should have thought the continual failures you have met with in all your own love affairs might have taught you better by this time.”

“Upon my soul, these women would puzzle the very Devil to read them aright. Why, here—they give you their hand—they press yours in return—they keep up a whispering conversation—permit you to accompany them home. Why, if a Parisian were to indulge in a quarter of these marks of flattering attention, her reputation would be gone forever.”

“And the very reason why the women of this fine country, ‘where sounds the _si_,’ as Dante writes, put so little restraint on their words and actions, is because they live so much in public, and have really nothing to conceal. Besides, you must have perceived that the countess was really alarmed.”

“At what? At the sight of that respectable gentleman sitting opposite to us in the same box with the lovely Greek girl? Now, for my part, I met them in the lobby after the conclusion of the piece; and hang me, if I can guess where you took your notions of the other world from. I can assure you that this hobgoblin of yours is a deuced fine-looking fellow—admirably dressed. Indeed, I feel quite sure, from the cut of his clothes, they are made by a first-rate Paris tailor—probably Blin or Humann. He was rather too pale, certainly; but then, you know, paleness is always looked upon as a strong proof of aristocratic descent and distinguished breeding.”

Franz smiled; for he well remembered that Albert particularly prided himself on the entire absence of color in his own complexion.

“Well, that tends to confirm my own ideas,” said Franz, “that the countess’s suspicions were destitute alike of sense and reason. Did he speak in your hearing? and did you catch any of his words?”

“I did; but they were uttered in the Romaic dialect. I knew that from the mixture of Greek words. I don’t know whether I ever told you that when I was at college I was rather—rather strong in Greek.”

“He spoke the Romaic language, did he?”

“I think so.”

“That settles it,” murmured Franz. “’Tis he, past all doubt.”

“What do you say?”

“Nothing, nothing. But tell me, what were you thinking about when I came in?”

“Oh, I was arranging a little surprise for you.”

“Indeed. Of what nature?”

“Why, you know it is quite impossible to procure a carriage.”

“Certainly; and I also know that we have done all that human means afforded to endeavor to get one.”

“Now, then, in this difficulty a bright idea has flashed across my brain.”

Franz looked at Albert as though he had not much confidence in the suggestions of his imagination.

“I tell you what, M. Franz,” cried Albert, “you deserve to be called out for such a misgiving and incredulous glance as that you were pleased to bestow on me just now.”

“And I promise to give you the satisfaction of a gentleman if your scheme turns out as ingenious as you assert.”

“Well, then, hearken to me.”

“I listen.”

“You agree, do you not, that obtaining a carriage is out of the question?”

“I do.”

“Neither can we procure horses?”

“True; we have offered any sum, but have failed.”

“Well, now, what do you say to a cart? I dare say such a thing might be had.”

“Very possibly.”

“And a pair of oxen?”

“As easily found as the cart.”

“Then you see, my good fellow, with a cart and a couple of oxen our business can be managed. The cart must be tastefully ornamented; and if you and I dress ourselves as Neapolitan reapers, we may get up a striking tableau, after the manner of that splendid picture by Léopold Robert. It would add greatly to the effect if the countess would join us in the costume of a peasant from Puzzoli or Sorrento. Our group would then be quite complete, more especially as the countess is quite beautiful enough to represent a Madonna.”

“Well,” said Franz, “this time, M. Albert, I am bound to give you credit for having hit upon a most capital idea.”

“And quite a national one, too,” replied Albert with gratified pride. “A mere masque borrowed from our own festivities. Ha, ha, ye Romans! you thought to make us, unhappy strangers, trot at the heels of your processions, like so many lazzaroni, because no carriages or horses are to be had in your beggarly city. But you don’t know us; when we can’t have one thing we invent another.”

“And have you communicated your triumphant idea to anybody?”

“Only to our host. Upon my return home I sent for him, and I then explained to him what I wished to procure. He assured me that nothing would be easier than to furnish all I desired. One thing I was sorry for; when I bade him have the horns of the oxen gilded, he told me there would not be time, as it would require three days to do that; so you see we must do without this little superfluity.”

“And where is he now?”

“Who?”

“Our host.”

“Gone out in search of our equipage, by tomorrow it might be too late.”

“Then he will be able to give us an answer tonight.”

“Oh, I expect him every minute.”

At this instant the door opened, and the head of Signor Pastrini appeared. “_Permesso_?” inquired he.

“Certainly—certainly,” cried Franz. “Come in, my host.”

“Now, then,” asked Albert eagerly, “have you found the desired cart and oxen?”

“Better than that!” replied Signor Pastrini, with the air of a man perfectly well satisfied with himself.

“Take care, my worthy host,” said Albert, “_better_ is a sure enemy to _well_.”

“Let your excellencies only leave the matter to me,” returned Signor Pastrini in a tone indicative of unbounded self-confidence.

“But what _have_ you done?” asked Franz. “S

INTRODUCTION AND ANALYSIS. THE REPUBLIC. PERSONS OF THE DIALOGUE. BOOK I. BOOK II. BOOK III. BOOK IV. BOOK V. BOOK VI. BOOK VII. BOOK VIII. BOOK IX. BOOK X.

INTRODUCTION AND ANALYSIS.

The Republic of Plato is the longest of his works with the exception of the Laws, and is certainly the greatest of them. There are nearer approaches to modern metaphysics in the Philebus and in the Sophist; the Politicus or Statesman is more ideal; the form and institutions of the State are more clearly drawn out in the Laws; as works of art, the Symposium and the Protagoras are of higher excellence. But no other Dialogue of Plato has the same largeness of view and the same perfection of style; no other shows an equal knowledge of the world, or contains more of those thoughts which are new as well as old, and not of one age only but of all. Nowhere in Plato is there a deeper irony or a greater wealth of humour or imagery, or more dramatic power. Nor in any other of his writings is the attempt made to interweave life and speculation, or to connect politics with philosophy. The Republic is the centre around which the other Dialogues may be grouped; here philosophy reaches the highest point (cp, especially in Books V, VI, VII) to which ancient thinkers ever attained. Plato among the Greeks, like Bacon among the moderns, was the first who conceived a method of knowledge, although neither of them always distinguished the bare outline or form from the substance of truth; and both of them had to be content with an abstraction of science which was not yet realized. He was the greatest metaphysical genius whom the world has seen; and in him, more than in any other ancient thinker, the germs of future knowledge are contained. The sciences of logic and psychology, which have supplied so many instruments of thought to after-ages, are based upon the analyses of Socrates and Plato. The principles of definition, the law of contradiction, the fallacy of arguing in a circle, the distinction between the essence and accidents of a thing or notion, between means and ends, between causes and conditions; also the division of the mind into the rational, concupiscent, and irascible elements, or of pleasures and desires into necessary and unnecessary—these and other great forms of thought are all of them to be found in the Republic, and were probably first invented by Plato. The greatest of all logical truths, and the one of which writers on philosophy are most apt to lose sight, the difference between words and things, has been most strenuously insisted on by him (cp. Rep.; Polit.; Cratyl. 435, 436 ff), although he has not always avoided the confusion of them in his own writings (e.g. Rep.). But he does not bind up truth in logical formulae,—logic is still veiled in metaphysics; and the science which he imagines to ‘contemplate all truth and all existence’ is very unlike the doctrine of the syllogism which Aristotle claims to have discovered (Soph. Elenchi, 33. 18).

Neither must we forget that the Republic is but the third part of a still larger design which was to have included an ideal history of Athens, as well as a political and physical philosophy. The fragment of the Critias has given birth to a world-famous fiction, second only in importance to the tale of Troy and the legend of Arthur; and is said as a fact to have inspired some of the early navigators of the sixteenth century. This mythical tale, of which the subject was a history of the wars of the Athenians against the Island of Atlantis, is supposed to be founded upon an unfinished poem of Solon, to which it would have stood in the same relation as the writings of the logographers to the poems of Homer. It would have told of a struggle for Liberty (cp. Tim. 25 C), intended to represent the conflict of Persia and Hellas. We may judge from the noble commencement of the Timaeus, from the fragment of the Critias itself, and from the third book of the Laws, in what manner Plato would have treated this high argument. We can only guess why the great design was abandoned; perhaps because Plato became sensible of some incongruity in a fictitious history, or because he had lost his interest in it, or because advancing years forbade the completion of it; and we may please ourselves with

the fancy that had this imaginary narrative ever been finished, we should have found Plato himself sympathising with the struggle for Hellenic independence (cp. Laws, iii. 698 ff.), singing a hymn of triumph over Marathon and Salamis, perhaps making the reflection of Herodotus (v. 78) where he contemplates the growth of the Athenian empire—'How brave a thing is freedom of speech, which has made the Athenians so far exceed every other state of Hellas in greatness!' or, more probably, attributing the victory to the ancient good order of Athens and to the favor of Apollo and Athene (cp. Introd. to Critias).

Again, Plato may be regarded as the 'captain' ('arhchegoz') or leader of a goodly band of followers; for in the Republic is to be found the original of Cicero's De Republica, of St. Augustine's City of God, of the Utopia of Sir Thomas More, and of the numerous other imaginary States which are framed upon the same model. The extent to which Aristotle or the Aristotelian school were indebted to him in the Politics has been little recognised, and the recognition is the more necessary because it is not made by Aristotle himself. The two philosophers had more in common than they were conscious of; and probably some elements of Plato remain still undetected in Aristotle. In English philosophy too, many affinities may be traced, not only in the works of the Cambridge Platonists, but in great original writers like Berkeley or Coleridge, to Plato and his ideas. That there is a truth higher than experience, of which the mind bears witness to herself, is a conviction which in our own generation has been enthusiastically asserted, and is perhaps gaining ground. Of the Greek authors who at the Renaissance brought a new life into the world Plato has had the greatest influence. The Republic of Plato is also the first treatise upon education, of which the writings of Milton and Locke, Rousseau, Jean Paul, and Goethe are the legitimate descendants. Like Dante or Bunyan, he has a revelation of another life; like Bacon, he is profoundly impressed with the unity of knowledge; in the early Church he exercised a real influence on theology, and at the Revival of Literature on politics. Even the fragments of his words when 'repeated at second-hand' (Symp. 215 D) have in all ages ravished the hearts of men, who have seen reflected in them their own higher nature. He is the father of idealism in philosophy, in politics, in literature. And many of the latest conceptions of modern thinkers and statesmen, such as the unity of knowledge, the reign of law, and the equality of the sexes, have been anticipated in a dream by him.

The argument of the Republic is the search after Justice, the nature of which is first hinted at by Cephalus, the just and blameless old man—then discussed on the basis of proverbial morality by Socrates and Polemarchus—then caricatured by Thrasymachus and partially explained by Socrates—reduced to an abstraction by Glaucon and Adeimantus, and having become invisible in the individual reappears at length in the ideal State which is constructed by Socrates. The first care of the rulers is to be education, of which an outline is drawn after the old Hellenic model, providing only for an improved religion and morality, and more simplicity in music and gymnastic, a manlier strain of poetry, and greater harmony of the individual and the State. We are thus led on to the conception of a higher State, in which 'no man calls anything his own,' and in which there is neither 'marrying nor giving in marriage,' and 'kings are philosophers' and 'philosophers are kings;' and there is another and higher education, intellectual as well as moral and religious, of science as well as of art, and not of youth only but of the whole of life. Such a State is hardly to be realized in this world and quickly degenerates. To the perfect ideal succeeds the government of the soldier and the lover of honour, this again declining into democracy, and democracy into tyranny, in an imaginary but regular order having not much resemblance to the actual facts. When 'the wheel has come full circle' we do not begin again with a new period of human life; but we have passed from the best to the worst, and there we end. The subject is then changed and the old quarrel of poetry and philosophy which had been more lightly treated in the earlier books of the Republic is now resumed and fought out to a conclusion. Poetry is discovered to be an imitation thrice removed from the truth, and Homer, as well as the dramatic poets, having been condemned as an imitator, is sent into banishment along with them. And the idea of the State is supplemented by the revelation of a future life.

The division into books, like all similar divisions (Cp. Sir G.C. Lewis in the Classical Museum, vol. ii. p 1.), is probably later than the age of Plato. The natural divisions are five in number;—(1) Book I and the first half of Book II down to the paragraph beginning, 'I had always admired the genius of Glaucon and Adeimantus,' which is introductory; the first book containing a refutation of the popular and sophistical notions of justice, and concluding, like some of the earlier Dialogues, without arriving at any definite result. To this is appended a restatement of the nature of justice according to common opinion, and an answer is demanded to the question—What is justice, stripped of appearances? The second division (2) includes the remainder of the second and the whole of the third and fourth books, which are mainly occupied with the construction of the first State and the first education. The third division (3) consists of the fifth, sixth, and seventh books, in which philosophy rather than justice is the subject of enquiry, and the second State is constructed on principles of communism and ruled by philosophers, and the contemplation of the idea of good takes the place of the social and political virtues. In the eighth and ninth books (4) the perversions of States and of the individuals who correspond to them are reviewed in succession; and the nature of pleasure and the principle of tyranny are further analysed in the individual man. The tenth book (5) is the conclusion of the whole, in which the relations of philosophy to poetry are finally determined, and the happiness of the citizens in this life, which has now been assured, is crowned by the vision of another.

Or a more general division into two parts may be adopted; the first (Books I - IV) containing the description of a State framed generally in accordance with Hellenic notions of religion and morality, while in the second (Books V - X) the Hellenic State is transformed into an ideal kingdom of philosophy, of which all other governments are the perversions. These two points of view are really opposed, and the opposition is only veiled by the genius of Plato. The Republic, like the Phaedrus (see Introduction to Phaedrus), is an imperfect whole; the higher light of philosophy breaks through the regularity of the Hellenic temple, which at last fades away into the heavens. Whether this imperfection of structure arises from an enlargement of the plan; or from the imperfect reconcilement in the writer's own mind of the struggling elements of thought which are now first brought together by him; or, perhaps, from the composition of the work at different times—are questions, like the similar question about the Iliad and the Odyssey, which are worth asking, but which cannot have a distinct answer. In the age of Plato there was no regular mode of publication, and an author would have the less scruple in altering or adding to a work which was known only to a few of his friends. There is no absurdity in supposing that he may have laid his labours aside for a time, or turned from one work to another; and such interruptions would be more likely to occur in the case of a long than of a short writing. In all attempts to determine the chronological order of the Platonic writings on internal evidence, this uncertainty about any single Dialogue being composed at one time is a disturbing element, which must be admitted to affect longer works, such as the Republic and the Laws, more than shorter ones. But, on the other hand, the seeming discrepancies of the Republic may only arise out of the discordant elements which the philosopher has attempted to unite in a single whole, perhaps without being himself able to recognise the inconsistency which is obvious to us. For there is a judgment of after ages which few great writers have ever been able to anticipate for themselves. They do not perceive the want of connexion in their own writings, or the gaps in their systems which are visible enough to those who come after them. In the beginnings of literature and philosophy, amid the first efforts of thought and language, more inconsistencies occur than now, when the paths of speculation are well worn and the meaning of words precisely defined. For consistency, too, is the growth of time; and some of the greatest creations of the human mind have been wanting in unity. Tried by this test, several of the Platonic Dialogues, according to our modern ideas, appear to be defective, but the deficiency is no proof that they were composed at different times or by different hands. And the supposition that the Republic was written uninterruptedly and by a continuous effort is in some degree confirmed by the numerous references from one part of the work to another.

The second title, 'Concerning Justice,' is not the one by which the Republic is quoted, either by Aristotle or generally in antiquity, and, like the other second titles of the Platonic Dialogues, may therefore be assumed to be of later date. Morgenstern and others have asked whether the definition of justice, which is the professed aim, or the construction of the State is the principal argument of the work. The answer is, that the two blend in one, and are two faces of the same truth; for justice is the order of the State, and the State is the visible embodiment of justice under the conditions of human society. The one is the soul and the other is the body, and the Greek ideal of the State, as of the individual, is a fair mind in a fair body. In Hegelian phraseology the state is the reality of which justice is the idea. Or, described in Christian language, the kingdom of God is within, and yet developes into a Church or external kingdom; 'the house not made with hands, eternal in the heavens,' is reduced to the proportions of an earthly building. Or, to use a Platonic image, justice and the State are the warp and the woof which run through the whole texture. And when the constitution of the State is completed, the conception of justice is not dismissed, but reappears under the same or different names throughout the work, both as the inner law of the individual soul, and finally as the principle of rewards and punishments in another life. The virtues are based on justice, of which common honesty in buying and selling is the shadow, and justice is based on the idea of good, which is the harmony of the world, and is reflected both in the institutions of states and in motions of the heavenly bodies (cp. Tim. 47). The Timaeus, which takes up the political rather than the ethical side of the Republic, and is chiefly occupied with hypotheses concerning the outward world, yet contains many indications that the same law is supposed to reign over the State, over nature, and over man.

Too much, however, has been made of this question both in ancient and modern times. There is a stage of criticism in which all works, whether of nature or of art, are referred to design. Now in ancient writings, and indeed in literature generally, there remains often a large element which was not comprehended in the original design. For the plan grows under the author's hand; new thoughts occur to him in the act of writing; he has not worked out the argument to the end before he begins. The reader who seeks to find some one idea under which the whole may be conceived, must necessarily seize on the vaguest and most general. Thus Stallbaum, who is dissatisfied with the ordinary explanations of the argument of the Republic, imagines himself to have found the true argument 'in the representation of human life in a State perfected by justice, and governed according to the idea of good.' There may be some use in such general descriptions, but they can hardly be said to express the design of the writer. The truth is, that we may as well speak of many designs as of one; nor need anything be excluded from the plan of a great work to which the mind is naturally led by the association of ideas, and which does not interfere with the general purpose. What kind or degree of

unity is to be sought after in a building, in the plastic arts, in poetry, in prose, is a problem which has to be determined relatively to the subject-matter. To Plato himself, the enquiry ‘what was the intention of the writer,’ or ‘what was the principal argument of the Republic’ would have been hardly intelligible, and therefore had better be at once dismissed (cp. the Introduction to the Phaedrus).

Is not the Republic the vehicle of three or four great truths which, to Plato’s own mind, are most naturally represented in the form of the State? Just as in the Jewish prophets the reign of Messiah, or ‘the day of the Lord,’ or the suffering Servant or people of God, or the ‘Sun of righteousness with healing in his wings’ only convey, to us at least, their great spiritual ideals, so through the Greek State Plato reveals to us his own thoughts about divine perfection, which is the idea of good—like the sun in the visible world;—about human perfection, which is justice—about education beginning in youth and continuing in later years—about poets and sophists and tyrants who are the false teachers and evil rulers of mankind—about ‘the world’ which is the embodiment of them—about a kingdom which exists nowhere upon earth but is laid up in heaven to be the pattern and rule of human life. No such inspired creation is at unity with itself, any more than the clouds of heaven when the sun pierces through them. Every shade of light and dark, of truth, and of fiction which is the veil of truth, is allowable in a work of philosophical imagination. It is not all on the same plane; it easily passes from ideas to myths and fancies, from facts to figures of speech. It is not prose but poetry, at least a great part of it, and ought not to be judged by the rules of logic or the probabilities of history. The writer is not fashioning his ideas into an artistic whole; they take possession of him and are too much for him. We have no need therefore to discuss whether a State such as Plato has conceived is practicable or not, or whether the outward form or the inward life came first into the mind of the writer. For the practicability of his ideas has nothing to do with their truth; and the highest thoughts to which he attains may be truly said to bear the greatest ‘marks of design’—justice more than the external frame-work of the State, the idea of good more than justice. The great science of dialectic or the organisation of ideas has no real content; but is only a type of the method or spirit in which the higher knowledge is to be pursued by the spectator of all time and all existence. It is in the fifth, sixth, and seventh books that Plato reaches the ‘summit of speculation,’ and these, although they fail to satisfy the requirements of a modern thinker, may therefore be regarded as the most important, as they are also the most original, portions of the work.

It is not necessary to discuss at length a minor question which has been raised by Boeckh, respecting the imaginary date at which the conversation was held (the year 411 B.C. which is proposed by him will do as well as any other); for a writer of fiction, and especially a writer who, like Plato, is notoriously careless of chronology (cp. Rep., Symp., 193 A, etc.), only aims at general probability. Whether all the persons mentioned in the Republic could ever have met at any one time is not a difficulty which would have occurred to an Athenian reading the work forty years later, or to Plato himself at the time of writing (any more than to Shakespeare respecting one of his own dramas); and need not greatly trouble us now. Yet this may be a question having no answer ‘which is still worth asking,’ because the investigation shows that we cannot argue historically from the dates in Plato; it would be useless therefore to waste time in inventing far-fetched reconcilements of them in order to avoid chronological difficulties, such, for example, as the conjecture of C.F. Hermann, that Glaucon and Adeimantus are not the brothers but the uncles of Plato (cp. Apol. 34 A), or the fancy of Stallbaum that Plato intentionally left anachronisms indicating the dates at which some of his Dialogues were written.

The principal characters in the Republic are Cephalus, Polemarchus, Thrasymachus, Socrates, Glaucon, and Adeimantus. Cephalus appears in the introduction only, Polemarchus drops at the end of the first argument, and Thrasymachus is reduced to silence at the close of the first book. The main discussion is carried on by Socrates, Glaucon, and Adeimantus. Among the company are Lysias (the orator) and Euthydemus, the sons of Cephalus and brothers of Polemarchus, an unknown Charmantides—these are mute auditors; also there is Cleitophon, who once interrupts, where, as in the Dialogue which bears his name, he appears as the friend and ally of Thrasymachus.

Cephalus, the patriarch of the house, has been appropriately engaged in offering a sacrifice. He is the pattern of an old man who has almost done with life, and is at peace with himself and with all mankind. He feels that he is drawing nearer to the world below, and seems to linger around the memory of the past. He is eager that Socrates should come to visit him, fond of the poetry of the last generation, happy in the consciousness of a well-spent life, glad at having escaped from the tyranny of youthful lusts. His love of conversation, his affection, his indifference to riches, even his garrulity, are interesting traits of character. He is not one of those who have nothing to say, because their whole mind has been absorbed in making money. Yet he acknowledges that riches have the advantage of placing men above the temptation to dishonesty or falsehood. The respectful attention shown to him by Socrates, whose love of conversation, no less than the mission imposed upon him by the Oracle, leads him to ask questions of all men, young and old alike, should also be noted. Who better suited to raise the question of justice than Cephalus, whose life might seem to be the expression of it? The moderation with which old age is pictured by Cephalus as a very tolerable portion of existence is

characteristic, not only of him, but of Greek feeling generally, and contrasts with the exaggeration of Cicero in the De Senectute. The evening of life is described by Plato in the most expressive manner, yet with the fewest possible touches. As Cicero remarks (Ep. ad Attic. iv. 16), the aged Cephalus would have been out of place in the discussion which follows, and which he could neither have understood nor taken part in without a violation of dramatic propriety (cp. Lysimachus in the Laches).

His ‘son and heir’ Polemarchus has the frankness and impetuousness of youth; he is for detaining Socrates by force in the opening scene, and will not ‘let him off’ on the subject of women and children. Like Cephalus, he is limited in his point of view, and represents the proverbial stage of morality which has rules of life rather than principles; and he quotes Simonides (cp. Aristoph. Clouds) as his father had quoted Pindar. But after this he has no more to say; the answers which he makes are only elicited from him by the dialectic of Socrates. He has not yet experienced the influence of the Sophists like Glaucon and Adeimantus, nor is he sensible of the necessity of refuting them; he belongs to the pre-Socratic or pre-dialectical age. He is incapable of arguing, and is bewildered by Socrates to such a degree that he does not know what he is saying. He is made to admit that justice is a thief, and that the virtues follow the analogy of the arts. From his brother Lysias (contra Eratosth.) we learn that he fell a victim to the Thirty Tyrants, but no allusion is here made to his fate, nor to the circumstance that Cephalus and his family were of Syracusan origin, and had migrated from Thurii to Athens.

The ‘Chalcedonian giant,’ Thrasymachus, of whom we have already heard in the Phaedrus, is the personification of the Sophists, according to Plato’s conception of them, in some of their worst characteristics. He is vain and blustering, refusing to discourse unless he is paid, fond of making an oration, and hoping thereby to escape the inevitable Socrates; but a mere child in argument, and unable to foresee that the next ‘move’ (to use a Platonic expression) will ‘shut him up.’ He has reached the stage of framing general notions, and in this respect is in advance of Cephalus and Polemarchus. But he is incapable of defending them in a discussion, and vainly tries to cover his confusion with banter and insolence. Whether such doctrines as are attributed to him by Plato were really held either by him or by any other Sophist is uncertain; in the infancy of philosophy serious errors about morality might easily grow up—they are certainly put into the mouths of speakers in Thucydides; but we are concerned at present with Plato’s description of him, and not with the historical reality. The inequality of the contest adds greatly to the humour of the scene. The pompous and empty Sophist is utterly helpless in the hands of the great master of dialectic, who knows how to touch all the springs of vanity and weakness in him. He is greatly irritated by the irony of Socrates, but his noisy and imbecile rage only lays him more and more open to the thrusts of his assailant. His determination to cram down their throats, or put ‘bodily into their souls’ his own words, elicits a cry of horror from Socrates. The state of his temper is quite as worthy of remark as the process of the argument. Nothing is more amusing than his complete submission when he has been once thoroughly beaten. At first he seems to continue the discussion with reluctance, but soon with apparent good-will, and he even testifies his interest at a later stage by one or two occasional remarks. When attacked by Glaucon he is humorously protected by Socrates ‘as one who has never been his enemy and is now his friend.’ From Cicero and Quintilian and from Aristotle’s Rhetoric we learn that the Sophist whom Plato has made so ridiculous was a man of note whose writings were preserved in later ages. The play on his name which was made by his contemporary Herodicus (Aris. Rhet.), ‘thou wast ever bold in battle,’ seems to show that the description of him is not devoid of verisimilitude.

When Thrasymachus has been silenced, the two principal respondents, Glaucon and Adeimantus, appear on the scene: here, as in Greek tragedy (cp. Introd. to Phaedo), three actors are introduced. At first sight the two sons of Ariston may seem to wear a family likeness, like the two friends Simmias and Cebes in the Phaedo. But on a nearer examination of them the similarity vanishes, and they are seen to be distinct characters. Glaucon is the impetuous youth who can ‘just never have enough of fechting’ (cp. the character of him in Xen. Mem. iii. 6); the man of pleasure who is acquainted with the mysteries of love; the ‘juvenis qui gaudet canibus,’ and who improves the breed of animals; the lover of art and music who has all the experiences of youthful life. He is full of quickness and penetration, piercing easily below the clumsy platitudes of Thrasymachus to the real difficulty; he turns out to the light the seamy side of human life, and yet does not lose faith in the just and true. It is Glaucon who seizes what may be termed the ludicrous relation of the philosopher to the world, to whom a state of simplicity is ‘a city of pigs,’ who is always prepared with a jest when the argument offers him an opportunity, and who is ever ready to second the humour of Socrates and to appreciate the ridiculous, whether in the connoisseurs of music, or in the lovers of theatricals, or in the fantastic behaviour of the citizens of democracy. His weaknesses are several times alluded to by Socrates, who, however, will not allow him to be attacked by his brother Adeimantus. He is a soldier, and, like Adeimantus, has been distinguished at the battle of Megara (anno 456?)...The character of Adeimantus is deeper and graver, and the profounder objections are commonly put into his mouth. Glaucon is more demonstrative, and generally opens the game. Adeimantus pursues the argument further. Glaucon has more of the liveliness and quick sympathy of youth; Adeimantus has the maturer judgment of a grown-up man of the world. In the second book, when

Glaucon insists that justice and injustice shall be considered without regard to their consequences, Adeimantus remarks that they are regarded by mankind in general only for the sake of their consequences; and in a similar vein of reflection he urges at the beginning of the fourth book that Socrates fails in making his citizens happy, and is answered that happiness is not the first but the second thing, not the direct aim but the indirect consequence of the good government of a State. In the discussion about religion and mythology, Adeimantus is the respondent, but Glaucon breaks in with a slight jest, and carries on the conversation in a lighter tone about music and gymnastic to the end of the book. It is Adeimantus again who volunteers the criticism of common sense on the Socratic method of argument, and who refuses to let Socrates pass lightly over the question of women and children. It is Adeimantus who is the respondent in the more argumentative, as Glaucon in the lighter and more imaginative portions of the Dialogue. For example, throughout the greater part of the sixth book, the causes of the corruption of philosophy and the conception of the idea of good are discussed with Adeimantus. Glaucon resumes his place of principal respondent; but he has a difficulty in apprehending the higher education of Socrates, and makes some false hits in the course of the discussion. Once more Adeimantus returns with the allusion to his brother Glaucon whom he compares to the contentious State; in the next book he is again superseded, and Glaucon continues to the end.

Thus in a succession of characters Plato represents the successive stages of morality, beginning with the Athenian gentleman of the olden time, who is followed by the practical man of that day regulating his life by proverbs and saws; to him succeeds the wild generalization of the Sophists, and lastly come the young disciples of the great teacher, who know the sophistical arguments but will not be convinced by them, and desire to go deeper into the nature of things. These too, like Cephalus, Polemarchus, Thrasymachus, are clearly distinguished from one another. Neither in the Republic, nor in any other Dialogue of Plato, is a single character repeated.

The delineation of Socrates in the Republic is not wholly consistent. In the first book we have more of the real Socrates, such as he is depicted in the Memorabilia of Xenophon, in the earliest Dialogues of Plato, and in the Apology. He is ironical, provoking, questioning, the old enemy of the Sophists, ready to put on the mask of Silenus as well as to argue seriously. But in the sixth book his enmity towards the Sophists abates; he acknowledges that they are the representatives rather than the corrupters of the world. He also becomes more dogmatic and constructive, passing beyond the range either of the political or the speculative ideas of the real Socrates. In one passage Plato himself seems to intimate that the time had now come for Socrates, who had passed his whole life in philosophy, to give his own opinion and not to be always repeating the notions of other men. There is no evidence that either the idea of good or the conception of a perfect state were comprehended in the Socratic teaching, though he certainly dwelt on the nature of the universal and of final causes (cp. Xen. Mem.; Phaedo); and a deep thinker like him, in his thirty or forty years of public teaching, could hardly have failed to touch on the nature of family relations, for which there is also some positive evidence in the Memorabilia (Mem.) The Socratic method is nominally retained; and every inference is either put into the mouth of the respondent or represented as the common discovery of him and Socrates. But any one can see that this is a mere form, of which the affectation grows wearisome as the work advances. The method of enquiry has passed into a method of teaching in which by the help of interlocutors the same thesis is looked at from various points of view. The nature of the process is truly characterized by Glaucon, when he describes himself as a companion who is not good for much in an investigation, but can see what he is shown, and may, perhaps, give the answer to a question more fluently than another.

Neither can we be absolutely certain that Socrates himself taught the immortality of the soul, which is unknown to his disciple Glaucon in the Republic (cp. Apol.); nor is there any reason to suppose that he used myths or revelations of another world as a vehicle of instruction, or that he would have banished poetry or have denounced the Greek mythology. His favorite oath is retained, and a slight mention is made of the daemonium, or internal sign, which is alluded to by Socrates as a phenomenon peculiar to himself. A real element of Socratic teaching, which is more prominent in the Republic than in any of the other Dialogues of Plato, is the use of example and illustration τ■ φορτικ■ α■τ■ προσφ■ροντες, ‘Let us apply the test of common instances.’ ‘You,’ says Adeimantus, ironically, in the sixth book, ‘are so unaccustomed to speak in images.’ And this use of examples or images, though truly Socratic in origin, is enlarged by the genius of Plato into the form of an allegory or parable, which embodies in the concrete what has been already described, or is about to be described, in the abstract. Thus the figure of the cave in Book VII is a recapitulation of the divisions of knowledge in Book VI. The composite animal in Book IX is an allegory of the parts of the soul. The noble captain and the ship and the true pilot in Book VI are a figure of the relation of the people to the philosophers in the State which has been described. Other figures, such as the dog, or the marriage of the portionless maiden, or the drones and wasps in the eighth and ninth books, also form links of connexion in long passages, or are used to recall previous discussions.

Plato is most true to the character of his master when he describes him as ‘not of this world.’ And with this representation of him the ideal state and the other paradoxes of the Republic are quite in accordance, though they cannot be shown to have been speculations of Socrates. To him, as to other great teachers both philosophical and religious, when they looked upward, the world seemed to be the embodiment of error and evil. The common sense of mankind has revolted against this view, or has only partially admitted it. And even in Socrates himself the sterner judgement of the multitude at times passes into a sort of ironical pity or love. Men in general are incapable of philosophy, and are therefore at enmity with the philosopher; but their misunderstanding of him is unavoidable: for they have never seen him as he truly is in his own image; they are only acquainted with artificial systems possessing no native force of truth—words which admit of many applications. Their leaders have nothing to measure with, and are therefore ignorant of their own stature. But they are to be pitied or laughed at, not to be quarrelled with; they mean well with their nostrums, if they could only learn that they are cutting off a Hydra’s head. This moderation towards those who are in error is one of the most characteristic features of Socrates in the Republic. In all the different representations of Socrates, whether of Xenophon or Plato, and amid the differences of the earlier or later Dialogues, he always retains the character of the unwearied and disinterested seeker after truth, without which he would have ceased to be Socrates.

Leaving the characters we may now analyse the contents of the Republic, and then proceed to consider (1) The general aspects of this Hellenic ideal of the State, (2) The modern lights in which the thoughts of Plato may be read.

BOOK I. The Republic opens with a truly Greek scene—a festival in honour of the goddess Bendis which is held in the Piraeus; to this is added the promise of an equestrian torch-race in the evening. The whole work is supposed to be recited by Socrates on the day after the festival to a small party, consisting of Critias, Timaeus, Hermocrates, and another; this we learn from the first words of the Timaeus.

When the rhetorical advantage of reciting the Dialogue has been gained, the attention is not distracted by any reference to the audience; nor is the reader further reminded of the extraordinary length of the narrative. Of the numerous company, three only take any serious part in the discussion; nor are we informed whether in the evening they went to the torch-race, or talked, as in the Symposium, through the night. The manner in which the conversation has arisen is described as follows:—Socrates and his companion Glaucon are about to leave the festival when they are detained by a message from Polemarchus, who speedily appears accompanied by Adeimantus, the brother of Glaucon, and with playful violence compels them to remain, promising them not only the torch-race, but the pleasure of conversation with the young, which to Socrates is a far greater attraction. They return to the house of Cephalus, Polemarchus’ father, now in extreme old age, who is found sitting upon a cushioned seat crowned for a sacrifice. ‘You should come to me oftener, Socrates, for I am too old to go to you; and at my time of life, having lost other pleasures, I care the more for conversation.’ Socrates asks him what he thinks of age, to which the old man replies, that the sorrows and discontents of age are to be attributed to the tempers of men, and that age is a time of peace in which the tyranny of the passions is no longer felt. Yes, replies Socrates, but the world will say, Cephalus, that you are happy in old age because you are rich. ‘And there is something in what they say, Socrates, but not so much as they imagine—as Themistocles replied to the Seriphian, “Neither you, if you had been an Athenian, nor I, if I had been a Seriphian, would ever have been famous,” I might in like manner reply to you, Neither a good poor man can be happy in age, nor yet a bad rich man.’ Socrates remarks that Cephalus appears not to care about riches, a quality which he ascribes to his having inherited, not acquired them, and would like to know what he considers to be the chief advantage of them. Cephalus answers that when you are old the belief in the world below grows upon you, and then to have done justice and never to have been compelled to do injustice through poverty, and never to have deceived anyone, are felt to be unspeakable blessings. Socrates, who is evidently preparing for an argument, next asks, What is the meaning of the word justice? To tell the truth and pay your debts? No more than this? Or must we admit exceptions? Ought I, for example, to put back into the hands of my friend, who has gone mad, the sword which I borrowed of him when he was in his right mind? ‘There must be exceptions.’ ‘And yet,’ says Polemarchus, ‘the definition which has been given has the authority of Simonides.’ Here Cephalus retires to look after the sacrifices, and bequeaths, as Socrates facetiously remarks, the possession of the argument to his heir, Polemarchus...

The description of old age is finished, and Plato, as his manner is, has touched the key-note of the whole work in asking for the definition of justice, first suggesting the question which Glaucon afterwards pursues respecting external goods, and preparing for the concluding mythus of the world below in the slight allusion of Cephalus. The portrait of the just man is a natural frontispiece or introduction to the long discourse which follows, and may perhaps imply that in all our perplexity about the nature of justice, there is no difficulty in discerning ‘who is a just man.’ The first explanation has been supported by a saying of Simonides; and now Socrates has a mind to show that the resolution of justice into two unconnected precepts, which have no common principle, fails to satisfy

the demands of dialectic.

...He proceeds: What did Simonides mean by this saying of his? Did he mean that I was to give back arms to a madman? ‘No, not in that case, not if the parties are friends, and evil would result. He meant that you were to do what was proper, good to friends and harm to enemies.’ Every act does something to somebody; and following this analogy, Socrates asks, What is this due and proper thing which justice does, and to whom? He is answered that justice does good to friends and harm to enemies. But in what way good or harm? ‘In making alliances with the one, and going to war with the other.’ Then in time of peace what is the good of justice? The answer is that justice is of use in contracts, and contracts are money partnerships. Yes; but how in such partnerships is the just man of more use than any other man? ‘When you want to have money safely kept and not used.’ Then justice will be useful when money is useless. And there is another difficulty: justice, like the art of war or any other art, must be of opposites, good at attack as well as at defence, at stealing as well as at guarding. But then justice is a thief, though a hero notwithstanding, like Autolycus, the Homeric hero, who was ‘excellent above all men in theft and perjury’—to such a pass have you and Homer and Simonides brought us; though I do not forget that the thieving must be for the good of friends and the harm of enemies. And still there arises another question: Are friends to be interpreted as real or seeming; enemies as real or seeming? And are our friends to be only the good, and our enemies to be the evil? The answer is, that we must do good to our seeming and real good friends, and evil to our seeming and real evil enemies—good to the good, evil to the evil. But ought we to render evil for evil at all, when to do so will only make men more evil? Can justice produce injustice any more than the art of horsemanship can make bad horsemen, or heat produce cold? The final conclusion is, that no sage or poet ever said that the just return evil for evil; this was a maxim of some rich and mighty man, Periander, Perdiccas, or Ismenias the Theban (about B.C. 398-381)...

Thus the first stage of aphoristic or unconscious morality is shown to be inadequate to the wants of the age; the authority of the poets is set aside, and through the winding mazes of dialectic we make an approach to the Christian precept of forgiveness of injuries. Similar words are applied by the Persian mystic poet to the Divine being when the questioning spirit is stirred within him:—‘If because I do evil, Thou punishest me by evil, what is the difference between Thee and me?’ In this both Plato and Kheyam rise above the level of many Christian (?) theologians. The first definition of justice easily passes into the second; for the simple words ‘to speak the truth and pay your debts’ is substituted the more abstract ‘to do good to your friends and harm to your enemies.’ Either of these explanations gives a sufficient rule of life for plain men, but they both fall short of the precision of philosophy. We may note in passing the antiquity of casuistry, which not only arises out of the conflict of established principles in particular cases, but also out of the effort to attain them, and is prior as well as posterior to our fundamental notions of morality. The ‘interrogation’ of moral ideas; the appeal to the authority of Homer; the conclusion that the maxim, ‘Do good to your friends and harm to your enemies,’ being erroneous, could not have been the word of any great man, are all of them very characteristic of the Platonic Socrates.

...Here Thrasymachus, who has made several attempts to interrupt, but has hitherto been kept in order by the company, takes advantage of a pause and rushes into the arena, beginning, like a savage animal, with a roar. ‘Socrates,’ he says, ‘what folly is this?—Why do you agree to be vanquished by one another in a pretended argument?’ He then prohibits all the ordinary definitions of justice; to which Socrates replies that he cannot tell how many twelve is, if he is forbidden to say 2 x 6, or 3 x 4, or 6 x 2, or 4 x 3. At first Thrasymachus is reluctant to argue; but at length, with a promise of payment on the part of the company and of praise from Socrates, he is induced to open the game. ‘Listen,’ he says, ‘my answer is that might is right, justice the interest of the stronger: now praise me.’ Let me understand you first. Do you mean that because Polydamas the wrestler, who is stronger than we are, finds the eating of beef for his interest, the eating of beef is also for our interest, who are not so strong? Thrasymachus is indignant at the illustration, and in pompous words, apparently intended to restore dignity to the argument, he explains his meaning to be that the rulers make laws for their own interests. But suppose, says Socrates, that the ruler or stronger makes a mistake—then the interest of the stronger is not his interest. Thrasymachus is saved from this speedy downfall by his disciple Cleitophon, who introduces the word ‘thinks;’—not the actual interest of the ruler, but what he thinks or what seems to be his interest, is justice. The contradiction is escaped by the unmeaning evasion: for though his real and apparent interests may differ, what the ruler thinks to be his interest will always remain what he thinks to be his interest.

Of course this was not the original assertion, nor is the new interpretation accepted by Thrasymachus himself. But Socrates is not disposed to quarrel about words, if, as he significantly insinuates, his adversary has changed his mind. In what follows Thrasymachus does in fact withdraw his admission that the ruler may make a mistake, for he affirms that the ruler as a ruler is infallible. Socrates is quite ready to accept the new position, which he equally turns against Thrasymachus by the help of the analogy of the arts. Every art or science has an interest, but this interest is to be distinguished from the accidental interest of the

artist, and is only concerned with the good of the things or persons which come under the art. And justice has an interest which is the interest not of the ruler or judge, but of those who come under his sway.

Thrasymachus is on the brink of the inevitable conclusion, when he makes a bold diversion. ‘Tell me, Socrates,’ he says, ‘have you a nurse?’ What a question! Why do you ask? ‘Because, if you have, she neglects you and lets you go about drivelling, and has not even taught you to know the shepherd from the sheep. For you fancy that shepherds and rulers never think of their own interest, but only of their sheep or subjects, whereas the truth is that they fatten them for their use, sheep and subjects alike. And experience proves that in every relation of life the just man is the loser and the unjust the gainer, especially where injustice is on the grand scale, which is quite another thing from the petty rogueries of swindlers and burglars and robbers of temples. The language of men proves this—our ‘gracious’ and ‘blessed’ tyrant and the like—all which tends to show (1) that justice is the interest of the stronger; and (2) that injustice is more profitable and also stronger than justice.’

Thrasymachus, who is better at a speech than at a close argument, having deluged the company with words, has a mind to escape. But the others will not let him go, and Socrates adds a humble but earnest request that he will not desert them at such a crisis of their fate. ‘And what can I do more for you?’ he says; ‘would you have me put the words bodily into your souls?’ God forbid! replies Socrates; but we want you to be consistent in the use of terms, and not to employ ‘physician’ in an exact sense, and then again ‘shepherd’ or ‘ruler’ in an inexact,—if the words are strictly taken, the ruler and the shepherd look only to the good of their people or flocks and not to their own: whereas you insist that rulers are solely actuated by love of office. ‘No doubt about it,’ replies Thrasymachus. Then why are they paid? Is not the reason, that their interest is not comprehended in their art, and is therefore the concern of another art, the art of pay, which is common to the arts in general, and therefore not identical with any one of them? Nor would any man be a ruler unless he were induced by the hope of reward or the fear of punishment;—the reward is money or honour, the punishment is the necessity of being ruled by a man worse than himself. And if a State (or Church) were composed entirely of good men, they would be affected by the last motive only; and there would be as much ‘nolo episcopari’ as there is at present of the opposite...

The satire on existing governments is heightened by the simple and apparently incidental manner in which the last remark is introduced. There is a similar irony in the argument that the governors of mankind do not like being in office, and that therefore they demand pay.

...Enough of this: the other assertion of Thrasymachus is far more important—that the unjust life is more gainful than the just. Now, as you and I, Glaucon, are not convinced by him, we must reply to him; but if we try to compare their respective gains we shall want a judge to decide for us; we had better therefore proceed by making mutual admissions of the truth to one another.

Thrasymachus had asserted that perfect injustice was more gainful than perfect justice, and after a little hesitation he is induced by Socrates to admit the still greater paradox that injustice is virtue and justice vice. Socrates praises his frankness, and assumes the attitude of one whose only wish is to understand the meaning of his opponents. At the same time he is weaving a net in which Thrasymachus is finally enclosed. The admission is elicited from him that the just man seeks to gain an advantage over the unjust only, but not over the just, while the unjust would gain an advantage over either. Socrates, in order to test this statement, employs once more the favourite analogy of the arts. The musician, doctor, skilled artist of any sort, does not seek to gain more than the skilled, but only more than the unskilled (that is to say, he works up to a rule, standard, law, and does not exceed it), whereas the unskilled makes random efforts at excess. Thus the skilled falls on the side of the good, and the unskilled on the side of the evil, and the just is the skilled, and the unjust is the unskilled.

There was great difficulty in bringing Thrasymachus to the point; the day was hot and he was streaming with perspiration, and for the first time in his life he was seen to blush. But his other thesis that injustice was stronger than justice has not yet been refuted, and Socrates now proceeds to the consideration of this, which, with the assistance of Thrasymachus, he hopes to clear up; the latter is at first churlish, but in the judicious hands of Socrates is soon restored to good-humour: Is there not honour among thieves? Is not the strength of injustice only a remnant of justice? Is not absolute injustice absolute weakness also? A house that is divided against itself cannot stand; two men who quarrel detract from one another’s strength, and he who is at war with himself is the enemy of himself and the gods. Not wickedness therefore, but semi-wickedness flourishes in states,—a remnant of good is needed in order to make union in action possible,—there is no kingdom of evil in this world.

Another question has not been answered: Is the just or the unjust the happier? To this we reply, that every art has an end and an excellence or virtue by which the end is accomplished. And is not the end of the soul happiness, and justice the excellence of the

soul by which happiness is attained? Justice and happiness being thus shown to be inseparable, the question whether the just or the unjust is the happier has disappeared.

Thrasymachus replies: ‘Let this be your entertainment, Socrates, at the festival of Bendis.’ Yes; and a very good entertainment with which your kindness has supplied me, now that you have left off scolding. And yet not a good entertainment—but that was my own fault, for I tasted of too many things. First of all the nature of justice was the subject of our enquiry, and then whether justice is virtue and wisdom, or evil and folly; and then the comparative advantages of just and unjust: and the sum of all is that I know not what justice is; how then shall I know whether the just is happy or not?...

Thus the sophistical fabric has been demolished, chiefly by appealing to the analogy of the arts. ‘Justice is like the arts (1) in having no external interest, and (2) in not aiming at excess, and (3) justice is to happiness what the implement of the workman is to his work.’ At this the modern reader is apt to stumble, because he forgets that Plato is writing in an age when the arts and the virtues, like the moral and intellectual faculties, were still undistinguished. Among early enquirers into the nature of human action the arts helped to fill up the void of speculation; and at first the comparison of the arts and the virtues was not perceived by them to be fallacious. They only saw the points of agreement in them and not the points of difference. Virtue, like art, must take means to an end; good manners are both an art and a virtue; character is naturally described under the image of a statue; and there are many other figures of speech which are readily transferred from art to morals. The next generation cleared up these perplexities; or at least supplied after ages with a further analysis of them. The contemporaries of Plato were in a state of transition, and had not yet fully realized the common-sense distinction of Aristotle, that ‘virtue is concerned with action, art with production’ (Nic. Eth.), or that ‘virtue implies intention and constancy of purpose,’ whereas ‘art requires knowledge only’. And yet in the absurdities which follow from some uses of the analogy, there seems to be an intimation conveyed that virtue is more than art. This is implied in the reductio ad absurdum that ‘justice is a thief,’ and in the dissatisfaction which Socrates expresses at the final result.

The expression ‘an art of pay’ which is described as ‘common to all the arts’ is not in accordance with the ordinary use of language. Nor is it employed elsewhere either by Plato or by any other Greek writer. It is suggested by the argument, and seems to extend the conception of art to doing as well as making. Another flaw or inaccuracy of language may be noted in the words ‘men who are injured are made more unjust.’ For those who are injured are not necessarily made worse, but only harmed or ill-treated.

The second of the three arguments, ‘that the just does not aim at excess,’ has a real meaning, though wrapped up in an enigmatical form. That the good is of the nature of the finite is a peculiarly Hellenic sentiment, which may be compared with the language of those modern writers who speak of virtue as fitness, and of freedom as obedience to law. The mathematical or logical notion of limit easily passes into an ethical one, and even finds a mythological expression in the conception of envy (Greek). Ideas of measure, equality, order, unity, proportion, still linger in the writings of moralists; and the true spirit of the fine arts is better conveyed by such terms than by superlatives.

‘When workmen strive to do better than well, They do confound their skill in covetousness.’ (King John. Act. iv. Sc. 2.)

The harmony of the soul and body, and of the parts of the soul with one another, a harmony ‘fairer than that of musical notes,’ is the true Hellenic mode of conceiving the perfection of human nature.

In what may be called the epilogue of the discussion with Thrasymachus, Plato argues that evil is not a principle of strength, but of discord and dissolution, just touching the question which has been often treated in modern times by theologians and philosophers, of the negative nature of evil. In the last argument we trace the germ of the Aristotelian doctrine of an end and a virtue directed towards the end, which again is suggested by the arts. The final reconcilement of justice and happiness and the identity of the individual and the State are also intimated. Socrates reassumes the character of a ‘know-nothing;’ at the same time he appears to be not wholly satisfied with the manner in which the argument has been conducted. Nothing is concluded; but the tendency of the dialectical process, here as always, is to enlarge our conception of ideas, and to widen their application to human life.

BOOK II. Thrasymachus is pacified, but the intrepid Glaucon insists on continuing the argument. He is not satisfied with the indirect manner in which, at the end of the last book, Socrates had disposed of the question ‘Whether the just or the unjust is the happier.’ He begins by dividing goods into three classes:—first, goods desirable in themselves; secondly, goods desirable in themselves and for their results; thirdly, goods desirable for their results only. He then asks Socrates in which of the three classes he would place justice. In the second class, replies Socrates, among goods desirable for themselves and also for their results. ‘Then the world in general are of another mind, for they say that justice belongs to the troublesome class of goods which are desirable for their results only. Socrates answers that this is the doctrine of Thrasymachus which he rejects. Glaucon thinks that Thrasymachus was too

ready to listen to the voice of the charmer, and proposes to consider the nature of justice and injustice in themselves and apart from the results and rewards of them which the world is always dinning in his ears. He will first of all speak of the nature and origin of justice; secondly, of the manner in which men view justice as a necessity and not a good; and thirdly, he will prove the reasonableness of this view.

'To do injustice is said to be a good; to suffer injustice an evil. As the evil is discovered by experience to be greater than the good, the sufferers, who cannot also be doers, make a compact that they will have neither, and this compact or mean is called justice, but is really the impossibility of doing injustice. No one would observe such a compact if he were not obliged. Let us suppose that the just and unjust have two rings, like that of Gyges in the well-known story, which make them invisible, and then no difference will appear in them, for every one will do evil if he can. And he who abstains will be regarded by the world as a fool for his pains. Men may praise him in public out of fear for themselves, but they will laugh at him in their hearts (Cp. Gorgias.)

'And now let us frame an ideal of the just and unjust. Imagine the unjust man to be master of his craft, seldom making mistakes and easily correcting them; having gifts of money, speech, strength—the greatest villain bearing the highest character: and at his side let us place the just in his nobleness and simplicity—being, not seeming—without name or reward—clothed in his justice only—the best of men who is thought to be the worst, and let him die as he has lived. I might add (but I would rather put the rest into the mouth of the panegyrists of injustice—they will tell you) that the just man will be scourged, racked, bound, will have his eyes put out, and will at last be crucified (literally impaled)—and all this because he ought to have preferred seeming to being. How different is the case of the unjust who clings to appearance as the true reality! His high character makes him a ruler; he can marry where he likes, trade where he likes, help his friends and hurt his enemies; having got rich by dishonesty he can worship the gods better, and will therefore be more loved by them than the just.'

I was thinking what to answer, when Adeimantus joined in the already unequal fray. He considered that the most important point of all had been omitted:—'Men are taught to be just for the sake of rewards; parents and guardians make reputation the incentive to virtue. And other advantages are promised by them of a more solid kind, such as wealthy marriages and high offices. There are the pictures in Homer and Hesiod of fat sheep and heavy fleeces, rich corn-fields and trees toppling with fruit, which the gods provide in this life for the just. And the Orphic poets add a similar picture of another. The heroes of Musaeus and Eumolpus lie on couches at a festival, with garlands on their heads, enjoying as the meed of virtue a paradise of immortal drunkenness. Some go further, and speak of a fair posterity in the third and fourth generation. But the wicked they bury in a slough and make them carry water in a sieve: and in this life they attribute to them the infamy which Glaucon was assuming to be the lot of the just who are supposed to be unjust.

'Take another kind of argument which is found both in poetry and prose:—"Virtue," as Hesiod says, "is honourable but difficult, vice is easy and profitable." You may often see the wicked in great prosperity and the righteous afflicted by the will of heaven. And mendicant prophets knock at rich men's doors, promising to atone for the sins of themselves or their fathers in an easy fashion with sacrifices and festive games, or with charms and invocations to get rid of an enemy good or bad by divine help and at a small charge;—they appeal to books professing to be written by Musaeus and Orpheus, and carry away the minds of whole cities, and promise to "get souls out of purgatory;" and if we refuse to listen to them, no one knows what will happen to us.

'When a lively-minded ingenuous youth hears all this, what will be his conclusion? "Will he," in the language of Pindar, "make justice his high tower, or fortify himself with crooked deceit?" Justice, he reflects, without the appearance of justice, is misery and ruin; injustice has the promise of a glorious life. Appearance is master of truth and lord of happiness. To appearance then I will turn,—I will put on the show of virtue and trail behind me the fox of Archilochus. I hear some one saying that "wickedness is not easily concealed," to which I reply that "nothing great is easy." Union and force and rhetoric will do much; and if men say that they cannot prevail over the gods, still how do we know that there are gods? Only from the poets, who acknowledge that they may be appeased by sacrifices. Then why not sin and pay for indulgences out of your sin? For if the righteous are only unpunished, still they have no further reward, while the wicked may be unpunished and have the pleasure of sinning too. But what of the world below? Nay, says the argument, there are atoning powers who will set that matter right, as the poets, who are the sons of the gods, tell us; and this is confirmed by the authority of the State.

'How can we resist such arguments in favour of injustice? Add good manners, and, as the wise tell us, we shall make the best of both worlds. Who that is not a miserable caitiff will refrain from smiling at the praises of justice? Even if a man knows the better part he will not be angry with others; for he knows also that more than human virtue is needed to save a man, and that he only praises justice who is incapable of injustice.

‘The origin of the evil is that all men from the beginning, heroes, poets, instructors of youth, have always asserted “the temporal dispensation,” the honours and profits of justice. Had we been taught in early youth the power of justice and injustice inherent in the soul, and unseen by any human or divine eye, we should not have needed others to be our guardians, but every one would have been the guardian of himself. This is what I want you to show, Socrates;—other men use arguments which rather tend to strengthen the position of Thrasymachus that “might is right;” but from you I expect better things. And please, as Glaucon said, to exclude reputation; let the just be thought unjust and the unjust just, and do you still prove to us the superiority of justice’...

The thesis, which for the sake of argument has been maintained by Glaucon, is the converse of that of Thrasymachus—not right is the interest of the stronger, but right is the necessity of the weaker. Starting from the same premises he carries the analysis of society a step further back;—might is still right, but the might is the weakness of the many combined against the strength of the few.

There have been theories in modern as well as in ancient times which have a family likeness to the speculations of Glaucon; e.g. that power is the foundation of right; or that a monarch has a divine right to govern well or ill; or that virtue is self-love or the love of power; or that war is the natural state of man; or that private vices are public benefits. All such theories have a kind of plausibility from their partial agreement with experience. For human nature oscillates between good and evil, and the motives of actions and the origin of institutions may be explained to a certain extent on either hypothesis according to the character or point of view of a particular thinker. The obligation of maintaining authority under all circumstances and sometimes by rather questionable means is felt strongly and has become a sort of instinct among civilized men. The divine right of kings, or more generally of governments, is one of the forms under which this natural feeling is expressed. Nor again is there any evil which has not some accompaniment of good or pleasure; nor any good which is free from some alloy of evil; nor any noble or generous thought which may not be attended by a shadow or the ghost of a shadow of self-interest or of self-love. We know that all human actions are imperfect; but we do not therefore attribute them to the worse rather than to the better motive or principle. Such a philosophy is both foolish and false, like that opinion of the clever rogue who assumes all other men to be like himself. And theories of this sort do not represent the real nature of the State, which is based on a vague sense of right gradually corrected and enlarged by custom and law (although capable also of perversion), any more than they describe the origin of society, which is to be sought in the family and in the social and religious feelings of man. Nor do they represent the average character of individuals, which cannot be explained simply on a theory of evil, but has always a counteracting element of good. And as men become better such theories appear more and more untruthful to them, because they are more conscious of their own disinterestedness. A little experience may make a man a cynic; a great deal will bring him back to a truer and kindlier view of the mixed nature of himself and his fellow men.

The two brothers ask Socrates to prove to them that the just is happy when they have taken from him all that in which happiness is ordinarily supposed to consist. Not that there is (1) any absurdity in the attempt to frame a notion of justice apart from circumstances. For the ideal must always be a paradox when compared with the ordinary conditions of human life. Neither the Stoical ideal nor the Christian ideal is true as a fact, but they may serve as a basis of education, and may exercise an ennobling influence. An ideal is none the worse because ‘some one has made the discovery’ that no such ideal was ever realized. And in a few exceptional individuals who are raised above the ordinary level of humanity, the ideal of happiness may be realized in death and misery. This may be the state which the reason deliberately approves, and which the utilitarian as well as every other moralist may be bound in certain cases to prefer.

Nor again, (2) must we forget that Plato, though he agrees generally with the view implied in the argument of the two brothers, is not expressing his own final conclusion, but rather seeking to dramatize one of the aspects of ethical truth. He is developing his idea gradually in a series of positions or situations. He is exhibiting Socrates for the first time undergoing the Socratic interrogation. Lastly, (3) the word ‘happiness’ involves some degree of confusion because associated in the language of modern philosophy with conscious pleasure or satisfaction, which was not equally present to his mind.

Glaucon has been drawing a picture of the misery of the just and the happiness of the unjust, to which the misery of the tyrant in Book IX is the answer and parallel. And still the unjust must appear just; that is ‘the homage which vice pays to virtue.’ But now Adeimantus, taking up the hint which had been already given by Glaucon, proceeds to show that in the opinion of mankind justice is regarded only for the sake of rewards and reputation, and points out the advantage which is given to such arguments as those of Thrasymachus and Glaucon by the conventional morality of mankind. He seems to feel the difficulty of ‘justifying the ways of God to man.’ Both the brothers touch upon the question, whether the morality of actions is determined by their consequences; and both of them go beyond the position of Socrates, that justice belongs to the class of goods not desirable for themselves only, but desirable for themselves and for their results, to which he recalls them. In their attempt to view justice as an internal principle, and in their

condemnation of the poets, they anticipate him. The common life of Greece is not enough for them; they must penetrate deeper into the nature of things.

It has been objected that justice is honesty in the sense of Glaucon and Adeimantus, but is taken by Socrates to mean all virtue. May we not more truly say that the old-fashioned notion of justice is enlarged by Socrates, and becomes equivalent to universal order or well-being, first in the State, and secondly in the individual? He has found a new answer to his old question (Protag.), 'whether the virtues are one or many,' viz. that one is the ordering principle of the three others. In seeking to establish the purely internal nature of justice, he is met by the fact that man is a social being, and he tries to harmonise the two opposite theses as well as he can. There is no more inconsistency in this than was inevitable in his age and country; there is no use in turning upon him the cross lights of modern philosophy, which, from some other point of view, would appear equally inconsistent. Plato does not give the final solution of philosophical questions for us; nor can he be judged of by our standard.

The remainder of the Republic is developed out of the question of the sons of Ariston. Three points are deserving of remark in what immediately follows:—First, that the answer of Socrates is altogether indirect. He does not say that happiness consists in the contemplation of the idea of justice, and still less will he be tempted to affirm the Stoical paradox that the just man can be happy on the rack. But first he dwells on the difficulty of the problem and insists on restoring man to his natural condition, before he will answer the question at all. He too will frame an ideal, but his ideal comprehends not only abstract justice, but the whole relations of man. Under the fanciful illustration of the large letters he implies that he will only look for justice in society, and that from the State he will proceed to the individual. His answer in substance amounts to this,—that under favourable conditions, i.e. in the perfect State, justice and happiness will coincide, and that when justice has been once found, happiness may be left to take care of itself. That he falls into some degree of inconsistency, when in the tenth book he claims to have got rid of the rewards and honours of justice, may be admitted; for he has left those which exist in the perfect State. And the philosopher 'who retires under the shelter of a wall' can hardly have been esteemed happy by him, at least not in this world. Still he maintains the true attitude of moral action. Let a man do his duty first, without asking whether he will be happy or not, and happiness will be the inseparable accident which attends him. 'Seek ye first the kingdom of God and his righteousness, and all these things shall be added unto you.'

Secondly, it may be remarked that Plato preserves the genuine character of Greek thought in beginning with the State and in going on to the individual. First ethics, then politics—this is the order of ideas to us; the reverse is the order of history. Only after many struggles of thought does the individual assert his right as a moral being. In early ages he is not ONE, but one of many, the citizen of a State which is prior to him; and he has no notion of good or evil apart from the law of his country or the creed of his church. And to this type he is constantly tending to revert, whenever the influence of custom, or of party spirit, or the recollection of the past becomes too strong for him.

Thirdly, we may observe the confusion or identification of the individual and the State, of ethics and politics, which pervades early Greek speculation, and even in modern times retains a certain degree of influence. The subtle difference between the collective and individual action of mankind seems to have escaped early thinkers, and we too are sometimes in danger of forgetting the conditions of united human action, whenever we either elevate politics into ethics, or lower ethics to the standard of politics. The good man and the good citizen only coincide in the perfect State; and this perfection cannot be attained by legislation acting upon them from without, but, if at all, by education fashioning them from within.

...Socrates praises the sons of Ariston, 'inspired offspring of the renowned hero,' as the elegiac poet terms them; but he does not understand how they can argue so eloquently on behalf of injustice while their character shows that they are uninfluenced by their own arguments. He knows not how to answer them, although he is afraid of deserting justice in the hour of need. He therefore makes a condition, that having weak eyes he shall be allowed to read the large letters first and then go on to the smaller, that is, he must look for justice in the State first, and will then proceed to the individual. Accordingly he begins to construct the State.

Society arises out of the wants of man. His first want is food; his second a house; his third a coat. The sense of these needs and the possibility of satisfying them by exchange, draw individuals together on the same spot; and this is the beginning of a State, which we take the liberty to invent, although necessity is the real inventor. There must be first a husbandman, secondly a builder, thirdly a weaver, to which may be added a cobbler. Four or five citizens at least are required to make a city. Now men have different natures, and one man will do one thing better than many; and business waits for no man. Hence there must be a division of labour into different employments; into wholesale and retail trade; into workers, and makers of workmen's tools; into shepherds and husbandmen. A city which includes all this will have far exceeded the limit of four or five, and yet not be very large. But then again imports will be required, and imports necessitate exports, and this implies variety of produce in order to attract the taste of

purchasers; also merchants and ships. In the city too we must have a market and money and retail trades; otherwise buyers and sellers will never meet, and the valuable time of the producers will be wasted in vain efforts at exchange. If we add hired servants the State will be complete. And we may guess that somewhere in the intercourse of the citizens with one another justice and injustice will appear.

Here follows a rustic picture of their way of life. They spend their days in houses which they have built for themselves; they make their own clothes and produce their own corn and wine. Their principal food is meal and flour, and they drink in moderation. They live on the best of terms with each other, and take care not to have too many children. 'But,' said Glaucon, interposing, 'are they not to have a relish?' Certainly; they will have salt and olives and cheese, vegetables and fruits, and chestnuts to roast at the fire. ''Tis a city of pigs, Socrates.' Why, I replied, what do you want more? 'Only the comforts of life,—sofas and tables, also sauces and sweets.' I see; you want not only a State, but a luxurious State; and possibly in the more complex frame we may sooner find justice and injustice. Then the fine arts must go to work—every conceivable instrument and ornament of luxury will be wanted. There will be dancers, painters, sculptors, musicians, cooks, barbers, tire-women, nurses, artists; swineherds and neatherds too for the animals, and physicians to cure the disorders of which luxury is the source. To feed all these superfluous mouths we shall need a part of our neighbour's land, and they will want a part of ours. And this is the origin of war, which may be traced to the same causes as other political evils. Our city will now require the slight addition of a camp, and the citizen will be converted into a soldier. But then again our old doctrine of the division of labour must not be forgotten. The art of war cannot be learned in a day, and there must be a natural aptitude for military duties. There will be some warlike natures who have this aptitude—dogs keen of scent, swift of foot to pursue, and strong of limb to fight. And as spirit is the foundation of courage, such natures, whether of men or animals, will be full of spirit. But these spirited natures are apt to bite and devour one another; the union of gentleness to friends and fierceness against enemies appears to be an impossibility, and the guardian of a State requires both qualities. Who then can be a guardian? The image of the dog suggests an answer. For dogs are gentle to friends and fierce to strangers. Your dog is a philosopher who judges by the rule of knowing or not knowing; and philosophy, whether in man or beast, is the parent of gentleness. The human watchdogs must be philosophers or lovers of learning which will make them gentle. And how are they to be learned without education?

But what shall their education be? Is any better than the old-fashioned sort which is comprehended under the name of music and gymnastic? Music includes literature, and literature is of two kinds, true and false. 'What do you mean?' he said. I mean that children hear stories before they learn gymnastics, and that the stories are either untrue, or have at most one or two grains of truth in a bushel of falsehood. Now early life is very impressible, and children ought not to learn what they will have to unlearn when they grow up; we must therefore have a censorship of nursery tales, banishing some and keeping others. Some of them are very improper, as we may see in the great instances of Homer and Hesiod, who not only tell lies but bad lies; stories about Uranus and Saturn, which are immoral as well as false, and which should never be spoken of to young persons, or indeed at all; or, if at all, then in a mystery, after the sacrifice, not of an Eleusinian pig, but of some unprocurable animal. Shall our youth be encouraged to beat their fathers by the example of Zeus, or our citizens be incited to quarrel by hearing or seeing representations of strife among the gods? Shall they listen to the narrative of Hephaestus binding his mother, and of Zeus sending him flying for helping her when she was beaten? Such tales may possibly have a mystical interpretation, but the young are incapable of understanding allegory. If any one asks what tales are to be allowed, we will answer that we are legislators and not book-makers; we only lay down the principles according to which books are to be written; to write them is the duty of others.

And our first principle is, that God must be represented as he is; not as the author of all things, but of good only. We will not suffer the poets to say that he is the steward of good and evil, or that he has two casks full of destinies;—or that Athene and Zeus incited Pandarus to break the treaty; or that God caused the sufferings of Niobe, or of Pelops, or the Trojan war; or that he makes men sin when he wishes to destroy them. Either these were not the actions of the gods, or God was just, and men were the better for being punished. But that the deed was evil, and God the author, is a wicked, suicidal fiction which we will allow no one, old or young, to utter. This is our first and great principle—God is the author of good only.

And the second principle is like unto it:—With God is no variableness or change of form. Reason teaches us this; for if we suppose a change in God, he must be changed either by another or by himself. By another?—but the best works of nature and art and the noblest qualities of mind are least liable to be changed by any external force. By himself?—but he cannot change for the better; he will hardly change for the worse. He remains for ever fairest and best in his own image. Therefore we refuse to listen to the poets who tell us of Here begging in the likeness of a priestess or of other deities who prowl about at night in strange disguises; all that blasphemous nonsense with which mothers fool the manhood out of their children must be suppressed. But some one will say that God, who is himself unchangeable, may take a form in relation to us. Why should he? For gods as well as men hate the lie in the

soul, or principle of falsehood; and as for any other form of lying which is used for a purpose and is regarded as innocent in certain exceptional cases—what need have the gods of this? For they are not ignorant of antiquity like the poets, nor are they afraid of their enemies, nor is any madman a friend of theirs. God then is true, he is absolutely true; he changes not, he deceives not, by day or night, by word or sign. This is our second great principle—God is true. Away with the lying dream of Agamemnon in Homer, and the accusation of Thetis against Apollo in Aeschylus...

In order to give clearness to his conception of the State, Plato proceeds to trace the first principles of mutual need and of division of labour in an imaginary community of four or five citizens. Gradually this community increases; the division of labour extends to countries; imports necessitate exports; a medium of exchange is required, and retailers sit in the market-place to save the time of the producers. These are the steps by which Plato constructs the first or primitive State, introducing the elements of political economy by the way. As he is going to frame a second or civilized State, the simple naturally comes before the complex. He indulges, like Rousseau, in a picture of primitive life—an idea which has indeed often had a powerful influence on the imagination of mankind, but he does not seriously mean to say that one is better than the other (Politicus); nor can any inference be drawn from the description of the first state taken apart from the second, such as Aristotle appears to draw in the Politics. We should not interpret a Platonic dialogue any more than a poem or a parable in too literal or matter-of-fact a style. On the other hand, when we compare the lively fancy of Plato with the dried-up abstractions of modern treatises on philosophy, we are compelled to say with Protagoras, that the ‘mythus is more interesting’ (Protag.)

Several interesting remarks which in modern times would have a place in a treatise on Political Economy are scattered up and down the writings of Plato: especially Laws, Population; Free Trade; Adulteration; Wills and Bequests; Begging; Eryxias, (though not Plato’s), Value and Demand; Republic, Division of Labour. The last subject, and also the origin of Retail Trade, is treated with admirable lucidity in the second book of the Republic. But Plato never combined his economic ideas into a system, and never seems to have recognized that Trade is one of the great motive powers of the State and of the world. He would make retail traders only of the inferior sort of citizens (Rep., Laws), though he remarks, quaintly enough (Laws), that ‘if only the best men and the best women everywhere were compelled to keep taverns for a time or to carry on retail trade, etc., then we should knew how pleasant and agreeable all these things are.’

The disappointment of Glaucon at the ‘city of pigs,’ the ludicrous description of the ministers of luxury in the more refined State, and the afterthought of the necessity of doctors, the illustration of the nature of the guardian taken from the dog, the desirableness of offering some almost unprocurable victim when impure mysteries are to be celebrated, the behaviour of Zeus to his father and of Hephaestus to his mother, are touches of humour which have also a serious meaning. In speaking of education Plato rather startles us by affirming that a child must be trained in falsehood first and in truth afterwards. Yet this is not very different from saying that children must be taught through the medium of imagination as well as reason; that their minds can only develope gradually, and that there is much which they must learn without understanding. This is also the substance of Plato’s view, though he must be acknowledged to have drawn the line somewhat differently from modern ethical writers, respecting truth and falsehood. To us, economies or accommodations would not be allowable unless they were required by the human faculties or necessary for the communication of knowledge to the simple and ignorant. We should insist that the word was inseparable from the intention, and that we must not be ‘falsely true,’ i.e. speak or act falsely in support of what was right or true. But Plato would limit the use of fictions only by requiring that they should have a good moral effect, and that such a dangerous weapon as falsehood should be employed by the rulers alone and for great objects.

A Greek in the age of Plato attached no importance to the question whether his religion was an historical fact. He was just beginning to be conscious that the past had a history; but he could see nothing beyond Homer and Hesiod. Whether their narratives were true or false did not seriously affect the political or social life of Hellas. Men only began to suspect that they were fictions when they recognised them to be immoral. And so in all religions: the consideration of their morality comes first, afterwards the truth of the documents in which they are recorded, or of the events natural or supernatural which are told of them. But in modern times, and in Protestant countries perhaps more than in Catholic, we have been too much inclined to identify the historical with the moral; and some have refused to believe in religion at all, unless a superhuman accuracy was discernible in every part of the record. The facts of an ancient or religious history are amongst the most important of all facts; but they are frequently uncertain, and we only learn the true lesson which is to be gathered from them when we place ourselves above them. These reflections tend to show that the difference between Plato and ourselves, though not unimportant, is not so great as might at first sight appear. For we should agree with him in placing the moral before the historical truth of religion; and, generally, in disregarding those errors or misstatements of fact which necessarily occur in the early stages of all religions. We know also that changes in the traditions of a

country cannot be made in a day; and are therefore tolerant of many things which science and criticism would condemn.

We note in passing that the allegorical interpretation of mythology, said to have been first introduced as early as the sixth century before Christ by Theagenes of Rhegium, was well established in the age of Plato, and here, as in the Phaedrus, though for a different reason, was rejected by him. That anachronisms whether of religion or law, when men have reached another stage of civilization, should be got rid of by fictions is in accordance with universal experience. Great is the art of interpretation; and by a natural process, which when once discovered was always going on, what could not be altered was explained away. And so without any palpable inconsistency there existed side by side two forms of religion, the tradition inherited or invented by the poets and the customary worship of the temple; on the other hand, there was the religion of the philosopher, who was dwelling in the heaven of ideas, but did not therefore refuse to offer a cock to Aesculapius, or to be seen saying his prayers at the rising of the sun. At length the antagonism between the popular and philosophical religion, never so great among the Greeks as in our own age, disappeared, and was only felt like the difference between the religion of the educated and uneducated among ourselves. The Zeus of Homer and Hesiod easily passed into the 'royal mind' of Plato (Philebus); the giant Heracles became the knight-errant and benefactor of mankind. These and still more wonderful transformations were readily effected by the ingenuity of Stoics and neo-Platonists in the two or three centuries before and after Christ. The Greek and Roman religions were gradually permeated by the spirit of philosophy; having lost their ancient meaning, they were resolved into poetry and morality; and probably were never purer than at the time of their decay, when their influence over the world was waning.

A singular conception which occurs towards the end of the book is the lie in the soul; this is connected with the Platonic and Socratic doctrine that involuntary ignorance is worse than voluntary. The lie in the soul is a true lie, the corruption of the highest truth, the deception of the highest part of the soul, from which he who is deceived has no power of delivering himself. For example, to represent God as false or immoral, or, according to Plato, as deluding men with appearances or as the author of evil; or again, to affirm with Protagoras that 'knowledge is sensation,' or that 'being is becoming,' or with Thrasymachus 'that might is right,' would have been regarded by Plato as a lie of this hateful sort. The greatest unconsciousness of the greatest untruth, e.g. if, in the language of the Gospels (John), 'he who was blind' were to say 'I see,' is another aspect of the state of mind which Plato is describing. The lie in the soul may be further compared with the sin against the Holy Ghost (Luke), allowing for the difference between Greek and Christian modes of speaking. To this is opposed the lie in words, which is only such a deception as may occur in a play or poem, or allegory or figure of speech, or in any sort of accommodation,—which though useless to the gods may be useful to men in certain cases. Socrates is here answering the question which he had himself raised about the propriety of deceiving a madman; and he is also contrasting the nature of God and man. For God is Truth, but mankind can only be true by appearing sometimes to be partial, or false. Reserving for another place the greater questions of religion or education, we may note further, (1) the approval of the old traditional education of Greece; (2) the preparation which Plato is making for the attack on Homer and the poets; (3) the preparation which he is also making for the use of economies in the State; (4) the contemptuous and at the same time euphemistic manner in which here as below he alludes to the 'Chronique Scandaleuse' of the gods.

BOOK III. There is another motive in purifying religion, which is to banish fear; for no man can be courageous who is afraid of death, or who believes the tales which are repeated by the poets concerning the world below. They must be gently requested not to abuse hell; they may be reminded that their stories are both untrue and discouraging. Nor must they be angry if we expunge obnoxious passages, such as the depressing words of Achilles—'I would rather be a serving-man than rule over all the dead;' and the verses which tell of the squalid mansions, the senseless shadows, the flitting soul mourning over lost strength and youth, the soul with a gibber going beneath the earth like smoke, or the souls of the suitors which flutter about like bats. The terrors and horrors of Cocytus and Styx, ghosts and sapless shades, and the rest of their Tartarean nomenclature, must vanish. Such tales may have their use; but they are not the proper food for soldiers. As little can we admit the sorrows and sympathies of the Homeric heroes:—Achilles, the son of Thetis, in tears, throwing ashes on his head, or pacing up and down the sea-shore in distraction; or Priam, the cousin of the gods, crying aloud, rolling in the mire. A good man is not prostrated at the loss of children or fortune. Neither is death terrible to him; and therefore lamentations over the dead should not be practised by men of note; they should be the concern of inferior persons only, whether women or men. Still worse is the attribution of such weakness to the gods; as when the goddesses say, 'Alas! my travail!' and worst of all, when the king of heaven himself laments his inability to save Hector, or sorrows over the impending doom of his dear Sarpedon. Such a character of God, if not ridiculed by our young men, is likely to be imitated by them. Nor should our citizens be given to excess of laughter—'Such violent delights' are followed by a violent re-action. The description in the Iliad of the gods shaking their sides at the clumsiness of Hephaestus will not be admitted by us. 'Certainly not.'

Truth should have a high place among the virtues, for falsehood, as we were saying, is useless to the gods, and only useful to men as a medicine. But this employment of falsehood must remain a privilege of state; the common man must not in return tell a lie to the ruler; any more than the patient would tell a lie to his physician, or the sailor to his captain.

In the next place our youth must be temperate, and temperance consists in self-control and obedience to authority. That is a lesson which Homer teaches in some places: 'The Achaeans marched on breathing prowess, in silent awe of their leaders;'—but a very different one in other places: 'O heavy with wine, who hast the eyes of a dog, but the heart of a stag.' Language of the latter kind will not impress self-control on the minds of youth. The same may be said about his praises of eating and drinking and his dread of starvation; also about the verses in which he tells of the rapturous loves of Zeus and Here, or of how Hephaestus once detained Ares and Aphrodite in a net on a similar occasion. There is a nobler strain heard in the words:—'Endure, my soul, thou hast endured worse.' Nor must we allow our citizens to receive bribes, or to say, 'Gifts persuade the gods, gifts reverend kings;' or to applaud the ignoble advice of Phoenix to Achilles that he should get money out of the Greeks before he assisted them; or the meanness of Achilles himself in taking gifts from Agamemnon; or his requiring a ransom for the body of Hector; or his cursing of Apollo; or his insolence to the river-god Scamander; or his dedication to the dead Patroclus of his own hair which had been already dedicated to the other river-god Spercheius; or his cruelty in dragging the body of Hector round the walls, and slaying the captives at the pyre: such a combination of meanness and cruelty in Cheiron's pupil is inconceivable. The amatory exploits of Peirithous and Theseus are equally unworthy. Either these so-called sons of gods were not the sons of gods, or they were not such as the poets imagine them, any more than the gods themselves are the authors of evil. The youth who believes that such things are done by those who have the blood of heaven flowing in their veins will be too ready to imitate their example.

Enough of gods and heroes;—what shall we say about men? What the poets and story-tellers say—that the wicked prosper and the righteous are afflicted, or that justice is another's gain? Such misrepresentations cannot be allowed by us. But in this we are anticipating the definition of justice, and had therefore better defer the enquiry.

The subjects of poetry have been sufficiently treated; next follows style. Now all poetry is a narrative of events past, present, or to come; and narrative is of three kinds, the simple, the imitative, and a composition of the two. An instance will make my meaning clear. The first scene in Homer is of the last or mixed kind, being partly description and partly dialogue. But if you throw the dialogue into the 'oratio obliqua,' the passage will run thus: The priest came and prayed Apollo that the Achaeans might take Troy and have a safe return if Agamemnon would only give him back his daughter; and the other Greeks assented, but Agamemnon was wroth, and so on—The whole then becomes descriptive, and the poet is the only speaker left; or, if you omit the narrative, the whole becomes dialogue. These are the three styles—which of them is to be admitted into our State? 'Do you ask whether tragedy and comedy are to be admitted?' Yes, but also something more—Is it not doubtful whether our guardians are to be imitators at all? Or rather, has not the question been already answered, for we have decided that one man cannot in his life play many parts, any more than he can act both tragedy and comedy, or be rhapsodist and actor at once? Human nature is coined into very small pieces, and as our guardians have their own business already, which is the care of freedom, they will have enough to do without imitating. If they imitate they should imitate, not any meanness or baseness, but the good only; for the mask which the actor wears is apt to become his face. We cannot allow men to play the parts of women, quarrelling, weeping, scolding, or boasting against the gods,—least of all when making love or in labour. They must not represent slaves, or bullies, or cowards, drunkards, or madmen, or blacksmiths, or neighing horses, or bellowing bulls, or sounding rivers, or a raging sea. A good or wise man will be willing to perform good and wise actions, but he will be ashamed to play an inferior part which he has never practised; and he will prefer to employ the descriptive style with as little imitation as possible. The man who has no self-respect, on the contrary, will imitate anybody and anything; sounds of nature and cries of animals alike; his whole performance will be imitation of gesture and voice. Now in the descriptive style there are few changes, but in the dramatic there are a great many. Poets and musicians use either, or a compound of both, and this compound is very attractive to youth and their teachers as well as to the vulgar. But our State in which one man plays one part only is not adapted for complexity. And when one of these polyphonous pantomimic gentlemen offers to exhibit himself and his poetry we will show him every observance of respect, but at the same time tell him that there is no room for his kind in our State; we prefer the rough, honest poet, and will not depart from our original models (Laws).

Next as to the music. A song or ode has three parts,—the subject, the harmony, and the rhythm; of which the two last are dependent upon the first. As we banished strains of lamentation, so we may now banish the mixed Lydian harmonies, which are the harmonies of lamentation; and as our citizens are to be temperate, we may also banish convivial harmonies, such as the Ionian and pure Lydian. Two remain—the Dorian and Phrygian, the first for war, the second for peace; the one expressive of courage, the other of obedience or instruction or religious feeling. And as we reject varieties of harmony, we shall also reject the many-stringed,

variously-shaped instruments which give utterance to them, and in particular the flute, which is more complex than any of them. The lyre and the harp may be permitted in the town, and the Pan's-pipe in the fields. Thus we have made a purgation of music, and will now make a purgation of metres. These should be like the harmonies, simple and suitable to the occasion. There are four notes of the tetrachord, and there are three ratios of metre, 3/2, 2/2, 2/1, which have all their characteristics, and the feet have different characteristics as well as the rhythms. But about this you and I must ask Damon, the great musician, who speaks, if I remember rightly, of a martial measure as well as of dactylic, trochaic, and iambic rhythms, which he arranges so as to equalize the syllables with one another, assigning to each the proper quantity. We only venture to affirm the general principle that the style is to conform to the subject and the metre to the style; and that the simplicity and harmony of the soul should be reflected in them all. This principle of simplicity has to be learnt by every one in the days of his youth, and may be gathered anywhere, from the creative and constructive arts, as well as from the forms of plants and animals.

Other artists as well as poets should be warned against meanness or unseemliness. Sculpture and painting equally with music must conform to the law of simplicity. He who violates it cannot be allowed to work in our city, and to corrupt the taste of our citizens. For our guardians must grow up, not amid images of deformity which will gradually poison and corrupt their souls, but in a land of health and beauty where they will drink in from every object sweet and harmonious influences. And of all these influences the greatest is the education given by music, which finds a way into the innermost soul and imparts to it the sense of beauty and of deformity. At first the effect is unconscious; but when reason arrives, then he who has been thus trained welcomes her as the friend whom he always knew. As in learning to read, first we acquire the elements or letters separately, and afterwards their combinations, and cannot recognize reflections of them until we know the letters themselves;—in like manner we must first attain the elements or essential forms of the virtues, and then trace their combinations in life and experience. There is a music of the soul which answers to the harmony of the world; and the fairest object of a musical soul is the fair mind in the fair body. Some defect in the latter may be excused, but not in the former. True love is the daughter of temperance, and temperance is utterly opposed to the madness of bodily pleasure. Enough has been said of music, which makes a fair ending with love.

Next we pass on to gymnastics; about which I would remark, that the soul is related to the body as a cause to an effect, and therefore if we educate the mind we may leave the education of the body in her charge, and need only give a general outline of the course to be pursued. In the first place the guardians must abstain from strong drink, for they should be the last persons to lose their wits. Whether the habits of the palaestra are suitable to them is more doubtful, for the ordinary gymnastic is a sleepy sort of thing, and if left off suddenly is apt to endanger health. But our warrior athletes must be wide-awake dogs, and must also be inured to all changes of food and climate. Hence they will require a simpler kind of gymnastic, akin to their simple music; and for their diet a rule may be found in Homer, who feeds his heroes on roast meat only, and gives them no fish although they are living at the sea-side, nor boiled meats which involve an apparatus of pots and pans; and, if I am not mistaken, he nowhere mentions sweet sauces. Sicilian cookery and Attic confections and Corinthian courtezans, which are to gymnastic what Lydian and Ionian melodies are to music, must be forbidden. Where gluttony and intemperance prevail the town quickly fills with doctors and pleaders; and law and medicine give themselves airs as soon as the freemen of a State take an interest in them. But what can show a more disgraceful state of education than to have to go abroad for justice because you have none of your own at home? And yet there IS a worse stage of the same disease—when men have learned to take a pleasure and pride in the twists and turns of the law; not considering how much better it would be for them so to order their lives as to have no need of a nodding justice. And there is a like disgrace in employing a physician, not for the cure of wounds or epidemic disorders, but because a man has by laziness and luxury contracted diseases which were unknown in the days of Asclepius. How simple is the Homeric practice of medicine. Eurypylus after he has been wounded drinks a posset of Pramnian wine, which is of a heating nature; and yet the sons of Asclepius blame neither the damsel who gives him the drink, nor Patroclus who is attending on him. The truth is that this modern system of nursing diseases was introduced by Herodicus the trainer; who, being of a sickly constitution, by a compound of training and medicine tortured first himself and then a good many other people, and lived a great deal longer than he had any right. But Asclepius would not practise this art, because he knew that the citizens of a well-ordered State have no leisure to be ill, and therefore he adopted the 'kill or cure' method, which artisans and labourers employ. 'They must be at their business,' they say, 'and have no time for coddling: if they recover, well; if they don't, there is an end of them.' Whereas the rich man is supposed to be a gentleman who can afford to be ill. Do you know a maxim of Phocylides—that 'when a man begins to be rich' (or, perhaps, a little sooner) 'he should practise virtue'? But how can excessive care of health be inconsistent with an ordinary occupation, and yet consistent with that practice of virtue which Phocylides inculcates? When a student imagines that philosophy gives him a headache, he never does anything; he is always unwell. This was the reason why Asclepius and his sons practised no such art. They were acting in the interest of the public, and did not wish to preserve useless lives, or raise up a puny offspring to wretched sires. Honest diseases they honestly cured; and

if a man was wounded, they applied the proper remedies, and then let him eat and drink what he liked. But they declined to treat intemperate and worthless subjects, even though they might have made large fortunes out of them. As to the story of Pindar, that Asclepius was slain by a thunderbolt for restoring a rich man to life, that is a lie—following our old rule we must say either that he did not take bribes, or that he was not the son of a god.

Glaucon then asks Socrates whether the best physicians and the best judges will not be those who have had severally the greatest experience of diseases and of crimes. Socrates draws a distinction between the two professions. The physician should have had experience of disease in his own body, for he cures with his mind and not with his body. But the judge controls mind by mind; and therefore his mind should not be corrupted by crime. Where then is he to gain experience? How is he to be wise and also innocent? When young a good man is apt to be deceived by evil-doers, because he has no pattern of evil in himself; and therefore the judge should be of a certain age; his youth should have been innocent, and he should have acquired insight into evil not by the practice of it, but by the observation of it in others. This is the ideal of a judge; the criminal turned detective is wonderfully suspicious, but when in company with good men who have experience, he is at fault, for he foolishly imagines that every one is as bad as himself. Vice may be known of virtue, but cannot know virtue. This is the sort of medicine and this the sort of law which will prevail in our State; they will be healing arts to better natures; but the evil body will be left to die by the one, and the evil soul will be put to death by the other. And the need of either will be greatly diminished by good music which will give harmony to the soul, and good gymnastic which will give health to the body. Not that this division of music and gymnastic really corresponds to soul and body; for they are both equally concerned with the soul, which is tamed by the one and aroused and sustained by the other. The two together supply our guardians with their twofold nature. The passionate disposition when it has too much gymnastic is hardened and brutalized, the gentle or philosophic temper which has too much music becomes enervated. While a man is allowing music to pour like water through the funnel of his ears, the edge of his soul gradually wears away, and the passionate or spirited element is melted out of him. Too little spirit is easily exhausted; too much quickly passes into nervous irritability. So, again, the athlete by feeding and training has his courage doubled, but he soon grows stupid; he is like a wild beast, ready to do everything by blows and nothing by counsel or policy. There are two principles in man, reason and passion, and to these, not to the soul and body, the two arts of music and gymnastic correspond. He who mingles them in harmonious concord is the true musician,—he shall be the presiding genius of our State.

The next question is, Who are to be our rulers? First, the elder must rule the younger; and the best of the elders will be the best guardians. Now they will be the best who love their subjects most, and think that they have a common interest with them in the welfare of the state. These we must select; but they must be watched at every epoch of life to see whether they have retained the same opinions and held out against force and enchantment. For time and persuasion and the love of pleasure may enchant a man into a change of purpose, and the force of grief and pain may compel him. And therefore our guardians must be men who have been tried by many tests, like gold in the refiner's fire, and have been passed first through danger, then through pleasure, and at every age have come out of such trials victorious and without stain, in full command of themselves and their principles; having all their faculties in harmonious exercise for their country's good. These shall receive the highest honours both in life and death. (It would perhaps be better to confine the term 'guardians' to this select class: the younger men may be called 'auxiliaries.')

And now for one magnificent lie, in the belief of which, Oh that we could train our rulers!—at any rate let us make the attempt with the rest of the world. What I am going to tell is only another version of the legend of Cadmus; but our unbelieving generation will be slow to accept such a story. The tale must be imparted, first to the rulers, then to the soldiers, lastly to the people. We will inform them that their youth was a dream, and that during the time when they seemed to be undergoing their education they were really being fashioned in the earth, who sent them up when they were ready; and that they must protect and cherish her whose children they are, and regard each other as brothers and sisters. 'I do not wonder at your being ashamed to propound such a fiction.' There is more behind. These brothers and sisters have different natures, and some of them God framed to rule, whom he fashioned of gold; others he made of silver, to be auxiliaries; others again to be husbandmen and craftsmen, and these were formed by him of brass and iron. But as they are all sprung from a common stock, a golden parent may have a silver son, or a silver parent a golden son, and then there must be a change of rank; the son of the rich must descend, and the child of the artisan rise, in the social scale; for an oracle says 'that the State will come to an end if governed by a man of brass or iron.' Will our citizens ever believe all this? 'Not in the present generation, but in the next, perhaps, Yes.'

Now let the earthborn men go forth under the command of their rulers, and look about and pitch their camp in a high place, which will be safe against enemies from without, and likewise against insurrections from within. There let them sacrifice and set up their tents; for soldiers they are to be and not shopkeepers, the watchdogs and guardians of the sheep; and luxury and avarice will turn

them into wolves and tyrants. Their habits and their dwellings should correspond to their education. They should have no property; their pay should only meet their expenses; and they should have common meals. Gold and silver we will tell them that they have from God, and this divine gift in their souls they must not alloy with that earthly dross which passes under the name of gold. They only of the citizens may not touch it, or be under the same roof with it, or drink from it; it is the accursed thing. Should they ever acquire houses or lands or money of their own, they will become householders and tradesmen instead of guardians, enemies and tyrants instead of helpers, and the hour of ruin, both to themselves and the rest of the State, will be at hand.

The religious and ethical aspect of Plato's education will hereafter be considered under a separate head. Some lesser points may be more conveniently noticed in this place.

1. The constant appeal to the authority of Homer, whom, with grave irony, Plato, after the manner of his age, summons as a witness about ethics and psychology, as well as about diet and medicine; attempting to distinguish the better lesson from the worse, sometimes altering the text from design; more than once quoting or alluding to Homer inaccurately, after the manner of the early logographers turning the Iliad into prose, and delighting to draw far-fetched inferences from his words, or to make ludicrous applications of them. He does not, like Heracleitus, get into a rage with Homer and Archilochus (Heracl.), but uses their words and expressions as vehicles of a higher truth; not on a system like Theagenes of Rhegium or Metrodorus, or in later times the Stoics, but as fancy may dictate. And the conclusions drawn from them are sound, although the premises are fictitious. These fanciful appeals to Homer add a charm to Plato's style, and at the same time they have the effect of a satire on the follies of Homeric interpretation. To us (and probably to himself), although they take the form of arguments, they are really figures of speech. They may be compared with modern citations from Scripture, which have often a great rhetorical power even when the original meaning of the words is entirely lost sight of. The real, like the Platonic Socrates, as we gather from the Memorabilia of Xenophon, was fond of making similar adaptations. Great in all ages and countries, in religion as well as in law and literature, has been the art of interpretation.

2. 'The style is to conform to the subject and the metre to the style.' Notwithstanding the fascination which the word 'classical' exercises over us, we can hardly maintain that this rule is observed in all the Greek poetry which has come down to us. We cannot deny that the thought often exceeds the power of lucid expression in Aeschylus and Pindar; or that rhetoric gets the better of the thought in the Sophist-poet Euripides. Only perhaps in Sophocles is there a perfect harmony of the two; in him alone do we find a grace of language like the beauty of a Greek statue, in which there is nothing to add or to take away; at least this is true of single plays or of large portions of them. The connection in the Tragic Choruses and in the Greek lyric poets is not unfrequently a tangled thread which in an age before logic the poet was unable to draw out. Many thoughts and feelings mingled in his mind, and he had no power of disengaging or arranging them. For there is a subtle influence of logic which requires to be transferred from prose to poetry, just as the music and perfection of language are infused by poetry into prose. In all ages the poet has been a bad judge of his own meaning (Apol.); for he does not see that the word which is full of associations to his own mind is difficult and unmeaning to that of another; or that the sequence which is clear to himself is puzzling to others. There are many passages in some of our greatest modern poets which are far too obscure; in which there is no proportion between style and subject, in which any half-expressed figure, any harsh construction, any distorted collocation of words, any remote sequence of ideas is admitted; and there is no voice 'coming sweetly from nature,' or music adding the expression of feeling to thought. As if there could be poetry without beauty, or beauty without ease and clearness. The obscurities of early Greek poets arose necessarily out of the state of language and logic which existed in their age. They are not examples to be followed by us; for the use of language ought in every generation to become clearer and clearer. Like Shakespere, they were great in spite, not in consequence, of their imperfections of expression. But there is no reason for returning to the necessary obscurity which prevailed in the infancy of literature. The English poets of the last century were certainly not obscure; and we have no excuse for losing what they had gained, or for going back to the earlier or transitional age which preceded them. The thought of our own times has not out-stripped language; a want of Plato's 'art of measuring' is the rule cause of the disproportion between them.

3. In the third book of the Republic a nearer approach is made to a theory of art than anywhere else in Plato. His views may be summed up as follows:—True art is not fanciful and imitative, but simple and ideal,—the expression of the highest moral energy, whether in action or repose. To live among works of plastic art which are of this noble and simple character, or to listen to such strains, is the best of influences,—the true Greek atmosphere, in which youth should be brought up. That is the way to create in them a natural good taste, which will have a feeling of truth and beauty in all things. For though the poets are to be expelled, still art is recognized as another aspect of reason—like love in the Symposium, extending over the same sphere, but confined to the preliminary education, and acting through the power of habit; and this conception of art is not limited to strains of music or the forms

of plastic art, but pervades all nature and has a wide kindred in the world. The Republic of Plato, like the Athens of Pericles, has an artistic as well as a political side.

There is hardly any mention in Plato of the creative arts; only in two or three passages does he even allude to them (Rep.; Soph.). He is not lost in rapture at the great works of Phidias, the Parthenon, the Propylea, the statues of Zeus or Athene. He would probably have regarded any abstract truth of number or figure as higher than the greatest of them. Yet it is hard to suppose that some influence, such as he hopes to inspire in youth, did not pass into his own mind from the works of art which he saw around him. We are living upon the fragments of them, and find in a few broken stones the standard of truth and beauty. But in Plato this feeling has no expression; he nowhere says that beauty is the object of art; he seems to deny that wisdom can take an external form (Phaedrus); he does not distinguish the fine from the mechanical arts. Whether or no, like some writers, he felt more than he expressed, it is at any rate remarkable that the greatest perfection of the fine arts should coincide with an almost entire silence about them. In one very striking passage he tells us that a work of art, like the State, is a whole; and this conception of a whole and the love of the newly-born mathematical sciences may be regarded, if not as the inspiring, at any rate as the regulating principles of Greek art (Xen. Mem.; and Sophist).

4. Plato makes the true and subtle remark that the physician had better not be in robust health; and should have known what illness is in his own person. But the judge ought to have had no similar experience of evil; he is to be a good man who, having passed his youth in innocence, became acquainted late in life with the vices of others. And therefore, according to Plato, a judge should not be young, just as a young man according to Aristotle is not fit to be a hearer of moral philosophy. The bad, on the other hand, have a knowledge of vice, but no knowledge of virtue. It may be doubted, however, whether this train of reflection is well founded. In a remarkable passage of the Laws it is acknowledged that the evil may form a correct estimate of the good. The union of gentleness and courage in Book ii. at first seemed to be a paradox, yet was afterwards ascertained to be a truth. And Plato might also have found that the intuition of evil may be consistent with the abhorrence of it. There is a directness of aim in virtue which gives an insight into vice. And the knowledge of character is in some degree a natural sense independent of any special experience of good or evil.

5. One of the most remarkable conceptions of Plato, because un-Greek and also very different from anything which existed at all in his age of the world, is the transposition of ranks. In the Spartan state there had been enfranchisement of Helots and degradation of citizens under special circumstances. And in the ancient Greek aristocracies, merit was certainly recognized as one of the elements on which government was based. The founders of states were supposed to be their benefactors, who were raised by their great actions above the ordinary level of humanity; at a later period, the services of warriors and legislators were held to entitle them and their descendants to the privileges of citizenship and to the first rank in the state. And although the existence of an ideal aristocracy is slenderly proven from the remains of early Greek history, and we have a difficulty in ascribing such a character, however the idea may be defined, to any actual Hellenic state—or indeed to any state which has ever existed in the world—still the rule of the best was certainly the aspiration of philosophers, who probably accommodated a good deal their views of primitive history to their own notions of good government. Plato further insists on applying to the guardians of his state a series of tests by which all those who fell short of a fixed standard were either removed from the governing body, or not admitted to it; and this ‘academic’ discipline did to a certain extent prevail in Greek states, especially in Sparta. He also indicates that the system of caste, which existed in a great part of the ancient, and is by no means extinct in the modern European world, should be set aside from time to time in favour of merit. He is aware how deeply the greater part of mankind resent any interference with the order of society, and therefore he proposes his novel idea in the form of what he himself calls a ‘monstrous fiction.’ (Compare the ceremony of preparation for the two ‘great waves’ in Book v.) Two principles are indicated by him: first, that there is a distinction of ranks dependent on circumstances prior to the individual: second, that this distinction is and ought to be broken through by personal qualities. He adapts mythology like the Homeric poems to the wants of the state, making ‘the Phoenician tale’ the vehicle of his ideas. Every Greek state had a myth respecting its own origin; the Platonic republic may also have a tale of earthborn men. The gravity and verisimilitude with which the tale is told, and the analogy of Greek tradition, are a sufficient verification of the ‘monstrous falsehood.’ Ancient poetry had spoken of a gold and silver and brass and iron age succeeding one another, but Plato supposes these differences in the natures of men to exist together in a single state. Mythology supplies a figure under which the lesson may be taught (as Protagoras says, ‘the myth is more interesting’), and also enables Plato to touch lightly on new principles without going into details. In this passage he shadows forth a general truth, but he does not tell us by what steps the transposition of ranks is to be effected. Indeed throughout the Republic he allows the lower ranks to fade into the distance. We do not know whether they are to carry arms, and whether in the fifth book they are or are not included in the communistic regulations respecting property and marriage. Nor is there any use in arguing strictly either from a few chance words, or from the silence of Plato, or in drawing

inferences which were beyond his vision. Aristotle, in his criticism on the position of the lower classes, does not perceive that the poetical creation is ‘like the air, invulnerable,’ and cannot be penetrated by the shafts of his logic (Pol.).

6. Two paradoxes which strike the modern reader as in the highest degree fanciful and ideal, and which suggest to him many reflections, are to be found in the third book of the Republic: first, the great power of music, so much beyond any influence which is experienced by us in modern times, when the art or science has been far more developed, and has found the secret of harmony, as well as of melody; secondly, the indefinite and almost absolute control which the soul is supposed to exercise over the body.

In the first we suspect some degree of exaggeration, such as we may also observe among certain masters of the art, not unknown to us, at the present day. With this natural enthusiasm, which is felt by a few only, there seems to mingle in Plato a sort of Pythagorean reverence for numbers and numerical proportion to which Aristotle is a stranger. Intervals of sound and number are to him sacred things which have a law of their own, not dependent on the variations of sense. They rise above sense, and become a connecting link with the world of ideas. But it is evident that Plato is describing what to him appears to be also a fact. The power of a simple and characteristic melody on the impressible mind of the Greek is more than we can easily appreciate. The effect of national airs may bear some comparison with it. And, besides all this, there is a confusion between the harmony of musical notes and the harmony of soul and body, which is so potently inspired by them.

The second paradox leads up to some curious and interesting questions—How far can the mind control the body? Is the relation between them one of mutual antagonism or of mutual harmony? Are they two or one, and is either of them the cause of the other? May we not at times drop the opposition between them, and the mode of describing them, which is so familiar to us, and yet hardly conveys any precise meaning, and try to view this composite creature, man, in a more simple manner? Must we not at any rate admit that there is in human nature a higher and a lower principle, divided by no distinct line, which at times break asunder and take up arms against one another? Or again, they are reconciled and move together, either unconsciously in the ordinary work of life, or consciously in the pursuit of some noble aim, to be attained not without an effort, and for which every thought and nerve are strained. And then the body becomes the good friend or ally, or servant or instrument of the mind. And the mind has often a wonderful and almost superhuman power of banishing disease and weakness and calling out a hidden strength. Reason and the desires, the intellect and the senses are brought into harmony and obedience so as to form a single human being. They are ever parting, ever meeting; and the identity or diversity of their tendencies or operations is for the most part unnoticed by us. When the mind touches the body through the appetites, we acknowledge the responsibility of the one to the other. There is a tendency in us which says ‘Drink.’ There is another which says, ‘Do not drink; it is not good for you.’ And we all of us know which is the rightful superior. We are also responsible for our health, although into this sphere there enter some elements of necessity which may be beyond our control. Still even in the management of health, care and thought, continued over many years, may make us almost free agents, if we do not exact too much of ourselves, and if we acknowledge that all human freedom is limited by the laws of nature and of mind.

We are disappointed to find that Plato, in the general condemnation which he passes on the practice of medicine prevailing in his own day, depreciates the effects of diet. He would like to have diseases of a definite character and capable of receiving a definite treatment. He is afraid of invalidism interfering with the business of life. He does not recognize that time is the great healer both of mental and bodily disorders; and that remedies which are gradual and proceed little by little are safer than those which produce a sudden catastrophe. Neither does he see that there is no way in which the mind can more surely influence the body than by the control of eating and drinking; or any other action or occasion of human life on which the higher freedom of the will can be more simple or truly asserted.

7. Lesser matters of style may be remarked.

(1) The affected ignorance of music, which is Plato’s way of expressing that he is passing lightly over the subject.

(2) The tentative manner in which here, as in the second book, he proceeds with the construction of the State.

(3) The description of the State sometimes as a reality, and then again as a work of imagination only; these are the arts by which he sustains the reader’s interest.

(4) Connecting links, or the preparation for the entire expulsion of the poets in Book X.

(5) The companion pictures of the lover of litigation and the valetudinarian, the satirical jest about the maxim of Phocylides, the manner in which the image of the gold and silver citizens is taken up into the subject, and the argument from the practice of

Asclepius, should not escape notice.

BOOK IV. Adeimantus said: ‘Suppose a person to argue, Socrates, that you make your citizens miserable, and this by their own free-will; they are the lords of the city, and yet instead of having, like other men, lands and houses and money of their own, they live as mercenaries and are always mounting guard.’ You may add, I replied, that they receive no pay but only their food, and have no money to spend on a journey or a mistress. ‘Well, and what answer do you give?’ My answer is, that our guardians may or may not be the happiest of men,—I should not be surprised to find in the long-run that they were,—but this is not the aim of our constitution, which was designed for the good of the whole and not of any one part. If I went to a sculptor and blamed him for having painted the eye, which is the noblest feature of the face, not purple but black, he would reply: ‘The eye must be an eye, and you should look at the statue as a whole.’ ‘Now I can well imagine a fool’s paradise, in which everybody is eating and drinking, clothed in purple and fine linen, and potters lie on sofas and have their wheel at hand, that they may work a little when they please; and cobblers and all the other classes of a State lose their distinctive character. And a State may get on without cobblers; but when the guardians degenerate into boon companions, then the ruin is complete. Remember that we are not talking of peasants keeping holiday, but of a State in which every man is expected to do his own work. The happiness resides not in this or that class, but in the State as a whole. I have another remark to make:—A middle condition is best for artisans; they should have money enough to buy tools, and not enough to be independent of business. And will not the same condition be best for our citizens? If they are poor, they will be mean; if rich, luxurious and lazy; and in neither case contented. ‘But then how will our poor city be able to go to war against an enemy who has money?’ There may be a difficulty in fighting against one enemy; against two there will be none. In the first place, the contest will be carried on by trained warriors against well-to-do citizens: and is not a regular athlete an easy match for two stout opponents at least? Suppose also, that before engaging we send ambassadors to one of the two cities, saying, ‘Silver and gold we have not; do you help us and take our share of the spoil;’—who would fight against the lean, wiry dogs, when they might join with them in preying upon the fatted sheep? ‘But if many states join their resources, shall we not be in danger?’ I am amused to hear you use the word ‘state’ of any but our own State. They are ‘states,’ but not ‘a state’—many in one. For in every state there are two hostile nations, rich and poor, which you may set one against the other. But our State, while she remains true to her principles, will be in very deed the mightiest of Hellenic states.

To the size of the state there is no limit but the necessity of unity; it must be neither too large nor too small to be one. This is a matter of secondary importance, like the principle of transposition which was intimated in the parable of the earthborn men. The meaning there implied was that every man should do that for which he was fitted, and be at one with himself, and then the whole city would be united. But all these things are secondary, if education, which is the great matter, be duly regarded. When the wheel has once been set in motion, the speed is always increasing; and each generation improves upon the preceding, both in physical and moral qualities. The care of the governors should be directed to preserve music and gymnastic from innovation; alter the songs of a country, Damon says, and you will soon end by altering its laws. The change appears innocent at first, and begins in play; but the evil soon becomes serious, working secretly upon the characters of individuals, then upon social and commercial relations, and lastly upon the institutions of a state; and there is ruin and confusion everywhere. But if education remains in the established form, there will be no danger. A restorative process will be always going on; the spirit of law and order will raise up what has fallen down. Nor will any regulations be needed for the lesser matters of life—rules of deportment or fashions of dress. Like invites like for good or for evil. Education will correct deficiencies and supply the power of self-government. Far be it from us to enter into the particulars of legislation; let the guardians take care of education, and education will take care of all other things.

But without education they may patch and mend as they please; they will make no progress, any more than a patient who thinks to cure himself by some favourite remedy and will not give up his luxurious mode of living. If you tell such persons that they must first alter their habits, then they grow angry; they are charming people. ‘Charming,—nay, the very reverse.’ Evidently these gentlemen are not in your good graces, nor the state which is like them. And such states there are which first ordain under penalty of death that no one shall alter the constitution, and then suffer themselves to be flattered into and out of anything; and he who indulges them and fawns upon them, is their leader and saviour. ‘Yes, the men are as bad as the states.’ But do you not admire their cleverness? ‘Nay, some of them are stupid enough to believe what the people tell them.’ And when all the world is telling a man that he is six feet high, and he has no measure, how can he believe anything else? But don’t get into a passion: to see our statesmen trying their nostrums, and fancying that they can cut off at a blow the Hydra-like rogueries of mankind, is as good as a play. Minute enactments are superfluous in good states, and are useless in bad ones.

And now what remains of the work of legislation? Nothing for us; but to Apollo the god of Delphi we leave the ordering of the greatest of all things—that is to say, religion. Only our ancestral deity sitting upon the centre and navel of the earth will be trusted by

us if we have any sense, in an affair of such magnitude. No foreign god shall be supreme in our realms...

Here, as Socrates would say, let us ‘reflect on’ (Greek) what has preceded: thus far we have spoken not of the happiness of the citizens, but only of the well-being of the State. They may be the happiest of men, but our principal aim in founding the State was not to make them happy. They were to be guardians, not holiday-makers. In this pleasant manner is presented to us the famous question both of ancient and modern philosophy, touching the relation of duty to happiness, of right to utility.

First duty, then happiness, is the natural order of our moral ideas. The utilitarian principle is valuable as a corrective of error, and shows to us a side of ethics which is apt to be neglected. It may be admitted further that right and utility are co-extensive, and that he who makes the happiness of mankind his object has one of the highest and noblest motives of human action. But utility is not the historical basis of morality; nor the aspect in which moral and religious ideas commonly occur to the mind. The greatest happiness of all is, as we believe, the far-off result of the divine government of the universe. The greatest happiness of the individual is certainly to be found in a life of virtue and goodness. But we seem to be more assured of a law of right than we can be of a divine purpose, that ‘all mankind should be saved;’ and we infer the one from the other. And the greatest happiness of the individual may be the reverse of the greatest happiness in the ordinary sense of the term, and may be realised in a life of pain, or in a voluntary death. Further, the word ‘happiness’ has several ambiguities; it may mean either pleasure or an ideal life, happiness subjective or objective, in this world or in another, of ourselves only or of our neighbours and of all men everywhere. By the modern founder of Utilitarianism the self-regarding and disinterested motives of action are included under the same term, although they are commonly opposed by us as benevolence and self-love. The word happiness has not the definiteness or the sacredness of ‘truth’ and ‘right’; it does not equally appeal to our higher nature, and has not sunk into the conscience of mankind. It is associated too much with the comforts and conveniences of life; too little with ‘the goods of the soul which we desire for their own sake.’ In a great trial, or danger, or temptation, or in any great and heroic action, it is scarcely thought of. For these reasons ‘the greatest happiness’ principle is not the true foundation of ethics. But though not the first principle, it is the second, which is like unto it, and is often of easier application. For the larger part of human actions are neither right nor wrong, except in so far as they tend to the happiness of mankind (Introd. to Gorgias and Philebus).

The same question reappears in politics, where the useful or expedient seems to claim a larger sphere and to have a greater authority. For concerning political measures, we chiefly ask: How will they affect the happiness of mankind? Yet here too we may observe that what we term expediency is merely the law of right limited by the conditions of human society. Right and truth are the highest aims of government as well as of individuals; and we ought not to lose sight of them because we cannot directly enforce them. They appeal to the better mind of nations; and sometimes they are too much for merely temporal interests to resist. They are the watchwords which all men use in matters of public policy, as well as in their private dealings; the peace of Europe may be said to depend upon them. In the most commercial and utilitarian states of society the power of ideas remains. And all the higher class of statesmen have in them something of that idealism which Pericles is said to have gathered from the teaching of Anaxagoras. They recognise that the true leader of men must be above the motives of ambition, and that national character is of greater value than material comfort and prosperity. And this is the order of thought in Plato; first, he expects his citizens to do their duty, and then under favourable circumstances, that is to say, in a well-ordered State, their happiness is assured. That he was far from excluding the modern principle of utility in politics is sufficiently evident from other passages; in which ‘the most beneficial is affirmed to be the most honourable’, and also ‘the most sacred’.

We may note

(1) The manner in which the objection of Adeimantus here, is designed to draw out and deepen the argument of Socrates.

(2) The conception of a whole as lying at the foundation both of politics and of art, in the latter supplying the only principle of criticism, which, under the various names of harmony, symmetry, measure, proportion, unity, the Greek seems to have applied to works of art.

(3) The requirement that the State should be limited in size, after the traditional model of a Greek state; as in the Politics of Aristotle, the fact that the cities of Hellas were small is converted into a principle.

(4) The humorous pictures of the lean dogs and the fatted sheep, of the light active boxer upsetting two stout gentlemen at least, of the ‘charming’ patients who are always making themselves worse; or again, the playful assumption that there is no State but our own; or the grave irony with which the statesman is excused who believes that he is six feet high because he is told so, and having nothing to measure with is to be pardoned for his ignorance—he is too amusing for us to be seriously angry with him.

(5) The light and superficial manner in which religion is passed over when provision has been made for two great principles,—first, that religion shall be based on the highest conception of the gods, secondly, that the true national or Hellenic type shall be maintained...

Socrates proceeds: But where amid all this is justice? Son of Ariston, tell me where. Light a candle and search the city, and get your brother and the rest of our friends to help in seeking for her. ‘That won’t do,’ replied Glaucon, ‘you yourself promised to make the search and talked about the impiety of deserting justice.’ Well, I said, I will lead the way, but do you follow. My notion is, that our State being perfect will contain all the four virtues—wisdom, courage, temperance, justice. If we eliminate the three first, the unknown remainder will be justice.

First then, of wisdom: the State which we have called into being will be wise because politic. And policy is one among many kinds of skill,—not the skill of the carpenter, or of the worker in metal, or of the husbandman, but the skill of him who advises about the interests of the whole State. Of such a kind is the skill of the guardians, who are a small class in number, far smaller than the blacksmiths; but in them is concentrated the wisdom of the State. And if this small ruling class have wisdom, then the whole State will be wise.

Our second virtue is courage, which we have no difficulty in finding in another class—that of soldiers. Courage may be defined as a sort of salvation—the never-failing salvation of the opinions which law and education have prescribed concerning dangers. You know the way in which dyers first prepare the white ground and then lay on the dye of purple or of any other colour. Colours dyed in this way become fixed, and no soap or lye will ever wash them out. Now the ground is education, and the laws are the colours; and if the ground is properly laid, neither the soap of pleasure nor the lye of pain or fear will ever wash them out. This power which preserves right opinion about danger I would ask you to call ‘courage,’ adding the epithet ‘political’ or ‘civilized’ in order to distinguish it from mere animal courage and from a higher courage which may hereafter be discussed.

Two virtues remain; temperance and justice. More than the preceding virtues temperance suggests the idea of harmony. Some light is thrown upon the nature of this virtue by the popular description of a man as ‘master of himself’—which has an absurd sound, because the master is also the servant. The expression really means that the better principle in a man masters the worse. There are in cities whole classes—women, slaves and the like—who correspond to the worse, and a few only to the better; and in our State the former class are held under control by the latter. Now to which of these classes does temperance belong? ‘To both of them.’ And our State if any will be the abode of temperance; and we were right in describing this virtue as a harmony which is diffused through the whole, making the dwellers in the city to be of one mind, and attuning the upper and middle and lower classes like the strings of an instrument, whether you suppose them to differ in wisdom, strength or wealth.

And now we are near the spot; let us draw in and surround the cover and watch with all our eyes, lest justice should slip away and escape. Tell me, if you see the thicket move first. ‘Nay, I would have you lead.’ Well then, offer up a prayer and follow. The way is dark and difficult; but we must push on. I begin to see a track. ‘Good news.’ Why, Glaucon, our dulness of scent is quite ludicrous! While we are straining our eyes into the distance, justice is tumbling out at our feet. We are as bad as people looking for a thing which they have in their hands. Have you forgotten our old principle of the division of labour, or of every man doing his own business, concerning which we spoke at the foundation of the State—what but this was justice? Is there any other virtue remaining which can compete with wisdom and temperance and courage in the scale of political virtue? For ‘every one having his own’ is the great object of government; and the great object of trade is that every man should do his own business. Not that there is much harm in a carpenter trying to be a cobbler, or a cobbler transforming himself into a carpenter; but great evil may arise from the cobbler leaving his last and turning into a guardian or legislator, or when a single individual is trainer, warrior, legislator, all in one. And this evil is injustice, or every man doing another’s business. I do not say that as yet we are in a condition to arrive at a final conclusion. For the definition which we believe to hold good in states has still to be tested by the individual. Having read the large letters we will now come back to the small. From the two together a brilliant light may be struck out...

Socrates proceeds to discover the nature of justice by a method of residues. Each of the first three virtues corresponds to one of the three parts of the soul and one of the three classes in the State, although the third, temperance, has more of the nature of a harmony than the first two. If there be a fourth virtue, that can only be sought for in the relation of the three parts in the soul or classes in the State to one another. It is obvious and simple, and for that very reason has not been found out. The modern logician will be inclined to object that ideas cannot be separated like chemical substances, but that they run into one another and may be only different aspects or names of the same thing, and such in this instance appears to be the case. For the definition here given of justice is verbally the same as one of the definitions of temperance given by Socrates in the Charmides, which however is only

provisional, and is afterwards rejected. And so far from justice remaining over when the other virtues are eliminated, the justice and temperance of the Republic can with difficulty be distinguished. Temperance appears to be the virtue of a part only, and one of three, whereas justice is a universal virtue of the whole soul. Yet on the other hand temperance is also described as a sort of harmony, and in this respect is akin to justice. Justice seems to differ from temperance in degree rather than in kind; whereas temperance is the harmony of discordant elements, justice is the perfect order by which all natures and classes do their own business, the right man in the right place, the division and co-operation of all the citizens. Justice, again, is a more abstract notion than the other virtues, and therefore, from Plato's point of view, the foundation of them, to which they are referred and which in idea precedes them. The proposal to omit temperance is a mere trick of style intended to avoid monotony.

There is a famous question discussed in one of the earlier Dialogues of Plato (Protagoras; Arist. Nic. Ethics), 'Whether the virtues are one or many?' This receives an answer which is to the effect that there are four cardinal virtues (now for the first time brought together in ethical philosophy), and one supreme over the rest, which is not like Aristotle's conception of universal justice, virtue relative to others, but the whole of virtue relative to the parts. To this universal conception of justice or order in the first education and in the moral nature of man, the still more universal conception of the good in the second education and in the sphere of speculative knowledge seems to succeed. Both might be equally described by the terms 'law,' 'order,' 'harmony;' but while the idea of good embraces 'all time and all existence,' the conception of justice is not extended beyond man.

...Socrates is now going to identify the individual and the State. But first he must prove that there are three parts of the individual soul. His argument is as follows:—Quantity makes no difference in quality. The word 'just,' whether applied to the individual or to the State, has the same meaning. And the term 'justice' implied that the same three principles in the State and in the individual were doing their own business. But are they really three or one? The question is difficult, and one which can hardly be solved by the methods which we are now using; but the truer and longer way would take up too much of our time. 'The shorter will satisfy me.' Well then, you would admit that the qualities of states mean the qualities of the individuals who compose them? The Scythians and Thracians are passionate, our own race intellectual, and the Egyptians and Phoenicians covetous, because the individual members of each have such and such a character; the difficulty is to determine whether the several principles are one or three; whether, that is to say, we reason with one part of our nature, desire with another, are angry with another, or whether the whole soul comes into play in each sort of action. This enquiry, however, requires a very exact definition of terms. The same thing in the same relation cannot be affected in two opposite ways. But there is no impossibility in a man standing still, yet moving his arms, or in a top which is fixed on one spot going round upon its axis. There is no necessity to mention all the possible exceptions; let us provisionally assume that opposites cannot do or be or suffer opposites in the same relation. And to the class of opposites belong assent and dissent, desire and avoidance. And one form of desire is thirst and hunger: and here arises a new point—thirst is thirst of drink, hunger is hunger of food; not of warm drink or of a particular kind of food, with the single exception of course that the very fact of our desiring anything implies that it is good. When relative terms have no attributes, their correlatives have no attributes; when they have attributes, their correlatives also have them. For example, the term 'greater' is simply relative to 'less,' and knowledge refers to a subject of knowledge. But on the other hand, a particular knowledge is of a particular subject. Again, every science has a distinct character, which is defined by an object; medicine, for example, is the science of health, although not to be confounded with health. Having cleared our ideas thus far, let us return to the original instance of thirst, which has a definite object—drink. Now the thirsty soul may feel two distinct impulses; the animal one saying 'Drink;' the rational one, which says 'Do not drink.' The two impulses are contradictory; and therefore we may assume that they spring from distinct principles in the soul. But is passion a third principle, or akin to desire? There is a story of a certain Leontius which throws some light on this question. He was coming up from the Piraeus outside the north wall, and he passed a spot where there were dead bodies lying by the executioner. He felt a longing desire to see them and also an abhorrence of them; at first he turned away and shut his eyes, then, suddenly tearing them open, he said,—'Take your fill, ye wretches, of the fair sight.' Now is there not here a third principle which is often found to come to the assistance of reason against desire, but never of desire against reason? This is passion or spirit, of the separate existence of which we may further convince ourselves by putting the following case:—When a man suffers justly, if he be of a generous nature he is not indignant at the hardships which he undergoes: but when he suffers unjustly, his indignation is his great support; hunger and thirst cannot tame him; the spirit within him must do or die, until the voice of the shepherd, that is, of reason, bidding his dog bark no more, is heard within. This shows that passion is the ally of reason. Is passion then the same with reason? No, for the former exists in children and brutes; and Homer affords a proof of the distinction between them when he says, 'He smote his breast, and thus rebuked his soul.'

And now, at last, we have reached firm ground, and are able to infer that the virtues of the State and of the individual are the same. For wisdom and courage and justice in the State are severally the wisdom and courage and justice in the individuals who form the

State. Each of the three classes will do the work of its own class in the State, and each part in the individual soul; reason, the superior, and passion, the inferior, will be harmonized by the influence of music and gymnastic. The counsellor and the warrior, the head and the arm, will act together in the town of Mansoul, and keep the desires in proper subjection. The courage of the warrior is that quality which preserves a right opinion about dangers in spite of pleasures and pains. The wisdom of the counsellor is that small part of the soul which has authority and reason. The virtue of temperance is the friendship of the ruling and the subject principles, both in the State and in the individual. Of justice we have already spoken; and the notion already given of it may be confirmed by common instances. Will the just state or the just individual steal, lie, commit adultery, or be guilty of impiety to gods and men? 'No.' And is not the reason of this that the several principles, whether in the state or in the individual, do their own business? And justice is the quality which makes just men and just states. Moreover, our old division of labour, which required that there should be one man for one use, was a dream or anticipation of what was to follow; and that dream has now been realized in justice, which begins by binding together the three chords of the soul, and then acts harmoniously in every relation of life. And injustice, which is the insubordination and disobedience of the inferior elements in the soul, is the opposite of justice, and is inharmonious and unnatural, being to the soul what disease is to the body; for in the soul as well as in the body, good or bad actions produce good or bad habits. And virtue is the health and beauty and well-being of the soul, and vice is the disease and weakness and deformity of the soul.

Again the old question returns upon us: Is justice or injustice the more profitable? The question has become ridiculous. For injustice, like mortal disease, makes life not worth having. Come up with me to the hill which overhangs the city and look down upon the single form of virtue, and the infinite forms of vice, among which are four special ones, characteristic both of states and of individuals. And the state which corresponds to the single form of virtue is that which we have been describing, wherein reason rules under one of two names—monarchy and aristocracy. Thus there are five forms in all, both of states and of souls...

In attempting to prove that the soul has three separate faculties, Plato takes occasion to discuss what makes difference of faculties. And the criterion which he proposes is difference in the working of the faculties. The same faculty cannot produce contradictory effects. But the path of early reasoners is beset by thorny entanglements, and he will not proceed a step without first clearing the ground. This leads him into a tiresome digression, which is intended to explain the nature of contradiction. First, the contradiction must be at the same time and in the same relation. Secondly, no extraneous word must be introduced into either of the terms in which the contradictory proposition is expressed: for example, thirst is of drink, not of warm drink. He implies, what he does not say, that if, by the advice of reason, or by the impulse of anger, a man is restrained from drinking, this proves that thirst, or desire under which thirst is included, is distinct from anger and reason. But suppose that we allow the term 'thirst' or 'desire' to be modified, and say an 'angry thirst,' or a 'revengeful desire,' then the two spheres of desire and anger overlap and become confused. This case therefore has to be excluded. And still there remains an exception to the rule in the use of the term 'good,' which is always implied in the object of desire. These are the discussions of an age before logic; and any one who is wearied by them should remember that they are necessary to the clearing up of ideas in the first development of the human faculties.

The psychology of Plato extends no further than the division of the soul into the rational, irascible, and concupiscent elements, which, as far as we know, was first made by him, and has been retained by Aristotle and succeeding ethical writers. The chief difficulty in this early analysis of the mind is to define exactly the place of the irascible faculty (Greek), which may be variously described under the terms righteous indignation, spirit, passion. It is the foundation of courage, which includes in Plato moral courage, the courage of enduring pain, and of surmounting intellectual difficulties, as well as of meeting dangers in war. Though irrational, it inclines to side with the rational: it cannot be aroused by punishment when justly inflicted: it sometimes takes the form of an enthusiasm which sustains a man in the performance of great actions. It is the 'lion heart' with which the reason makes a treaty. On the other hand it is negative rather than positive; it is indignant at wrong or falsehood, but does not, like Love in the Symposium and Phaedrus, aspire to the vision of Truth or Good. It is the peremptory military spirit which prevails in the government of honour. It differs from anger (Greek), this latter term having no accessory notion of righteous indignation. Although Aristotle has retained the word, yet we may observe that 'passion' (Greek) has with him lost its affinity to the rational and has become indistinguishable from 'anger' (Greek). And to this vernacular use Plato himself in the Laws seems to revert, though not always. By modern philosophy too, as well as in our ordinary conversation, the words anger or passion are employed almost exclusively in a bad sense; there is no connotation of a just or reasonable cause by which they are aroused. The feeling of 'righteous indignation' is too partial and accidental to admit of our regarding it as a separate virtue or habit. We are tempted also to doubt whether Plato is right in supposing that an offender, however justly condemned, could be expected to acknowledge the justice of his sentence; this is the spirit of a philosopher or martyr rather than of a criminal.

We may observe how nearly Plato approaches Aristotle's famous thesis, that 'good actions produce good habits.' The words 'as healthy practices (Greek) produce health, so do just practices produce justice,' have a sound very like the Nicomachean Ethics. But we note also that an incidental remark in Plato has become a far-reaching principle in Aristotle, and an inseparable part of a great Ethical system.

There is a difficulty in understanding what Plato meant by 'the longer way': he seems to intimate some metaphysic of the future which will not be satisfied with arguing from the principle of contradiction. In the sixth and seventh books (compare Sophist and Parmenides) he has given us a sketch of such a metaphysic; but when Glaucon asks for the final revelation of the idea of good, he is put off with the declaration that he has not yet studied the preliminary sciences. How he would have filled up the sketch, or argued about such questions from a higher point of view, we can only conjecture. Perhaps he hoped to find some a priori method of developing the parts out of the whole; or he might have asked which of the ideas contains the other ideas, and possibly have stumbled on the Hegelian identity of the 'ego' and the 'universal.' Or he may have imagined that ideas might be constructed in some manner analogous to the construction of figures and numbers in the mathematical sciences. The most certain and necessary truth was to Plato the universal; and to this he was always seeking to refer all knowledge or opinion, just as in modern times we seek to rest them on the opposite pole of induction and experience. The aspirations of metaphysicians have always tended to pass beyond the limits of human thought and language: they seem to have reached a height at which they are 'moving about in worlds unrealized,' and their conceptions, although profoundly affecting their own minds, become invisible or unintelligible to others. We are not therefore surprized to find that Plato himself has nowhere clearly explained his doctrine of ideas; or that his school in a later generation, like his contemporaries Glaucon and Adeimantus, were unable to follow him in this region of speculation. In the Sophist, where he is refuting the scepticism which maintained either that there was no such thing as predication, or that all might be predicated of all, he arrives at the conclusion that some ideas combine with some, but not all with all. But he makes only one or two steps forward on this path; he nowhere attains to any connected system of ideas, or even to a knowledge of the most elementary relations of the sciences to one another.

BOOK V. I was going to enumerate the four forms of vice or decline in states, when Polemarchus—he was sitting a little farther from me than Adeimantus—taking him by the coat and leaning towards him, said something in an undertone, of which I only caught the words, 'Shall we let him off?' 'Certainly not,' said Adeimantus, raising his voice. Whom, I said, are you not going to let off? 'You,' he said. Why? 'Because we think that you are not dealing fairly with us in omitting women and children, of whom you have slily disposed under the general formula that friends have all things in common.' And was I not right? 'Yes,' he replied, 'but there are many sorts of communism or community, and we want to know which of them is right. The company, as you have just heard, are resolved to have a further explanation.' Thrasymachus said, 'Do you think that we have come hither to dig for gold, or to hear you discourse?' Yes, I said; but the discourse should be of a reasonable length. Glaucon added, 'Yes, Socrates, and there is reason in spending the whole of life in such discussions; but pray, without more ado, tell us how this community is to be carried out, and how the interval between birth and education is to be filled up.' Well, I said, the subject has several difficulties—What is possible? is the first question. What is desirable? is the second. 'Fear not,' he replied, 'for you are speaking among friends.' That, I replied, is a sorry consolation; I shall destroy my friends as well as myself. Not that I mind a little innocent laughter; but he who kills the truth is a murderer. 'Then,' said Glaucon, laughing, 'in case you should murder us we will acquit you beforehand, and you shall be held free from the guilt of deceiving us.'

Socrates proceeds:—The guardians of our state are to be watch-dogs, as we have already said. Now dogs are not divided into hes and shes—we do not take the masculine gender out to hunt and leave the females at home to look after their puppies. They have the same employments—the only difference between them is that the one sex is stronger and the other weaker. But if women are to have the same employments as men, they must have the same education—they must be taught music and gymnastics, and the art of war. I know that a great joke will be made of their riding on horseback and carrying weapons; the sight of the naked old wrinkled women showing their agility in the palaestra will certainly not be a vision of beauty, and may be expected to become a famous jest. But we must not mind the wits; there was a time when they might have laughed at our present gymnastics. All is habit: people have at last found out that the exposure is better than the concealment of the person, and now they laugh no more. Evil only should be the subject of ridicule.

The first question is, whether women are able either wholly or partially to share in the employments of men. And here we may be charged with inconsistency in making the proposal at all. For we started originally with the division of labour; and the diversity of employments was based on the difference of natures. But is there no difference between men and women? Nay, are they not wholly different? THERE was the difficulty, Glaucon, which made me unwilling to speak of family relations. However, when a man is

out of his depth, whether in a pool or in an ocean, he can only swim for his life; and we must try to find a way of escape, if we can.

The argument is, that different natures have different uses, and the natures of men and women are said to differ. But this is only a verbal opposition. We do not consider that the difference may be purely nominal and accidental; for example, a bald man and a hairy man are opposed in a single point of view, but you cannot infer that because a bald man is a cobbler a hairy man ought not to be a cobbler. Now why is such an inference erroneous? Simply because the opposition between them is partial only, like the difference between a male physician and a female physician, not running through the whole nature, like the difference between a physician and a carpenter. And if the difference of the sexes is only that the one beget and the other bear children, this does not prove that they ought to have distinct educations. Admitting that women differ from men in capacity, do not men equally differ from one another? Has not nature scattered all the qualities which our citizens require indifferently up and down among the two sexes? and even in their peculiar pursuits, are not women often, though in some cases superior to men, ridiculously enough surpassed by them? Women are the same in kind as men, and have the same aptitude or want of aptitude for medicine or gymnastic or war, but in a less degree. One woman will be a good guardian, another not; and the good must be chosen to be the colleagues of our guardians. If however their natures are the same, the inference is that their education must also be the same; there is no longer anything unnatural or impossible in a woman learning music and gymnastic. And the education which we give them will be the very best, far superior to that of cobblers, and will train up the very best women, and nothing can be more advantageous to the State than this. Therefore let them strip, clothed in their chastity, and share in the toils of war and in the defence of their country; he who laughs at them is a fool for his pains.

The first wave is past, and the argument is compelled to admit that men and women have common duties and pursuits. A second and greater wave is rolling in—community of wives and children; is this either expedient or possible? The expediency I do not doubt; I am not so sure of the possibility. ‘Nay, I think that a considerable doubt will be entertained on both points.’ I meant to have escaped the trouble of proving the first, but as you have detected the little stratagem I must even submit. Only allow me to feed my fancy like the solitary in his walks, with a dream of what might be, and then I will return to the question of what can be.

In the first place our rulers will enforce the laws and make new ones where they are wanted, and their allies or ministers will obey. You, as legislator, have already selected the men; and now you shall select the women. After the selection has been made, they will dwell in common houses and have their meals in common, and will be brought together by a necessity more certain than that of mathematics. But they cannot be allowed to live in licentiousness; that is an unholy thing, which the rulers are determined to prevent. For the avoidance of this, holy marriage festivals will be instituted, and their holiness will be in proportion to their usefulness. And here, Glaucon, I should like to ask (as I know that you are a breeder of birds and animals), Do you not take the greatest care in the mating? ‘Certainly.’ And there is no reason to suppose that less care is required in the marriage of human beings. But then our rulers must be skilful physicians of the State, for they will often need a strong dose of falsehood in order to bring about desirable unions between their subjects. The good must be paired with the good, and the bad with the bad, and the offspring of the one must be reared, and of the other destroyed; in this way the flock will be preserved in prime condition. Hymeneal festivals will be celebrated at times fixed with an eye to population, and the brides and bridegrooms will meet at them; and by an ingenious system of lots the rulers will contrive that the brave and the fair come together, and that those of inferior breed are paired with inferiors—the latter will ascribe to chance what is really the invention of the rulers. And when children are born, the offspring of the brave and fair will be carried to an enclosure in a certain part of the city, and there attended by suitable nurses; the rest will be hurried away to places unknown. The mothers will be brought to the fold and will suckle the children; care however must be taken that none of them recognise their own offspring; and if necessary other nurses may also be hired. The trouble of watching and getting up at night will be transferred to attendants. ‘Then the wives of our guardians will have a fine easy time when they are having children.’ And quite right too, I said, that they should.

The parents ought to be in the prime of life, which for a man may be reckoned at thirty years—from twenty-five, when he has ‘passed the point at which the speed of life is greatest,’ to fifty-five; and at twenty years for a woman—from twenty to forty. Any one above or below those ages who partakes in the hymeneals shall be guilty of impiety; also every one who forms a marriage connexion at other times without the consent of the rulers. This latter regulation applies to those who are within the specified ages, after which they may range at will, provided they avoid the prohibited degrees of parents and children, or of brothers and sisters, which last, however, are not absolutely prohibited, if a dispensation be procured. ‘But how shall we know the degrees of affinity, when all things are common?’ The answer is, that brothers and sisters are all such as are born seven or nine months after the espousals, and their parents those who are then espoused, and every one will have many children and every child many parents.

Socrates proceeds: I have now to prove that this scheme is advantageous and also consistent with our entire polity. The greatest good of a State is unity; the greatest evil, discord and distraction. And there will be unity where there are no private pleasures or pains or interests—where if one member suffers all the members suffer, if one citizen is touched all are quickly sensitive; and the least hurt to the little finger of the State runs through the whole body and vibrates to the soul. For the true State, like an individual, is injured as a whole when any part is affected. Every State has subjects and rulers, who in a democracy are called rulers, and in other States masters: but in our State they are called saviours and allies; and the subjects who in other States are termed slaves, are by us termed nurturers and paymasters, and those who are termed comrades and colleagues in other places, are by us called fathers and brothers. And whereas in other States members of the same government regard one of their colleagues as a friend and another as an enemy, in our State no man is a stranger to another; for every citizen is connected with every other by ties of blood, and these names and this way of speaking will have a corresponding reality—brother, father, sister, mother, repeated from infancy in the ears of children, will not be mere words. Then again the citizens will have all things in common, in having common property they will have common pleasures and pains.

Can there be strife and contention among those who are of one mind; or lawsuits about property when men have nothing but their bodies which they call their own; or suits about violence when every one is bound to defend himself? The permission to strike when insulted will be an ‘antidote’ to the knife and will prevent disturbances in the State. But no younger man will strike an elder; reverence will prevent him from laying hands on his kindred, and he will fear that the rest of the family may retaliate. Moreover, our citizens will be rid of the lesser evils of life; there will be no flattery of the rich, no sordid household cares, no borrowing and not paying. Compared with the citizens of other States, ours will be Olympic victors, and crowned with blessings greater still—they and their children having a better maintenance during life, and after death an honourable burial. Nor has the happiness of the individual been sacrificed to the happiness of the State; our Olympic victor has not been turned into a cobbler, but he has a happiness beyond that of any cobbler. At the same time, if any conceited youth begins to dream of appropriating the State to himself, he must be reminded that ‘half is better than the whole.’ ‘I should certainly advise him to stay where he is when he has the promise of such a brave life.’

But is such a community possible?—as among the animals, so also among men; and if possible, in what way possible? About war there is no difficulty; the principle of communism is adapted to military service. Parents will take their children to look on at a battle, just as potters’ boys are trained to the business by looking on at the wheel. And to the parents themselves, as to other animals, the sight of their young ones will prove a great incentive to bravery. Young warriors must learn, but they must not run into danger, although a certain degree of risk is worth incurring when the benefit is great. The young creatures should be placed under the care of experienced veterans, and they should have wings—that is to say, swift and tractable steeds on which they may fly away and escape. One of the first things to be done is to teach a youth to ride.

Cowards and deserters shall be degraded to the class of husbandmen; gentlemen who allow themselves to be taken prisoners, may be presented to the enemy. But what shall be done to the hero? First of all he shall be crowned by all the youths in the army; secondly, he shall receive the right hand of fellowship; and thirdly, do you think that there is any harm in his being kissed? We have already determined that he shall have more wives than others, in order that he may have as many children as possible. And at a feast he shall have more to eat; we have the authority of Homer for honouring brave men with ‘long chines,’ which is an appropriate compliment, because meat is a very strengthening thing. Fill the bowl then, and give the best seats and meats to the brave—may they do them good! And he who dies in battle will be at once declared to be of the golden race, and will, as we believe, become one of Hesiod’s guardian angels. He shall be worshipped after death in the manner prescribed by the oracle; and not only he, but all other benefactors of the State who die in any other way, shall be admitted to the same honours.

The next question is, How shall we treat our enemies? Shall Hellenes be enslaved? No; for there is too great a risk of the whole race passing under the yoke of the barbarians. Or shall the dead be despoiled? Certainly not; for that sort of thing is an excuse for skulking, and has been the ruin of many an army. There is meanness and feminine malice in making an enemy of the dead body, when the soul which was the owner has fled—like a dog who cannot reach his assailants, and quarrels with the stones which are thrown at him instead. Again, the arms of Hellenes should not be offered up in the temples of the Gods; they are a pollution, for they are taken from brethren. And on similar grounds there should be a limit to the devastation of Hellenic territory—the houses should not be burnt, nor more than the annual produce carried off. For war is of two kinds, civil and foreign; the first of which is properly termed ‘discord,’ and only the second ‘war;’ and war between Hellenes is in reality civil war—a quarrel in a family, which is ever to be regarded as unpatriotic and unnatural, and ought to be prosecuted with a view to reconciliation in a true phil-Hellenic spirit, as of those who would chasten but not utterly enslave. The war is not against a whole nation who are a friendly multitude of

men, women, and children, but only against a few guilty persons; when they are punished peace will be restored. That is the way in which Hellenes should war against one another—and against barbarians, as they war against one another now.

‘But, my dear Socrates, you are forgetting the main question: Is such a State possible? I grant all and more than you say about the blessedness of being one family—fathers, brothers, mothers, daughters, going out to war together; but I want to ascertain the possibility of this ideal State.’ You are too unmerciful. The first wave and the second wave I have hardly escaped, and now you will certainly drown me with the third. When you see the towering crest of the wave, I expect you to take pity. ‘Not a whit.’

Well, then, we were led to form our ideal polity in the search after justice, and the just man answered to the just State. Is this ideal at all the worse for being impracticable? Would the picture of a perfectly beautiful man be any the worse because no such man ever lived? Can any reality come up to the idea? Nature will not allow words to be fully realized; but if I am to try and realize the ideal of the State in a measure, I think that an approach may be made to the perfection of which I dream by one or two, I do not say slight, but possible changes in the present constitution of States. I would reduce them to a single one—the great wave, as I call it. Until, then, kings are philosophers, or philosophers are kings, cities will never cease from ill: no, nor the human race; nor will our ideal polity ever come into being. I know that this is a hard saying, which few will be able to receive. ‘Socrates, all the world will take off his coat and rush upon you with sticks and stones, and therefore I would advise you to prepare an answer.’ You got me into the scrape, I said. ‘And I was right,’ he replied; ‘however, I will stand by you as a sort of do-nothing, well-meaning ally.’ Having the help of such a champion, I will do my best to maintain my position. And first, I must explain of whom I speak and what sort of natures these are who are to be philosophers and rulers. As you are a man of pleasure, you will not have forgotten how indiscriminate lovers are in their attachments; they love all, and turn blemishes into beauties. The snub-nosed youth is said to have a winning grace; the beak of another has a royal look; the featureless are faultless; the dark are manly, the fair angels; the sickly have a new term of endearment invented expressly for them, which is ‘honey-pale.’ Lovers of wine and lovers of ambition also desire the objects of their affection in every form. Now here comes the point:—The philosopher too is a lover of knowledge in every form; he has an insatiable curiosity. ‘But will curiosity make a philosopher? Are the lovers of sights and sounds, who let out their ears to every chorus at the Dionysiac festivals, to be called philosophers?’ They are not true philosophers, but only an imitation. ‘Then how are we to describe the true?’

You would acknowledge the existence of abstract ideas, such as justice, beauty, good, evil, which are severally one, yet in their various combinations appear to be many. Those who recognize these realities are philosophers; whereas the other class hear sounds and see colours, and understand their use in the arts, but cannot attain to the true or waking vision of absolute justice or beauty or truth; they have not the light of knowledge, but of opinion, and what they see is a dream only. Perhaps he of whom we say the last will be angry with us; can we pacify him without revealing the disorder of his mind? Suppose we say that, if he has knowledge we rejoice to hear it, but knowledge must be of something which is, as ignorance is of something which is not; and there is a third thing, which both is and is not, and is matter of opinion only. Opinion and knowledge, then, having distinct objects, must also be distinct faculties. And by faculties I mean powers unseen and distinguishable only by the difference in their objects, as opinion and knowledge differ, since the one is liable to err, but the other is unerring and is the mightiest of all our faculties. If being is the object of knowledge, and not-being of ignorance, and these are the extremes, opinion must lie between them, and may be called darker than the one and brighter than the other. This intermediate or contingent matter is and is not at the same time, and partakes both of existence and of non-existence. Now I would ask my good friend, who denies abstract beauty and justice, and affirms a many beautiful and a many just, whether everything he sees is not in some point of view different—the beautiful ugly, the pious impious, the just unjust? Is not the double also the half, and are not heavy and light relative terms which pass into one another? Everything is and is not, as in the old riddle—‘A man and not a man shot and did not shoot a bird and not a bird with a stone and not a stone.’ The mind cannot be fixed on either alternative; and these ambiguous, intermediate, erring, half-lighted objects, which have a disorderly movement in the region between being and not-being, are the proper matter of opinion, as the immutable objects are the proper matter of knowledge. And he who grovels in the world of sense, and has only this uncertain perception of things, is not a philosopher, but a lover of opinion only...

The fifth book is the new beginning of the Republic, in which the community of property and of family are first maintained, and the transition is made to the kingdom of philosophers. For both of these Plato, after his manner, has been preparing in some chance words of Book IV, which fall unperceived on the reader’s mind, as they are supposed at first to have fallen on the ear of Glaucon and Adeimantus. The ‘paradoxes,’ as Morgenstern terms them, of this book of the Republic will be reserved for another place; a few remarks on the style, and some explanations of difficulties, may be briefly added.

First, there is the image of the waves, which serves for a sort of scheme or plan of the book. The first wave, the second wave, the third and greatest wave come rolling in, and we hear the roar of them. All that can be said of the extravagance of Plato's proposals is anticipated by himself. Nothing is more admirable than the hesitation with which he proposes the solemn text, 'Until kings are philosophers,' etc.; or the reaction from the sublime to the ridiculous, when Glaucon describes the manner in which the new truth will be received by mankind.

Some defects and difficulties may be noted in the execution of the communistic plan. Nothing is told us of the application of communism to the lower classes; nor is the table of prohibited degrees capable of being made out. It is quite possible that a child born at one hymeneal festival may marry one of its own brothers or sisters, or even one of its parents, at another. Plato is afraid of incestuous unions, but at the same time he does not wish to bring before us the fact that the city would be divided into families of those born seven and nine months after each hymeneal festival. If it were worth while to argue seriously about such fancies, we might remark that while all the old affinities are abolished, the newly prohibited affinity rests not on any natural or rational principle, but only upon the accident of children having been born in the same month and year. Nor does he explain how the lots could be so manipulated by the legislature as to bring together the fairest and best. The singular expression which is employed to describe the age of five-and-twenty may perhaps be taken from some poet.

In the delineation of the philosopher, the illustrations of the nature of philosophy derived from love are more suited to the apprehension of Glaucon, the Athenian man of pleasure, than to modern tastes or feelings. They are partly facetious, but also contain a germ of truth. That science is a whole, remains a true principle of inductive as well as of metaphysical philosophy; and the love of universal knowledge is still the characteristic of the philosopher in modern as well as in ancient times.

At the end of the fifth book Plato introduces the figment of contingent matter, which has exercised so great an influence both on the Ethics and Theology of the modern world, and which occurs here for the first time in the history of philosophy. He did not remark that the degrees of knowledge in the subject have nothing corresponding to them in the object. With him a word must answer to an idea; and he could not conceive of an opinion which was an opinion about nothing. The influence of analogy led him to invent 'parallels and conjugates' and to overlook facts. To us some of his difficulties are puzzling only from their simplicity: we do not perceive that the answer to them 'is tumbling out at our feet.' To the mind of early thinkers, the conception of not-being was dark and mysterious; they did not see that this terrible apparition which threatened destruction to all knowledge was only a logical determination. The common term under which, through the accidental use of language, two entirely different ideas were included was another source of confusion. Thus through the ambiguity of (Greek) Plato, attempting to introduce order into the first chaos of human thought, seems to have confused perception and opinion, and to have failed to distinguish the contingent from the relative. In the Theaetetus the first of these difficulties begins to clear up; in the Sophist the second; and for this, as well as for other reasons, both these dialogues are probably to be regarded as later than the Republic.

BOOK VI. Having determined that the many have no knowledge of true being, and have no clear patterns in their minds of justice, beauty, truth, and that philosophers have such patterns, we have now to ask whether they or the many shall be rulers in our State. But who can doubt that philosophers should be chosen, if they have the other qualities which are required in a ruler? For they are lovers of the knowledge of the eternal and of all truth; they are haters of falsehood; their meaner desires are absorbed in the interests of knowledge; they are spectators of all time and all existence; and in the magnificence of their contemplation the life of man is as nothing to them, nor is death fearful. Also they are of a social, gracious disposition, equally free from cowardice and arrogance. They learn and remember easily; they have harmonious, well-regulated minds; truth flows to them sweetly by nature. Can the god of Jealousy himself find any fault with such an assemblage of good qualities?

Here Adeimantus interposes:—'No man can answer you, Socrates; but every man feels that this is owing to his own deficiency in argument. He is driven from one position to another, until he has nothing more to say, just as an unskilful player at draughts is reduced to his last move by a more skilled opponent. And yet all the time he may be right. He may know, in this very instance, that those who make philosophy the business of their lives, generally turn out rogues if they are bad men, and fools if they are good. What do you say?' I should say that he is quite right. 'Then how is such an admission reconcileable with the doctrine that philosophers should be kings?'

I shall answer you in a parable which will also let you see how poor a hand I am at the invention of allegories. The relation of good men to their governments is so peculiar, that in order to defend them I must take an illustration from the world of fiction. Conceive the captain of a ship, taller by a head and shoulders than any of the crew, yet a little deaf, a little blind, and rather ignorant of the seaman's art. The sailors want to steer, although they know nothing of the art; and they have a theory that it cannot be learned. If

the helm is refused them, they drug the captain's posset, bind him hand and foot, and take possession of the ship. He who joins in the mutiny is termed a good pilot and what not; they have no conception that the true pilot must observe the winds and the stars, and must be their master, whether they like it or not;—such an one would be called by them fool, prater, star-gazer. This is my parable; which I will beg you to interpret for me to those gentlemen who ask why the philosopher has such an evil name, and to explain to them that not he, but those who will not use him, are to blame for his uselessness. The philosopher should not beg of mankind to be put in authority over them. The wise man should not seek the rich, as the proverb bids, but every man, whether rich or poor, must knock at the door of the physician when he has need of him. Now the pilot is the philosopher—he whom in the parable they call star-gazer, and the mutinous sailors are the mob of politicians by whom he is rendered useless. Not that these are the worst enemies of philosophy, who is far more dishonoured by her own professing sons when they are corrupted by the world. Need I recall the original image of the philosopher? Did we not say of him just now, that he loved truth and hated falsehood, and that he could not rest in the multiplicity of phenomena, but was led by a sympathy in his own nature to the contemplation of the absolute? All the virtues as well as truth, who is the leader of them, took up their abode in his soul. But as you were observing, if we turn aside to view the reality, we see that the persons who were thus described, with the exception of a small and useless class, are utter rogues.

The point which has to be considered, is the origin of this corruption in nature. Every one will admit that the philosopher, in our description of him, is a rare being. But what numberless causes tend to destroy these rare beings! There is no good thing which may not be a cause of evil—health, wealth, strength, rank, and the virtues themselves, when placed under unfavourable circumstances. For as in the animal or vegetable world the strongest seeds most need the accompaniment of good air and soil, so the best of human characters turn out the worst when they fall upon an unsuitable soil; whereas weak natures hardly ever do any considerable good or harm; they are not the stuff out of which either great criminals or great heroes are made. The philosopher follows the same analogy: he is either the best or the worst of all men. Some persons say that the Sophists are the corrupters of youth; but is not public opinion the real Sophist who is everywhere present—in those very persons, in the assembly, in the courts, in the camp, in the applauses and hisses of the theatre re-echoed by the surrounding hills? Will not a young man's heart leap amid these discordant sounds? and will any education save him from being carried away by the torrent? Nor is this all. For if he will not yield to opinion, there follows the gentle compulsion of exile or death. What principle of rival Sophists or anybody else can overcome in such an unequal contest? Characters there may be more than human, who are exceptions—God may save a man, but not his own strength. Further, I would have you consider that the hireling Sophist only gives back to the world their own opinions; he is the keeper of the monster, who knows how to flatter or anger him, and observes the meaning of his inarticulate grunts. Good is what pleases him, evil what he dislikes; truth and beauty are determined only by the taste of the brute. Such is the Sophist's wisdom, and such is the condition of those who make public opinion the test of truth, whether in art or in morals. The curse is laid upon them of being and doing what it approves, and when they attempt first principles the failure is ludicrous. Think of all this and ask yourself whether the world is more likely to be a believer in the unity of the idea, or in the multiplicity of phenomena. And the world if not a believer in the idea cannot be a philosopher, and must therefore be a persecutor of philosophers. There is another evil:—the world does not like to lose the gifted nature, and so they flatter the young (Alcibiades) into a magnificent opinion of his own capacity; the tall, proper youth begins to expand, and is dreaming of kingdoms and empires. If at this instant a friend whispers to him, 'Now the gods lighten thee; thou art a great fool' and must be educated—do you think that he will listen? Or suppose a better sort of man who is attracted towards philosophy, will they not make Herculean efforts to spoil and corrupt him? Are we not right in saying that the love of knowledge, no less than riches, may divert him? Men of this class (Critias) often become politicians—they are the authors of great mischief in states, and sometimes also of great good. And thus philosophy is deserted by her natural protectors, and others enter in and dishonour her. Vulgar little minds see the land open and rush from the prisons of the arts into her temple. A clever mechanic having a soul coarse as his body, thinks that he will gain caste by becoming her suitor. For philosophy, even in her fallen estate, has a dignity of her own—and he, like a bald little blacksmith's apprentice as he is, having made some money and got out of durance, washes and dresses himself as a bridegroom and marries his master's daughter. What will be the issue of such marriages? Will they not be vile and bastard, devoid of truth and nature? 'They will.' Small, then, is the remnant of genuine philosophers; there may be a few who are citizens of small states, in which politics are not worth thinking of, or who have been detained by Theages' bridle of ill health; for my own case of the oracular sign is almost unique, and too rare to be worth mentioning. And these few when they have tasted the pleasures of philosophy, and have taken a look at that den of thieves and place of wild beasts, which is human life, will stand aside from the storm under the shelter of a wall, and try to preserve their own innocence and to depart in peace. 'A great work, too, will have been accomplished by them.' Great, yes, but not the greatest; for man is a social being, and can only attain his highest development in the society which is best suited to him.

Enough, then, of the causes why philosophy has such an evil name. Another question is, Which of existing states is suited to her? Not one of them; at present she is like some exotic seed which degenerates in a strange soil; only in her proper state will she be shown to be of heavenly growth. ‘And is her proper state ours or some other?’ Ours in all points but one, which was left undetermined. You may remember our saying that some living mind or witness of the legislator was needed in states. But we were afraid to enter upon a subject of such difficulty, and now the question recurs and has not grown easier:—How may philosophy be safely studied? Let us bring her into the light of day, and make an end of the inquiry.

In the first place, I say boldly that nothing can be worse than the present mode of study. Persons usually pick up a little philosophy in early youth, and in the intervals of business, but they never master the real difficulty, which is dialectic. Later, perhaps, they occasionally go to a lecture on philosophy. Years advance, and the sun of philosophy, unlike that of Heracleitus, sets never to rise again. This order of education should be reversed; it should begin with gymnastics in youth, and as the man strengthens, he should increase the gymnastics of his soul. Then, when active life is over, let him finally return to philosophy. ‘You are in earnest, Socrates, but the world will be equally earnest in withstanding you—no more than Thrasymachus.’ Do not make a quarrel between Thrasymachus and me, who were never enemies and are now good friends enough. And I shall do my best to convince him and all mankind of the truth of my words, or at any rate to prepare for the future when, in another life, we may again take part in similar discussions. ‘That will be a long time hence.’ Not long in comparison with eternity. The many will probably remain incredulous, for they have never seen the natural unity of ideas, but only artificial juxtapositions; not free and generous thoughts, but tricks of controversy and quips of law;—a perfect man ruling in a perfect state, even a single one they have not known. And we foresaw that there was no chance of perfection either in states or individuals until a necessity was laid upon philosophers—not the rogues, but those whom we called the useless class—of holding office; or until the sons of kings were inspired with a true love of philosophy. Whether in the infinity of past time there has been, or is in some distant land, or ever will be hereafter, an ideal such as we have described, we stoutly maintain that there has been, is, and will be such a state whenever the Muse of philosophy rules. Will you say that the world is of another mind? O, my friend, do not revile the world! They will soon change their opinion if they are gently entreated, and are taught the true nature of the philosopher. Who can hate a man who loves him? Or be jealous of one who has no jealousy? Consider, again, that the many hate not the true but the false philosophers—the pretenders who force their way in without invitation, and are always speaking of persons and not of principles, which is unlike the spirit of philosophy. For the true philosopher despises earthly strife; his eye is fixed on the eternal order in accordance with which he moulds himself into the Divine image (and not himself only, but other men), and is the creator of the virtues private as well as public. When mankind see that the happiness of states is only to be found in that image, will they be angry with us for attempting to delineate it? ‘Certainly not. But what will be the process of delineation?’ The artist will do nothing until he has made a tabula rasa; on this he will inscribe the constitution of a state, glancing often at the divine truth of nature, and from that deriving the godlike among men, mingling the two elements, rubbing out and painting in, until there is a perfect harmony or fusion of the divine and human. But perhaps the world will doubt the existence of such an artist. What will they doubt? That the philosopher is a lover of truth, having a nature akin to the best?—and if they admit this will they still quarrel with us for making philosophers our kings? ‘They will be less disposed to quarrel.’ Let us assume then that they are pacified. Still, a person may hesitate about the probability of the son of a king being a philosopher. And we do not deny that they are very liable to be corrupted; but yet surely in the course of ages there might be one exception—and one is enough. If one son of a king were a philosopher, and had obedient citizens, he might bring the ideal polity into being. Hence we conclude that our laws are not only the best, but that they are also possible, though not free from difficulty.

I gained nothing by evading the troublesome questions which arose concerning women and children. I will be wiser now and acknowledge that we must go to the bottom of another question: What is to be the education of our guardians? It was agreed that they were to be lovers of their country, and were to be tested in the refiner’s fire of pleasures and pains, and those who came forth pure and remained fixed in their principles were to have honours and rewards in life and after death. But at this point, the argument put on her veil and turned into another path. I hesitated to make the assertion which I now hazard,—that our guardians must be philosophers. You remember all the contradictory elements, which met in the philosopher—how difficult to find them all in a single person! Intelligence and spirit are not often combined with steadiness; the stolid, fearless, nature is averse to intellectual toil. And yet these opposite elements are all necessary, and therefore, as we were saying before, the aspirant must be tested in pleasures and dangers; and also, as we must now further add, in the highest branches of knowledge. You will remember, that when we spoke of the virtues mention was made of a longer road, which you were satisfied to leave unexplored. ‘Enough seemed to have been said.’ Enough, my friend; but what is enough while anything remains wanting? Of all men the guardian must not faint in the search after truth; he must be prepared to take the longer road, or he will never reach that higher region which is above the four virtues; and of the virtues too he must not only get an outline, but a clear and distinct vision. (Strange that we should be so precise about

trifles, so careless about the highest truths!) ‘And what are the highest?’ You to pretend unconsciousness, when you have so often heard me speak of the idea of good, about which we know so little, and without which though a man gain the world he has no profit of it! Some people imagine that the good is wisdom; but this involves a circle,—the good, they say, is wisdom, wisdom has to do with the good. According to others the good is pleasure; but then comes the absurdity that good is bad, for there are bad pleasures as well as good. Again, the good must have reality; a man may desire the appearance of virtue, but he will not desire the appearance of good. Ought our guardians then to be ignorant of this supreme principle, of which every man has a presentiment, and without which no man has any real knowledge of anything? ‘But, Socrates, what is this supreme principle, knowledge or pleasure, or what? You may think me troublesome, but I say that you have no business to be always repeating the doctrines of others instead of giving us your own.’ Can I say what I do not know? ‘You may offer an opinion.’ And will the blindness and crookedness of opinion content you when you might have the light and certainty of science? ‘I will only ask you to give such an explanation of the good as you have given already of temperance and justice.’ I wish that I could, but in my present mood I cannot reach to the height of the knowledge of the good. To the parent or principal I cannot introduce you, but to the child begotten in his image, which I may compare with the interest on the principal, I will. (Audit the account, and do not let me give you a false statement of the debt.) You remember our old distinction of the many beautiful and the one beautiful, the particular and the universal, the objects of sight and the objects of thought? Did you ever consider that the objects of sight imply a faculty of sight which is the most complex and costly of our senses, requiring not only objects of sense, but also a medium, which is light; without which the sight will not distinguish between colours and all will be a blank? For light is the noble bond between the perceiving faculty and the thing perceived, and the god who gives us light is the sun, who is the eye of the day, but is not to be confounded with the eye of man. This eye of the day or sun is what I call the child of the good, standing in the same relation to the visible world as the good to the intellectual. When the sun shines the eye sees, and in the intellectual world where truth is, there is sight and light. Now that which is the sun of intelligent natures, is the idea of good, the cause of knowledge and truth, yet other and fairer than they are, and standing in the same relation to them in which the sun stands to light. O inconceivable height of beauty, which is above knowledge and above truth! (‘You cannot surely mean pleasure,’ he said. Peace, I replied.) And this idea of good, like the sun, is also the cause of growth, and the author not of knowledge only, but of being, yet greater far than either in dignity and power. ‘That is a reach of thought more than human; but, pray, go on with the image, for I suspect that there is more behind.’ There is, I said; and bearing in mind our two suns or principles, imagine further their corresponding worlds—one of the visible, the other of the intelligible; you may assist your fancy by figuring the distinction under the image of a line divided into two unequal parts, and may again subdivide each part into two lesser segments representative of the stages of knowledge in either sphere. The lower portion of the lower or visible sphere will consist of shadows and reflections, and its upper and smaller portion will contain real objects in the world of nature or of art. The sphere of the intelligible will also have two divisions,—one of mathematics, in which there is no ascent but all is descent; no inquiring into premises, but only drawing of inferences. In this division the mind works with figures and numbers, the images of which are taken not from the shadows, but from the objects, although the truth of them is seen only with the mind’s eye; and they are used as hypotheses without being analysed. Whereas in the other division reason uses the hypotheses as stages or steps in the ascent to the idea of good, to which she fastens them, and then again descends, walking firmly in the region of ideas, and of ideas only, in her ascent as well as descent, and finally resting in them. ‘I partly understand,’ he replied; ‘you mean that the ideas of science are superior to the hypothetical, metaphorical conceptions of geometry and the other arts or sciences, whichever is to be the name of them; and the latter conceptions you refuse to make subjects of pure intellect, because they have no first principle, although when resting on a first principle, they pass into the higher sphere.’ You understand me very well, I said. And now to those four divisions of knowledge you may assign four corresponding faculties—pure intelligence to the highest sphere; active intelligence to the second; to the third, faith; to the fourth, the perception of shadows—and the clearness of the several faculties will be in the same ratio as the truth of the objects to which they are related...

Like Socrates, we may recapitulate the virtues of the philosopher. In language which seems to reach beyond the horizon of that age and country, he is described as ‘the spectator of all time and all existence.’ He has the noblest gifts of nature, and makes the highest use of them. All his desires are absorbed in the love of wisdom, which is the love of truth. None of the graces of a beautiful soul are wanting in him; neither can he fear death, or think much of human life. The ideal of modern times hardly retains the simplicity of the antique; there is not the same originality either in truth or error which characterized the Greeks. The philosopher is no longer living in the unseen, nor is he sent by an oracle to convince mankind of ignorance; nor does he regard knowledge as a system of ideas leading upwards by regular stages to the idea of good. The eagerness of the pursuit has abated; there is more division of labour and less of comprehensive reflection upon nature and human life as a whole; more of exact observation and less of anticipation and inspiration. Still, in the altered conditions of knowledge, the parallel is not wholly lost; and there may be a use in translating the conception of Plato into the language of our own age. The philosopher in modern times is one who fixes his mind on

the laws of nature in their sequence and connexion, not on fragments or pictures of nature; on history, not on controversy; on the truths which are acknowledged by the few, not on the opinions of the many. He is aware of the importance of ‘classifying according to nature,’ and will try to ‘separate the limbs of science without breaking them’ (Phaedr.). There is no part of truth, whether great or small, which he will dishonour; and in the least things he will discern the greatest (Parmen.). Like the ancient philosopher he sees the world pervaded by analogies, but he can also tell ‘why in some cases a single instance is sufficient for an induction’ (Mill’s Logic), while in other cases a thousand examples would prove nothing. He inquires into a portion of knowledge only, because the whole has grown too vast to be embraced by a single mind or life. He has a clearer conception of the divisions of science and of their relation to the mind of man than was possible to the ancients. Like Plato, he has a vision of the unity of knowledge, not as the beginning of philosophy to be attained by a study of elementary mathematics, but as the far-off result of the working of many minds in many ages. He is aware that mathematical studies are preliminary to almost every other; at the same time, he will not reduce all varieties of knowledge to the type of mathematics. He too must have a nobility of character, without which genius loses the better half of greatness. Regarding the world as a point in immensity, and each individual as a link in a never-ending chain of existence, he will not think much of his own life, or be greatly afraid of death.

Adeimantus objects first of all to the form of the Socratic reasoning, thus showing that Plato is aware of the imperfection of his own method. He brings the accusation against himself which might be brought against him by a modern logician—that he extracts the answer because he knows how to put the question. In a long argument words are apt to change their meaning slightly, or premises may be assumed or conclusions inferred with rather too much certainty or universality; the variation at each step may be unobserved, and yet at last the divergence becomes considerable. Hence the failure of attempts to apply arithmetical or algebraic formulae to logic. The imperfection, or rather the higher and more elastic nature of language, does not allow words to have the precision of numbers or of symbols. And this quality in language impairs the force of an argument which has many steps.

The objection, though fairly met by Socrates in this particular instance, may be regarded as implying a reflection upon the Socratic mode of reasoning. And here, as elsewhere, Plato seems to intimate that the time had come when the negative and interrogative method of Socrates must be superseded by a positive and constructive one, of which examples are given in some of the later dialogues. Adeimantus further argues that the ideal is wholly at variance with facts; for experience proves philosophers to be either useless or rogues. Contrary to all expectation Socrates has no hesitation in admitting the truth of this, and explains the anomaly in an allegory, first characteristically depreciating his own inventive powers. In this allegory the people are distinguished from the professional politicians, and, as elsewhere, are spoken of in a tone of pity rather than of censure under the image of ‘the noble captain who is not very quick in his perceptions.’

The uselessness of philosophers is explained by the circumstance that mankind will not use them. The world in all ages has been divided between contempt and fear of those who employ the power of ideas and know no other weapons. Concerning the false philosopher, Socrates argues that the best is most liable to corruption; and that the finer nature is more likely to suffer from alien conditions. We too observe that there are some kinds of excellence which spring from a peculiar delicacy of constitution; as is evidently true of the poetical and imaginative temperament, which often seems to depend on impressions, and hence can only breathe or live in a certain atmosphere. The man of genius has greater pains and greater pleasures, greater powers and greater weaknesses, and often a greater play of character than is to be found in ordinary men. He can assume the disguise of virtue or disinterestedness without having them, or veil personal enmity in the language of patriotism and philosophy,—he can say the word which all men are thinking, he has an insight which is terrible into the follies and weaknesses of his fellow-men. An Alcibiades, a Mirabeau, or a Napoleon the First, are born either to be the authors of great evils in states, or ‘of great good, when they are drawn in that direction.’

Yet the thesis, ‘corruptio optimi pessima,’ cannot be maintained generally or without regard to the kind of excellence which is corrupted. The alien conditions which are corrupting to one nature, may be the elements of culture to another. In general a man can only receive his highest development in a congenial state or family, among friends or fellow-workers. But also he may sometimes be stirred by adverse circumstances to such a degree that he rises up against them and reforms them. And while weaker or coarser characters will extract good out of evil, say in a corrupt state of the church or of society, and live on happily, allowing the evil to remain, the finer or stronger natures may be crushed or spoiled by surrounding influences—may become misanthrope and philanthrope by turns; or in a few instances, like the founders of the monastic orders, or the Reformers, owing to some peculiarity in themselves or in their age, may break away entirely from the world and from the church, sometimes into great good, sometimes into great evil, sometimes into both. And the same holds in the lesser sphere of a convent, a school, a family.

Plato would have us consider how easily the best natures are overpowered by public opinion, and what efforts the rest of mankind will make to get possession of them. The world, the church, their own profession, any political or party organization, are always carrying them off their legs and teaching them to apply high and holy names to their own prejudices and interests. The ‘monster’ corporation to which they belong judges right and truth to be the pleasure of the community. The individual becomes one with his order; or, if he resists, the world is too much for him, and will sooner or later be revenged on him. This is, perhaps, a one-sided but not wholly untrue picture of the maxims and practice of mankind when they ‘sit down together at an assembly,’ either in ancient or modern times.

When the higher natures are corrupted by politics, the lower take possession of the vacant place of philosophy. This is described in one of those continuous images in which the argument, to use a Platonic expression, ‘veils herself,’ and which is dropped and reappears at intervals. The question is asked,—Why are the citizens of states so hostile to philosophy? The answer is, that they do not know her. And yet there is also a better mind of the many; they would believe if they were taught. But hitherto they have only known a conventional imitation of philosophy, words without thoughts, systems which have no life in them; a (divine) person uttering the words of beauty and freedom, the friend of man holding communion with the Eternal, and seeking to frame the state in that image, they have never known. The same double feeling respecting the mass of mankind has always existed among men. The first thought is that the people are the enemies of truth and right; the second, that this only arises out of an accidental error and confusion, and that they do not really hate those who love them, if they could be educated to know them.

In the latter part of the sixth book, three questions have to be considered: 1st, the nature of the longer and more circuitous way, which is contrasted with the shorter and more imperfect method of Book IV; 2nd, the heavenly pattern or idea of the state; 3rd, the relation of the divisions of knowledge to one another and to the corresponding faculties of the soul:

1. Of the higher method of knowledge in Plato we have only a glimpse. Neither here nor in the Phaedrus or Symposium, nor yet in the Philebus or Sophist, does he give any clear explanation of his meaning. He would probably have described his method as proceeding by regular steps to a system of universal knowledge, which inferred the parts from the whole rather than the whole from the parts. This ideal logic is not practised by him in the search after justice, or in the analysis of the parts of the soul; there, like Aristotle in the Nicomachean Ethics, he argues from experience and the common use of language. But at the end of the sixth book he conceives another and more perfect method, in which all ideas are only steps or grades or moments of thought, forming a connected whole which is self-supporting, and in which consistency is the test of truth. He does not explain to us in detail the nature of the process. Like many other thinkers both in ancient and modern times his mind seems to be filled with a vacant form which he is unable to realize. He supposes the sciences to have a natural order and connexion in an age when they can hardly be said to exist. He is hastening on to the ‘end of the intellectual world’ without even making a beginning of them.

In modern times we hardly need to be reminded that the process of acquiring knowledge is here confused with the contemplation of absolute knowledge. In all science a priori and a posteriori truths mingle in various proportions. The a priori part is that which is derived from the most universal experience of men, or is universally accepted by them; the a posteriori is that which grows up around the more general principles and becomes imperceptibly one with them. But Plato erroneously imagines that the synthesis is separable from the analysis, and that the method of science can anticipate science. In entertaining such a vision of a priori knowledge he is sufficiently justified, or at least his meaning may be sufficiently explained by the similar attempts of Descartes, Kant, Hegel, and even of Bacon himself, in modern philosophy. Anticipations or divinations, or prophetic glimpses of truths whether concerning man or nature, seem to stand in the same relation to ancient philosophy which hypotheses bear to modern inductive science. These ‘guesses at truth’ were not made at random; they arose from a superficial impression of uniformities and first principles in nature which the genius of the Greek, contemplating the expanse of heaven and earth, seemed to recognize in the distance. Nor can we deny that in ancient times knowledge must have stood still, and the human mind been deprived of the very instruments of thought, if philosophy had been strictly confined to the results of experience.

2. Plato supposes that when the tablet has been made blank the artist will fill in the lineaments of the ideal state. Is this a pattern laid up in heaven, or mere vacancy on which he is supposed to gaze with wondering eye? The answer is, that such ideals are framed partly by the omission of particulars, partly by imagination perfecting the form which experience supplies (Phaedo). Plato represents these ideals in a figure as belonging to another world; and in modern times the idea will sometimes seem to precede, at other times to co-operate with the hand of the artist. As in science, so also in creative art, there is a synthetical as well as an analytical method. One man will have the whole in his mind before he begins; to another the processes of mind and hand will be simultaneous.

3. There is no difficulty in seeing that Plato's divisions of knowledge are based, first, on the fundamental antithesis of sensible and intellectual which pervades the whole pre-Socratic philosophy; in which is implied also the opposition of the permanent and transient, of the universal and particular. But the age of philosophy in which he lived seemed to require a further distinction;—numbers and figures were beginning to separate from ideas. The world could no longer regard justice as a cube, and was learning to see, though imperfectly, that the abstractions of sense were distinct from the abstractions of mind. Between the Eleatic being or essence and the shadows of phenomena, the Pythagorean principle of number found a place, and was, as Aristotle remarks, a conducting medium from one to the other. Hence Plato is led to introduce a third term which had not hitherto entered into the scheme of his philosophy. He had observed the use of mathematics in education; they were the best preparation for higher studies. The subjective relation between them further suggested an objective one; although the passage from one to the other is really imaginary (Metaph.). For metaphysical and moral philosophy has no connexion with mathematics; number and figure are the abstractions of time and space, not the expressions of purely intellectual conceptions. When divested of metaphor, a straight line or a square has no more to do with right and justice than a crooked line with vice. The figurative association was mistaken for a real one; and thus the three latter divisions of the Platonic proportion were constructed.

There is more difficulty in comprehending how he arrived at the first term of the series, which is nowhere else mentioned, and has no reference to any other part of his system. Nor indeed does the relation of shadows to objects correspond to the relation of numbers to ideas. Probably Plato has been led by the love of analogy (Timaeus) to make four terms instead of three, although the objects perceived in both divisions of the lower sphere are equally objects of sense. He is also preparing the way, as his manner is, for the shadows of images at the beginning of the seventh book, and the imitation of an imitation in the tenth. The line may be regarded as reaching from unity to infinity, and is divided into two unequal parts, and subdivided into two more; each lower sphere is the multiplication of the preceding. Of the four faculties, faith in the lower division has an intermediate position (cp. for the use of the word faith or belief, (Greek), Timaeus), contrasting equally with the vagueness of the perception of shadows (Greek) and the higher certainty of understanding (Greek) and reason (Greek).

The difference between understanding and mind or reason (Greek) is analogous to the difference between acquiring knowledge in the parts and the contemplation of the whole. True knowledge is a whole, and is at rest; consistency and universality are the tests of truth. To this self-evidencing knowledge of the whole the faculty of mind is supposed to correspond. But there is a knowledge of the understanding which is incomplete and in motion always, because unable to rest in the subordinate ideas. Those ideas are called both images and hypotheses—images because they are clothed in sense, hypotheses because they are assumptions only, until they are brought into connexion with the idea of good.

The general meaning of the passage, 'Noble, then, is the bond which links together sight...And of this kind I spoke as the intelligible...' so far as the thought contained in it admits of being translated into the terms of modern philosophy, may be described or explained as follows:—There is a truth, one and self-existent, to which by the help of a ladder let down from above, the human intelligence may ascend. This unity is like the sun in the heavens, the light by which all things are seen, the being by which they are created and sustained. It is the IDEA of good. And the steps of the ladder leading up to this highest or universal existence are the mathematical sciences, which also contain in themselves an element of the universal. These, too, we see in a new manner when we connect them with the idea of good. They then cease to be hypotheses or pictures, and become essential parts of a higher truth which is at once their first principle and their final cause.

We cannot give any more precise meaning to this remarkable passage, but we may trace in it several rudiments or vestiges of thought which are common to us and to Plato: such as (1) the unity and correlation of the sciences, or rather of science, for in Plato's time they were not yet parted off or distinguished; (2) the existence of a Divine Power, or life or idea or cause or reason, not yet conceived or no longer conceived as in the Timaeus and elsewhere under the form of a person; (3) the recognition of the hypothetical and conditional character of the mathematical sciences, and in a measure of every science when isolated from the rest; (4) the conviction of a truth which is invisible, and of a law, though hardly a law of nature, which permeates the intellectual rather than the visible world.

The method of Socrates is hesitating and tentative, awaiting the fuller explanation of the idea of good, and of the nature of dialectic in the seventh book. The imperfect intelligence of Glaucon, and the reluctance of Socrates to make a beginning, mark the difficulty of the subject. The allusion to Theages' bridle, and to the internal oracle, or demonic sign, of Socrates, which here, as always in Plato, is only prohibitory; the remark that the salvation of any remnant of good in the present evil state of the world is due to God only; the reference to a future state of existence, which is unknown to Glaucon in the tenth book, and in which the discussions of Socrates and his disciples would be resumed; the surprise in the answers; the fanciful irony of Socrates, where he pretends that he

can only describe the strange position of the philosopher in a figure of speech; the original observation that the Sophists, after all, are only the representatives and not the leaders of public opinion; the picture of the philosopher standing aside in the shower of sleet under a wall; the figure of 'the great beast' followed by the expression of good-will towards the common people who would not have rejected the philosopher if they had known him; the 'right noble thought' that the highest truths demand the greatest exactness; the hesitation of Socrates in returning once more to his well-worn theme of the idea of good; the ludicrous earnestness of Glaucon; the comparison of philosophy to a deserted maiden who marries beneath her—are some of the most interesting characteristics of the sixth book.

Yet a few more words may be added, on the old theme, which was so oft discussed in the Socratic circle, of which we, like Glaucon and Adeimantus, would fain, if possible, have a clearer notion. Like them, we are dissatisfied when we are told that the idea of good can only be revealed to a student of the mathematical sciences, and we are inclined to think that neither we nor they could have been led along that path to any satisfactory goal. For we have learned that differences of quantity cannot pass into differences of quality, and that the mathematical sciences can never rise above themselves into the sphere of our higher thoughts, although they may sometimes furnish symbols and expressions of them, and may train the mind in habits of abstraction and self-concentration. The illusion which was natural to an ancient philosopher has ceased to be an illusion to us. But if the process by which we are supposed to arrive at the idea of good be really imaginary, may not the idea itself be also a mere abstraction? We remark, first, that in all ages, and especially in primitive philosophy, words such as being, essence, unity, good, have exerted an extraordinary influence over the minds of men. The meagreness or negativeness of their content has been in an inverse ratio to their power. They have become the forms under which all things were comprehended. There was a need or instinct in the human soul which they satisfied; they were not ideas, but gods, and to this new mythology the men of a later generation began to attach the powers and associations of the elder deities.

The idea of good is one of those sacred words or forms of thought, which were beginning to take the place of the old mythology. It meant unity, in which all time and all existence were gathered up. It was the truth of all things, and also the light in which they shone forth, and became evident to intelligences human and divine. It was the cause of all things, the power by which they were brought into being. It was the universal reason divested of a human personality. It was the life as well as the light of the world, all knowledge and all power were comprehended in it. The way to it was through the mathematical sciences, and these too were dependent on it. To ask whether God was the maker of it, or made by it, would be like asking whether God could be conceived apart from goodness, or goodness apart from God. The God of the Timaeus is not really at variance with the idea of good; they are aspects of the same, differing only as the personal from the impersonal, or the masculine from the neuter, the one being the expression or language of mythology, the other of philosophy.

This, or something like this, is the meaning of the idea of good as conceived by Plato. Ideas of number, order, harmony, development may also be said to enter into it. The paraphrase which has just been given of it goes beyond the actual words of Plato. We have perhaps arrived at the stage of philosophy which enables us to understand what he is aiming at, better than he did himself. We are beginning to realize what he saw darkly and at a distance. But if he could have been told that this, or some conception of the same kind, but higher than this, was the truth at which he was aiming, and the need which he sought to supply, he would gladly have recognized that more was contained in his own thoughts than he himself knew. As his words are few and his manner reticent and tentative, so must the style of his interpreter be. We should not approach his meaning more nearly by attempting to define it further. In translating him into the language of modern thought, we might insensibly lose the spirit of ancient philosophy. It is remarkable that although Plato speaks of the idea of good as the first principle of truth and being, it is nowhere mentioned in his writings except in this passage. Nor did it retain any hold upon the minds of his disciples in a later generation; it was probably unintelligible to them. Nor does the mention of it in Aristotle appear to have any reference to this or any other passage in his extant writings.

BOOK VII. And now I will describe in a figure the enlightenment or unenlightenment of our nature:—Imagine human beings living in an underground den which is open towards the light; they have been there from childhood, having their necks and legs chained, and can only see into the den. At a distance there is a fire, and between the fire and the prisoners a raised way, and a low wall is built along the way, like the screen over which marionette players show their puppets. Behind the wall appear moving figures, who hold in their hands various works of art, and among them images of men and animals, wood and stone, and some of the passers-by are talking and others silent. 'A strange parable,' he said, 'and strange captives.' They are ourselves, I replied; and they see only the shadows of the images which the fire throws on the wall of the den; to these they give names, and if we add an echo which returns from the wall, the voices of the passengers will seem to proceed from the shadows. Suppose now that you suddenly turn

them round and make them look with pain and grief to themselves at the real images; will they believe them to be real? Will not their eyes be dazzled, and will they not try to get away from the light to something which they are able to behold without blinking? And suppose further, that they are dragged up a steep and rugged ascent into the presence of the sun himself, will not their sight be darkened with the excess of light? Some time will pass before they get the habit of perceiving at all; and at first they will be able to perceive only shadows and reflections in the water; then they will recognize the moon and the stars, and will at length behold the sun in his own proper place as he is. Last of all they will conclude:—This is he who gives us the year and the seasons, and is the author of all that we see. How will they rejoice in passing from darkness to light! How worthless to them will seem the honours and glories of the den! But now imagine further, that they descend into their old habitations;—in that underground dwelling they will not see as well as their fellows, and will not be able to compete with them in the measurement of the shadows on the wall; there will be many jokes about the man who went on a visit to the sun and lost his eyes, and if they find anybody trying to set free and enlighten one of their number, they will put him to death, if they can catch him. Now the cave or den is the world of sight, the fire is the sun, the way upwards is the way to knowledge, and in the world of knowledge the idea of good is last seen and with difficulty, but when seen is inferred to be the author of good and right—parent of the lord of light in this world, and of truth and understanding in the other. He who attains to the beatific vision is always going upwards; he is unwilling to descend into political assemblies and courts of law; for his eyes are apt to blink at the images or shadows of images which they behold in them—he cannot enter into the ideas of those who have never in their lives understood the relation of the shadow to the substance. But blindness is of two kinds, and may be caused either by passing out of darkness into light or out of light into darkness, and a man of sense will distinguish between them, and will not laugh equally at both of them, but the blindness which arises from fulness of light he will deem blessed, and pity the other; or if he laugh at the puzzled soul looking at the sun, he will have more reason to laugh than the inhabitants of the den at those who descend from above. There is a further lesson taught by this parable of ours. Some persons fancy that instruction is like giving eyes to the blind, but we say that the faculty of sight was always there, and that the soul only requires to be turned round towards the light. And this is conversion; other virtues are almost like bodily habits, and may be acquired in the same manner, but intelligence has a diviner life, and is indestructible, turning either to good or evil according to the direction given. Did you never observe how the mind of a clever rogue peers out of his eyes, and the more clearly he sees, the more evil he does? Now if you take such an one, and cut away from him those leaden weights of pleasure and desire which bind his soul to earth, his intelligence will be turned round, and he will behold the truth as clearly as he now discerns his meaner ends. And have we not decided that our rulers must neither be so uneducated as to have no fixed rule of life, nor so over-educated as to be unwilling to leave their paradise for the business of the world? We must choose out therefore the natures who are most likely to ascend to the light and knowledge of the good; but we must not allow them to remain in the region of light; they must be forced down again among the captives in the den to partake of their labours and honours. ‘Will they not think this a hardship?’ You should remember that our purpose in framing the State was not that our citizens should do what they like, but that they should serve the State for the common good of all. May we not fairly say to our philosopher,—Friend, we do you no wrong; for in other States philosophy grows wild, and a wild plant owes nothing to the gardener, but you have been trained by us to be the rulers and kings of our hive, and therefore we must insist on your descending into the den. You must, each of you, take your turn, and become able to use your eyes in the dark, and with a little practice you will see far better than those who quarrel about the shadows, whose knowledge is a dream only, whilst yours is a waking reality. It may be that the saint or philosopher who is best fitted, may also be the least inclined to rule, but necessity is laid upon him, and he must no longer live in the heaven of ideas. And this will be the salvation of the State. For those who rule must not be those who are desirous to rule; and, if you can offer to our citizens a better life than that of rulers generally is, there will be a chance that the rich, not only in this world’s goods, but in virtue and wisdom, may bear rule. And the only life which is better than the life of political ambition is that of philosophy, which is also the best preparation for the government of a State.

Then now comes the question,—How shall we create our rulers; what way is there from darkness to light? The change is effected by philosophy; it is not the turning over of an oyster-shell, but the conversion of a soul from night to day, from becoming to being. And what training will draw the soul upwards? Our former education had two branches, gymnastic, which was occupied with the body, and music, the sister art, which infused a natural harmony into mind and literature; but neither of these sciences gave any promise of doing what we want. Nothing remains to us but that universal or primary science of which all the arts and sciences are partakers, I mean number or calculation. ‘Very true.’ Including the art of war? ‘Yes, certainly.’ Then there is something ludicrous about Palamedes in the tragedy, coming in and saying that he had invented number, and had counted the ranks and set them in order. For if Agamemnon could not count his feet (and without number how could he?) he must have been a pretty sort of general indeed. No man should be a soldier who cannot count, and indeed he is hardly to be called a man. But I am not speaking of these practical applications of arithmetic, for number, in my view, is rather to be regarded as a conductor to thought and being. I will explain what I mean by the last expression:—Things sensible are of two kinds; the one class invite or stimulate the mind, while in

the other the mind acquiesces. Now the stimulating class are the things which suggest contrast and relation. For example, suppose that I hold up to the eyes three fingers—a fore finger, a middle finger, a little finger—the sight equally recognizes all three fingers, but without number cannot further distinguish them. Or again, suppose two objects to be relatively great and small, these ideas of greatness and smallness are supplied not by the sense, but by the mind. And the perception of their contrast or relation quickens and sets in motion the mind, which is puzzled by the confused intimations of sense, and has recourse to number in order to find out whether the things indicated are one or more than one. Number replies that they are two and not one, and are to be distinguished from one another. Again, the sight beholds great and small, but only in a confused chaos, and not until they are distinguished does the question arise of their respective natures; we are thus led on to the distinction between the visible and intelligible. That was what I meant when I spoke of stimulants to the intellect; I was thinking of the contradictions which arise in perception. The idea of unity, for example, like that of a finger, does not arouse thought unless involving some conception of plurality; but when the one is also the opposite of one, the contradiction gives rise to reflection; an example of this is afforded by any object of sight. All number has also an elevating effect; it raises the mind out of the foam and flux of generation to the contemplation of being, having lesser military and retail uses also. The retail use is not required by us; but as our guardian is to be a soldier as well as a philosopher, the military one may be retained. And to our higher purpose no science can be better adapted; but it must be pursued in the spirit of a philosopher, not of a shopkeeper. It is concerned, not with visible objects, but with abstract truth; for numbers are pure abstractions—the true arithmetician indignantly denies that his unit is capable of division. When you divide, he insists that you are only multiplying; his ‘one’ is not material or resolvable into fractions, but an unvarying and absolute equality; and this proves the purely intellectual character of his study. Note also the great power which arithmetic has of sharpening the wits; no other discipline is equally severe, or an equal test of general ability, or equally improving to a stupid person.

Let our second branch of education be geometry. ‘I can easily see,’ replied Glaucon, ‘that the skill of the general will be doubled by his knowledge of geometry.’ That is a small matter; the use of geometry, to which I refer, is the assistance given by it in the contemplation of the idea of good, and the compelling the mind to look at true being, and not at generation only. Yet the present mode of pursuing these studies, as any one who is the least of a mathematician is aware, is mean and ridiculous; they are made to look downwards to the arts, and not upwards to eternal existence. The geometer is always talking of squaring, subtending, apposing, as if he had in view action; whereas knowledge is the real object of the study. It should elevate the soul, and create the mind of philosophy; it should raise up what has fallen down, not to speak of lesser uses in war and military tactics, and in the improvement of the faculties.

Shall we propose, as a third branch of our education, astronomy? ‘Very good,’ replied Glaucon; ‘the knowledge of the heavens is necessary at once for husbandry, navigation, military tactics.’ I like your way of giving useful reasons for everything in order to make friends of the world. And there is a difficulty in proving to mankind that education is not only useful information but a purification of the eye of the soul, which is better than the bodily eye, for by this alone is truth seen. Now, will you appeal to mankind in general or to the philosopher? or would you prefer to look to yourself only? ‘Every man is his own best friend.’ Then take a step backward, for we are out of order, and insert the third dimension which is of solids, after the second which is of planes, and then you may proceed to solids in motion. But solid geometry is not popular and has not the patronage of the State, nor is the use of it fully recognized; the difficulty is great, and the votaries of the study are conceited and impatient. Still the charm of the pursuit wins upon men, and, if government would lend a little assistance, there might be great progress made. ‘Very true,’ replied Glaucon; ‘but do I understand you now to begin with plane geometry, and to place next geometry of solids, and thirdly, astronomy, or the motion of solids?’ Yes, I said; my hastiness has only hindered us.

‘Very good, and now let us proceed to astronomy, about which I am willing to speak in your lofty strain. No one can fail to see that the contemplation of the heavens draws the soul upwards.’ I am an exception, then; astronomy as studied at present appears to me to draw the soul not upwards, but downwards. Star-gazing is just looking up at the ceiling—no better; a man may lie on his back on land or on water—he may look up or look down, but there is no science in that. The vision of knowledge of which I speak is seen not with the eyes, but with the mind. All the magnificence of the heavens is but the embroidery of a copy which falls far short of the divine Original, and teaches nothing about the absolute harmonies or motions of things. Their beauty is like the beauty of figures drawn by the hand of Daedalus or any other great artist, which may be used for illustration, but no mathematician would seek to obtain from them true conceptions of equality or numerical relations. How ridiculous then to look for these in the map of the heavens, in which the imperfection of matter comes in everywhere as a disturbing element, marring the symmetry of day and night, of months and years, of the sun and stars in their courses. Only by problems can we place astronomy on a truly scientific basis. Let the heavens alone, and exert the intellect.

Still, mathematics admit of other applications, as the Pythagoreans say, and we agree. There is a sister science of harmonical motion, adapted to the ear as astronomy is to the eye, and there may be other applications also. Let us inquire of the Pythagoreans about them, not forgetting that we have an aim higher than theirs, which is the relation of these sciences to the idea of good. The error which pervades astronomy also pervades harmonics. The musicians put their ears in the place of their minds. 'Yes,' replied Glaucon, 'I like to see them laying their ears alongside of their neighbours' faces—some saying, "That's a new note," others declaring that the two notes are the same.' Yes, I said; but you mean the empirics who are always twisting and torturing the strings of the lyre, and quarrelling about the tempers of the strings; I am referring rather to the Pythagorean harmonists, who are almost equally in error. For they investigate only the numbers of the consonances which are heard, and ascend no higher,—of the true numerical harmony which is unheard, and is only to be found in problems, they have not even a conception. 'That last,' he said, 'must be a marvellous thing.' A thing, I replied, which is only useful if pursued with a view to the good.

All these sciences are the prelude of the strain, and are profitable if they are regarded in their natural relations to one another. 'I dare say, Socrates,' said Glaucon; 'but such a study will be an endless business.' What study do you mean—of the prelude, or what? For all these things are only the prelude, and you surely do not suppose that a mere mathematician is also a dialectician? 'Certainly not. I have hardly ever known a mathematician who could reason.' And yet, Glaucon, is not true reasoning that hymn of dialectic which is the music of the intellectual world, and which was by us compared to the effort of sight, when from beholding the shadows on the wall we arrived at last at the images which gave the shadows? Even so the dialectical faculty withdrawing from sense arrives by the pure intellect at the contemplation of the idea of good, and never rests but at the very end of the intellectual world. And the royal road out of the cave into the light, and the blinking of the eyes at the sun and turning to contemplate the shadows of reality, not the shadows of an image only—this progress and gradual acquisition of a new faculty of sight by the help of the mathematical sciences, is the elevation of the soul to the contemplation of the highest ideal of being.

'So far, I agree with you. But now, leaving the prelude, let us proceed to the hymn. What, then, is the nature of dialectic, and what are the paths which lead thither?' Dear Glaucon, you cannot follow me here. There can be no revelation of the absolute truth to one who has not been disciplined in the previous sciences. But that there is a science of absolute truth, which is attained in some way very different from those now practised, I am confident. For all other arts or sciences are relative to human needs and opinions; and the mathematical sciences are but a dream or hypothesis of true being, and never analyse their own principles. Dialectic alone rises to the principle which is above hypotheses, converting and gently leading the eye of the soul out of the barbarous slough of ignorance into the light of the upper world, with the help of the sciences which we have been describing—sciences, as they are often termed, although they require some other name, implying greater clearness than opinion and less clearness than science, and this in our previous sketch was understanding. And so we get four names—two for intellect, and two for opinion,—reason or mind, understanding, faith, perception of shadows—which make a proportion— being:becoming::intellect:opinion—and science:belief::understanding: perception of shadows. Dialectic may be further described as that science which defines and explains the essence or being of each nature, which distinguishes and abstracts the good, and is ready to do battle against all opponents in the cause of good. To him who is not a dialectician life is but a sleepy dream; and many a man is in his grave before his is well waked up. And would you have the future rulers of your ideal State intelligent beings, or stupid as posts? 'Certainly not the latter.' Then you must train them in dialectic, which will teach them to ask and answer questions, and is the coping-stone of the sciences.

I dare say that you have not forgotten how our rulers were chosen; and the process of selection may be carried a step further:—As before, they must be constant and valiant, good-looking, and of noble manners, but now they must also have natural ability which education will improve; that is to say, they must be quick at learning, capable of mental toil, retentive, solid, diligent natures, who combine intellectual with moral virtues; not lame and one-sided, diligent in bodily exercise and indolent in mind, or conversely; not a maimed soul, which hates falsehood and yet unintentionally is always wallowing in the mire of ignorance; not a bastard or feeble person, but sound in wind and limb, and in perfect condition for the great gymnastic trial of the mind. Justice herself can find no fault with natures such as these; and they will be the saviours of our State; disciples of another sort would only make philosophy more ridiculous than she is at present. Forgive my enthusiasm; I am becoming excited; but when I see her trampled underfoot, I am angry at the authors of her disgrace. 'I did not notice that you were more excited than you ought to have been.' But I felt that I was. Now do not let us forget another point in the selection of our disciples—that they must be young and not old. For Solon is mistaken in saying that an old man can be always learning; youth is the time of study, and here we must remember that the mind is free and dainty, and, unlike the body, must not be made to work against the grain. Learning should be at first a sort of play, in which the natural bent is detected. As in training them for war, the young dogs should at first only taste blood; but when the necessary gymnastics are over which during two or three years divide life between sleep and bodily exercise, then the education of the soul

will become a more serious matter. At twenty years of age, a selection must be made of the more promising disciples, with whom a new epoch of education will begin. The sciences which they have hitherto learned in fragments will now be brought into relation with each other and with true being; for the power of combining them is the test of speculative and dialectical ability. And afterwards at thirty a further selection shall be made of those who are able to withdraw from the world of sense into the abstraction of ideas. But at this point, judging from present experience, there is a danger that dialectic may be the source of many evils. The danger may be illustrated by a parallel case:—Imagine a person who has been brought up in wealth and luxury amid a crowd of flatterers, and who is suddenly informed that he is a supposititious son. He has hitherto honoured his reputed parents and disregarded the flatterers, and now he does the reverse. This is just what happens with a man's principles. There are certain doctrines which he learnt at home and which exercised a parental authority over him. Presently he finds that imputations are cast upon them; a troublesome querist comes and asks, 'What is the just and good?' or proves that virtue is vice and vice virtue, and his mind becomes unsettled, and he ceases to love, honour, and obey them as he has hitherto done. He is seduced into the life of pleasure, and becomes a lawless person and a rogue. The case of such speculators is very pitiable, and, in order that our thirty years' old pupils may not require this pity, let us take every possible care that young persons do not study philosophy too early. For a young man is a sort of puppy who only plays with an argument; and is reasoned into and out of his opinions every day; he soon begins to believe nothing, and brings himself and philosophy into discredit. A man of thirty does not run on in this way; he will argue and not merely contradict, and adds new honour to philosophy by the sobriety of his conduct. What time shall we allow for this second gymnastic training of the soul?—say, twice the time required for the gymnastics of the body; six, or perhaps five years, to commence at thirty, and then for fifteen years let the student go down into the den, and command armies, and gain experience of life. At fifty let him return to the end of all things, and have his eyes uplifted to the idea of good, and order his life after that pattern; if necessary, taking his turn at the helm of State, and training up others to be his successors. When his time comes he shall depart in peace to the islands of the blest. He shall be honoured with sacrifices, and receive such worship as the Pythian oracle approves.

'You are a statuary, Socrates, and have made a perfect image of our governors.' Yes, and of our governesses, for the women will share in all things with the men. And you will admit that our State is not a mere aspiration, but may really come into being when there shall arise philosopher-kings, one or more, who will despise earthly vanities, and will be the servants of justice only. 'And how will they begin their work?' Their first act will be to send away into the country all those who are more than ten years of age, and to proceed with those who are left...

At the commencement of the sixth book, Plato anticipated his explanation of the relation of the philosopher to the world in an allegory, in this, as in other passages, following the order which he prescribes in education, and proceeding from the concrete to the abstract. At the commencement of Book VII, under the figure of a cave having an opening towards a fire and a way upwards to the true light, he returns to view the divisions of knowledge, exhibiting familiarly, as in a picture, the result which had been hardly won by a great effort of thought in the previous discussion; at the same time casting a glance onward at the dialectical process, which is represented by the way leading from darkness to light. The shadows, the images, the reflection of the sun and stars in the water, the stars and sun themselves, severally correspond,—the first, to the realm of fancy and poetry,—the second, to the world of sense,—the third, to the abstractions or universals of sense, of which the mathematical sciences furnish the type,—the fourth and last to the same abstractions, when seen in the unity of the idea, from which they derive a new meaning and power. The true dialectical process begins with the contemplation of the real stars, and not mere reflections of them, and ends with the recognition of the sun, or idea of good, as the parent not only of light but of warmth and growth. To the divisions of knowledge the stages of education partly answer:—first, there is the early education of childhood and youth in the fancies of the poets, and in the laws and customs of the State;—then there is the training of the body to be a warrior athlete, and a good servant of the mind;—and thirdly, after an interval follows the education of later life, which begins with mathematics and proceeds to philosophy in general.

There seem to be two great aims in the philosophy of Plato,—first, to realize abstractions; secondly, to connect them. According to him, the true education is that which draws men from becoming to being, and to a comprehensive survey of all being. He desires to develop in the human mind the faculty of seeing the universal in all things; until at last the particulars of sense drop away and the universal alone remains. He then seeks to combine the universals which he has disengaged from sense, not perceiving that the correlation of them has no other basis but the common use of language. He never understands that abstractions, as Hegel says, are 'mere abstractions'—of use when employed in the arrangement of facts, but adding nothing to the sum of knowledge when pursued apart from them, or with reference to an imaginary idea of good. Still the exercise of the faculty of abstraction apart from facts has enlarged the mind, and played a great part in the education of the human race. Plato appreciated the value of this faculty, and saw that it might be quickened by the study of number and relation. All things in which there is opposition or proportion are suggestive of reflection. The mere impression of sense evokes no power of thought or of mind, but when sensible objects ask to be

compared and distinguished, then philosophy begins. The science of arithmetic first suggests such distinctions. The follow in order the other sciences of plain and solid geometry, and of solids in motion, one branch of which is astronomy or the harmony of the spheres,—to this is appended the sister science of the harmony of sounds. Plato seems also to hint at the possibility of other applications of arithmetical or mathematical proportions, such as we employ in chemistry and natural philosophy, such as the Pythagoreans and even Aristotle make use of in Ethics and Politics, e.g. his distinction between arithmetical and geometrical proportion in the Ethics (Book V), or between numerical and proportional equality in the Politics.

The modern mathematician will readily sympathise with Plato's delight in the properties of pure mathematics. He will not be disinclined to say with him:—Let alone the heavens, and study the beauties of number and figure in themselves. He too will be apt to depreciate their application to the arts. He will observe that Plato has a conception of geometry, in which figures are to be dispensed with; thus in a distant and shadowy way seeming to anticipate the possibility of working geometrical problems by a more general mode of analysis. He will remark with interest on the backward state of solid geometry, which, alas! was not encouraged by the aid of the State in the age of Plato; and he will recognize the grasp of Plato's mind in his ability to conceive of one science of solids in motion including the earth as well as the heavens,—not forgetting to notice the intimation to which allusion has been already made, that besides astronomy and harmonics the science of solids in motion may have other applications. Still more will he be struck with the comprehensiveness of view which led Plato, at a time when these sciences hardly existed, to say that they must be studied in relation to one another, and to the idea of good, or common principle of truth and being. But he will also see (and perhaps without surprise) that in that stage of physical and mathematical knowledge, Plato has fallen into the error of supposing that he can construct the heavens a priori by mathematical problems, and determine the principles of harmony irrespective of the adaptation of sounds to the human ear. The illusion was a natural one in that age and country. The simplicity and certainty of astronomy and harmonics seemed to contrast with the variation and complexity of the world of sense; hence the circumstance that there was some elementary basis of fact, some measurement of distance or time or vibrations on which they must ultimately rest, was overlooked by him. The modern predecessors of Newton fell into errors equally great; and Plato can hardly be said to have been very far wrong, or may even claim a sort of prophetic insight into the subject, when we consider that the greater part of astronomy at the present day consists of abstract dynamics, by the help of which most astronomical discoveries have been made.

The metaphysical philosopher from his point of view recognizes mathematics as an instrument of education,—which strengthens the power of attention, developes the sense of order and the faculty of construction, and enables the mind to grasp under simple formulae the quantitative differences of physical phenomena. But while acknowledging their value in education, he sees also that they have no connexion with our higher moral and intellectual ideas. In the attempt which Plato makes to connect them, we easily trace the influences of ancient Pythagorean notions. There is no reason to suppose that he is speaking of the ideal numbers; but he is describing numbers which are pure abstractions, to which he assigns a real and separate existence, which, as 'the teachers of the art' (meaning probably the Pythagoreans) would have affirmed, repel all attempts at subdivision, and in which unity and every other number are conceived of as absolute. The truth and certainty of numbers, when thus disengaged from phenomena, gave them a kind of sacredness in the eyes of an ancient philosopher. Nor is it easy to say how far ideas of order and fixedness may have had a moral and elevating influence on the minds of men, 'who,' in the words of the Timaeus, 'might learn to regulate their erring lives according to them.' It is worthy of remark that the old Pythagorean ethical symbols still exist as figures of speech among ourselves. And those who in modern times see the world pervaded by universal law, may also see an anticipation of this last word of modern philosophy in the Platonic idea of good, which is the source and measure of all things, and yet only an abstraction (Philebus).

Two passages seem to require more particular explanations. First, that which relates to the analysis of vision. The difficulty in this passage may be explained, like many others, from differences in the modes of conception prevailing among ancient and modern thinkers. To us, the perceptions of sense are inseparable from the act of the mind which accompanies them. The consciousness of form, colour, distance, is indistinguishable from the simple sensation, which is the medium of them. Whereas to Plato sense is the Heraclitean flux of sense, not the vision of objects in the order in which they actually present themselves to the experienced sight, but as they may be imagined to appear confused and blurred to the half-awakened eye of the infant. The first action of the mind is aroused by the attempt to set in order this chaos, and the reason is required to frame distinct conceptions under which the confused impressions of sense may be arranged. Hence arises the question, 'What is great, what is small?' and thus begins the distinction of the visible and the intelligible.

The second difficulty relates to Plato's conception of harmonics. Three classes of harmonists are distinguished by him:—first, the Pythagoreans, whom he proposes to consult as in the previous discussion on music he was to consult Damon—they are

acknowledged to be masters in the art, but are altogether deficient in the knowledge of its higher import and relation to the good; secondly, the mere empirics, whom Glaucon appears to confuse with them, and whom both he and Socrates ludicrously describe as experimenting by mere auscultation on the intervals of sounds. Both of these fall short in different degrees of the Platonic idea of harmony, which must be studied in a purely abstract way, first by the method of problems, and secondly as a part of universal knowledge in relation to the idea of good.

The allegory has a political as well as a philosophical meaning. The den or cave represents the narrow sphere of politics or law (compare the description of the philosopher and lawyer in the Theaetetus), and the light of the eternal ideas is supposed to exercise a disturbing influence on the minds of those who return to this lower world. In other words, their principles are too wide for practical application; they are looking far away into the past and future, when their business is with the present. The ideal is not easily reduced to the conditions of actual life, and may often be at variance with them. And at first, those who return are unable to compete with the inhabitants of the den in the measurement of the shadows, and are derided and persecuted by them; but after a while they see the things below in far truer proportions than those who have never ascended into the upper world. The difference between the politician turned into a philosopher and the philosopher turned into a politician, is symbolized by the two kinds of disordered eyesight, the one which is experienced by the captive who is transferred from darkness to day, the other, of the heavenly messenger who voluntarily for the good of his fellow-men descends into the den. In what way the brighter light is to dawn on the inhabitants of the lower world, or how the idea of good is to become the guiding principle of politics, is left unexplained by Plato. Like the nature and divisions of dialectic, of which Glaucon impatiently demands to be informed, perhaps he would have said that the explanation could not be given except to a disciple of the previous sciences. (Symposium.)

Many illustrations of this part of the Republic may be found in modern Politics and in daily life. For among ourselves, too, there have been two sorts of Politicians or Statesmen, whose eyesight has become disordered in two different ways. First, there have been great men who, in the language of Burke, ‘have been too much given to general maxims,’ who, like J.S. Mill or Burke himself, have been theorists or philosophers before they were politicians, or who, having been students of history, have allowed some great historical parallel, such as the English Revolution of 1688, or possibly Athenian democracy or Roman Imperialism, to be the medium through which they viewed contemporary events. Or perhaps the long projecting shadow of some existing institution may have darkened their vision. The Church of the future, the Commonwealth of the future, the Society of the future, have so absorbed their minds, that they are unable to see in their true proportions the Politics of to-day. They have been intoxicated with great ideas, such as liberty, or equality, or the greatest happiness of the greatest number, or the brotherhood of humanity, and they no longer care to consider how these ideas must be limited in practice or harmonized with the conditions of human life. They are full of light, but the light to them has become only a sort of luminous mist or blindness. Almost every one has known some enthusiastic half-educated person, who sees everything at false distances, and in erroneous proportions.

With this disorder of eyesight may be contrasted another—of those who see not far into the distance, but what is near only; who have been engaged all their lives in a trade or a profession; who are limited to a set or sect of their own. Men of this kind have no universal except their own interests or the interests of their class, no principle but the opinion of persons like themselves, no knowledge of affairs beyond what they pick up in the streets or at their club. Suppose them to be sent into a larger world, to undertake some higher calling, from being tradesmen to turn generals or politicians, from being schoolmasters to become philosophers:—or imagine them on a sudden to receive an inward light which reveals to them for the first time in their lives a higher idea of God and the existence of a spiritual world, by this sudden conversion or change is not their daily life likely to be upset; and on the other hand will not many of their old prejudices and narrownesses still adhere to them long after they have begun to take a more comprehensive view of human things? From familiar examples like these we may learn what Plato meant by the eyesight which is liable to two kinds of disorders.

Nor have we any difficulty in drawing a parallel between the young Athenian in the fifth century before Christ who became unsettled by new ideas, and the student of a modern University who has been the subject of a similar ‘aufklärung.’ We too observe that when young men begin to criticise customary beliefs, or to analyse the constitution of human nature, they are apt to lose hold of solid principle (■παν τ■ β■βαιον α■τ■ν ■ξο■χεται). They are like trees which have been frequently transplanted. The earth about them is loose, and they have no roots reaching far into the soil. They ‘light upon every flower,’ following their own wayward wills, or because the wind blows them. They catch opinions, as diseases are caught—when they are in the air. Borne hither and thither, ‘they speedily fall into beliefs’ the opposite of those in which they were brought up. They hardly retain the distinction of right and wrong; they seem to think one thing as good as another. They suppose themselves to be searching after truth when they are playing the game of ‘follow my leader.’ They fall in love ‘at first sight’ with paradoxes respecting morality, some fancy about art,

some novelty or eccentricity in religion, and like lovers they are so absorbed for a time in their new notion that they can think of nothing else. The resolution of some philosophical or theological question seems to them more interesting and important than any substantial knowledge of literature or science or even than a good life. Like the youth in the Philebus, they are ready to discourse to any one about a new philosophy. They are generally the disciples of some eminent professor or sophist, whom they rather imitate than understand. They may be counted happy if in later years they retain some of the simple truths which they acquired in early education, and which they may, perhaps, find to be worth all the rest. Such is the picture which Plato draws and which we only reproduce, partly in his own words, of the dangers which beset youth in times of transition, when old opinions are fading away and the new are not yet firmly established. Their condition is ingeniously compared by him to that of a supposititious son, who has made the discovery that his reputed parents are not his real ones, and, in consequence, they have lost their authority over him.

The distinction between the mathematician and the dialectician is also noticeable. Plato is very well aware that the faculty of the mathematician is quite distinct from the higher philosophical sense which recognizes and combines first principles. The contempt which he expresses for distinctions of words, the danger of involuntary falsehood, the apology which Socrates makes for his earnestness of speech, are highly characteristic of the Platonic style and mode of thought. The quaint notion that if Palamedes was the inventor of number Agamemnon could not have counted his feet; the art by which we are made to believe that this State of ours is not a dream only; the gravity with which the first step is taken in the actual creation of the State, namely, the sending out of the city all who had arrived at ten years of age, in order to expedite the business of education by a generation, are also truly Platonic. (For the last, compare the passage at the end of the third book, in which he expects the lie about the earthborn men to be believed in the second generation.)

BOOK VIII. And so we have arrived at the conclusion, that in the perfect State wives and children are to be in common; and the education and pursuits of men and women, both in war and peace, are to be common, and kings are to be philosophers and warriors, and the soldiers of the State are to live together, having all things in common; and they are to be warrior athletes, receiving no pay but only their food, from the other citizens. Now let us return to the point at which we digressed. ‘That is easily done,’ he replied: ‘You were speaking of the State which you had constructed, and of the individual who answered to this, both of whom you affirmed to be good; and you said that of inferior States there were four forms and four individuals corresponding to them, which although deficient in various degrees, were all of them worth inspecting with a view to determining the relative happiness or misery of the best or worst man. Then Polemarchus and Adeimantus interrupted you, and this led to another argument,—and so here we are.’ Suppose that we put ourselves again in the same position, and do you repeat your question. ‘I should like to know of what constitutions you were speaking?’ Besides the perfect State there are only four of any note in Hellas:—first, the famous Lacedaemonian or Cretan commonwealth; secondly, oligarchy, a State full of evils; thirdly, democracy, which follows next in order; fourthly, tyranny, which is the disease or death of all government. Now, States are not made of ‘oak and rock,’ but of flesh and blood; and therefore as there are five States there must be five human natures in individuals, which correspond to them. And first, there is the ambitious nature, which answers to the Lacedaemonian State; secondly, the oligarchical nature; thirdly, the democratical; and fourthly, the tyrannical. This last will have to be compared with the perfectly just, which is the fifth, that we may know which is the happier, and then we shall be able to determine whether the argument of Thrasymachus or our own is the more convincing. And as before we began with the State and went on to the individual, so now, beginning with timocracy, let us go on to the timocratical man, and then proceed to the other forms of government, and the individuals who answer to them.

But how did timocracy arise out of the perfect State? Plainly, like all changes of government, from division in the rulers. But whence came division? ‘Sing, heavenly Muses,’ as Homer says;—let them condescend to answer us, as if we were children, to whom they put on a solemn face in jest. ‘And what will they say?’ They will say that human things are fated to decay, and even the perfect State will not escape from this law of destiny, when ‘the wheel comes full circle’ in a period short or long. Plants or animals have times of fertility and sterility, which the intelligence of rulers because alloyed by sense will not enable them to ascertain, and children will be born out of season. For whereas divine creations are in a perfect cycle or number, the human creation is in a number which declines from perfection, and has four terms and three intervals of numbers, increasing, waning, assimilating, dissimilating, and yet perfectly commensurate with each other. The base of the number with a fourth added (or which is 3:4), multiplied by five and cubed, gives two harmonies:—the first a square number, which is a hundred times the base (or a hundred times a hundred); the second, an oblong, being a hundred squares of the rational diameter of a figure the side of which is five, subtracting one from each square or two perfect squares from all, and adding a hundred cubes of three. This entire number is geometrical and contains the rule or law of generation. When this law is neglected marriages will be unpropitious; the inferior offspring who are then born will in time become the rulers; the State will decline, and education fall into decay; gymnastic will be

preferred to music, and the gold and silver and brass and iron will form a chaotic mass—thus division will arise. Such is the Muses' answer to our question. 'And a true answer, of course:—but what more have they to say?' They say that the two races, the iron and brass, and the silver and gold, will draw the State different ways;—the one will take to trade and moneymaking, and the others, having the true riches and not caring for money, will resist them: the contest will end in a compromise; they will agree to have private property, and will enslave their fellow-citizens who were once their friends and nurturers. But they will retain their warlike character, and will be chiefly occupied in fighting and exercising rule. Thus arises timocracy, which is intermediate between aristocracy and oligarchy.

The new form of government resembles the ideal in obedience to rulers and contempt for trade, and having common meals, and in devotion to warlike and gymnastic exercises. But corruption has crept into philosophy, and simplicity of character, which was once her note, is now looked for only in the military class. Arts of war begin to prevail over arts of peace; the ruler is no longer a philosopher; as in oligarchies, there springs up among them an extravagant love of gain—get another man's and save your own, is their principle; and they have dark places in which they hoard their gold and silver, for the use of their women and others; they take their pleasures by stealth, like boys who are running away from their father—the law; and their education is not inspired by the Muse, but imposed by the strong arm of power. The leading characteristic of this State is party spirit and ambition.

And what manner of man answers to such a State? 'In love of contention,' replied Adeimantus, 'he will be like our friend Glaucon.' In that respect, perhaps, but not in others. He is self-asserting and ill-educated, yet fond of literature, although not himself a speaker,—fierce with slaves, but obedient to rulers, a lover of power and honour, which he hopes to gain by deeds of arms,—fond, too, of gymnastics and of hunting. As he advances in years he grows avaricious, for he has lost philosophy, which is the only saviour and guardian of men. His origin is as follows:—His father is a good man dwelling in an ill-ordered State, who has retired from politics in order that he may lead a quiet life. His mother is angry at her loss of precedence among other women; she is disgusted at her husband's selfishness, and she expatiates to her son on the unmanliness and indolence of his father. The old family servant takes up the tale, and says to the youth:—'When you grow up you must be more of a man than your father.' All the world are agreed that he who minds his own business is an idiot, while a busybody is highly honoured and esteemed. The young man compares this spirit with his father's words and ways, and as he is naturally well disposed, although he has suffered from evil influences, he rests at a middle point and becomes ambitious and a lover of honour.

And now let us set another city over against another man. The next form of government is oligarchy, in which the rule is of the rich only; nor is it difficult to see how such a State arises. The decline begins with the possession of gold and silver; illegal modes of expenditure are invented; one draws another on, and the multitude are infected; riches outweigh virtue; lovers of money take the place of lovers of honour; misers of politicians; and, in time, political privileges are confined by law to the rich, who do not shrink from violence in order to effect their purposes.

Thus much of the origin,—let us next consider the evils of oligarchy. Would a man who wanted to be safe on a voyage take a bad pilot because he was rich, or refuse a good one because he was poor? And does not the analogy apply still more to the State? And there are yet greater evils: two nations are struggling together in one—the rich and the poor; and the rich dare not put arms into the hands of the poor, and are unwilling to pay for defenders out of their own money. And have we not already condemned that State in which the same persons are warriors as well as shopkeepers? The greatest evil of all is that a man may sell his property and have no place in the State; while there is one class which has enormous wealth, the other is entirely destitute. But observe that these destitutes had not really any more of the governing nature in them when they were rich than now that they are poor; they were miserable spendthrifts always. They are the drones of the hive; only whereas the actual drone is unprovided by nature with a sting, the two-legged things whom we call drones are some of them without stings and some of them have dreadful stings; in other words, there are paupers and there are rogues. These are never far apart; and in oligarchical cities, where nearly everybody is a pauper who is not a ruler, you will find abundance of both. And this evil state of society originates in bad education and bad government.

Like State, like man,—the change in the latter begins with the representative of timocracy; he walks at first in the ways of his father, who may have been a statesman, or general, perhaps; and presently he sees him 'fallen from his high estate,' the victim of informers, dying in prison or exile, or by the hand of the executioner. The lesson which he thus receives, makes him cautious; he leaves politics, represses his pride, and saves pence. Avarice is enthroned as his bosom's lord, and assumes the style of the Great King; the rational and spirited elements sit humbly on the ground at either side, the one immersed in calculation, the other absorbed in the admiration of wealth. The love of honour turns to love of money; the conversion is instantaneous. The man is mean, saving, toiling, the slave of one passion which is the master of the rest: Is he not the very image of the State? He has had no education, or he would never have allowed the blind god of riches to lead the dance within him. And being uneducated he will have many slavish

desires, some beggarly, some knavish, breeding in his soul. If he is the trustee of an orphan, and has the power to defraud, he will soon prove that he is not without the will, and that his passions are only restrained by fear and not by reason. Hence he leads a divided existence; in which the better desires mostly prevail. But when he is contending for prizes and other distinctions, he is afraid to incur a loss which is to be repaid only by barren honour; in time of war he fights with a small part of his resources, and usually keeps his money and loses the victory.

Next comes democracy and the democratic man, out of oligarchy and the oligarchical man. Insatiable avarice is the ruling passion of an oligarchy; and they encourage expensive habits in order that they may gain by the ruin of extravagant youth. Thus men of family often lose their property or rights of citizenship; but they remain in the city, full of hatred against the new owners of their estates and ripe for revolution. The usurer with stooping walk pretends not to see them; he passes by, and leaves his sting—that is, his money—in some other victim; and many a man has to pay the parent or principal sum multiplied into a family of children, and is reduced into a state of dronage by him. The only way of diminishing the evil is either to limit a man in his use of his property, or to insist that he shall lend at his own risk. But the ruling class do not want remedies; they care only for money, and are as careless of virtue as the poorest of the citizens. Now there are occasions on which the governors and the governed meet together,—at festivals, on a journey, voyaging or fighting. The sturdy pauper finds that in the hour of danger he is not despised; he sees the rich man puffing and panting, and draws the conclusion which he privately imparts to his companions,—'that our people are not good for much;' and as a sickly frame is made ill by a mere touch from without, or sometimes without external impulse is ready to fall to pieces of itself, so from the least cause, or with none at all, the city falls ill and fights a battle for life or death. And democracy comes into power when the poor are the victors, killing some and exiling some, and giving equal shares in the government to all the rest.

The manner of life in such a State is that of democrats; there is freedom and plainness of speech, and every man does what is right in his own eyes, and has his own way of life. Hence arise the most various developments of character; the State is like a piece of embroidery of which the colours and figures are the manners of men, and there are many who, like women and children, prefer this variety to real beauty and excellence. The State is not one but many, like a bazaar at which you can buy anything. The great charm is, that you may do as you like; you may govern if you like, let it alone if you like; go to war and make peace if you feel disposed, and all quite irrespective of anybody else. When you condemn men to death they remain alive all the same; a gentleman is desired to go into exile, and he stalks about the streets like a hero; and nobody sees him or cares for him. Observe, too, how grandly Democracy sets her foot upon all our fine theories of education,—how little she cares for the training of her statesmen! The only qualification which she demands is the profession of patriotism. Such is democracy;—a pleasing, lawless, various sort of government, distributing equality to equals and unequals alike.

Let us now inspect the individual democrat; and first, as in the case of the State, we will trace his antecedents. He is the son of a miserly oligarch, and has been taught by him to restrain the love of unnecessary pleasures. Perhaps I ought to explain this latter term:—Necessary pleasures are those which are good, and which we cannot do without; unnecessary pleasures are those which do no good, and of which the desire might be eradicated by early training. For example, the pleasures of eating and drinking are necessary and healthy, up to a certain point; beyond that point they are alike hurtful to body and mind, and the excess may be avoided. When in excess, they may be rightly called expensive pleasures, in opposition to the useful ones. And the drone, as we called him, is the slave of these unnecessary pleasures and desires, whereas the miserly oligarch is subject only to the necessary.

The oligarch changes into the democrat in the following manner:—The youth who has had a miserly bringing up, gets a taste of the drone's honey; he meets with wild companions, who introduce him to every new pleasure. As in the State, so in the individual, there are allies on both sides, temptations from without and passions from within; there is reason also and external influences of parents and friends in alliance with the oligarchical principle; and the two factions are in violent conflict with one another. Sometimes the party of order prevails, but then again new desires and new disorders arise, and the whole mob of passions gets possession of the Acropolis, that is to say, the soul, which they find void and unguarded by true words and works. Falsehoods and illusions ascend to take their place; the prodigal goes back into the country of the Lotophagi or drones, and openly dwells there. And if any offer of alliance or parley of individual elders comes from home, the false spirits shut the gates of the castle and permit no one to enter,—there is a battle, and they gain the victory; and straightway making alliance with the desires, they banish modesty, which they call folly, and send temperance over the border. When the house has been swept and garnished, they dress up the exiled vices, and, crowning them with garlands, bring them back under new names. Insolence they call good breeding, anarchy freedom, waste magnificence, impudence courage. Such is the process by which the youth passes from the necessary pleasures to the unnecessary. After a while he divides his time impartially between them; and perhaps, when he gets older and the violence of passion has abated, he restores some of the exiles and lives in a sort of equilibrium, indulging first one pleasure and then another;

and if reason comes and tells him that some pleasures are good and honourable, and others bad and vile, he shakes his head and says that he can make no distinction between them. Thus he lives in the fancy of the hour; sometimes he takes to drink, and then he turns abstainer; he practises in the gymnasium or he does nothing at all; then again he would be a philosopher or a politician; or again, he would be a warrior or a man of business; he is

'Every thing by starts and nothing long.'

There remains still the finest and fairest of all men and all States—tyranny and the tyrant. Tyranny springs from democracy much as democracy springs from oligarchy. Both arise from excess; the one from excess of wealth, the other from excess of freedom. 'The great natural good of life,' says the democrat, 'is freedom.' And this exclusive love of freedom and regardlessness of everything else, is the cause of the change from democracy to tyranny. The State demands the strong wine of freedom, and unless her rulers give her a plentiful draught, punishes and insults them; equality and fraternity of governors and governed is the approved principle. Anarchy is the law, not of the State only, but of private houses, and extends even to the animals. Father and son, citizen and foreigner, teacher and pupil, old and young, are all on a level; fathers and teachers fear their sons and pupils, and the wisdom of the young man is a match for the elder, and the old imitate the jaunty manners of the young because they are afraid of being thought morose. Slaves are on a level with their masters and mistresses, and there is no difference between men and women. Nay, the very animals in a democratic State have a freedom which is unknown in other places. The she-dogs are as good as their she-mistresses, and horses and asses march along with dignity and run their noses against anybody who comes in their way. 'That has often been my experience.' At last the citizens become so sensitive that they cannot endure the yoke of laws, written or unwritten; they would have no man call himself their master. Such is the glorious beginning of things out of which tyranny springs. 'Glorious, indeed; but what is to follow?' The ruin of oligarchy is the ruin of democracy; for there is a law of contraries; the excess of freedom passes into the excess of slavery, and the greater the freedom the greater the slavery. You will remember that in the oligarchy were found two classes—rogues and paupers, whom we compared to drones with and without stings. These two classes are to the State what phlegm and bile are to the human body; and the State-physician, or legislator, must get rid of them, just as the bee-master keeps the drones out of the hive. Now in a democracy, too, there are drones, but they are more numerous and more dangerous than in the oligarchy; there they are inert and unpractised, here they are full of life and animation; and the keener sort speak and act, while the others buzz about the bema and prevent their opponents from being heard. And there is another class in democratic States, of respectable, thriving individuals, who can be squeezed when the drones have need of their possessions; there is moreover a third class, who are the labourers and the artisans, and they make up the mass of the people. When the people meet, they are omnipotent, but they cannot be brought together unless they are attracted by a little honey; and the rich are made to supply the honey, of which the demagogues keep the greater part themselves, giving a taste only to the mob. Their victims attempt to resist; they are driven mad by the stings of the drones, and so become downright oligarchs in self-defence. Then follow informations and convictions for treason. The people have some protector whom they nurse into greatness, and from this root the tree of tyranny springs. The nature of the change is indicated in the old fable of the temple of Zeus Lycaeus, which tells how he who tastes human flesh mixed up with the flesh of other victims will turn into a wolf. Even so the protector, who tastes human blood, and slays some and exiles others with or without law, who hints at abolition of debts and division of lands, must either perish or become a wolf—that is, a tyrant. Perhaps he is driven out, but he soon comes back from exile; and then if his enemies cannot get rid of him by lawful means, they plot his assassination. Thereupon the friend of the people makes his well-known request to them for a body-guard, which they readily grant, thinking only of his danger and not of their own. Now let the rich man make to himself wings, for he will never run away again if he does not do so then. And the Great Protector, having crushed all his rivals, stands proudly erect in the chariot of State, a full-blown tyrant: Let us enquire into the nature of his happiness.

In the early days of his tyranny he smiles and beams upon everybody; he is not a 'dominus,' no, not he: he has only come to put an end to debt and the monopoly of land. Having got rid of foreign enemies, he makes himself necessary to the State by always going to war. He is thus enabled to depress the poor by heavy taxes, and so keep them at work; and he can get rid of bolder spirits by handing them over to the enemy. Then comes unpopularity; some of his old associates have the courage to oppose him. The consequence is, that he has to make a purgation of the State; but, unlike the physician who purges away the bad, he must get rid of the high-spirited, the wise and the wealthy; for he has no choice between death and a life of shame and dishonour. And the more hated he is, the more he will require trusty guards; but how will he obtain them? 'They will come flocking like birds—for pay.' Will he not rather obtain them on the spot? He will take the slaves from their owners and make them his body-guard; these are his trusted friends, who admire and look up to him. Are not the tragic poets wise who magnify and exalt the tyrant, and say that he is wise by association with the wise? And are not their praises of tyranny alone a sufficient reason why we should exclude them from our

State? They may go to other cities, and gather the mob about them with fine words, and change commonwealths into tyrannies and democracies, receiving honours and rewards for their services; but the higher they and their friends ascend constitution hill, the more their honour will fail and become 'too asthmatic to mount.' To return to the tyrant—How will he support that rare army of his? First, by robbing the temples of their treasures, which will enable him to lighten the taxes; then he will take all his father's property, and spend it on his companions, male or female. Now his father is the demus, and if the demus gets angry, and says that a great hulking son ought not to be a burden on his parents, and bids him and his riotous crew begone, then will the parent know what a monster he has been nurturing, and that the son whom he would fain expel is too strong for him. 'You do not mean to say that he will beat his father?' Yes, he will, after having taken away his arms. 'Then he is a parricide and a cruel, unnatural son.' And the people have jumped from the fear of slavery into slavery, out of the smoke into the fire. Thus liberty, when out of all order and reason, passes into the worst form of servitude...

In the previous books Plato has described the ideal State; now he returns to the perverted or declining forms, on which he had lightly touched at the end of Book IV. These he describes in a succession of parallels between the individuals and the States, tracing the origin of either in the State or individual which has preceded them. He begins by asking the point at which he digressed; and is thus led shortly to recapitulate the substance of the three former books, which also contain a parallel of the philosopher and the State.

Of the first decline he gives no intelligible account; he would not have liked to admit the most probable causes of the fall of his ideal State, which to us would appear to be the impracticability of communism or the natural antagonism of the ruling and subject classes. He throws a veil of mystery over the origin of the decline, which he attributes to ignorance of the law of population. Of this law the famous geometrical figure or number is the expression. Like the ancients in general, he had no idea of the gradual perfectibility of man or of the education of the human race. His ideal was not to be attained in the course of ages, but was to spring in full armour from the head of the legislator. When good laws had been given, he thought only of the manner in which they were likely to be corrupted, or of how they might be filled up in detail or restored in accordance with their original spirit. He appears not to have reflected upon the full meaning of his own words, 'In the brief space of human life, nothing great can be accomplished'; or again, as he afterwards says in the Laws, 'Infinite time is the maker of cities.' The order of constitutions which is adopted by him represents an order of thought rather than a succession of time, and may be considered as the first attempt to frame a philosophy of history.

The first of these declining States is timocracy, or the government of soldiers and lovers of honour, which answers to the Spartan State; this is a government of force, in which education is not inspired by the Muses, but imposed by the law, and in which all the finer elements of organization have disappeared. The philosopher himself has lost the love of truth, and the soldier, who is of a simpler and honester nature, rules in his stead. The individual who answers to timocracy has some noticeable qualities. He is described as ill educated, but, like the Spartan, a lover of literature; and although he is a harsh master to his servants he has no natural superiority over them. His character is based upon a reaction against the circumstances of his father, who in a troubled city has retired from politics; and his mother, who is dissatisfied at her own position, is always urging him towards the life of political ambition. Such a character may have had this origin, and indeed Livy attributes the Licinian laws to a feminine jealousy of a similar kind. But there is obviously no connection between the manner in which the timocratic State springs out of the ideal, and the mere accident by which the timocratic man is the son of a retired statesman.

The two next stages in the decline of constitutions have even less historical foundation. For there is no trace in Greek history of a polity like the Spartan or Cretan passing into an oligarchy of wealth, or of the oligarchy of wealth passing into a democracy. The order of history appears to be different; first, in the Homeric times there is the royal or patriarchal form of government, which a century or two later was succeeded by an oligarchy of birth rather than of wealth, and in which wealth was only the accident of the hereditary possession of land and power. Sometimes this oligarchical government gave way to a government based upon a qualification of property, which, according to Aristotle's mode of using words, would have been called a timocracy; and this in some cities, as at Athens, became the conducting medium to democracy. But such was not the necessary order of succession in States; nor, indeed, can any order be discerned in the endless fluctuation of Greek history (like the tides in the Euripus), except, perhaps, in the almost uniform tendency from monarchy to aristocracy in the earliest times. At first sight there appears to be a similar inversion in the last step of the Platonic succession; for tyranny, instead of being the natural end of democracy, in early Greek history appears rather as a stage leading to democracy; the reign of Peisistratus and his sons is an episode which comes between the legislation of Solon and the constitution of Cleisthenes; and some secret cause common to them all seems to have led the greater part of Hellas at her first appearance in the dawn of history, e.g. Athens, Argos, Corinth, Sicyon, and nearly every State with

the exception of Sparta, through a similar stage of tyranny which ended either in oligarchy or democracy. But then we must remember that Plato is describing rather the contemporary governments of the Sicilian States, which alternated between democracy and tyranny, than the ancient history of Athens or Corinth.

The portrait of the tyrant himself is just such as the later Greek delighted to draw of Phalaris and Dionysius, in which, as in the lives of mediaeval saints or mythic heroes, the conduct and actions of one were attributed to another in order to fill up the outline. There was no enormity which the Greek was not today to believe of them; the tyrant was the negation of government and law; his assassination was glorious; there was no crime, however unnatural, which might not with probability be attributed to him. In this, Plato was only following the common thought of his countrymen, which he embellished and exaggerated with all the power of his genius. There is no need to suppose that he drew from life; or that his knowledge of tyrants is derived from a personal acquaintance with Dionysius. The manner in which he speaks of them would rather tend to render doubtful his ever having ‘consorted’ with them, or entertained the schemes, which are attributed to him in the Epistles, of regenerating Sicily by their help.

Plato in a hyperbolical and serio-comic vein exaggerates the follies of democracy which he also sees reflected in social life. To him democracy is a state of individualism or dissolution; in which every one is doing what is right in his own eyes. Of a people animated by a common spirit of liberty, rising as one man to repel the Persian host, which is the leading idea of democracy in Herodotus and Thucydides, he never seems to think. But if he is not a believer in liberty, still less is he a lover of tyranny. His deeper and more serious condemnation is reserved for the tyrant, who is the ideal of wickedness and also of weakness, and who in his utter helplessness and suspiciousness is leading an almost impossible existence, without that remnant of good which, in Plato’s opinion, was required to give power to evil (Book I). This ideal of wickedness living in helpless misery, is the reverse of that other portrait of perfect injustice ruling in happiness and splendour, which first of all Thrasymachus, and afterwards the sons of Ariston had drawn, and is also the reverse of the king whose rule of life is the good of his subjects.

Each of these governments and individuals has a corresponding ethical gradation: the ideal State is under the rule of reason, not extinguishing but harmonizing the passions, and training them in virtue; in the timocracy and the timocratic man the constitution, whether of the State or of the individual, is based, first, upon courage, and secondly, upon the love of honour; this latter virtue, which is hardly to be esteemed a virtue, has superseded all the rest. In the second stage of decline the virtues have altogether disappeared, and the love of gain has succeeded to them; in the third stage, or democracy, the various passions are allowed to have free play, and the virtues and vices are impartially cultivated. But this freedom, which leads to many curious extravagances of character, is in reality only a state of weakness and dissipation. At last, one monster passion takes possession of the whole nature of man—this is tyranny. In all of them excess—the excess first of wealth and then of freedom, is the element of decay.

The eighth book of the Republic abounds in pictures of life and fanciful allusions; the use of metaphorical language is carried to a greater extent than anywhere else in Plato. We may remark,

(1), the description of the two nations in one, which become more and more divided in the Greek Republics, as in feudal times, and perhaps also in our own;

(2), the notion of democracy expressed in a sort of Pythagorean formula as equality among unequals;

(3), the free and easy ways of men and animals, which are characteristic of liberty, as foreign mercenaries and universal mistrust are of the tyrant;

(4), the proposal that mere debts should not be recoverable by law is a speculation which has often been entertained by reformers of the law in modern times, and is in harmony with the tendencies of modern legislation. Debt and land were the two great difficulties of the ancient lawgiver: in modern times we may be said to have almost, if not quite, solved the first of these difficulties, but hardly the second.

Still more remarkable are the corresponding portraits of individuals: there is the family picture of the father and mother and the old servant of the timocratical man, and the outward respectability and inherent meanness of the oligarchical; the uncontrolled licence and freedom of the democrat, in which the young Alcibiades seems to be depicted, doing right or wrong as he pleases, and who at last, like the prodigal, goes into a far country (note here the play of language by which the democratic man is himself represented under the image of a State having a citadel and receiving embassies); and there is the wild-beast nature, which breaks loose in his successor. The hit about the tyrant being a parricide; the representation of the tyrant’s life as an obscene dream; the rhetorical surprise of a more miserable than the most miserable of men in Book IX; the hint to the poets that if they are the friends of tyrants

there is no place for them in a constitutional State, and that they are too clever not to see the propriety of their own expulsion; the continuous image of the drones who are of two kinds, swelling at last into the monster drone having wings (Book IX),—are among Plato's happiest touches.

There remains to be considered the great difficulty of this book of the Republic, the so-called number of the State. This is a puzzle almost as great as the Number of the Beast in the Book of Revelation, and though apparently known to Aristotle, is referred to by Cicero as a proverb of obscurity (Ep. ad Att.). And some have imagined that there is no answer to the puzzle, and that Plato has been practising upon his readers. But such a deception as this is inconsistent with the manner in which Aristotle speaks of the number (Pol.), and would have been ridiculous to any reader of the Republic who was acquainted with Greek mathematics. As little reason is there for supposing that Plato intentionally used obscure expressions; the obscurity arises from our want of familiarity with the subject. On the other hand, Plato himself indicates that he is not altogether serious, and in describing his number as a solemn jest of the Muses, he appears to imply some degree of satire on the symbolical use of number. (Compare Cratylus; Protag.)

Our hope of understanding the passage depends principally on an accurate study of the words themselves; on which a faint light is thrown by the parallel passage in the ninth book. Another help is the allusion in Aristotle, who makes the important remark that the latter part of the passage (Greek) describes a solid figure. (Pol.—'He only says that nothing is abiding, but that all things change in a certain cycle; and that the origin of the change is a base of numbers which are in the ratio of 4:3; and this when combined with a figure of five gives two harmonies; he means when the number of this figure becomes solid.') Some further clue may be gathered from the appearance of the Pythagorean triangle, which is denoted by the numbers 3, 4, 5, and in which, as in every right-angled triangle, the squares of the two lesser sides equal the square of the hypotenuse (9 + 16 = 25).

Plato begins by speaking of a perfect or cyclical number (Tim.), i.e. a number in which the sum of the divisors equals the whole; this is the divine or perfect number in which all lesser cycles or revolutions are complete. He also speaks of a human or imperfect number, having four terms and three intervals of numbers which are related to one another in certain proportions; these he converts into figures, and finds in them when they have been raised to the third power certain elements of number, which give two 'harmonies,' the one square, the other oblong; but he does not say that the square number answers to the divine, or the oblong number to the human cycle; nor is any intimation given that the first or divine number represents the period of the world, the second the period of the state, or of the human race as Zeller supposes; nor is the divine number afterwards mentioned (Arist.). The second is the number of generations or births, and presides over them in the same mysterious manner in which the stars preside over them, or in which, according to the Pythagoreans, opportunity, justice, marriage, are represented by some number or figure. This is probably the number 216.

The explanation given in the text supposes the two harmonies to make up the number 8000. This explanation derives a certain plausibility from the circumstance that 8000 is the ancient number of the Spartan citizens (Herod.), and would be what Plato might have called 'a number which nearly concerns the population of a city'; the mysterious disappearance of the Spartan population may possibly have suggested to him the first cause of his decline of States. The lesser or square 'harmony,' of 400, might be a symbol of the guardians,—the larger or oblong 'harmony,' of the people, and the numbers 3, 4, 5 might refer respectively to the three orders in the State or parts of the soul, the four virtues, the five forms of government. The harmony of the musical scale, which is elsewhere used as a symbol of the harmony of the state, is also indicated. For the numbers 3, 4, 5, which represent the sides of the Pythagorean triangle, also denote the intervals of the scale.

The terms used in the statement of the problem may be explained as follows. A perfect number (Greek), as already stated, is one which is equal to the sum of its divisors. Thus 6, which is the first perfect or cyclical number, = 1 + 2 + 3. The words (Greek), 'terms' or 'notes,' and (Greek), 'intervals,' are applicable to music as well as to number and figure. (Greek) is the 'base' on which the whole calculation depends, or the 'lowest term' from which it can be worked out. The words (Greek) have been variously translated—'squared and cubed' (Donaldson), 'equalling and equalled in power' (Weber), 'by involution and evolution,' i.e. by raising the power and extracting the root (as in the translation). Numbers are called 'like and unlike' (Greek) when the factors or the sides of the planes and cubes which they represent are or are not in the same ratio: e.g. 8 and 27 = 2 cubed and 3 cubed; and conversely. 'Waxing' (Greek) numbers, called also 'increasing' (Greek), are those which are exceeded by the sum of their divisors: e.g. 12 and 18 are less than 16 and 21. 'Waning' (Greek) numbers, called also 'decreasing' (Greek) are those which succeed the sum of their divisors: e.g. 8 and 27 exceed 7 and 13. The words translated 'commensurable and agreeable to one another' (Greek) seem to be different ways of describing the same relation, with more or less precision. They are equivalent to 'expressible in terms having the same relation to one another,' like the series 8, 12, 18, 27, each of which numbers is in the relation of (1 and 1/2) to the preceding. The 'base,' or 'fundamental number, which has 1/3 added to it' (1 and 1/3) = 4/3 or a musical fourth. (Greek) is a

‘proportion’ of numbers as of musical notes, applied either to the parts or factors of a single number or to the relation of one number to another. The first harmony is a ‘square’ number (Greek); the second harmony is an ‘oblong’ number (Greek), i.e. a number representing a figure of which the opposite sides only are equal. (Greek) = ‘numbers squared from’ or ‘upon diameters’; (Greek) = ‘rational,’ i.e. omitting fractions, (Greek), ‘irrational,’ i.e. including fractions; e.g. 49 is a square of the rational diameter of a figure the side of which = 5: 50, of an irrational diameter of the same. For several of the explanations here given and for a good deal besides I am indebted to an excellent article on the Platonic Number by Dr. Donaldson (Proc. of the Philol. Society).

The conclusions which he draws from these data are summed up by him as follows. Having assumed that the number of the perfect or divine cycle is the number of the world, and the number of the imperfect cycle the number of the state, he proceeds: ‘The period of the world is defined by the perfect number 6, that of the state by the cube of that number or 216, which is the product of the last pair of terms in the Platonic Tetractys (a series of seven terms, 1, 2, 3, 4, 9, 8, 27); and if we take this as the basis of our computation, we shall have two cube numbers (Greek), viz. 8 and 27; and the mean proportionals between these, viz. 12 and 18, will furnish three intervals and four terms, and these terms and intervals stand related to one another in the sesqui-altera ratio, i.e. each term is to the preceding as 3/2. Now if we remember that the number 216 = 8 x 27 = 3 cubed + 4 cubed + 5 cubed, and 3 squared + 4 squared = 5 squared, we must admit that this number implies the numbers 3, 4, 5, to which musicians attach so much importance. And if we combine the ratio 4/3 with the number 5, or multiply the ratios of the sides by the hypotenuse, we shall by first squaring and then cubing obtain two expressions, which denote the ratio of the two last pairs of terms in the Platonic Tetractys, the former multiplied by the square, the latter by the cube of the number 10, the sum of the first four digits which constitute the Platonic Tetractys.’ The two (Greek) he elsewhere explains as follows: ‘The first (Greek) is (Greek), in other words (4/3 x 5) all squared = 100 x 2 squared over 3 squared. The second (Greek), a cube of the same root, is described as 100 multiplied (alpha) by the rational diameter of 5 diminished by unity, i.e., as shown above, 48: (beta) by two incommensurable diameters, i.e. the two first irrationals, or 2 and 3: and (gamma) by the cube of 3, or 27. Thus we have (48 + 5 + 27) 100 = 1000 x 2 cubed. This second harmony is to be the cube of the number of which the former harmony is the square, and therefore must be divided by the cube of 3. In other words, the whole expression will be: (1), for the first harmony, 400/9: (2), for the second harmony, 8000/27.’

The reasons which have inclined me to agree with Dr. Donaldson and also with Schleiermacher in supposing that 216 is the Platonic number of births are: (1) that it coincides with the description of the number given in the first part of the passage (Greek...): (2) that the number 216 with its permutations would have been familiar to a Greek mathematician, though unfamiliar to us: (3) that 216 is the cube of 6, and also the sum of 3 cubed, 4 cubed, 5 cubed, the numbers 3, 4, 5 representing the Pythagorean triangle, of which the sides when squared equal the square of the hypotenuse (9 + 16 = 25): (4) that it is also the period of the Pythagorean Metempsychosis: (5) the three ultimate terms or bases (3, 4, 5) of which 216 is composed answer to the third, fourth, fifth in the musical scale: (6) that the number 216 is the product of the cubes of 2 and 3, which are the two last terms in the Platonic Tetractys: (7) that the Pythagorean triangle is said by Plutarch (de Is. et Osir.), Proclus (super prima Eucl.), and Quintilian (de Musica) to be contained in this passage, so that the tradition of the school seems to point in the same direction: (8) that the Pythagorean triangle is called also the figure of marriage (Greek).

But though agreeing with Dr. Donaldson thus far, I see no reason for supposing, as he does, that the first or perfect number is the world, the human or imperfect number the state; nor has he given any proof that the second harmony is a cube. Nor do I think that (Greek) can mean ‘two incommensurables,’ which he arbitrarily assumes to be 2 and 3, but rather, as the preceding clause implies, (Greek), i.e. two square numbers based upon irrational diameters of a figure the side of which is 5 = 50 x 2.

The greatest objection to the translation is the sense given to the words (Greek), ‘a base of three with a third added to it, multiplied by 5.’ In this somewhat forced manner Plato introduces once more the numbers of the Pythagorean triangle. But the coincidences in the numbers which follow are in favour of the explanation. The first harmony of 400, as has been already remarked, probably represents the rulers; the second and oblong harmony of 7600, the people.

And here we take leave of the difficulty. The discovery of the riddle would be useless, and would throw no light on ancient mathematics. The point of interest is that Plato should have used such a symbol, and that so much of the Pythagorean spirit should have prevailed in him. His general meaning is that divine creation is perfect, and is represented or presided over by a perfect or cyclical number; human generation is imperfect, and represented or presided over by an imperfect number or series of numbers. The number 5040, which is the number of the citizens in the Laws, is expressly based by him on utilitarian grounds, namely, the convenience of the number for division; it is also made up of the first seven digits multiplied by one another. The contrast of the perfect and imperfect number may have been easily suggested by the corrections of the cycle, which were made first by Meton and secondly by Callippus; (the latter is said to have been a pupil of Plato). Of the degree of importance or of exactness to be attributed

to the problem, the number of the tyrant in Book IX (729 = 365 x 2), and the slight correction of the error in the number 5040/12 (Laws), may furnish a criterion. There is nothing surprising in the circumstance that those who were seeking for order in nature and had found order in number, should have imagined one to give law to the other. Plato believes in a power of number far beyond what he could see realized in the world around him, and he knows the great influence which 'the little matter of 1, 2, 3' exercises upon education. He may even be thought to have a prophetic anticipation of the discoveries of Quetelet and others, that numbers depend upon numbers; e.g.—in population, the numbers of births and the respective numbers of children born of either sex, on the respective ages of parents, i.e. on other numbers.

BOOK IX. Last of all comes the tyrannical man, about whom we have to enquire, Whence is he, and how does he live—in happiness or in misery? There is, however, a previous question of the nature and number of the appetites, which I should like to consider first. Some of them are unlawful, and yet admit of being chastened and weakened in various degrees by the power of reason and law. 'What appetites do you mean?' I mean those which are awake when the reasoning powers are asleep, which get up and walk about naked without any self-respect or shame; and there is no conceivable folly or crime, however cruel or unnatural, of which, in imagination, they may not be guilty. 'True,' he said; 'very true.' But when a man's pulse beats temperately; and he has supped on a feast of reason and come to a knowledge of himself before going to rest, and has satisfied his desires just enough to prevent their perturbing his reason, which remains clear and luminous, and when he is free from quarrel and heat,—the visions which he has on his bed are least irregular and abnormal. Even in good men there is such an irregular wild-beast nature, which peers out in sleep.

To return:—You remember what was said of the democrat; that he was the son of a miserly father, who encouraged the saving desires and repressed the ornamental and expensive ones; presently the youth got into fine company, and began to entertain a dislike to his father's narrow ways; and being a better man than the corrupters of his youth, he came to a mean, and led a life, not of lawless or slavish passion, but of regular and successive indulgence. Now imagine that the youth has become a father, and has a son who is exposed to the same temptations, and has companions who lead him into every sort of iniquity, and parents and friends who try to keep him right. The counsellors of evil find that their only chance of retaining him is to implant in his soul a monster drone, or love; while other desires buzz around him and mystify him with sweet sounds and scents, this monster love takes possession of him, and puts an end to every true or modest thought or wish. Love, like drunkenness and madness, is a tyranny; and the tyrannical man, whether made by nature or habit, is just a drinking, lusting, furious sort of animal.

And how does such an one live? 'Nay, that you must tell me.' Well then, I fancy that he will live amid revelries and harlotries, and love will be the lord and master of the house. Many desires require much money, and so he spends all that he has and borrows more; and when he has nothing the young ravens are still in the nest in which they were hatched, crying for food. Love urges them on; and they must be gratified by force or fraud, or if not, they become painful and troublesome; and as the new pleasures succeed the old ones, so will the son take possession of the goods of his parents; if they show signs of refusing, he will defraud and deceive them; and if they openly resist, what then? 'I can only say, that I should not much like to be in their place.' But, O heavens, Adeimantus, to think that for some new-fangled and unnecessary love he will give up his old father and mother, best and dearest of friends, or enslave them to the fancies of the hour! Truly a tyrannical son is a blessing to his father and mother! When there is no more to be got out of them, he turns burglar or pickpocket, or robs a temple. Love overmasters the thoughts of his youth, and he becomes in sober reality the monster that he was sometimes in sleep. He waxes strong in all violence and lawlessness; and is ready for any deed of daring that will supply the wants of his rabble-rout. In a well-ordered State there are only a few such, and these in time of war go out and become the mercenaries of a tyrant. But in time of peace they stay at home and do mischief; they are the thieves, footpads, cut-purses, man-stealers of the community; or if they are able to speak, they turn false-witnesses and informers. 'No small catalogue of crimes truly, even if the perpetrators are few.' Yes, I said; but small and great are relative terms, and no crimes which are committed by them approach those of the tyrant, whom this class, growing strong and numerous, create out of themselves. If the people yield, well and good, but, if they resist, then, as before he beat his father and mother, so now he beats his fatherland and motherland, and places his mercenaries over them. Such men in their early days live with flatterers, and they themselves flatter others, in order to gain their ends; but they soon discard their followers when they have no longer any need of them; they are always either masters or servants,—the joys of friendship are unknown to them. And they are utterly treacherous and unjust, if the nature of justice be at all understood by us. They realize our dream; and he who is the most of a tyrant by nature, and leads the life of a tyrant for the longest time, will be the worst of them, and being the worst of them, will also be the most miserable.

Like man, like State,—the tyrannical man will answer to tyranny, which is the extreme opposite of the royal State; for one is the best and the other the worst. But which is the happier? Great and terrible as the tyrant may appear enthroned amid his satellites, let us not be afraid to go in and ask; and the answer is, that the monarchical is the happiest, and the tyrannical the most miserable of States. And may we not ask the same question about the men themselves, requesting some one to look into them who is able to penetrate the inner nature of man, and will not be panic-struck by the vain pomp of tyranny? I will suppose that he is one who has lived with him, and has seen him in family life, or perhaps in the hour of trouble and danger.

Assuming that we ourselves are the impartial judge for whom we seek, let us begin by comparing the individual and State, and ask first of all, whether the State is likely to be free or enslaved—Will there not be a little freedom and a great deal of slavery? And the freedom is of the bad, and the slavery of the good; and this applies to the man as well as to the State; for his soul is full of meanness and slavery, and the better part is enslaved to the worse. He cannot do what he would, and his mind is full of confusion; he is the very reverse of a freeman. The State will be poor and full of misery and sorrow; and the man's soul will also be poor and full of sorrows, and he will be the most miserable of men. No, not the most miserable, for there is yet a more miserable. 'Who is that?' The tyrannical man who has the misfortune also to become a public tyrant. 'There I suspect that you are right.' Say rather, 'I am sure;' conjecture is out of place in an enquiry of this nature. He is like a wealthy owner of slaves, only he has more of them than any private individual. You will say, 'The owners of slaves are not generally in any fear of them.' But why? Because the whole city is in a league which protects the individual. Suppose however that one of these owners and his household is carried off by a god into a wilderness, where there are no freemen to help him—will he not be in an agony of terror?—will he not be compelled to flatter his slaves and to promise them many things sore against his will? And suppose the same god who carried him off were to surround him with neighbours who declare that no man ought to have slaves, and that the owners of them should be punished with death. 'Still worse and worse! He will be in the midst of his enemies.' And is not our tyrant such a captive soul, who is tormented by a swarm of passions which he cannot indulge; living indoors always like a woman, and jealous of those who can go out and see the world?

Having so many evils, will not the most miserable of men be still more miserable in a public station? Master of others when he is not master of himself; like a sick man who is compelled to be an athlete; the meanest of slaves and the most abject of flatterers; wanting all things, and never able to satisfy his desires; always in fear and distraction, like the State of which he is the representative. His jealous, hateful, faithless temper grows worse with command; he is more and more faithless, envious, unrighteous,—the most wretched of men, a misery to himself and to others. And so let us have a final trial and proclamation; need we hire a herald, or shall I proclaim the result? 'Made the proclamation yourself.' The son of Ariston (the best) is of opinion that the best and justest of men is also the happiest, and that this is he who is the most royal master of himself; and that the unjust man is he who is the greatest tyrant of himself and of his State. And I add further—'seen or unseen by gods or men.'

This is our first proof. The second is derived from the three kinds of pleasure, which answer to the three elements of the soul—reason, passion, desire; under which last is comprehended avarice as well as sensual appetite, while passion includes ambition, party-feeling, love of reputation. Reason, again, is solely directed to the attainment of truth, and careless of money and reputation. In accordance with the difference of men's natures, one of these three principles is in the ascendant, and they have their several pleasures corresponding to them. Interrogate now the three natures, and each one will be found praising his own pleasures and depreciating those of others. The money-maker will contrast the vanity of knowledge with the solid advantages of wealth. The ambitious man will despise knowledge which brings no honour; whereas the philosopher will regard only the fruition of truth, and will call other pleasures necessary rather than good. Now, how shall we decide between them? Is there any better criterion than experience and knowledge? And which of the three has the truest knowledge and the widest experience? The experience of youth makes the philosopher acquainted with the two kinds of desire, but the avaricious and the ambitious man never taste the pleasures of truth and wisdom. Honour he has equally with them; they are 'judged of him,' but he is 'not judged of them,' for they never attain to the knowledge of true being. And his instrument is reason, whereas their standard is only wealth and honour; and if by reason we are to judge, his good will be the truest. And so we arrive at the result that the pleasure of the rational part of the soul, and a life passed in such pleasure is the pleasantest. He who has a right to judge judges thus. Next comes the life of ambition, and, in the third place, that of money-making.

Twice has the just man overthrown the unjust—once more, as in an Olympian contest, first offering up a prayer to the saviour Zeus, let him try a fall. A wise man whispers to me that the pleasures of the wise are true and pure; all others are a shadow only. Let us examine this: Is not pleasure opposed to pain, and is there not a mean state which is neither? When a man is sick, nothing is more pleasant to him than health. But this he never found out while he was well. In pain he desires only to cease from pain; on the other

hand, when he is in an ecstasy of pleasure, rest is painful to him. Thus rest or cessation is both pleasure and pain. But can that which is neither become both? Again, pleasure and pain are motions, and the absence of them is rest; but if so, how can the absence of either of them be the other? Thus we are led to infer that the contradiction is an appearance only, and witchery of the senses. And these are not the only pleasures, for there are others which have no preceding pains. Pure pleasure then is not the absence of pain, nor pure pain the absence of pleasure; although most of the pleasures which reach the mind through the body are reliefs of pain, and have not only their reactions when they depart, but their anticipations before they come. They can be best described in a simile. There is in nature an upper, lower, and middle region, and he who passes from the lower to the middle imagines that he is going up and is already in the upper world; and if he were taken back again would think, and truly think, that he was descending. All this arises out of his ignorance of the true upper, middle, and lower regions. And a like confusion happens with pleasure and pain, and with many other things. The man who compares grey with black, calls grey white; and the man who compares absence of pain with pain, calls the absence of pain pleasure. Again, hunger and thirst are inanitions of the body, ignorance and folly of the soul; and food is the satisfaction of the one, knowledge of the other. Now which is the purer satisfaction—that of eating and drinking, or that of knowledge? Consider the matter thus: The satisfaction of that which has more existence is truer than of that which has less. The invariable and immortal has a more real existence than the variable and mortal, and has a corresponding measure of knowledge and truth. The soul, again, has more existence and truth and knowledge than the body, and is therefore more really satisfied and has a more natural pleasure. Those who feast only on earthly food, are always going at random up to the middle and down again; but they never pass into the true upper world, or have a taste of true pleasure. They are like fatted beasts, full of gluttony and sensuality, and ready to kill one another by reason of their insatiable lust; for they are not filled with true being, and their vessel is leaky (Gorgias). Their pleasures are mere shadows of pleasure, mixed with pain, coloured and intensified by contrast, and therefore intensely desired; and men go fighting about them, as Stesichorus says that the Greeks fought about the shadow of Helen at Troy, because they know not the truth.

The same may be said of the passionate element:—the desires of the ambitious soul, as well as of the covetous, have an inferior satisfaction. Only when under the guidance of reason do either of the other principles do their own business or attain the pleasure which is natural to them. When not attaining, they compel the other parts of the soul to pursue a shadow of pleasure which is not theirs. And the more distant they are from philosophy and reason, the more distant they will be from law and order, and the more illusive will be their pleasures. The desires of love and tyranny are the farthest from law, and those of the king are nearest to it. There is one genuine pleasure, and two spurious ones: the tyrant goes beyond even the latter; he has run away altogether from law and reason. Nor can the measure of his inferiority be told, except in a figure. The tyrant is the third removed from the oligarch, and has therefore, not a shadow of his pleasure, but the shadow of a shadow only. The oligarch, again, is thrice removed from the king, and thus we get the formula 3 x 3, which is the number of a surface, representing the shadow which is the tyrant's pleasure, and if you like to cube this 'number of the beast,' you will find that the measure of the difference amounts to 729; the king is 729 times more happy than the tyrant. And this extraordinary number is NEARLY equal to the number of days and nights in a year (365 x 2 = 730); and is therefore concerned with human life. This is the interval between a good and bad man in happiness only: what must be the difference between them in comeliness of life and virtue!

Perhaps you may remember some one saying at the beginning of our discussion that the unjust man was profited if he had the reputation of justice. Now that we know the nature of justice and injustice, let us make an image of the soul, which will personify his words. First of all, fashion a multitudinous beast, having a ring of heads of all manner of animals, tame and wild, and able to produce and change them at pleasure. Suppose now another form of a lion, and another of a man; the second smaller than the first, the third than the second; join them together and cover them with a human skin, in which they are completely concealed. When this has been done, let us tell the supporter of injustice that he is feeding up the beasts and starving the man. The maintainer of justice, on the other hand, is trying to strengthen the man; he is nourishing the gentle principle within him, and making an alliance with the lion heart, in order that he may be able to keep down the many-headed hydra, and bring all into unity with each other and with themselves. Thus in every point of view, whether in relation to pleasure, honour, or advantage, the just man is right, and the unjust wrong.

But now, let us reason with the unjust, who is not intentionally in error. Is not the noble that which subjects the beast to the man, or rather to the God in man; the ignoble, that which subjects the man to the beast? And if so, who would receive gold on condition that he was to degrade the noblest part of himself under the worst?—who would sell his son or daughter into the hands of brutal and evil men, for any amount of money? And will he sell his own fairer and diviner part without any compunction to the most godless and foul? Would he not be worse than Eriphyle, who sold her husband's life for a necklace? And intemperance is the letting loose of the multiform monster, and pride and sullenness are the growth and increase of the lion and serpent element, while luxury and

effeminacy are caused by a too great relaxation of spirit. Flattery and meanness again arise when the spirited element is subjected to avarice, and the lion is habituated to become a monkey. The real disgrace of handicraft arts is, that those who are engaged in them have to flatter, instead of mastering their desires; therefore we say that they should be placed under the control of the better principle in another because they have none in themselves; not, as Thrasymachus imagined, to the injury of the subjects, but for their good. And our intention in educating the young, is to give them self-control; the law desires to nurse up in them a higher principle, and when they have acquired this, they may go their ways.

'What, then, shall a man profit, if he gain the whole world' and become more and more wicked? Or what shall he profit by escaping discovery, if the concealment of evil prevents the cure? If he had been punished, the brute within him would have been silenced, and the gentler element liberated; and he would have united temperance, justice, and wisdom in his soul—a union better far than any combination of bodily gifts. The man of understanding will honour knowledge above all; in the next place he will keep under his body, not only for the sake of health and strength, but in order to attain the most perfect harmony of body and soul. In the acquisition of riches, too, he will aim at order and harmony; he will not desire to heap up wealth without measure, but he will fear that the increase of wealth will disturb the constitution of his own soul. For the same reason he will only accept such honours as will make him a better man; any others he will decline. 'In that case,' said he, 'he will never be a politician.' Yes, but he will, in his own city; though probably not in his native country, unless by some divine accident. 'You mean that he will be a citizen of the ideal city, which has no place upon earth.' But in heaven, I replied, there is a pattern of such a city, and he who wishes may order his life after that image. Whether such a state is or ever will be matters not; he will act according to that pattern and no other...

The most noticeable points in the 9th Book of the Republic are:—(1) the account of pleasure; (2) the number of the interval which divides the king from the tyrant; (3) the pattern which is in heaven.

1. Plato's account of pleasure is remarkable for moderation, and in this respect contrasts with the later Platonists and the views which are attributed to them by Aristotle. He is not, like the Cynics, opposed to all pleasure, but rather desires that the several parts of the soul shall have their natural satisfaction; he even agrees with the Epicureans in describing pleasure as something more than the absence of pain. This is proved by the circumstance that there are pleasures which have no antecedent pains (as he also remarks in the Philebus), such as the pleasures of smell, and also the pleasures of hope and anticipation. In the previous book he had made the distinction between necessary and unnecessary pleasure, which is repeated by Aristotle, and he now observes that there are a further class of 'wild beast' pleasures, corresponding to Aristotle's (Greek). He dwells upon the relative and unreal character of sensual pleasures and the illusion which arises out of the contrast of pleasure and pain, pointing out the superiority of the pleasures of reason, which are at rest, over the fleeting pleasures of sense and emotion. The pre-eminence of royal pleasure is shown by the fact that reason is able to form a judgment of the lower pleasures, while the two lower parts of the soul are incapable of judging the pleasures of reason. Thus, in his treatment of pleasure, as in many other subjects, the philosophy of Plato is 'sawn up into quantities' by Aristotle; the analysis which was originally made by him became in the next generation the foundation of further technical distinctions. Both in Plato and Aristotle we note the illusion under which the ancients fell of regarding the transience of pleasure as a proof of its unreality, and of confounding the permanence of the intellectual pleasures with the unchangeableness of the knowledge from which they are derived. Neither do we like to admit that the pleasures of knowledge, though more elevating, are not more lasting than other pleasures, and are almost equally dependent on the accidents of our bodily state (Introduction to Philebus).

2. The number of the interval which separates the king from the tyrant, and royal from tyrannical pleasures, is 729, the cube of 9. Which Plato characteristically designates as a number concerned with human life, because NEARLY equivalent to the number of days and nights in the year. He is desirous of proclaiming that the interval between them is immeasurable, and invents a formula to give expression to his idea. Those who spoke of justice as a cube, of virtue as an art of measuring (Prot.), saw no inappropriateness in conceiving the soul under the figure of a line, or the pleasure of the tyrant as separated from the pleasure of the king by the numerical interval of 729. And in modern times we sometimes use metaphorically what Plato employed as a philosophical formula. 'It is not easy to estimate the loss of the tyrant, except perhaps in this way,' says Plato. So we might say, that although the life of a good man is not to be compared to that of a bad man, yet you may measure the difference between them by valuing one minute of the one at an hour of the other ('One day in thy courts is better than a thousand'), or you might say that 'there is an infinite difference.' But this is not so much as saying, in homely phrase, 'They are a thousand miles asunder.' And accordingly Plato finds the natural vehicle of his thoughts in a progression of numbers; this arithmetical formula he draws out with the utmost seriousness, and both here and in the number of generation seems to find an additional proof of the truth of his speculation in forming the number into a geometrical figure; just as persons in our own day are apt to fancy that a statement is verified when it has

been only thrown into an abstract form. In speaking of the number 729 as proper to human life, he probably intended to intimate that one year of the tyrannical = 12 hours of the royal life.

The simple observation that the comparison of two similar solids is effected by the comparison of the cubes of their sides, is the mathematical groundwork of this fanciful expression. There is some difficulty in explaining the steps by which the number 729 is obtained; the oligarch is removed in the third degree from the royal and aristocratical, and the tyrant in the third degree from the oligarchical; but we have to arrange the terms as the sides of a square and to count the oligarch twice over, thus reckoning them not as = 5 but as = 9. The square of 9 is passed lightly over as only a step towards the cube.

3. Towards the close of the Republic, Plato seems to be more and more convinced of the ideal character of his own speculations. At the end of the 9th Book the pattern which is in heaven takes the place of the city of philosophers on earth. The vision which has received form and substance at his hands, is now discovered to be at a distance. And yet this distant kingdom is also the rule of man's life. ('Say not lo! here, or lo! there, for the kingdom of God is within you.') Thus a note is struck which prepares for the revelation of a future life in the following Book. But the future life is present still; the ideal of politics is to be realized in the individual.

BOOK X. Many things pleased me in the order of our State, but there was nothing which I liked better than the regulation about poetry. The division of the soul throws a new light on our exclusion of imitation. I do not mind telling you in confidence that all poetry is an outrage on the understanding, unless the hearers have that balm of knowledge which heals error. I have loved Homer ever since I was a boy, and even now he appears to me to be the great master of tragic poetry. But much as I love the man, I love truth more, and therefore I must speak out: and first of all, will you explain what is imitation, for really I do not understand? 'How likely then that I should understand!' That might very well be, for the duller often sees better than the keener eye. 'True, but in your presence I can hardly venture to say what I think.' Then suppose that we begin in our old fashion, with the doctrine of universals. Let us assume the existence of beds and tables. There is one idea of a bed, or of a table, which the maker of each had in his mind when making them; he did not make the ideas of beds and tables, but he made beds and tables according to the ideas. And is there not a maker of the works of all workmen, who makes not only vessels but plants and animals, himself, the earth and heaven, and things in heaven and under the earth? He makes the Gods also. 'He must be a wizard indeed!' But do you not see that there is a sense in which you could do the same? You have only to take a mirror, and catch the reflection of the sun, and the earth, or anything else—there now you have made them. 'Yes, but only in appearance.' Exactly so; and the painter is such a creator as you are with the mirror, and he is even more unreal than the carpenter; although neither the carpenter nor any other artist can be supposed to make the absolute bed. 'Not if philosophers may be believed.' Nor need we wonder that his bed has but an imperfect relation to the truth. Reflect:—Here are three beds; one in nature, which is made by God; another, which is made by the carpenter; and the third, by the painter. God only made one, nor could he have made more than one; for if there had been two, there would always have been a third—more absolute and abstract than either, under which they would have been included. We may therefore conceive God to be the natural maker of the bed, and in a lower sense the carpenter is also the maker; but the painter is rather the imitator of what the other two make; he has to do with a creation which is thrice removed from reality. And the tragic poet is an imitator, and, like every other imitator, is thrice removed from the king and from the truth. The painter imitates not the original bed, but the bed made by the carpenter. And this, without being really different, appears to be different, and has many points of view, of which only one is caught by the painter, who represents everything because he represents a piece of everything, and that piece an image. And he can paint any other artist, although he knows nothing of their arts; and this with sufficient skill to deceive children or simple people. Suppose now that somebody came to us and told us, how he had met a man who knew all that everybody knows, and better than anybody:—should we not infer him to be a simpleton who, having no discernment of truth and falsehood, had met with a wizard or enchanter, whom he fancied to be all-wise? And when we hear persons saying that Homer and the tragedians know all the arts and all the virtues, must we not infer that they are under a similar delusion? they do not see that the poets are imitators, and that their creations are only imitations. 'Very true.' But if a person could create as well as imitate, he would rather leave some permanent work and not an imitation only; he would rather be the receiver than the giver of praise? 'Yes, for then he would have more honour and advantage.'

Let us now interrogate Homer and the poets. Friend Homer, say I to him, I am not going to ask you about medicine, or any art to which your poems incidentally refer, but about their main subjects—war, military tactics, politics. If you are only twice and not thrice removed from the truth—not an imitator or an image-maker, please to inform us what good you have ever done to mankind? Is there any city which professes to have received laws from you, as Sicily and Italy have from Charondas, Sparta from Lycurgus, Athens from Solon? Or was any war ever carried on by your counsels? or is any invention attributed to you, as there is to Thales and Anacharsis? Or is there any Homeric way of life, such as the Pythagorean was, in which you instructed men, and which is

called after you? ‘No, indeed; and Creophylus (Flesh-child) was even more unfortunate in his breeding than he was in his name, if, as tradition says, Homer in his lifetime was allowed by him and his other friends to starve.’ Yes, but could this ever have happened if Homer had really been the educator of Hellas? Would he not have had many devoted followers? If Protagoras and Prodicus can persuade their contemporaries that no one can manage house or State without them, is it likely that Homer and Hesiod would have been allowed to go about as beggars—I mean if they had really been able to do the world any good?—would not men have compelled them to stay where they were, or have followed them about in order to get education? But they did not; and therefore we may infer that Homer and all the poets are only imitators, who do but imitate the appearances of things. For as a painter by a knowledge of figure and colour can paint a cobbler without any practice in cobbling, so the poet can delineate any art in the colours of language, and give harmony and rhythm to the cobbler and also to the general; and you know how mere narration, when deprived of the ornaments of metre, is like a face which has lost the beauty of youth and never had any other. Once more, the imitator has no knowledge of reality, but only of appearance. The painter paints, and the artificer makes a bridle and reins, but neither understands the use of them—the knowledge of this is confined to the horseman; and so of other things. Thus we have three arts: one of use, another of invention, a third of imitation; and the user furnishes the rule to the two others. The flute-player will know the good and bad flute, and the maker will put faith in him; but the imitator will neither know nor have faith—neither science nor true opinion can be ascribed to him. Imitation, then, is devoid of knowledge, being only a kind of play or sport, and the tragic and epic poets are imitators in the highest degree.

And now let us enquire, what is the faculty in man which answers to imitation. Allow me to explain my meaning: Objects are differently seen when in the water and when out of the water, when near and when at a distance; and the painter or juggler makes use of this variation to impose upon us. And the art of measuring and weighing and calculating comes in to save our bewildered minds from the power of appearance; for, as we were saying, two contrary opinions of the same about the same and at the same time, cannot both of them be true. But which of them is true is determined by the art of calculation; and this is allied to the better faculty in the soul, as the arts of imitation are to the worse. And the same holds of the ear as well as of the eye, of poetry as well as painting. The imitation is of actions voluntary or involuntary, in which there is an expectation of a good or bad result, and present experience of pleasure and pain. But is a man in harmony with himself when he is the subject of these conflicting influences? Is there not rather a contradiction in him? Let me further ask, whether he is more likely to control sorrow when he is alone or when he is in company. ‘In the latter case.’ Feeling would lead him to indulge his sorrow, but reason and law control him and enjoin patience; since he cannot know whether his affliction is good or evil, and no human thing is of any great consequence, while sorrow is certainly a hindrance to good counsel. For when we stumble, we should not, like children, make an uproar; we should take the measures which reason prescribes, not raising a lament, but finding a cure. And the better part of us is ready to follow reason, while the irrational principle is full of sorrow and distraction at the recollection of our troubles. Unfortunately, however, this latter furnishes the chief materials of the imitative arts. Whereas reason is ever in repose and cannot easily be displayed, especially to a mixed multitude who have no experience of her. Thus the poet is like the painter in two ways: first he paints an inferior degree of truth, and secondly, he is concerned with an inferior part of the soul. He indulges the feelings, while he enfeebles the reason; and we refuse to allow him to have authority over the mind of man; for he has no measure of greater and less, and is a maker of images and very far gone from truth.

But we have not yet mentioned the heaviest count in the indictment—the power which poetry has of injuriously exciting the feelings. When we hear some passage in which a hero laments his sufferings at tedious length, you know that we sympathize with him and praise the poet; and yet in our own sorrows such an exhibition of feeling is regarded as effeminate and unmanly (Ion). Now, ought a man to feel pleasure in seeing another do what he hates and abominates in himself? Is he not giving way to a sentiment which in his own case he would control?—he is off his guard because the sorrow is another’s; and he thinks that he may indulge his feelings without disgrace, and will be the gainer by the pleasure. But the inevitable consequence is that he who begins by weeping at the sorrows of others, will end by weeping at his own. The same is true of comedy,—you may often laugh at buffoonery which you would be ashamed to utter, and the love of coarse merriment on the stage will at last turn you into a buffoon at home. Poetry feeds and waters the passions and desires; she lets them rule instead of ruling them. And therefore, when we hear the encomiasts of Homer affirming that he is the educator of Hellas, and that all life should be regulated by his precepts, we may allow the excellence of their intentions, and agree with them in thinking Homer a great poet and tragedian. But we shall continue to prohibit all poetry which goes beyond hymns to the Gods and praises of famous men. Not pleasure and pain, but law and reason shall rule in our State.

These are our grounds for expelling poetry; but lest she should charge us with discourtesy, let us also make an apology to her. We will remind her that there is an ancient quarrel between poetry and philosophy, of which there are many traces in the writings of the

poets, such as the saying of ‘the she-dog, yelping at her mistress,’ and ‘the philosophers who are ready to circumvent Zeus,’ and ‘the philosophers who are paupers.’ Nevertheless we bear her no ill-will, and will gladly allow her to return upon condition that she makes a defence of herself in verse; and her supporters who are not poets may speak in prose. We confess her charms; but if she cannot show that she is useful as well as delightful, like rational lovers, we must renounce our love, though endeared to us by early associations. Having come to years of discretion, we know that poetry is not truth, and that a man should be careful how he introduces her to that state or constitution which he himself is; for there is a mighty issue at stake—no less than the good or evil of a human soul. And it is not worth while to forsake justice and virtue for the attractions of poetry, any more than for the sake of honour or wealth. ‘I agree with you.’

And yet the rewards of virtue are greater far than I have described. ‘And can we conceive things greater still?’ Not, perhaps, in this brief span of life: but should an immortal being care about anything short of eternity? ‘I do not understand what you mean?’ Do you not know that the soul is immortal? ‘Surely you are not prepared to prove that?’ Indeed I am. ‘Then let me hear this argument, of which you make so light.’

You would admit that everything has an element of good and of evil. In all things there is an inherent corruption; and if this cannot destroy them, nothing else will. The soul too has her own corrupting principles, which are injustice, intemperance, cowardice, and the like. But none of these destroy the soul in the same sense that disease destroys the body. The soul may be full of all iniquities, but is not, by reason of them, brought any nearer to death. Nothing which was not destroyed from within ever perished by external affection of evil. The body, which is one thing, cannot be destroyed by food, which is another, unless the badness of the food is communicated to the body. Neither can the soul, which is one thing, be corrupted by the body, which is another, unless she herself is infected. And as no bodily evil can infect the soul, neither can any bodily evil, whether disease or violence, or any other destroy the soul, unless it can be shown to render her unholy and unjust. But no one will ever prove that the souls of men become more unjust when they die. If a person has the audacity to say the contrary, the answer is—Then why do criminals require the hand of the executioner, and not die of themselves? ‘Truly,’ he said, ‘injustice would not be very terrible if it brought a cessation of evil; but I rather believe that the injustice which murders others may tend to quicken and stimulate the life of the unjust.’ You are quite right. If sin which is her own natural and inherent evil cannot destroy the soul, hardly will anything else destroy her. But the soul which cannot be destroyed either by internal or external evil must be immortal and everlasting. And if this be true, souls will always exist in the same number. They cannot diminish, because they cannot be destroyed; nor yet increase, for the increase of the immortal must come from something mortal, and so all would end in immortality. Neither is the soul variable and diverse; for that which is immortal must be of the fairest and simplest composition. If we would conceive her truly, and so behold justice and injustice in their own nature, she must be viewed by the light of reason pure as at birth, or as she is reflected in philosophy when holding converse with the divine and immortal and eternal. In her present condition we see her only like the sea-god Glaucus, bruised and maimed in the sea which is the world, and covered with shells and stones which are incrusted upon her from the entertainments of earth.

Thus far, as the argument required, we have said nothing of the rewards and honours which the poets attribute to justice; we have contented ourselves with showing that justice in herself is best for the soul in herself, even if a man should put on a Gyges’ ring and have the helmet of Hades too. And now you shall repay me what you borrowed; and I will enumerate the rewards of justice in life and after death. I granted, for the sake of argument, as you will remember, that evil might perhaps escape the knowledge of Gods and men, although this was really impossible. And since I have shown that justice has reality, you must grant me also that she has the palm of appearance. In the first place, the just man is known to the Gods, and he is therefore the friend of the Gods, and he will receive at their hands every good, always excepting such evil as is the necessary consequence of former sins. All things end in good to him, either in life or after death, even what appears to be evil; for the Gods have a care of him who desires to be in their likeness. And what shall we say of men? Is not honesty the best policy? The clever rogue makes a great start at first, but breaks down before he reaches the goal, and slinks away in dishonour; whereas the true runner perseveres to the end, and receives the prize. And you must allow me to repeat all the blessings which you attributed to the fortunate unjust—they bear rule in the city, they marry and give in marriage to whom they will; and the evils which you attributed to the unfortunate just, do really fall in the end on the unjust, although, as you implied, their sufferings are better veiled in silence.

But all the blessings of this present life are as nothing when compared with those which await good men after death. ‘I should like to hear about them.’ Come, then, and I will tell you the story of Er, the son of Armenius, a valiant man. He was supposed to have died in battle, but ten days afterwards his body was found untouched by corruption and sent home for burial. On the twelfth day he was placed on the funeral pyre and there he came to life again, and told what he had seen in the world below. He said that his soul went with a great company to a place, in which there were two chasms near together in the earth beneath, and two corresponding

chasms in the heaven above. And there were judges sitting in the intermediate space, bidding the just ascend by the heavenly way on the right hand, having the seal of their judgment set upon them before, while the unjust, having the seal behind, were bidden to descend by the way on the left hand. Him they told to look and listen, as he was to be their messenger to men from the world below. And he beheld and saw the souls departing after judgment at either chasm; some who came from earth, were worn and travel-stained; others, who came from heaven, were clean and bright. They seemed glad to meet and rest awhile in the meadow; here they discoursed with one another of what they had seen in the other world. Those who came from earth wept at the remembrance of their sorrows, but the spirits from above spoke of glorious sights and heavenly bliss. He said that for every evil deed they were punished tenfold—now the journey was of a thousand years' duration, because the life of man was reckoned as a hundred years—and the rewards of virtue were in the same proportion. He added something hardly worth repeating about infants dying almost as soon as they were born. Of parricides and other murderers he had tortures still more terrible to narrate. He was present when one of the spirits asked—Where is Ardiaeus the Great? (This Ardiaeus was a cruel tyrant, who had murdered his father, and his elder brother, a thousand years before.) Another spirit answered, 'He comes not hither, and will never come. And I myself,' he added, 'actually saw this terrible sight. At the entrance of the chasm, as we were about to reascend, Ardiaeus appeared, and some other sinners—most of whom had been tyrants, but not all—and just as they fancied that they were returning to life, the chasm gave a roar, and then wild, fiery-looking men who knew the meaning of the sound, seized him and several others, and bound them hand and foot and threw them down, and dragged them along at the side of the road, lacerating them and carding them like wool, and explaining to the passers-by, that they were going to be cast into hell.' The greatest terror of the pilgrims ascending was lest they should hear the voice, and when there was silence one by one they passed up with joy. To these sufferings there were corresponding delights.

On the eighth day the souls of the pilgrims resumed their journey, and in four days came to a spot whence they looked down upon a line of light, in colour like a rainbow, only brighter and clearer. One day more brought them to the place, and they saw that this was the column of light which binds together the whole universe. The ends of the column were fastened to heaven, and from them hung the distaff of Necessity, on which all the heavenly bodies turned—the hook and spindle were of adamant, and the whorl of a mixed substance. The whorl was in form like a number of boxes fitting into one another with their edges turned upwards, making together a single whorl which was pierced by the spindle. The outermost had the rim broadest, and the inner whorls were smaller and smaller, and had their rims narrower. The largest (the fixed stars) was spangled—the seventh (the sun) was brightest—the eighth (the moon) shone by the light of the seventh—the second and fifth (Saturn and Mercury) were most like one another and yellower than the eighth—the third (Jupiter) had the whitest light—the fourth (Mars) was red—the sixth (Venus) was in whiteness second. The whole had one motion, but while this was revolving in one direction the seven inner circles were moving in the opposite, with various degrees of swiftness and slowness. The spindle turned on the knees of Necessity, and a Siren stood hymning upon each circle, while Lachesis, Clotho, and Atropos, the daughters of Necessity, sat on thrones at equal intervals, singing of past, present, and future, responsive to the music of the Sirens; Clotho from time to time guiding the outer circle with a touch of her right hand; Atropos with her left hand touching and guiding the inner circles; Lachesis in turn putting forth her hand from time to time to guide both of them. On their arrival the pilgrims went to Lachesis, and there was an interpreter who arranged them, and taking from her knees lots, and samples of lives, got up into a pulpit and said: 'Mortal souls, hear the words of Lachesis, the daughter of Necessity. A new period of mortal life has begun, and you may choose what divinity you please; the responsibility of choosing is with you—God is blameless.' After speaking thus, he cast the lots among them and each one took up the lot which fell near him. He then placed on the ground before them the samples of lives, many more than the souls present; and there were all sorts of lives, of men and of animals. There were tyrannies ending in misery and exile, and lives of men and women famous for their different qualities; and also mixed lives, made up of wealth and poverty, sickness and health. Here, Glaucon, is the great risk of human life, and therefore the whole of education should be directed to the acquisition of such a knowledge as will teach a man to refuse the evil and choose the good. He should know all the combinations which occur in life—of beauty with poverty or with wealth,—of knowledge with external goods,—and at last choose with reference to the nature of the soul, regarding that only as the better life which makes men better, and leaving the rest. And a man must take with him an iron sense of truth and right into the world below, that there too he may remain undazzled by wealth or the allurements of evil, and be determined to avoid the extremes and choose the mean. For this, as the messenger reported the interpreter to have said, is the true happiness of man; and any one, as he proclaimed, may, if he choose with understanding, have a good lot, even though he come last. 'Let not the first be careless in his choice, nor the last despair.' He spoke; and when he had spoken, he who had drawn the first lot chose a tyranny: he did not see that he was fated to devour his own children—and when he discovered his mistake, he wept and beat his breast, blaming chance and the Gods and anybody rather than himself. He was one of those who had come from heaven, and in his previous life had been a citizen of a well-ordered State, but he had only habit and no philosophy. Like many another, he made a bad choice, because he

had no experience of life; whereas those who came from earth and had seen trouble were not in such a hurry to choose. But if a man had followed philosophy while upon earth, and had been moderately fortunate in his lot, he might not only be happy here, but his pilgrimage both from and to this world would be smooth and heavenly. Nothing was more curious than the spectacle of the choice, at once sad and laughable and wonderful; most of the souls only seeking to avoid their own condition in a previous life. He saw the soul of Orpheus changing into a swan because he would not be born of a woman; there was Thamyras becoming a nightingale; musical birds, like the swan, choosing to be men; the twentieth soul, which was that of Ajax, preferring the life of a lion to that of a man, in remembrance of the injustice which was done to him in the judgment of the arms; and Agamemnon, from a like enmity to human nature, passing into an eagle. About the middle was the soul of Atalanta choosing the honours of an athlete, and next to her Epeus taking the nature of a workwoman; among the last was Thersites, who was changing himself into a monkey. Thither, the last of all, came Odysseus, and sought the lot of a private man, which lay neglected and despised, and when he found it he went away rejoicing, and said that if he had been first instead of last, his choice would have been the same. Men, too, were seen passing into animals, and wild and tame animals changing into one another.

When all the souls had chosen they went to Lachesis, who sent with each of them their genius or attendant to fulfil their lot. He first of all brought them under the hand of Clotho, and drew them within the revolution of the spindle impelled by her hand; from her they were carried to Atropos, who made the threads irreversible; whence, without turning round, they passed beneath the throne of Necessity; and when they had all passed, they moved on in scorching heat to the plain of Forgetfulness and rested at evening by the river Unmindful, whose water could not be retained in any vessel; of this they had all to drink a certain quantity—some of them drank more than was required, and he who drank forgot all things. Er himself was prevented from drinking. When they had gone to rest, about the middle of the night there were thunderstorms and earthquakes, and suddenly they were all driven divers ways, shooting like stars to their birth. Concerning his return to the body, he only knew that awaking suddenly in the morning he found himself lying on the pyre.

Thus, Glaucon, the tale has been saved, and will be our salvation, if we believe that the soul is immortal, and hold fast to the heavenly way of Justice and Knowledge. So shall we pass undefiled over the river of Forgetfulness, and be dear to ourselves and to the Gods, and have a crown of reward and happiness both in this world and also in the millennial pilgrimage of the other.

The Tenth Book of the Republic of Plato falls into two divisions: first, resuming an old thread which has been interrupted, Socrates assails the poets, who, now that the nature of the soul has been analyzed, are seen to be very far gone from the truth; and secondly, having shown the reality of the happiness of the just, he demands that appearance shall be restored to him, and then proceeds to prove the immortality of the soul. The argument, as in the Phaedo and Gorgias, is supplemented by the vision of a future life.

Why Plato, who was himself a poet, and whose dialogues are poems and dramas, should have been hostile to the poets as a class, and especially to the dramatic poets; why he should not have seen that truth may be embodied in verse as well as in prose, and that there are some indefinable lights and shadows of human life which can only be expressed in poetry—some elements of imagination which always entwine with reason; why he should have supposed epic verse to be inseparably associated with the impurities of the old Hellenic mythology; why he should try Homer and Hesiod by the unfair and prosaic test of utility,—are questions which have always been debated amongst students of Plato. Though unable to give a complete answer to them, we may show—first, that his views arose naturally out of the circumstances of his age; and secondly, we may elicit the truth as well as the error which is contained in them.

He is the enemy of the poets because poetry was declining in his own lifetime, and a theatrocracy, as he says in the Laws, had taken the place of an intellectual aristocracy. Euripides exhibited the last phase of the tragic drama, and in him Plato saw the friend and apologist of tyrants, and the Sophist of tragedy. The old comedy was almost extinct; the new had not yet arisen. Dramatic and lyric poetry, like every other branch of Greek literature, was falling under the power of rhetoric. There was no ‘second or third’ to Aeschylus and Sophocles in the generation which followed them. Aristophanes, in one of his later comedies (Frogs), speaks of ‘thousands of tragedy-making prattlers,’ whose attempts at poetry he compares to the chirping of swallows; ‘their garrulity went far beyond Euripides,’—‘they appeared once upon the stage, and there was an end of them.’ To a man of genius who had a real appreciation of the godlike Aeschylus and the noble and gentle Sophocles, though disagreeing with some parts of their ‘theology’ (Rep.), these ‘minor poets’ must have been contemptible and intolerable. There is no feeling stronger in the dialogues of Plato than a sense of the decline and decay both in literature and in politics which marked his own age. Nor can he have been expected to look with favour on the licence of Aristophanes, now at the end of his career, who had begun by satirizing Socrates in the Clouds, and in a similar spirit forty years afterwards had satirized the founders of ideal commonwealths in his Eccleziazusae, or Female

Parliament (Laws).

There were other reasons for the antagonism of Plato to poetry. The profession of an actor was regarded by him as a degradation of human nature, for ‘one man in his life’ cannot ‘play many parts;’ the characters which the actor performs seem to destroy his own character, and to leave nothing which can be truly called himself. Neither can any man live his life and act it. The actor is the slave of his art, not the master of it. Taking this view Plato is more decided in his expulsion of the dramatic than of the epic poets, though he must have known that the Greek tragedians afforded noble lessons and examples of virtue and patriotism, to which nothing in Homer can be compared. But great dramatic or even great rhetorical power is hardly consistent with firmness or strength of mind, and dramatic talent is often incidentally associated with a weak or dissolute character.

In the Tenth Book Plato introduces a new series of objections. First, he says that the poet or painter is an imitator, and in the third degree removed from the truth. His creations are not tested by rule and measure; they are only appearances. In modern times we should say that art is not merely imitation, but rather the expression of the ideal in forms of sense. Even adopting the humble image of Plato, from which his argument derives a colour, we should maintain that the artist may ennoble the bed which he paints by the folds of the drapery, or by the feeling of home which he introduces; and there have been modern painters who have imparted such an ideal interest to a blacksmith’s or a carpenter’s shop. The eye or mind which feels as well as sees can give dignity and pathos to a ruined mill, or a straw-built shed (Rembrandt), to the hull of a vessel ‘going to its last home’ (Turner). Still more would this apply to the greatest works of art, which seem to be the visible embodiment of the divine. Had Plato been asked whether the Zeus or Athene of Pheidias was the imitation of an imitation only, would he not have been compelled to admit that something more was to be found in them than in the form of any mortal; and that the rule of proportion to which they conformed was ‘higher far than any geometry or arithmetic could express?’ (Statesman.)

Again, Plato objects to the imitative arts that they express the emotional rather than the rational part of human nature. He does not admit Aristotle’s theory, that tragedy or other serious imitations are a purgation of the passions by pity and fear; to him they appear only to afford the opportunity of indulging them. Yet we must acknowledge that we may sometimes cure disordered emotions by giving expression to them; and that they often gain strength when pent up within our own breast. It is not every indulgence of the feelings which is to be condemned. For there may be a gratification of the higher as well as of the lower—thoughts which are too deep or too sad to be expressed by ourselves, may find an utterance in the words of poets. Every one would acknowledge that there have been times when they were consoled and elevated by beautiful music or by the sublimity of architecture or by the peacefulness of nature. Plato has himself admitted, in the earlier part of the Republic, that the arts might have the effect of harmonizing as well as of enervating the mind; but in the Tenth Book he regards them through a Stoic or Puritan medium. He asks only ‘What good have they done?’ and is not satisfied with the reply, that ‘They have given innocent pleasure to mankind.’

He tells us that he rejoices in the banishment of the poets, since he has found by the analysis of the soul that they are concerned with the inferior faculties. He means to say that the higher faculties have to do with universals, the lower with particulars of sense. The poets are on a level with their own age, but not on a level with Socrates and Plato; and he was well aware that Homer and Hesiod could not be made a rule of life by any process of legitimate interpretation; his ironical use of them is in fact a denial of their authority; he saw, too, that the poets were not critics—as he says in the Apology, ‘Any one was a better interpreter of their writings than they were themselves. He himself ceased to be a poet when he became a disciple of Socrates; though, as he tells us of Solon, ‘he might have been one of the greatest of them, if he had not been deterred by other pursuits’ (Tim.) Thus from many points of view there is an antagonism between Plato and the poets, which was foreshadowed to him in the old quarrel between philosophy and poetry. The poets, as he says in the Protagoras, were the Sophists of their day; and his dislike of the one class is reflected on the other. He regards them both as the enemies of reasoning and abstraction, though in the case of Euripides more with reference to his immoral sentiments about tyrants and the like. For Plato is the prophet who ‘came into the world to convince men’—first of the fallibility of sense and opinion, and secondly of the reality of abstract ideas. Whatever strangeness there may be in modern times in opposing philosophy to poetry, which to us seem to have so many elements in common, the strangeness will disappear if we conceive of poetry as allied to sense, and of philosophy as equivalent to thought and abstraction. Unfortunately the very word ‘idea,’ which to Plato is expressive of the most real of all things, is associated in our minds with an element of subjectiveness and unreality. We may note also how he differs from Aristotle who declares poetry to be truer than history, for the opposite reason, because it is concerned with universals, not like history, with particulars (Poet).

The things which are seen are opposed in Scripture to the things which are unseen—they are equally opposed in Plato to universals and ideas. To him all particulars appear to be floating about in a world of sense; they have a taint of error or even of evil. There is no difficulty in seeing that this is an illusion; for there is no more error or variation in an individual man, horse, bed, etc.,

than in the class man, horse, bed, etc.; nor is the truth which is displayed in individual instances less certain than that which is conveyed through the medium of ideas. But Plato, who is deeply impressed with the real importance of universals as instruments of thought, attributes to them an essential truth which is imaginary and unreal; for universals may be often false and particulars true. Had he attained to any clear conception of the individual, which is the synthesis of the universal and the particular; or had he been able to distinguish between opinion and sensation, which the ambiguity of the words (Greek) and the like, tended to confuse, he would not have denied truth to the particulars of sense.

But the poets are also the representatives of falsehood and feigning in all departments of life and knowledge, like the sophists and rhetoricians of the Gorgias and Phaedrus; they are the false priests, false prophets, lying spirits, enchanters of the world. There is another count put into the indictment against them by Plato, that they are the friends of the tyrant, and bask in the sunshine of his patronage. Despotism in all ages has had an apparatus of false ideas and false teachers at its service—in the history of Modern Europe as well as of Greece and Rome. For no government of men depends solely upon force; without some corruption of literature and morals—some appeal to the imagination of the masses—some pretence to the favour of heaven—some element of good giving power to evil, tyranny, even for a short time, cannot be maintained. The Greek tyrants were not insensible to the importance of awakening in their cause a Pseudo-Hellenic feeling; they were proud of successes at the Olympic games; they were not devoid of the love of literature and art. Plato is thinking in the first instance of Greek poets who had graced the courts of Dionysius or Archelaus: and the old spirit of freedom is roused within him at their prostitution of the Tragic Muse in the praises of tyranny. But his prophetic eye extends beyond them to the false teachers of other ages who are the creatures of the government under which they live. He compares the corruption of his contemporaries with the idea of a perfect society, and gathers up into one mass of evil the evils and errors of mankind; to him they are personified in the rhetoricians, sophists, poets, rulers who deceive and govern the world.

A further objection which Plato makes to poetry and the imitative arts is that they excite the emotions. Here the modern reader will be disposed to introduce a distinction which appears to have escaped him. For the emotions are neither bad nor good in themselves, and are not most likely to be controlled by the attempt to eradicate them, but by the moderate indulgence of them. And the vocation of art is to present thought in the form of feeling, to enlist the feelings on the side of reason, to inspire even for a moment courage or resignation; perhaps to suggest a sense of infinity and eternity in a way which mere language is incapable of attaining. True, the same power which in the purer age of art embodies gods and heroes only, may be made to express the voluptuous image of a Corinthian courtezan. But this only shows that art, like other outward things, may be turned to good and also to evil, and is not more closely connected with the higher than with the lower part of the soul. All imitative art is subject to certain limitations, and therefore necessarily partakes of the nature of a compromise. Something of ideal truth is sacrificed for the sake of the representation, and something in the exactness of the representation is sacrificed to the ideal. Still, works of art have a permanent element; they idealize and detain the passing thought, and are the intermediates between sense and ideas.

In the present stage of the human mind, poetry and other forms of fiction may certainly be regarded as a good. But we can also imagine the existence of an age in which a severer conception of truth has either banished or transformed them. At any rate we must admit that they hold a different place at different periods of the world's history. In the infancy of mankind, poetry, with the exception of proverbs, is the whole of literature, and the only instrument of intellectual culture; in modern times she is the shadow or echo of her former self, and appears to have a precarious existence. Milton in his day doubted whether an epic poem was any longer possible. At the same time we must remember, that what Plato would have called the charms of poetry have been partly transferred to prose; he himself (Statesman) admits rhetoric to be the handmaiden of Politics, and proposes to find in the strain of law (Laws) a substitute for the old poets. Among ourselves the creative power seems often to be growing weaker, and scientific fact to be more engrossing and overpowering to the mind than formerly. The illusion of the feelings commonly called love, has hitherto been the inspiring influence of modern poetry and romance, and has exercised a humanizing if not a strengthening influence on the world. But may not the stimulus which love has given to fancy be some day exhausted? The modern English novel which is the most popular of all forms of reading is not more than a century or two old: will the tale of love a hundred years hence, after so many thousand variations of the same theme, be still received with unabated interest?

Art cannot claim to be on a level with philosophy or religion, and may often corrupt them. It is possible to conceive a mental state in which all artistic representations are regarded as a false and imperfect expression, either of the religious ideal or of the philosophical ideal. The fairest forms may be revolting in certain moods of mind, as is proved by the fact that the Mahometans, and many sects of Christians, have renounced the use of pictures and images. The beginning of a great religion, whether Christian or Gentile, has not been 'wood or stone,' but a spirit moving in the hearts of men. The disciples have met in a large upper room or in

‘holes and caves of the earth’; in the second or third generation, they have had mosques, temples, churches, monasteries. And the revival or reform of religions, like the first revelation of them, has come from within and has generally disregarded external ceremonies and accompaniments.

But poetry and art may also be the expression of the highest truth and the purest sentiment. Plato himself seems to waver between two opposite views—when, as in the third Book, he insists that youth should be brought up amid wholesome imagery; and again in Book X, when he banishes the poets from his Republic. Admitting that the arts, which some of us almost deify, have fallen short of their higher aim, we must admit on the other hand that to banish imagination wholly would be suicidal as well as impossible. For nature too is a form of art; and a breath of the fresh air or a single glance at the varying landscape would in an instant revive and reillumine the extinguished spark of poetry in the human breast. In the lower stages of civilization imagination more than reason distinguishes man from the animals; and to banish art would be to banish thought, to banish language, to banish the expression of all truth. No religion is wholly devoid of external forms; even the Mahometan who renounces the use of pictures and images has a temple in which he worships the Most High, as solemn and beautiful as any Greek or Christian building. Feeling too and thought are not really opposed; for he who thinks must feel before he can execute. And the highest thoughts, when they become familiarized to us, are always tending to pass into the form of feeling.

Plato does not seriously intend to expel poets from life and society. But he feels strongly the unreality of their writings; he is protesting against the degeneracy of poetry in his own day as we might protest against the want of serious purpose in modern fiction, against the unseemliness or extravagance of some of our poets or novelists, against the time-serving of preachers or public writers, against the regardlessness of truth which to the eye of the philosopher seems to characterize the greater part of the world. For we too have reason to complain that our poets and novelists ‘paint inferior truth’ and ‘are concerned with the inferior part of the soul’; that the readers of them become what they read and are injuriously affected by them. And we look in vain for that healthy atmosphere of which Plato speaks,—‘the beauty which meets the sense like a breeze and imperceptibly draws the soul, even in childhood, into harmony with the beauty of reason.’

For there might be a poetry which would be the hymn of divine perfection, the harmony of goodness and truth among men: a strain which should renew the youth of the world, and bring back the ages in which the poet was man’s only teacher and best friend,—which would find materials in the living present as well as in the romance of the past, and might subdue to the fairest forms of speech and verse the intractable materials of modern civilisation,—which might elicit the simple principles, or, as Plato would have called them, the essential forms, of truth and justice out of the variety of opinion and the complexity of modern society,—which would preserve all the good of each generation and leave the bad unsung,—which should be based not on vain longings or faint imaginings, but on a clear insight into the nature of man. Then the tale of love might begin again in poetry or prose, two in one, united in the pursuit of knowledge, or the service of God and man; and feelings of love might still be the incentive to great thoughts and heroic deeds as in the days of Dante or Petrarch; and many types of manly and womanly beauty might appear among us, rising above the ordinary level of humanity, and many lives which were like poems (Laws), be not only written, but lived by us. A few such strains have been heard among men in the tragedies of Aeschylus and Sophocles, whom Plato quotes, not, as Homer is quoted by him, in irony, but with deep and serious approval,—in the poetry of Milton and Wordsworth, and in passages of other English poets,—first and above all in the Hebrew prophets and psalmists. Shakespeare has taught us how great men should speak and act; he has drawn characters of a wonderful purity and depth; he has ennobled the human mind, but, like Homer (Rep.), he ‘has left no way of life.’ The next greatest poet of modern times, Goethe, is concerned with ‘a lower degree of truth’; he paints the world as a stage on which ‘all the men and women are merely players’; he cultivates life as an art, but he furnishes no ideals of truth and action. The poet may rebel against any attempt to set limits to his fancy; and he may argue truly that moralizing in verse is not poetry. Possibly, like Mephistopheles in Faust, he may retaliate on his adversaries. But the philosopher will still be justified in asking, ‘How may the heavenly gift of poesy be devoted to the good of mankind?’

Returning to Plato, we may observe that a similar mixture of truth and error appears in other parts of the argument. He is aware of the absurdity of mankind framing their whole lives according to Homer; just as in the Phaedrus he intimates the absurdity of interpreting mythology upon rational principles; both these were the modern tendencies of his own age, which he deservedly ridicules. On the other hand, his argument that Homer, if he had been able to teach mankind anything worth knowing, would not have been allowed by them to go about begging as a rhapsodist, is both false and contrary to the spirit of Plato (Rep.). It may be compared with those other paradoxes of the Gorgias, that ‘No statesman was ever unjustly put to death by the city of which he was the head’; and that ‘No Sophist was ever defrauded by his pupils’ (Gorg.)...

The argument for immortality seems to rest on the absolute dualism of soul and body. Admitting the existence of the soul, we know of no force which is able to put an end to her. Vice is her own proper evil; and if she cannot be destroyed by that, she cannot be destroyed by any other. Yet Plato has acknowledged that the soul may be so overgrown by the incrustations of earth as to lose her original form; and in the Timaeus he recognizes more strongly than in the Republic the influence which the body has over the mind, denying even the voluntariness of human actions, on the ground that they proceed from physical states (Tim.). In the Republic, as elsewhere, he wavers between the original soul which has to be restored, and the character which is developed by training and education...

The vision of another world is ascribed to Er, the son of Armenius, who is said by Clement of Alexandria to have been Zoroaster. The tale has certainly an oriental character, and may be compared with the pilgrimages of the soul in the Zend Avesta (Haug, Avesta). But no trace of acquaintance with Zoroaster is found elsewhere in Plato's writings, and there is no reason for giving him the name of Er the Pamphylian. The philosophy of Heracleitus cannot be shown to be borrowed from Zoroaster, and still less the myths of Plato.

The local arrangement of the vision is less distinct than that of the Phaedrus and Phaedo. Astronomy is mingled with symbolism and mythology; the great sphere of heaven is represented under the symbol of a cylinder or box, containing the seven orbits of the planets and the fixed stars; this is suspended from an axis or spindle which turns on the knees of Necessity; the revolutions of the seven orbits contained in the cylinder are guided by the fates, and their harmonious motion produces the music of the spheres. Through the innermost or eighth of these, which is the moon, is passed the spindle; but it is doubtful whether this is the continuation of the column of light, from which the pilgrims contemplate the heavens; the words of Plato imply that they are connected, but not the same. The column itself is clearly not of adamant. The spindle (which is of adamant) is fastened to the ends of the chains which extend to the middle of the column of light—this column is said to hold together the heaven; but whether it hangs from the spindle, or is at right angles to it, is not explained. The cylinder containing the orbits of the stars is almost as much a symbol as the figure of Necessity turning the spindle;—for the outermost rim is the sphere of the fixed stars, and nothing is said about the intervals of space which divide the paths of the stars in the heavens. The description is both a picture and an orrery, and therefore is necessarily inconsistent with itself. The column of light is not the Milky Way—which is neither straight, nor like a rainbow—but the imaginary axis of the earth. This is compared to the rainbow in respect not of form but of colour, and not to the undergirders of a trireme, but to the straight rope running from prow to stern in which the undergirders meet.

The orrery or picture of the heavens given in the Republic differs in its mode of representation from the circles of the same and of the other in the Timaeus. In both the fixed stars are distinguished from the planets, and they move in orbits without them, although in an opposite direction: in the Republic as in the Timaeus they are all moving round the axis of the world. But we are not certain that in the former they are moving round the earth. No distinct mention is made in the Republic of the circles of the same and other; although both in the Timaeus and in the Republic the motion of the fixed stars is supposed to coincide with the motion of the whole. The relative thickness of the rims is perhaps designed to express the relative distances of the planets. Plato probably intended to represent the earth, from which Er and his companions are viewing the heavens, as stationary in place; but whether or not herself revolving, unless this is implied in the revolution of the axis, is uncertain (Timaeus). The spectator may be supposed to look at the heavenly bodies, either from above or below. The earth is a sort of earth and heaven in one, like the heaven of the Phaedrus, on the back of which the spectator goes out to take a peep at the stars and is borne round in the revolution. There is no distinction between the equator and the ecliptic. But Plato is no doubt led to imagine that the planets have an opposite motion to that of the fixed stars, in order to account for their appearances in the heavens. In the description of the meadow, and the retribution of the good and evil after death, there are traces of Homer.

The description of the axis as a spindle, and of the heavenly bodies as forming a whole, partly arises out of the attempt to connect the motions of the heavenly bodies with the mythological image of the web, or weaving of the Fates. The giving of the lots, the weaving of them, and the making of them irreversible, which are ascribed to the three Fates—Lachesis, Clotho, Atropos, are obviously derived from their names. The element of chance in human life is indicated by the order of the lots. But chance, however adverse, may be overcome by the wisdom of man, if he knows how to choose aright; there is a worse enemy to man than chance; this enemy is himself. He who was moderately fortunate in the number of the lot—even the very last comer—might have a good life if he chose with wisdom. And as Plato does not like to make an assertion which is unproven, he more than confirms this statement a few sentences afterwards by the example of Odysseus, who chose last. But the virtue which is founded on habit is not sufficient to enable a man to choose; he must add to virtue knowledge, if he is to act rightly when placed in new circumstances. The routine of good actions and good habits is an inferior sort of goodness; and, as Coleridge says, 'Common sense is intolerable which is not

based on metaphysics,' so Plato would have said, 'Habit is worthless which is not based upon philosophy.'

The freedom of the will to refuse the evil and to choose the good is distinctly asserted. 'Virtue is free, and as a man honours or dishonours her he will have more or less of her.' The life of man is 'rounded' by necessity; there are circumstances prior to birth which affect him (Pol.). But within the walls of necessity there is an open space in which he is his own master, and can study for himself the effects which the variously compounded gifts of nature or fortune have upon the soul, and act accordingly. All men cannot have the first choice in everything. But the lot of all men is good enough, if they choose wisely and will live diligently.

The verisimilitude which is given to the pilgrimage of a thousand years, by the intimation that Ardiaeus had lived a thousand years before; the coincidence of Er coming to life on the twelfth day after he was supposed to have been dead with the seven days which the pilgrims passed in the meadow, and the four days during which they journeyed to the column of light; the precision with which the soul is mentioned who chose the twentieth lot; the passing remarks that there was no definite character among the souls, and that the souls which had chosen ill blamed any one rather than themselves; or that some of the souls drank more than was necessary of the waters of Forgetfulness, while Er himself was hindered from drinking; the desire of Odysseus to rest at last, unlike the conception of him in Dante and Tennyson; the feigned ignorance of how Er returned to the body, when the other souls went shooting like stars to their birth,—add greatly to the probability of the narrative. They are such touches of nature as the art of Defoe might have introduced when he wished to win credibility for marvels and apparitions.

There still remain to be considered some points which have been intentionally reserved to the end: (1) the Janus-like character of the Republic, which presents two faces—one an Hellenic state, the other a kingdom of philosophers. Connected with the latter of the two aspects are (2) the paradoxes of the Republic, as they have been termed by Morgenstern: (a) the community of property; (b) of families; (c) the rule of philosophers; (d) the analogy of the individual and the State, which, like some other analogies in the Republic, is carried too far. We may then proceed to consider (3) the subject of education as conceived by Plato, bringing together in a general view the education of youth and the education of after-life; (4) we may note further some essential differences between ancient and modern politics which are suggested by the Republic; (5) we may compare the Politicus and the Laws; (6) we may observe the influence exercised by Plato on his imitators; and (7) take occasion to consider the nature and value of political, and (8) of religious ideals.

1. Plato expressly says that he is intending to found an Hellenic State (Book V). Many of his regulations are characteristically Spartan; such as the prohibition of gold and silver, the common meals of the men, the military training of the youth, the gymnastic exercises of the women. The life of Sparta was the life of a camp (Laws), enforced even more rigidly in time of peace than in war; the citizens of Sparta, like Plato's, were forbidden to trade—they were to be soldiers and not shopkeepers. Nowhere else in Greece was the individual so completely subjected to the State; the time when he was to marry, the education of his children, the clothes which he was to wear, the food which he was to eat, were all prescribed by law. Some of the best enactments in the Republic, such as the reverence to be paid to parents and elders, and some of the worst, such as the exposure of deformed children, are borrowed from the practice of Sparta. The encouragement of friendships between men and youths, or of men with one another, as affording incentives to bravery, is also Spartan; in Sparta too a nearer approach was made than in any other Greek State to equality of the sexes, and to community of property; and while there was probably less of licentiousness in the sense of immorality, the tie of marriage was regarded more lightly than in the rest of Greece. The 'suprema lex' was the preservation of the family, and the interest of the State. The coarse strength of a military government was not favourable to purity and refinement; and the excessive strictness of some regulations seems to have produced a reaction. Of all Hellenes the Spartans were most accessible to bribery; several of the greatest of them might be described in the words of Plato as having a 'fierce secret longing after gold and silver.' Though not in the strict sense communists, the principle of communism was maintained among them in their division of lands, in their common meals, in their slaves, and in the free use of one another's goods. Marriage was a public institution: and the women were educated by the State, and sang and danced in public with the men.

Many traditions were preserved at Sparta of the severity with which the magistrates had maintained the primitive rule of music and poetry; as in the Republic of Plato, the new-fangled poet was to be expelled. Hymns to the Gods, which are the only kind of music admitted into the ideal State, were the only kind which was permitted at Sparta. The Spartans, though an unpoetical race, were nevertheless lovers of poetry; they had been stirred by the Elegiac strains of Tyrtaeus, they had crowded around Hippias to hear his recitals of Homer; but in this they resembled the citizens of the timocratic rather than of the ideal State. The council of elder men also corresponds to the Spartan gerousia; and the freedom with which they are permitted to judge about matters of detail agrees with what we are told of that institution. Once more, the military rule of not spoiling the dead or offering arms at the temples; the

moderation in the pursuit of enemies; the importance attached to the physical well-being of the citizens; the use of warfare for the sake of defence rather than of aggression—are features probably suggested by the spirit and practice of Sparta.

To the Spartan type the ideal State reverts in the first decline; and the character of the individual timocrat is borrowed from the Spartan citizen. The love of Lacedaemon not only affected Plato and Xenophon, but was shared by many undistinguished Athenians; there they seemed to find a principle which was wanting in their own democracy. The (Greek) of the Spartans attracted them, that is to say, not the goodness of their laws, but the spirit of order and loyalty which prevailed. Fascinated by the idea, citizens of Athens would imitate the Lacedaemonians in their dress and manners; they were known to the contemporaries of Plato as 'the persons who had their ears bruised,' like the Roundheads of the Commonwealth. The love of another church or country when seen at a distance only, the longing for an imaginary simplicity in civilized times, the fond desire of a past which never has been, or of a future which never will be,—these are aspirations of the human mind which are often felt among ourselves. Such feelings meet with a response in the Republic of Plato.

But there are other features of the Platonic Republic, as, for example, the literary and philosophical education, and the grace and beauty of life, which are the reverse of Spartan. Plato wishes to give his citizens a taste of Athenian freedom as well as of Lacedaemonian discipline. His individual genius is purely Athenian, although in theory he is a lover of Sparta; and he is something more than either—he has also a true Hellenic feeling. He is desirous of humanizing the wars of Hellenes against one another; he acknowledges that the Delphian God is the grand hereditary interpreter of all Hellas. The spirit of harmony and the Dorian mode are to prevail, and the whole State is to have an external beauty which is the reflex of the harmony within. But he has not yet found out the truth which he afterwards enunciated in the Laws—that he was a better legislator who made men to be of one mind, than he who trained them for war. The citizens, as in other Hellenic States, democratic as well as aristocratic, are really an upper class; for, although no mention is made of slaves, the lower classes are allowed to fade away into the distance, and are represented in the individual by the passions. Plato has no idea either of a social State in which all classes are harmonized, or of a federation of Hellas or the world in which different nations or States have a place. His city is equipped for war rather than for peace, and this would seem to be justified by the ordinary condition of Hellenic States. The myth of the earth-born men is an embodiment of the orthodox tradition of Hellas, and the allusion to the four ages of the world is also sanctioned by the authority of Hesiod and the poets. Thus we see that the Republic is partly founded on the ideal of the old Greek polis, partly on the actual circumstances of Hellas in that age. Plato, like the old painters, retains the traditional form, and like them he has also a vision of a city in the clouds.

There is yet another thread which is interwoven in the texture of the work; for the Republic is not only a Dorian State, but a Pythagorean league. The 'way of life' which was connected with the name of Pythagoras, like the Catholic monastic orders, showed the power which the mind of an individual might exercise over his contemporaries, and may have naturally suggested to Plato the possibility of reviving such 'mediaeval institutions.' The Pythagoreans, like Plato, enforced a rule of life and a moral and intellectual training. The influence ascribed to music, which to us seems exaggerated, is also a Pythagorean feature; it is not to be regarded as representing the real influence of music in the Greek world. More nearly than any other government of Hellas, the Pythagorean league of three hundred was an aristocracy of virtue. For once in the history of mankind the philosophy of order or (Greek), expressing and consequently enlisting on its side the combined endeavours of the better part of the people, obtained the management of public affairs and held possession of it for a considerable time (until about B.C. 500). Probably only in States prepared by Dorian institutions would such a league have been possible. The rulers, like Plato's (Greek), were required to submit to a severe training in order to prepare the way for the education of the other members of the community. Long after the dissolution of the Order, eminent Pythagoreans, such as Archytas of Tarentum, retained their political influence over the cities of Magna Graecia. There was much here that was suggestive to the kindred spirit of Plato, who had doubtless meditated deeply on the 'way of life of Pythagoras' (Rep.) and his followers. Slight traces of Pythagoreanism are to be found in the mystical number of the State, in the number which expresses the interval between the king and the tyrant, in the doctrine of transmigration, in the music of the spheres, as well as in the great though secondary importance ascribed to mathematics in education.

But as in his philosophy, so also in the form of his State, he goes far beyond the old Pythagoreans. He attempts a task really impossible, which is to unite the past of Greek history with the future of philosophy, analogous to that other impossibility, which has often been the dream of Christendom, the attempt to unite the past history of Europe with the kingdom of Christ. Nothing actually existing in the world at all resembles Plato's ideal State; nor does he himself imagine that such a State is possible. This he repeats again and again; e.g. in the Republic, or in the Laws where, casting a glance back on the Republic, he admits that the perfect state of communism and philosophy was impossible in his own age, though still to be retained as a pattern. The same doubt is implied in the earnestness with which he argues in the Republic that ideals are none the worse because they cannot be realized in fact, and in

the chorus of laughter, which like a breaking wave will, as he anticipates, greet the mention of his proposals; though like other writers of fiction, he uses all his art to give reality to his inventions. When asked how the ideal polity can come into being, he answers ironically, ‘When one son of a king becomes a philosopher’; he designates the fiction of the earth-born men as ‘a noble lie’; and when the structure is finally complete, he fairly tells you that his Republic is a vision only, which in some sense may have reality, but not in the vulgar one of a reign of philosophers upon earth. It has been said that Plato flies as well as walks, but this falls short of the truth; for he flies and walks at the same time, and is in the air and on firm ground in successive instants.

Niebuhr has asked a trifling question, which may be briefly noticed in this place—Was Plato a good citizen? If by this is meant, Was he loyal to Athenian institutions?—he can hardly be said to be the friend of democracy: but neither is he the friend of any other existing form of government; all of them he regarded as ‘states of faction’ (Laws); none attained to his ideal of a voluntary rule over voluntary subjects, which seems indeed more nearly to describe democracy than any other; and the worst of them is tyranny. The truth is, that the question has hardly any meaning when applied to a great philosopher whose writings are not meant for a particular age and country, but for all time and all mankind. The decline of Athenian politics was probably the motive which led Plato to frame an ideal State, and the Republic may be regarded as reflecting the departing glory of Hellas. As well might we complain of St. Augustine, whose great work ‘The City of God’ originated in a similar motive, for not being loyal to the Roman Empire. Even a nearer parallel might be afforded by the first Christians, who cannot fairly be charged with being bad citizens because, though ‘subject to the higher powers,’ they were looking forward to a city which is in heaven.

2. The idea of the perfect State is full of paradox when judged of according to the ordinary notions of mankind. The paradoxes of one age have been said to become the commonplaces of the next; but the paradoxes of Plato are at least as paradoxical to us as they were to his contemporaries. The modern world has either sneered at them as absurd, or denounced them as unnatural and immoral; men have been pleased to find in Aristotle’s criticisms of them the anticipation of their own good sense. The wealthy and cultivated classes have disliked and also dreaded them; they have pointed with satisfaction to the failure of efforts to realize them in practice. Yet since they are the thoughts of one of the greatest of human intelligences, and of one who had done most to elevate morality and religion, they seem to deserve a better treatment at our hands. We may have to address the public, as Plato does poetry, and assure them that we mean no harm to existing institutions. There are serious errors which have a side of truth and which therefore may fairly demand a careful consideration: there are truths mixed with error of which we may indeed say, ‘The half is better than the whole.’ Yet ‘the half’ may be an important contribution to the study of human nature.

(a) The first paradox is the community of goods, which is mentioned slightly at the end of the third Book, and seemingly, as Aristotle observes, is confined to the guardians; at least no mention is made of the other classes. But the omission is not of any real significance, and probably arises out of the plan of the work, which prevents the writer from entering into details.

Aristotle censures the community of property much in the spirit of modern political economy, as tending to repress industry, and as doing away with the spirit of benevolence. Modern writers almost refuse to consider the subject, which is supposed to have been long ago settled by the common opinion of mankind. But it must be remembered that the sacredness of property is a notion far more fixed in modern than in ancient times. The world has grown older, and is therefore more conservative. Primitive society offered many examples of land held in common, either by a tribe or by a township, and such may probably have been the original form of landed tenure. Ancient legislators had invented various modes of dividing and preserving the divisions of land among the citizens; according to Aristotle there were nations who held the land in common and divided the produce, and there were others who divided the land and stored the produce in common. The evils of debt and the inequality of property were far greater in ancient than in modern times, and the accidents to which property was subject from war, or revolution, or taxation, or other legislative interference, were also greater. All these circumstances gave property a less fixed and sacred character. The early Christians are believed to have held their property in common, and the principle is sanctioned by the words of Christ himself, and has been maintained as a counsel of perfection in almost all ages of the Church. Nor have there been wanting instances of modern enthusiasts who have made a religion of communism; in every age of religious excitement notions like Wycliffe’s ‘inheritance of grace’ have tended to prevail. A like spirit, but fiercer and more violent, has appeared in politics. ‘The preparation of the Gospel of peace’ soon becomes the red flag of Republicanism.

We can hardly judge what effect Plato’s views would have upon his own contemporaries; they would perhaps have seemed to them only an exaggeration of the Spartan commonwealth. Even modern writers would acknowledge that the right of private property is based on expediency, and may be interfered with in a variety of ways for the public good. Any other mode of vesting property which was found to be more advantageous, would in time acquire the same basis of right; ‘the most useful,’ in Plato’s words, ‘would be the most sacred.’ The lawyers and ecclesiastics of former ages would have spoken of property as a sacred institution. But they only

meant by such language to oppose the greatest amount of resistance to any invasion of the rights of individuals and of the Church.

When we consider the question, without any fear of immediate application to practice, in the spirit of Plato's Republic, are we quite sure that the received notions of property are the best? Is the distribution of wealth which is customary in civilized countries the most favourable that can be conceived for the education and development of the mass of mankind? Can 'the spectator of all time and all existence' be quite convinced that one or two thousand years hence, great changes will not have taken place in the rights of property, or even that the very notion of property, beyond what is necessary for personal maintenance, may not have disappeared? This was a distinction familiar to Aristotle, though likely to be laughed at among ourselves. Such a change would not be greater than some other changes through which the world has passed in the transition from ancient to modern society, for example, the emancipation of the serfs in Russia, or the abolition of slavery in America and the West Indies; and not so great as the difference which separates the Eastern village community from the Western world. To accomplish such a revolution in the course of a few centuries, would imply a rate of progress not more rapid than has actually taken place during the last fifty or sixty years. The kingdom of Japan underwent more change in five or six years than Europe in five or six hundred. Many opinions and beliefs which have been cherished among ourselves quite as strongly as the sacredness of property have passed away; and the most untenable propositions respecting the right of bequests or entail have been maintained with as much fervour as the most moderate. Some one will be heard to ask whether a state of society can be final in which the interests of thousands are perilled on the life or character of a single person. And many will indulge the hope that our present condition may, after all, be only transitional, and may conduct to a higher, in which property, besides ministering to the enjoyment of the few, may also furnish the means of the highest culture to all, and will be a greater benefit to the public generally, and also more under the control of public authority. There may come a time when the saying, 'Have I not a right to do what I will with my own?' will appear to be a barbarous relic of individualism;—when the possession of a part may be a greater blessing to each and all than the possession of the whole is now to any one.

Such reflections appear visionary to the eye of the practical statesman, but they are within the range of possibility to the philosopher. He can imagine that in some distant age or clime, and through the influence of some individual, the notion of common property may or might have sunk as deep into the heart of a race, and have become as fixed to them, as private property is to ourselves. He knows that this latter institution is not more than four or five thousand years old: may not the end revert to the beginning? In our own age even Utopias affect the spirit of legislation, and an abstract idea may exercise a great influence on practical politics.

The objections that would be generally urged against Plato's community of property, are the old ones of Aristotle, that motives for exertion would be taken away, and that disputes would arise when each was dependent upon all. Every man would produce as little and consume as much as he liked. The experience of civilized nations has hitherto been adverse to Socialism. The effort is too great for human nature; men try to live in common, but the personal feeling is always breaking in. On the other hand it may be doubted whether our present notions of property are not conventional, for they differ in different countries and in different states of society. We boast of an individualism which is not freedom, but rather an artificial result of the industrial state of modern Europe. The individual is nominally free, but he is also powerless in a world bound hand and foot in the chains of economic necessity. Even if we cannot expect the mass of mankind to become disinterested, at any rate we observe in them a power of organization which fifty years ago would never have been suspected. The same forces which have revolutionized the political system of Europe, may effect a similar change in the social and industrial relations of mankind. And if we suppose the influence of some good as well as neutral motives working in the community, there will be no absurdity in expecting that the mass of mankind having power, and becoming enlightened about the higher possibilities of human life, when they learn how much more is attainable for all than is at present the possession of a favoured few, may pursue the common interest with an intelligence and persistency which mankind have hitherto never seen.

Now that the world has once been set in motion, and is no longer held fast under the tyranny of custom and ignorance; now that criticism has pierced the veil of tradition and the past no longer overpowers the present,—the progress of civilization may be expected to be far greater and swifter than heretofore. Even at our present rate of speed the point at which we may arrive in two or three generations is beyond the power of imagination to foresee. There are forces in the world which work, not in an arithmetical, but in a geometrical ratio of increase. Education, to use the expression of Plato, moves like a wheel with an ever-multiplying rapidity. Nor can we say how great may be its influence, when it becomes universal,—when it has been inherited by many generations,—when it is freed from the trammels of superstition and rightly adapted to the wants and capacities of different classes of men and women. Neither do we know how much more the co-operation of minds or of hands may be capable of accomplishing, whether in labour or in study. The resources of the natural sciences are not half-developed as yet; the soil of the earth, instead of

growing more barren, may become many times more fertile than hitherto; the uses of machinery far greater, and also more minute than at present. New secrets of physiology may be revealed, deeply affecting human nature in its innermost recesses. The standard of health may be raised and the lives of men prolonged by sanitary and medical knowledge. There may be peace, there may be leisure, there may be innocent refreshments of many kinds. The ever-increasing power of locomotion may join the extremes of earth. There may be mysterious workings of the human mind, such as occur only at great crises of history. The East and the West may meet together, and all nations may contribute their thoughts and their experience to the common stock of humanity. Many other elements enter into a speculation of this kind. But it is better to make an end of them. For such reflections appear to the majority far-fetched, and to men of science, commonplace.

(b) Neither to the mind of Plato nor of Aristotle did the doctrine of community of property present at all the same difficulty, or appear to be the same violation of the common Hellenic sentiment, as the community of wives and children. This paradox he prefaces by another proposal, that the occupations of men and women shall be the same, and that to this end they shall have a common training and education. Male and female animals have the same pursuits—why not also the two sexes of man?

But have we not here fallen into a contradiction? for we were saying that different natures should have different pursuits. How then can men and women have the same? And is not the proposal inconsistent with our notion of the division of labour?—These objections are no sooner raised than answered; for, according to Plato, there is no organic difference between men and women, but only the accidental one that men beget and women bear children. Following the analogy of the other animals, he contends that all natural gifts are scattered about indifferently among both sexes, though there may be a superiority of degree on the part of the men. The objection on the score of decency to their taking part in the same gymnastic exercises, is met by Plato's assertion that the existing feeling is a matter of habit.

That Plato should have emancipated himself from the ideas of his own country and from the example of the East, shows a wonderful independence of mind. He is conscious that women are half the human race, in some respects the more important half (Laws); and for the sake both of men and women he desires to raise the woman to a higher level of existence. He brings, not sentiment, but philosophy to bear upon a question which both in ancient and modern times has been chiefly regarded in the light of custom or feeling. The Greeks had noble conceptions of womanhood in the goddesses Athene and Artemis, and in the heroines Antigone and Andromache. But these ideals had no counterpart in actual life. The Athenian woman was in no way the equal of her husband; she was not the entertainer of his guests or the mistress of his house, but only his housekeeper and the mother of his children. She took no part in military or political matters; nor is there any instance in the later ages of Greece of a woman becoming famous in literature. 'Hers is the greatest glory who has the least renown among men,' is the historian's conception of feminine excellence. A very different ideal of womanhood is held up by Plato to the world; she is to be the companion of the man, and to share with him in the toils of war and in the cares of government. She is to be similarly trained both in bodily and mental exercises. She is to lose as far as possible the incidents of maternity and the characteristics of the female sex.

The modern antagonist of the equality of the sexes would argue that the differences between men and women are not confined to the single point urged by Plato; that sensibility, gentleness, grace, are the qualities of women, while energy, strength, higher intelligence, are to be looked for in men. And the criticism is just: the differences affect the whole nature, and are not, as Plato supposes, confined to a single point. But neither can we say how far these differences are due to education and the opinions of mankind, or physically inherited from the habits and opinions of former generations. Women have been always taught, not exactly that they are slaves, but that they are in an inferior position, which is also supposed to have compensating advantages; and to this position they have conformed. It is also true that the physical form may easily change in the course of generations through the mode of life; and the weakness or delicacy, which was once a matter of opinion, may become a physical fact. The characteristics of sex vary greatly in different countries and ranks of society, and at different ages in the same individuals. Plato may have been right in denying that there was any ultimate difference in the sexes of man other than that which exists in animals, because all other differences may be conceived to disappear in other states of society, or under different circumstances of life and training.

The first wave having been passed, we proceed to the second—community of wives and children. 'Is it possible? Is it desirable?' For as Glaucon intimates, and as we far more strongly insist, 'Great doubts may be entertained about both these points.' Any free discussion of the question is impossible, and mankind are perhaps right in not allowing the ultimate bases of social life to be examined. Few of us can safely enquire into the things which nature hides, any more than we can dissect our own bodies. Still, the manner in which Plato arrived at his conclusions should be considered. For here, as Mr. Grote has remarked, is a wonderful thing, that one of the wisest and best of men should have entertained ideas of morality which are wholly at variance with our own. And if we would do Plato justice, we must examine carefully the character of his proposals. First, we may observe that the relations of the

sexes supposed by him are the reverse of licentious: he seems rather to aim at an impossible strictness. Secondly, he conceives the family to be the natural enemy of the state; and he entertains the serious hope that an universal brotherhood may take the place of private interests—an aspiration which, although not justified by experience, has possessed many noble minds. On the other hand, there is no sentiment or imagination in the connections which men and women are supposed by him to form; human beings return to the level of the animals, neither exalting to heaven, nor yet abusing the natural instincts. All that world of poetry and fancy which the passion of love has called forth in modern literature and romance would have been banished by Plato. The arrangements of marriage in the Republic are directed to one object—the improvement of the race. In successive generations a great development both of bodily and mental qualities might be possible. The analogy of animals tends to show that mankind can within certain limits receive a change of nature. And as in animals we should commonly choose the best for breeding, and destroy the others, so there must be a selection made of the human beings whose lives are worthy to be preserved.

We start back horrified from this Platonic ideal, in the belief, first, that the higher feelings of humanity are far too strong to be crushed out; secondly, that if the plan could be carried into execution we should be poorly recompensed by improvements in the breed for the loss of the best things in life. The greatest regard for the weakest and meanest of human beings—the infant, the criminal, the insane, the idiot, truly seems to us one of the noblest results of Christianity. We have learned, though as yet imperfectly, that the individual man has an endless value in the sight of God, and that we honour Him when we honour the darkened and disfigured image of Him (Laws). This is the lesson which Christ taught in a parable when He said, 'Their angels do always behold the face of My Father which is in heaven.' Such lessons are only partially realized in any age; they were foreign to the age of Plato, as they have very different degrees of strength in different countries or ages of the Christian world. To the Greek the family was a religious and customary institution binding the members together by a tie inferior in strength to that of friendship, and having a less solemn and sacred sound than that of country. The relationship which existed on the lower level of custom, Plato imagined that he was raising to the higher level of nature and reason; while from the modern and Christian point of view we regard him as sanctioning murder and destroying the first principles of morality.

The great error in these and similar speculations is that the difference between man and the animals is forgotten in them. The human being is regarded with the eye of a dog- or bird-fancier, or at best of a slave-owner; the higher or human qualities are left out. The breeder of animals aims chiefly at size or speed or strength; in a few cases at courage or temper; most often the fitness of the animal for food is the great desideratum. But mankind are not bred to be eaten, nor yet for their superiority in fighting or in running or in drawing carts. Neither does the improvement of the human race consist merely in the increase of the bones and flesh, but in the growth and enlightenment of the mind. Hence there must be 'a marriage of true minds' as well as of bodies, of imagination and reason as well as of lusts and instincts. Men and women without feeling or imagination are justly called brutes; yet Plato takes away these qualities and puts nothing in their place, not even the desire of a noble offspring, since parents are not to know their own children. The most important transaction of social life, he who is the idealist philosopher converts into the most brutal. For the pair are to have no relation to one another, except at the hymeneal festival; their children are not theirs, but the state's; nor is any tie of affection to unite them. Yet here the analogy of the animals might have saved Plato from a gigantic error, if he had 'not lost sight of his own illustration.' For the 'nobler sort of birds and beasts' nourish and protect their offspring and are faithful to one another.

An eminent physiologist thinks it worth while 'to try and place life on a physical basis.' But should not life rest on the moral rather than upon the physical? The higher comes first, then the lower, first the human and rational, afterwards the animal. Yet they are not absolutely divided; and in times of sickness or moments of self-indulgence they seem to be only different aspects of a common human nature which includes them both. Neither is the moral the limit of the physical, but the expansion and enlargement of it,—the highest form which the physical is capable of receiving. As Plato would say, the body does not take care of the body, and still less of the mind, but the mind takes care of both. In all human action not that which is common to man and the animals is the characteristic element, but that which distinguishes him from them. Even if we admit the physical basis, and resolve all virtue into health of body 'la facon que notre sang circule,' still on merely physical grounds we must come back to ideas. Mind and reason and duty and conscience, under these or other names, are always reappearing. There cannot be health of body without health of mind; nor health of mind without the sense of duty and the love of truth (Charm).

That the greatest of ancient philosophers should in his regulations about marriage have fallen into the error of separating body and mind, does indeed appear surprising. Yet the wonder is not so much that Plato should have entertained ideas of morality which to our own age are revolting, but that he should have contradicted himself to an extent which is hardly credible, falling in an instant from the heaven of idealism into the crudest animalism. Rejoicing in the newly found gift of reflection, he appears to have thought

out a subject about which he had better have followed the enlightened feeling of his own age. The general sentiment of Hellas was opposed to his monstrous fancy. The old poets, and in later time the tragedians, showed no want of respect for the family, on which much of their religion was based. But the example of Sparta, and perhaps in some degree the tendency to defy public opinion, seems to have misled him. He will make one family out of all the families of the state. He will select the finest specimens of men and women and breed from these only.

Yet because the illusion is always returning (for the animal part of human nature will from time to time assert itself in the disguise of philosophy as well as of poetry), and also because any departure from established morality, even where this is not intended, is apt to be unsettling, it may be worth while to draw out a little more at length the objections to the Platonic marriage. In the first place, history shows that wherever polygamy has been largely allowed the race has deteriorated. One man to one woman is the law of God and nature. Nearly all the civilized peoples of the world at some period before the age of written records, have become monogamists; and the step when once taken has never been retraced. The exceptions occurring among Brahmins or Mahometans or the ancient Persians, are of that sort which may be said to prove the rule. The connexions formed between superior and inferior races hardly ever produce a noble offspring, because they are licentious; and because the children in such cases usually despise the mother and are neglected by the father who is ashamed of them. Barbarous nations when they are introduced by Europeans to vice die out; polygamist peoples either import and adopt children from other countries, or dwindle in numbers, or both. Dynasties and aristocracies which have disregarded the laws of nature have decreased in numbers and degenerated in stature; ‘mariages de convenance’ leave their enfeebling stamp on the offspring of them (King Lear). The marriage of near relations, or the marrying in and in of the same family tends constantly to weakness or idiocy in the children, sometimes assuming the form as they grow older of passionate licentiousness. The common prostitute rarely has any offspring. By such unmistakable evidence is the authority of morality asserted in the relations of the sexes: and so many more elements enter into this ‘mystery’ than are dreamed of by Plato and some other philosophers.

Recent enquirers have indeed arrived at the conclusion that among primitive tribes there existed a community of wives as of property, and that the captive taken by the spear was the only wife or slave whom any man was permitted to call his own. The partial existence of such customs among some of the lower races of man, and the survival of peculiar ceremonies in the marriages of some civilized nations, are thought to furnish a proof of similar institutions having been once universal. There can be no question that the study of anthropology has considerably changed our views respecting the first appearance of man upon the earth. We know more about the aborigines of the world than formerly, but our increasing knowledge shows above all things how little we know. With all the helps which written monuments afford, we do but faintly realize the condition of man two thousand or three thousand years ago. Of what his condition was when removed to a distance 200,000 or 300,000 years, when the majority of mankind were lower and nearer the animals than any tribe now existing upon the earth, we cannot even entertain conjecture. Plato (Laws) and Aristotle (Metaph.) may have been more right than we imagine in supposing that some forms of civilisation were discovered and lost several times over. If we cannot argue that all barbarism is a degraded civilization, neither can we set any limits to the depth of degradation to which the human race may sink through war, disease, or isolation. And if we are to draw inferences about the origin of marriage from the practice of barbarous nations, we should also consider the remoter analogy of the animals. Many birds and animals, especially the carnivorous, have only one mate, and the love and care of offspring which seems to be natural is inconsistent with the primitive theory of marriage. If we go back to an imaginary state in which men were almost animals and the companions of them, we have as much right to argue from what is animal to what is human as from the barbarous to the civilized man. The record of animal life on the globe is fragmentary,—the connecting links are wanting and cannot be supplied; the record of social life is still more fragmentary and precarious. Even if we admit that our first ancestors had no such institution as marriage, still the stages by which men passed from outer barbarism to the comparative civilization of China, Assyria, and Greece, or even of the ancient Germans, are wholly unknown to us.

Such speculations are apt to be unsettling, because they seem to show that an institution which was thought to be a revelation from heaven, is only the growth of history and experience. We ask what is the origin of marriage, and we are told that like the right of property, after many wars and contests, it has gradually arisen out of the selfishness of barbarians. We stand face to face with human nature in its primitive nakedness. We are compelled to accept, not the highest, but the lowest account of the origin of human society. But on the other hand we may truly say that every step in human progress has been in the same direction, and that in the course of ages the idea of marriage and of the family has been more and more defined and consecrated. The civilized East is immeasurably in advance of any savage tribes; the Greeks and Romans have improved upon the East; the Christian nations have been stricter in their views of the marriage relation than any of the ancients. In this as in so many other things, instead of looking back with regret to the past, we should look forward with hope to the future. We must consecrate that which we believe to be the

most holy, and that ‘which is the most holy will be the most useful.’ There is more reason for maintaining the sacredness of the marriage tie, when we see the benefit of it, than when we only felt a vague religious horror about the violation of it. But in all times of transition, when established beliefs are being undermined, there is a danger that in the passage from the old to the new we may insensibly let go the moral principle, finding an excuse for listening to the voice of passion in the uncertainty of knowledge, or the fluctuations of opinion. And there are many persons in our own day who, enlightened by the study of anthropology, and fascinated by what is new and strange, some using the language of fear, others of hope, are inclined to believe that a time will come when through the self-assertion of women, or the rebellious spirit of children, by the analysis of human relations, or by the force of outward circumstances, the ties of family life may be broken or greatly relaxed. They point to societies in America and elsewhere which tend to show that the destruction of the family need not necessarily involve the overthrow of all morality. Wherever we may think of such speculations, we can hardly deny that they have been more rife in this generation than in any other; and whither they are tending, who can predict?

To the doubts and queries raised by these ‘social reformers’ respecting the relation of the sexes and the moral nature of man, there is a sufficient answer, if any is needed. The difference about them and us is really one of fact. They are speaking of man as they wish or fancy him to be, but we are speaking of him as he is. They isolate the animal part of his nature; we regard him as a creature having many sides, or aspects, moving between good and evil, striving to rise above himself and to become ‘a little lower than the angels.’ We also, to use a Platonic formula, are not ignorant of the dissatisfactions and incompatibilities of family life, of the meannesses of trade, of the flatteries of one class of society by another, of the impediments which the family throws in the way of lofty aims and aspirations. But we are conscious that there are evils and dangers in the background greater still, which are not appreciated, because they are either concealed or suppressed. What a condition of man would that be, in which human passions were controlled by no authority, divine or human, in which there was no shame or decency, no higher affection overcoming or sanctifying the natural instincts, but simply a rule of health! Is it for this that we are asked to throw away the civilization which is the growth of ages?

For strength and health are not the only qualities to be desired; there are the more important considerations of mind and character and soul. We know how human nature may be degraded; we do not know how by artificial means any improvement in the breed can be effected. The problem is a complex one, for if we go back only four steps (and these at least enter into the composition of a child), there are commonly thirty progenitors to be taken into account. Many curious facts, rarely admitting of proof, are told us respecting the inheritance of disease or character from a remote ancestor. We can trace the physical resemblances of parents and children in the same family—

‘Sic oculos, sic ille manus, sic ora ferebat’;

but scarcely less often the differences which distinguish children both from their parents and from one another. We are told of similar mental peculiarities running in families, and again of a tendency, as in the animals, to revert to a common or original stock. But we have a difficulty in distinguishing what is a true inheritance of genius or other qualities, and what is mere imitation or the result of similar circumstances. Great men and great women have rarely had great fathers and mothers. Nothing that we know of in the circumstances of their birth or lineage will explain their appearance. Of the English poets of the last and two preceding centuries scarcely a descendant remains,—none have ever been distinguished. So deeply has nature hidden her secret, and so ridiculous is the fancy which has been entertained by some that we might in time by suitable marriage arrangements or, as Plato would have said, ‘by an ingenious system of lots,’ produce a Shakespeare or a Milton. Even supposing that we could breed men having the tenacity of bulldogs, or, like the Spartans, ‘lacking the wit to run away in battle,’ would the world be any the better? Many of the noblest specimens of the human race have been among the weakest physically. Tyrtaeus or Aesop, or our own Newton, would have been exposed at Sparta; and some of the fairest and strongest men and women have been among the wickedest and worst. Not by the Platonic device of uniting the strong and fair with the strong and fair, regardless of sentiment and morality, nor yet by his other device of combining dissimilar natures (Statesman), have mankind gradually passed from the brutality and licentiousness of primitive marriage to marriage Christian and civilized.

Few persons would deny that we bring into the world an inheritance of mental and physical qualities derived first from our parents, or through them from some remoter ancestor, secondly from our race, thirdly from the general condition of mankind into which we are born. Nothing is commoner than the remark, that ‘So and so is like his father or his uncle’; and an aged person may not unfrequently note a resemblance in a youth to a long-forgotten ancestor, observing that ‘Nature sometimes skips a generation.’ It may be true also, that if we knew more about our ancestors, these similarities would be even more striking to us. Admitting the facts which are thus described in a popular way, we may however remark that there is no method of difference by which they can be

defined or estimated, and that they constitute only a small part of each individual. The doctrine of heredity may seem to take out of our hands the conduct of our own lives, but it is the idea, not the fact, which is really terrible to us. For what we have received from our ancestors is only a fraction of what we are, or may become. The knowledge that drunkenness or insanity has been prevalent in a family may be the best safeguard against their recurrence in a future generation. The parent will be most awake to the vices or diseases in his child of which he is most sensible within himself. The whole of life may be directed to their prevention or cure. The traces of consumption may become fainter, or be wholly effaced: the inherent tendency to vice or crime may be eradicated. And so heredity, from being a curse, may become a blessing. We acknowledge that in the matter of our birth, as in our nature generally, there are previous circumstances which affect us. But upon this platform of circumstances or within this wall of necessity, we have still the power of creating a life for ourselves by the informing energy of the human will.

There is another aspect of the marriage question to which Plato is a stranger. All the children born in his state are foundlings. It never occurred to him that the greater part of them, according to universal experience, would have perished. For children can only be brought up in families. There is a subtle sympathy between the mother and the child which cannot be supplied by other mothers, or by ‘strong nurses one or more’ (Laws). If Plato’s ‘pen’ was as fatal as the Creches of Paris, or the foundling hospital of Dublin, more than nine-tenths of his children would have perished. There would have been no need to expose or put out of the way the weaklier children, for they would have died of themselves. So emphatically does nature protest against the destruction of the family.

What Plato had heard or seen of Sparta was applied by him in a mistaken way to his ideal commonwealth. He probably observed that both the Spartan men and women were superior in form and strength to the other Greeks; and this superiority he was disposed to attribute to the laws and customs relating to marriage. He did not consider that the desire of a noble offspring was a passion among the Spartans, or that their physical superiority was to be attributed chiefly, not to their marriage customs, but to their temperance and training. He did not reflect that Sparta was great, not in consequence of the relaxation of morality, but in spite of it, by virtue of a political principle stronger far than existed in any other Grecian state. Least of all did he observe that Sparta did not really produce the finest specimens of the Greek race. The genius, the political inspiration of Athens, the love of liberty—all that has made Greece famous with posterity, were wanting among the Spartans. They had no Themistocles, or Pericles, or Aeschylus, or Sophocles, or Socrates, or Plato. The individual was not allowed to appear above the state; the laws were fixed, and he had no business to alter or reform them. Yet whence has the progress of cities and nations arisen, if not from remarkable individuals, coming into the world we know not how, and from causes over which we have no control? Something too much may have been said in modern times of the value of individuality. But we can hardly condemn too strongly a system which, instead of fostering the scattered seeds or sparks of genius and character, tends to smother and extinguish them.

Still, while condemning Plato, we must acknowledge that neither Christianity, nor any other form of religion and society, has hitherto been able to cope with this most difficult of social problems, and that the side from which Plato regarded it is that from which we turn away. Population is the most untameable force in the political and social world. Do we not find, especially in large cities, that the greatest hindrance to the amelioration of the poor is their improvidence in marriage?—a small fault truly, if not involving endless consequences. There are whole countries too, such as India, or, nearer home, Ireland, in which a right solution of the marriage question seems to lie at the foundation of the happiness of the community. There are too many people on a given space, or they marry too early and bring into the world a sickly and half-developed offspring; or owing to the very conditions of their existence, they become emaciated and hand on a similar life to their descendants. But who can oppose the voice of prudence to the ‘mightiest passions of mankind’ (Laws), especially when they have been licensed by custom and religion? In addition to the influences of education, we seem to require some new principles of right and wrong in these matters, some force of opinion, which may indeed be already heard whispering in private, but has never affected the moral sentiments of mankind in general. We unavoidably lose sight of the principle of utility, just in that action of our lives in which we have the most need of it. The influences which we can bring to bear upon this question are chiefly indirect. In a generation or two, education, emigration, improvements in agriculture and manufactures, may have provided the solution. The state physician hardly likes to probe the wound: it is beyond his art; a matter which he cannot safely let alone, but which he dare not touch:

‘We do but skin and film the ulcerous place.’

When again in private life we see a whole family one by one dropping into the grave under the Ate of some inherited malady, and the parents perhaps surviving them, do our minds ever go back silently to that day twenty-five or thirty years before on which under the fairest auspices, amid the rejoicings of friends and acquaintances, a bride and bridegroom joined hands with one another? In making such a reflection we are not opposing physical considerations to moral, but moral to physical; we are seeking to make the voice of reason heard, which drives us back from the extravagance of sentimentalism on common sense. The late Dr. Combe is

said by his biographer to have resisted the temptation to marriage, because he knew that he was subject to hereditary consumption. One who deserved to be called a man of genius, a friend of my youth, was in the habit of wearing a black ribbon on his wrist, in order to remind him that, being liable to outbreaks of insanity, he must not give way to the natural impulses of affection: he died unmarried in a lunatic asylum. These two little facts suggest the reflection that a very few persons have done from a sense of duty what the rest of mankind ought to have done under like circumstances, if they had allowed themselves to think of all the misery which they were about to bring into the world. If we could prevent such marriages without any violation of feeling or propriety, we clearly ought; and the prohibition in the course of time would be protected by a 'horror naturalis' similar to that which, in all civilized ages and countries, has prevented the marriage of near relations by blood. Mankind would have been the happier, if some things which are now allowed had from the beginning been denied to them; if the sanction of religion could have prohibited practices inimical to health; if sanitary principles could in early ages have been invested with a superstitious awe. But, living as we do far on in the world's history, we are no longer able to stamp at once with the impress of religion a new prohibition. A free agent cannot have his fancies regulated by law; and the execution of the law would be rendered impossible, owing to the uncertainty of the cases in which marriage was to be forbidden. Who can weigh virtue, or even fortune against health, or moral and mental qualities against bodily? Who can measure probabilities against certainties? There has been some good as well as evil in the discipline of suffering; and there are diseases, such as consumption, which have exercised a refining and softening influence on the character. Youth is too inexperienced to balance such nice considerations; parents do not often think of them, or think of them too late. They are at a distance and may probably be averted; change of place, a new state of life, the interests of a home may be the cure of them. So persons vainly reason when their minds are already made up and their fortunes irrevocably linked together. Nor is there any ground for supposing that marriages are to any great extent influenced by reflections of this sort, which seem unable to make any head against the irresistible impulse of individual attachment.

Lastly, no one can have observed the first rising flood of the passions in youth, the difficulty of regulating them, and the effects on the whole mind and nature which follow from them, the stimulus which is given to them by the imagination, without feeling that there is something unsatisfactory in our method of treating them. That the most important influence on human life should be wholly left to chance or shrouded in mystery, and instead of being disciplined or understood, should be required to conform only to an external standard of propriety—cannot be regarded by the philosopher as a safe or satisfactory condition of human things. And still those who have the charge of youth may find a way by watchfulness, by affection, by the manliness and innocence of their own lives, by occasional hints, by general admonitions which every one can apply for himself, to mitigate this terrible evil which eats out the heart of individuals and corrupts the moral sentiments of nations. In no duty towards others is there more need of reticence and self-restraint. So great is the danger lest he who would be the counsellor of another should reveal the secret prematurely, lest he should get another too much into his power; or fix the passing impression of evil by demanding the confession of it.

Nor is Plato wrong in asserting that family attachments may interfere with higher aims. If there have been some who 'to party gave up what was meant for mankind,' there have certainly been others who to family gave up what was meant for mankind or for their country. The cares of children, the necessity of procuring money for their support, the flatteries of the rich by the poor, the exclusiveness of caste, the pride of birth or wealth, the tendency of family life to divert men from the pursuit of the ideal or the heroic, are as lowering in our own age as in that of Plato. And if we prefer to look at the gentle influences of home, the development of the affections, the amenities of society, the devotion of one member of a family for the good of the others, which form one side of the picture, we must not quarrel with him, or perhaps ought rather to be grateful to him, for having presented to us the reverse. Without attempting to defend Plato on grounds of morality, we may allow that there is an aspect of the world which has not unnaturally led him into error.

We hardly appreciate the power which the idea of the State, like all other abstract ideas, exercised over the mind of Plato. To us the State seems to be built up out of the family, or sometimes to be the framework in which family and social life is contained. But to Plato in his present mood of mind the family is only a disturbing influence which, instead of filling up, tends to disarrange the higher unity of the State. No organization is needed except a political, which, regarded from another point of view, is a military one. The State is all-sufficing for the wants of man, and, like the idea of the Church in later ages, absorbs all other desires and affections. In time of war the thousand citizens are to stand like a rampart impregnable against the world or the Persian host; in time of peace the preparation for war and their duties to the State, which are also their duties to one another, take up their whole life and time. The only other interest which is allowed to them besides that of war, is the interest of philosophy. When they are too old to be soldiers they are to retire from active life and to have a second novitiate of study and contemplation. There is an element of monasticism even in Plato's communism. If he could have done without children, he might have converted his Republic into a religious order. Neither in the Laws, when the daylight of common sense breaks in upon him, does he retract his error. In the state of which he

would be the founder, there is no marrying or giving in marriage: but because of the infirmity of mankind, he condescends to allow the law of nature to prevail.

(c) But Plato has an equal, or, in his own estimation, even greater paradox in reserve, which is summed up in the famous text, 'Until kings are philosophers or philosophers are kings, cities will never cease from ill.' And by philosophers he explains himself to mean those who are capable of apprehending ideas, especially the idea of good. To the attainment of this higher knowledge the second education is directed. Through a process of training which has already made them good citizens they are now to be made good legislators. We find with some surprise (not unlike the feeling which Aristotle in a well-known passage describes the hearers of Plato's lectures as experiencing, when they went to a discourse on the idea of good, expecting to be instructed in moral truths, and received instead of them arithmetical and mathematical formulae) that Plato does not propose for his future legislators any study of finance or law or military tactics, but only of abstract mathematics, as a preparation for the still more abstract conception of good. We ask, with Aristotle, What is the use of a man knowing the idea of good, if he does not know what is good for this individual, this state, this condition of society? We cannot understand how Plato's legislators or guardians are to be fitted for their work of statesmen by the study of the five mathematical sciences. We vainly search in Plato's own writings for any explanation of this seeming absurdity.

The discovery of a great metaphysical conception seems to ravish the mind with a prophetic consciousness which takes away the power of estimating its value. No metaphysical enquirer has ever fairly criticised his own speculations; in his own judgment they have been above criticism; nor has he understood that what to him seemed to be absolute truth may reappear in the next generation as a form of logic or an instrument of thought. And posterity have also sometimes equally misapprehended the real value of his speculations. They appear to them to have contributed nothing to the stock of human knowledge. The IDEA of good is apt to be regarded by the modern thinker as an unmeaning abstraction; but he forgets that this abstraction is waiting ready for use, and will hereafter be filled up by the divisions of knowledge. When mankind do not as yet know that the world is subject to law, the introduction of the mere conception of law or design or final cause, and the far-off anticipation of the harmony of knowledge, are great steps onward. Even the crude generalization of the unity of all things leads men to view the world with different eyes, and may easily affect their conception of human life and of politics, and also their own conduct and character (Tim). We can imagine how a great mind like that of Pericles might derive elevation from his intercourse with Anaxagoras (Phaedr.). To be struggling towards a higher but unattainable conception is a more favourable intellectual condition than to rest satisfied in a narrow portion of ascertained fact. And the earlier, which have sometimes been the greater ideas of science, are often lost sight of at a later period. How rarely can we say of any modern enquirer in the magnificent language of Plato, that 'He is the spectator of all time and of all existence!'

Nor is there anything unnatural in the hasty application of these vast metaphysical conceptions to practical and political life. In the first enthusiasm of ideas men are apt to see them everywhere, and to apply them in the most remote sphere. They do not understand that the experience of ages is required to enable them to fill up 'the intermediate axioms.' Plato himself seems to have imagined that the truths of psychology, like those of astronomy and harmonics, would be arrived at by a process of deduction, and that the method which he has pursued in the Fourth Book, of inferring them from experience and the use of language, was imperfect and only provisional. But when, after having arrived at the idea of good, which is the end of the science of dialectic, he is asked, What is the nature, and what are the divisions of the science? He refuses to answer, as if intending by the refusal to intimate that the state of knowledge which then existed was not such as would allow the philosopher to enter into his final rest. The previous sciences must first be studied, and will, we may add, continue to be studied till the end of time, although in a sense different from any which Plato could have conceived. But we may observe, that while he is aware of the vacancy of his own ideal, he is full of enthusiasm in the contemplation of it. Looking into the orb of light, he sees nothing, but he is warmed and elevated. The Hebrew prophet believed that faith in God would enable him to govern the world; the Greek philosopher imagined that contemplation of the good would make a legislator. There is as much to be filled up in the one case as in the other, and the one mode of conception is to the Israelite what the other is to the Greek. Both find a repose in a divine perfection, which, whether in a more personal or impersonal form, exists without them and independently of them, as well as within them.

There is no mention of the idea of good in the Timaeus, nor of the divine Creator of the world in the Republic; and we are naturally led to ask in what relation they stand to one another. Is God above or below the idea of good? Or is the Idea of Good another mode of conceiving God? The latter appears to be the truer answer. To the Greek philosopher the perfection and unity of God was a far higher conception than his personality, which he hardly found a word to express, and which to him would have seemed to be borrowed from mythology. To the Christian, on the other hand, or to the modern thinker in general, it is difficult, if not impossible, to

attach reality to what he terms mere abstraction; while to Plato this very abstraction is the truest and most real of all things. Hence, from a difference in forms of thought, Plato appears to be resting on a creation of his own mind only. But if we may be allowed to paraphrase the idea of good by the words 'intelligent principle of law and order in the universe, embracing equally man and nature,' we begin to find a meeting-point between him and ourselves.

The question whether the ruler or statesman should be a philosopher is one that has not lost interest in modern times. In most countries of Europe and Asia there has been some one in the course of ages who has truly united the power of command with the power of thought and reflection, as there have been also many false combinations of these qualities. Some kind of speculative power is necessary both in practical and political life; like the rhetorician in the Phaedrus, men require to have a conception of the varieties of human character, and to be raised on great occasions above the commonplaces of ordinary life. Yet the idea of the philosopher-statesman has never been popular with the mass of mankind; partly because he cannot take the world into his confidence or make them understand the motives from which he acts; and also because they are jealous of a power which they do not understand. The revolution which human nature desires to effect step by step in many ages is likely to be precipitated by him in a single year or life. They are afraid that in the pursuit of his greater aims he may disregard the common feelings of humanity, he is too apt to be looking into the distant future or back into the remote past, and unable to see actions or events which, to use an expression of Plato's 'are tumbling out at his feet.' Besides, as Plato would say, there are other corruptions of these philosophical statesmen. Either 'the native hue of resolution is sicklied o'er with the pale cast of thought,' and at the moment when action above all things is required he is undecided, or general principles are enunciated by him in order to cover some change of policy; or his ignorance of the world has made him more easily fall a prey to the arts of others; or in some cases he has been converted into a courtier, who enjoys the luxury of holding liberal opinions, but was never known to perform a liberal action. No wonder that mankind have been in the habit of calling statesmen of this class pedants, sophisters, doctrinaires, visionaries. For, as we may be allowed to say, a little parodying the words of Plato, 'they have seen bad imitations of the philosopher-statesman.' But a man in whom the power of thought and action are perfectly balanced, equal to the present, reaching forward to the future, 'such a one,' ruling in a constitutional state, 'they have never seen.'

But as the philosopher is apt to fail in the routine of political life, so the ordinary statesman is also apt to fail in extraordinary crises. When the face of the world is beginning to alter, and thunder is heard in the distance, he is still guided by his old maxims, and is the slave of his inveterate party prejudices; he cannot perceive the signs of the times; instead of looking forward he looks back; he learns nothing and forgets nothing; with 'wise saws and modern instances' he would stem the rising tide of revolution. He lives more and more within the circle of his own party, as the world without him becomes stronger. This seems to be the reason why the old order of things makes so poor a figure when confronted with the new, why churches can never reform, why most political changes are made blindly and convulsively. The great crises in the history of nations have often been met by an ecclesiastical positiveness, and a more obstinate reassertion of principles which have lost their hold upon a nation. The fixed ideas of a reactionary statesman may be compared to madness; they grow upon him, and he becomes possessed by them; no judgement of others is ever admitted by him to be weighed in the balance against his own.

(d) Plato, labouring under what, to modern readers, appears to have been a confusion of ideas, assimilates the state to the individual, and fails to distinguish Ethics from Politics. He thinks that to be most of a state which is most like one man, and in which the citizens have the greatest uniformity of character. He does not see that the analogy is partly fallacious, and that the will or character of a state or nation is really the balance or rather the surplus of individual wills, which are limited by the condition of having to act in common. The movement of a body of men can never have the pliancy or facility of a single man; the freedom of the individual, which is always limited, becomes still more straitened when transferred to a nation. The powers of action and feeling are necessarily weaker and more balanced when they are diffused through a community; whence arises the often discussed question, 'Can a nation, like an individual, have a conscience?' We hesitate to say that the characters of nations are nothing more than the sum of the characters of the individuals who compose them; because there may be tendencies in individuals which react upon one another. A whole nation may be wiser than any one man in it; or may be animated by some common opinion or feeling which could not equally have affected the mind of a single person, or may have been inspired by a leader of genius to perform acts more than human. Plato does not appear to have analysed the complications which arise out of the collective action of mankind. Neither is he capable of seeing that analogies, though specious as arguments, may often have no foundation in fact, or of distinguishing between what is intelligible or vividly present to the mind, and what is true. In this respect he is far below Aristotle, who is comparatively seldom imposed upon by false analogies. He cannot disentangle the arts from the virtues—at least he is always arguing from one to the other. His notion of music is transferred from harmony of sounds to harmony of life: in this he is assisted by the ambiguities of language as well as by the prevalence of Pythagorean notions. And having once assimilated the state to the individual, he imagines

that he will find the succession of states paralleled in the lives of individuals.

Still, through this fallacious medium, a real enlargement of ideas is attained. When the virtues as yet presented no distinct conception to the mind, a great advance was made by the comparison of them with the arts; for virtue is partly art, and has an outward form as well as an inward principle. The harmony of music affords a lively image of the harmonies of the world and of human life, and may be regarded as a splendid illustration which was naturally mistaken for a real analogy. In the same way the identification of ethics with politics has a tendency to give definiteness to ethics, and also to elevate and ennoble men's notions of the aims of government and of the duties of citizens; for ethics from one point of view may be conceived as an idealized law and politics; and politics, as ethics reduced to the conditions of human society. There have been evils which have arisen out of the attempt to identify them, and this has led to the separation or antagonism of them, which has been introduced by modern political writers. But we may likewise feel that something has been lost in their separation, and that the ancient philosophers who estimated the moral and intellectual wellbeing of mankind first, and the wealth of nations and individuals second, may have a salutary influence on the speculations of modern times. Many political maxims originate in a reaction against an opposite error; and when the errors against which they were directed have passed away, they in turn become errors.

3. Plato's views of education are in several respects remarkable; like the rest of the Republic they are partly Greek and partly ideal, beginning with the ordinary curriculum of the Greek youth, and extending to after-life. Plato is the first writer who distinctly says that education is to comprehend the whole of life, and to be a preparation for another in which education begins again. This is the continuous thread which runs through the Republic, and which more than any other of his ideas admits of an application to modern life.

He has long given up the notion that virtue cannot be taught; and he is disposed to modify the thesis of the Protagoras, that the virtues are one and not many. He is not unwilling to admit the sensible world into his scheme of truth. Nor does he assert in the Republic the involuntariness of vice, which is maintained by him in the Timaeus, Sophist, and Laws (Protag., Apol., Gorg.). Nor do the so-called Platonic ideas recovered from a former state of existence affect his theory of mental improvement. Still we observe in him the remains of the old Socratic doctrine, that true knowledge must be elicited from within, and is to be sought for in ideas, not in particulars of sense. Education, as he says, will implant a principle of intelligence which is better than ten thousand eyes. The paradox that the virtues are one, and the kindred notion that all virtue is knowledge, are not entirely renounced; the first is seen in the supremacy given to justice over the rest; the second in the tendency to absorb the moral virtues in the intellectual, and to centre all goodness in the contemplation of the idea of good. The world of sense is still depreciated and identified with opinion, though admitted to be a shadow of the true. In the Republic he is evidently impressed with the conviction that vice arises chiefly from ignorance and may be cured by education; the multitude are hardly to be deemed responsible for what they do. A faint allusion to the doctrine of reminiscence occurs in the Tenth Book; but Plato's views of education have no more real connection with a previous state of existence than our own; he only proposes to elicit from the mind that which is there already. Education is represented by him, not as the filling of a vessel, but as the turning the eye of the soul towards the light.

He treats first of music or literature, which he divides into true and false, and then goes on to gymnastics; of infancy in the Republic he takes no notice, though in the Laws he gives sage counsels about the nursing of children and the management of the mothers, and would have an education which is even prior to birth. But in the Republic he begins with the age at which the child is capable of receiving ideas, and boldly asserts, in language which sounds paradoxical to modern ears, that he must be taught the false before he can learn the true. The modern and ancient philosophical world are not agreed about truth and falsehood; the one identifies truth almost exclusively with fact, the other with ideas. This is the difference between ourselves and Plato, which is, however, partly a difference of words. For we too should admit that a child must receive many lessons which he imperfectly understands; he must be taught some things in a figure only, some too which he can hardly be expected to believe when he grows older; but we should limit the use of fiction by the necessity of the case. Plato would draw the line differently; according to him the aim of early education is not truth as a matter of fact, but truth as a matter of principle; the child is to be taught first simple religious truths, and then simple moral truths, and insensibly to learn the lesson of good manners and good taste. He would make an entire reformation of the old mythology; like Xenophanes and Heracleitus he is sensible of the deep chasm which separates his own age from Homer and Hesiod, whom he quotes and invests with an imaginary authority, but only for his own purposes. The lusts and treacheries of the gods are to be banished; the terrors of the world below are to be dispelled; the misbehaviour of the Homeric heroes is not to be a model for youth. But there is another strain heard in Homer which may teach our youth endurance; and something may be learnt in medicine from the simple practice of the Homeric age. The principles on which religion is to be based are two only: first, that God is true; secondly, that he is good. Modern and Christian writers have often fallen short of these; they can hardly be said to have gone

beyond them.

The young are to be brought up in happy surroundings, out of the way of sights or sounds which may hurt the character or vitiate the taste. They are to live in an atmosphere of health; the breeze is always to be wafting to them the impressions of truth and goodness. Could such an education be realized, or if our modern religious education could be bound up with truth and virtue and good manners and good taste, that would be the best hope of human improvement. Plato, like ourselves, is looking forward to changes in the moral and religious world, and is preparing for them. He recognizes the danger of unsettling young men's minds by sudden changes of laws and principles, by destroying the sacredness of one set of ideas when there is nothing else to take their place. He is afraid too of the influence of the drama, on the ground that it encourages false sentiment, and therefore he would not have his children taken to the theatre; he thinks that the effect on the spectators is bad, and on the actors still worse. His idea of education is that of harmonious growth, in which are insensibly learnt the lessons of temperance and endurance, and the body and mind develope in equal proportions. The first principle which runs through all art and nature is simplicity; this also is to be the rule of human life.

The second stage of education is gymnastic, which answers to the period of muscular growth and development. The simplicity which is enforced in music is extended to gymnastic; Plato is aware that the training of the body may be inconsistent with the training of the mind, and that bodily exercise may be easily overdone. Excessive training of the body is apt to give men a headache or to render them sleepy at a lecture on philosophy, and this they attribute not to the true cause, but to the nature of the subject. Two points are noticeable in Plato's treatment of gymnastic:—First, that the time of training is entirely separated from the time of literary education. He seems to have thought that two things of an opposite and different nature could not be learnt at the same time. Here we can hardly agree with him; and, if we may judge by experience, the effect of spending three years between the ages of fourteen and seventeen in mere bodily exercise would be far from improving to the intellect. Secondly, he affirms that music and gymnastic are not, as common opinion is apt to imagine, intended, the one for the cultivation of the mind and the other of the body, but that they are both equally designed for the improvement of the mind. The body, in his view, is the servant of the mind; the subjection of the lower to the higher is for the advantage of both. And doubtless the mind may exercise a very great and paramount influence over the body, if exerted not at particular moments and by fits and starts, but continuously, in making preparation for the whole of life. Other Greek writers saw the mischievous tendency of Spartan discipline (Arist. Pol; Thuc.). But only Plato recognized the fundamental error on which the practice was based.

The subject of gymnastic leads Plato to the sister subject of medicine, which he further illustrates by the parallel of law. The modern disbelief in medicine has led in this, as in some other departments of knowledge, to a demand for greater simplicity; physicians are becoming aware that they often make diseases 'greater and more complicated' by their treatment of them (Rep.). In two thousand years their art has made but slender progress; what they have gained in the analysis of the parts is in a great degree lost by their feebler conception of the human frame as a whole. They have attended more to the cure of diseases than to the conditions of health; and the improvements in medicine have been more than counterbalanced by the disuse of regular training. Until lately they have hardly thought of air and water, the importance of which was well understood by the ancients; as Aristotle remarks, 'Air and water, being the elements which we most use, have the greatest effect upon health' (Polit.). For ages physicians have been under the dominion of prejudices which have only recently given way; and now there are as many opinions in medicine as in theology, and an equal degree of scepticism and some want of toleration about both. Plato has several good notions about medicine; according to him, 'the eye cannot be cured without the rest of the body, nor the body without the mind' (Charm.). No man of sense, he says in the Timaeus, would take physic; and we heartily sympathize with him in the Laws when he declares that 'the limbs of the rustic worn with toil will derive more benefit from warm baths than from the prescriptions of a not over wise doctor.' But we can hardly praise him when, in obedience to the authority of Homer, he depreciates diet, or approve of the inhuman spirit in which he would get rid of invalid and useless lives by leaving them to die. He does not seem to have considered that the 'bridle of Theages' might be accompanied by qualities which were of far more value to the State than the health or strength of the citizens; or that the duty of taking care of the helpless might be an important element of education in a State. The physician himself (this is a delicate and subtle observation) should not be a man in robust health; he should have, in modern phraseology, a nervous temperament; he should have experience of disease in his own person, in order that his powers of observation may be quickened in the case of others.

The perplexity of medicine is paralleled by the perplexity of law; in which, again, Plato would have men follow the golden rule of simplicity. Greater matters are to be determined by the legislator or by the oracle of Delphi, lesser matters are to be left to the temporary regulation of the citizens themselves. Plato is aware that laissez faire is an important element of government. The

diseases of a State are like the heads of a hydra; they multiply when they are cut off. The true remedy for them is not extirpation but prevention. And the way to prevent them is to take care of education, and education will take care of all the rest. So in modern times men have often felt that the only political measure worth having—the only one which would produce any certain or lasting effect, was a measure of national education. And in our own more than in any previous age the necessity has been recognized of restoring the ever-increasing confusion of law to simplicity and common sense.

When the training in music and gymnastic is completed, there follows the first stage of active and public life. But soon education is to begin again from a new point of view. In the interval between the Fourth and Seventh Books we have discussed the nature of knowledge, and have thence been led to form a higher conception of what was required of us. For true knowledge, according to Plato, is of abstractions, and has to do, not with particulars or individuals, but with universals only; not with the beauties of poetry, but with the ideas of philosophy. And the great aim of education is the cultivation of the habit of abstraction. This is to be acquired through the study of the mathematical sciences. They alone are capable of giving ideas of relation, and of arousing the dormant energies of thought.

Mathematics in the age of Plato comprehended a very small part of that which is now included in them; but they bore a much larger proportion to the sum of human knowledge. They were the only organon of thought which the human mind at that time possessed, and the only measure by which the chaos of particulars could be reduced to rule and order. The faculty which they trained was naturally at war with the poetical or imaginative; and hence to Plato, who is everywhere seeking for abstractions and trying to get rid of the illusions of sense, nearly the whole of education is contained in them. They seemed to have an inexhaustible application, partly because their true limits were not yet understood. These Plato himself is beginning to investigate; though not aware that number and figure are mere abstractions of sense, he recognizes that the forms used by geometry are borrowed from the sensible world. He seeks to find the ultimate ground of mathematical ideas in the idea of good, though he does not satisfactorily explain the connexion between them; and in his conception of the relation of ideas to numbers, he falls very far short of the definiteness attributed to him by Aristotle (Met.). But if he fails to recognize the true limits of mathematics, he also reaches a point beyond them; in his view, ideas of number become secondary to a higher conception of knowledge. The dialectician is as much above the mathematician as the mathematician is above the ordinary man. The one, the self-proving, the good which is the higher sphere of dialectic, is the perfect truth to which all things ascend, and in which they finally repose.

This self-proving unity or idea of good is a mere vision of which no distinct explanation can be given, relative only to a particular stage in Greek philosophy. It is an abstraction under which no individuals are comprehended, a whole which has no parts (Arist., Nic. Eth.). The vacancy of such a form was perceived by Aristotle, but not by Plato. Nor did he recognize that in the dialectical process are included two or more methods of investigation which are at variance with each other. He did not see that whether he took the longer or the shorter road, no advance could be made in this way. And yet such visions often have an immense effect; for although the method of science cannot anticipate science, the idea of science, not as it is, but as it will be in the future, is a great and inspiring principle. In the pursuit of knowledge we are always pressing forward to something beyond us; and as a false conception of knowledge, for example the scholastic philosophy, may lead men astray during many ages, so the true ideal, though vacant, may draw all their thoughts in a right direction. It makes a great difference whether the general expectation of knowledge, as this indefinite feeling may be termed, is based upon a sound judgment. For mankind may often entertain a true conception of what knowledge ought to be when they have but a slender experience of facts. The correlation of the sciences, the consciousness of the unity of nature, the idea of classification, the sense of proportion, the unwillingness to stop short of certainty or to confound probability with truth, are important principles of the higher education. Although Plato could tell us nothing, and perhaps knew that he could tell us nothing, of the absolute truth, he has exercised an influence on the human mind which even at the present day is not exhausted; and political and social questions may yet arise in which the thoughts of Plato may be read anew and receive a fresh meaning.

The Idea of good is so called only in the Republic, but there are traces of it in other dialogues of Plato. It is a cause as well as an idea, and from this point of view may be compared with the creator of the Timaeus, who out of his goodness created all things. It corresponds to a certain extent with the modern conception of a law of nature, or of a final cause, or of both in one, and in this regard may be connected with the measure and symmetry of the Philebus. It is represented in the Symposium under the aspect of beauty, and is supposed to be attained there by stages of initiation, as here by regular gradations of knowledge. Viewed subjectively, it is the process or science of dialectic. This is the science which, according to the Phaedrus, is the true basis of rhetoric, which alone is able to distinguish the natures and classes of men and things; which divides a whole into the natural parts, and reunites the scattered parts into a natural or organized whole; which defines the abstract essences or universal ideas of all

things, and connects them; which pierces the veil of hypotheses and reaches the final cause or first principle of all; which regards the sciences in relation to the idea of good. This ideal science is the highest process of thought, and may be described as the soul conversing with herself or holding communion with eternal truth and beauty, and in another form is the everlasting question and answer—the ceaseless interrogative of Socrates. The dialogues of Plato are themselves examples of the nature and method of dialectic. Viewed objectively, the idea of good is a power or cause which makes the world without us correspond with the world within. Yet this world without us is still a world of ideas. With Plato the investigation of nature is another department of knowledge, and in this he seeks to attain only probable conclusions (Timaeus).

If we ask whether this science of dialectic which Plato only half explains to us is more akin to logic or to metaphysics, the answer is that in his mind the two sciences are not as yet distinguished, any more than the subjective and objective aspects of the world and of man, which German philosophy has revealed to us. Nor has he determined whether his science of dialectic is at rest or in motion, concerned with the contemplation of absolute being, or with a process of development and evolution. Modern metaphysics may be described as the science of abstractions, or as the science of the evolution of thought; modern logic, when passing beyond the bounds of mere Aristotelian forms, may be defined as the science of method. The germ of both of them is contained in the Platonic dialectic; all metaphysicians have something in common with the ideas of Plato; all logicians have derived something from the method of Plato. The nearest approach in modern philosophy to the universal science of Plato, is to be found in the Hegelian 'succession of moments in the unity of the idea.' Plato and Hegel alike seem to have conceived the world as the correlation of abstractions; and not impossibly they would have understood one another better than any of their commentators understand them (Swift's Voyage to Laputa. 'Having a desire to see those ancients who were most renowned for wit and learning, I set apart one day on purpose. I proposed that Homer and Aristotle might appear at the head of all their commentators; but these were so numerous that some hundreds were forced to attend in the court and outward rooms of the palace. I knew, and could distinguish these two heroes, at first sight, not only from the crowd, but from each other. Homer was the taller and comelier person of the two, walked very erect for one of his age, and his eyes were the most quick and piercing I ever beheld. Aristotle stooped much, and made use of a staff. His visage was meagre, his hair lank and thin, and his voice hollow. I soon discovered that both of them were perfect strangers to the rest of the company, and had never seen or heard of them before. And I had a whisper from a ghost, who shall be nameless, "That these commentators always kept in the most distant quarters from their principals, in the lower world, through a consciousness of shame and guilt, because they had so horribly misrepresented the meaning of these authors to posterity." I introduced Didymus and Eustathius to Homer, and prevailed on him to treat them better than perhaps they deserved, for he soon found they wanted a genius to enter into the spirit of a poet. But Aristotle was out of all patience with the account I gave him of Scotus and Ramus, as I presented them to him; and he asked them "whether the rest of the tribe were as great dunces as themselves?"'). There is, however, a difference between them: for whereas Hegel is thinking of all the minds of men as one mind, which developes the stages of the idea in different countries or at different times in the same country, with Plato these gradations are regarded only as an order of thought or ideas; the history of the human mind had not yet dawned upon him.

Many criticisms may be made on Plato's theory of education. While in some respects he unavoidably falls short of modern thinkers, in others he is in advance of them. He is opposed to the modes of education which prevailed in his own time; but he can hardly be said to have discovered new ones. He does not see that education is relative to the characters of individuals; he only desires to impress the same form of the state on the minds of all. He has no sufficient idea of the effect of literature on the formation of the mind, and greatly exaggerates that of mathematics. His aim is above all things to train the reasoning faculties; to implant in the mind the spirit and power of abstraction; to explain and define general notions, and, if possible, to connect them. No wonder that in the vacancy of actual knowledge his followers, and at times even he himself, should have fallen away from the doctrine of ideas, and have returned to that branch of knowledge in which alone the relation of the one and many can be truly seen—the science of number. In his views both of teaching and training he might be styled, in modern language, a doctrinaire; after the Spartan fashion he would have his citizens cast in one mould; he does not seem to consider that some degree of freedom, 'a little wholesome neglect,' is necessary to strengthen and develope the character and to give play to the individual nature. His citizens would not have acquired that knowledge which in the vision of Er is supposed to be gained by the pilgrims from their experience of evil.

On the other hand, Plato is far in advance of modern philosophers and theologians when he teaches that education is to be continued through life and will begin again in another. He would never allow education of some kind to cease; although he was aware that the proverbial saying of Solon, 'I grow old learning many things,' cannot be applied literally. Himself ravished with the contemplation of the idea of good, and delighting in solid geometry (Rep.), he has no difficulty in imagining that a lifetime might be passed happily in such pursuits. We who know how many more men of business there are in the world than real students or thinkers, are not equally sanguine. The education which he proposes for his citizens is really the ideal life of the philosopher or man

of genius, interrupted, but only for a time, by practical duties,—a life not for the many, but for the few.

Yet the thought of Plato may not be wholly incapable of application to our own times. Even if regarded as an ideal which can never be realized, it may have a great effect in elevating the characters of mankind, and raising them above the routine of their ordinary occupation or profession. It is the best form under which we can conceive the whole of life. Nevertheless the idea of Plato is not easily put into practice. For the education of after life is necessarily the education which each one gives himself. Men and women cannot be brought together in schools or colleges at forty or fifty years of age; and if they could the result would be disappointing. The destination of most men is what Plato would call ‘the Den’ for the whole of life, and with that they are content. Neither have they teachers or advisers with whom they can take counsel in riper years. There is no ‘schoolmaster abroad’ who will tell them of their faults, or inspire them with the higher sense of duty, or with the ambition of a true success in life; no Socrates who will convict them of ignorance; no Christ, or follower of Christ, who will reprove them of sin. Hence they have a difficulty in receiving the first element of improvement, which is self-knowledge. The hopes of youth no longer stir them; they rather wish to rest than to pursue high objects. A few only who have come across great men and women, or eminent teachers of religion and morality, have received a second life from them, and have lighted a candle from the fire of their genius.

The want of energy is one of the main reasons why so few persons continue to improve in later years. They have not the will, and do not know the way. They ‘never try an experiment,’ or look up a point of interest for themselves; they make no sacrifices for the sake of knowledge; their minds, like their bodies, at a certain age become fixed. Genius has been defined as ‘the power of taking pains’; but hardly any one keeps up his interest in knowledge throughout a whole life. The troubles of a family, the business of making money, the demands of a profession destroy the elasticity of the mind. The waxen tablet of the memory which was once capable of receiving ‘true thoughts and clear impressions’ becomes hard and crowded; there is not room for the accumulations of a long life (Theaet.). The student, as years advance, rather makes an exchange of knowledge than adds to his stores. There is no pressing necessity to learn; the stock of Classics or History or Natural Science which was enough for a man at twenty-five is enough for him at fifty. Neither is it easy to give a definite answer to any one who asks how he is to improve. For self-education consists in a thousand things, commonplace in themselves,—in adding to what we are by nature something of what we are not; in learning to see ourselves as others see us; in judging, not by opinion, but by the evidence of facts; in seeking out the society of superior minds; in a study of lives and writings of great men; in observation of the world and character; in receiving kindly the natural influence of different times of life; in any act or thought which is raised above the practice or opinions of mankind; in the pursuit of some new or original enquiry; in any effort of mind which calls forth some latent power.

If any one is desirous of carrying out in detail the Platonic education of after-life, some such counsels as the following may be offered to him:—That he shall choose the branch of knowledge to which his own mind most distinctly inclines, and in which he takes the greatest delight, either one which seems to connect with his own daily employment, or, perhaps, furnishes the greatest contrast to it. He may study from the speculative side the profession or business in which he is practically engaged. He may make Homer, Dante, Shakespeare, Plato, Bacon the friends and companions of his life. He may find opportunities of hearing the living voice of a great teacher. He may select for enquiry some point of history or some unexplained phenomenon of nature. An hour a day passed in such scientific or literary pursuits will furnish as many facts as the memory can retain, and will give him ‘a pleasure not to be repented of’ (Timaeus). Only let him beware of being the slave of crotchets, or of running after a Will o’ the Wisp in his ignorance, or in his vanity of attributing to himself the gifts of a poet or assuming the air of a philosopher. He should know the limits of his own powers. Better to build up the mind by slow additions, to creep on quietly from one thing to another, to gain insensibly new powers and new interests in knowledge, than to form vast schemes which are never destined to be realized. But perhaps, as Plato would say, ‘This is part of another subject’ (Tim.); though we may also defend our digression by his example (Theaet.).

4. We remark with surprise that the progress of nations or the natural growth of institutions which fill modern treatises on political philosophy seem hardly ever to have attracted the attention of Plato and Aristotle. The ancients were familiar with the mutability of human affairs; they could moralize over the ruins of cities and the fall of empires (Plato, Statesman, and Sulpicius’ Letter to Cicero); by them fate and chance were deemed to be real powers, almost persons, and to have had a great share in political events. The wiser of them like Thucydides believed that ‘what had been would be again,’ and that a tolerable idea of the future could be gathered from the past. Also they had dreams of a Golden Age which existed once upon a time and might still exist in some unknown land, or might return again in the remote future. But the regular growth of a state enlightened by experience, progressing in knowledge, improving in the arts, of which the citizens were educated by the fulfilment of political duties, appears never to have come within the range of their hopes and aspirations. Such a state had never been seen, and therefore could not be conceived by them. Their experience (Aristot. Metaph.; Plato, Laws) led them to conclude that there had been cycles of civilization in which the

arts had been discovered and lost many times over, and cities had been overthrown and rebuilt again and again, and deluges and volcanoes and other natural convulsions had altered the face of the earth. Tradition told them of many destructions of mankind and of the preservation of a remnant. The world began again after a deluge and was reconstructed out of the fragments of itself. Also they were acquainted with empires of unknown antiquity, like the Egyptian or Assyrian; but they had never seen them grow, and could not imagine, any more than we can, the state of man which preceded them. They were puzzled and awestricken by the Egyptian monuments, of which the forms, as Plato says, not in a figure, but literally, were ten thousand years old (Laws), and they contrasted the antiquity of Egypt with their own short memories.

The early legends of Hellas have no real connection with the later history: they are at a distance, and the intermediate region is concealed from view; there is no road or path which leads from one to the other. At the beginning of Greek history, in the vestibule of the temple, is seen standing first of all the figure of the legislator, himself the interpreter and servant of the God. The fundamental laws which he gives are not supposed to change with time and circumstances. The salvation of the state is held rather to depend on the inviolable maintenance of them. They were sanctioned by the authority of heaven, and it was deemed impiety to alter them. The desire to maintain them unaltered seems to be the origin of what at first sight is very surprising to us—the intolerant zeal of Plato against innovators in religion or politics (Laws); although with a happy inconsistency he is also willing that the laws of other countries should be studied and improvements in legislation privately communicated to the Nocturnal Council (Laws). The additions which were made to them in later ages in order to meet the increasing complexity of affairs were still ascribed by a fiction to the original legislator; and the words of such enactments at Athens were disputed over as if they had been the words of Solon himself. Plato hopes to preserve in a later generation the mind of the legislator; he would have his citizens remain within the lines which he has laid down for them. He would not harass them with minute regulations, he would have allowed some changes in the laws: but not changes which would affect the fundamental institutions of the state, such for example as would convert an aristocracy into a timocracy, or a timocracy into a popular form of government.

Passing from speculations to facts, we observe that progress has been the exception rather than the law of human history. And therefore we are not surprised to find that the idea of progress is of modern rather than of ancient date; and, like the idea of a philosophy of history, is not more than a century or two old. It seems to have arisen out of the impression left on the human mind by the growth of the Roman Empire and of the Christian Church, and to be due to the political and social improvements which they introduced into the world; and still more in our own century to the idealism of the first French Revolution and the triumph of American Independence; and in a yet greater degree to the vast material prosperity and growth of population in England and her colonies and in America. It is also to be ascribed in a measure to the greater study of the philosophy of history. The optimist temperament of some great writers has assisted the creation of it, while the opposite character has led a few to regard the future of the world as dark. The ‘spectator of all time and of all existence’ sees more of ‘the increasing purpose which through the ages ran’ than formerly: but to the inhabitant of a small state of Hellas the vision was necessarily limited like the valley in which he dwelt. There was no remote past on which his eye could rest, nor any future from which the veil was partly lifted up by the analogy of history. The narrowness of view, which to ourselves appears so singular, was to him natural, if not unavoidable.

5. For the relation of the Republic to the Statesman and the Laws, and the two other works of Plato which directly treat of politics, see the Introductions to the two latter; a few general points of comparison may be touched upon in this place.

And first of the Laws.

(1) The Republic, though probably written at intervals, yet speaking generally and judging by the indications of thought and style, may be reasonably ascribed to the middle period of Plato’s life: the Laws are certainly the work of his declining years, and some portions of them at any rate seem to have been written in extreme old age.

(2) The Republic is full of hope and aspiration: the Laws bear the stamp of failure and disappointment. The one is a finished work which received the last touches of the author: the other is imperfectly executed, and apparently unfinished. The one has the grace and beauty of youth: the other has lost the poetical form, but has more of the severity and knowledge of life which is characteristic of old age.

(3) The most conspicuous defect of the Laws is the failure of dramatic power, whereas the Republic is full of striking contrasts of ideas and oppositions of character.

(4) The Laws may be said to have more the nature of a sermon, the Republic of a poem; the one is more religious, the other more intellectual.

(5) Many theories of Plato, such as the doctrine of ideas, the government of the world by philosophers, are not found in the Laws; the immortality of the soul is first mentioned in xii; the person of Socrates has altogether disappeared. The community of women and children is renounced; the institution of common or public meals for women (Laws) is for the first time introduced (Ar. Pol.).

(6) There remains in the Laws the old enmity to the poets, who are ironically saluted in high-flown terms, and, at the same time, are peremptorily ordered out of the city, if they are not willing to submit their poems to the censorship of the magistrates (Rep.).

(7) Though the work is in most respects inferior, there are a few passages in the Laws, such as the honour due to the soul, the evils of licentious or unnatural love, the whole of Book x. (religion), the dishonesty of retail trade, and bequests, which come more home to us, and contain more of what may be termed the modern element in Plato than almost anything in the Republic.

The relation of the two works to one another is very well given:

(1) by Aristotle in the Politics from the side of the Laws:—

'The same, or nearly the same, objections apply to Plato's later work, the Laws, and therefore we had better examine briefly the constitution which is therein described. In the Republic, Socrates has definitely settled in all a few questions only; such as the community of women and children, the community of property, and the constitution of the state. The population is divided into two classes—one of husbandmen, and the other of warriors; from this latter is taken a third class of counsellors and rulers of the state. But Socrates has not determined whether the husbandmen and artists are to have a share in the government, and whether they too are to carry arms and share in military service or not. He certainly thinks that the women ought to share in the education of the guardians, and to fight by their side. The remainder of the work is filled up with digressions foreign to the main subject, and with discussions about the education of the guardians. In the Laws there is hardly anything but laws; not much is said about the constitution. This, which he had intended to make more of the ordinary type, he gradually brings round to the other or ideal form. For with the exception of the community of women and property, he supposes everything to be the same in both states; there is to be the same education; the citizens of both are to live free from servile occupations, and there are to be common meals in both. The only difference is that in the Laws the common meals are extended to women, and the warriors number about 5000, but in the Republic only 1000.'

(2) by Plato in the Laws (Book v.), from the side of the Republic:—

'The first and highest form of the state and of the government and of the law is that in which there prevails most widely the ancient saying that "Friends have all things in common." Whether there is now, or ever will be, this communion of women and children and of property, in which the private and individual is altogether banished from life, and things which are by nature private, such as eyes and ears and hands, have become common, and all men express praise and blame, and feel joy and sorrow, on the same occasions, and the laws unite the city to the utmost,—whether all this is possible or not, I say that no man, acting upon any other principle, will ever constitute a state more exalted in virtue, or truer or better than this. Such a state, whether inhabited by Gods or sons of Gods, will make them blessed who dwell therein; and therefore to this we are to look for the pattern of the state, and to cling to this, and, as far as possible, to seek for one which is like this. The state which we have now in hand, when created, will be nearest to immortality and unity in the next degree; and after that, by the grace of God, we will complete the third one. And we will begin by speaking of the nature and origin of the second.'

The comparatively short work called the Statesman or Politicus in its style and manner is more akin to the Laws, while in its idealism it rather resembles the Republic. As far as we can judge by various indications of language and thought, it must be later than the one and of course earlier than the other. In both the Republic and Statesman a close connection is maintained between Politics and Dialectic. In the Statesman, enquiries into the principles of Method are interspersed with discussions about Politics. The comparative advantages of the rule of law and of a person are considered, and the decision given in favour of a person (Arist. Pol.). But much may be said on the other side, nor is the opposition necessary; for a person may rule by law, and law may be so applied as to be the living voice of the legislator. As in the Republic, there is a myth, describing, however, not a future, but a former existence of mankind. The question is asked, 'Whether the state of innocence which is described in the myth, or a state like our own which possesses art and science and distinguishes good from evil, is the preferable condition of man.' To this question of the comparative happiness of civilized and primitive life, which was so often discussed in the last century and in our own, no answer is given. The Statesman, though less perfect in style than the Republic and of far less range, may justly be regarded as one of the greatest of Plato's dialogues.

6. Others as well as Plato have chosen an ideal Republic to be the vehicle of thoughts which they could not definitely express, or which went beyond their own age. The classical writing which approaches most nearly to the Republic of Plato is the ‘De Republica’ of Cicero; but neither in this nor in any other of his dialogues does he rival the art of Plato. The manners are clumsy and inferior; the hand of the rhetorician is apparent at every turn. Yet noble sentiments are constantly recurring: the true note of Roman patriotism—‘We Romans are a great people’—resounds through the whole work. Like Socrates, Cicero turns away from the phenomena of the heavens to civil and political life. He would rather not discuss the ‘two Suns’ of which all Rome was talking, when he can converse about ‘the two nations in one’ which had divided Rome ever since the days of the Gracchi. Like Socrates again, speaking in the person of Scipio, he is afraid lest he should assume too much the character of a teacher, rather than of an equal who is discussing among friends the two sides of a question. He would confine the terms King or State to the rule of reason and justice, and he will not concede that title either to a democracy or to a monarchy. But under the rule of reason and justice he is willing to include the natural superior ruling over the natural inferior, which he compares to the soul ruling over the body. He prefers a mixture of forms of government to any single one. The two portraits of the just and the unjust, which occur in the second book of the Republic, are transferred to the state—Philus, one of the interlocutors, maintaining against his will the necessity of injustice as a principle of government, while the other, Laelius, supports the opposite thesis. His views of language and number are derived from Plato; like him he denounces the drama. He also declares that if his life were to be twice as long he would have no time to read the lyric poets. The picture of democracy is translated by him word for word, though he had hardly shown himself able to ‘carry the jest’ of Plato. He converts into a stately sentence the humorous fancy about the animals, who ‘are so imbued with the spirit of democracy that they make the passers-by get out of their way.’ His description of the tyrant is imitated from Plato, but is far inferior. The second book is historical, and claims for the Roman constitution (which is to him the ideal) a foundation of fact such as Plato probably intended to have given to the Republic in the Critias. His most remarkable imitation of Plato is the adaptation of the vision of Er, which is converted by Cicero into the ‘Somnium Scipionis’; he has ‘romanized’ the myth of the Republic, adding an argument for the immortality of the soul taken from the Phaedrus, and some other touches derived from the Phaedo and the Timaeus. Though a beautiful tale and containing splendid passages, the ‘Somnium Scipionis; is very inferior to the vision of Er; it is only a dream, and hardly allows the reader to suppose that the writer believes in his own creation. Whether his dialogues were framed on the model of the lost dialogues of Aristotle, as he himself tells us, or of Plato, to which they bear many superficial resemblances, he is still the Roman orator; he is not conversing, but making speeches, and is never able to mould the intractable Latin to the grace and ease of the Greek Platonic dialogue. But if he is defective in form, much more is he inferior to the Greek in matter; he nowhere in his philosophical writings leaves upon our minds the impression of an original thinker.

Plato’s Republic has been said to be a church and not a state; and such an ideal of a city in the heavens has always hovered over the Christian world, and is embodied in St. Augustine’s ‘De Civitate Dei,’ which is suggested by the decay and fall of the Roman Empire, much in the same manner in which we may imagine the Republic of Plato to have been influenced by the decline of Greek politics in the writer’s own age. The difference is that in the time of Plato the degeneracy, though certain, was gradual and insensible: whereas the taking of Rome by the Goths stirred like an earthquake the age of St. Augustine. Men were inclined to believe that the overthrow of the city was to be ascribed to the anger felt by the old Roman deities at the neglect of their worship. St. Augustine maintains the opposite thesis; he argues that the destruction of the Roman Empire is due, not to the rise of Christianity, but to the vices of Paganism. He wanders over Roman history, and over Greek philosophy and mythology, and finds everywhere crime, impiety and falsehood. He compares the worst parts of the Gentile religions with the best elements of the faith of Christ. He shows nothing of the spirit which led others of the early Christian Fathers to recognize in the writings of the Greek philosophers the power of the divine truth. He traces the parallel of the kingdom of God, that is, the history of the Jews, contained in their scriptures, and of the kingdoms of the world, which are found in gentile writers, and pursues them both into an ideal future. It need hardly be remarked that his use both of Greek and of Roman historians and of the sacred writings of the Jews is wholly uncritical. The heathen mythology, the Sybilline oracles, the myths of Plato, the dreams of Neo-Platonists are equally regarded by him as matter of fact. He must be acknowledged to be a strictly polemical or controversial writer who makes the best of everything on one side and the worst of everything on the other. He has no sympathy with the old Roman life as Plato has with Greek life, nor has he any idea of the ecclesiastical kingdom which was to arise out of the ruins of the Roman empire. He is not blind to the defects of the Christian Church, and looks forward to a time when Christian and Pagan shall be alike brought before the judgment-seat, and the true City of God shall appear...The work of St. Augustine is a curious repertory of antiquarian learning and quotations, deeply penetrated with Christian ethics, but showing little power of reasoning, and a slender knowledge of the Greek literature and language. He was a great genius, and a noble character, yet hardly capable of feeling or understanding anything external to his own theology. Of all the ancient philosophers he is most attracted by Plato, though he is very slightly acquainted with his writings. He is inclined to believe that the idea of creation in the Timaeus is derived from the narrative in Genesis; and he is strangely taken

with the coincidence (?) of Plato's saying that 'the philosopher is the lover of God,' and the words of the Book of Exodus in which God reveals himself to Moses (Exod.) He dwells at length on miracles performed in his own day, of which the evidence is regarded by him as irresistible. He speaks in a very interesting manner of the beauty and utility of nature and of the human frame, which he conceives to afford a foretaste of the heavenly state and of the resurrection of the body. The book is not really what to most persons the title of it would imply, and belongs to an age which has passed away. But it contains many fine passages and thoughts which are for all time.

The short treatise de Monarchia of Dante is by far the most remarkable of mediaeval ideals, and bears the impress of the great genius in whom Italy and the Middle Ages are so vividly reflected. It is the vision of an Universal Empire, which is supposed to be the natural and necessary government of the world, having a divine authority distinct from the Papacy, yet coextensive with it. It is not 'the ghost of the dead Roman Empire sitting crowned upon the grave thereof,' but the legitimate heir and successor of it, justified by the ancient virtues of the Romans and the beneficence of their rule. Their right to be the governors of the world is also confirmed by the testimony of miracles, and acknowledged by St. Paul when he appealed to Caesar, and even more emphatically by Christ Himself, Who could not have made atonement for the sins of men if He had not been condemned by a divinely authorized tribunal. The necessity for the establishment of an Universal Empire is proved partly by a priori arguments such as the unity of God and the unity of the family or nation; partly by perversions of Scripture and history, by false analogies of nature, by misapplied quotations from the classics, and by odd scraps and commonplaces of logic, showing a familiar but by no means exact knowledge of Aristotle (of Plato there is none). But a more convincing argument still is the miserable state of the world, which he touchingly describes. He sees no hope of happiness or peace for mankind until all nations of the earth are comprehended in a single empire. The whole treatise shows how deeply the idea of the Roman Empire was fixed in the minds of his contemporaries. Not much argument was needed to maintain the truth of a theory which to his own contemporaries seemed so natural and congenial. He speaks, or rather preaches, from the point of view, not of the ecclesiastic, but of the layman, although, as a good Catholic, he is willing to acknowledge that in certain respects the Empire must submit to the Church. The beginning and end of all his noble reflections and of his arguments, good and bad, is the aspiration 'that in this little plot of earth belonging to mortal man life may pass in freedom and peace.' So inextricably is his vision of the future bound up with the beliefs and circumstances of his own age.

The 'Utopia' of Sir Thomas More is a surprising monument of his genius, and shows a reach of thought far beyond his contemporaries. The book was written by him at the age of about 34 or 35, and is full of the generous sentiments of youth. He brings the light of Plato to bear upon the miserable state of his own country. Living not long after the Wars of the Roses, and in the dregs of the Catholic Church in England, he is indignant at the corruption of the clergy, at the luxury of the nobility and gentry, at the sufferings of the poor, at the calamities caused by war. To the eye of More the whole world was in dissolution and decay; and side by side with the misery and oppression which he has described in the First Book of the Utopia, he places in the Second Book the ideal state which by the help of Plato he had constructed. The times were full of stir and intellectual interest. The distant murmur of the Reformation was beginning to be heard. To minds like More's, Greek literature was a revelation: there had arisen an art of interpretation, and the New Testament was beginning to be understood as it had never been before, and has not often been since, in its natural sense. The life there depicted appeared to him wholly unlike that of Christian commonwealths, in which 'he saw nothing but a certain conspiracy of rich men procuring their own commodities under the name and title of the Commonwealth.' He thought that Christ, like Plato, 'instituted all things common,' for which reason, he tells us, the citizens of Utopia were the more willing to receive his doctrines ('Howbeit, I think this was no small help and furtherance in the matter, that they heard us say that Christ instituted among his, all things common, and that the same community doth yet remain in the rightest Christian communities' (Utopia).). The community of property is a fixed idea with him, though he is aware of the arguments which may be urged on the other side ('These things (I say), when I consider with myself, I hold well with Plato, and do nothing marvel that he would make no laws for them that refused those laws, whereby all men should have and enjoy equal portions of riches and commodities. For the wise men did easily foresee this to be the one and only way to the wealth of a community, if equality of all things should be brought in and established' (Utopia).). We wonder how in the reign of Henry VIII, though veiled in another language and published in a foreign country, such speculations could have been endured.

He is gifted with far greater dramatic invention than any one who succeeded him, with the exception of Swift. In the art of feigning he is a worthy disciple of Plato. Like him, starting from a small portion of fact, he founds his tale with admirable skill on a few lines in the Latin narrative of the voyages of Amerigo Vespucci. He is very precise about dates and facts, and has the power of making us believe that the narrator of the tale must have been an eyewitness. We are fairly puzzled by his manner of mixing up real and imaginary persons; his boy John Clement and Peter Giles, citizen of Antwerp, with whom he disputes about the precise words which are supposed to have been used by the (imaginary) Portuguese traveller, Raphael Hythloday. 'I have the more cause,' says

Hythloday, ‘to fear that my words shall not be believed, for that I know how difficultly and hardly I myself would have believed another man telling the same, if I had not myself seen it with mine own eyes.’ Or again: ‘If you had been with me in Utopia, and had presently seen their fashions and laws as I did which lived there five years and more, and would never have come thence, but only to make the new land known here,’ etc. More greatly regrets that he forgot to ask Hythloday in what part of the world Utopia is situated; he ‘would have spent no small sum of money rather than it should have escaped him,’ and he begs Peter Giles to see Hythloday or write to him and obtain an answer to the question. After this we are not surprised to hear that a Professor of Divinity (perhaps ‘a late famous vicar of Croydon in Surrey,’ as the translator thinks) is desirous of being sent thither as a missionary by the High Bishop, ‘yea, and that he may himself be made Bishop of Utopia, nothing doubting that he must obtain this Bishopric with suit; and he counteth that a godly suit which proceedeth not of the desire of honour or lucre, but only of a godly zeal.’ The design may have failed through the disappearance of Hythloday, concerning whom we have ‘very uncertain news’ after his departure. There is no doubt, however, that he had told More and Giles the exact situation of the island, but unfortunately at the same moment More’s attention, as he is reminded in a letter from Giles, was drawn off by a servant, and one of the company from a cold caught on shipboard coughed so loud as to prevent Giles from hearing. And ‘the secret has perished’ with him; to this day the place of Utopia remains unknown.

The words of Phaedrus, ‘O Socrates, you can easily invent Egyptians or anything,’ are recalled to our mind as we read this lifelike fiction. Yet the greater merit of the work is not the admirable art, but the originality of thought. More is as free as Plato from the prejudices of his age, and far more tolerant. The Utopians do not allow him who believes not in the immortality of the soul to share in the administration of the state (Laws), ‘howbeit they put him to no punishment, because they be persuaded that it is in no man’s power to believe what he list’; and ‘no man is to be blamed for reasoning in support of his own religion (‘One of our company in my presence was sharply punished. He, as soon as he was baptised, began, against our wills, with more earnest affection than wisdom, to reason of Christ’s religion, and began to wax so hot in his matter, that he did not only prefer our religion before all other, but also did despise and condemn all other, calling them profane, and the followers of them wicked and devilish, and the children of everlasting damnation. When he had thus long reasoned the matter, they laid hold on him, accused him, and condemned him into exile, not as a despiser of religion, but as a seditious person and a raiser up of dissension among the people’).’ In the public services ‘no prayers be used, but such as every man may boldly pronounce without giving offence to any sect.’ He says significantly, ‘There be that give worship to a man that was once of excellent virtue or of famous glory, not only as God, but also the chiefest and highest God. But the most and the wisest part, rejecting all these, believe that there is a certain godly power unknown, far above the capacity and reach of man’s wit, dispersed throughout all the world, not in bigness, but in virtue and power. Him they call the Father of all. To Him alone they attribute the beginnings, the increasings, the proceedings, the changes, and the ends of all things. Neither give they any divine honours to any other than him.’ So far was More from sharing the popular beliefs of his time. Yet at the end he reminds us that he does not in all respects agree with the customs and opinions of the Utopians which he describes. And we should let him have the benefit of this saving clause, and not rudely withdraw the veil behind which he has been pleased to conceal himself.

Nor is he less in advance of popular opinion in his political and moral speculations. He would like to bring military glory into contempt; he would set all sorts of idle people to profitable occupation, including in the same class, priests, women, noblemen, gentlemen, and ‘sturdy and valiant beggars,’ that the labour of all may be reduced to six hours a day. His dislike of capital punishment, and plans for the reformation of offenders; his detestation of priests and lawyers (Compare his satirical observation: ‘They (the Utopians) have priests of exceeding holiness, and therefore very few.); his remark that ‘although every one may hear of ravenous dogs and wolves and cruel man-eaters, it is not easy to find states that are well and wisely governed,’ are curiously at variance with the notions of his age and indeed with his own life. There are many points in which he shows a modern feeling and a prophetic insight like Plato. He is a sanitary reformer; he maintains that civilized states have a right to the soil of waste countries; he is inclined to the opinion which places happiness in virtuous pleasures, but herein, as he thinks, not disagreeing from those other philosophers who define virtue to be a life according to nature. He extends the idea of happiness so as to include the happiness of others; and he argues ingeniously, ‘All men agree that we ought to make others happy; but if others, how much more ourselves!’ And still he thinks that there may be a more excellent way, but to this no man’s reason can attain unless heaven should inspire him with a higher truth. His ceremonies before marriage; his humane proposal that war should be carried on by assassinating the leaders of the enemy, may be compared to some of the paradoxes of Plato. He has a charming fancy, like the affinities of Greeks and barbarians in the Timaeus, that the Utopians learnt the language of the Greeks with the more readiness because they were originally of the same race with them. He is penetrated with the spirit of Plato, and quotes or adapts many thoughts both from the Republic and from the Timaeus. He prefers public duties to private, and is somewhat impatient of the importunity of relations. His

citizens have no silver or gold of their own, but are ready enough to pay them to their mercenaries. There is nothing of which he is more contemptuous than the love of money. Gold is used for fetters of criminals, and diamonds and pearls for children's necklaces (When the ambassadors came arrayed in gold and peacocks' feathers 'to the eyes of all the Utopians except very few, which had been in other countries for some reasonable cause, all that gorgeousness of apparel seemed shameful and reproachful. In so much that they most reverently saluted the vilest and most abject of them for lords—passing over the ambassadors themselves without any honour, judging them by their wearing of golden chains to be bondmen. You should have seen children also, that had cast away their pearls and precious stones, when they saw the like sticking upon the ambassadors' caps, dig and push their mothers under the sides, saying thus to them—"Look, though he were a little child still." But the mother; yea and that also in good earnest: "Peace, son," saith she, "I think he be some of the ambassadors' fools."')

Like Plato he is full of satirical reflections on governments and princes; on the state of the world and of knowledge. The hero of his discourse (Hythloday) is very unwilling to become a minister of state, considering that he would lose his independence and his advice would never be heeded (Compare an exquisite passage, of which the conclusion is as follows: 'And verily it is naturally given...suppressed and ended.') He ridicules the new logic of his time; the Utopians could never be made to understand the doctrine of Second Intentions ('For they have not devised one of all those rules of restrictions, amplifications, and suppositions, very wittily invented in the small Logicals, which here our children in every place do learn. Furthermore, they were never yet able to find out the second intentions; insomuch that none of them all could ever see man himself in common, as they call him, though he be (as you know) bigger than was ever any giant, yea, and pointed to of us even with our finger.') He is very severe on the sports of the gentry; the Utopians count 'hunting the lowest, the vilest, and the most abject part of butchery.' He quotes the words of the Republic in which the philosopher is described 'standing out of the way under a wall until the driving storm of sleet and rain be overpast,' which admit of a singular application to More's own fate; although, writing twenty years before (about the year 1514), he can hardly be supposed to have foreseen this. There is no touch of satire which strikes deeper than his quiet remark that the greater part of the precepts of Christ are more at variance with the lives of ordinary Christians than the discourse of Utopia ('And yet the most part of them is more dissident from the manners of the world now a days, than my communication was. But preachers, sly and wily men, following your counsel (as I suppose) because they saw men evil-willing to frame their manners to Christ's rule, they have wrested and wried his doctrine, and, like a rule of lead, have applied it to men's manners, that by some means at the least way, they might agree together.')

The 'New Atlantis' is only a fragment, and far inferior in merit to the 'Utopia.' The work is full of ingenuity, but wanting in creative fancy, and by no means impresses the reader with a sense of credibility. In some places Lord Bacon is characteristically different from Sir Thomas More, as, for example, in the external state which he attributes to the governor of Solomon's House, whose dress he minutely describes, while to Sir Thomas More such trappings appear simple ridiculous. Yet, after this programme of dress, Bacon adds the beautiful trait, 'that he had a look as though he pitied men.' Several things are borrowed by him from the Timaeus; but he has injured the unity of style by adding thoughts and passages which are taken from the Hebrew Scriptures.

The 'City of the Sun' written by Campanella (1568-1639), a Dominican friar, several years after the 'New Atlantis' of Bacon, has many resemblances to the Republic of Plato. The citizens have wives and children in common; their marriages are of the same temporary sort, and are arranged by the magistrates from time to time. They do not, however, adopt his system of lots, but bring together the best natures, male and female, 'according to philosophical rules.' The infants until two years of age are brought up by their mothers in public temples; and since individuals for the most part educate their children badly, at the beginning of their third year they are committed to the care of the State, and are taught at first, not out of books, but from paintings of all kinds, which are emblazoned on the walls of the city. The city has six interior circuits of walls, and an outer wall which is the seventh. On this outer wall are painted the figures of legislators and philosophers, and on each of the interior walls the symbols or forms of some one of the sciences are delineated. The women are, for the most part, trained, like the men, in warlike and other exercises; but they have two special occupations of their own. After a battle, they and the boys soothe and relieve the wounded warriors; also they encourage them with embraces and pleasant words. Some elements of the Christian or Catholic religion are preserved among them. The life of the Apostles is greatly admired by this people because they had all things in common; and the short prayer which Jesus Christ taught men is used in their worship. It is a duty of the chief magistrates to pardon sins, and therefore the whole people make secret confession of them to the magistrates, and they to their chief, who is a sort of Rector Metaphysicus; and by this means he is well informed of all that is going on in the minds of men. After confession, absolution is granted to the citizens collectively, but no one is mentioned by name. There also exists among them a practice of perpetual prayer, performed by a succession of priests, who change every hour. Their religion is a worship of God in Trinity, that is of Wisdom, Love and Power, but without any distinction of persons. They behold in the sun the reflection of His glory; mere graven images they reject, refusing to fall under the 'tyranny' of

idolatry.

Many details are given about their customs of eating and drinking, about their mode of dressing, their employments, their wars. Campanella looks forward to a new mode of education, which is to be a study of nature, and not of Aristotle. He would not have his citizens waste their time in the consideration of what he calls ‘the dead signs of things.’ He remarks that he who knows one science only, does not really know that one any more than the rest, and insists strongly on the necessity of a variety of knowledge. More scholars are turned out in the City of the Sun in one year than by contemporary methods in ten or fifteen. He evidently believes, like Bacon, that henceforward natural science will play a great part in education, a hope which seems hardly to have been realized, either in our own or in any former age; at any rate the fulfilment of it has been long deferred.

There is a good deal of ingenuity and even originality in this work, and a most enlightened spirit pervades it. But it has little or no charm of style, and falls very far short of the ‘New Atlantis’ of Bacon, and still more of the ‘Utopia’ of Sir Thomas More. It is full of inconsistencies, and though borrowed from Plato, shows but a superficial acquaintance with his writings. It is a work such as one might expect to have been written by a philosopher and man of genius who was also a friar, and who had spent twenty-seven years of his life in a prison of the Inquisition. The most interesting feature of the book, common to Plato and Sir Thomas More, is the deep feeling which is shown by the writer, of the misery and ignorance prevailing among the lower classes in his own time. Campanella takes note of Aristotle’s answer to Plato’s community of property, that in a society where all things are common, no individual would have any motive to work (Arist. Pol.): he replies, that his citizens being happy and contented in themselves (they are required to work only four hours a day), will have greater regard for their fellows than exists among men at present. He thinks, like Plato, that if he abolishes private feelings and interests, a great public feeling will take their place.

Other writings on ideal states, such as the ‘Oceana’ of Harrington, in which the Lord Archon, meaning Cromwell, is described, not as he was, but as he ought to have been; or the ‘Argenis’ of Barclay, which is an historical allegory of his own time, are too unlike Plato to be worth mentioning. More interesting than either of these, and far more Platonic in style and thought, is Sir John Eliot’s ‘Monarchy of Man,’ in which the prisoner of the Tower, no longer able ‘to be a politician in the land of his birth,’ turns away from politics to view ‘that other city which is within him,’ and finds on the very threshold of the grave that the secret of human happiness is the mastery of self. The change of government in the time of the English Commonwealth set men thinking about first principles, and gave rise to many works of this class...The great original genius of Swift owes nothing to Plato; nor is there any trace in the conversation or in the works of Dr. Johnson of any acquaintance with his writings. He probably would have refuted Plato without reading him, in the same fashion in which he supposed himself to have refuted Bishop Berkeley’s theory of the non-existence of matter. If we except the so-called English Platonists, or rather Neo-Platonists, who never understood their master, and the writings of Coleridge, who was to some extent a kindred spirit, Plato has left no permanent impression on English literature.

7. Human life and conduct are affected by ideals in the same way that they are affected by the examples of eminent men. Neither the one nor the other are immediately applicable to practice, but there is a virtue flowing from them which tends to raise individuals above the common routine of society or trade, and to elevate States above the mere interests of commerce or the necessities of self-defence. Like the ideals of art they are partly framed by the omission of particulars; they require to be viewed at a certain distance, and are apt to fade away if we attempt to approach them. They gain an imaginary distinctness when embodied in a State or in a system of philosophy, but they still remain the visions of ‘a world unrealized.’ More striking and obvious to the ordinary mind are the examples of great men, who have served their own generation and are remembered in another. Even in our own family circle there may have been some one, a woman, or even a child, in whose face has shone forth a goodness more than human. The ideal then approaches nearer to us, and we fondly cling to it. The ideal of the past, whether of our own past lives or of former states of society, has a singular fascination for the minds of many. Too late we learn that such ideals cannot be recalled, though the recollection of them may have a humanizing influence on other times. But the abstractions of philosophy are to most persons cold and vacant; they give light without warmth; they are like the full moon in the heavens when there are no stars appearing. Men cannot live by thought alone; the world of sense is always breaking in upon them. They are for the most part confined to a corner of earth, and see but a little way beyond their own home or place of abode; they ‘do not lift up their eyes to the hills’; they are not awake when the dawn appears. But in Plato we have reached a height from which a man may look into the distance and behold the future of the world and of philosophy. The ideal of the State and of the life of the philosopher; the ideal of an education continuing through life and extending equally to both sexes; the ideal of the unity and correlation of knowledge; the faith in good and immortality—are the vacant forms of light on which Plato is seeking to fix the eye of mankind.

8. Two other ideals, which never appeared above the horizon in Greek Philosophy, float before the minds of men in our own day: one seen more clearly than formerly, as though each year and each generation brought us nearer to some great change; the other

almost in the same degree retiring from view behind the laws of nature, as if oppressed by them, but still remaining a silent hope of we know not what hidden in the heart of man. The first ideal is the future of the human race in this world; the second the future of the individual in another. The first is the more perfect realization of our own present life; the second, the abnegation of it: the one, limited by experience, the other, transcending it. Both of them have been and are powerful motives of action; there are a few in whom they have taken the place of all earthly interests. The hope of a future for the human race at first sight seems to be the more disinterested, the hope of individual existence the more egotistical, of the two motives. But when men have learned to resolve their hope of a future either for themselves or for the world into the will of God—'not my will but Thine,' the difference between them falls away; and they may be allowed to make either of them the basis of their lives, according to their own individual character or temperament. There is as much faith in the willingness to work for an unseen future in this world as in another. Neither is it inconceivable that some rare nature may feel his duty to another generation, or to another century, almost as strongly as to his own, or that living always in the presence of God, he may realize another world as vividly as he does this.

The greatest of all ideals may, or rather must be conceived by us under similitudes derived from human qualities; although sometimes, like the Jewish prophets, we may dash away these figures of speech and describe the nature of God only in negatives. These again by degrees acquire a positive meaning. It would be well, if when meditating on the higher truths either of philosophy or religion, we sometimes substituted one form of expression for another, lest through the necessities of language we should become the slaves of mere words.

There is a third ideal, not the same, but akin to these, which has a place in the home and heart of every believer in the religion of Christ, and in which men seem to find a nearer and more familiar truth, the Divine man, the Son of Man, the Saviour of mankind, Who is the first-born and head of the whole family in heaven and earth, in Whom the Divine and human, that which is without and that which is within the range of our earthly faculties, are indissolubly united. Neither is this divine form of goodness wholly separable from the ideal of the Christian Church, which is said in the New Testament to be 'His body,' or at variance with those other images of good which Plato sets before us. We see Him in a figure only, and of figures of speech we select but a few, and those the simplest, to be the expression of Him. We behold Him in a picture, but He is not there. We gather up the fragments of His discourses, but neither do they represent Him as He truly was. His dwelling is neither in heaven nor earth, but in the heart of man. This is that image which Plato saw dimly in the distance, which, when existing among men, he called, in the language of Homer, 'the likeness of God,' the likeness of a nature which in all ages men have felt to be greater and better than themselves, and which in endless forms, whether derived from Scripture or nature, from the witness of history or from the human heart, regarded as a person or not as a person, with or without parts or passions, existing in space or not in space, is and will always continue to be to mankind the Idea of Good.

THE REPUBLIC.

PERSONS OF THE DIALOGUE.

Socrates, who is the narrator.

Glaucon.

Adeimantus.

Polemarchus.

Cephalus.

Thrasymachus.

Cleitophon.

And others who are mute auditors.

The scene is laid in the house of Cephalus at the Piraeus; and the whole dialogue is narrated by Socrates the day after it actually took place to Timaeus, Hermocrates, Critias, and a nameless person, who are introduced in the Timaeus.

BOOK I.

I went down yesterday to the Piraeus with Glaucon the son of Ariston, that I might offer up my prayers to the goddess (Bendis, the Thracian Artemis.); and also because I wanted to see in what manner they would celebrate the festival, which was a new thing. I was delighted with the procession of the inhabitants; but that of the Thracians was equally, if not more, beautiful. When we had finished our prayers and viewed the spectacle, we turned in the direction of the city; and at that instant Polemarchus the son of Cephalus chanced to catch sight of us from a distance as we were starting on our way home, and told his servant to run and bid us wait for him. The servant took hold of me by the cloak behind, and said: Polemarchus desires you to wait.

I turned round, and asked him where his master was.

There he is, said the youth, coming after you, if you will only wait.

Certainly we will, said Glaucon; and in a few minutes Polemarchus appeared, and with him Adeimantus, Glaucon's brother, Niceratus the son of Nicias, and several others who had been at the procession.

Polemarchus said to me: I perceive, Socrates, that you and your companion are already on your way to the city.

You are not far wrong, I said.

But do you see, he rejoined, how many we are?

Of course.

And are you stronger than all these? for if not, you will have to remain where you are.

May there not be the alternative, I said, that we may persuade you to let us go?

But can you persuade us, if we refuse to listen to you? he said.

Certainly not, replied Glaucon.

Then we are not going to listen; of that you may be assured.

Adeimantus added: Has no one told you of the torch-race on horseback in honour of the goddess which will take place in the evening?

With horses! I replied: That is a novelty. Will horsemen carry torches and pass them one to another during the race?

Yes, said Polemarchus, and not only so, but a festival will be celebrated at night, which you certainly ought to see. Let us rise soon after supper and see this festival; there will be a gathering of young men, and we will have a good talk. Stay then, and do not be perverse.

Glaucon said: I suppose, since you insist, that we must.

Very good, I replied.

Accordingly we went with Polemarchus to his house; and there we found his brothers Lysias and Euthydemus, and with them Thrasymachus the Chalcedonian, Charmantides the Paeanian, and Cleitophon the son of Aristonymus. There too was Cephalus the father of Polemarchus, whom I had not seen for a long time, and I thought him very much aged. He was seated on a cushioned chair, and had a garland on his head, for he had been sacrificing in the court; and there were some other chairs in the room arranged in a semicircle, upon which we sat down by him. He saluted me eagerly, and then he said:—

You don't come to see me, Socrates, as often as you ought: If I were still able to go and see you I would not ask you to come to me. But at my age I can hardly get to the city, and therefore you should come oftener to the Piraeus. For let me tell you, that the more the pleasures of the body fade away, the greater to me is the pleasure and charm of conversation. Do not then deny my request, but make our house your resort and keep company with these young men; we are old friends, and you will be quite at home with us.

I replied: There is nothing which for my part I like better, Cephalus, than conversing with aged men; for I regard them as travellers who have gone a journey which I too may have to go, and of whom I ought to enquire, whether the way is smooth and easy, or rugged and difficult. And this is a question which I should like to ask of you who have arrived at that time which the poets call the

‘threshold of old age’—Is life harder towards the end, or what report do you give of it?

I will tell you, Socrates, he said, what my own feeling is. Men of my age flock together; we are birds of a feather, as the old proverb says; and at our meetings the tale of my acquaintance commonly is—I cannot eat, I cannot drink; the pleasures of youth and love are fled away: there was a good time once, but now that is gone, and life is no longer life. Some complain of the slights which are put upon them by relations, and they will tell you sadly of how many evils their old age is the cause. But to me, Socrates, these complainers seem to blame that which is not really in fault. For if old age were the cause, I too being old, and every other old man, would have felt as they do. But this is not my own experience, nor that of others whom I have known. How well I remember the aged poet Sophocles, when in answer to the question, How does love suit with age, Sophocles,—are you still the man you were? Peace, he replied; most gladly have I escaped the thing of which you speak; I feel as if I had escaped from a mad and furious master. His words have often occurred to my mind since, and they seem as good to me now as at the time when he uttered them. For certainly old age has a great sense of calm and freedom; when the passions relax their hold, then, as Sophocles says, we are freed from the grasp not of one mad master only, but of many. The truth is, Socrates, that these regrets, and also the complaints about relations, are to be attributed to the same cause, which is not old age, but men’s characters and tempers; for he who is of a calm and happy nature will hardly feel the pressure of age, but to him who is of an opposite disposition youth and age are equally a burden.

I listened in admiration, and wanting to draw him out, that he might go on—Yes, Cephalus, I said: but I rather suspect that people in general are not convinced by you when you speak thus; they think that old age sits lightly upon you, not because of your happy disposition, but because you are rich, and wealth is well known to be a great comforter.

You are right, he replied; they are not convinced: and there is something in what they say; not, however, so much as they imagine. I might answer them as Themistocles answered the Seriphian who was abusing him and saying that he was famous, not for his own merits but because he was an Athenian: ‘If you had been a native of my country or I of yours, neither of us would have been famous.’ And to those who are not rich and are impatient of old age, the same reply may be made; for to the good poor man old age cannot be a light burden, nor can a bad rich man ever have peace with himself.

May I ask, Cephalus, whether your fortune was for the most part inherited or acquired by you?

Acquired! Socrates; do you want to know how much I acquired? In the art of making money I have been midway between my father and grandfather: for my grandfather, whose name I bear, doubled and trebled the value of his patrimony, that which he inherited being much what I possess now; but my father Lysanias reduced the property below what it is at present: and I shall be satisfied if I leave to these my sons not less but a little more than I received.

That was why I asked you the question, I replied, because I see that you are indifferent about money, which is a characteristic rather of those who have inherited their fortunes than of those who have acquired them; the makers of fortunes have a second love of money as a creation of their own, resembling the affection of authors for their own poems, or of parents for their children, besides that natural love of it for the sake of use and profit which is common to them and all men. And hence they are very bad company, for they can talk about nothing but the praises of wealth.

That is true, he said.

Yes, that is very true, but may I ask another question?—What do you consider to be the greatest blessing which you have reaped from your wealth?

One, he said, of which I could not expect easily to convince others. For let me tell you, Socrates, that when a man thinks himself to be near death, fears and cares enter into his mind which he never had before; the tales of a world below and the punishment which is exacted there of deeds done here were once a laughing matter to him, but now he is tormented with the thought that they may be true: either from the weakness of age, or because he is now drawing nearer to that other place, he has a clearer view of these things; suspicions and alarms crowd thickly upon him, and he begins to reflect and consider what wrongs he has done to others. And when he finds that the sum of his transgressions is great he will many a time like a child start up in his sleep for fear, and he is filled with dark forebodings. But to him who is conscious of no sin, sweet hope, as Pindar charmingly says, is the kind nurse of his age:

‘Hope,’ he says, ‘cherishes the soul of him who lives in justice and holiness, and is the nurse of his age and the companion of his journey;—hope which is mightiest to sway the restless soul of man.’

How admirable are his words! And the great blessing of riches, I do not say to every man, but to a good man, is, that he has had no occasion to deceive or to defraud others, either intentionally or unintentionally; and when he departs to the world below he is not in any apprehension about offerings due to the gods or debts which he owes to men. Now to this peace of mind the possession of wealth greatly contributes; and therefore I say, that, setting one thing against another, of the many advantages which wealth has to give, to a man of sense this is in my opinion the greatest.

Well said, Cephalus, I replied; but as concerning justice, what is it?—to speak the truth and to pay your debts—no more than this? And even to this are there not exceptions? Suppose that a friend when in his right mind has deposited arms with me and he asks for them when he is not in his right mind, ought I to give them back to him? No one would say that I ought or that I should be right in doing so, any more than they would say that I ought always to speak the truth to one who is in his condition.

You are quite right, he replied.

But then, I said, speaking the truth and paying your debts is not a correct definition of justice.

Quite correct, Socrates, if Simonides is to be believed, said Polemarchus interposing.

I fear, said Cephalus, that I must go now, for I have to look after the sacrifices, and I hand over the argument to Polemarchus and the company.

Is not Polemarchus your heir? I said.

To be sure, he answered, and went away laughing to the sacrifices.

Tell me then, O thou heir of the argument, what did Simonides say, and according to you truly say, about justice?

He said that the repayment of a debt is just, and in saying so he appears to me to be right.

I should be sorry to doubt the word of such a wise and inspired man, but his meaning, though probably clear to you, is the reverse of clear to me. For he certainly does not mean, as we were just now saying, that I ought to return a deposit of arms or of anything else to one who asks for it when he is not in his right senses; and yet a deposit cannot be denied to be a debt.

True.

Then when the person who asks me is not in his right mind I am by no means to make the return?

Certainly not.

When Simonides said that the repayment of a debt was justice, he did not mean to include that case?

Certainly not; for he thinks that a friend ought always to do good to a friend and never evil.

You mean that the return of a deposit of gold which is to the injury of the receiver, if the two parties are friends, is not the repayment of a debt,—that is what you would imagine him to say?

Yes.

And are enemies also to receive what we owe to them?

To be sure, he said, they are to receive what we owe them, and an enemy, as I take it, owes to an enemy that which is due or proper to him—that is to say, evil.

Simonides, then, after the manner of poets, would seem to have spoken darkly of the nature of justice; for he really meant to say that justice is the giving to each man what is proper to him, and this he termed a debt.

That must have been his meaning, he said.

By heaven! I replied; and if we asked him what due or proper thing is given by medicine, and to whom, what answer do you think that he would make to us?

He would surely reply that medicine gives drugs and meat and drink to human bodies.

And what due or proper thing is given by cookery, and to what?

Seasoning to food.

And what is that which justice gives, and to whom?

If, Socrates, we are to be guided at all by the analogy of the preceding instances, then justice is the art which gives good to friends and evil to enemies.

That is his meaning then?

I think so.

And who is best able to do good to his friends and evil to his enemies in time of sickness?

The physician.

Or when they are on a voyage, amid the perils of the sea?

The pilot.

And in what sort of actions or with a view to what result is the just man most able to do harm to his enemy and good to his friend?

In going to war against the one and in making alliances with the other.

But when a man is well, my dear Polemarchus, there is no need of a physician?

No.

And he who is not on a voyage has no need of a pilot?

No.

Then in time of peace justice will be of no use?

I am very far from thinking so.

You think that justice may be of use in peace as well as in war?

Yes.

Like husbandry for the acquisition of corn?

Yes.

Or like shoemaking for the acquisition of shoes,—that is what you mean?

Yes.

And what similar use or power of acquisition has justice in time of peace?

In contracts, Socrates, justice is of use.

And by contracts you mean partnerships?

Exactly.

But is the just man or the skilful player a more useful and better partner at a game of draughts?

The skilful player.

And in the laying of bricks and stones is the just man a more useful or better partner than the builder?

Quite the reverse.

Then in what sort of partnership is the just man a better partner than the harp-player, as in playing the harp the harp-player is certainly a better partner than the just man?

In a money partnership.

Yes, Polemarchus, but surely not in the use of money; for you do not want a just man to be your counsellor in the purchase or sale of a horse; a man who is knowing about horses would be better for that, would he not?

Certainly.

And when you want to buy a ship, the shipwright or the pilot would be better?

True.

Then what is that joint use of silver or gold in which the just man is to be preferred?

When you want a deposit to be kept safely.

You mean when money is not wanted, but allowed to lie?

Precisely.

That is to say, justice is useful when money is useless?

That is the inference.

And when you want to keep a pruning-hook safe, then justice is useful to the individual and to the state; but when you want to use it, then the art of the vine-dresser?

Clearly.

And when you want to keep a shield or a lyre, and not to use them, you would say that justice is useful; but when you want to use them, then the art of the soldier or of the musician?

Certainly.

And so of all other things;—justice is useful when they are useless, and useless when they are useful?

That is the inference.

Then justice is not good for much. But let us consider this further point: Is not he who can best strike a blow in a boxing match or in any kind of fighting best able to ward off a blow?

Certainly.

And he who is most skilful in preventing or escaping from a disease is best able to create one?

True.

And he is the best guard of a camp who is best able to steal a march upon the enemy?

Certainly.

Then he who is a good keeper of anything is also a good thief?

That, I suppose, is to be inferred.

Then if the just man is good at keeping money, he is good at stealing it.

That is implied in the argument.

Then after all the just man has turned out to be a thief. And this is a lesson which I suspect you must have learnt out of Homer; for he, speaking of Autolycus, the maternal grandfather of Odysseus, who is a favourite of his, affirms that

‘He was excellent above all men in theft and perjury.’

And so, you and Homer and Simonides are agreed that justice is an art of theft; to be practised however ‘for the good of friends and for the harm of enemies,’—that was what you were saying?

No, certainly not that, though I do not now know what I did say; but I still stand by the latter words.

Well, there is another question: By friends and enemies do we mean those who are so really, or only in seeming?

Surely, he said, a man may be expected to love those whom he thinks good, and to hate those whom he thinks evil.

Yes, but do not persons often err about good and evil: many who are not good seem to be so, and conversely?

That is true.

Then to them the good will be enemies and the evil will be their friends? True.

And in that case they will be right in doing good to the evil and evil to the good?

Clearly.

But the good are just and would not do an injustice?

True.

Then according to your argument it is just to injure those who do no wrong?

Nay, Socrates; the doctrine is immoral.

Then I suppose that we ought to do good to the just and harm to the unjust?

I like that better.

But see the consequence:—Many a man who is ignorant of human nature has friends who are bad friends, and in that case he ought to do harm to them; and he has good enemies whom he ought to benefit; but, if so, we shall be saying the very opposite of that which we affirmed to be the meaning of Simonides.

Very true, he said: and I think that we had better correct an error into which we seem to have fallen in the use of the words ‘friend’ and ‘enemy.’

What was the error, Polemarchus? I asked.

We assumed that he is a friend who seems to be or who is thought good.

And how is the error to be corrected?

We should rather say that he is a friend who is, as well as seems, good; and that he who seems only, and is not good, only seems to be and is not a friend; and of an enemy the same may be said.

You would argue that the good are our friends and the bad our enemies?

Yes.

And instead of saying simply as we did at first, that it is just to do good to our friends and harm to our enemies, we should further say: It is just to do good to our friends when they are good and harm to our enemies when they are evil?

Yes, that appears to me to be the truth.

But ought the just to injure any one at all?

Undoubtedly he ought to injure those who are both wicked and his enemies.

When horses are injured, are they improved or deteriorated?

The latter.

Deteriorated, that is to say, in the good qualities of horses, not of dogs?

Yes, of horses.

And dogs are deteriorated in the good qualities of dogs, and not of horses?

Of course.

And will not men who are injured be deteriorated in that which is the proper virtue of man?

Certainly.

And that human virtue is justice?

To be sure.

Then men who are injured are of necessity made unjust?

That is the result.

But can the musician by his art make men unmusical?

Certainly not.

Or the horseman by his art make them bad horsemen?

Impossible.

And can the just by justice make men unjust, or speaking generally, can the good by virtue make them bad?

Assuredly not.

Any more than heat can produce cold?

It cannot.

Or drought moisture?

Clearly not.

Nor can the good harm any one?

Impossible.

And the just is the good?

Certainly.

Then to injure a friend or any one else is not the act of a just man, but of the opposite, who is the unjust?

I think that what you say is quite true, Socrates.

Then if a man says that justice consists in the repayment of debts, and that good is the debt which a just man owes to his friends, and evil the debt which he owes to his enemies,—to say this is not wise; for it is not true, if, as has been clearly shown, the injuring of another can be in no case just.

I agree with you, said Polemarchus.

Then you and I are prepared to take up arms against any one who attributes such a saying to Simonides or Bias or Pittacus, or any other wise man or seer?

I am quite ready to do battle at your side, he said.

Shall I tell you whose I believe the saying to be?

Whose?

I believe that Periander or Perdiccas or Xerxes or Ismenias the Theban, or some other rich and mighty man, who had a great opinion of his own power, was the first to say that justice is ‘doing good to your friends and harm to your enemies.’

Most true, he said.

Yes, I said; but if this definition of justice also breaks down, what other can be offered?

Several times in the course of the discussion Thrasymachus had made an attempt to get the argument into his own hands, and had been put down by the rest of the company, who wanted to hear the end. But when Polemarchus and I had done speaking and there was a pause, he could no longer hold his peace; and, gathering himself up, he came at us like a wild beast, seeking to devour us. We were quite panic-stricken at the sight of him.

He roared out to the whole company: What folly, Socrates, has taken possession of you all? And why, sillybillies, do you knock under to one another? I say that if you want really to know what justice is, you should not only ask but answer, and you should not seek honour to yourself from the refutation of an opponent, but have your own answer; for there is many a one who can ask and cannot answer. And now I will not have you say that justice is duty or advantage or profit or gain or interest, for this sort of nonsense will not do for me; I must have clearness and accuracy.

I was panic-stricken at his words, and could not look at him without trembling. Indeed I believe that if I had not fixed my eye upon him, I should have been struck dumb: but when I saw his fury rising, I looked at him first, and was therefore able to reply to him.

Thrasymachus, I said, with a quiver, don’t be hard upon us. Polemarchus and I may have been guilty of a little mistake in the argument, but I can assure you that the error was not intentional. If we were seeking for a piece of gold, you would not imagine that we were ‘knocking under to one another,’ and so losing our chance of finding it. And why, when we are seeking for justice, a thing more precious than many pieces of gold, do you say that we are weakly yielding to one another and not doing our utmost to get at the truth? Nay, my good friend, we are most willing and anxious to do so, but the fact is that we cannot. And if so, you people who know all things should pity us and not be angry with us.

How characteristic of Socrates! he replied, with a bitter laugh;—that’s your ironical style! Did I not foresee—have I not already told you, that whatever he was asked he would refuse to answer, and try irony or any other shuffle, in order that he might avoid answering?

You are a philosopher, Thrasymachus, I replied, and well know that if you ask a person what numbers make up twelve, taking care to prohibit him whom you ask from answering twice six, or three times four, or six times two, or four times three, ‘for this sort of nonsense will not do for me,’—then obviously, if that is your way of putting the question, no one can answer you. But suppose that he were to retort, ‘Thrasymachus, what do you mean? If one of these numbers which you interdict be the true answer to the question, am I falsely to say some other number which is not the right one?—is that your meaning?’—How would you answer him?

Just as if the two cases were at all alike! he said.

Why should they not be? I replied; and even if they are not, but only appear to be so to the person who is asked, ought he not to say what he thinks, whether you and I forbid him or not?

I presume then that you are going to make one of the interdicted answers?

I dare say that I may, notwithstanding the danger, if upon reflection I approve of any of them.

But what if I give you an answer about justice other and better, he said, than any of these? What do you deserve to have done to you?

Done to me!—as becomes the ignorant, I must learn from the wise—that is what I deserve to have done to me.

What, and no payment! a pleasant notion!

I will pay when I have the money, I replied.

But you have, Socrates, said Glaucon: and you, Thrasymachus, need be under no anxiety about money, for we will all make a contribution for Socrates.

Yes, he replied, and then Socrates will do as he always does—refuse to answer himself, but take and pull to pieces the answer of some one else.

Why, my good friend, I said, how can any one answer who knows, and says that he knows, just nothing; and who, even if he has some faint notions of his own, is told by a man of authority not to utter them? The natural thing is, that the speaker should be some one like yourself who professes to know and can tell what he knows. Will you then kindly answer, for the edification of the company and of myself?

Glaucon and the rest of the company joined in my request, and Thrasymachus, as any one might see, was in reality eager to speak; for he thought that he had an excellent answer, and would distinguish himself. But at first he affected to insist on my answering; at length he consented to begin. Behold, he said, the wisdom of Socrates; he refuses to teach himself, and goes about learning of others, to whom he never even says Thank you.

That I learn of others, I replied, is quite true; but that I am ungrateful I wholly deny. Money I have none, and therefore I pay in praise, which is all I have; and how ready I am to praise any one who appears to me to speak well you will very soon find out when you answer; for I expect that you will answer well.

Listen, then, he said; I proclaim that justice is nothing else than the interest of the stronger. And now why do you not praise me? But of course you won't.

Let me first understand you, I replied. Justice, as you say, is the interest of the stronger. What, Thrasymachus, is the meaning of this? You cannot mean to say that because Polydamas, the pancratiast, is stronger than we are, and finds the eating of beef conducive to his bodily strength, that to eat beef is therefore equally for our good who are weaker than he is, and right and just for us?

That's abominable of you, Socrates; you take the words in the sense which is most damaging to the argument.

Not at all, my good sir, I said; I am trying to understand them; and I wish that you would be a little clearer.

Well, he said, have you never heard that forms of government differ; there are tyrannies, and there are democracies, and there are aristocracies?

Yes, I know.

And the government is the ruling power in each state?

Certainly.

And the different forms of government make laws democratical, aristocratical, tyrannical, with a view to their several interests; and these laws, which are made by them for their own interests, are the justice which they deliver to their subjects, and him who transgresses them they punish as a breaker of the law, and unjust. And that is what I mean when I say that in all states there is the same principle of justice, which is the interest of the government; and as the government must be supposed to have power, the only reasonable conclusion is, that everywhere there is one principle of justice, which is the interest of the stronger.

Now I understand you, I said; and whether you are right or not I will try to discover. But let me remark, that in defining justice you have yourself used the word 'interest' which you forbade me to use. It is true, however, that in your definition the words 'of the stronger' are added.

A small addition, you must allow, he said.

Great or small, never mind about that: we must first enquire whether what you are saying is the truth. Now we are both agreed that justice is interest of some sort, but you go on to say 'of the stronger'; about this addition I am not so sure, and must therefore consider further.

Proceed.

I will; and first tell me, Do you admit that it is just for subjects to obey their rulers?

I do.

But are the rulers of states absolutely infallible, or are they sometimes liable to err?

To be sure, he replied, they are liable to err.

Then in making their laws they may sometimes make them rightly, and sometimes not?

True.

When they make them rightly, they make them agreeably to their interest; when they are mistaken, contrary to their interest; you admit that?

Yes.

And the laws which they make must be obeyed by their subjects,—and that is what you call justice?

Doubtless.

Then justice, according to your argument, is not only obedience to the interest of the stronger but the reverse?

What is that you are saying? he asked.

I am only repeating what you are saying, I believe. But let us consider: Have we not admitted that the rulers may be mistaken about their own interest in what they command, and also that to obey them is justice? Has not that been admitted?

Yes.

Then you must also have acknowledged justice not to be for the interest of the stronger, when the rulers unintentionally command things to be done which are to their own injury. For if, as you say, justice is the obedience which the subject renders to their commands, in that case, O wisest of men, is there any escape from the conclusion that the weaker are commanded to do, not what is for the interest, but what is for the injury of the stronger?

Nothing can be clearer, Socrates, said Polemarchus.

Yes, said Cleitophon, interposing, if you are allowed to be his witness.

But there is no need of any witness, said Polemarchus, for Thrasymachus himself acknowledges that rulers may sometimes command what is not for their own interest, and that for subjects to obey them is justice.

Yes, Polemarchus,—Thrasymachus said that for subjects to do what was commanded by their rulers is just.

Yes, Cleitophon, but he also said that justice is the interest of the stronger, and, while admitting both these propositions, he further acknowledged that the stronger may command the weaker who are his subjects to do what is not for his own interest; whence follows that justice is the injury quite as much as the interest of the stronger.

But, said Cleitophon, he meant by the interest of the stronger what the stronger thought to be his interest,—this was what the weaker had to do; and this was affirmed by him to be justice.

Those were not his words, rejoined Polemarchus.

Never mind, I replied, if he now says that they are, let us accept his statement. Tell me, Thrasymachus, I said, did you mean by justice what the stronger thought to be his interest, whether really so or not?

Certainly not, he said. Do you suppose that I call him who is mistaken the stronger at the time when he is mistaken?

Yes, I said, my impression was that you did so, when you admitted that the ruler was not infallible but might be sometimes mistaken.

You argue like an informer, Socrates. Do you mean, for example, that he who is mistaken about the sick is a physician in that he is mistaken? or that he who errs in arithmetic or grammar is an arithmetician or grammarian at the time when he is making the mistake, in respect of the mistake? True, we say that the physician or arithmetician or grammarian has made a mistake, but this is only a way of speaking; for the fact is that neither the grammarian nor any other person of skill ever makes a mistake in so far as he is what his name implies; they none of them err unless their skill fails them, and then they cease to be skilled artists. No artist or

sage or ruler errs at the time when he is what his name implies; though he is commonly said to err, and I adopted the common mode of speaking. But to be perfectly accurate, since you are such a lover of accuracy, we should say that the ruler, in so far as he is a ruler, is unerring, and, being unerring, always commands that which is for his own interest; and the subject is required to execute his commands; and therefore, as I said at first and now repeat, justice is the interest of the stronger.

Indeed, Thrasymachus, and do I really appear to you to argue like an informer?

Certainly, he replied.

And do you suppose that I ask these questions with any design of injuring you in the argument?

Nay, he replied, ‘suppose’ is not the word—I know it; but you will be found out, and by sheer force of argument you will never prevail.

I shall not make the attempt, my dear man; but to avoid any misunderstanding occurring between us in future, let me ask, in what sense do you speak of a ruler or stronger whose interest, as you were saying, he being the superior, it is just that the inferior should execute—is he a ruler in the popular or in the strict sense of the term?

In the strictest of all senses, he said. And now cheat and play the informer if you can; I ask no quarter at your hands. But you never will be able, never.

And do you imagine, I said, that I am such a madman as to try and cheat, Thrasymachus? I might as well shave a lion.

Why, he said, you made the attempt a minute ago, and you failed.

Enough, I said, of these civilities. It will be better that I should ask you a question: Is the physician, taken in that strict sense of which you are speaking, a healer of the sick or a maker of money? And remember that I am now speaking of the true physician.

A healer of the sick, he replied.

And the pilot—that is to say, the true pilot—is he a captain of sailors or a mere sailor?

A captain of sailors.

The circumstance that he sails in the ship is not to be taken into account; neither is he to be called a sailor; the name pilot by which he is distinguished has nothing to do with sailing, but is significant of his skill and of his authority over the sailors.

Very true, he said.

Now, I said, every art has an interest?

Certainly.

For which the art has to consider and provide?

Yes, that is the aim of art.

And the interest of any art is the perfection of it—this and nothing else?

What do you mean?

I mean what I may illustrate negatively by the example of the body. Suppose you were to ask me whether the body is self-sufficing or has wants, I should reply: Certainly the body has wants; for the body may be ill and require to be cured, and has therefore interests to which the art of medicine ministers; and this is the origin and intention of medicine, as you will acknowledge. Am I not right?

Quite right, he replied.

But is the art of medicine or any other art faulty or deficient in any quality in the same way that the eye may be deficient in sight or the ear fail of hearing, and therefore requires another art to provide for the interests of seeing and hearing—has art in itself, I say, any similar liability to fault or defect, and does every art require another supplementary art to provide for its interests, and that another and another without end? Or have the arts to look only after their own interests? Or have they no need either of themselves

or of another?—having no faults or defects, they have no need to correct them, either by the exercise of their own art or of any other; they have only to consider the interest of their subject-matter. For every art remains pure and faultless while remaining true—that is to say, while perfect and unimpaired. Take the words in your precise sense, and tell me whether I am not right.

Yes, clearly.

Then medicine does not consider the interest of medicine, but the interest of the body?

True, he said.

Nor does the art of horsemanship consider the interests of the art of horsemanship, but the interests of the horse; neither do any other arts care for themselves, for they have no needs; they care only for that which is the subject of their art?

True, he said.

But surely, Thrasymachus, the arts are the superiors and rulers of their own subjects?

To this he assented with a good deal of reluctance.

Then, I said, no science or art considers or enjoins the interest of the stronger or superior, but only the interest of the subject and weaker?

He made an attempt to contest this proposition also, but finally acquiesced.

Then, I continued, no physician, in so far as he is a physician, considers his own good in what he prescribes, but the good of his patient; for the true physician is also a ruler having the human body as a subject, and is not a mere money-maker; that has been admitted?

Yes.

And the pilot likewise, in the strict sense of the term, is a ruler of sailors and not a mere sailor?

That has been admitted.

And such a pilot and ruler will provide and prescribe for the interest of the sailor who is under him, and not for his own or the ruler's interest?

He gave a reluctant 'Yes.'

Then, I said, Thrasymachus, there is no one in any rule who, in so far as he is a ruler, considers or enjoins what is for his own interest, but always what is for the interest of his subject or suitable to his art; to that he looks, and that alone he considers in everything which he says and does.

When we had got to this point in the argument, and every one saw that the definition of justice had been completely upset, Thrasymachus, instead of replying to me, said: Tell me, Socrates, have you got a nurse?

Why do you ask such a question, I said, when you ought rather to be answering?

Because she leaves you to snivel, and never wipes your nose: she has not even taught you to know the shepherd from the sheep.

What makes you say that? I replied.

Because you fancy that the shepherd or neatherd fattens or tends the sheep or oxen with a view to their own good and not to the good of himself or his master; and you further imagine that the rulers of states, if they are true rulers, never think of their subjects as sheep, and that they are not studying their own advantage day and night. Oh, no; and so entirely astray are you in your ideas about the just and unjust as not even to know that justice and the just are in reality another's good; that is to say, the interest of the ruler and stronger, and the loss of the subject and servant; and injustice the opposite; for the unjust is lord over the truly simple and just: he is the stronger, and his subjects do what is for his interest, and minister to his happiness, which is very far from being their own. Consider further, most foolish Socrates, that the just is always a loser in comparison with the unjust. First of all, in private contracts: wherever the unjust is the partner of the just you will find that, when the partnership is dissolved, the unjust man has always more and the just less. Secondly, in their dealings with the State: when there is an income-tax, the just man will pay more and the unjust

less on the same amount of income; and when there is anything to be received the one gains nothing and the other much. Observe also what happens when they take an office; there is the just man neglecting his affairs and perhaps suffering other losses, and getting nothing out of the public, because he is just; moreover he is hated by his friends and acquaintance for refusing to serve them in unlawful ways. But all this is reversed in the case of the unjust man. I am speaking, as before, of injustice on a large scale in which the advantage of the unjust is most apparent; and my meaning will be most clearly seen if we turn to that highest form of injustice in which the criminal is the happiest of men, and the sufferers or those who refuse to do injustice are the most miserable—that is to say tyranny, which by fraud and force takes away the property of others, not little by little but wholesale; comprehending in one, things sacred as well as profane, private and public; for which acts of wrong, if he were detected perpetrating any one of them singly, he would be punished and incur great disgrace—they who do such wrong in particular cases are called robbers of temples, and man-stealers and burglars and swindlers and thieves. But when a man besides taking away the money of the citizens has made slaves of them, then, instead of these names of reproach, he is termed happy and blessed, not only by the citizens but by all who hear of his having achieved the consummation of injustice. For mankind censure injustice, fearing that they may be the victims of it and not because they shrink from committing it. And thus, as I have shown, Socrates, injustice, when on a sufficient scale, has more strength and freedom and mastery than justice; and, as I said at first, justice is the interest of the stronger, whereas injustice is a man's own profit and interest.

Thrasymachus, when he had thus spoken, having, like a bath-man, deluged our ears with his words, had a mind to go away. But the company would not let him; they insisted that he should remain and defend his position; and I myself added my own humble request that he would not leave us. Thrasymachus, I said to him, excellent man, how suggestive are your remarks! And are you going to run away before you have fairly taught or learned whether they are true or not? Is the attempt to determine the way of man's life so small a matter in your eyes—to determine how life may be passed by each one of us to the greatest advantage?

And do I differ from you, he said, as to the importance of the enquiry?

You appear rather, I replied, to have no care or thought about us, Thrasymachus—whether we live better or worse from not knowing what you say you know, is to you a matter of indifference. Prithee, friend, do not keep your knowledge to yourself; we are a large party; and any benefit which you confer upon us will be amply rewarded. For my own part I openly declare that I am not convinced, and that I do not believe injustice to be more gainful than justice, even if uncontrolled and allowed to have free play. For, granting that there may be an unjust man who is able to commit injustice either by fraud or force, still this does not convince me of the superior advantage of injustice, and there may be others who are in the same predicament with myself. Perhaps we may be wrong; if so, you in your wisdom should convince us that we are mistaken in preferring justice to injustice.

And how am I to convince you, he said, if you are not already convinced by what I have just said; what more can I do for you? Would you have me put the proof bodily into your souls?

Heaven forbid! I said; I would only ask you to be consistent; or, if you change, change openly and let there be no deception. For I must remark, Thrasymachus, if you will recall what was previously said, that although you began by defining the true physician in an exact sense, you did not observe a like exactness when speaking of the shepherd; you thought that the shepherd as a shepherd tends the sheep not with a view to their own good, but like a mere diner or banquetter with a view to the pleasures of the table; or, again, as a trader for sale in the market, and not as a shepherd. Yet surely the art of the shepherd is concerned only with the good of his subjects; he has only to provide the best for them, since the perfection of the art is already ensured whenever all the requirements of it are satisfied. And that was what I was saying just now about the ruler. I conceived that the art of the ruler, considered as ruler, whether in a state or in private life, could only regard the good of his flock or subjects; whereas you seem to think that the rulers in states, that is to say, the true rulers, like being in authority.

Think! Nay, I am sure of it.

Then why in the case of lesser offices do men never take them willingly without payment, unless under the idea that they govern for the advantage not of themselves but of others? Let me ask you a question: Are not the several arts different, by reason of their each having a separate function? And, my dear illustrious friend, do say what you think, that we may make a little progress.

Yes, that is the difference, he replied.

And each art gives us a particular good and not merely a general one—medicine, for example, gives us health; navigation, safety at sea, and so on?

Yes, he said.

And the art of payment has the special function of giving pay: but we do not confuse this with other arts, any more than the art of the pilot is to be confused with the art of medicine, because the health of the pilot may be improved by a sea voyage. You would not be inclined to say, would you, that navigation is the art of medicine, at least if we are to adopt your exact use of language?

Certainly not.

Or because a man is in good health when he receives pay you would not say that the art of payment is medicine?

I should not.

Nor would you say that medicine is the art of receiving pay because a man takes fees when he is engaged in healing?

Certainly not.

And we have admitted, I said, that the good of each art is specially confined to the art?

Yes.

Then, if there be any good which all artists have in common, that is to be attributed to something of which they all have the common use?

True, he replied.

And when the artist is benefited by receiving pay the advantage is gained by an additional use of the art of pay, which is not the art professed by him?

He gave a reluctant assent to this.

Then the pay is not derived by the several artists from their respective arts. But the truth is, that while the art of medicine gives health, and the art of the builder builds a house, another art attends them which is the art of pay. The various arts may be doing their own business and benefiting that over which they preside, but would the artist receive any benefit from his art unless he were paid as well?

I suppose not.

But does he therefore confer no benefit when he works for nothing?

Certainly, he confers a benefit.

Then now, Thrasymachus, there is no longer any doubt that neither arts nor governments provide for their own interests; but, as we were before saying, they rule and provide for the interests of their subjects who are the weaker and not the stronger—to their good they attend and not to the good of the superior. And this is the reason, my dear Thrasymachus, why, as I was just now saying, no one is willing to govern; because no one likes to take in hand the reformation of evils which are not his concern without remuneration. For, in the execution of his work, and in giving his orders to another, the true artist does not regard his own interest, but always that of his subjects; and therefore in order that rulers may be willing to rule, they must be paid in one of three modes of payment, money, or honour, or a penalty for refusing.

What do you mean, Socrates? said Glaucon. The first two modes of payment are intelligible enough, but what the penalty is I do not understand, or how a penalty can be a payment.

You mean that you do not understand the nature of this payment which to the best men is the great inducement to rule? Of course you know that ambition and avarice are held to be, as indeed they are, a disgrace?

Very true.

And for this reason, I said, money and honour have no attraction for them; good men do not wish to be openly demanding payment for governing and so to get the name of hirelings, nor by secretly helping themselves out of the public revenues to get the name of thieves. And not being ambitious they do not care about honour. Wherefore necessity must be laid upon them, and they must be induced to serve from the fear of punishment. And this, as I imagine, is the reason why the forwardness to take office, instead of

waiting to be compelled, has been deemed dishonourable. Now the worst part of the punishment is that he who refuses to rule is liable to be ruled by one who is worse than himself. And the fear of this, as I conceive, induces the good to take office, not because they would, but because they cannot help—not under the idea that they are going to have any benefit or enjoyment themselves, but as a necessity, and because they are not able to commit the task of ruling to any one who is better than themselves, or indeed as good. For there is reason to think that if a city were composed entirely of good men, then to avoid office would be as much an object of contention as to obtain office is at present; then we should have plain proof that the true ruler is not meant by nature to regard his own interest, but that of his subjects; and every one who knew this would choose rather to receive a benefit from another than to have the trouble of conferring one. So far am I from agreeing with Thrasymachus that justice is the interest of the stronger. This latter question need not be further discussed at present; but when Thrasymachus says that the life of the unjust is more advantageous than that of the just, his new statement appears to me to be of a far more serious character. Which of us has spoken truly? And which sort of life, Glaucon, do you prefer?

I for my part deem the life of the just to be the more advantageous, he answered.

Did you hear all the advantages of the unjust which Thrasymachus was rehearsing?

Yes, I heard him, he replied, but he has not convinced me.

Then shall we try to find some way of convincing him, if we can, that he is saying what is not true?

Most certainly, he replied.

If, I said, he makes a set speech and we make another recounting all the advantages of being just, and he answers and we rejoin, there must be a numbering and measuring of the goods which are claimed on either side, and in the end we shall want judges to decide; but if we proceed in our enquiry as we lately did, by making admissions to one another, we shall unite the offices of judge and advocate in our own persons.

Very good, he said.

And which method do I understand you to prefer? I said.

That which you propose.

Well, then, Thrasymachus, I said, suppose you begin at the beginning and answer me. You say that perfect injustice is more gainful than perfect justice?

Yes, that is what I say, and I have given you my reasons.

And what is your view about them? Would you call one of them virtue and the other vice?

Certainly.

I suppose that you would call justice virtue and injustice vice?

What a charming notion! So likely too, seeing that I affirm injustice to be profitable and justice not.

What else then would you say?

The opposite, he replied.

And would you call justice vice?

No, I would rather say sublime simplicity.

Then would you call injustice malignity?

No; I would rather say discretion.

And do the unjust appear to you to be wise and good?

Yes, he said; at any rate those of them who are able to be perfectly unjust, and who have the power of subduing states and nations; but perhaps you imagine me to be talking of cutpurses. Even this profession if undetected has advantages, though they are not to

be compared with those of which I was just now speaking.

I do not think that I misapprehend your meaning, Thrasymachus, I replied; but still I cannot hear without amazement that you class injustice with wisdom and virtue, and justice with the opposite.

Certainly I do so class them.

Now, I said, you are on more substantial and almost unanswerable ground; for if the injustice which you were maintaining to be profitable had been admitted by you as by others to be vice and deformity, an answer might have been given to you on received principles; but now I perceive that you will call injustice honourable and strong, and to the unjust you will attribute all the qualities which were attributed by us before to the just, seeing that you do not hesitate to rank injustice with wisdom and virtue.

You have guessed most infallibly, he replied.

Then I certainly ought not to shrink from going through with the argument so long as I have reason to think that you, Thrasymachus, are speaking your real mind; for I do believe that you are now in earnest and are not amusing yourself at our expense.

I may be in earnest or not, but what is that to you?—to refute the argument is your business.

Very true, I said; that is what I have to do: But will you be so good as answer yet one more question? Does the just man try to gain any advantage over the just?

Far otherwise; if he did he would not be the simple amusing creature which he is.

And would he try to go beyond just action?

He would not.

And how would he regard the attempt to gain an advantage over the unjust; would that be considered by him as just or unjust?

He would think it just, and would try to gain the advantage; but he would not be able.

Whether he would or would not be able, I said, is not to the point. My question is only whether the just man, while refusing to have more than another just man, would wish and claim to have more than the unjust?

Yes, he would.

And what of the unjust—does he claim to have more than the just man and to do more than is just?

Of course, he said, for he claims to have more than all men.

And the unjust man will strive and struggle to obtain more than the unjust man or action, in order that he may have more than all?

True.

We may put the matter thus, I said—the just does not desire more than his like but more than his unlike, whereas the unjust desires more than both his like and his unlike?

Nothing, he said, can be better than that statement.

And the unjust is good and wise, and the just is neither?

Good again, he said.

And is not the unjust like the wise and good and the just unlike them?

Of course, he said, he who is of a certain nature, is like those who are of a certain nature; he who is not, not.

Each of them, I said, is such as his like is?

Certainly, he replied.

Very good, Thrasymachus, I said; and now to take the case of the arts: you would admit that one man is a musician and another not a musician?

Yes.

And which is wise and which is foolish?

Clearly the musician is wise, and he who is not a musician is foolish.

And he is good in as far as he is wise, and bad in as far as he is foolish?

Yes.

And you would say the same sort of thing of the physician?

Yes.

And do you think, my excellent friend, that a musician when he adjusts the lyre would desire or claim to exceed or go beyond a musician in the tightening and loosening the strings?

I do not think that he would.

But he would claim to exceed the non-musician?

Of course.

And what would you say of the physician? In prescribing meats and drinks would he wish to go beyond another physician or beyond the practice of medicine?

He would not.

But he would wish to go beyond the non-physician?

Yes.

And about knowledge and ignorance in general; see whether you think that any man who has knowledge ever would wish to have the choice of saying or doing more than another man who has knowledge. Would he not rather say or do the same as his like in the same case?

That, I suppose, can hardly be denied.

And what of the ignorant? would he not desire to have more than either the knowing or the ignorant?

I dare say.

And the knowing is wise?

Yes.

And the wise is good?

True.

Then the wise and good will not desire to gain more than his like, but more than his unlike and opposite?

I suppose so.

Whereas the bad and ignorant will desire to gain more than both?

Yes.

But did we not say, Thrasymachus, that the unjust goes beyond both his like and unlike? Were not these your words?

They were.

And you also said that the just will not go beyond his like but his unlike?

Yes.

Then the just is like the wise and good, and the unjust like the evil and ignorant?

That is the inference.

And each of them is such as his like is?

That was admitted.

Then the just has turned out to be wise and good and the unjust evil and ignorant.

Thrasymachus made all these admissions, not fluently, as I repeat them, but with extreme reluctance; it was a hot summer's day, and the perspiration poured from him in torrents; and then I saw what I had never seen before, Thrasymachus blushing. As we were now agreed that justice was virtue and wisdom, and injustice vice and ignorance, I proceeded to another point:

Well, I said, Thrasymachus, that matter is now settled; but were we not also saying that injustice had strength; do you remember?

Yes, I remember, he said, but do not suppose that I approve of what you are saying or have no answer; if however I were to answer, you would be quite certain to accuse me of haranguing; therefore either permit me to have my say out, or if you would rather ask, do so, and I will answer 'Very good,' as they say to story-telling old women, and will nod 'Yes' and 'No.'

Certainly not, I said, if contrary to your real opinion.

Yes, he said, I will, to please you, since you will not let me speak. What else would you have?

Nothing in the world, I said; and if you are so disposed I will ask and you shall answer.

Proceed.

Then I will repeat the question which I asked before, in order that our examination of the relative nature of justice and injustice may be carried on regularly. A statement was made that injustice is stronger and more powerful than justice, but now justice, having been identified with wisdom and virtue, is easily shown to be stronger than injustice, if injustice is ignorance; this can no longer be questioned by any one. But I want to view the matter, Thrasymachus, in a different way: You would not deny that a state may be unjust and may be unjustly attempting to enslave other states, or may have already enslaved them, and may be holding many of them in subjection?

True, he replied; and I will add that the best and most perfectly unjust state will be most likely to do so.

I know, I said, that such was your position; but what I would further consider is, whether this power which is possessed by the superior state can exist or be exercised without justice or only with justice.

If you are right in your view, and justice is wisdom, then only with justice; but if I am right, then without justice.

I am delighted, Thrasymachus, to see you not only nodding assent and dissent, but making answers which are quite excellent.

That is out of civility to you, he replied.

You are very kind, I said; and would you have the goodness also to inform me, whether you think that a state, or an army, or a band of robbers and thieves, or any other gang of evil-doers could act at all if they injured one another?

No indeed, he said, they could not.

But if they abstained from injuring one another, then they might act together better?

Yes.

And this is because injustice creates divisions and hatreds and fighting, and justice imparts harmony and friendship; is not that true, Thrasymachus?

I agree, he said, because I do not wish to quarrel with you.

How good of you, I said; but I should like to know also whether injustice, having this tendency to arouse hatred, wherever existing, among slaves or among freemen, will not make them hate one another and set them at variance and render them incapable of

common action?

Certainly.

And even if injustice be found in two only, will they not quarrel and fight, and become enemies to one another and to the just?

They will.

And suppose injustice abiding in a single person, would your wisdom say that she loses or that she retains her natural power?

Let us assume that she retains her power.

Yet is not the power which injustice exercises of such a nature that wherever she takes up her abode, whether in a city, in an army, in a family, or in any other body, that body is, to begin with, rendered incapable of united action by reason of sedition and distraction; and does it not become its own enemy and at variance with all that opposes it, and with the just? Is not this the case?

Yes, certainly.

And is not injustice equally fatal when existing in a single person; in the first place rendering him incapable of action because he is not at unity with himself, and in the second place making him an enemy to himself and the just? Is not that true, Thrasymachus?

Yes.

And O my friend, I said, surely the gods are just?

Granted that they are.

But if so, the unjust will be the enemy of the gods, and the just will be their friend?

Feast away in triumph, and take your fill of the argument; I will not oppose you, lest I should displease the company.

Well then, proceed with your answers, and let me have the remainder of my repast. For we have already shown that the just are clearly wiser and better and abler than the unjust, and that the unjust are incapable of common action; nay more, that to speak as we did of men who are evil acting at any time vigorously together, is not strictly true, for if they had been perfectly evil, they would have laid hands upon one another; but it is evident that there must have been some remnant of justice in them, which enabled them to combine; if there had not been they would have injured one another as well as their victims; they were but half-villains in their enterprises; for had they been whole villains, and utterly unjust, they would have been utterly incapable of action. That, as I believe, is the truth of the matter, and not what you said at first. But whether the just have a better and happier life than the unjust is a further question which we also proposed to consider. I think that they have, and for the reasons which I have given; but still I should like to examine further, for no light matter is at stake, nothing less than the rule of human life.

Proceed.

I will proceed by asking a question: Would you not say that a horse has some end?

I should.

And the end or use of a horse or of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

I do not understand, he said.

Let me explain: Can you see, except with the eye?

Certainly not.

Or hear, except with the ear?

No.

These then may be truly said to be the ends of these organs?

They may.

But you can cut off a vine-branch with a dagger or with a chisel, and in many other ways?

Of course.

And yet not so well as with a pruning-hook made for the purpose?

True.

May we not say that this is the end of a pruning-hook?

We may.

Then now I think you will have no difficulty in understanding my meaning when I asked the question whether the end of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

I understand your meaning, he said, and assent.

And that to which an end is appointed has also an excellence? Need I ask again whether the eye has an end?

It has.

And has not the eye an excellence?

Yes.

And the ear has an end and an excellence also?

True.

And the same is true of all other things; they have each of them an end and a special excellence?

That is so.

Well, and can the eyes fulfil their end if they are wanting in their own proper excellence and have a defect instead?

How can they, he said, if they are blind and cannot see?

You mean to say, if they have lost their proper excellence, which is sight; but I have not arrived at that point yet. I would rather ask the question more generally, and only enquire whether the things which fulfil their ends fulfil them by their own proper excellence, and fail of fulfilling them by their own defect?

Certainly, he replied.

I might say the same of the ears; when deprived of their own proper excellence they cannot fulfil their end?

True.

And the same observation will apply to all other things?

I agree.

Well; and has not the soul an end which nothing else can fulfil? for example, to superintend and command and deliberate and the like. Are not these functions proper to the soul, and can they rightly be assigned to any other?

To no other.

And is not life to be reckoned among the ends of the soul?

Assuredly, he said.

And has not the soul an excellence also?

Yes.

And can she or can she not fulfil her own ends when deprived of that excellence?

She cannot.

Then an evil soul must necessarily be an evil ruler and superintendent, and the good soul a good ruler?

Yes, necessarily.

And we have admitted that justice is the excellence of the soul, and injustice the defect of the soul?

That has been admitted.

Then the just soul and the just man will live well, and the unjust man will live ill?

That is what your argument proves.

And he who lives well is blessed and happy, and he who lives ill the reverse of happy?

Certainly.

Then the just is happy, and the unjust miserable?

So be it.

But happiness and not misery is profitable.

Of course.

Then, my blessed Thrasymachus, injustice can never be more profitable than justice.

Let this, Socrates, he said, be your entertainment at the Bendidea.

For which I am indebted to you, I said, now that you have grown gentle towards me and have left off scolding. Nevertheless, I have not been well entertained; but that was my own fault and not yours. As an epicure snatches a taste of every dish which is successively brought to table, he not having allowed himself time to enjoy the one before, so have I gone from one subject to another without having discovered what I sought at first, the nature of justice. I left that enquiry and turned away to consider whether justice is virtue and wisdom or evil and folly; and when there arose a further question about the comparative advantages of justice and injustice, I could not refrain from passing on to that. And the result of the whole discussion has been that I know nothing at all. For I know not what justice is, and therefore I am not likely to know whether it is or is not a virtue, nor can I say whether the just man is happy or unhappy.

BOOK II.

With these words I was thinking that I had made an end of the discussion; but the end, in truth, proved to be only a beginning. For Glaucon, who is always the most pugnacious of men, was dissatisfied at Thrasymachus' retirement; he wanted to have the battle out. So he said to me: Socrates, do you wish really to persuade us, or only to seem to have persuaded us, that to be just is always better than to be unjust?

I should wish really to persuade you, I replied, if I could.

Then you certainly have not succeeded. Let me ask you now:—How would you arrange goods—are there not some which we welcome for their own sakes, and independently of their consequences, as, for example, harmless pleasures and enjoyments, which delight us at the time, although nothing follows from them?

I agree in thinking that there is such a class, I replied.

Is there not also a second class of goods, such as knowledge, sight, health, which are desirable not only in themselves, but also for their results?

Certainly, I said.

And would you not recognize a third class, such as gymnastic, and the care of the sick, and the physician's art; also the various ways of money-making—these do us good but we regard them as disagreeable; and no one would choose them for their own

sakes, but only for the sake of some reward or result which flows from them?

There is, I said, this third class also. But why do you ask?

Because I want to know in which of the three classes you would place justice?

In the highest class, I replied,—among those goods which he who would be happy desires both for their own sake and for the sake of their results.

Then the many are of another mind; they think that justice is to be reckoned in the troublesome class, among goods which are to be pursued for the sake of rewards and of reputation, but in themselves are disagreeable and rather to be avoided.

I know, I said, that this is their manner of thinking, and that this was the thesis which Thrasymachus was maintaining just now, when he censured justice and praised injustice. But I am too stupid to be convinced by him.

I wish, he said, that you would hear me as well as him, and then I shall see whether you and I agree. For Thrasymachus seems to me, like a snake, to have been charmed by your voice sooner than he ought to have been; but to my mind the nature of justice and injustice have not yet been made clear. Setting aside their rewards and results, I want to know what they are in themselves, and how they inwardly work in the soul. If you, please, then, I will revive the argument of Thrasymachus. And first I will speak of the nature and origin of justice according to the common view of them. Secondly, I will show that all men who practise justice do so against their will, of necessity, but not as a good. And thirdly, I will argue that there is reason in this view, for the life of the unjust is after all better far than the life of the just—if what they say is true, Socrates, since I myself am not of their opinion. But still I acknowledge that I am perplexed when I hear the voices of Thrasymachus and myriads of others dinning in my ears; and, on the other hand, I have never yet heard the superiority of justice to injustice maintained by any one in a satisfactory way. I want to hear justice praised in respect of itself; then I shall be satisfied, and you are the person from whom I think that I am most likely to hear this; and therefore I will praise the unjust life to the utmost of my power, and my manner of speaking will indicate the manner in which I desire to hear you too praising justice and censuring injustice. Will you say whether you approve of my proposal?

Indeed I do; nor can I imagine any theme about which a man of sense would oftener wish to converse.

I am delighted, he replied, to hear you say so, and shall begin by speaking, as I proposed, of the nature and origin of justice.

They say that to do injustice is, by nature, good; to suffer injustice, evil; but that the evil is greater than the good. And so when men have both done and suffered injustice and have had experience of both, not being able to avoid the one and obtain the other, they think that they had better agree among themselves to have neither; hence there arise laws and mutual covenants; and that which is ordained by law is termed by them lawful and just. This they affirm to be the origin and nature of justice;—it is a mean or compromise, between the best of all, which is to do injustice and not be punished, and the worst of all, which is to suffer injustice without the power of retaliation; and justice, being at a middle point between the two, is tolerated not as a good, but as the lesser evil, and honoured by reason of the inability of men to do injustice. For no man who is worthy to be called a man would ever submit to such an agreement if he were able to resist; he would be mad if he did. Such is the received account, Socrates, of the nature and origin of justice.

Now that those who practise justice do so involuntarily and because they have not the power to be unjust will best appear if we imagine something of this kind: having given both to the just and the unjust power to do what they will, let us watch and see whither desire will lead them; then we shall discover in the very act the just and unjust man to be proceeding along the same road, following their interest, which all natures deem to be their good, and are only diverted into the path of justice by the force of law. The liberty which we are supposing may be most completely given to them in the form of such a power as is said to have been possessed by Gyges, the ancestor of Croesus the Lydian. According to the tradition, Gyges was a shepherd in the service of the king of Lydia; there was a great storm, and an earthquake made an opening in the earth at the place where he was feeding his flock. Amazed at the sight, he descended into the opening, where, among other marvels, he beheld a hollow brazen horse, having doors, at which he stooping and looking in saw a dead body of stature, as appeared to him, more than human, and having nothing on but a gold ring; this he took from the finger of the dead and reascended. Now the shepherds met together, according to custom, that they might send their monthly report about the flocks to the king; into their assembly he came having the ring on his finger, and as he was sitting among them he chanced to turn the collet of the ring inside his hand, when instantly he became invisible to the rest of the company and they began to speak of him as if he were no longer present. He was astonished at this, and again touching the ring he turned the collet outwards and reappeared; he made several trials of the ring, and always with the same result—when he turned

the collet inwards he became invisible, when outwards he reappeared. Whereupon he contrived to be chosen one of the messengers who were sent to the court; whereas soon as he arrived he seduced the queen, and with her help conspired against the king and slew him, and took the kingdom. Suppose now that there were two such magic rings, and the just put on one of them and the unjust the other; no man can be imagined to be of such an iron nature that he would stand fast in justice. No man would keep his hands off what was not his own when he could safely take what he liked out of the market, or go into houses and lie with any one at his pleasure, or kill or release from prison whom he would, and in all respects be like a God among men. Then the actions of the just would be as the actions of the unjust; they would both come at last to the same point. And this we may truly affirm to be a great proof that a man is just, not willingly or because he thinks that justice is any good to him individually, but of necessity, for wherever any one thinks that he can safely be unjust, there he is unjust. For all men believe in their hearts that injustice is far more profitable to the individual than justice, and he who argues as I have been supposing, will say that they are right. If you could imagine any one obtaining this power of becoming invisible, and never doing any wrong or touching what was another's, he would be thought by the lookers-on to be a most wretched idiot, although they would praise him to one another's faces, and keep up appearances with one another from a fear that they too might suffer injustice. Enough of this.

Now, if we are to form a real judgment of the life of the just and unjust, we must isolate them; there is no other way; and how is the isolation to be effected? I answer: Let the unjust man be entirely unjust, and the just man entirely just; nothing is to be taken away from either of them, and both are to be perfectly furnished for the work of their respective lives. First, let the unjust be like other distinguished masters of craft; like the skilful pilot or physician, who knows intuitively his own powers and keeps within their limits, and who, if he fails at any point, is able to recover himself. So let the unjust make his unjust attempts in the right way, and lie hidden if he means to be great in his injustice: (he who is found out is nobody:) for the highest reach of injustice is, to be deemed just when you are not. Therefore I say that in the perfectly unjust man we must assume the most perfect injustice; there is to be no deduction, but we must allow him, while doing the most unjust acts, to have acquired the greatest reputation for justice. If he have taken a false step he must be able to recover himself; he must be one who can speak with effect, if any of his deeds come to light, and who can force his way where force is required by his courage and strength, and command of money and friends. And at his side let us place the just man in his nobleness and simplicity, wishing, as Aeschylus says, to be and not to seem good. There must be no seeming, for if he seem to be just he will be honoured and rewarded, and then we shall not know whether he is just for the sake of justice or for the sake of honours and rewards; therefore, let him be clothed in justice only, and have no other covering; and he must be imagined in a state of life the opposite of the former. Let him be the best of men, and let him be thought the worst; then he will have been put to the proof; and we shall see whether he will be affected by the fear of infamy and its consequences. And let him continue thus to the hour of death; being just and seeming to be unjust. When both have reached the uttermost extreme, the one of justice and the other of injustice, let judgment be given which of them is the happier of the two.

Heavens! my dear Glaucon, I said, how energetically you polish them up for the decision, first one and then the other, as if they were two statues.

I do my best, he said. And now that we know what they are like there is no difficulty in tracing out the sort of life which awaits either of them. This I will proceed to describe; but as you may think the description a little too coarse, I ask you to suppose, Socrates, that the words which follow are not mine.—Let me put them into the mouths of the eulogists of injustice: They will tell you that the just man who is thought unjust will be scourged, racked, bound—will have his eyes burnt out; and, at last, after suffering every kind of evil, he will be impaled: Then he will understand that he ought to seem only, and not to be, just; the words of Aeschylus may be more truly spoken of the unjust than of the just. For the unjust is pursuing a reality; he does not live with a view to appearances—he wants to be really unjust and not to seem only:—

'His mind has a soil deep and fertile, Out of which spring his prudent counsels.'

In the first place, he is thought just, and therefore bears rule in the city; he can marry whom he will, and give in marriage to whom he will; also he can trade and deal where he likes, and always to his own advantage, because he has no misgivings about injustice; and at every contest, whether in public or private, he gets the better of his antagonists, and gains at their expense, and is rich, and out of his gains he can benefit his friends, and harm his enemies; moreover, he can offer sacrifices, and dedicate gifts to the gods abundantly and magnificently, and can honour the gods or any man whom he wants to honour in a far better style than the just, and therefore he is likely to be dearer than they are to the gods. And thus, Socrates, gods and men are said to unite in making the life of the unjust better than the life of the just.

I was going to say something in answer to Glaucon, when Adeimantus, his brother, interposed: Socrates, he said, you do not suppose that there is nothing more to be urged?

Why, what else is there? I answered.

The strongest point of all has not been even mentioned, he replied.

Well, then, according to the proverb, 'Let brother help brother'—if he fails in any part do you assist him; although I must confess that Glaucon has already said quite enough to lay me in the dust, and take from me the power of helping justice.

Nonsense, he replied. But let me add something more: There is another side to Glaucon's argument about the praise and censure of justice and injustice, which is equally required in order to bring out what I believe to be his meaning. Parents and tutors are always telling their sons and their wards that they are to be just; but why? not for the sake of justice, but for the sake of character and reputation; in the hope of obtaining for him who is reputed just some of those offices, marriages, and the like which Glaucon has enumerated among the advantages accruing to the unjust from the reputation of justice. More, however, is made of appearances by this class of persons than by the others; for they throw in the good opinion of the gods, and will tell you of a shower of benefits which the heavens, as they say, rain upon the pious; and this accords with the testimony of the noble Hesiod and Homer, the first of whom says, that the gods make the oaks of the just—

'To bear acorns at their summit, and bees in the middle; And the sheep are bowed down with the weight of their fleeces,'

and many other blessings of a like kind are provided for them. And Homer has a very similar strain; for he speaks of one whose fame is—

'As the fame of some blameless king who, like a god, Maintains justice; to whom the black earth brings forth Wheat and barley, whose trees are bowed with fruit, And his sheep never fail to bear, and the sea gives him fish.'

Still grander are the gifts of heaven which Musaeus and his son vouchsafe to the just; they take them down into the world below, where they have the saints lying on couches at a feast, everlastingly drunk, crowned with garlands; their idea seems to be that an immortality of drunkenness is the highest meed of virtue. Some extend their rewards yet further; the posterity, as they say, of the faithful and just shall survive to the third and fourth generation. This is the style in which they praise justice. But about the wicked there is another strain; they bury them in a slough in Hades, and make them carry water in a sieve; also while they are yet living they bring them to infamy, and inflict upon them the punishments which Glaucon described as the portion of the just who are reputed to be unjust; nothing else does their invention supply. Such is their manner of praising the one and censuring the other.

Once more, Socrates, I will ask you to consider another way of speaking about justice and injustice, which is not confined to the poets, but is found in prose writers. The universal voice of mankind is always declaring that justice and virtue are honourable, but grievous and toilsome; and that the pleasures of vice and injustice are easy of attainment, and are only censured by law and opinion. They say also that honesty is for the most part less profitable than dishonesty; and they are quite ready to call wicked men happy, and to honour them both in public and private when they are rich or in any other way influential, while they despise and overlook those who may be weak and poor, even though acknowledging them to be better than the others. But most extraordinary of all is their mode of speaking about virtue and the gods: they say that the gods apportion calamity and misery to many good men, and good and happiness to the wicked. And mendicant prophets go to rich men's doors and persuade them that they have a power committed to them by the gods of making an atonement for a man's own or his ancestor's sins by sacrifices or charms, with rejoicings and feasts; and they promise to harm an enemy, whether just or unjust, at a small cost; with magic arts and incantations binding heaven, as they say, to execute their will. And the poets are the authorities to whom they appeal, now smoothing the path of vice with the words of Hesiod;—

'Vice may be had in abundance without trouble; the way is smooth and her dwelling-place is near. But before virtue the gods have set toil,'

and a tedious and uphill road: then citing Homer as a witness that the gods may be influenced by men; for he also says:—

'The gods, too, may be turned from their purpose; and men pray to them and avert their wrath by sacrifices and soothing entreaties, and by libations and the odour of fat, when they have sinned and transgressed.'

And they produce a host of books written by Musaeus and Orpheus, who were children of the Moon and the Muses—that is what they say—according to which they perform their ritual, and persuade not only individuals, but whole cities, that expiations and atonements for sin may be made by sacrifices and amusements which fill a vacant hour, and are equally at the service of the living and the dead; the latter sort they call mysteries, and they redeem us from the pains of hell, but if we neglect them no one knows what awaits us.

He proceeded: And now when the young hear all this said about virtue and vice, and the way in which gods and men regard them, how are their minds likely to be affected, my dear Socrates,—those of them, I mean, who are quickwitted, and, like bees on the wing, light on every flower, and from all that they hear are prone to draw conclusions as to what manner of persons they should be and in what way they should walk if they would make the best of life? Probably the youth will say to himself in the words of Pindar—

'Can I by justice or by crooked ways of deceit ascend a loftier tower which may be a fortress to me all my days?'

For what men say is that, if I am really just and am not also thought just profit there is none, but the pain and loss on the other hand are unmistakeable. But if, though unjust, I acquire the reputation of justice, a heavenly life is promised to me. Since then, as philosophers prove, appearance tyrannizes over truth and is lord of happiness, to appearance I must devote myself. I will describe around me a picture and shadow of virtue to be the vestibule and exterior of my house; behind I will trail the subtle and crafty fox, as Archilochus, greatest of sages, recommends. But I hear some one exclaiming that the concealment of wickedness is often difficult; to which I answer, Nothing great is easy. Nevertheless, the argument indicates this, if we would be happy, to be the path along which we should proceed. With a view to concealment we will establish secret brotherhoods and political clubs. And there are professors of rhetoric who teach the art of persuading courts and assemblies; and so, partly by persuasion and partly by force, I shall make unlawful gains and not be punished. Still I hear a voice saying that the gods cannot be deceived, neither can they be compelled. But what if there are no gods? or, suppose them to have no care of human things—why in either case should we mind about concealment? And even if there are gods, and they do care about us, yet we know of them only from tradition and the genealogies of the poets; and these are the very persons who say that they may be influenced and turned by 'sacrifices and soothing entreaties and by offerings.' Let us be consistent then, and believe both or neither. If the poets speak truly, why then we had better be unjust, and offer of the fruits of injustice; for if we are just, although we may escape the vengeance of heaven, we shall lose the gains of injustice; but, if we are unjust, we shall keep the gains, and by our sinning and praying, and praying and sinning, the gods will be propitiated, and we shall not be punished. 'But there is a world below in which either we or our posterity will suffer for our unjust deeds.' Yes, my friend, will be the reflection, but there are mysteries and atoning deities, and these have great power. That is what mighty cities declare; and the children of the gods, who were their poets and prophets, bear a like testimony.

On what principle, then, shall we any longer choose justice rather than the worst injustice? when, if we only unite the latter with a deceitful regard to appearances, we shall fare to our mind both with gods and men, in life and after death, as the most numerous and the highest authorities tell us. Knowing all this, Socrates, how can a man who has any superiority of mind or person or rank or wealth, be willing to honour justice; or indeed to refrain from laughing when he hears justice praised? And even if there should be some one who is able to disprove the truth of my words, and who is satisfied that justice is best, still he is not angry with the unjust, but is very ready to forgive them, because he also knows that men are not just of their own free will; unless, peradventure, there be some one whom the divinity within him may have inspired with a hatred of injustice, or who has attained knowledge of the truth—but no other man. He only blames injustice who, owing to cowardice or age or some weakness, has not the power of being unjust. And this is proved by the fact that when he obtains the power, he immediately becomes unjust as far as he can be.

The cause of all this, Socrates, was indicated by us at the beginning of the argument, when my brother and I told you how astonished we were to find that of all the professing panegyrists of justice—beginning with the ancient heroes of whom any memorial has been preserved to us, and ending with the men of our own time—no one has ever blamed injustice or praised justice except with a view to the glories, honours, and benefits which flow from them. No one has ever adequately described either in verse or prose the true essential nature of either of them abiding in the soul, and invisible to any human or divine eye; or shown that of all the things of a man's soul which he has within him, justice is the greatest good, and injustice the greatest evil. Had this been the universal strain, had you sought to persuade us of this from our youth upwards, we should not have been on the watch to keep one another from doing wrong, but every one would have been his own watchman, because afraid, if he did wrong, of harbouring in himself the greatest of evils. I dare say that Thrasymachus and others would seriously hold the language which I have been merely repeating, and words even stronger than these about justice and injustice, grossly, as I conceive, perverting their true nature. But I speak in this vehement manner, as I must frankly confess to you, because I want to hear from you the opposite side; and I would ask you to show not only the superiority which justice has over injustice, but what effect they have on the possessor of them which

makes the one to be a good and the other an evil to him. And please, as Glaucon requested of you, to exclude reputations; for unless you take away from each of them his true reputation and add on the false, we shall say that you do not praise justice, but the appearance of it; we shall think that you are only exhorting us to keep injustice dark, and that you really agree with Thrasymachus in thinking that justice is another's good and the interest of the stronger, and that injustice is a man's own profit and interest, though injurious to the weaker. Now as you have admitted that justice is one of that highest class of goods which are desired indeed for their results, but in a far greater degree for their own sakes—like sight or hearing or knowledge or health, or any other real and natural and not merely conventional good—I would ask you in your praise of justice to regard one point only: I mean the essential good and evil which justice and injustice work in the possessors of them. Let others praise justice and censure injustice, magnifying the rewards and honours of the one and abusing the other; that is a manner of arguing which, coming from them, I am ready to tolerate, but from you who have spent your whole life in the consideration of this question, unless I hear the contrary from your own lips, I expect something better. And therefore, I say, not only prove to us that justice is better than injustice, but show what they either of them do to the possessor of them, which makes the one to be a good and the other an evil, whether seen or unseen by gods and men.

I had always admired the genius of Glaucon and Adeimantus, but on hearing these words I was quite delighted, and said: Sons of an illustrious father, that was not a bad beginning of the Elegiac verses which the admirer of Glaucon made in honour of you after you had distinguished yourselves at the battle of Megara:—

'Sons of Ariston,' he sang, 'divine offspring of an illustrious hero.'

The epithet is very appropriate, for there is something truly divine in being able to argue as you have done for the superiority of injustice, and remaining unconvinced by your own arguments. And I do believe that you are not convinced—this I infer from your general character, for had I judged only from your speeches I should have mistrusted you. But now, the greater my confidence in you, the greater is my difficulty in knowing what to say. For I am in a strait between two; on the one hand I feel that I am unequal to the task; and my inability is brought home to me by the fact that you were not satisfied with the answer which I made to Thrasymachus, proving, as I thought, the superiority which justice has over injustice. And yet I cannot refuse to help, while breath and speech remain to me; I am afraid that there would be an impiety in being present when justice is evil spoken of and not lifting up a hand in her defence. And therefore I had best give such help as I can.

Glaucon and the rest entreated me by all means not to let the question drop, but to proceed in the investigation. They wanted to arrive at the truth, first, about the nature of justice and injustice, and secondly, about their relative advantages. I told them, what I really thought, that the enquiry would be of a serious nature, and would require very good eyes. Seeing then, I said, that we are no great wits, I think that we had better adopt a method which I may illustrate thus; suppose that a short-sighted person had been asked by some one to read small letters from a distance; and it occurred to some one else that they might be found in another place which was larger and in which the letters were larger—if they were the same and he could read the larger letters first, and then proceed to the lesser—this would have been thought a rare piece of good fortune.

Very true, said Adeimantus; but how does the illustration apply to our enquiry?

I will tell you, I replied; justice, which is the subject of our enquiry, is, as you know, sometimes spoken of as the virtue of an individual, and sometimes as the virtue of a State.

True, he replied.

And is not a State larger than an individual?

It is.

Then in the larger the quantity of justice is likely to be larger and more easily discernible. I propose therefore that we enquire into the nature of justice and injustice, first as they appear in the State, and secondly in the individual, proceeding from the greater to the lesser and comparing them.

That, he said, is an excellent proposal.

And if we imagine the State in process of creation, we shall see the justice and injustice of the State in process of creation also.

I dare say.

When the State is completed there may be a hope that the object of our search will be more easily discovered.

Yes, far more easily.

But ought we to attempt to construct one? I said; for to do so, as I am inclined to think, will be a very serious task. Reflect therefore.

I have reflected, said Adeimantus, and am anxious that you should proceed.

A State, I said, arises, as I conceive, out of the needs of mankind; no one is self-sufficing, but all of us have many wants. Can any other origin of a State be imagined?

There can be no other.

Then, as we have many wants, and many persons are needed to supply them, one takes a helper for one purpose and another for another; and when these partners and helpers are gathered together in one habitation the body of inhabitants is termed a State.

True, he said.

And they exchange with one another, and one gives, and another receives, under the idea that the exchange will be for their good.

Very true.

Then, I said, let us begin and create in idea a State; and yet the true creator is necessity, who is the mother of our invention.

Of course, he replied.

Now the first and greatest of necessities is food, which is the condition of life and existence.

Certainly.

The second is a dwelling, and the third clothing and the like.

True.

And now let us see how our city will be able to supply this great demand: We may suppose that one man is a husbandman, another a builder, some one else a weaver—shall we add to them a shoemaker, or perhaps some other purveyor to our bodily wants?

Quite right.

The barest notion of a State must include four or five men.

Clearly.

And how will they proceed? Will each bring the result of his labours into a common stock?—the individual husbandman, for example, producing for four, and labouring four times as long and as much as he need in the provision of food with which he supplies others as well as himself; or will he have nothing to do with others and not be at the trouble of producing for them, but provide for himself alone a fourth of the food in a fourth of the time, and in the remaining three fourths of his time be employed in making a house or a coat or a pair of shoes, having no partnership with others, but supplying himself all his own wants?

Adeimantus thought that he should aim at producing food only and not at producing everything.

Probably, I replied, that would be the better way; and when I hear you say this, I am myself reminded that we are not all alike; there are diversities of natures among us which are adapted to different occupations.

Very true.

And will you have a work better done when the workman has many occupations, or when he has only one?

When he has only one.

Further, there can be no doubt that a work is spoilt when not done at the right time?

No doubt.

For business is not disposed to wait until the doer of the business is at leisure; but the doer must follow up what he is doing, and make the business his first object.

He must.

And if so, we must infer that all things are produced more plentifully and easily and of a better quality when one man does one thing which is natural to him and does it at the right time, and leaves other things.

Undoubtedly.

Then more than four citizens will be required; for the husbandman will not make his own plough or mattock, or other implements of agriculture, if they are to be good for anything. Neither will the builder make his tools—and he too needs many; and in like manner the weaver and shoemaker.

True.

Then carpenters, and smiths, and many other artisans, will be sharers in our little State, which is already beginning to grow?

True.

Yet even if we add neatherds, shepherds, and other herdsmen, in order that our husbandmen may have oxen to plough with, and builders as well as husbandmen may have draught cattle, and curriers and weavers fleeces and hides,—still our State will not be very large.

That is true; yet neither will it be a very small State which contains all these.

Then, again, there is the situation of the city—to find a place where nothing need be imported is wellnigh impossible.

Impossible.

Then there must be another class of citizens who will bring the required supply from another city?

There must.

But if the trader goes empty-handed, having nothing which they require who would supply his need, he will come back empty-handed.

That is certain.

And therefore what they produce at home must be not only enough for themselves, but such both in quantity and quality as to accommodate those from whom their wants are supplied.

Very true.

Then more husbandmen and more artisans will be required?

They will.

Not to mention the importers and exporters, who are called merchants?

Yes.

Then we shall want merchants?

We shall.

And if merchandise is to be carried over the sea, skilful sailors will also be needed, and in considerable numbers?

Yes, in considerable numbers.

Then, again, within the city, how will they exchange their productions? To secure such an exchange was, as you will remember, one of our principal objects when we formed them into a society and constituted a State.

Clearly they will buy and sell.

Then they will need a market-place, and a money-token for purposes of exchange.

Certainly.

Suppose now that a husbandman, or an artisan, brings some production to market, and he comes at a time when there is no one to exchange with him,—is he to leave his calling and sit idle in the market-place?

Not at all; he will find people there who, seeing the want, undertake the office of salesmen. In well-ordered states they are commonly those who are the weakest in bodily strength, and therefore of little use for any other purpose; their duty is to be in the market, and to give money in exchange for goods to those who desire to sell and to take money from those who desire to buy.

This want, then, creates a class of retail-traders in our State. Is not 'retailer' the term which is applied to those who sit in the market-place engaged in buying and selling, while those who wander from one city to another are called merchants?

Yes, he said.

And there is another class of servants, who are intellectually hardly on the level of companionship; still they have plenty of bodily strength for labour, which accordingly they sell, and are called, if I do not mistake, hirelings, hire being the name which is given to the price of their labour.

True.

Then hirelings will help to make up our population?

Yes.

And now, Adeimantus, is our State matured and perfected?

I think so.

Where, then, is justice, and where is injustice, and in what part of the State did they spring up?

Probably in the dealings of these citizens with one another. I cannot imagine that they are more likely to be found any where else.

I dare say that you are right in your suggestion, I said; we had better think the matter out, and not shrink from the enquiry.

Let us then consider, first of all, what will be their way of life, now that we have thus established them. Will they not produce corn, and wine, and clothes, and shoes, and build houses for themselves? And when they are housed, they will work, in summer, commonly, stripped and barefoot, but in winter substantially clothed and shod. They will feed on barley-meal and flour of wheat, baking and kneading them, making noble cakes and loaves; these they will serve up on a mat of reeds or on clean leaves, themselves reclining the while upon beds strewn with yew or myrtle. And they and their children will feast, drinking of the wine which they have made, wearing garlands on their heads, and hymning the praises of the gods, in happy converse with one another. And they will take care that their families do not exceed their means; having an eye to poverty or war.

But, said Glaucon, interposing, you have not given them a relish to their meal.

True, I replied, I had forgotten; of course they must have a relish—salt, and olives, and cheese, and they will boil roots and herbs such as country people prepare; for a dessert we shall give them figs, and peas, and beans; and they will roast myrtle-berries and acorns at the fire, drinking in moderation. And with such a diet they may be expected to live in peace and health to a good old age, and bequeath a similar life to their children after them.

Yes, Socrates, he said, and if you were providing for a city of pigs, how else would you feed the beasts?

But what would you have, Glaucon? I replied.

Why, he said, you should give them the ordinary conveniences of life. People who are to be comfortable are accustomed to lie on sofas, and dine off tables, and they should have sauces and sweets in the modern style.

Yes, I said, now I understand: the question which you would have me consider is, not only how a State, but how a luxurious State is created; and possibly there is no harm in this, for in such a State we shall be more likely to see how justice and injustice originate. In my opinion the true and healthy constitution of the State is the one which I have described. But if you wish also to see a State at

fever-heat, I have no objection. For I suspect that many will not be satisfied with the simpler way of life. They will be for adding sofas, and tables, and other furniture; also dainties, and perfumes, and incense, and courtesans, and cakes, all these not of one sort only, but in every variety; we must go beyond the necessaries of which I was at first speaking, such as houses, and clothes, and shoes: the arts of the painter and the embroiderer will have to be set in motion, and gold and ivory and all sorts of materials must be procured.

True, he said.

Then we must enlarge our borders; for the original healthy State is no longer sufficient. Now will the city have to fill and swell with a multitude of callings which are not required by any natural want; such as the whole tribe of hunters and actors, of whom one large class have to do with forms and colours; another will be the votaries of music—poets and their attendant train of rhapsodists, players, dancers, contractors; also makers of divers kinds of articles, including women's dresses. And we shall want more servants. Will not tutors be also in request, and nurses wet and dry, tirewomen and barbers, as well as confectioners and cooks; and swineherds, too, who were not needed and therefore had no place in the former edition of our State, but are needed now? They must not be forgotten: and there will be animals of many other kinds, if people eat them.

Certainly.

And living in this way we shall have much greater need of physicians than before?

Much greater.

And the country which was enough to support the original inhabitants will be too small now, and not enough?

Quite true.

Then a slice of our neighbours' land will be wanted by us for pasture and tillage, and they will want a slice of ours, if, like ourselves, they exceed the limit of necessity, and give themselves up to the unlimited accumulation of wealth?

That, Socrates, will be inevitable.

And so we shall go to war, Glaucon. Shall we not?

Most certainly, he replied.

Then without determining as yet whether war does good or harm, thus much we may affirm, that now we have discovered war to be derived from causes which are also the causes of almost all the evils in States, private as well as public.

Undoubtedly.

And our State must once more enlarge; and this time the enlargement will be nothing short of a whole army, which will have to go out and fight with the invaders for all that we have, as well as for the things and persons whom we were describing above.

Why? he said; are they not capable of defending themselves?

No, I said; not if we were right in the principle which was acknowledged by all of us when we were framing the State: the principle, as you will remember, was that one man cannot practise many arts with success.

Very true, he said.

But is not war an art?

Certainly.

And an art requiring as much attention as shoemaking?

Quite true.

And the shoemaker was not allowed by us to be a husbandman, or a weaver, or a builder—in order that we might have our shoes well made; but to him and to every other worker was assigned one work for which he was by nature fitted, and at that he was to continue working all his life long and at no other; he was not to let opportunities slip, and then he would become a good workman.

Now nothing can be more important than that the work of a soldier should be well done. But is war an art so easily acquired that a man may be a warrior who is also a husbandman, or shoemaker, or other artisan; although no one in the world would be a good dice or draught player who merely took up the game as a recreation, and had not from his earliest years devoted himself to this and nothing else? No tools will make a man a skilled workman, or master of defence, nor be of any use to him who has not learned how to handle them, and has never bestowed any attention upon them. How then will he who takes up a shield or other implement of war become a good fighter all in a day, whether with heavy-armed or any other kind of troops?

Yes, he said, the tools which would teach men their own use would be beyond price.

And the higher the duties of the guardian, I said, the more time, and skill, and art, and application will be needed by him?

No doubt, he replied.

Will he not also require natural aptitude for his calling?

Certainly.

Then it will be our duty to select, if we can, natures which are fitted for the task of guarding the city?

It will.

And the selection will be no easy matter, I said; but we must be brave and do our best.

We must.

Is not the noble youth very like a well-bred dog in respect of guarding and watching?

What do you mean?

I mean that both of them ought to be quick to see, and swift to overtake the enemy when they see him; and strong too if, when they have caught him, they have to fight with him.

All these qualities, he replied, will certainly be required by them.

Well, and your guardian must be brave if he is to fight well?

Certainly.

And is he likely to be brave who has no spirit, whether horse or dog or any other animal? Have you never observed how invincible and unconquerable is spirit and how the presence of it makes the soul of any creature to be absolutely fearless and indomitable?

I have.

Then now we have a clear notion of the bodily qualities which are required in the guardian.

True.

And also of the mental ones; his soul is to be full of spirit?

Yes.

But are not these spirited natures apt to be savage with one another, and with everybody else?

A difficulty by no means easy to overcome, he replied.

Whereas, I said, they ought to be dangerous to their enemies, and gentle to their friends; if not, they will destroy themselves without waiting for their enemies to destroy them.

True, he said.

What is to be done then? I said; how shall we find a gentle nature which has also a great spirit, for the one is the contradiction of the other?

True.

He will not be a good guardian who is wanting in either of these two qualities; and yet the combination of them appears to be impossible; and hence we must infer that to be a good guardian is impossible.

I am afraid that what you say is true, he replied.

Here feeling perplexed I began to think over what had preceded.—My friend, I said, no wonder that we are in a perplexity; for we have lost sight of the image which we had before us.

What do you mean? he said.

I mean to say that there do exist natures gifted with those opposite qualities.

And where do you find them?

Many animals, I replied, furnish examples of them; our friend the dog is a very good one: you know that well-bred dogs are perfectly gentle to their familiars and acquaintances, and the reverse to strangers.

Yes, I know.

Then there is nothing impossible or out of the order of nature in our finding a guardian who has a similar combination of qualities?

Certainly not.

Would not he who is fitted to be a guardian, besides the spirited nature, need to have the qualities of a philosopher?

I do not apprehend your meaning.

The trait of which I am speaking, I replied, may be also seen in the dog, and is remarkable in the animal.

What trait?

Why, a dog, whenever he sees a stranger, is angry; when an acquaintance, he welcomes him, although the one has never done him any harm, nor the other any good. Did this never strike you as curious?

The matter never struck me before; but I quite recognise the truth of your remark.

And surely this instinct of the dog is very charming;—your dog is a true philosopher.

Why?

Why, because he distinguishes the face of a friend and of an enemy only by the criterion of knowing and not knowing. And must not an animal be a lover of learning who determines what he likes and dislikes by the test of knowledge and ignorance?

Most assuredly.

And is not the love of learning the love of wisdom, which is philosophy?

They are the same, he replied.

And may we not say confidently of man also, that he who is likely to be gentle to his friends and acquaintances, must by nature be a lover of wisdom and knowledge?

That we may safely affirm.

Then he who is to be a really good and noble guardian of the State will require to unite in himself philosophy and spirit and swiftness and strength?

Undoubtedly.

Then we have found the desired natures; and now that we have found them, how are they to be reared and educated? Is not this an enquiry which may be expected to throw light on the greater enquiry which is our final end—How do justice and injustice grow up in States? for we do not want either to omit what is to the point or to draw out the argument to an inconvenient length.

Adeimantus thought that the enquiry would be of great service to us.

Then, I said, my dear friend, the task must not be given up, even if somewhat long.

Certainly not.

Come then, and let us pass a leisure hour in story-telling, and our story shall be the education of our heroes.

By all means.

And what shall be their education? Can we find a better than the traditional sort?—and this has two divisions, gymnastic for the body, and music for the soul.

True.

Shall we begin education with music, and go on to gymnastic afterwards?

By all means.

And when you speak of music, do you include literature or not?

I do.

And literature may be either true or false?

Yes.

And the young should be trained in both kinds, and we begin with the false?

I do not understand your meaning, he said.

You know, I said, that we begin by telling children stories which, though not wholly destitute of truth, are in the main fictitious; and these stories are told them when they are not of an age to learn gymnastics.

Very true.

That was my meaning when I said that we must teach music before gymnastics.

Quite right, he said.

You know also that the beginning is the most important part of any work, especially in the case of a young and tender thing; for that is the time at which the character is being formed and the desired impression is more readily taken.

Quite true.

And shall we just carelessly allow children to hear any casual tales which may be devised by casual persons, and to receive into their minds ideas for the most part the very opposite of those which we should wish them to have when they are grown up?

We cannot.

Then the first thing will be to establish a censorship of the writers of fiction, and let the censors receive any tale of fiction which is good, and reject the bad; and we will desire mothers and nurses to tell their children the authorised ones only. Let them fashion the mind with such tales, even more fondly than they mould the body with their hands; but most of those which are now in use must be discarded.

Of what tales are you speaking? he said.

You may find a model of the lesser in the greater, I said; for they are necessarily of the same type, and there is the same spirit in both of them.

Very likely, he replied; but I do not as yet know what you would term the greater.

Those, I said, which are narrated by Homer and Hesiod, and the rest of the poets, who have ever been the great story-tellers of mankind.

But which stories do you mean, he said; and what fault do you find with them?

A fault which is most serious, I said; the fault of telling a lie, and, what is more, a bad lie.

But when is this fault committed?

Whenever an erroneous representation is made of the nature of gods and heroes,—as when a painter paints a portrait not having the shadow of a likeness to the original.

Yes, he said, that sort of thing is certainly very blameable; but what are the stories which you mean?

First of all, I said, there was that greatest of all lies in high places, which the poet told about Uranus, and which was a bad lie too,—I mean what Hesiod says that Uranus did, and how Cronus retaliated on him. The doings of Cronus, and the sufferings which in turn his son inflicted upon him, even if they were true, ought certainly not to be lightly told to young and thoughtless persons; if possible, they had better be buried in silence. But if there is an absolute necessity for their mention, a chosen few might hear them in a mystery, and they should sacrifice not a common (Eleusinian) pig, but some huge and unprocurable victim; and then the number of the hearers will be very few indeed.

Why, yes, said he, those stories are extremely objectionable.

Yes, Adeimantus, they are stories not to be repeated in our State; the young man should not be told that in committing the worst of crimes he is far from doing anything outrageous; and that even if he chastises his father when he does wrong, in whatever manner, he will only be following the example of the first and greatest among the gods.

I entirely agree with you, he said; in my opinion those stories are quite unfit to be repeated.

Neither, if we mean our future guardians to regard the habit of quarrelling among themselves as of all things the basest, should any word be said to them of the wars in heaven, and of the plots and fightings of the gods against one another, for they are not true. No, we shall never mention the battles of the giants, or let them be embroidered on garments; and we shall be silent about the innumerable other quarrels of gods and heroes with their friends and relatives. If they would only believe us we would tell them that quarrelling is unholy, and that never up to this time has there been any quarrel between citizens; this is what old men and old women should begin by telling children; and when they grow up, the poets also should be told to compose for them in a similar spirit. But the narrative of Hephaestus binding Here his mother, or how on another occasion Zeus sent him flying for taking her part when she was being beaten, and all the battles of the gods in Homer—these tales must not be admitted into our State, whether they are supposed to have an allegorical meaning or not. For a young person cannot judge what is allegorical and what is literal; anything that he receives into his mind at that age is likely to become indelible and unalterable; and therefore it is most important that the tales which the young first hear should be models of virtuous thoughts.

There you are right, he replied; but if any one asks where are such models to be found and of what tales are you speaking—how shall we answer him?

I said to him, You and I, Adeimantus, at this moment are not poets, but founders of a State: now the founders of a State ought to know the general forms in which poets should cast their tales, and the limits which must be observed by them, but to make the tales is not their business.

Very true, he said; but what are these forms of theology which you mean?

Something of this kind, I replied:—God is always to be represented as he truly is, whatever be the sort of poetry, epic, lyric or tragic, in which the representation is given.

Right.

And is he not truly good? and must he not be represented as such?

Certainly.

And no good thing is hurtful?

No, indeed.

And that which is not hurtful hurts not?

Certainly not.

And that which hurts not does no evil?

No.

And can that which does no evil be a cause of evil?

Impossible.

And the good is advantageous?

Yes.

And therefore the cause of well-being?

Yes.

It follows therefore that the good is not the cause of all things, but of the good only?

Assuredly.

Then God, if he be good, is not the author of all things, as the many assert, but he is the cause of a few things only, and not of most things that occur to men. For few are the goods of human life, and many are the evils, and the good is to be attributed to God alone; of the evils the causes are to be sought elsewhere, and not in him.

That appears to me to be most true, he said.

Then we must not listen to Homer or to any other poet who is guilty of the folly of saying that two casks

'Lie at the threshold of Zeus, full of lots, one of good, the other of evil lots,'

and that he to whom Zeus gives a mixture of the two

'Sometimes meets with evil fortune, at other times with good;'

but that he to whom is given the cup of unmingled ill,

'Him wild hunger drives o'er the beauteous earth.'

And again—

'Zeus, who is the dispenser of good and evil to us.'

And if any one asserts that the violation of oaths and treaties, which was really the work of Pandarus, was brought about by Athene and Zeus, or that the strife and contention of the gods was instigated by Themis and Zeus, he shall not have our approval; neither will we allow our young men to hear the words of Aeschylus, that

'God plants guilt among men when he desires utterly to destroy a house.'

And if a poet writes of the sufferings of Niobe—the subject of the tragedy in which these iambic verses occur—or of the house of Pelops, or of the Trojan war or on any similar theme, either we must not permit him to say that these are the works of God, or if they are of God, he must devise some explanation of them such as we are seeking; he must say that God did what was just and right, and they were the better for being punished; but that those who are punished are miserable, and that God is the author of their misery—the poet is not to be permitted to say; though he may say that the wicked are miserable because they require to be punished, and are benefited by receiving punishment from God; but that God being good is the author of evil to any one is to be strenuously denied, and not to be said or sung or heard in verse or prose by any one whether old or young in any well-ordered commonwealth. Such a fiction is suicidal, ruinous, impious.

I agree with you, he replied, and am ready to give my assent to the law.

Let this then be one of our rules and principles concerning the gods, to which our poets and reciters will be expected to conform,—that God is not the author of all things, but of good only.

That will do, he said.

And what do you think of a second principle? Shall I ask you whether God is a magician, and of a nature to appear insidiously now in one shape, and now in another—sometimes himself changing and passing into many forms, sometimes deceiving us with the semblance of such transformations; or is he one and the same immutably fixed in his own proper image?

I cannot answer you, he said, without more thought.

Well, I said; but if we suppose a change in anything, that change must be effected either by the thing itself, or by some other thing?

Most certainly.

And things which are at their best are also least liable to be altered or discomposed; for example, when healthiest and strongest, the human frame is least liable to be affected by meats and drinks, and the plant which is in the fullest vigour also suffers least from winds or the heat of the sun or any similar causes.

Of course.

And will not the bravest and wisest soul be least confused or deranged by any external influence?

True.

And the same principle, as I should suppose, applies to all composite things—furniture, houses, garments: when good and well made, they are least altered by time and circumstances.

Very true.

Then everything which is good, whether made by art or nature, or both, is least liable to suffer change from without?

True.

But surely God and the things of God are in every way perfect?

Of course they are.

Then he can hardly be compelled by external influence to take many shapes?

He cannot.

But may he not change and transform himself?

Clearly, he said, that must be the case if he is changed at all.

And will he then change himself for the better and fairer, or for the worse and more unsightly?

If he change at all he can only change for the worse, for we cannot suppose him to be deficient either in virtue or beauty.

Very true, Adeimantus; but then, would any one, whether God or man, desire to make himself worse?

Impossible.

Then it is impossible that God should ever be willing to change; being, as is supposed, the fairest and best that is conceivable, every God remains absolutely and for ever in his own form.

That necessarily follows, he said, in my judgment.

Then, I said, my dear friend, let none of the poets tell us that

‘The gods, taking the disguise of strangers from other lands, walk up and down cities in all sorts of forms;’

and let no one slander Proteus and Thetis, neither let any one, either in tragedy or in any other kind of poetry, introduce Here disguised in the likeness of a priestess asking an alms

‘For the life-giving daughters of Inachus the river of Argos;’

—let us have no more lies of that sort. Neither must we have mothers under the influence of the poets scaring their children with a bad version of these myths—telling how certain gods, as they say, ‘Go about by night in the likeness of so many strangers and in divers forms;’ but let them take heed lest they make cowards of their children, and at the same time speak blasphemy against the gods.

Heaven forbid, he said.

But although the gods are themselves unchangeable, still by witchcraft and deception they may make us think that they appear in various forms?

Perhaps, he replied.

Well, but can you imagine that God will be willing to lie, whether in word or deed, or to put forth a phantom of himself?

I cannot say, he replied.

Do you not know, I said, that the true lie, if such an expression may be allowed, is hated of gods and men?

What do you mean? he said.

I mean that no one is willingly deceived in that which is the truest and highest part of himself, or about the truest and highest matters; there, above all, he is most afraid of a lie having possession of him.

Still, he said, I do not comprehend you.

The reason is, I replied, that you attribute some profound meaning to my words; but I am only saying that deception, or being deceived or uninformed about the highest realities in the highest part of themselves, which is the soul, and in that part of them to have and to hold the lie, is what mankind least like;—that, I say, is what they utterly detest.

There is nothing more hateful to them.

And, as I was just now remarking, this ignorance in the soul of him who is deceived may be called the true lie; for the lie in words is only a kind of imitation and shadowy image of a previous affection of the soul, not pure unadulterated falsehood. Am I not right?

Perfectly right.

The true lie is hated not only by the gods, but also by men?

Yes.

Whereas the lie in words is in certain cases useful and not hateful; in dealing with enemies—that would be an instance; or again, when those whom we call our friends in a fit of madness or illusion are going to do some harm, then it is useful and is a sort of medicine or preventive; also in the tales of mythology, of which we were just now speaking—because we do not know the truth about ancient times, we make falsehood as much like truth as we can, and so turn it to account.

Very true, he said.

But can any of these reasons apply to God? Can we suppose that he is ignorant of antiquity, and therefore has recourse to invention?

That would be ridiculous, he said.

Then the lying poet has no place in our idea of God?

I should say not.

Or perhaps he may tell a lie because he is afraid of enemies?

That is inconceivable.

But he may have friends who are senseless or mad?

But no mad or senseless person can be a friend of God.

Then no motive can be imagined why God should lie?

None whatever.

Then the superhuman and divine is absolutely incapable of falsehood?

Yes.

Then is God perfectly simple and true both in word and deed; he changes not; he deceives not, either by sign or word, by dream or waking vision.

Your thoughts, he said, are the reflection of my own.

You agree with me then, I said, that this is the second type or form in which we should write and speak about divine things. The gods are not magicians who transform themselves, neither do they deceive mankind in any way.

I grant that.

Then, although we are admirers of Homer, we do not admire the lying dream which Zeus sends to Agamemnon; neither will we praise the verses of Aeschylus in which Thetis says that Apollo at her nuptials

'Was celebrating in song her fair progeny whose days were to be long, and to know no sickness. And when he had spoken of my lot as in all things blessed of heaven he raised a note of triumph and cheered my soul. And I thought that the word of Phoebus, being divine and full of prophecy, would not fail. And now he himself who uttered the strain, he who was present at the banquet, and who said this—he it is who has slain my son.'

These are the kind of sentiments about the gods which will arouse our anger; and he who utters them shall be refused a chorus; neither shall we allow teachers to make use of them in the instruction of the young, meaning, as we do, that our guardians, as far as men can be, should be true worshippers of the gods and like them.

I entirely agree, he said, in these principles, and promise to make them my laws.

BOOK III.

Such then, I said, are our principles of theology—some tales are to be told, and others are not to be told to our disciples from their youth upwards, if we mean them to honour the gods and their parents, and to value friendship with one another.

Yes; and I think that our principles are right, he said.

But if they are to be courageous, must they not learn other lessons besides these, and lessons of such a kind as will take away the fear of death? Can any man be courageous who has the fear of death in him?

Certainly not, he said.

And can he be fearless of death, or will he choose death in battle rather than defeat and slavery, who believes the world below to be real and terrible?

Impossible.

Then we must assume a control over the narrators of this class of tales as well as over the others, and beg them not simply to revile but rather to commend the world below, intimating to them that their descriptions are untrue, and will do harm to our future warriors.

That will be our duty, he said.

Then, I said, we shall have to obliterate many obnoxious passages, beginning with the verses,

‘I would rather be a serf on the land of a poor and portionless man than rule over all the dead who have come to nought.’

We must also expunge the verse, which tells us how Pluto feared,

‘Lest the mansions grim and squalid which the gods abhor should be seen both of mortals and immortals.’

And again:—

‘O heavens! verily in the house of Hades there is soul and ghostly form but no mind at all!’

Again of Tiresias:—

‘(To him even after death did Persephone grant mind,) that he alone should be wise; but the other souls are flitting shades.’

Again:—

‘The soul flying from the limbs had gone to Hades, lamenting her fate, leaving manhood and youth.’

Again:—

‘And the soul, with shrilling cry, passed like smoke beneath the earth.’

And,—

‘As bats in hollow of mystic cavern, whenever any of them has dropped out of the string and falls from the rock, fly shrilling and cling to one another, so did they with shrilling cry hold together as they moved.’

And we must beg Homer and the other poets not to be angry if we strike out these and similar passages, not because they are unpoetical, or unattractive to the popular ear, but because the greater the poetical charm of them, the less are they meet for the ears of boys and men who are meant to be free, and who should fear slavery more than death.

Undoubtedly.

Also we shall have to reject all the terrible and appalling names which describe the world below—Cocytus and Styx, ghosts under the earth, and sapless shades, and any similar words of which the very mention causes a shudder to pass through the inmost soul of him who hears them. I do not say that these horrible stories may not have a use of some kind; but there is a danger that the nerves of our guardians may be rendered too excitable and effeminate by them.

There is a real danger, he said.

Then we must have no more of them.

True.

Another and a nobler strain must be composed and sung by us.

Clearly.

And shall we proceed to get rid of the weepings and wailings of famous men?

They will go with the rest.

But shall we be right in getting rid of them? Reflect: our principle is that the good man will not consider death terrible to any other good man who is his comrade.

Yes; that is our principle.

And therefore he will not sorrow for his departed friend as though he had suffered anything terrible?

He will not.

Such an one, as we further maintain, is sufficient for himself and his own happiness, and therefore is least in need of other men.

True, he said.

And for this reason the loss of a son or brother, or the deprivation of fortune, is to him of all men least terrible.

Assuredly.

And therefore he will be least likely to lament, and will bear with the greatest equanimity any misfortune of this sort which may befall him.

Yes, he will feel such a misfortune far less than another.

Then we shall be right in getting rid of the lamentations of famous men, and making them over to women (and not even to women who are good for anything), or to men of a baser sort, that those who are being educated by us to be the defenders of their country may scorn to do the like.

That will be very right.

Then we will once more entreat Homer and the other poets not to depict Achilles, who is the son of a goddess, first lying on his side, then on his back, and then on his face; then starting up and sailing in a frenzy along the shores of the barren sea; now taking the sooty ashes in both his hands and pouring them over his head, or weeping and wailing in the various modes which Homer has delineated. Nor should he describe Priam the kinsman of the gods as praying and beseeching,

‘Rolling in the dirt, calling each man loudly by his name.’

Still more earnestly will we beg of him at all events not to introduce the gods lamenting and saying,

‘Alas! my misery! Alas! that I bore the bravest to my sorrow.’

But if he must introduce the gods, at any rate let him not dare so completely to misrepresent the greatest of the gods, as to make him say—

‘O heavens! with my eyes verily I behold a dear friend of mine chased round and round the city, and my heart is sorrowful.’

Or again:—

Woe is me that I am fated to have Sarpedon, dearest of men to me, subdued at the hands of Patroclus the son of Menoetius.’

For if, my sweet Adeimantus, our youth seriously listen to such unworthy representations of the gods, instead of laughing at them as they ought, hardly will any of them deem that he himself, being but a man, can be dishonoured by similar actions; neither will he rebuke any inclination which may arise in his mind to say and do the like. And instead of having any shame or self-control, he will be always whining and lamenting on slight occasions.

Yes, he said, that is most true.

Yes, I replied; but that surely is what ought not to be, as the argument has just proved to us; and by that proof we must abide until it is disproved by a better.

It ought not to be.

Neither ought our guardians to be given to laughter. For a fit of laughter which has been indulged to excess almost always produces a violent reaction.

So I believe.

Then persons of worth, even if only mortal men, must not be represented as overcome by laughter, and still less must such a representation of the gods be allowed.

Still less of the gods, as you say, he replied.

Then we shall not suffer such an expression to be used about the gods as that of Homer when he describes how

‘Inextinguishable laughter arose among the blessed gods, when they saw Hephaestus bustling about the mansion.’

On your views, we must not admit them.

On my views, if you like to father them on me; that we must not admit them is certain.

Again, truth should be highly valued; if, as we were saying, a lie is useless to the gods, and useful only as a medicine to men, then the use of such medicines should be restricted to physicians; private individuals have no business with them.

Clearly not, he said.

Then if any one at all is to have the privilege of lying, the rulers of the State should be the persons; and they, in their dealings either with enemies or with their own citizens, may be allowed to lie for the public good. But nobody else should meddle with anything of the kind; and although the rulers have this privilege, for a private man to lie to them in return is to be deemed a more heinous fault than for the patient or the pupil of a gymnasium not to speak the truth about his own bodily illnesses to the physician or to the trainer, or for a sailor not to tell the captain what is happening about the ship and the rest of the crew, and how things are going with himself or his fellow sailors.

Most true, he said.

If, then, the ruler catches anybody beside himself lying in the State,

‘Any of the craftsmen, whether he be priest or physician or carpenter,’

he will punish him for introducing a practice which is equally subversive and destructive of ship or State.

Most certainly, he said, if our idea of the State is ever carried out.

In the next place our youth must be temperate?

Certainly.

Are not the chief elements of temperance, speaking generally, obedience to commanders and self-control in sensual pleasures?

True.

Then we shall approve such language as that of Diomede in Homer,

‘Friend, sit still and obey my word,’

and the verses which follow,

‘The Greeks marched breathing prowess, ...in silent awe of their leaders,’

and other sentiments of the same kind.

We shall.

What of this line,

‘O heavy with wine, who hast the eyes of a dog and the heart of a stag,’

and of the words which follow? Would you say that these, or any similar impertinences which private individuals are supposed to address to their rulers, whether in verse or prose, are well or ill spoken?

They are ill spoken.

They may very possibly afford some amusement, but they do not conduce to temperance. And therefore they are likely to do harm to our young men—you would agree with me there?

Yes.

And then, again, to make the wisest of men say that nothing in his opinion is more glorious than

‘When the tables are full of bread and meat, and the cup-bearer carries round wine which he draws from the bowl and pours into the cups,’

is it fit or conducive to temperance for a young man to hear such words? Or the verse

‘The saddest of fates is to die and meet destiny from hunger?’

What would you say again to the tale of Zeus, who, while other gods and men were asleep and he the only person awake, lay devising plans, but forgot them all in a moment through his lust, and was so completely overcome at the sight of Here that he would not even go into the hut, but wanted to lie with her on the ground, declaring that he had never been in such a state of rapture before, even when they first met one another

‘Without the knowledge of their parents;’

or that other tale of how Hephaestus, because of similar goings on, cast a chain around Ares and Aphrodite?

Indeed, he said, I am strongly of opinion that they ought not to hear that sort of thing.

But any deeds of endurance which are done or told by famous men, these they ought to see and hear; as, for example, what is said in the verses,

‘He smote his breast, and thus reproached his heart, Endure, my heart; far worse hast thou endured!’

Certainly, he said.

In the next place, we must not let them be receivers of gifts or lovers of money.

Certainly not.

Neither must we sing to them of

‘Gifts persuading gods, and persuading reverend kings.’

Neither is Phoenix, the tutor of Achilles, to be approved or deemed to have given his pupil good counsel when he told him that he should take the gifts of the Greeks and assist them; but that without a gift he should not lay aside his anger. Neither will we believe or acknowledge Achilles himself to have been such a lover of money that he took Agamemnon’s gifts, or that when he had received payment he restored the dead body of Hector, but that without payment he was unwilling to do so.

Undoubtedly, he said, these are not sentiments which can be approved.

Loving Homer as I do, I hardly like to say that in attributing these feelings to Achilles, or in believing that they are truly attributed to him, he is guilty of downright impiety. As little can I believe the narrative of his insolence to Apollo, where he says,

‘Thou hast wronged me, O far-darter, most abominable of deities. Verily I would be even with thee, if I had only the power;’

or his insubordination to the river-god, on whose divinity he is ready to lay hands; or his offering to the dead Patroclus of his own hair, which had been previously dedicated to the other river-god Spercheius, and that he actually performed this vow; or that he dragged Hector round the tomb of Patroclus, and slaughtered the captives at the pyre; of all this I cannot believe that he was guilty, any more than I can allow our citizens to believe that he, the wise Cheiron’s pupil, the son of a goddess and of Peleus who was the gentlest of men and third in descent from Zeus, was so disordered in his wits as to be at one time the slave of two seemingly inconsistent passions, meanness, not untainted by avarice, combined with overweening contempt of gods and men.

You are quite right, he replied.

And let us equally refuse to believe, or allow to be repeated, the tale of Theseus son of Poseidon, or of Peirithous son of Zeus, going forth as they did to perpetrate a horrid rape; or of any other hero or son of a god daring to do such impious and dreadful things as they falsely ascribe to them in our day: and let us further compel the poets to declare either that these acts were not done by them, or that they were not the sons of gods;—both in the same breath they shall not be permitted to affirm. We will not have them trying to persuade our youth that the gods are the authors of evil, and that heroes are no better than men—sentiments which, as we were saying, are neither pious nor true, for we have already proved that evil cannot come from the gods.

Assuredly not.

And further they are likely to have a bad effect on those who hear them; for everybody will begin to excuse his own vices when he is convinced that similar wickednesses are always being perpetrated by—

‘The kindred of the gods, the relatives of Zeus, whose ancestral altar, the altar of Zeus, is aloft in air on the peak of Ida,’

and who have

‘the blood of deities yet flowing in their veins.’

And therefore let us put an end to such tales, lest they engender laxity of morals among the young.

By all means, he replied.

But now that we are determining what classes of subjects are or are not to be spoken of, let us see whether any have been omitted by us. The manner in which gods and demigods and heroes and the world below should be treated has been already laid down.

Very true.

And what shall we say about men? That is clearly the remaining portion of our subject.

Clearly so.

But we are not in a condition to answer this question at present, my friend.

Why not?

Because, if I am not mistaken, we shall have to say that about men poets and story-tellers are guilty of making the gravest misstatements when they tell us that wicked men are often happy, and the good miserable; and that injustice is profitable when undetected, but that justice is a man’s own loss and another’s gain—these things we shall forbid them to utter, and command them to sing and say the opposite.

To be sure we shall, he replied.

But if you admit that I am right in this, then I shall maintain that you have implied the principle for which we have been all along contending.

I grant the truth of your inference.

That such things are or are not to be said about men is a question which we cannot determine until we have discovered what justice is, and how naturally advantageous to the possessor, whether he seem to be just or not.

Most true, he said.

Enough of the subjects of poetry: let us now speak of the style; and when this has been considered, both matter and manner will have been completely treated.

I do not understand what you mean, said Adeimantus.

Then I must make you understand; and perhaps I may be more intelligible if I put the matter in this way. You are aware, I suppose, that all mythology and poetry is a narration of events, either past, present, or to come?

Certainly, he replied.

And narration may be either simple narration, or imitation, or a union of the two?

That again, he said, I do not quite understand.

I fear that I must be a ridiculous teacher when I have so much difficulty in making myself apprehended. Like a bad speaker, therefore, I will not take the whole of the subject, but will break a piece off in illustration of my meaning. You know the first lines of the Iliad, in which the poet says that Chryses prayed Agamemnon to release his daughter, and that Agamemnon flew into a passion with him; whereupon Chryses, failing of his object, invoked the anger of the God against the Achaeans. Now as far as these lines,

‘And he prayed all the Greeks, but especially the two sons of Atreus, the chiefs of the people,’

the poet is speaking in his own person; he never leads us to suppose that he is any one else. But in what follows he takes the person of Chryses, and then he does all that he can to make us believe that the speaker is not Homer, but the aged priest himself.

And in this double form he has cast the entire narrative of the events which occurred at Troy and in Ithaca and throughout the Odyssey.

Yes.

And a narrative it remains both in the speeches which the poet recites from time to time and in the intermediate passages?

Quite true.

But when the poet speaks in the person of another, may we not say that he assimilates his style to that of the person who, as he informs you, is going to speak?

Certainly.

And this assimilation of himself to another, either by the use of voice or gesture, is the imitation of the person whose character he assumes?

Of course.

Then in this case the narrative of the poet may be said to proceed by way of imitation?

Very true.

Or, if the poet everywhere appears and never conceals himself, then again the imitation is dropped, and his poetry becomes simple narration. However, in order that I may make my meaning quite clear, and that you may no more say, 'I don't understand,' I will show how the change might be effected. If Homer had said, 'The priest came, having his daughter's ransom in his hands, supplicating the Achaeans, and above all the kings;' and then if, instead of speaking in the person of Chryses, he had continued in his own person, the words would have been, not imitation, but simple narration. The passage would have run as follows (I am no poet, and therefore I drop the metre), 'The priest came and prayed the gods on behalf of the Greeks that they might capture Troy and return safely home, but begged that they would give him back his daughter, and take the ransom which he brought, and respect the God. Thus he spoke, and the other Greeks revered the priest and assented. But Agamemnon was wroth, and bade him depart and not come again, lest the staff and chaplets of the God should be of no avail to him—the daughter of Chryses should not be released, he said—she should grow old with him in Argos. And then he told him to go away and not to provoke him, if he intended to get home unscathed. And the old man went away in fear and silence, and, when he had left the camp, he called upon Apollo by his many names, reminding him of everything which he had done pleasing to him, whether in building his temples, or in offering sacrifice, and praying that his good deeds might be returned to him, and that the Achaeans might expiate his tears by the arrows of the god,'—and so on. In this way the whole becomes simple narrative.

I understand, he said.

Or you may suppose the opposite case—that the intermediate passages are omitted, and the dialogue only left.

That also, he said, I understand; you mean, for example, as in tragedy.

You have conceived my meaning perfectly; and if I mistake not, what you failed to apprehend before is now made clear to you, that poetry and mythology are, in some cases, wholly imitative—instances of this are supplied by tragedy and comedy; there is likewise the opposite style, in which the poet is the only speaker—of this the dithyramb affords the best example; and the combination of both is found in epic, and in several other styles of poetry. Do I take you with me?

Yes, he said; I see now what you meant.

I will ask you to remember also what I began by saying, that we had done with the subject and might proceed to the style.

Yes, I remember.

In saying this, I intended to imply that we must come to an understanding about the mimetic art,—whether the poets, in narrating their stories, are to be allowed by us to imitate, and if so, whether in whole or in part, and if the latter, in what parts; or should all imitation be prohibited?

You mean, I suspect, to ask whether tragedy and comedy shall be admitted into our State?

Yes, I said; but there may be more than this in question: I really do not know as yet, but whither the argument may blow, thither we go.

And go we will, he said.

Then, Adeimantus, let me ask you whether our guardians ought to be imitators; or rather, has not this question been decided by the rule already laid down that one man can only do one thing well, and not many; and that if he attempt many, he will altogether fail of gaining much reputation in any?

Certainly.

And this is equally true of imitation; no one man can imitate many things as well as he would imitate a single one?

He cannot.

Then the same person will hardly be able to play a serious part in life, and at the same time to be an imitator and imitate many other parts as well; for even when two species of imitation are nearly allied, the same persons cannot succeed in both, as, for example, the writers of tragedy and comedy—did you not just now call them imitations?

Yes, I did; and you are right in thinking that the same persons cannot succeed in both.

Any more than they can be rhapsodists and actors at once?

True.

Neither are comic and tragic actors the same; yet all these things are but imitations.

They are so.

And human nature, Adeimantus, appears to have been coined into yet smaller pieces, and to be as incapable of imitating many things well, as of performing well the actions of which the imitations are copies.

Quite true, he replied.

If then we adhere to our original notion and bear in mind that our guardians, setting aside every other business, are to dedicate themselves wholly to the maintenance of freedom in the State, making this their craft, and engaging in no work which does not bear on this end, they ought not to practise or imitate anything else; if they imitate at all, they should imitate from youth upward only those characters which are suitable to their profession—the courageous, temperate, holy, free, and the like; but they should not depict or be skilful at imitating any kind of illiberality or baseness, lest from imitation they should come to be what they imitate. Did you never observe how imitations, beginning in early youth and continuing far into life, at length grow into habits and become a second nature, affecting body, voice, and mind?

Yes, certainly, he said.

Then, I said, we will not allow those for whom we profess a care and of whom we say that they ought to be good men, to imitate a woman, whether young or old, quarrelling with her husband, or striving and vaunting against the gods in conceit of her happiness, or when she is in affliction, or sorrow, or weeping; and certainly not one who is in sickness, love, or labour.

Very right, he said.

Neither must they represent slaves, male or female, performing the offices of slaves?

They must not.

And surely not bad men, whether cowards or any others, who do the reverse of what we have just been prescribing, who scold or mock or revile one another in drink or out of drink, or who in any other manner sin against themselves and their neighbours in word or deed, as the manner of such is. Neither should they be trained to imitate the action or speech of men or women who are mad or bad; for madness, like vice, is to be known but not to be practised or imitated.

Very true, he replied.

Neither may they imitate smiths or other artificers, or oarsmen, or boatswains, or the like?

How can they, he said, when they are not allowed to apply their minds to the callings of any of these?

Nor may they imitate the neighing of horses, the bellowing of bulls, the murmur of rivers and roll of the ocean, thunder, and all that sort of thing?

Nay, he said, if madness be forbidden, neither may they copy the behaviour of madmen.

You mean, I said, if I understand you aright, that there is one sort of narrative style which may be employed by a truly good man when he has anything to say, and that another sort will be used by a man of an opposite character and education.

And which are these two sorts? he asked.

Suppose, I answered, that a just and good man in the course of a narration comes on some saying or action of another good man,—I should imagine that he will like to personate him, and will not be ashamed of this sort of imitation: he will be most ready to play the part of the good man when he is acting firmly and wisely; in a less degree when he is overtaken by illness or love or drink, or has met with any other disaster. But when he comes to a character which is unworthy of him, he will not make a study of that; he will disdain such a person, and will assume his likeness, if at all, for a moment only when he is performing some good action; at other times he will be ashamed to play a part which he has never practised, nor will he like to fashion and frame himself after the baser models; he feels the employment of such an art, unless in jest, to be beneath him, and his mind revolts at it.

So I should expect, he replied.

Then he will adopt a mode of narration such as we have illustrated out of Homer, that is to say, his style will be both imitative and narrative; but there will be very little of the former, and a great deal of the latter. Do you agree?

Certainly, he said; that is the model which such a speaker must necessarily take.

But there is another sort of character who will narrate anything, and, the worse he is, the more unscrupulous he will be; nothing will be too bad for him: and he will be ready to imitate anything, not as a joke, but in right good earnest, and before a large company. As I was just now saying, he will attempt to represent the roll of thunder, the noise of wind and hail, or the creaking of wheels, and pulleys, and the various sounds of flutes, pipes, trumpets, and all sorts of instruments: he will bark like a dog, bleat like a sheep, or crow like a cock; his entire art will consist in imitation of voice and gesture, and there will be very little narration.

That, he said, will be his mode of speaking.

These, then, are the two kinds of style?

Yes.

And you would agree with me in saying that one of them is simple and has but slight changes; and if the harmony and rhythm are also chosen for their simplicity, the result is that the speaker, if he speaks correctly, is always pretty much the same in style, and he will keep within the limits of a single harmony (for the changes are not great), and in like manner he will make use of nearly the same rhythm?

That is quite true, he said.

Whereas the other requires all sorts of harmonies and all sorts of rhythms, if the music and the style are to correspond, because the style has all sorts of changes.

That is also perfectly true, he replied.

And do not the two styles, or the mixture of the two, comprehend all poetry, and every form of expression in words? No one can say anything except in one or other of them or in both together.

They include all, he said.

And shall we receive into our State all the three styles, or one only of the two unmixed styles? or would you include the mixed?

I should prefer only to admit the pure imitator of virtue.

Yes, I said, Adeimantus, but the mixed style is also very charming: and indeed the pantomimic, which is the opposite of the one chosen by you, is the most popular style with children and their attendants, and with the world in general.

I do not deny it.

But I suppose you would argue that such a style is unsuitable to our State, in which human nature is not twofold or manifold, for one man plays one part only?

Yes; quite unsuitable.

And this is the reason why in our State, and in our State only, we shall find a shoemaker to be a shoemaker and not a pilot also, and a husbandman to be a husbandman and not a dicast also, and a soldier a soldier and not a trader also, and the same throughout?

True, he said.

And therefore when any one of these pantomimic gentlemen, who are so clever that they can imitate anything, comes to us, and makes a proposal to exhibit himself and his poetry, we will fall down and worship him as a sweet and holy and wonderful being; but we must also inform him that in our State such as he are not permitted to exist; the law will not allow them. And so when we have anointed him with myrrh, and set a garland of wool upon his head, we shall send him away to another city. For we mean to employ for our souls' health the rougher and severer poet or story-teller, who will imitate the style of the virtuous only, and will follow those models which we prescribed at first when we began the education of our soldiers.

We certainly will, he said, if we have the power.

Then now, my friend, I said, that part of music or literary education which relates to the story or myth may be considered to be finished; for the matter and manner have both been discussed.

I think so too, he said.

Next in order will follow melody and song.

That is obvious.

Every one can see already what we ought to say about them, if we are to be consistent with ourselves.

I fear, said Glaucon, laughing, that the word 'every one' hardly includes me, for I cannot at the moment say what they should be; though I may guess.

At any rate you can tell that a song or ode has three parts—the words, the melody, and the rhythm; that degree of knowledge I may presuppose?

Yes, he said; so much as that you may.

And as for the words, there will surely be no difference between words which are and which are not set to music; both will conform to the same laws, and these have been already determined by us?

Yes.

And the melody and rhythm will depend upon the words?

Certainly.

We were saying, when we spoke of the subject-matter, that we had no need of lamentation and strains of sorrow?

True.

And which are the harmonies expressive of sorrow? You are musical, and can tell me.

The harmonies which you mean are the mixed or tenor Lydian, and the full-toned or bass Lydian, and such like.

These then, I said, must be banished; even to women who have a character to maintain they are of no use, and much less to men.

Certainly.

In the next place, drunkenness and softness and indolence are utterly unbecoming the character of our guardians.

Utterly unbecoming.

And which are the soft or drinking harmonies?

The Ionian, he replied, and the Lydian; they are termed ‘relaxed.’

Well, and are these of any military use?

Quite the reverse, he replied; and if so the Dorian and the Phrygian are the only ones which you have left.

I answered: Of the harmonies I know nothing, but I want to have one warlike, to sound the note or accent which a brave man utters in the hour of danger and stern resolve, or when his cause is failing, and he is going to wounds or death or is overtaken by some other evil, and at every such crisis meets the blows of fortune with firm step and a determination to endure; and another to be used by him in times of peace and freedom of action, when there is no pressure of necessity, and he is seeking to persuade God by prayer, or man by instruction and admonition, or on the other hand, when he is expressing his willingness to yield to persuasion or entreaty or admonition, and which represents him when by prudent conduct he has attained his end, not carried away by his success, but acting moderately and wisely under the circumstances, and acquiescing in the event. These two harmonies I ask you to leave; the strain of necessity and the strain of freedom, the strain of the unfortunate and the strain of the fortunate, the strain of courage, and the strain of temperance; these, I say, leave.

And these, he replied, are the Dorian and Phrygian harmonies of which I was just now speaking.

Then, I said, if these and these only are to be used in our songs and melodies, we shall not want multiplicity of notes or a panharmonic scale?

I suppose not.

Then we shall not maintain the artificers of lyres with three corners and complex scales, or the makers of any other many-stringed curiously-harmonised instruments?

Certainly not.

But what do you say to flute-makers and flute-players? Would you admit them into our State when you reflect that in this composite use of harmony the flute is worse than all the stringed instruments put together; even the panharmonic music is only an imitation of the flute?

Clearly not.

There remain then only the lyre and the harp for use in the city, and the shepherds may have a pipe in the country.

That is surely the conclusion to be drawn from the argument.

The preferring of Apollo and his instruments to Marsyas and his instruments is not at all strange, I said.

Not at all, he replied.

And so, by the dog of Egypt, we have been unconsciously purging the State, which not long ago we termed luxurious.

And we have done wisely, he replied.

Then let us now finish the purgation, I said. Next in order to harmonies, rhythms will naturally follow, and they should be subject to the same rules, for we ought not to seek out complex systems of metre, or metres of every kind, but rather to discover what rhythms are the expressions of a courageous and harmonious life; and when we have found them, we shall adapt the foot and the melody to words having a like spirit, not the words to the foot and melody. To say what these rhythms are will be your duty—you must teach me them, as you have already taught me the harmonies.

But, indeed, he replied, I cannot tell you. I only know that there are some three principles of rhythm out of which metrical systems are framed, just as in sounds there are four notes (i.e. the four notes of the tetrachord.) out of which all the harmonies are composed; that is an observation which I have made. But of what sort of lives they are severally the imitations I am unable to say.

Then, I said, we must take Damon into our counsels; and he will tell us what rhythms are expressive of meanness, or insolence, or fury, or other unworthiness, and what are to be reserved for the expression of opposite feelings. And I think that I have an indistinct recollection of his mentioning a complex Cretic rhythm; also a dactylic or heroic, and he arranged them in some manner which I do not quite understand, making the rhythms equal in the rise and fall of the foot, long and short alternating; and, unless I am mistaken, he spoke of an iambic as well as of a trochaic rhythm, and assigned to them short and long quantities. Also in some cases he appeared to praise or censure the movement of the foot quite as much as the rhythm; or perhaps a combination of the two; for I am not certain what he meant. These matters, however, as I was saying, had better be referred to Damon himself, for the analysis of the subject would be difficult, you know? (Socrates expresses himself carelessly in accordance with his assumed ignorance of the details of the subject. In the first part of the sentence he appears to be speaking of paeonic rhythms which are in the ratio of 3/2; in the second part, of dactylic and anapaestic rhythms, which are in the ratio of 1/1; in the last clause, of iambic and trochaic rhythms, which are in the ratio of 1/2 or 2/1.)

Rather so, I should say.

But there is no difficulty in seeing that grace or the absence of grace is an effect of good or bad rhythm.

None at all.

And also that good and bad rhythm naturally assimilate to a good and bad style; and that harmony and discord in like manner follow style; for our principle is that rhythm and harmony are regulated by the words, and not the words by them.

Just so, he said, they should follow the words.

And will not the words and the character of the style depend on the temper of the soul?

Yes.

And everything else on the style?

Yes.

Then beauty of style and harmony and grace and good rhythm depend on simplicity,—I mean the true simplicity of a rightly and nobly ordered mind and character, not that other simplicity which is only an euphemism for folly?

Very true, he replied.

And if our youth are to do their work in life, must they not make these graces and harmonies their perpetual aim?

They must.

And surely the art of the painter and every other creative and constructive art are full of them,—weaving, embroidery, architecture, and every kind of manufacture; also nature, animal and vegetable,—in all of them there is grace or the absence of grace. And ugliness and discord and inharmonious motion are nearly allied to ill words and ill nature, as grace and harmony are the twin sisters of goodness and virtue and bear their likeness.

That is quite true, he said.

But shall our superintendence go no further, and are the poets only to be required by us to express the image of the good in their works, on pain, if they do anything else, of expulsion from our State? Or is the same control to be extended to other artists, and are they also to be prohibited from exhibiting the opposite forms of vice and intemperance and meanness and indecency in sculpture and building and the other creative arts; and is he who cannot conform to this rule of ours to be prevented from practising his art in our State, lest the taste of our citizens be corrupted by him? We would not have our guardians grow up amid images of moral deformity, as in some noxious pasture, and there browse and feed upon many a baneful herb and flower day by day, little by little, until they silently gather a festering mass of corruption in their own soul. Let our artists rather be those who are gifted to discern the true nature of the beautiful and graceful; then will our youth dwell in a land of health, amid fair sights and sounds, and receive the

good in everything; and beauty, the effluence of fair works, shall flow into the eye and ear, like a health-giving breeze from a purer region, and insensibly draw the soul from earliest years into likeness and sympathy with the beauty of reason.

There can be no nobler training than that, he replied.

And therefore, I said, Glaucon, musical training is a more potent instrument than any other, because rhythm and harmony find their way into the inward places of the soul, on which they mightily fasten, imparting grace, and making the soul of him who is rightly educated graceful, or of him who is ill-educated ungraceful; and also because he who has received this true education of the inner being will most shrewdly perceive omissions or faults in art and nature, and with a true taste, while he praises and rejoices over and receives into his soul the good, and becomes noble and good, he will justly blame and hate the bad, now in the days of his youth, even before he is able to know the reason why; and when reason comes he will recognise and salute the friend with whom his education has made him long familiar.

Yes, he said, I quite agree with you in thinking that our youth should be trained in music and on the grounds which you mention.

Just as in learning to read, I said, we were satisfied when we knew the letters of the alphabet, which are very few, in all their recurring sizes and combinations; not slighting them as unimportant whether they occupy a space large or small, but everywhere eager to make them out; and not thinking ourselves perfect in the art of reading until we recognise them wherever they are found:

True—

Or, as we recognise the reflection of letters in the water, or in a mirror, only when we know the letters themselves; the same art and study giving us the knowledge of both:

Exactly—

Even so, as I maintain, neither we nor our guardians, whom we have to educate, can ever become musical until we and they know the essential forms of temperance, courage, liberality, magnificence, and their kindred, as well as the contrary forms, in all their combinations, and can recognise them and their images wherever they are found, not slighting them either in small things or great, but believing them all to be within the sphere of one art and study.

Most assuredly.

And when a beautiful soul harmonizes with a beautiful form, and the two are cast in one mould, that will be the fairest of sights to him who has an eye to see it?

The fairest indeed.

And the fairest is also the loveliest?

That may be assumed.

And the man who has the spirit of harmony will be most in love with the loveliest; but he will not love him who is of an inharmonious soul?

That is true, he replied, if the deficiency be in his soul; but if there be any merely bodily defect in another he will be patient of it, and will love all the same.

I perceive, I said, that you have or have had experiences of this sort, and I agree. But let me ask you another question: Has excess of pleasure any affinity to temperance?

How can that be? he replied; pleasure deprives a man of the use of his faculties quite as much as pain.

Or any affinity to virtue in general?

None whatever.

Any affinity to wantonness and intemperance?

Yes, the greatest.

And is there any greater or keener pleasure than that of sensual love?

No, nor a madder.

Whereas true love is a love of beauty and order—temperate and harmonious?

Quite true, he said.

Then no intemperance or madness should be allowed to approach true love?

Certainly not.

Then mad or intemperate pleasure must never be allowed to come near the lover and his beloved; neither of them can have any part in it if their love is of the right sort?

No, indeed, Socrates, it must never come near them.

Then I suppose that in the city which we are founding you would make a law to the effect that a friend should use no other familiarity to his love than a father would use to his son, and then only for a noble purpose, and he must first have the other's consent; and this rule is to limit him in all his intercourse, and he is never to be seen going further, or, if he exceeds, he is to be deemed guilty of coarseness and bad taste.

I quite agree, he said.

Thus much of music, which makes a fair ending; for what should be the end of music if not the love of beauty?

I agree, he said.

After music comes gymnastic, in which our youth are next to be trained.

Certainly.

Gymnastic as well as music should begin in early years; the training in it should be careful and should continue through life. Now my belief is,—and this is a matter upon which I should like to have your opinion in confirmation of my own, but my own belief is,—not that the good body by any bodily excellence improves the soul, but, on the contrary, that the good soul, by her own excellence, improves the body as far as this may be possible. What do you say?

Yes, I agree.

Then, to the mind when adequately trained, we shall be right in handing over the more particular care of the body; and in order to avoid prolixity we will now only give the general outlines of the subject.

Very good.

That they must abstain from intoxication has been already remarked by us; for of all persons a guardian should be the last to get drunk and not know where in the world he is.

Yes, he said; that a guardian should require another guardian to take care of him is ridiculous indeed.

But next, what shall we say of their food; for the men are in training for the great contest of all—are they not?

Yes, he said.

And will the habit of body of our ordinary athletes be suited to them?

Why not?

I am afraid, I said, that a habit of body such as they have is but a sleepy sort of thing, and rather perilous to health. Do you not observe that these athletes sleep away their lives, and are liable to most dangerous illnesses if they depart, in ever so slight a degree, from their customary regimen?

Yes, I do.

Then, I said, a finer sort of training will be required for our warrior athletes, who are to be like wakeful dogs, and to see and hear with the utmost keenness; amid the many changes of water and also of food, of summer heat and winter cold, which they will have to endure when on a campaign, they must not be liable to break down in health.

That is my view.

The really excellent gymnastic is twin sister of that simple music which we were just now describing.

How so?

Why, I conceive that there is a gymnastic which, like our music, is simple and good; and especially the military gymnastic.

What do you mean?

My meaning may be learned from Homer; he, you know, feeds his heroes at their feasts, when they are campaigning, on soldiers' fare; they have no fish, although they are on the shores of the Hellespont, and they are not allowed boiled meats but only roast, which is the food most convenient for soldiers, requiring only that they should light a fire, and not involving the trouble of carrying about pots and pans.

True.

And I can hardly be mistaken in saying that sweet sauces are nowhere mentioned in Homer. In proscribing them, however, he is not singular; all professional athletes are well aware that a man who is to be in good condition should take nothing of the kind.

Yes, he said; and knowing this, they are quite right in not taking them.

Then you would not approve of Syracusan dinners, and the refinements of Sicilian cookery?

I think not.

Nor, if a man is to be in condition, would you allow him to have a Corinthian girl as his fair friend?

Certainly not.

Neither would you approve of the delicacies, as they are thought, of Athenian confectionary?

Certainly not.

All such feeding and living may be rightly compared by us to melody and song composed in the panharmonic style, and in all the rhythms.

Exactly.

There complexity engendered licence, and here disease; whereas simplicity in music was the parent of temperance in the soul; and simplicity in gymnastic of health in the body.

Most true, he said.

But when intemperance and diseases multiply in a State, halls of justice and medicine are always being opened; and the arts of the doctor and the lawyer give themselves airs, finding how keen is the interest which not only the slaves but the freemen of a city take about them.

Of course.

And yet what greater proof can there be of a bad and disgraceful state of education than this, that not only artisans and the meaner sort of people need the skill of first-rate physicians and judges, but also those who would profess to have had a liberal education? Is it not disgraceful, and a great sign of want of good-breeding, that a man should have to go abroad for his law and physic because he has none of his own at home, and must therefore surrender himself into the hands of other men whom he makes lords and judges over him?

Of all things, he said, the most disgraceful.

Would you say ‘most,’ I replied, when you consider that there is a further stage of the evil in which a man is not only a life-long litigant, passing all his days in the courts, either as plaintiff or defendant, but is actually led by his bad taste to pride himself on his litigiousness; he imagines that he is a master in dishonesty; able to take every crooked turn, and wriggle into and out of every hole, bending like a withy and getting out of the way of justice: and all for what?—in order to gain small points not worth mentioning, he not knowing that so to order his life as to be able to do without a napping judge is a far higher and nobler sort of thing. Is not that still more disgraceful?

Yes, he said, that is still more disgraceful.

Well, I said, and to require the help of medicine, not when a wound has to be cured, or on occasion of an epidemic, but just because, by indolence and a habit of life such as we have been describing, men fill themselves with waters and winds, as if their bodies were a marsh, compelling the ingenious sons of Asclepius to find more names for diseases, such as flatulence and catarrh; is not this, too, a disgrace?

Yes, he said, they do certainly give very strange and newfangled names to diseases.

Yes, I said, and I do not believe that there were any such diseases in the days of Asclepius; and this I infer from the circumstance that the hero Eurypylus, after he has been wounded in Homer, drinks a posset of Pramnian wine well besprinkled with barley-meal and grated cheese, which are certainly inflammatory, and yet the sons of Asclepius who were at the Trojan war do not blame the damsel who gives him the drink, or rebuke Patroclus, who is treating his case.

Well, he said, that was surely an extraordinary drink to be given to a person in his condition.

Not so extraordinary, I replied, if you bear in mind that in former days, as is commonly said, before the time of Herodicus, the guild of Asclepius did not practise our present system of medicine, which may be said to educate diseases. But Herodicus, being a trainer, and himself of a sickly constitution, by a combination of training and doctoring found out a way of torturing first and chiefly himself, and secondly the rest of the world.

How was that? he said.

By the invention of lingering death; for he had a mortal disease which he perpetually tended, and as recovery was out of the question, he passed his entire life as a valetudinarian; he could do nothing but attend upon himself, and he was in constant torment whenever he departed in anything from his usual regimen, and so dying hard, by the help of science he struggled on to old age.

A rare reward of his skill!

Yes, I said; a reward which a man might fairly expect who never understood that, if Asclepius did not instruct his descendants in valetudinarian arts, the omission arose, not from ignorance or inexperience of such a branch of medicine, but because he knew that in all well-ordered states every individual has an occupation to which he must attend, and has therefore no leisure to spend in continually being ill. This we remark in the case of the artisan, but, ludicrously enough, do not apply the same rule to people of the richer sort.

How do you mean? he said.

I mean this: When a carpenter is ill he asks the physician for a rough and ready cure; an emetic or a purge or a cautery or the knife,—these are his remedies. And if some one prescribes for him a course of dietetics, and tells him that he must swathe and swaddle his head, and all that sort of thing, he replies at once that he has no time to be ill, and that he sees no good in a life which is spent in nursing his disease to the neglect of his customary employment; and therefore bidding good-bye to this sort of physician, he resumes his ordinary habits, and either gets well and lives and does his business, or, if his constitution fails, he dies and has no more trouble.

Yes, he said, and a man in his condition of life ought to use the art of medicine thus far only.

Has he not, I said, an occupation; and what profit would there be in his life if he were deprived of his occupation?

Quite true, he said.

But with the rich man this is otherwise; of him we do not say that he has any specially appointed work which he must perform, if he would live.

He is generally supposed to have nothing to do.

Then you never heard of the saying of Phocylides, that as soon as a man has a livelihood he should practise virtue?

Nay, he said, I think that he had better begin somewhat sooner.

Let us not have a dispute with him about this, I said; but rather ask ourselves: Is the practice of virtue obligatory on the rich man, or can he live without it? And if obligatory on him, then let us raise a further question, whether this dieting of disorders, which is an impediment to the application of the mind in carpentering and the mechanical arts, does not equally stand in the way of the sentiment of Phocylides?

Of that, he replied, there can be no doubt; such excessive care of the body, when carried beyond the rules of gymnastic, is most inimical to the practice of virtue.

Yes, indeed, I replied, and equally incompatible with the management of a house, an army, or an office of state; and, what is most important of all, irreconcileable with any kind of study or thought or self-reflection—there is a constant suspicion that headache and giddiness are to be ascribed to philosophy, and hence all practising or making trial of virtue in the higher sense is absolutely stopped; for a man is always fancying that he is being made ill, and is in constant anxiety about the state of his body.

Yes, likely enough.

And therefore our politic Asclepius may be supposed to have exhibited the power of his art only to persons who, being generally of healthy constitution and habits of life, had a definite ailment; such as these he cured by purges and operations, and bade them live as usual, herein consulting the interests of the State; but bodies which disease had penetrated through and through he would not have attempted to cure by gradual processes of evacuation and infusion: he did not want to lengthen out good-for-nothing lives, or to have weak fathers begetting weaker sons;—if a man was not able to live in the ordinary way he had no business to cure him; for such a cure would have been of no use either to himself, or to the State.

Then, he said, you regard Asclepius as a statesman.

Clearly; and his character is further illustrated by his sons. Note that they were heroes in the days of old and practised the medicines of which I am speaking at the siege of Troy: You will remember how, when Pandarus wounded Menelaus, they

‘Sucked the blood out of the wound, and sprinkled soothing remedies,’

but they never prescribed what the patient was afterwards to eat or drink in the case of Menelaus, any more than in the case of Eurypylus; the remedies, as they conceived, were enough to heal any man who before he was wounded was healthy and regular in his habits; and even though he did happen to drink a posset of Pramnian wine, he might get well all the same. But they would have nothing to do with unhealthy and intemperate subjects, whose lives were of no use either to themselves or others; the art of medicine was not designed for their good, and though they were as rich as Midas, the sons of Asclepius would have declined to attend them.

They were very acute persons, those sons of Asclepius.

Naturally so, I replied. Nevertheless, the tragedians and Pindar disobeying our behests, although they acknowledge that Asclepius was the son of Apollo, say also that he was bribed into healing a rich man who was at the point of death, and for this reason he was struck by lightning. But we, in accordance with the principle already affirmed by us, will not believe them when they tell us both;—if he was the son of a god, we maintain that he was not avaricious; or, if he was avaricious, he was not the son of a god.

All that, Socrates, is excellent; but I should like to put a question to you: Ought there not to be good physicians in a State, and are not the best those who have treated the greatest number of constitutions good and bad? and are not the best judges in like manner those who are acquainted with all sorts of moral natures?

Yes, I said, I too would have good judges and good physicians. But do you know whom I think good?

Will you tell me?

I will, if I can. Let me however note that in the same question you join two things which are not the same.

How so? he asked.

Why, I said, you join physicians and judges. Now the most skilful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons. For the body, as I conceive, is not the instrument with which they cure the body; in that case we could not allow them ever to be or to have been sickly; but they cure the body with the mind, and the mind which has become and is sick can cure nothing.

That is very true, he said.

But with the judge it is otherwise; since he governs mind by mind; he ought not therefore to have been trained among vicious minds, and to have associated with them from youth upwards, and to have gone through the whole calendar of crime, only in order that he may quickly infer the crimes of others as he might their bodily diseases from his own self-consciousness; the honourable mind which is to form a healthy judgment should have had no experience or contamination of evil habits when young. And this is the reason why in youth good men often appear to be simple, and are easily practised upon by the dishonest, because they have no examples of what evil is in their own souls.

Yes, he said, they are far too apt to be deceived.

Therefore, I said, the judge should not be young; he should have learned to know evil, not from his own soul, but from late and long observation of the nature of evil in others: knowledge should be his guide, not personal experience.

Yes, he said, that is the ideal of a judge.

Yes, I replied, and he will be a good man (which is my answer to your question); for he is good who has a good soul. But the cunning and suspicious nature of which we spoke,—he who has committed many crimes, and fancies himself to be a master in wickedness, when he is amongst his fellows, is wonderful in the precautions which he takes, because he judges of them by himself: but when he gets into the company of men of virtue, who have the experience of age, he appears to be a fool again, owing to his unseasonable suspicions; he cannot recognise an honest man, because he has no pattern of honesty in himself; at the same time, as the bad are more numerous than the good, and he meets with them oftener, he thinks himself, and is by others thought to be, rather wise than foolish.

Most true, he said.

Then the good and wise judge whom we are seeking is not this man, but the other; for vice cannot know virtue too, but a virtuous nature, educated by time, will acquire a knowledge both of virtue and vice: the virtuous, and not the vicious, man has wisdom—in my opinion.

And in mine also.

This is the sort of medicine, and this is the sort of law, which you will sanction in your state. They will minister to better natures, giving health both of soul and of body; but those who are diseased in their bodies they will leave to die, and the corrupt and incurable souls they will put an end to themselves.

That is clearly the best thing both for the patients and for the State.

And thus our youth, having been educated only in that simple music which, as we said, inspires temperance, will be reluctant to go to law.

Clearly.

And the musician, who, keeping to the same track, is content to practise the simple gymnastic, will have nothing to do with medicine unless in some extreme case.

That I quite believe.

The very exercises and tolls which he undergoes are intended to stimulate the spirited element of his nature, and not to increase his strength; he will not, like common athletes, use exercise and regimen to develope his muscles.

Very right, he said.

Neither are the two arts of music and gymnastic really designed, as is often supposed, the one for the training of the soul, the other for the training of the body.

What then is the real object of them?

I believe, I said, that the teachers of both have in view chiefly the improvement of the soul.

How can that be? he asked.

Did you never observe, I said, the effect on the mind itself of exclusive devotion to gymnastic, or the opposite effect of an exclusive devotion to music?

In what way shown? he said.

The one producing a temper of hardness and ferocity, the other of softness and effeminacy, I replied.

Yes, he said, I am quite aware that the mere athlete becomes too much of a savage, and that the mere musician is melted and softened beyond what is good for him.

Yet surely, I said, this ferocity only comes from spirit, which, if rightly educated, would give courage, but, if too much intensified, is liable to become hard and brutal.

That I quite think.

On the other hand the philosopher will have the quality of gentleness. And this also, when too much indulged, will turn to softness, but, if educated rightly, will be gentle and moderate.

True.

And in our opinion the guardians ought to have both these qualities?

Assuredly.

And both should be in harmony?

Beyond question.

And the harmonious soul is both temperate and courageous?

Yes.

And the inharmonious is cowardly and boorish?

Very true.

And, when a man allows music to play upon him and to pour into his soul through the funnel of his ears those sweet and soft and melancholy airs of which we were just now speaking, and his whole life is passed in warbling and the delights of song; in the first stage of the process the passion or spirit which is in him is tempered like iron, and made useful, instead of brittle and useless. But, if he carries on the softening and soothing process, in the next stage he begins to melt and waste, until he has wasted away his spirit and cut out the sinews of his soul; and he becomes a feeble warrior.

Very true.

If the element of spirit is naturally weak in him the change is speedily accomplished, but if he have a good deal, then the power of music weakening the spirit renders him excitable;—on the least provocation he flames up at once, and is speedily extinguished; instead of having spirit he grows irritable and passionate and is quite impracticable.

Exactly.

And so in gymnastics, if a man takes violent exercise and is a great feeder, and the reverse of a great student of music and philosophy, at first the high condition of his body fills him with pride and spirit, and he becomes twice the man that he was.

Certainly.

And what happens? if he do nothing else, and holds no converse with the Muses, does not even that intelligence which there may be in him, having no taste of any sort of learning or enquiry or thought or culture, grow feeble and dull and blind, his mind never waking up or receiving nourishment, and his senses not being purged of their mists?

True, he said.

And he ends by becoming a hater of philosophy, uncivilized, never using the weapon of persuasion,—he is like a wild beast, all violence and fierceness, and knows no other way of dealing; and he lives in all ignorance and evil conditions, and has no sense of propriety and grace.

That is quite true, he said.

And as there are two principles of human nature, one the spirited and the other the philosophical, some God, as I should say, has given mankind two arts answering to them (and only indirectly to the soul and body), in order that these two principles (like the strings of an instrument) may be relaxed or drawn tighter until they are duly harmonized.

That appears to be the intention.

And he who mingles music with gymnastic in the fairest proportions, and best attempers them to the soul, may be rightly called the true musician and harmonist in a far higher sense than the tuner of the strings.

You are quite right, Socrates.

And such a presiding genius will be always required in our State if the government is to last.

Yes, he will be absolutely necessary.

Such, then, are our principles of nurture and education: Where would be the use of going into further details about the dances of our citizens, or about their hunting and coursing, their gymnastic and equestrian contests? For these all follow the general principle, and having found that, we shall have no difficulty in discovering them.

I dare say that there will be no difficulty.

Very good, I said; then what is the next question? Must we not ask who are to be rulers and who subjects?

Certainly.

There can be no doubt that the elder must rule the younger.

Clearly.

And that the best of these must rule.

That is also clear.

Now, are not the best husbandmen those who are most devoted to husbandry?

Yes.

And as we are to have the best of guardians for our city, must they not be those who have most the character of guardians?

Yes.

And to this end they ought to be wise and efficient, and to have a special care of the State?

True.

And a man will be most likely to care about that which he loves?

To be sure.

And he will be most likely to love that which he regards as having the same interests with himself, and that of which the good or evil fortune is supposed by him at any time most to affect his own?

Very true, he replied.

Then there must be a selection. Let us note among the guardians those who in their whole life show the greatest eagerness to do what is for the good of their country, and the greatest repugnance to do what is against her interests.

Those are the right men.

And they will have to be watched at every age, in order that we may see whether they preserve their resolution, and never, under the influence either of force or enchantment, forget or cast off their sense of duty to the State.

How cast off? he said.

I will explain to you, I replied. A resolution may go out of a man's mind either with his will or against his will; with his will when he gets rid of a falsehood and learns better, against his will whenever he is deprived of a truth.

I understand, he said, the willing loss of a resolution; the meaning of the unwilling I have yet to learn.

Why, I said, do you not see that men are unwillingly deprived of good, and willingly of evil? Is not to have lost the truth an evil, and to possess the truth a good? and you would agree that to conceive things as they are is to possess the truth?

Yes, he replied; I agree with you in thinking that mankind are deprived of truth against their will.

And is not this involuntary deprivation caused either by theft, or force, or enchantment?

Still, he replied, I do not understand you.

I fear that I must have been talking darkly, like the tragedians. I only mean that some men are changed by persuasion and that others forget; argument steals away the hearts of one class, and time of the other; and this I call theft. Now you understand me?

Yes.

Those again who are forced, are those whom the violence of some pain or grief compels to change their opinion.

I understand, he said, and you are quite right.

And you would also acknowledge that the enchanted are those who change their minds either under the softer influence of pleasure, or the sterner influence of fear?

Yes, he said; everything that deceives may be said to enchant.

Therefore, as I was just now saying, we must enquire who are the best guardians of their own conviction that what they think the interest of the State is to be the rule of their lives. We must watch them from their youth upwards, and make them perform actions in which they are most likely to forget or to be deceived, and he who remembers and is not deceived is to be selected, and he who fails in the trial is to be rejected. That will be the way?

Yes.

And there should also be toils and pains and conflicts prescribed for them, in which they will be made to give further proof of the same qualities.

Very right, he replied.

And then, I said, we must try them with enchantments—that is the third sort of test—and see what will be their behaviour: like those who take colts amid noise and tumult to see if they are of a timid nature, so must we take our youth amid terrors of some kind, and again pass them into pleasures, and prove them more thoroughly than gold is proved in the furnace, that we may discover whether they are armed against all enchantments, and of a noble bearing always, good guardians of themselves and of the music which they have learned, and retaining under all circumstances a rhythmical and harmonious nature, such as will be most serviceable to the individual and to the State. And he who at every age, as boy and youth and in mature life, has come out of the trial victorious and pure, shall be appointed a ruler and guardian of the State; he shall be honoured in life and death, and shall receive sepulture and other memorials of honour, the greatest that we have to give. But him who fails, we must reject. I am inclined to think that this is the sort of way in which our rulers and guardians should be chosen and appointed. I speak generally, and not with any pretension

to exactness.

And, speaking generally, I agree with you, he said.

And perhaps the word ‘guardian’ in the fullest sense ought to be applied to this higher class only who preserve us against foreign enemies and maintain peace among our citizens at home, that the one may not have the will, or the others the power, to harm us. The young men whom we before called guardians may be more properly designated auxiliaries and supporters of the principles of the rulers.

I agree with you, he said.

How then may we devise one of those needful falsehoods of which we lately spoke—just one royal lie which may deceive the rulers, if that be possible, and at any rate the rest of the city?

What sort of lie? he said.

Nothing new, I replied; only an old Phoenician tale (Laws) of what has often occurred before now in other places, (as the poets say, and have made the world believe,) though not in our time, and I do not know whether such an event could ever happen again, or could now even be made probable, if it did.

How your words seem to hesitate on your lips!

You will not wonder, I replied, at my hesitation when you have heard.

Speak, he said, and fear not.

Well then, I will speak, although I really know not how to look you in the face, or in what words to utter the audacious fiction, which I propose to communicate gradually, first to the rulers, then to the soldiers, and lastly to the people. They are to be told that their youth was a dream, and the education and training which they received from us, an appearance only; in reality during all that time they were being formed and fed in the womb of the earth, where they themselves and their arms and appurtenances were manufactured; when they were completed, the earth, their mother, sent them up; and so, their country being their mother and also their nurse, they are bound to advise for her good, and to defend her against attacks, and her citizens they are to regard as children of the earth and their own brothers.

You had good reason, he said, to be ashamed of the lie which you were going to tell.

True, I replied, but there is more coming; I have only told you half. Citizens, we shall say to them in our tale, you are brothers, yet God has framed you differently. Some of you have the power of command, and in the composition of these he has mingled gold, wherefore also they have the greatest honour; others he has made of silver, to be auxiliaries; others again who are to be husbandmen and craftsmen he has composed of brass and iron; and the species will generally be preserved in the children. But as all are of the same original stock, a golden parent will sometimes have a silver son, or a silver parent a golden son. And God proclaims as a first principle to the rulers, and above all else, that there is nothing which they should so anxiously guard, or of which they are to be such good guardians, as of the purity of the race. They should observe what elements mingle in their offspring; for if the son of a golden or silver parent has an admixture of brass and iron, then nature orders a transposition of ranks, and the eye of the ruler must not be pitiful towards the child because he has to descend in the scale and become a husbandman or artisan, just as there may be sons of artisans who having an admixture of gold or silver in them are raised to honour, and become guardians or auxiliaries. For an oracle says that when a man of brass or iron guards the State, it will be destroyed. Such is the tale; is there any possibility of making our citizens believe in it?

Not in the present generation, he replied; there is no way of accomplishing this; but their sons may be made to believe in the tale, and their sons’ sons, and posterity after them.

I see the difficulty, I replied; yet the fostering of such a belief will make them care more for the city and for one another. Enough, however, of the fiction, which may now fly abroad upon the wings of rumour, while we arm our earth-born heroes, and lead them forth under the command of their rulers. Let them look round and select a spot whence they can best suppress insurrection, if any prove refractory within, and also defend themselves against enemies, who like wolves may come down on the fold from without; there let them encamp, and when they have encamped, let them sacrifice to the proper Gods and prepare their dwellings.

Just so, he said.

And their dwellings must be such as will shield them against the cold of winter and the heat of summer.

I suppose that you mean houses, he replied.

Yes, I said; but they must be the houses of soldiers, and not of shop-keepers.

What is the difference? he said.

That I will endeavour to explain, I replied. To keep watch-dogs, who, from want of discipline or hunger, or some evil habit or other, would turn upon the sheep and worry them, and behave not like dogs but wolves, would be a foul and monstrous thing in a shepherd?

Truly monstrous, he said.

And therefore every care must be taken that our auxiliaries, being stronger than our citizens, may not grow to be too much for them and become savage tyrants instead of friends and allies?

Yes, great care should be taken.

And would not a really good education furnish the best safeguard?

But they are well-educated already, he replied.

I cannot be so confident, my dear Glaucon, I said; I am much more certain that they ought to be, and that true education, whatever that may be, will have the greatest tendency to civilize and humanize them in their relations to one another, and to those who are under their protection.

Very true, he replied.

And not only their education, but their habitations, and all that belongs to them, should be such as will neither impair their virtue as guardians, nor tempt them to prey upon the other citizens. Any man of sense must acknowledge that.

He must.

Then now let us consider what will be their way of life, if they are to realize our idea of them. In the first place, none of them should have any property of his own beyond what is absolutely necessary; neither should they have a private house or store closed against any one who has a mind to enter; their provisions should be only such as are required by trained warriors, who are men of temperance and courage; they should agree to receive from the citizens a fixed rate of pay, enough to meet the expenses of the year and no more; and they will go to mess and live together like soldiers in a camp. Gold and silver we will tell them that they have from God; the diviner metal is within them, and they have therefore no need of the dross which is current among men, and ought not to pollute the divine by any such earthly admixture; for that commoner metal has been the source of many unholy deeds, but their own is undefiled. And they alone of all the citizens may not touch or handle silver or gold, or be under the same roof with them, or wear them, or drink from them. And this will be their salvation, and they will be the saviours of the State. But should they ever acquire homes or lands or moneys of their own, they will become housekeepers and husbandmen instead of guardians, enemies and tyrants instead of allies of the other citizens; hating and being hated, plotting and being plotted against, they will pass their whole life in much greater terror of internal than of external enemies, and the hour of ruin, both to themselves and to the rest of the State, will be at hand. For all which reasons may we not say that thus shall our State be ordered, and that these shall be the regulations appointed by us for guardians concerning their houses and all other matters?

Yes, said Glaucon.

BOOK IV.

Here Adeimantus interposed a question: How would you answer, Socrates, said he, if a person were to say that you are making these people miserable, and that they are the cause of their own unhappiness; the city in fact belongs to them, but they are none the better for it; whereas other men acquire lands, and build large and handsome houses, and have everything handsome about them, offering sacrifices to the gods on their own account, and practising hospitality; moreover, as you were saying just now, they

have gold and silver, and all that is usual among the favourites of fortune; but our poor citizens are no better than mercenaries who are quartered in the city and are always mounting guard?

Yes, I said; and you may add that they are only fed, and not paid in addition to their food, like other men; and therefore they cannot, if they would, take a journey of pleasure; they have no money to spend on a mistress or any other luxurious fancy, which, as the world goes, is thought to be happiness; and many other accusations of the same nature might be added.

But, said he, let us suppose all this to be included in the charge.

You mean to ask, I said, what will be our answer?

Yes.

If we proceed along the old path, my belief, I said, is that we shall find the answer. And our answer will be that, even as they are, our guardians may very likely be the happiest of men; but that our aim in founding the State was not the disproportionate happiness of any one class, but the greatest happiness of the whole; we thought that in a State which is ordered with a view to the good of the whole we should be most likely to find justice, and in the ill-ordered State injustice: and, having found them, we might then decide which of the two is the happier. At present, I take it, we are fashioning the happy State, not piecemeal, or with a view of making a few happy citizens, but as a whole; and by-and-by we will proceed to view the opposite kind of State. Suppose that we were painting a statue, and some one came up to us and said, Why do you not put the most beautiful colours on the most beautiful parts of the body—the eyes ought to be purple, but you have made them black—to him we might fairly answer, Sir, you would not surely have us beautify the eyes to such a degree that they are no longer eyes; consider rather whether, by giving this and the other features their due proportion, we make the whole beautiful. And so I say to you, do not compel us to assign to the guardians a sort of happiness which will make them anything but guardians; for we too can clothe our husbandmen in royal apparel, and set crowns of gold on their heads, and bid them till the ground as much as they like, and no more. Our potters also might be allowed to repose on couches, and feast by the fireside, passing round the winecup, while their wheel is conveniently at hand, and working at pottery only as much as they like; in this way we might make every class happy—and then, as you imagine, the whole State would be happy. But do not put this idea into our heads; for, if we listen to you, the husbandman will be no longer a husbandman, the potter will cease to be a potter, and no one will have the character of any distinct class in the State. Now this is not of much consequence where the corruption of society, and pretension to be what you are not, is confined to cobblers; but when the guardians of the laws and of the government are only seeming and not real guardians, then see how they turn the State upside down; and on the other hand they alone have the power of giving order and happiness to the State. We mean our guardians to be true saviours and not the destroyers of the State, whereas our opponent is thinking of peasants at a festival, who are enjoying a life of revelry, not of citizens who are doing their duty to the State. But, if so, we mean different things, and he is speaking of something which is not a State. And therefore we must consider whether in appointing our guardians we would look to their greatest happiness individually, or whether this principle of happiness does not rather reside in the State as a whole. But if the latter be the truth, then the guardians and auxiliaries, and all others equally with them, must be compelled or induced to do their own work in the best way. And thus the whole State will grow up in a noble order, and the several classes will receive the proportion of happiness which nature assigns to them.

I think that you are quite right.

I wonder whether you will agree with another remark which occurs to me.

What may that be?

There seem to be two causes of the deterioration of the arts.

What are they?

Wealth, I said, and poverty.

How do they act?

The process is as follows: When a potter becomes rich, will he, think you, any longer take the same pains with his art?

Certainly not.

He will grow more and more indolent and careless?

Very true.

And the result will be that he becomes a worse potter?

Yes; he greatly deteriorates.

But, on the other hand, if he has no money, and cannot provide himself with tools or instruments, he will not work equally well himself, nor will he teach his sons or apprentices to work equally well.

Certainly not.

Then, under the influence either of poverty or of wealth, workmen and their work are equally liable to degenerate?

That is evident.

Here, then, is a discovery of new evils, I said, against which the guardians will have to watch, or they will creep into the city unobserved.

What evils?

Wealth, I said, and poverty; the one is the parent of luxury and indolence, and the other of meanness and viciousness, and both of discontent.

That is very true, he replied; but still I should like to know, Socrates, how our city will be able to go to war, especially against an enemy who is rich and powerful, if deprived of the sinews of war.

There would certainly be a difficulty, I replied, in going to war with one such enemy; but there is no difficulty where there are two of them.

How so? he asked.

In the first place, I said, if we have to fight, our side will be trained warriors fighting against an army of rich men.

That is true, he said.

And do you not suppose, Adeimantus, that a single boxer who was perfect in his art would easily be a match for two stout and well-to-do gentlemen who were not boxers?

Hardly, if they came upon him at once.

What, now, I said, if he were able to run away and then turn and strike at the one who first came up? And supposing he were to do this several times under the heat of a scorching sun, might he not, being an expert, overturn more than one stout personage?

Certainly, he said, there would be nothing wonderful in that.

And yet rich men probably have a greater superiority in the science and practise of boxing than they have in military qualities.

Likely enough.

Then we may assume that our athletes will be able to fight with two or three times their own number?

I agree with you, for I think you right.

And suppose that, before engaging, our citizens send an embassy to one of the two cities, telling them what is the truth: Silver and gold we neither have nor are permitted to have, but you may; do you therefore come and help us in war, and take the spoils of the other city: Who, on hearing these words, would choose to fight against lean wiry dogs, rather than, with the dogs on their side, against fat and tender sheep?

That is not likely; and yet there might be a danger to the poor State if the wealth of many States were to be gathered into one.

But how simple of you to use the term State at all of any but our own!

Why so?

You ought to speak of other States in the plural number; not one of them is a city, but many cities, as they say in the game. For indeed any city, however small, is in fact divided into two, one the city of the poor, the other of the rich; these are at war with one another; and in either there are many smaller divisions, and you would be altogether beside the mark if you treated them all as a single State. But if you deal with them as many, and give the wealth or power or persons of the one to the others, you will always have a great many friends and not many enemies. And your State, while the wise order which has now been prescribed continues to prevail in her, will be the greatest of States, I do not mean to say in reputation or appearance, but in deed and truth, though she number not more than a thousand defenders. A single State which is her equal you will hardly find, either among Hellenes or barbarians, though many that appear to be as great and many times greater.

That is most true, he said.

And what, I said, will be the best limit for our rulers to fix when they are considering the size of the State and the amount of territory which they are to include, and beyond which they will not go?

What limit would you propose?

I would allow the State to increase so far as is consistent with unity; that, I think, is the proper limit.

Very good, he said.

Here then, I said, is another order which will have to be conveyed to our guardians: Let our city be accounted neither large nor small, but one and self-sufficing.

And surely, said he, this is not a very severe order which we impose upon them.

And the other, said I, of which we were speaking before is lighter still,—I mean the duty of degrading the offspring of the guardians when inferior, and of elevating into the rank of guardians the offspring of the lower classes, when naturally superior. The intention was, that, in the case of the citizens generally, each individual should be put to the use for which nature intended him, one to one work, and then every man would do his own business, and be one and not many; and so the whole city would be one and not many.

Yes, he said; that is not so difficult.

The regulations which we are prescribing, my good Adeimantus, are not, as might be supposed, a number of great principles, but trifles all, if care be taken, as the saying is, of the one great thing,—a thing, however, which I would rather call, not great, but sufficient for our purpose.

What may that be? he asked.

Education, I said, and nurture: If our citizens are well educated, and grow into sensible men, they will easily see their way through all these, as well as other matters which I omit; such, for example, as marriage, the possession of women and the procreation of children, which will all follow the general principle that friends have all things in common, as the proverb says.

That will be the best way of settling them.

Also, I said, the State, if once started well, moves with accumulating force like a wheel. For good nurture and education implant good constitutions, and these good constitutions taking root in a good education improve more and more, and this improvement affects the breed in man as in other animals.

Very possibly, he said.

Then to sum up: This is the point to which, above all, the attention of our rulers should be directed,—that music and gymnastic be preserved in their original form, and no innovation made. They must do their utmost to maintain them intact. And when any one says that mankind most regard

‘The newest song which the singers have,’

they will be afraid that he may be praising, not new songs, but a new kind of song; and this ought not to be praised, or conceived to be the meaning of the poet; for any musical innovation is full of danger to the whole State, and ought to be prohibited. So Damon tells me, and I can quite believe him;—he says that when modes of music change, the fundamental laws of the State always

change with them.

Yes, said Adeimantus; and you may add my suffrage to Damon's and your own.

Then, I said, our guardians must lay the foundations of their fortress in music?

Yes, he said; the lawlessness of which you speak too easily steals in.

Yes, I replied, in the form of amusement; and at first sight it appears harmless.

Why, yes, he said, and there is no harm; were it not that little by little this spirit of licence, finding a home, imperceptibly penetrates into manners and customs; whence, issuing with greater force, it invades contracts between man and man, and from contracts goes on to laws and constitutions, in utter recklessness, ending at last, Socrates, by an overthrow of all rights, private as well as public.

Is that true? I said.

That is my belief, he replied.

Then, as I was saying, our youth should be trained from the first in a stricter system, for if amusements become lawless, and the youths themselves become lawless, they can never grow up into well-conducted and virtuous citizens.

Very true, he said.

And when they have made a good beginning in play, and by the help of music have gained the habit of good order, then this habit of order, in a manner how unlike the lawless play of the others! will accompany them in all their actions and be a principle of growth to them, and if there be any fallen places in the State will raise them up again.

Very true, he said.

Thus educated, they will invent for themselves any lesser rules which their predecessors have altogether neglected.

What do you mean?

I mean such things as these:—when the young are to be silent before their elders; how they are to show respect to them by standing and making them sit; what honour is due to parents; what garments or shoes are to be worn; the mode of dressing the hair; deportment and manners in general. You would agree with me?

Yes.

But there is, I think, small wisdom in legislating about such matters,—I doubt if it is ever done; nor are any precise written enactments about them likely to be lasting.

Impossible.

It would seem, Adeimantus, that the direction in which education starts a man, will determine his future life. Does not like always attract like?

To be sure.

Until some one rare and grand result is reached which may be good, and may be the reverse of good?

That is not to be denied.

And for this reason, I said, I shall not attempt to legislate further about them.

Naturally enough, he replied.

Well, and about the business of the agora, and the ordinary dealings between man and man, or again about agreements with artisans; about insult and injury, or the commencement of actions, and the appointment of juries, what would you say? there may also arise questions about any impositions and exactions of market and harbour dues which may be required, and in general about the regulations of markets, police, harbours, and the like. But, oh heavens! shall we condescend to legislate on any of these

particulars?

I think, he said, that there is no need to impose laws about them on good men; what regulations are necessary they will find out soon enough for themselves.

Yes, I said, my friend, if God will only preserve to them the laws which we have given them.

And without divine help, said Adeimantus, they will go on for ever making and mending their laws and their lives in the hope of attaining perfection.

You would compare them, I said, to those invalids who, having no self-restraint, will not leave off their habits of intemperance?

Exactly.

Yes, I said; and what a delightful life they lead! they are always doctoring and increasing and complicating their disorders, and always fancying that they will be cured by any nostrum which anybody advises them to try.

Such cases are very common, he said, with invalids of this sort.

Yes, I replied; and the charming thing is that they deem him their worst enemy who tells them the truth, which is simply that, unless they give up eating and drinking and wenching and idling, neither drug nor cautery nor spell nor amulet nor any other remedy will avail.

Charming! he replied. I see nothing charming in going into a passion with a man who tells you what is right.

These gentlemen, I said, do not seem to be in your good graces.

Assuredly not.

Nor would you praise the behaviour of States which act like the men whom I was just now describing. For are there not ill-ordered States in which the citizens are forbidden under pain of death to alter the constitution; and yet he who most sweetly courts those who live under this regime and indulges them and fawns upon them and is skilful in anticipating and gratifying their humours is held to be a great and good statesman—do not these States resemble the persons whom I was describing?

Yes, he said; the States are as bad as the men; and I am very far from praising them.

But do you not admire, I said, the coolness and dexterity of these ready ministers of political corruption?

Yes, he said, I do; but not of all of them, for there are some whom the applause of the multitude has deluded into the belief that they are really statesmen, and these are not much to be admired.

What do you mean? I said; you should have more feeling for them. When a man cannot measure, and a great many others who cannot measure declare that he is four cubits high, can he help believing what they say?

Nay, he said, certainly not in that case.

Well, then, do not be angry with them; for are they not as good as a play, trying their hand at paltry reforms such as I was describing; they are always fancying that by legislation they will make an end of frauds in contracts, and the other rascalities which I was mentioning, not knowing that they are in reality cutting off the heads of a hydra?

Yes, he said; that is just what they are doing.

I conceive, I said, that the true legislator will not trouble himself with this class of enactments whether concerning laws or the constitution either in an ill-ordered or in a well-ordered State; for in the former they are quite useless, and in the latter there will be no difficulty in devising them; and many of them will naturally flow out of our previous regulations.

What, then, he said, is still remaining to us of the work of legislation?

Nothing to us, I replied; but to Apollo, the God of Delphi, there remains the ordering of the greatest and noblest and chiefest things of all.

Which are they? he said.

The institution of temples and sacrifices, and the entire service of gods, demigods, and heroes; also the ordering of the repositories of the dead, and the rites which have to be observed by him who would propitiate the inhabitants of the world below. These are matters of which we are ignorant ourselves, and as founders of a city we should be unwise in trusting them to any interpreter but our ancestral deity. He is the god who sits in the centre, on the navel of the earth, and he is the interpreter of religion to all mankind.

You are right, and we will do as you propose.

But where, amid all this, is justice? son of Ariston, tell me where. Now that our city has been made habitable, light a candle and search, and get your brother and Polemarchus and the rest of our friends to help, and let us see where in it we can discover justice and where injustice, and in what they differ from one another, and which of them the man who would be happy should have for his portion, whether seen or unseen by gods and men.

Nonsense, said Glaucon: did you not promise to search yourself, saying that for you not to help justice in her need would be an impiety?

I do not deny that I said so, and as you remind me, I will be as good as my word; but you must join.

We will, he replied.

Well, then, I hope to make the discovery in this way: I mean to begin with the assumption that our State, if rightly ordered, is perfect.

That is most certain.

And being perfect, is therefore wise and valiant and temperate and just.

That is likewise clear.

And whichever of these qualities we find in the State, the one which is not found will be the residue?

Very good.

If there were four things, and we were searching for one of them, wherever it might be, the one sought for might be known to us from the first, and there would be no further trouble; or we might know the other three first, and then the fourth would clearly be the one left.

Very true, he said.

And is not a similar method to be pursued about the virtues, which are also four in number?

Clearly.

First among the virtues found in the State, wisdom comes into view, and in this I detect a certain peculiarity.

What is that?

The State which we have been describing is said to be wise as being good in counsel?

Very true.

And good counsel is clearly a kind of knowledge, for not by ignorance, but by knowledge, do men counsel well?

Clearly.

And the kinds of knowledge in a State are many and diverse?

Of course.

There is the knowledge of the carpenter; but is that the sort of knowledge which gives a city the title of wise and good in counsel?

Certainly not; that would only give a city the reputation of skill in carpentering.

Then a city is not to be called wise because possessing a knowledge which counsels for the best about wooden implements?

Certainly not.

Nor by reason of a knowledge which advises about brazen pots, I said, nor as possessing any other similar knowledge?

Not by reason of any of them, he said.

Nor yet by reason of a knowledge which cultivates the earth; that would give the city the name of agricultural?

Yes.

Well, I said, and is there any knowledge in our recently-founded State among any of the citizens which advises, not about any particular thing in the State, but about the whole, and considers how a State can best deal with itself and with other States?

There certainly is.

And what is this knowledge, and among whom is it found? I asked.

It is the knowledge of the guardians, he replied, and is found among those whom we were just now describing as perfect guardians.

And what is the name which the city derives from the possession of this sort of knowledge?

The name of good in counsel and truly wise.

And will there be in our city more of these true guardians or more smiths?

The smiths, he replied, will be far more numerous.

Will not the guardians be the smallest of all the classes who receive a name from the profession of some kind of knowledge?

Much the smallest.

And so by reason of the smallest part or class, and of the knowledge which resides in this presiding and ruling part of itself, the whole State, being thus constituted according to nature, will be wise; and this, which has the only knowledge worthy to be called wisdom, has been ordained by nature to be of all classes the least.

Most true.

Thus, then, I said, the nature and place in the State of one of the four virtues has somehow or other been discovered.

And, in my humble opinion, very satisfactorily discovered, he replied.

Again, I said, there is no difficulty in seeing the nature of courage, and in what part that quality resides which gives the name of courageous to the State.

How do you mean?

Why, I said, every one who calls any State courageous or cowardly, will be thinking of the part which fights and goes out to war on the State's behalf.

No one, he replied, would ever think of any other.

The rest of the citizens may be courageous or may be cowardly, but their courage or cowardice will not, as I conceive, have the effect of making the city either the one or the other.

Certainly not.

The city will be courageous in virtue of a portion of herself which preserves under all circumstances that opinion about the nature of things to be feared and not to be feared in which our legislator educated them; and this is what you term courage.

I should like to hear what you are saying once more, for I do not think that I perfectly understand you.

I mean that courage is a kind of salvation.

Salvation of what?

Of the opinion respecting things to be feared, what they are and of what nature, which the law implants through education; and I mean by the words ‘under all circumstances’ to intimate that in pleasure or in pain, or under the influence of desire or fear, a man preserves, and does not lose this opinion. Shall I give you an illustration?

If you please.

You know, I said, that dyers, when they want to dye wool for making the true sea-purple, begin by selecting their white colour first; this they prepare and dress with much care and pains, in order that the white ground may take the purple hue in full perfection. The dyeing then proceeds; and whatever is dyed in this manner becomes a fast colour, and no washing either with lyes or without them can take away the bloom. But, when the ground has not been duly prepared, you will have noticed how poor is the look either of purple or of any other colour.

Yes, he said; I know that they have a washed-out and ridiculous appearance.

Then now, I said, you will understand what our object was in selecting our soldiers, and educating them in music and gymnastic; we were contriving influences which would prepare them to take the dye of the laws in perfection, and the colour of their opinion about dangers and of every other opinion was to be indelibly fixed by their nurture and training, not to be washed away by such potent lyes as pleasure—mightier agent far in washing the soul than any soda or lye; or by sorrow, fear, and desire, the mightiest of all other solvents. And this sort of universal saving power of true opinion in conformity with law about real and false dangers I call and maintain to be courage, unless you disagree.

But I agree, he replied; for I suppose that you mean to exclude mere uninstructed courage, such as that of a wild beast or of a slave—this, in your opinion, is not the courage which the law ordains, and ought to have another name.

Most certainly.

Then I may infer courage to be such as you describe?

Why, yes, said I, you may, and if you add the words ‘of a citizen,’ you will not be far wrong;—hereafter, if you like, we will carry the examination further, but at present we are seeking not for courage but justice; and for the purpose of our enquiry we have said enough.

You are right, he replied.

Two virtues remain to be discovered in the State—first, temperance, and then justice which is the end of our search.

Very true.

Now, can we find justice without troubling ourselves about temperance?

I do not know how that can be accomplished, he said, nor do I desire that justice should be brought to light and temperance lost sight of; and therefore I wish that you would do me the favour of considering temperance first.

Certainly, I replied, I should not be justified in refusing your request.

Then consider, he said.

Yes, I replied; I will; and as far as I can at present see, the virtue of temperance has more of the nature of harmony and symphony than the preceding.

How so? he asked.

Temperance, I replied, is the ordering or controlling of certain pleasures and desires; this is curiously enough implied in the saying of ‘a man being his own master;’ and other traces of the same notion may be found in language.

No doubt, he said.

There is something ridiculous in the expression ‘master of himself;’ for the master is also the servant and the servant the master; and in all these modes of speaking the same person is denoted.

Certainly.

The meaning is, I believe, that in the human soul there is a better and also a worse principle; and when the better has the worse under control, then a man is said to be master of himself; and this is a term of praise: but when, owing to evil education or association, the better principle, which is also the smaller, is overwhelmed by the greater mass of the worse—in this case he is blamed and is called the slave of self and unprincipled.

Yes, there is reason in that.

And now, I said, look at our newly-created State, and there you will find one of these two conditions realized; for the State, as you will acknowledge, may be justly called master of itself, if the words ‘temperance’ and ‘self-mastery’ truly express the rule of the better part over the worse.

Yes, he said, I see that what you say is true.

Let me further note that the manifold and complex pleasures and desires and pains are generally found in children and women and servants, and in the freemen so called who are of the lowest and more numerous class.

Certainly, he said.

Whereas the simple and moderate desires which follow reason, and are under the guidance of mind and true opinion, are to be found only in a few, and those the best born and best educated.

Very true.

These two, as you may perceive, have a place in our State; and the meaner desires of the many are held down by the virtuous desires and wisdom of the few.

That I perceive, he said.

Then if there be any city which may be described as master of its own pleasures and desires, and master of itself, ours may claim such a designation?

Certainly, he replied.

It may also be called temperate, and for the same reasons?

Yes.

And if there be any State in which rulers and subjects will be agreed as to the question who are to rule, that again will be our State?

Undoubtedly.

And the citizens being thus agreed among themselves, in which class will temperance be found—in the rulers or in the subjects?

In both, as I should imagine, he replied.

Do you observe that we were not far wrong in our guess that temperance was a sort of harmony?

Why so?

Why, because temperance is unlike courage and wisdom, each of which resides in a part only, the one making the State wise and the other valiant; not so temperance, which extends to the whole, and runs through all the notes of the scale, and produces a harmony of the weaker and the stronger and the middle class, whether you suppose them to be stronger or weaker in wisdom or power or numbers or wealth, or anything else. Most truly then may we deem temperance to be the agreement of the naturally superior and inferior, as to the right to rule of either, both in states and individuals.

I entirely agree with you.

And so, I said, we may consider three out of the four virtues to have been discovered in our State. The last of those qualities which make a state virtuous must be justice, if we only knew what that was.

The inference is obvious.

The time then has arrived, Glaucon, when, like huntsmen, we should surround the cover, and look sharp that justice does not steal away, and pass out of sight and escape us; for beyond a doubt she is somewhere in this country: watch therefore and strive to catch a sight of her, and if you see her first, let me know.

Would that I could! but you should regard me rather as a follower who has just eyes enough to see what you show him—that is about as much as I am good for.

Offer up a prayer with me and follow.

I will, but you must show me the way.

Here is no path, I said, and the wood is dark and perplexing; still we must push on.

Let us push on.

Here I saw something: Halloo! I said, I begin to perceive a track, and I believe that the quarry will not escape.

Good news, he said.

Truly, I said, we are stupid fellows.

Why so?

Why, my good sir, at the beginning of our enquiry, ages ago, there was justice tumbling out at our feet, and we never saw her; nothing could be more ridiculous. Like people who go about looking for what they have in their hands—that was the way with us—we looked not at what we were seeking, but at what was far off in the distance; and therefore, I suppose, we missed her.

What do you mean?

I mean to say that in reality for a long time past we have been talking of justice, and have failed to recognise her.

I grow impatient at the length of your exordium.

Well then, tell me, I said, whether I am right or not: You remember the original principle which we were always laying down at the foundation of the State, that one man should practise one thing only, the thing to which his nature was best adapted;—now justice is this principle or a part of it.

Yes, we often said that one man should do one thing only.

Further, we affirmed that justice was doing one's own business, and not being a busybody; we said so again and again, and many others have said the same to us.

Yes, we said so.

Then to do one's own business in a certain way may be assumed to be justice. Can you tell me whence I derive this inference?

I cannot, but I should like to be told.

Because I think that this is the only virtue which remains in the State when the other virtues of temperance and courage and wisdom are abstracted; and, that this is the ultimate cause and condition of the existence of all of them, and while remaining in them is also their preservative; and we were saying that if the three were discovered by us, justice would be the fourth or remaining one.

That follows of necessity.

If we are asked to determine which of these four qualities by its presence contributes most to the excellence of the State, whether the agreement of rulers and subjects, or the preservation in the soldiers of the opinion which the law ordains about the true nature of dangers, or wisdom and watchfulness in the rulers, or whether this other which I am mentioning, and which is found in children and women, slave and freeman, artisan, ruler, subject,—the quality, I mean, of every one doing his own work, and not being a busybody, would claim the palm—the question is not so easily answered.

Certainly, he replied, there would be a difficulty in saying which.

Then the power of each individual in the State to do his own work appears to compete with the other political virtues, wisdom, temperance, courage.

Yes, he said.

And the virtue which enters into this competition is justice?

Exactly.

Let us look at the question from another point of view: Are not the rulers in a State those to whom you would entrust the office of determining suits at law?

Certainly.

And are suits decided on any other ground but that a man may neither take what is another's, nor be deprived of what is his own?

Yes; that is their principle.

Which is a just principle?

Yes.

Then on this view also justice will be admitted to be the having and doing what is a man's own, and belongs to him?

Very true.

Think, now, and say whether you agree with me or not. Suppose a carpenter to be doing the business of a cobbler, or a cobbler of a carpenter; and suppose them to exchange their implements or their duties, or the same person to be doing the work of both, or whatever be the change; do you think that any great harm would result to the State?

Not much.

But when the cobbler or any other man whom nature designed to be a trader, having his heart lifted up by wealth or strength or the number of his followers, or any like advantage, attempts to force his way into the class of warriors, or a warrior into that of legislators and guardians, for which he is unfitted, and either to take the implements or the duties of the other; or when one man is trader, legislator, and warrior all in one, then I think you will agree with me in saying that this interchange and this meddling of one with another is the ruin of the State.

Most true.

Seeing then, I said, that there are three distinct classes, any meddling of one with another, or the change of one into another, is the greatest harm to the State, and may be most justly termed evil-doing?

Precisely.

And the greatest degree of evil-doing to one's own city would be termed by you injustice?

Certainly.

This then is injustice; and on the other hand when the trader, the auxiliary, and the guardian each do their own business, that is justice, and will make the city just.

I agree with you.

We will not, I said, be over-positive as yet; but if, on trial, this conception of justice be verified in the individual as well as in the State, there will be no longer any room for doubt; if it be not verified, we must have a fresh enquiry. First let us complete the old investigation, which we began, as you remember, under the impression that, if we could previously examine justice on the larger scale, there would be less difficulty in discerning her in the individual. That larger example appeared to be the State, and accordingly we constructed as good a one as we could, knowing well that in the good State justice would be found. Let the discovery which we made be now applied to the individual—if they agree, we shall be satisfied; or, if there be a difference in the individual, we will come back to the State and have another trial of the theory. The friction of the two when rubbed together may

possibly strike a light in which justice will shine forth, and the vision which is then revealed we will fix in our souls.

That will be in regular course; let us do as you say.

I proceeded to ask: When two things, a greater and less, are called by the same name, are they like or unlike in so far as they are called the same?

Like, he replied.

The just man then, if we regard the idea of justice only, will be like the just State?

He will.

And a State was thought by us to be just when the three classes in the State severally did their own business; and also thought to be temperate and valiant and wise by reason of certain other affections and qualities of these same classes?

True, he said.

And so of the individual; we may assume that he has the same three principles in his own soul which are found in the State; and he may be rightly described in the same terms, because he is affected in the same manner?

Certainly, he said.

Once more then, O my friend, we have alighted upon an easy question—whether the soul has these three principles or not?

An easy question! Nay, rather, Socrates, the proverb holds that hard is the good.

Very true, I said; and I do not think that the method which we are employing is at all adequate to the accurate solution of this question; the true method is another and a longer one. Still we may arrive at a solution not below the level of the previous enquiry.

May we not be satisfied with that? he said;—under the circumstances, I am quite content.

I too, I replied, shall be extremely well satisfied.

Then faint not in pursuing the speculation, he said.

Must we not acknowledge, I said, that in each of us there are the same principles and habits which there are in the State; and that from the individual they pass into the State?—how else can they come there? Take the quality of passion or spirit;—it would be ridiculous to imagine that this quality, when found in States, is not derived from the individuals who are supposed to possess it, e.g. the Thracians, Scythians, and in general the northern nations; and the same may be said of the love of knowledge, which is the special characteristic of our part of the world, or of the love of money, which may, with equal truth, be attributed to the Phoenicians and Egyptians.

Exactly so, he said.

There is no difficulty in understanding this.

None whatever.

But the question is not quite so easy when we proceed to ask whether these principles are three or one; whether, that is to say, we learn with one part of our nature, are angry with another, and with a third part desire the satisfaction of our natural appetites; or whether the whole soul comes into play in each sort of action—to determine that is the difficulty.

Yes, he said; there lies the difficulty.

Then let us now try and determine whether they are the same or different.

How can we? he asked.

I replied as follows: The same thing clearly cannot act or be acted upon in the same part or in relation to the same thing at the same time, in contrary ways; and therefore whenever this contradiction occurs in things apparently the same, we know that they are really not the same, but different.

Good.

For example, I said, can the same thing be at rest and in motion at the same time in the same part?

Impossible.

Still, I said, let us have a more precise statement of terms, lest we should hereafter fall out by the way. Imagine the case of a man who is standing and also moving his hands and his head, and suppose a person to say that one and the same person is in motion and at rest at the same moment—to such a mode of speech we should object, and should rather say that one part of him is in motion while another is at rest.

Very true.

And suppose the objector to refine still further, and to draw the nice distinction that not only parts of tops, but whole tops, when they spin round with their pegs fixed on the spot, are at rest and in motion at the same time (and he may say the same of anything which revolves in the same spot), his objection would not be admitted by us, because in such cases things are not at rest and in motion in the same parts of themselves; we should rather say that they have both an axis and a circumference, and that the axis stands still, for there is no deviation from the perpendicular; and that the circumference goes round. But if, while revolving, the axis inclines either to the right or left, forwards or backwards, then in no point of view can they be at rest.

That is the correct mode of describing them, he replied.

Then none of these objections will confuse us, or incline us to believe that the same thing at the same time, in the same part or in relation to the same thing, can act or be acted upon in contrary ways.

Certainly not, according to my way of thinking.

Yet, I said, that we may not be compelled to examine all such objections, and prove at length that they are untrue, let us assume their absurdity, and go forward on the understanding that hereafter, if this assumption turn out to be untrue, all the consequences which follow shall be withdrawn.

Yes, he said, that will be the best way.

Well, I said, would you not allow that assent and dissent, desire and aversion, attraction and repulsion, are all of them opposites, whether they are regarded as active or passive (for that makes no difference in the fact of their opposition)?

Yes, he said, they are opposites.

Well, I said, and hunger and thirst, and the desires in general, and again willing and wishing,—all these you would refer to the classes already mentioned. You would say—would you not?—that the soul of him who desires is seeking after the object of his desire; or that he is drawing to himself the thing which he wishes to possess: or again, when a person wants anything to be given him, his mind, longing for the realization of his desire, intimates his wish to have it by a nod of assent, as if he had been asked a question?

Very true.

And what would you say of unwillingness and dislike and the absence of desire; should not these be referred to the opposite class of repulsion and rejection?

Certainly.

Admitting this to be true of desire generally, let us suppose a particular class of desires, and out of these we will select hunger and thirst, as they are termed, which are the most obvious of them?

Let us take that class, he said.

The object of one is food, and of the other drink?

Yes.

And here comes the point: is not thirst the desire which the soul has of drink, and of drink only; not of drink qualified by anything else; for example, warm or cold, or much or little, or, in a word, drink of any particular sort: but if the thirst be accompanied by heat, then the desire is of cold drink; or, if accompanied by cold, then of warm drink; or, if the thirst be excessive, then the drink which is desired will be excessive; or, if not great, the quantity of drink will also be small: but thirst pure and simple will desire drink pure and simple, which is the natural satisfaction of thirst, as food is of hunger?

Yes, he said; the simple desire is, as you say, in every case of the simple object, and the qualified desire of the qualified object.

But here a confusion may arise; and I should wish to guard against an opponent starting up and saying that no man desires drink only, but good drink, or food only, but good food; for good is the universal object of desire, and thirst being a desire, will necessarily be thirst after good drink; and the same is true of every other desire.

Yes, he replied, the opponent might have something to say.

Nevertheless I should still maintain, that of relatives some have a quality at

THE TRAGEDY OF ROMEO AND JULIET

by William Shakespeare

Contents

THE PROLOGUE.

ACT I Scene I. A public place. Scene II. A Street. Scene III. Room in Capulet’s House. Scene IV. A Street. Scene V. A Hall in Capulet’s House.

ACT II CHORUS. Scene I. An open place adjoining Capulet’s Garden. Scene II. Capulet’s Garden. Scene III. Friar Lawrence’s Cell. Scene IV. A Street. Scene V. Capulet’s Garden. Scene VI. Friar Lawrence’s Cell.

ACT III Scene I. A public Place. Scene II. A Room in Capulet’s House. Scene III. Friar Lawrence’s cell. Scene IV. A Room in Capulet’s House. Scene V. An open Gallery to Juliet’s Chamber, overlooking the Garden.

ACT IV Scene I. Friar Lawrence’s Cell. Scene II. Hall in Capulet’s House. Scene III. Juliet’s Chamber. Scene IV. Hall in Capulet’s House. Scene V. Juliet’s Chamber; Juliet on the bed.

ACT V Scene I. Mantua. A Street. Scene II. Friar Lawrence’s Cell. Scene III. A churchyard; in it a Monument belonging to the Capulets.

Dramatis Personæ

ESCALUS, Prince of Verona. MERCUTIO, kinsman to the Prince, and friend to Romeo. PARIS, a young Nobleman, kinsman to the Prince. Page to Paris.

MONTAGUE, head of a Veronese family at feud with the Capulets. LADY MONTAGUE, wife to Montague. ROMEO, son to Montague. BENVOLIO, nephew to Montague, and friend to Romeo. ABRAM, servant to Montague. BALTHASAR, servant to Romeo.

CAPULET, head of a Veronese family at feud with the Montagues. LADY CAPULET, wife to Capulet. JULIET, daughter to Capulet. TYBALT, nephew to Lady Capulet. CAPULET’S COUSIN, an old man. NURSE to Juliet. PETER, servant to Juliet’s Nurse. SAMPSON, servant to Capulet. GREGORY, servant to Capulet. Servants.

FRIAR LAWRENCE, a Franciscan. FRIAR JOHN, of the same Order. An Apothecary. CHORUS. Three Musicians. An Officer. Citizens of Verona; several Men and Women, relations to both houses; Maskers, Guards, Watchmen and Attendants.

SCENE. During the greater part of the Play in Verona; once, in the Fifth Act, at Mantua.

THE PROLOGUE

Enter Chorus.

CHORUS. Two households, both alike in dignity, In fair Verona, where we lay our scene, From ancient grudge break to new mutiny, Where civil blood makes civil hands unclean. From forth the fatal loins of these two foes A pair of star-cross’d lovers take their life; Whose misadventur’d piteous overthrows Doth with their death bury their parents’ strife. The fearful passage of their death-mark’d love, And the continuance of their parents’ rage, Which, but their children’s end, nought could remove, Is now the two hours’ traffic of our stage; The which, if you with patient ears attend, What here shall miss, our toil shall strive to mend.

[_Exit._]

ACT I

SCENE I. A public place.

Enter Sampson and Gregory armed with swords and bucklers.

SAMPSON. Gregory, on my word, we'll not carry coals.

GREGORY. No, for then we should be colliers.

SAMPSON. I mean, if we be in choler, we'll draw.

GREGORY. Ay, while you live, draw your neck out o' the collar.

SAMPSON. I strike quickly, being moved.

GREGORY. But thou art not quickly moved to strike.

SAMPSON. A dog of the house of Montague moves me.

GREGORY. To move is to stir; and to be valiant is to stand: therefore, if thou art moved, thou runn'st away.

SAMPSON. A dog of that house shall move me to stand. I will take the wall of any man or maid of Montague's.

GREGORY. That shows thee a weak slave, for the weakest goes to the wall.

SAMPSON. True, and therefore women, being the weaker vessels, are ever thrust to the wall: therefore I will push Montague's men from the wall, and thrust his maids to the wall.

GREGORY. The quarrel is between our masters and us their men.

SAMPSON. 'Tis all one, I will show myself a tyrant: when I have fought with the men I will be civil with the maids, I will cut off their heads.

GREGORY. The heads of the maids?

SAMPSON. Ay, the heads of the maids, or their maidenheads; take it in what sense thou wilt.

GREGORY. They must take it in sense that feel it.

SAMPSON. Me they shall feel while I am able to stand: and 'tis known I am a pretty piece of flesh.

GREGORY. 'Tis well thou art not fish; if thou hadst, thou hadst been poor John. Draw thy tool; here comes of the house of Montagues.

Enter Abram and Balthasar.

SAMPSON. My naked weapon is out: quarrel, I will back thee.

GREGORY. How? Turn thy back and run?

SAMPSON. Fear me not.

GREGORY. No, marry; I fear thee!

SAMPSON. Let us take the law of our sides; let them begin.

GREGORY. I will frown as I pass by, and let them take it as they list.

SAMPSON. Nay, as they dare. I will bite my thumb at them, which is disgrace to them if they bear it.

ABRAM. Do you bite your thumb at us, sir?

SAMPSON. I do bite my thumb, sir.

ABRAM. Do you bite your thumb at us, sir?

SAMPSON. Is the law of our side if I say ay?

GREGORY. No.

SAMPSON. No sir, I do not bite my thumb at you, sir; but I bite my thumb, sir.

GREGORY. Do you quarrel, sir?

ABRAM. Quarrel, sir? No, sir.

SAMPSON. But if you do, sir, I am for you. I serve as good a man as you.

ABRAM. No better.

SAMPSON. Well, sir.

Enter Benvolio.

GREGORY. Say better; here comes one of my master's kinsmen.

SAMPSON. Yes, better, sir.

ABRAM. You lie.

SAMPSON. Draw, if you be men. Gregory, remember thy washing blow.

[_They fight._]

BENVOLIO. Part, fools! put up your swords, you know not what you do.

[_Beats down their swords._]

Enter Tybalt.

TYBALT. What, art thou drawn among these heartless hinds? Turn thee Benvolio, look upon thy death.

BENVOLIO. I do but keep the peace, put up thy sword, Or manage it to part these men with me.

TYBALT. What, drawn, and talk of peace? I hate the word As I hate hell, all Montagues, and thee: Have at thee, coward.

[_They fight._]

Enter three or four Citizens with clubs.

FIRST CITIZEN. Clubs, bills and partisans! Strike! Beat them down! Down with the Capulets! Down with the Montagues!

Enter Capulet in his gown, and Lady Capulet.

CAPULET. What noise is this? Give me my long sword, ho!

LADY CAPULET. A crutch, a crutch! Why call you for a sword?

CAPULET. My sword, I say! Old Montague is come, And flourishes his blade in spite of me.

Enter Montague and his Lady Montague.

MONTAGUE. Thou villain Capulet! Hold me not, let me go.

LADY MONTAGUE. Thou shalt not stir one foot to seek a foe.

Enter Prince Escalus, with Attendants.

PRINCE. Rebellious subjects, enemies to peace, Profaners of this neighbour-stained steel,— Will they not hear? What, ho! You men, you beasts, That quench the fire of your pernicious rage With purple fountains issuing from your veins, On pain of torture,

from those bloody hands Throw your mistemper'd weapons to the ground And hear the sentence of your moved prince. Three civil brawls, bred of an airy word, By thee, old Capulet, and Montague, Have thrice disturb'd the quiet of our streets, And made Verona's ancient citizens Cast by their grave beseeming ornaments, To wield old partisans, in hands as old, Canker'd with peace, to part your canker'd hate. If ever you disturb our streets again, Your lives shall pay the forfeit of the peace. For this time all the rest depart away: You, Capulet, shall go along with me, And Montague, come you this afternoon, To know our farther pleasure in this case, To old Free-town, our common judgement-place. Once more, on pain of death, all men depart.

[_Exeunt Prince and Attendants; Capulet, Lady Capulet, Tybalt, Citizens and Servants._]

MONTAGUE. Who set this ancient quarrel new abroach? Speak, nephew, were you by when it began?

BENVOLIO. Here were the servants of your adversary And yours, close fighting ere I did approach. I drew to part them, in the instant came The fiery Tybalt, with his sword prepar'd, Which, as he breath'd defiance to my ears, He swung about his head, and cut the winds, Who nothing hurt withal, hiss'd him in scorn. While we were interchanging thrusts and blows Came more and more, and fought on part and part, Till the Prince came, who parted either part.

LADY MONTAGUE. O where is Romeo, saw you him today? Right glad I am he was not at this fray.

BENVOLIO. Madam, an hour before the worshipp'd sun Peer'd forth the golden window of the east, A troubled mind drave me to walk abroad, Where underneath the grove of sycamore That westward rooteth from this city side, So early walking did I see your son. Towards him I made, but he was ware of me, And stole into the covert of the wood. I, measuring his affections by my own, Which then most sought where most might not be found, Being one too many by my weary self, Pursu'd my humour, not pursuing his, And gladly shunn'd who gladly fled from me.

MONTAGUE. Many a morning hath he there been seen, With tears augmenting the fresh morning's dew, Adding to clouds more clouds with his deep sighs; But all so soon as the all-cheering sun Should in the farthest east begin to draw The shady curtains from Aurora's bed, Away from light steals home my heavy son, And private in his chamber pens himself, Shuts up his windows, locks fair daylight out And makes himself an artificial night. Black and portentous must this humour prove, Unless good counsel may the cause remove.

BENVOLIO. My noble uncle, do you know the cause?

MONTAGUE. I neither know it nor can learn of him.

BENVOLIO. Have you importun'd him by any means?

MONTAGUE. Both by myself and many other friends; But he, his own affections' counsellor, Is to himself—I will not say how true— But to himself so secret and so close, So far from sounding and discovery, As is the bud bit with an envious worm Ere he can spread his sweet leaves to the air, Or dedicate his beauty to the sun. Could we but learn from whence his sorrows grow, We would as willingly give cure as know.

Enter Romeo.

BENVOLIO. See, where he comes. So please you step aside; I'll know his grievance or be much denied.

MONTAGUE. I would thou wert so happy by thy stay To hear true shrift. Come, madam, let's away,

[_Exeunt Montague and Lady Montague._]

BENVOLIO. Good morrow, cousin.

ROMEO. Is the day so young?

BENVOLIO. But new struck nine.

ROMEO. Ay me, sad hours seem long. Was that my father that went hence so fast?

BENVOLIO. It was. What sadness lengthens Romeo's hours?

ROMEO. Not having that which, having, makes them short.

BENVOLIO. In love?

ROMEO. Out.

BENVOLIO. Of love?

ROMEO. Out of her favour where I am in love.

BENVOLIO. Alas that love so gentle in his view, Should be so tyrannous and rough in proof.

ROMEO. Alas that love, whose view is muffled still, Should, without eyes, see pathways to his will! Where shall we dine? O me! What fray was here? Yet tell me not, for I have heard it all. Here's much to do with hate, but more with love: Why, then, O brawling love! O loving hate! O anything, of nothing first create! O heavy lightness! serious vanity! Misshapen chaos of well-seeming forms! Feather of lead, bright smoke, cold fire, sick health! Still-waking sleep, that is not what it is! This love feel I, that feel no love in this. Dost thou not laugh?

BENVOLIO. No coz, I rather weep.

ROMEO. Good heart, at what?

BENVOLIO. At thy good heart's oppression.

ROMEO. Why such is love's transgression. Griefs of mine own lie heavy in my breast, Which thou wilt propagate to have it prest With more of thine. This love that thou hast shown Doth add more grief to too much of mine own. Love is a smoke made with the fume of sighs; Being purg'd, a fire sparkling in lovers' eyes; Being vex'd, a sea nourish'd with lovers' tears: What is it else? A madness most discreet, A choking gall, and a preserving sweet. Farewell, my coz.

[_Going._]

BENVOLIO. Soft! I will go along: And if you leave me so, you do me wrong.

ROMEO. Tut! I have lost myself; I am not here. This is not Romeo, he's some other where.

BENVOLIO. Tell me in sadness who is that you love?

ROMEO. What, shall I groan and tell thee?

BENVOLIO. Groan! Why, no; but sadly tell me who.

ROMEO. Bid a sick man in sadness make his will, A word ill urg'd to one that is so ill. In sadness, cousin, I do love a woman.

BENVOLIO. I aim'd so near when I suppos'd you lov'd.

ROMEO. A right good markman, and she's fair I love.

BENVOLIO. A right fair mark, fair coz, is soonest hit.

ROMEO. Well, in that hit you miss: she'll not be hit With Cupid's arrow, she hath Dian's wit; And in strong proof of chastity well arm'd, From love's weak childish bow she lives uncharm'd. She will not stay the siege of loving terms Nor bide th'encounter of assailing eyes, Nor ope her lap to saint-seducing gold: O she's rich in beauty, only poor That when she dies, with beauty dies her store.

BENVOLIO. Then she hath sworn that she will still live chaste?

ROMEO. She hath, and in that sparing makes huge waste; For beauty starv'd with her severity, Cuts beauty off from all posterity. She is too fair, too wise; wisely too fair, To merit bliss by making me despair. She hath forsworn to love, and in that vow Do I live dead, that live to tell it now.

BENVOLIO. Be rul'd by me, forget to think of her.

ROMEO. O teach me how I should forget to think.

BENVOLIO. By giving liberty unto thine eyes; Examine other beauties.

ROMEO. ’Tis the way To call hers, exquisite, in question more. These happy masks that kiss fair ladies’ brows, Being black, puts us in mind they hide the fair; He that is strucken blind cannot forget The precious treasure of his eyesight lost. Show me a mistress that is passing fair, What doth her beauty serve but as a note Where I may read who pass’d that passing fair? Farewell, thou canst not teach me to forget.

BENVOLIO. I’ll pay that doctrine, or else die in debt.

[_Exeunt._]

SCENE II. A Street.

Enter Capulet, Paris and Servant.

CAPULET. But Montague is bound as well as I, In penalty alike; and ’tis not hard, I think, For men so old as we to keep the peace.

PARIS. Of honourable reckoning are you both, And pity ’tis you liv’d at odds so long. But now my lord, what say you to my suit?

CAPULET. But saying o’er what I have said before. My child is yet a stranger in the world, She hath not seen the change of fourteen years; Let two more summers wither in their pride Ere we may think her ripe to be a bride.

PARIS. Younger than she are happy mothers made.

CAPULET. And too soon marr’d are those so early made. The earth hath swallowed all my hopes but she, She is the hopeful lady of my earth: But woo her, gentle Paris, get her heart, My will to her consent is but a part; And she agree, within her scope of choice Lies my consent and fair according voice. This night I hold an old accustom’d feast, Whereto I have invited many a guest, Such as I love, and you among the store, One more, most welcome, makes my number more. At my poor house look to behold this night Earth-treading stars that make dark heaven light: Such comfort as do lusty young men feel When well apparell’d April on the heel Of limping winter treads, even such delight Among fresh female buds shall you this night Inherit at my house. Hear all, all see, And like her most whose merit most shall be: Which, on more view of many, mine, being one, May stand in number, though in reckoning none. Come, go with me. Go, sirrah, trudge about Through fair Verona; find those persons out Whose names are written there, [_gives a paper_] and to them say, My house and welcome on their pleasure stay.

[_Exeunt Capulet and Paris._]

SERVANT. Find them out whose names are written here! It is written that the shoemaker should meddle with his yard and the tailor with his last, the fisher with his pencil, and the painter with his nets; but I am sent to find those persons whose names are here writ, and can never find what names the writing person hath here writ. I must to the learned. In good time!

Enter Benvolio and Romeo.

BENVOLIO. Tut, man, one fire burns out another’s burning, One pain is lessen’d by another’s anguish; Turn giddy, and be holp by backward turning; One desperate grief cures with another’s languish: Take thou some new infection to thy eye, And the rank poison of the old will die.

ROMEO. Your plantain leaf is excellent for that.

BENVOLIO. For what, I pray thee?

ROMEO. For your broken shin.

BENVOLIO. Why, Romeo, art thou mad?

ROMEO. Not mad, but bound more than a madman is: Shut up in prison, kept without my food, Whipp’d and tormented and—God-den, good fellow.

SERVANT. God gi’ go-den. I pray, sir, can you read?

ROMEO. Ay, mine own fortune in my misery.

SERVANT. Perhaps you have learned it without book. But I pray, can you read anything you see?

ROMEO. Ay, If I know the letters and the language.

SERVANT. Ye say honestly, rest you merry!

ROMEO. Stay, fellow; I can read.

[_He reads the letter._]

_Signior Martino and his wife and daughters; County Anselmo and his beauteous sisters; The lady widow of Utruvio; Signior Placentio and his lovely nieces; Mercutio and his brother Valentine; Mine uncle Capulet, his wife, and daughters; My fair niece Rosaline and Livia; Signior Valentio and his cousin Tybalt; Lucio and the lively Helena. _

A fair assembly. [_Gives back the paper_] Whither should they come?

SERVANT. Up.

ROMEO. Whither to supper?

SERVANT. To our house.

ROMEO. Whose house?

SERVANT. My master's.

ROMEO. Indeed I should have ask'd you that before.

SERVANT. Now I'll tell you without asking. My master is the great rich Capulet, and if you be not of the house of Montagues, I pray come and crush a cup of wine. Rest you merry.

[_Exit._]

BENVOLIO. At this same ancient feast of Capulet's Sups the fair Rosaline whom thou so lov'st; With all the admired beauties of Verona. Go thither and with unattainted eye, Compare her face with some that I shall show, And I will make thee think thy swan a crow.

ROMEO. When the devout religion of mine eye Maintains such falsehood, then turn tears to fire; And these who, often drown'd, could never die, Transparent heretics, be burnt for liars. One fairer than my love? The all-seeing sun Ne'er saw her match since first the world begun.

BENVOLIO. Tut, you saw her fair, none else being by, Herself pois'd with herself in either eye: But in that crystal scales let there be weigh'd Your lady's love against some other maid That I will show you shining at this feast, And she shall scant show well that now shows best.

ROMEO. I'll go along, no such sight to be shown, But to rejoice in splendour of my own.

[_Exeunt._]

SCENE III. Room in Capulet's House.

Enter Lady Capulet and Nurse.

LADY CAPULET. Nurse, where's my daughter? Call her forth to me.

NURSE. Now, by my maidenhead, at twelve year old, I bade her come. What, lamb! What ladybird! God forbid! Where's this girl? What, Juliet!

Enter Juliet.

JULIET. How now, who calls?

NURSE. Your mother.

JULIET. Madam, I am here. What is your will?

LADY CAPULET. This is the matter. Nurse, give leave awhile, We must talk in secret. Nurse, come back again, I have remember'd me, thou's hear our counsel. Thou knowest my daughter's of a pretty age.

NURSE. Faith, I can tell her age unto an hour.

LADY CAPULET. She's not fourteen.

NURSE. I'll lay fourteen of my teeth, And yet, to my teen be it spoken, I have but four, She is not fourteen. How long is it now To Lammas-tide?

LADY CAPULET. A fortnight and odd days.

NURSE. Even or odd, of all days in the year, Come Lammas Eve at night shall she be fourteen. Susan and she,—God rest all Christian souls!— Were of an age. Well, Susan is with God; She was too good for me. But as I said, On Lammas Eve at night shall she be fourteen; That shall she, marry; I remember it well. 'Tis since the earthquake now eleven years; And she was wean'd,—I never shall forget it—, Of all the days of the year, upon that day: For I had then laid wormwood to my dug, Sitting in the sun under the dovehouse wall; My lord and you were then at Mantua: Nay, I do bear a brain. But as I said, When it did taste the wormwood on the nipple Of my dug and felt it bitter, pretty fool, To see it tetchy, and fall out with the dug! Shake, quoth the dovehouse: 'twas no need, I trow, To bid me trudge. And since that time it is eleven years; For then she could stand alone; nay, by th'rood She could have run and waddled all about; For even the day before she broke her brow, And then my husband,—God be with his soul! A was a merry man,—took up the child: 'Yea,' quoth he, 'dost thou fall upon thy face? Thou wilt fall backward when thou hast more wit; Wilt thou not, Jule?' and, by my holidame, The pretty wretch left crying, and said 'Ay'. To see now how a jest shall come about. I warrant, and I should live a thousand years, I never should forget it. 'Wilt thou not, Jule?' quoth he; And, pretty fool, it stinted, and said 'Ay.'

LADY CAPULET. Enough of this; I pray thee hold thy peace.

NURSE. Yes, madam, yet I cannot choose but laugh, To think it should leave crying, and say 'Ay'; And yet I warrant it had upon it brow A bump as big as a young cockerel's stone; A perilous knock, and it cried bitterly. 'Yea,' quoth my husband, 'fall'st upon thy face? Thou wilt fall backward when thou comest to age; Wilt thou not, Jule?' it stinted, and said 'Ay'.

JULIET. And stint thou too, I pray thee, Nurse, say I.

NURSE. Peace, I have done. God mark thee to his grace Thou wast the prettiest babe that e'er I nurs'd: And I might live to see thee married once, I have my wish.

LADY CAPULET. Marry, that marry is the very theme I came to talk of. Tell me, daughter Juliet, How stands your disposition to be married?

JULIET. It is an honour that I dream not of.

NURSE. An honour! Were not I thine only nurse, I would say thou hadst suck'd wisdom from thy teat.

LADY CAPULET. Well, think of marriage now: younger than you, Here in Verona, ladies of esteem, Are made already mothers. By my count I was your mother much upon these years That you are now a maid. Thus, then, in brief; The valiant Paris seeks you for his love.

NURSE. A man, young lady! Lady, such a man As all the world—why he's a man of wax.

LADY CAPULET. Verona's summer hath not such a flower.

NURSE. Nay, he's a flower, in faith a very flower.

LADY CAPULET. What say you, can you love the gentleman? This night you shall behold him at our feast; Read o'er the volume of young Paris' face, And find delight writ there with beauty's pen. Examine every married lineament, And see how one another lends content; And what obscur'd in this fair volume lies, Find written in the margent of his eyes. This precious book of love, this unbound lover, To beautify him, only lacks a cover: The fish lives in the sea; and 'tis much pride For fair without the fair within to hide. That book in many's eyes doth share the glory, That in gold clasps locks in the golden story; So shall you share all that he doth possess, By having him, making yourself no less.

NURSE. No less, nay bigger. Women grow by men.

LADY CAPULET. Speak briefly, can you like of Paris' love?

JULIET. I'll look to like, if looking liking move: But no more deep will I endart mine eye Than your consent gives strength to make it fly.

Enter a Servant.

SERVANT. Madam, the guests are come, supper served up, you called, my young lady asked for, the Nurse cursed in the pantry, and everything in extremity. I must hence to wait, I beseech you follow straight.

LADY CAPULET. We follow thee.

[_Exit Servant._]

Juliet, the County stays.

NURSE. Go, girl, seek happy nights to happy days.

[_Exeunt._]

SCENE IV. A Street.

Enter Romeo, Mercutio, Benvolio, with five or six Maskers; Torch-bearers and others.

ROMEO. What, shall this speech be spoke for our excuse? Or shall we on without apology?

BENVOLIO. The date is out of such prolixity: We'll have no Cupid hoodwink'd with a scarf, Bearing a Tartar's painted bow of lath, Scaring the ladies like a crow-keeper; Nor no without-book prologue, faintly spoke After the prompter, for our entrance: But let them measure us by what they will, We'll measure them a measure, and be gone.

ROMEO. Give me a torch, I am not for this ambling; Being but heavy I will bear the light.

MERCUTIO. Nay, gentle Romeo, we must have you dance.

ROMEO. Not I, believe me, you have dancing shoes, With nimble soles, I have a soul of lead So stakes me to the ground I cannot move.

MERCUTIO. You are a lover, borrow Cupid's wings, And soar with them above a common bound.

ROMEO. I am too sore enpierced with his shaft To soar with his light feathers, and so bound, I cannot bound a pitch above dull woe. Under love's heavy burden do I sink.

MERCUTIO. And, to sink in it, should you burden love; Too great oppression for a tender thing.

ROMEO. Is love a tender thing? It is too rough, Too rude, too boisterous; and it pricks like thorn.

MERCUTIO. If love be rough with you, be rough with love; Prick love for pricking, and you beat love down. Give me a case to put my visage in: [_Putting on a mask._] A visor for a visor. What care I What curious eye doth quote deformities? Here are the beetle-brows shall blush for me.

BENVOLIO. Come, knock and enter; and no sooner in But every man betake him to his legs.

ROMEO. A torch for me: let wantons, light of heart, Tickle the senseless rushes with their heels; For I am proverb'd with a grandsire phrase, I'll be a candle-holder and look on, The game was ne'er so fair, and I am done.

MERCUTIO. Tut, dun's the mouse, the constable's own word: If thou art dun, we'll draw thee from the mire Or save your reverence love, wherein thou stickest Up to the ears. Come, we burn daylight, ho.

ROMEO. Nay, that's not so.

MERCUTIO. I mean sir, in delay We waste our lights in vain, light lights by day. Take our good meaning, for our judgment sits Five times in that ere once in our five wits.

ROMEO. And we mean well in going to this mask; But ’tis no wit to go.

MERCUTIO. Why, may one ask?

ROMEO. I dreamt a dream tonight.

MERCUTIO. And so did I.

ROMEO. Well what was yours?

MERCUTIO. That dreamers often lie.

ROMEO. In bed asleep, while they do dream things true.

MERCUTIO. O, then, I see Queen Mab hath been with you. She is the fairies’ midwife, and she comes In shape no bigger than an agate-stone On the fore-finger of an alderman, Drawn with a team of little atomies Over men’s noses as they lie asleep: Her waggon-spokes made of long spinners’ legs; The cover, of the wings of grasshoppers; Her traces, of the smallest spider’s web; The collars, of the moonshine’s watery beams; Her whip of cricket’s bone; the lash, of film; Her waggoner, a small grey-coated gnat, Not half so big as a round little worm Prick’d from the lazy finger of a maid: Her chariot is an empty hazelnut, Made by the joiner squirrel or old grub, Time out o’ mind the fairies’ coachmakers. And in this state she gallops night by night Through lovers’ brains, and then they dream of love; O’er courtiers’ knees, that dream on curtsies straight; O’er lawyers’ fingers, who straight dream on fees; O’er ladies’ lips, who straight on kisses dream, Which oft the angry Mab with blisters plagues, Because their breaths with sweetmeats tainted are: Sometime she gallops o’er a courtier’s nose, And then dreams he of smelling out a suit; And sometime comes she with a tithe-pig’s tail, Tickling a parson’s nose as a lies asleep, Then dreams he of another benefice: Sometime she driveth o’er a soldier’s neck, And then dreams he of cutting foreign throats, Of breaches, ambuscados, Spanish blades, Of healths five fathom deep; and then anon Drums in his ear, at which he starts and wakes; And, being thus frighted, swears a prayer or two, And sleeps again. This is that very Mab That plats the manes of horses in the night; And bakes the elf-locks in foul sluttish hairs, Which, once untangled, much misfortune bodes: This is the hag, when maids lie on their backs, That presses them, and learns them first to bear, Making them women of good carriage: This is she,—

ROMEO. Peace, peace, Mercutio, peace, Thou talk’st of nothing.

MERCUTIO. True, I talk of dreams, Which are the children of an idle brain, Begot of nothing but vain fantasy, Which is as thin of substance as the air, And more inconstant than the wind, who woos Even now the frozen bosom of the north, And, being anger’d, puffs away from thence, Turning his side to the dew-dropping south.

BENVOLIO. This wind you talk of blows us from ourselves: Supper is done, and we shall come too late.

ROMEO. I fear too early: for my mind misgives Some consequence yet hanging in the stars, Shall bitterly begin his fearful date With this night’s revels; and expire the term Of a despised life, clos’d in my breast By some vile forfeit of untimely death. But he that hath the steerage of my course Direct my suit. On, lusty gentlemen!

BENVOLIO. Strike, drum.

[_Exeunt._]

SCENE V. A Hall in Capulet’s House.

Musicians waiting. Enter Servants.

FIRST SERVANT. Where’s Potpan, that he helps not to take away? He shift a trencher! He scrape a trencher!

SECOND SERVANT. When good manners shall lie all in one or two men’s hands, and they unwash’d too, ’tis a foul thing.

FIRST SERVANT. Away with the join-stools, remove the court-cupboard, look to the plate. Good thou, save me a piece of marchpane; and as thou loves me, let the porter let in Susan Grindstone and Nell. Antony and Potpan!

SECOND SERVANT. Ay, boy, ready.

FIRST SERVANT. You are looked for and called for, asked for and sought for, in the great chamber.

SECOND SERVANT. We cannot be here and there too. Cheerly, boys. Be brisk awhile, and the longer liver take all.

[_Exeunt._]

Enter Capulet, &c. with the Guests and Gentlewomen to the Maskers.

CAPULET. Welcome, gentlemen, ladies that have their toes Unplagu'd with corns will have a bout with you. Ah my mistresses, which of you all Will now deny to dance? She that makes dainty, She I'll swear hath corns. Am I come near ye now? Welcome, gentlemen! I have seen the day That I have worn a visor, and could tell A whispering tale in a fair lady's ear, Such as would please; 'tis gone, 'tis gone, 'tis gone, You are welcome, gentlemen! Come, musicians, play. A hall, a hall, give room! And foot it, girls.

[_Music plays, and they dance._]

More light, you knaves; and turn the tables up, And quench the fire, the room is grown too hot. Ah sirrah, this unlook'd-for sport comes well. Nay sit, nay sit, good cousin Capulet, For you and I are past our dancing days; How long is't now since last yourself and I Were in a mask?

CAPULET'S COUSIN. By'r Lady, thirty years.

CAPULET. What, man, 'tis not so much, 'tis not so much: 'Tis since the nuptial of Lucentio, Come Pentecost as quickly as it will, Some five and twenty years; and then we mask'd.

CAPULET'S COUSIN. 'Tis more, 'tis more, his son is elder, sir; His son is thirty.

CAPULET. Will you tell me that? His son was but a ward two years ago.

ROMEO. What lady is that, which doth enrich the hand Of yonder knight?

SERVANT. I know not, sir.

ROMEO. O, she doth teach the torches to burn bright! It seems she hangs upon the cheek of night As a rich jewel in an Ethiop's ear; Beauty too rich for use, for earth too dear! So shows a snowy dove trooping with crows As yonder lady o'er her fellows shows. The measure done, I'll watch her place of stand, And touching hers, make blessed my rude hand. Did my heart love till now? Forswear it, sight! For I ne'er saw true beauty till this night.

TYBALT. This by his voice, should be a Montague. Fetch me my rapier, boy. What, dares the slave Come hither, cover'd with an antic face, To fleer and scorn at our solemnity? Now by the stock and honour of my kin, To strike him dead I hold it not a sin.

CAPULET. Why how now, kinsman! Wherefore storm you so?

TYBALT. Uncle, this is a Montague, our foe; A villain that is hither come in spite, To scorn at our solemnity this night.

CAPULET. Young Romeo, is it?

TYBALT. 'Tis he, that villain Romeo.

CAPULET. Content thee, gentle coz, let him alone, A bears him like a portly gentleman; And, to say truth, Verona brags of him To be a virtuous and well-govern'd youth. I would not for the wealth of all the town Here in my house do him disparagement. Therefore be patient, take no note of him, It is my will; the which if thou respect, Show a fair presence and put off these frowns, An ill-beseeming semblance for a feast.

TYBALT. It fits when such a villain is a guest: I'll not endure him.

CAPULET. He shall be endur'd. What, goodman boy! I say he shall, go to; Am I the master here, or you? Go to. You'll not endure him! God shall mend my soul, You'll make a mutiny among my guests! You will set cock-a-hoop, you'll be the man!

TYBALT. Why, uncle, 'tis a shame.

CAPULET. Go to, go to! You are a saucy boy. Is’t so, indeed? This trick may chance to scathe you, I know what. You must contrary me! Marry, ’tis time. Well said, my hearts!—You are a princox; go: Be quiet, or—More light, more light!—For shame! I’ll make you quiet. What, cheerly, my hearts.

TYBALT. Patience perforce with wilful choler meeting Makes my flesh tremble in their different greeting. I will withdraw: but this intrusion shall, Now seeming sweet, convert to bitter gall.

[_Exit._]

ROMEO. [_To Juliet._] If I profane with my unworthiest hand This holy shrine, the gentle sin is this, My lips, two blushing pilgrims, ready stand To smooth that rough touch with a tender kiss.

JULIET. Good pilgrim, you do wrong your hand too much, Which mannerly devotion shows in this; For saints have hands that pilgrims’ hands do touch, And palm to palm is holy palmers’ kiss.

ROMEO. Have not saints lips, and holy palmers too?

JULIET. Ay, pilgrim, lips that they must use in prayer.

ROMEO. O, then, dear saint, let lips do what hands do: They pray, grant thou, lest faith turn to despair.

JULIET. Saints do not move, though grant for prayers’ sake.

ROMEO. Then move not while my prayer’s effect I take. Thus from my lips, by thine my sin is purg’d. [_Kissing her._]

JULIET. Then have my lips the sin that they have took.

ROMEO. Sin from my lips? O trespass sweetly urg’d! Give me my sin again.

JULIET. You kiss by the book.

NURSE. Madam, your mother craves a word with you.

ROMEO. What is her mother?

NURSE. Marry, bachelor, Her mother is the lady of the house, And a good lady, and a wise and virtuous. I nurs’d her daughter that you talk’d withal. I tell you, he that can lay hold of her Shall have the chinks.

ROMEO. Is she a Capulet? O dear account! My life is my foe’s debt.

BENVOLIO. Away, be gone; the sport is at the best.

ROMEO. Ay, so I fear; the more is my unrest.

CAPULET. Nay, gentlemen, prepare not to be gone, We have a trifling foolish banquet towards. Is it e’en so? Why then, I thank you all; I thank you, honest gentlemen; good night. More torches here! Come on then, let’s to bed. Ah, sirrah, by my fay, it waxes late, I’ll to my rest.

[_Exeunt all but Juliet and Nurse._]

JULIET. Come hither, Nurse. What is yond gentleman?

NURSE. The son and heir of old Tiberio.

JULIET. What’s he that now is going out of door?

NURSE. Marry, that I think be young Petruchio.

JULIET. What’s he that follows here, that would not dance?

NURSE. I know not.

JULIET. Go ask his name. If he be married, My grave is like to be my wedding bed.

NURSE. His name is Romeo, and a Montague, The only son of your great enemy.

JULIET. My only love sprung from my only hate! Too early seen unknown, and known too late! Prodigious birth of love it is to me, That I must love a loathed enemy.

NURSE. What's this? What's this?

JULIET. A rhyme I learn'd even now Of one I danc'd withal.

[_One calls within, 'Juliet'._]

NURSE. Anon, anon! Come let's away, the strangers all are gone.

[_Exeunt._]

ACT II

Enter Chorus.

CHORUS. Now old desire doth in his deathbed lie, And young affection gapes to be his heir; That fair for which love groan'd for and would die, With tender Juliet match'd, is now not fair. Now Romeo is belov'd, and loves again, Alike bewitched by the charm of looks; But to his foe suppos'd he must complain, And she steal love's sweet bait from fearful hooks: Being held a foe, he may not have access To breathe such vows as lovers use to swear; And she as much in love, her means much less To meet her new beloved anywhere. But passion lends them power, time means, to meet, Tempering extremities with extreme sweet.

[_Exit._]

SCENE I. An open place adjoining Capulet's Garden.

Enter Romeo.

ROMEO. Can I go forward when my heart is here? Turn back, dull earth, and find thy centre out.

[_He climbs the wall and leaps down within it._]

Enter Benvolio and Mercutio.

BENVOLIO. Romeo! My cousin Romeo! Romeo!

MERCUTIO. He is wise, And on my life hath stol'n him home to bed.

BENVOLIO. He ran this way, and leap'd this orchard wall: Call, good Mercutio.

MERCUTIO. Nay, I'll conjure too. Romeo! Humours! Madman! Passion! Lover! Appear thou in the likeness of a sigh, Speak but one rhyme, and I am satisfied; Cry but 'Ah me!' Pronounce but Love and dove; Speak to my gossip Venus one fair word, One nickname for her purblind son and heir, Young Abraham Cupid, he that shot so trim When King Cophetua lov'd the beggar-maid. He heareth not, he stirreth not, he moveth not; The ape is dead, and I must conjure him. I conjure thee by Rosaline's bright eyes, By her high forehead and her scarlet lip, By her fine foot, straight leg, and quivering thigh, And the demesnes that there adjacent lie, That in thy likeness thou appear to us.

BENVOLIO. An if he hear thee, thou wilt anger him.

MERCUTIO. This cannot anger him. 'Twould anger him To raise a spirit in his mistress' circle, Of some strange nature, letting it there stand Till she had laid it, and conjur'd it down; That were some spite. My invocation Is fair and honest, and, in his mistress' name, I conjure only but to raise up him.

BENVOLIO. Come, he hath hid himself among these trees To be consorted with the humorous night. Blind is his love, and best befits the dark.

MERCUTIO. If love be blind, love cannot hit the mark. Now will he sit under a medlar tree, And wish his mistress were that kind of fruit As maids call medlars when they laugh alone. O Romeo, that she were, O that she were An open-arse and thou a poperin

pear! Romeo, good night. I'll to my truckle-bed. This field-bed is too cold for me to sleep. Come, shall we go?

BENVOLIO. Go then; for 'tis in vain To seek him here that means not to be found.

[_Exeunt._]

SCENE II. Capulet's Garden.

Enter Romeo.

ROMEO. He jests at scars that never felt a wound.

Juliet appears above at a window.

But soft, what light through yonder window breaks? It is the east, and Juliet is the sun! Arise fair sun and kill the envious moon, Who is already sick and pale with grief, That thou her maid art far more fair than she. Be not her maid since she is envious; Her vestal livery is but sick and green, And none but fools do wear it; cast it off. It is my lady, O it is my love! O, that she knew she were! She speaks, yet she says nothing. What of that? Her eye discourses, I will answer it. I am too bold, 'tis not to me she speaks. Two of the fairest stars in all the heaven, Having some business, do entreat her eyes To twinkle in their spheres till they return. What if her eyes were there, they in her head? The brightness of her cheek would shame those stars, As daylight doth a lamp; her eyes in heaven Would through the airy region stream so bright That birds would sing and think it were not night. See how she leans her cheek upon her hand. O that I were a glove upon that hand, That I might touch that cheek.

JULIET. Ay me.

ROMEO. She speaks. O speak again bright angel, for thou art As glorious to this night, being o'er my head, As is a winged messenger of heaven Unto the white-upturned wondering eyes Of mortals that fall back to gaze on him When he bestrides the lazy-puffing clouds And sails upon the bosom of the air.

JULIET. O Romeo, Romeo, wherefore art thou Romeo? Deny thy father and refuse thy name. Or if thou wilt not, be but sworn my love, And I'll no longer be a Capulet.

ROMEO. [_Aside._] Shall I hear more, or shall I speak at this?

JULIET. 'Tis but thy name that is my enemy; Thou art thyself, though not a Montague. What's Montague? It is nor hand nor foot, Nor arm, nor face, nor any other part Belonging to a man. O be some other name. What's in a name? That which we call a rose By any other name would smell as sweet; So Romeo would, were he not Romeo call'd, Retain that dear perfection which he owes Without that title. Romeo, doff thy name, And for thy name, which is no part of thee, Take all myself.

ROMEO. I take thee at thy word. Call me but love, and I'll be new baptis'd; Henceforth I never will be Romeo.

JULIET. What man art thou that, thus bescreen'd in night So stumblest on my counsel?

ROMEO. By a name I know not how to tell thee who I am: My name, dear saint, is hateful to myself, Because it is an enemy to thee. Had I it written, I would tear the word.

JULIET. My ears have yet not drunk a hundred words Of thy tongue's utterance, yet I know the sound. Art thou not Romeo, and a Montague?

ROMEO. Neither, fair maid, if either thee dislike.

JULIET. How cam'st thou hither, tell me, and wherefore? The orchard walls are high and hard to climb, And the place death, considering who thou art, If any of my kinsmen find thee here.

ROMEO. With love's light wings did I o'erperch these walls, For stony limits cannot hold love out, And what love can do, that dares love attempt: Therefore thy kinsmen are no stop to me.

JULIET. If they do see thee, they will murder thee.

ROMEO. Alack, there lies more peril in thine eye Than twenty of their swords. Look thou but sweet, And I am proof against their enmity.

JULIET. I would not for the world they saw thee here.

ROMEO. I have night's cloak to hide me from their eyes, And but thou love me, let them find me here. My life were better ended by their hate Than death prorogued, wanting of thy love.

JULIET. By whose direction found'st thou out this place?

ROMEO. By love, that first did prompt me to enquire; He lent me counsel, and I lent him eyes. I am no pilot; yet wert thou as far As that vast shore wash'd with the farthest sea, I should adventure for such merchandise.

JULIET. Thou knowest the mask of night is on my face, Else would a maiden blush bepaint my cheek For that which thou hast heard me speak tonight. Fain would I dwell on form, fain, fain deny What I have spoke; but farewell compliment. Dost thou love me? I know thou wilt say Ay, And I will take thy word. Yet, if thou swear'st, Thou mayst prove false. At lovers' perjuries, They say Jove laughs. O gentle Romeo, If thou dost love, pronounce it faithfully. Or if thou thinkest I am too quickly won, I'll frown and be perverse, and say thee nay, So thou wilt woo. But else, not for the world. In truth, fair Montague, I am too fond; And therefore thou mayst think my 'haviour light: But trust me, gentleman, I'll prove more true Than those that have more cunning to be strange. I should have been more strange, I must confess, But that thou overheard'st, ere I was 'ware, My true-love passion; therefore pardon me, And not impute this yielding to light love, Which the dark night hath so discovered.

ROMEO. Lady, by yonder blessed moon I vow, That tips with silver all these fruit-tree tops,—

JULIET. O swear not by the moon, th'inconstant moon, That monthly changes in her circled orb, Lest that thy love prove likewise variable.

ROMEO. What shall I swear by?

JULIET. Do not swear at all. Or if thou wilt, swear by thy gracious self, Which is the god of my idolatry, And I'll believe thee.

ROMEO. If my heart's dear love,—

JULIET. Well, do not swear. Although I joy in thee, I have no joy of this contract tonight; It is too rash, too unadvis'd, too sudden, Too like the lightning, which doth cease to be Ere one can say "It lightens." Sweet, good night. This bud of love, by summer's ripening breath, May prove a beauteous flower when next we meet. Good night, good night. As sweet repose and rest Come to thy heart as that within my breast.

ROMEO. O wilt thou leave me so unsatisfied?

JULIET. What satisfaction canst thou have tonight?

ROMEO. Th'exchange of thy love's faithful vow for mine.

JULIET. I gave thee mine before thou didst request it; And yet I would it were to give again.

ROMEO. Would'st thou withdraw it? For what purpose, love?

JULIET. But to be frank and give it thee again. And yet I wish but for the thing I have; My bounty is as boundless as the sea, My love as deep; the more I give to thee, The more I have, for both are infinite. I hear some noise within. Dear love, adieu. [_Nurse calls within._] Anon, good Nurse!—Sweet Montague be true. Stay but a little, I will come again.

[_Exit._]

ROMEO. O blessed, blessed night. I am afeard, Being in night, all this is but a dream, Too flattering sweet to be substantial.

Enter Juliet above.

JULIET. Three words, dear Romeo, and good night indeed. If that thy bent of love be honourable, Thy purpose marriage, send me word tomorrow, By one that I'll procure to come to thee, Where and what time thou wilt perform the rite, And all my fortunes at thy foot I'll lay And follow thee my lord throughout the world.

NURSE. [_Within._] Madam.

JULIET. I come, anon.— But if thou meanest not well, I do beseech thee,—

NURSE. [_Within._] Madam.

JULIET. By and by I come— To cease thy strife and leave me to my grief. Tomorrow will I send.

ROMEO. So thrive my soul,—

JULIET. A thousand times good night.

[_Exit._]

ROMEO. A thousand times the worse, to want thy light. Love goes toward love as schoolboys from their books, But love from love, towards school with heavy looks.

[_Retiring slowly._]

Re-enter Juliet, above.

JULIET. Hist! Romeo, hist! O for a falconer's voice To lure this tassel-gentle back again. Bondage is hoarse and may not speak aloud, Else would I tear the cave where Echo lies, And make her airy tongue more hoarse than mine With repetition of my Romeo's name.

ROMEO. It is my soul that calls upon my name. How silver-sweet sound lovers' tongues by night, Like softest music to attending ears.

JULIET. Romeo.

ROMEO. My dear?

JULIET. What o'clock tomorrow Shall I send to thee?

ROMEO. By the hour of nine.

JULIET. I will not fail. 'Tis twenty years till then. I have forgot why I did call thee back.

ROMEO. Let me stand here till thou remember it.

JULIET. I shall forget, to have thee still stand there, Remembering how I love thy company.

ROMEO. And I'll still stay, to have thee still forget, Forgetting any other home but this.

JULIET. 'Tis almost morning; I would have thee gone, And yet no farther than a wanton's bird, That lets it hop a little from her hand, Like a poor prisoner in his twisted gyves, And with a silk thread plucks it back again, So loving-jealous of his liberty.

ROMEO. I would I were thy bird.

JULIET. Sweet, so would I: Yet I should kill thee with much cherishing. Good night, good night. Parting is such sweet sorrow That I shall say good night till it be morrow.

[_Exit._]

ROMEO. Sleep dwell upon thine eyes, peace in thy breast. Would I were sleep and peace, so sweet to rest. Hence will I to my ghostly Sire's cell, His help to crave and my dear hap to tell.

[_Exit._]

SCENE III. Friar Lawrence's Cell.

Enter Friar Lawrence with a basket.

FRIAR LAWRENCE. The grey-ey'd morn smiles on the frowning night, Chequering the eastern clouds with streaks of light; And fleckled darkness like a drunkard reels From forth day's pathway, made by Titan's fiery wheels Now, ere the sun advance his burning eye, The day to cheer, and night's dank dew to dry, I must upfill this osier cage of ours With baleful weeds and

precious-juiced flowers. The earth that's nature's mother, is her tomb; What is her burying grave, that is her womb: And from her womb children of divers kind We sucking on her natural bosom find. Many for many virtues excellent, None but for some, and yet all different. O, mickle is the powerful grace that lies In plants, herbs, stones, and their true qualities. For naught so vile that on the earth doth live But to the earth some special good doth give; Nor aught so good but, strain'd from that fair use, Revolts from true birth, stumbling on abuse. Virtue itself turns vice being misapplied, And vice sometime's by action dignified.

Enter Romeo.

Within the infant rind of this weak flower Poison hath residence, and medicine power: For this, being smelt, with that part cheers each part; Being tasted, slays all senses with the heart. Two such opposed kings encamp them still In man as well as herbs,—grace and rude will; And where the worser is predominant, Full soon the canker death eats up that plant.

ROMEO. Good morrow, father.

FRIAR LAWRENCE. Benedicite! What early tongue so sweet saluteth me? Young son, it argues a distemper'd head So soon to bid good morrow to thy bed. Care keeps his watch in every old man's eye, And where care lodges sleep will never lie; But where unbruised youth with unstuff'd brain Doth couch his limbs, there golden sleep doth reign. Therefore thy earliness doth me assure Thou art uprous'd with some distemperature; Or if not so, then here I hit it right, Our Romeo hath not been in bed tonight.

ROMEO. That last is true; the sweeter rest was mine.

FRIAR LAWRENCE. God pardon sin. Wast thou with Rosaline?

ROMEO. With Rosaline, my ghostly father? No. I have forgot that name, and that name's woe.

FRIAR LAWRENCE. That's my good son. But where hast thou been then?

ROMEO. I'll tell thee ere thou ask it me again. I have been feasting with mine enemy, Where on a sudden one hath wounded me That's by me wounded. Both our remedies Within thy help and holy physic lies. I bear no hatred, blessed man; for lo, My intercession likewise steads my foe.

FRIAR LAWRENCE. Be plain, good son, and homely in thy drift; Riddling confession finds but riddling shrift.

ROMEO. Then plainly know my heart's dear love is set On the fair daughter of rich Capulet. As mine on hers, so hers is set on mine; And all combin'd, save what thou must combine By holy marriage. When, and where, and how We met, we woo'd, and made exchange of vow, I'll tell thee as we pass; but this I pray, That thou consent to marry us today.

FRIAR LAWRENCE. Holy Saint Francis! What a change is here! Is Rosaline, that thou didst love so dear, So soon forsaken? Young men's love then lies Not truly in their hearts, but in their eyes. Jesu Maria, what a deal of brine Hath wash'd thy sallow cheeks for Rosaline! How much salt water thrown away in waste, To season love, that of it doth not taste. The sun not yet thy sighs from heaven clears, Thy old groans yet ring in mine ancient ears. Lo here upon thy cheek the stain doth sit Of an old tear that is not wash'd off yet. If ere thou wast thyself, and these woes thine, Thou and these woes were all for Rosaline, And art thou chang'd? Pronounce this sentence then, Women may fall, when there's no strength in men.

ROMEO. Thou chidd'st me oft for loving Rosaline.

FRIAR LAWRENCE. For doting, not for loving, pupil mine.

ROMEO. And bad'st me bury love.

FRIAR LAWRENCE. Not in a grave To lay one in, another out to have.

ROMEO. I pray thee chide me not, her I love now Doth grace for grace and love for love allow. The other did not so.

FRIAR LAWRENCE. O, she knew well Thy love did read by rote, that could not spell. But come young waverer, come go with me, In one respect I'll thy assistant be; For this alliance may so happy prove, To turn your households' rancour to pure love.

ROMEO. O let us hence; I stand on sudden haste.

FRIAR LAWRENCE. Wisely and slow; they stumble that run fast.

[_Exeunt._]

SCENE IV. A Street.

Enter Benvolio and Mercutio.

MERCUTIO. Where the devil should this Romeo be? Came he not home tonight?

BENVOLIO. Not to his father's; I spoke with his man.

MERCUTIO. Why, that same pale hard-hearted wench, that Rosaline, torments him so that he will sure run mad.

BENVOLIO. Tybalt, the kinsman to old Capulet, hath sent a letter to his father's house.

MERCUTIO. A challenge, on my life.

BENVOLIO. Romeo will answer it.

MERCUTIO. Any man that can write may answer a letter.

BENVOLIO. Nay, he will answer the letter's master, how he dares, being dared.

MERCUTIO. Alas poor Romeo, he is already dead, stabbed with a white wench's black eye; run through the ear with a love song, the very pin of his heart cleft with the blind bow-boy's butt-shaft. And is he a man to encounter Tybalt?

BENVOLIO. Why, what is Tybalt?

MERCUTIO. More than Prince of cats. O, he's the courageous captain of compliments. He fights as you sing prick-song, keeps time, distance, and proportion. He rests his minim rest, one, two, and the third in your bosom: the very butcher of a silk button, a duellist, a duellist; a gentleman of the very first house, of the first and second cause. Ah, the immortal passado, the punto reverso, the hay.

BENVOLIO. The what?

MERCUTIO. The pox of such antic lisping, affecting phantasies; these new tuners of accent. By Jesu, a very good blade, a very tall man, a very good whore. Why, is not this a lamentable thing, grandsire, that we should be thus afflicted with these strange flies, these fashion-mongers, these pardon-me's, who stand so much on the new form that they cannot sit at ease on the old bench? O their bones, their bones!

Enter Romeo.

BENVOLIO. Here comes Romeo, here comes Romeo!

MERCUTIO. Without his roe, like a dried herring. O flesh, flesh, how art thou fishified! Now is he for the numbers that Petrarch flowed in. Laura, to his lady, was but a kitchen wench,—marry, she had a better love to berhyme her: Dido a dowdy; Cleopatra a gypsy; Helen and Hero hildings and harlots; Thisbe a grey eye or so, but not to the purpose. Signior Romeo, bonjour! There's a French salutation to your French slop. You gave us the counterfeit fairly last night.

ROMEO. Good morrow to you both. What counterfeit did I give you?

MERCUTIO. The slip sir, the slip; can you not conceive?

ROMEO. Pardon, good Mercutio, my business was great, and in such a case as mine a man may strain courtesy.

MERCUTIO. That's as much as to say, such a case as yours constrains a man to bow in the hams.

ROMEO. Meaning, to curtsy.

MERCUTIO. Thou hast most kindly hit it.

ROMEO. A most courteous exposition.

MERCUTIO. Nay, I am the very pink of courtesy.

ROMEO. Pink for flower.

MERCUTIO. Right.

ROMEO. Why, then is my pump well flowered.

MERCUTIO. Sure wit, follow me this jest now, till thou hast worn out thy pump, that when the single sole of it is worn, the jest may remain after the wearing, solely singular.

ROMEO. O single-soled jest, solely singular for the singleness!

MERCUTIO. Come between us, good Benvolio; my wits faint.

ROMEO. Swits and spurs, swits and spurs; or I'll cry a match.

MERCUTIO. Nay, if thy wits run the wild-goose chase, I am done. For thou hast more of the wild-goose in one of thy wits, than I am sure, I have in my whole five. Was I with you there for the goose?

ROMEO. Thou wast never with me for anything, when thou wast not there for the goose.

MERCUTIO. I will bite thee by the ear for that jest.

ROMEO. Nay, good goose, bite not.

MERCUTIO. Thy wit is a very bitter sweeting, it is a most sharp sauce.

ROMEO. And is it not then well served in to a sweet goose?

MERCUTIO. O here's a wit of cheveril, that stretches from an inch narrow to an ell broad.

ROMEO. I stretch it out for that word broad, which added to the goose, proves thee far and wide a broad goose.

MERCUTIO. Why, is not this better now than groaning for love? Now art thou sociable, now art thou Romeo; now art thou what thou art, by art as well as by nature. For this drivelling love is like a great natural, that runs lolling up and down to hide his bauble in a hole.

BENVOLIO. Stop there, stop there.

MERCUTIO. Thou desirest me to stop in my tale against the hair.

BENVOLIO. Thou wouldst else have made thy tale large.

MERCUTIO. O, thou art deceived; I would have made it short, for I was come to the whole depth of my tale, and meant indeed to occupy the argument no longer.

Enter Nurse and Peter.

ROMEO. Here's goodly gear! A sail, a sail!

MERCUTIO. Two, two; a shirt and a smock.

NURSE. Peter!

PETER. Anon.

NURSE. My fan, Peter.

MERCUTIO. Good Peter, to hide her face; for her fan's the fairer face.

NURSE. God ye good morrow, gentlemen.

MERCUTIO. God ye good-den, fair gentlewoman.

NURSE. Is it good-den?

MERCUTIO. ’Tis no less, I tell ye; for the bawdy hand of the dial is now upon the prick of noon.

NURSE. Out upon you! What a man are you?

ROMEO. One, gentlewoman, that God hath made for himself to mar.

NURSE. By my troth, it is well said; for himself to mar, quoth a? Gentlemen, can any of you tell me where I may find the young Romeo?

ROMEO. I can tell you: but young Romeo will be older when you have found him than he was when you sought him. I am the youngest of that name, for fault of a worse.

NURSE. You say well.

MERCUTIO. Yea, is the worst well? Very well took, i’faith; wisely, wisely.

NURSE. If you be he, sir, I desire some confidence with you.

BENVOLIO. She will endite him to some supper.

MERCUTIO. A bawd, a bawd, a bawd! So ho!

ROMEO. What hast thou found?

MERCUTIO. No hare, sir; unless a hare, sir, in a lenten pie, that is something stale and hoar ere it be spent. [_Sings._] An old hare hoar, And an old hare hoar, Is very good meat in Lent; But a hare that is hoar Is too much for a score When it hoars ere it be spent. Romeo, will you come to your father’s? We’ll to dinner thither.

ROMEO. I will follow you.

MERCUTIO. Farewell, ancient lady; farewell, lady, lady, lady.

[_Exeunt Mercutio and Benvolio._]

NURSE. I pray you, sir, what saucy merchant was this that was so full of his ropery?

ROMEO. A gentleman, Nurse, that loves to hear himself talk, and will speak more in a minute than he will stand to in a month.

NURSE. And a speak anything against me, I’ll take him down, and a were lustier than he is, and twenty such Jacks. And if I cannot, I’ll find those that shall. Scurvy knave! I am none of his flirt-gills; I am none of his skains-mates.—And thou must stand by too and suffer every knave to use me at his pleasure!

PETER. I saw no man use you at his pleasure; if I had, my weapon should quickly have been out. I warrant you, I dare draw as soon as another man, if I see occasion in a good quarrel, and the law on my side.

NURSE. Now, afore God, I am so vexed that every part about me quivers. Scurvy knave. Pray you, sir, a word: and as I told you, my young lady bid me enquire you out; what she bade me say, I will keep to myself. But first let me tell ye, if ye should lead her in a fool’s paradise, as they say, it were a very gross kind of behaviour, as they say; for the gentlewoman is young. And therefore, if you should deal double with her, truly it were an ill thing to be offered to any gentlewoman, and very weak dealing.

ROMEO. Nurse, commend me to thy lady and mistress. I protest unto thee,—

NURSE. Good heart, and i’faith I will tell her as much. Lord, Lord, she will be a joyful woman.

ROMEO. What wilt thou tell her, Nurse? Thou dost not mark me.

NURSE. I will tell her, sir, that you do protest, which, as I take it, is a gentlemanlike offer.

ROMEO. Bid her devise Some means to come to shrift this afternoon, And there she shall at Friar Lawrence’ cell Be shriv’d and married. Here is for thy pains.

NURSE. No truly, sir; not a penny.

ROMEO. Go to; I say you shall.

NURSE. This afternoon, sir? Well, she shall be there.

ROMEO. And stay, good Nurse, behind the abbey wall. Within this hour my man shall be with thee, And bring thee cords made like a tackled stair, Which to the high topgallant of my joy Must be my convoy in the secret night. Farewell, be trusty, and I'll quit thy pains; Farewell; commend me to thy mistress.

NURSE. Now God in heaven bless thee. Hark you, sir.

ROMEO. What say'st thou, my dear Nurse?

NURSE. Is your man secret? Did you ne'er hear say, Two may keep counsel, putting one away?

ROMEO. I warrant thee my man's as true as steel.

NURSE. Well, sir, my mistress is the sweetest lady. Lord, Lord! When 'twas a little prating thing,—O, there is a nobleman in town, one Paris, that would fain lay knife aboard; but she, good soul, had as lief see a toad, a very toad, as see him. I anger her sometimes, and tell her that Paris is the properer man, but I'll warrant you, when I say so, she looks as pale as any clout in the versal world. Doth not rosemary and Romeo begin both with a letter?

ROMEO. Ay, Nurse; what of that? Both with an R.

NURSE. Ah, mocker! That's the dog's name. R is for the—no, I know it begins with some other letter, and she hath the prettiest sententious of it, of you and rosemary, that it would do you good to hear it.

ROMEO. Commend me to thy lady.

NURSE. Ay, a thousand times. Peter!

[_Exit Romeo._]

PETER. Anon.

NURSE. Before and apace.

[_Exeunt._]

SCENE V. Capulet's Garden.

Enter Juliet.

JULIET. The clock struck nine when I did send the Nurse, In half an hour she promised to return. Perchance she cannot meet him. That's not so. O, she is lame. Love's heralds should be thoughts, Which ten times faster glides than the sun's beams, Driving back shadows over lowering hills: Therefore do nimble-pinion'd doves draw love, And therefore hath the wind-swift Cupid wings. Now is the sun upon the highmost hill Of this day's journey, and from nine till twelve Is three long hours, yet she is not come. Had she affections and warm youthful blood, She'd be as swift in motion as a ball; My words would bandy her to my sweet love, And his to me. But old folks, many feign as they were dead; Unwieldy, slow, heavy and pale as lead.

Enter Nurse and Peter.

O God, she comes. O honey Nurse, what news? Hast thou met with him? Send thy man away.

NURSE. Peter, stay at the gate.

[_Exit Peter._]

JULIET. Now, good sweet Nurse,—O Lord, why look'st thou sad? Though news be sad, yet tell them merrily; If good, thou sham'st the music of sweet news By playing it to me with so sour a face.

NURSE. I am aweary, give me leave awhile; Fie, how my bones ache! What a jaunt have I had!

JULIET. I would thou hadst my bones, and I thy news: Nay come, I pray thee speak; good, good Nurse, speak.

NURSE. Jesu, what haste? Can you not stay a while? Do you not see that I am out of breath?

JULIET. How art thou out of breath, when thou hast breath To say to me that thou art out of breath? The excuse that thou dost make in this delay Is longer than the tale thou dost excuse. Is thy news good or bad? Answer to that; Say either, and I'll stay the circumstance. Let me be satisfied, is't good or bad?

NURSE. Well, you have made a simple choice; you know not how to choose a man. Romeo? No, not he. Though his face be better than any man's, yet his leg excels all men's, and for a hand and a foot, and a body, though they be not to be talked on, yet they are past compare. He is not the flower of courtesy, but I'll warrant him as gentle as a lamb. Go thy ways, wench, serve God. What, have you dined at home?

JULIET. No, no. But all this did I know before. What says he of our marriage? What of that?

NURSE. Lord, how my head aches! What a head have I! It beats as it would fall in twenty pieces. My back o' t'other side,—O my back, my back! Beshrew your heart for sending me about To catch my death with jauncing up and down.

JULIET. I'faith, I am sorry that thou art not well. Sweet, sweet, sweet Nurse, tell me, what says my love?

NURSE. Your love says like an honest gentleman, And a courteous, and a kind, and a handsome, And I warrant a virtuous,—Where is your mother?

JULIET. Where is my mother? Why, she is within. Where should she be? How oddly thou repliest. 'Your love says, like an honest gentleman, 'Where is your mother?'

NURSE. O God's lady dear, Are you so hot? Marry, come up, I trow. Is this the poultice for my aching bones? Henceforward do your messages yourself.

JULIET. Here's such a coil. Come, what says Romeo?

NURSE. Have you got leave to go to shrift today?

JULIET. I have.

NURSE. Then hie you hence to Friar Lawrence' cell; There stays a husband to make you a wife. Now comes the wanton blood up in your cheeks, They'll be in scarlet straight at any news. Hie you to church. I must another way, To fetch a ladder by the which your love Must climb a bird's nest soon when it is dark. I am the drudge, and toil in your delight; But you shall bear the burden soon at night. Go. I'll to dinner; hie you to the cell.

JULIET. Hie to high fortune! Honest Nurse, farewell.

[_Exeunt._]

SCENE VI. Friar Lawrence's Cell.

Enter Friar Lawrence and Romeo.

FRIAR LAWRENCE. So smile the heavens upon this holy act That after-hours with sorrow chide us not.

ROMEO. Amen, amen, but come what sorrow can, It cannot countervail the exchange of joy That one short minute gives me in her sight. Do thou but close our hands with holy words, Then love-devouring death do what he dare, It is enough I may but call her mine.

FRIAR LAWRENCE. These violent delights have violent ends, And in their triumph die; like fire and powder, Which as they kiss consume. The sweetest honey Is loathsome in his own deliciousness, And in the taste confounds the appetite. Therefore love moderately: long love doth so; Too swift arrives as tardy as too slow.

Enter Juliet.

Here comes the lady. O, so light a foot Will ne'er wear out the everlasting flint. A lover may bestride the gossamers That idles in the wanton summer air And yet not fall; so light is vanity.

JULIET. Good even to my ghostly confessor.

FRIAR LAWRENCE. Romeo shall thank thee, daughter, for us both.

JULIET. As much to him, else is his thanks too much.

ROMEO. Ah, Juliet, if the measure of thy joy Be heap'd like mine, and that thy skill be more To blazon it, then sweeten with thy breath This neighbour air, and let rich music's tongue Unfold the imagin'd happiness that both Receive in either by this dear encounter.

JULIET. Conceit more rich in matter than in words, Brags of his substance, not of ornament. They are but beggars that can count their worth; But my true love is grown to such excess, I cannot sum up sum of half my wealth.

FRIAR LAWRENCE. Come, come with me, and we will make short work, For, by your leaves, you shall not stay alone Till holy church incorporate two in one.

[_Exeunt._]

ACT III

SCENE I. A public Place.

Enter Mercutio, Benvolio, Page and Servants.

BENVOLIO. I pray thee, good Mercutio, let's retire: The day is hot, the Capulets abroad, And if we meet, we shall not scape a brawl, For now these hot days, is the mad blood stirring.

MERCUTIO. Thou art like one of these fellows that, when he enters the confines of a tavern, claps me his sword upon the table, and says 'God send me no need of thee!' and by the operation of the second cup draws him on the drawer, when indeed there is no need.

BENVOLIO. Am I like such a fellow?

MERCUTIO. Come, come, thou art as hot a Jack in thy mood as any in Italy; and as soon moved to be moody, and as soon moody to be moved.

BENVOLIO. And what to?

MERCUTIO. Nay, an there were two such, we should have none shortly, for one would kill the other. Thou? Why, thou wilt quarrel with a man that hath a hair more or a hair less in his beard than thou hast. Thou wilt quarrel with a man for cracking nuts, having no other reason but because thou hast hazel eyes. What eye but such an eye would spy out such a quarrel? Thy head is as full of quarrels as an egg is full of meat, and yet thy head hath been beaten as addle as an egg for quarrelling. Thou hast quarrelled with a man for coughing in the street, because he hath wakened thy dog that hath lain asleep in the sun. Didst thou not fall out with a tailor for wearing his new doublet before Easter? with another for tying his new shoes with an old riband? And yet thou wilt tutor me from quarrelling!

BENVOLIO. And I were so apt to quarrel as thou art, any man should buy the fee simple of my life for an hour and a quarter.

MERCUTIO. The fee simple! O simple!

Enter Tybalt and others.

BENVOLIO. By my head, here comes the Capulets.

MERCUTIO. By my heel, I care not.

TYBALT. Follow me close, for I will speak to them. Gentlemen, good-den: a word with one of you.

MERCUTIO. And but one word with one of us? Couple it with something; make it a word and a blow.

TYBALT. You shall find me apt enough to that, sir, and you will give me occasion.

MERCUTIO. Could you not take some occasion without giving?

TYBALT. Mercutio, thou consortest with Romeo.

MERCUTIO. Consort? What, dost thou make us minstrels? And thou make minstrels of us, look to hear nothing but discords. Here's my fiddlestick, here's that shall make you dance. Zounds, consort!

BENVOLIO. We talk here in the public haunt of men. Either withdraw unto some private place, And reason coldly of your grievances, Or else depart; here all eyes gaze on us.

MERCUTIO. Men's eyes were made to look, and let them gaze. I will not budge for no man's pleasure, I.

Enter Romeo.

TYBALT. Well, peace be with you, sir, here comes my man.

MERCUTIO. But I'll be hanged, sir, if he wear your livery. Marry, go before to field, he'll be your follower; Your worship in that sense may call him man.

TYBALT. Romeo, the love I bear thee can afford No better term than this: Thou art a villain.

ROMEO. Tybalt, the reason that I have to love thee Doth much excuse the appertaining rage To such a greeting. Villain am I none; Therefore farewell; I see thou know'st me not.

TYBALT. Boy, this shall not excuse the injuries That thou hast done me, therefore turn and draw.

ROMEO. I do protest I never injur'd thee, But love thee better than thou canst devise Till thou shalt know the reason of my love. And so good Capulet, which name I tender As dearly as mine own, be satisfied.

MERCUTIO. O calm, dishonourable, vile submission! [_Draws._] Alla stoccata carries it away. Tybalt, you rat-catcher, will you walk?

TYBALT. What wouldst thou have with me?

MERCUTIO. Good King of Cats, nothing but one of your nine lives; that I mean to make bold withal, and, as you shall use me hereafter, dry-beat the rest of the eight. Will you pluck your sword out of his pilcher by the ears? Make haste, lest mine be about your ears ere it be out.

TYBALT. [_Drawing._] I am for you.

ROMEO. Gentle Mercutio, put thy rapier up.

MERCUTIO. Come, sir, your passado.

[_They fight._]

ROMEO. Draw, Benvolio; beat down their weapons. Gentlemen, for shame, forbear this outrage, Tybalt, Mercutio, the Prince expressly hath Forbid this bandying in Verona streets. Hold, Tybalt! Good Mercutio!

[_Exeunt Tybalt with his Partizans._]

MERCUTIO. I am hurt. A plague o' both your houses. I am sped. Is he gone, and hath nothing?

BENVOLIO. What, art thou hurt?

MERCUTIO. Ay, ay, a scratch, a scratch. Marry, 'tis enough. Where is my page? Go villain, fetch a surgeon.

[_Exit Page._]

ROMEO. Courage, man; the hurt cannot be much.

MERCUTIO. No, 'tis not so deep as a well, nor so wide as a church door, but 'tis enough, 'twill serve. Ask for me tomorrow, and you shall find me a grave man. I am peppered, I warrant, for this world. A plague o' both your houses. Zounds, a dog, a rat, a mouse, a

cat, to scratch a man to death. A braggart, a rogue, a villain, that fights by the book of arithmetic!—Why the devil came you between us? I was hurt under your arm.

ROMEO. I thought all for the best.

MERCUTIO. Help me into some house, Benvolio, Or I shall faint. A plague o' both your houses. They have made worms' meat of me. I have it, and soundly too. Your houses!

[_Exeunt Mercutio and Benvolio._]

ROMEO. This gentleman, the Prince's near ally, My very friend, hath got his mortal hurt In my behalf; my reputation stain'd With Tybalt's slander,—Tybalt, that an hour Hath been my cousin. O sweet Juliet, Thy beauty hath made me effeminate And in my temper soften'd valour's steel.

Re-enter Benvolio.

BENVOLIO. O Romeo, Romeo, brave Mercutio's dead, That gallant spirit hath aspir'd the clouds, Which too untimely here did scorn the earth.

ROMEO. This day's black fate on mo days doth depend; This but begins the woe others must end.

Re-enter Tybalt.

BENVOLIO. Here comes the furious Tybalt back again.

ROMEO. Again in triumph, and Mercutio slain? Away to heaven respective lenity, And fire-ey'd fury be my conduct now! Now, Tybalt, take the 'villain' back again That late thou gav'st me, for Mercutio's soul Is but a little way above our heads, Staying for thine to keep him company. Either thou or I, or both, must go with him.

TYBALT. Thou wretched boy, that didst consort him here, Shalt with him hence.

ROMEO. This shall determine that.

[_They fight; Tybalt falls._]

BENVOLIO. Romeo, away, be gone! The citizens are up, and Tybalt slain. Stand not amaz'd. The Prince will doom thee death If thou art taken. Hence, be gone, away!

ROMEO. O, I am fortune's fool!

BENVOLIO. Why dost thou stay?

[_Exit Romeo._]

Enter Citizens.

FIRST CITIZEN. Which way ran he that kill'd Mercutio? Tybalt, that murderer, which way ran he?

BENVOLIO. There lies that Tybalt.

FIRST CITIZEN. Up, sir, go with me. I charge thee in the Prince's name obey.

Enter Prince, attended; Montague, Capulet, their Wives and others.

PRINCE. Where are the vile beginners of this fray?

BENVOLIO. O noble Prince, I can discover all The unlucky manage of this fatal brawl. There lies the man, slain by young Romeo, That slew thy kinsman, brave Mercutio.

LADY CAPULET. Tybalt, my cousin! O my brother's child! O Prince! O husband! O, the blood is spill'd Of my dear kinsman! Prince, as thou art true, For blood of ours shed blood of Montague. O cousin, cousin.

PRINCE. Benvolio, who began this bloody fray?

BENVOLIO. Tybalt, here slain, whom Romeo's hand did slay; Romeo, that spoke him fair, bid him bethink How nice the quarrel was, and urg'd withal Your high displeasure. All this uttered With gentle breath, calm look, knees humbly bow'd Could not take truce with the unruly spleen Of Tybalt, deaf to peace, but that he tilts With piercing steel at bold Mercutio's breast, Who, all as hot, turns deadly point to point, And, with a martial scorn, with one hand beats Cold death aside, and with the other sends It back to Tybalt, whose dexterity Retorts it. Romeo he cries aloud, 'Hold, friends! Friends, part!' and swifter than his tongue, His agile arm beats down their fatal points, And 'twixt them rushes; underneath whose arm An envious thrust from Tybalt hit the life Of stout Mercutio, and then Tybalt fled. But by and by comes back to Romeo, Who had but newly entertain'd revenge, And to't they go like lightning; for, ere I Could draw to part them was stout Tybalt slain; And as he fell did Romeo turn and fly. This is the truth, or let Benvolio die.

LADY CAPULET. He is a kinsman to the Montague. Affection makes him false, he speaks not true. Some twenty of them fought in this black strife, And all those twenty could but kill one life. I beg for justice, which thou, Prince, must give; Romeo slew Tybalt, Romeo must not live.

PRINCE. Romeo slew him, he slew Mercutio. Who now the price of his dear blood doth owe?

MONTAGUE. Not Romeo, Prince, he was Mercutio's friend; His fault concludes but what the law should end, The life of Tybalt.

PRINCE. And for that offence Immediately we do exile him hence. I have an interest in your hate's proceeding, My blood for your rude brawls doth lie a-bleeding. But I'll amerce you with so strong a fine That you shall all repent the loss of mine. I will be deaf to pleading and excuses; Nor tears nor prayers shall purchase out abuses. Therefore use none. Let Romeo hence in haste, Else, when he is found, that hour is his last. Bear hence this body, and attend our will. Mercy but murders, pardoning those that kill.

[_Exeunt._]

SCENE II. A Room in Capulet's House.

Enter Juliet.

JULIET. Gallop apace, you fiery-footed steeds, Towards Phoebus' lodging. Such a waggoner As Phaeton would whip you to the west And bring in cloudy night immediately. Spread thy close curtain, love-performing night, That runaway's eyes may wink, and Romeo Leap to these arms, untalk'd of and unseen. Lovers can see to do their amorous rites By their own beauties: or, if love be blind, It best agrees with night. Come, civil night, Thou sober-suited matron, all in black, And learn me how to lose a winning match, Play'd for a pair of stainless maidenhoods. Hood my unmann'd blood, bating in my cheeks, With thy black mantle, till strange love, grow bold, Think true love acted simple modesty. Come, night, come Romeo; come, thou day in night; For thou wilt lie upon the wings of night Whiter than new snow upon a raven's back. Come gentle night, come loving black-brow'd night, Give me my Romeo, and when I shall die, Take him and cut him out in little stars, And he will make the face of heaven so fine That all the world will be in love with night, And pay no worship to the garish sun. O, I have bought the mansion of a love, But not possess'd it; and though I am sold, Not yet enjoy'd. So tedious is this day As is the night before some festival To an impatient child that hath new robes And may not wear them. O, here comes my Nurse, And she brings news, and every tongue that speaks But Romeo's name speaks heavenly eloquence.

Enter Nurse, with cords.

Now, Nurse, what news? What hast thou there? The cords that Romeo bid thee fetch?

NURSE. Ay, ay, the cords.

[_Throws them down._]

JULIET. Ay me, what news? Why dost thou wring thy hands?

NURSE. Ah, well-a-day, he's dead, he's dead, he's dead! We are undone, lady, we are undone. Alack the day, he's gone, he's kill'd, he's dead.

JULIET. Can heaven be so envious?

NURSE. Romeo can, Though heaven cannot. O Romeo, Romeo. Who ever would have thought it? Romeo!

JULIET. What devil art thou, that dost torment me thus? This torture should be roar'd in dismal hell. Hath Romeo slain himself? Say thou but Ay, And that bare vowel I shall poison more Than the death-darting eye of cockatrice. I am not I if there be such an I; Or those eyes shut that make thee answer Ay. If he be slain, say Ay; or if not, No. Brief sounds determine of my weal or woe.

NURSE. I saw the wound, I saw it with mine eyes, God save the mark!—here on his manly breast. A piteous corse, a bloody piteous corse; Pale, pale as ashes, all bedaub'd in blood, All in gore-blood. I swounded at the sight.

JULIET. O, break, my heart. Poor bankrout, break at once. To prison, eyes; ne'er look on liberty. Vile earth to earth resign; end motion here, And thou and Romeo press one heavy bier.

NURSE. O Tybalt, Tybalt, the best friend I had. O courteous Tybalt, honest gentleman! That ever I should live to see thee dead.

JULIET. What storm is this that blows so contrary? Is Romeo slaughter'd and is Tybalt dead? My dearest cousin, and my dearer lord? Then dreadful trumpet sound the general doom, For who is living, if those two are gone?

NURSE. Tybalt is gone, and Romeo banished, Romeo that kill'd him, he is banished.

JULIET. O God! Did Romeo's hand shed Tybalt's blood?

NURSE. It did, it did; alas the day, it did.

JULIET. O serpent heart, hid with a flowering face! Did ever dragon keep so fair a cave? Beautiful tyrant, fiend angelical, Dove-feather'd raven, wolvish-ravening lamb! Despised substance of divinest show! Just opposite to what thou justly seem'st, A damned saint, an honourable villain! O nature, what hadst thou to do in hell When thou didst bower the spirit of a fiend In mortal paradise of such sweet flesh? Was ever book containing such vile matter So fairly bound? O, that deceit should dwell In such a gorgeous palace.

NURSE. There's no trust, No faith, no honesty in men. All perjur'd, All forsworn, all naught, all dissemblers. Ah, where's my man? Give me some aqua vitae. These griefs, these woes, these sorrows make me old. Shame come to Romeo.

JULIET. Blister'd be thy tongue For such a wish! He was not born to shame. Upon his brow shame is asham'd to sit; For 'tis a throne where honour may be crown'd Sole monarch of the universal earth. O, what a beast was I to chide at him!

NURSE. Will you speak well of him that kill'd your cousin?

JULIET. Shall I speak ill of him that is my husband? Ah, poor my lord, what tongue shall smooth thy name, When I thy three-hours' wife have mangled it? But wherefore, villain, didst thou kill my cousin? That villain cousin would have kill'd my husband. Back, foolish tears, back to your native spring, Your tributary drops belong to woe, Which you mistaking offer up to joy. My husband lives, that Tybalt would have slain, And Tybalt's dead, that would have slain my husband. All this is comfort; wherefore weep I then? Some word there was, worser than Tybalt's death, That murder'd me. I would forget it fain, But O, it presses to my memory Like damned guilty deeds to sinners' minds. Tybalt is dead, and Romeo banished. That 'banished,' that one word 'banished,' Hath slain ten thousand Tybalts. Tybalt's death Was woe enough, if it had ended there. Or if sour woe delights in fellowship, And needly will be rank'd with other griefs, Why follow'd not, when she said Tybalt's dead, Thy father or thy mother, nay or both, Which modern lamentation might have mov'd? But with a rear-ward following Tybalt's death, 'Romeo is banished'—to speak that word Is father, mother, Tybalt, Romeo, Juliet, All slain, all dead. Romeo is banished, There is no end, no limit, measure, bound, In that word's death, no words can that woe sound. Where is my father and my mother, Nurse?

NURSE. Weeping and wailing over Tybalt's corse. Will you go to them? I will bring you thither.

JULIET. Wash they his wounds with tears. Mine shall be spent, When theirs are dry, for Romeo's banishment. Take up those cords. Poor ropes, you are beguil'd, Both you and I; for Romeo is exil'd. He made you for a highway to my bed, But I, a maid, die maiden-widowed. Come cords, come Nurse, I'll to my wedding bed, And death, not Romeo, take my maidenhead.

NURSE. Hie to your chamber. I'll find Romeo To comfort you. I wot well where he is. Hark ye, your Romeo will be here at night. I'll to him, he is hid at Lawrence' cell.

JULIET. O find him, give this ring to my true knight, And bid him come to take his last farewell.

[_Exeunt._]

SCENE III. Friar Lawrence’s cell.

Enter Friar Lawrence.

FRIAR LAWRENCE. Romeo, come forth; come forth, thou fearful man. Affliction is enanmour’d of thy parts And thou art wedded to calamity.

Enter Romeo.

ROMEO. Father, what news? What is the Prince’s doom? What sorrow craves acquaintance at my hand, That I yet know not?

FRIAR LAWRENCE. Too familiar Is my dear son with such sour company. I bring thee tidings of the Prince’s doom.

ROMEO. What less than doomsday is the Prince’s doom?

FRIAR LAWRENCE. A gentler judgment vanish’d from his lips, Not body’s death, but body’s banishment.

ROMEO. Ha, banishment? Be merciful, say death; For exile hath more terror in his look, Much more than death. Do not say banishment.

FRIAR LAWRENCE. Hence from Verona art thou banished. Be patient, for the world is broad and wide.

ROMEO. There is no world without Verona walls, But purgatory, torture, hell itself. Hence banished is banish’d from the world, And world’s exile is death. Then banished Is death misterm’d. Calling death banished, Thou cutt’st my head off with a golden axe, And smilest upon the stroke that murders me.

FRIAR LAWRENCE. O deadly sin, O rude unthankfulness! Thy fault our law calls death, but the kind Prince, Taking thy part, hath brush’d aside the law, And turn’d that black word death to banishment. This is dear mercy, and thou see’st it not.

ROMEO. ’Tis torture, and not mercy. Heaven is here Where Juliet lives, and every cat and dog, And little mouse, every unworthy thing, Live here in heaven and may look on her, But Romeo may not. More validity, More honourable state, more courtship lives In carrion flies than Romeo. They may seize On the white wonder of dear Juliet’s hand, And steal immortal blessing from her lips, Who, even in pure and vestal modesty Still blush, as thinking their own kisses sin. But Romeo may not, he is banished. This may flies do, when I from this must fly. They are free men but I am banished. And say’st thou yet that exile is not death? Hadst thou no poison mix’d, no sharp-ground knife, No sudden mean of death, though ne’er so mean, But banished to kill me? Banished? O Friar, the damned use that word in hell. Howling attends it. How hast thou the heart, Being a divine, a ghostly confessor, A sin-absolver, and my friend profess’d, To mangle me with that word banished?

FRIAR LAWRENCE. Thou fond mad man, hear me speak a little,

ROMEO. O, thou wilt speak again of banishment.

FRIAR LAWRENCE. I’ll give thee armour to keep off that word, Adversity’s sweet milk, philosophy, To comfort thee, though thou art banished.

ROMEO. Yet banished? Hang up philosophy. Unless philosophy can make a Juliet, Displant a town, reverse a Prince’s doom, It helps not, it prevails not, talk no more.

FRIAR LAWRENCE. O, then I see that mad men have no ears.

ROMEO. How should they, when that wise men have no eyes?

FRIAR LAWRENCE. Let me dispute with thee of thy estate.

ROMEO. Thou canst not speak of that thou dost not feel. Wert thou as young as I, Juliet thy love, An hour but married, Tybalt murdered, Doting like me, and like me banished, Then mightst thou speak, then mightst thou tear thy hair, And fall upon the ground as I do now, Taking the measure of an unmade grave.

[_Knocking within._]

FRIAR LAWRENCE. Arise; one knocks. Good Romeo, hide thyself.

ROMEO. Not I, unless the breath of heartsick groans Mist-like infold me from the search of eyes.

[_Knocking._]

FRIAR LAWRENCE. Hark, how they knock!—Who's there?—Romeo, arise, Thou wilt be taken.—Stay awhile.—Stand up.

[_Knocking._]

Run to my study.—By-and-by.—God's will, What simpleness is this.—I come, I come.

[_Knocking._]

Who knocks so hard? Whence come you, what's your will?

NURSE. [_Within._] Let me come in, and you shall know my errand. I come from Lady Juliet.

FRIAR LAWRENCE. Welcome then.

Enter Nurse.

NURSE. O holy Friar, O, tell me, holy Friar, Where is my lady's lord, where's Romeo?

FRIAR LAWRENCE. There on the ground, with his own tears made drunk.

NURSE. O, he is even in my mistress' case. Just in her case! O woeful sympathy! Piteous predicament. Even so lies she, Blubbering and weeping, weeping and blubbering. Stand up, stand up; stand, and you be a man. For Juliet's sake, for her sake, rise and stand. Why should you fall into so deep an O?

ROMEO. Nurse.

NURSE. Ah sir, ah sir, death's the end of all.

ROMEO. Spakest thou of Juliet? How is it with her? Doth not she think me an old murderer, Now I have stain'd the childhood of our joy With blood remov'd but little from her own? Where is she? And how doth she? And what says My conceal'd lady to our cancell'd love?

NURSE. O, she says nothing, sir, but weeps and weeps; And now falls on her bed, and then starts up, And Tybalt calls, and then on Romeo cries, And then down falls again.

ROMEO. As if that name, Shot from the deadly level of a gun, Did murder her, as that name's cursed hand Murder'd her kinsman. O, tell me, Friar, tell me, In what vile part of this anatomy Doth my name lodge? Tell me, that I may sack The hateful mansion.

[_Drawing his sword._]

FRIAR LAWRENCE. Hold thy desperate hand. Art thou a man? Thy form cries out thou art. Thy tears are womanish, thy wild acts denote The unreasonable fury of a beast. Unseemly woman in a seeming man, And ill-beseeming beast in seeming both! Thou hast amaz'd me. By my holy order, I thought thy disposition better temper'd. Hast thou slain Tybalt? Wilt thou slay thyself? And slay thy lady, that in thy life lives, By doing damned hate upon thyself? Why rail'st thou on thy birth, the heaven and earth? Since birth, and heaven and earth, all three do meet In thee at once; which thou at once wouldst lose. Fie, fie, thou sham'st thy shape, thy love, thy wit, Which, like a usurer, abound'st in all, And usest none in that true use indeed Which should bedeck thy shape, thy love, thy wit. Thy noble shape is but a form of wax, Digressing from the valour of a man; Thy dear love sworn but hollow perjury, Killing that love which thou hast vow'd to cherish; Thy wit, that ornament to shape and love, Misshapen in the conduct of them both, Like powder in a skilless soldier's flask, Is set afire by thine own ignorance, And thou dismember'd with thine own defence. What, rouse thee, man. Thy Juliet is alive, For whose dear sake thou wast but lately dead. There art thou happy. Tybalt would kill thee, But thou slew'st Tybalt; there art thou happy. The law that threaten'd death becomes thy friend, And turns it to exile; there art thou happy. A pack of blessings light upon thy back; Happiness courts thee in her best array; But like a misshaped and sullen wench, Thou putt'st up thy Fortune and thy love. Take heed, take heed, for such die miserable. Go, get thee to thy love as was decreed, Ascend her chamber, hence and comfort her. But look thou stay not till the watch be set, For then thou canst not pass to Mantua; Where thou shalt live till we can find a time To blaze your marriage, reconcile your friends, Beg pardon of the Prince, and call thee back With twenty hundred thousand times more joy Than thou went'st forth in lamentation. Go before, Nurse. Commend me to thy lady, And

bid her hasten all the house to bed, Which heavy sorrow makes them apt unto. Romeo is coming.

NURSE. O Lord, I could have stay'd here all the night To hear good counsel. O, what learning is! My lord, I'll tell my lady you will come.

ROMEO. Do so, and bid my sweet prepare to chide.

NURSE. Here sir, a ring she bid me give you, sir. Hie you, make haste, for it grows very late.

[_Exit._]

ROMEO. How well my comfort is reviv'd by this.

FRIAR LAWRENCE. Go hence, good night, and here stands all your state: Either be gone before the watch be set, Or by the break of day disguis'd from hence. Sojourn in Mantua. I'll find out your man, And he shall signify from time to time Every good hap to you that chances here. Give me thy hand; 'tis late; farewell; good night.

ROMEO. But that a joy past joy calls out on me, It were a grief so brief to part with thee. Farewell.

[_Exeunt._]

SCENE IV. A Room in Capulet's House.

Enter Capulet, Lady Capulet and Paris.

CAPULET. Things have fallen out, sir, so unluckily That we have had no time to move our daughter. Look you, she lov'd her kinsman Tybalt dearly, And so did I. Well, we were born to die. 'Tis very late; she'll not come down tonight. I promise you, but for your company, I would have been abed an hour ago.

PARIS. These times of woe afford no tune to woo. Madam, good night. Commend me to your daughter.

LADY CAPULET. I will, and know her mind early tomorrow; Tonight she's mew'd up to her heaviness.

CAPULET. Sir Paris, I will make a desperate tender Of my child's love. I think she will be rul'd In all respects by me; nay more, I doubt it not. Wife, go you to her ere you go to bed, Acquaint her here of my son Paris' love, And bid her, mark you me, on Wednesday next, But, soft, what day is this?

PARIS. Monday, my lord.

CAPULET. Monday! Ha, ha! Well, Wednesday is too soon, A Thursday let it be; a Thursday, tell her, She shall be married to this noble earl. Will you be ready? Do you like this haste? We'll keep no great ado,—a friend or two, For, hark you, Tybalt being slain so late, It may be thought we held him carelessly, Being our kinsman, if we revel much. Therefore we'll have some half a dozen friends, And there an end. But what say you to Thursday?

PARIS. My lord, I would that Thursday were tomorrow.

CAPULET. Well, get you gone. A Thursday be it then. Go you to Juliet ere you go to bed, Prepare her, wife, against this wedding day. Farewell, my lord.—Light to my chamber, ho! Afore me, it is so very very late that we May call it early by and by. Good night.

[_Exeunt._]

SCENE V. An open Gallery to Juliet's Chamber, overlooking the Garden.

Enter Romeo and Juliet.

JULIET. Wilt thou be gone? It is not yet near day. It was the nightingale, and not the lark, That pierc'd the fearful hollow of thine ear; Nightly she sings on yond pomegranate tree. Believe me, love, it was the nightingale.

ROMEO. It was the lark, the herald of the morn, No nightingale. Look, love, what envious streaks Do lace the severing clouds in yonder east. Night's candles are burnt out, and jocund day Stands tiptoe on the misty mountain tops. I must be gone and live, or stay and die.

JULIET. Yond light is not daylight, I know it, I. It is some meteor that the sun exhales To be to thee this night a torchbearer And light thee on thy way to Mantua. Therefore stay yet, thou need'st not to be gone.

ROMEO. Let me be ta'en, let me be put to death, I am content, so thou wilt have it so. I'll say yon grey is not the morning's eye, 'Tis but the pale reflex of Cynthia's brow. Nor that is not the lark whose notes do beat The vaulty heaven so high above our heads. I have more care to stay than will to go. Come, death, and welcome. Juliet wills it so. How is't, my soul? Let's talk. It is not day.

JULIET. It is, it is! Hie hence, be gone, away. It is the lark that sings so out of tune, Straining harsh discords and unpleasing sharps. Some say the lark makes sweet division; This doth not so, for she divideth us. Some say the lark and loathed toad change eyes. O, now I would they had chang'd voices too, Since arm from arm that voice doth us affray, Hunting thee hence with hunt's-up to the day. O now be gone, more light and light it grows.

ROMEO. More light and light, more dark and dark our woes.

Enter Nurse.

NURSE. Madam.

JULIET. Nurse?

NURSE. Your lady mother is coming to your chamber. The day is broke, be wary, look about.

[_Exit._]

JULIET. Then, window, let day in, and let life out.

ROMEO. Farewell, farewell, one kiss, and I'll descend.

[_Descends._]

JULIET. Art thou gone so? Love, lord, ay husband, friend, I must hear from thee every day in the hour, For in a minute there are many days. O, by this count I shall be much in years Ere I again behold my Romeo.

ROMEO. Farewell! I will omit no opportunity That may convey my greetings, love, to thee.

JULIET. O thinkest thou we shall ever meet again?

ROMEO. I doubt it not, and all these woes shall serve For sweet discourses in our time to come.

JULIET. O God! I have an ill-divining soul! Methinks I see thee, now thou art so low, As one dead in the bottom of a tomb. Either my eyesight fails, or thou look'st pale.

ROMEO. And trust me, love, in my eye so do you. Dry sorrow drinks our blood. Adieu, adieu.

[_Exit below._]

JULIET. O Fortune, Fortune! All men call thee fickle, If thou art fickle, what dost thou with him That is renown'd for faith? Be fickle, Fortune; For then, I hope thou wilt not keep him long But send him back.

LADY CAPULET. [_Within._] Ho, daughter, are you up?

JULIET. Who is't that calls? Is it my lady mother? Is she not down so late, or up so early? What unaccustom'd cause procures her hither?

Enter Lady Capulet.

LADY CAPULET. Why, how now, Juliet?

JULIET. Madam, I am not well.

LADY CAPULET. Evermore weeping for your cousin's death? What, wilt thou wash him from his grave with tears? And if thou couldst, thou couldst not make him live. Therefore have done: some grief shows much of love, But much of grief shows still some want of wit.

JULIET. Yet let me weep for such a feeling loss.

LADY CAPULET. So shall you feel the loss, but not the friend Which you weep for.

JULIET. Feeling so the loss, I cannot choose but ever weep the friend.

LADY CAPULET. Well, girl, thou weep'st not so much for his death As that the villain lives which slaughter'd him.

JULIET. What villain, madam?

LADY CAPULET. That same villain Romeo.

JULIET. Villain and he be many miles asunder. God pardon him. I do, with all my heart. And yet no man like he doth grieve my heart.

LADY CAPULET. That is because the traitor murderer lives.

JULIET. Ay madam, from the reach of these my hands. Would none but I might venge my cousin's death.

LADY CAPULET. We will have vengeance for it, fear thou not. Then weep no more. I'll send to one in Mantua, Where that same banish'd runagate doth live, Shall give him such an unaccustom'd dram That he shall soon keep Tybalt company: And then I hope thou wilt be satisfied.

JULIET. Indeed I never shall be satisfied With Romeo till I behold him—dead— Is my poor heart so for a kinsman vex'd. Madam, if you could find out but a man To bear a poison, I would temper it, That Romeo should upon receipt thereof, Soon sleep in quiet. O, how my heart abhors To hear him nam'd, and cannot come to him, To wreak the love I bore my cousin Upon his body that hath slaughter'd him.

LADY CAPULET. Find thou the means, and I'll find such a man. But now I'll tell thee joyful tidings, girl.

JULIET. And joy comes well in such a needy time. What are they, I beseech your ladyship?

LADY CAPULET. Well, well, thou hast a careful father, child; One who to put thee from thy heaviness, Hath sorted out a sudden day of joy, That thou expects not, nor I look'd not for.

JULIET. Madam, in happy time, what day is that?

LADY CAPULET. Marry, my child, early next Thursday morn The gallant, young, and noble gentleman, The County Paris, at Saint Peter's Church, Shall happily make thee there a joyful bride.

JULIET. Now by Saint Peter's Church, and Peter too, He shall not make me there a joyful bride. I wonder at this haste, that I must wed Ere he that should be husband comes to woo. I pray you tell my lord and father, madam, I will not marry yet; and when I do, I swear It shall be Romeo, whom you know I hate, Rather than Paris. These are news indeed.

LADY CAPULET. Here comes your father, tell him so yourself, And see how he will take it at your hands.

Enter Capulet and Nurse.

CAPULET. When the sun sets, the air doth drizzle dew; But for the sunset of my brother's son It rains downright. How now? A conduit, girl? What, still in tears? Evermore showering? In one little body Thou counterfeits a bark, a sea, a wind. For still thy eyes, which I may call the sea, Do ebb and flow with tears; the bark thy body is, Sailing in this salt flood, the winds, thy sighs, Who raging with thy tears and they with them, Without a sudden calm will overset Thy tempest-tossed body. How now, wife? Have you deliver'd to her our decree?

LADY CAPULET. Ay, sir; but she will none, she gives you thanks. I would the fool were married to her grave.

CAPULET. Soft. Take me with you, take me with you, wife. How, will she none? Doth she not give us thanks? Is she not proud? Doth she not count her blest, Unworthy as she is, that we have wrought So worthy a gentleman to be her bridegroom?

JULIET. Not proud you have, but thankful that you have. Proud can I never be of what I hate; But thankful even for hate that is meant love.

CAPULET. How now, how now, chopp'd logic? What is this? Proud, and, I thank you, and I thank you not; And yet not proud. Mistress minion you, Thank me no thankings, nor proud me no prouds, But fettle your fine joints 'gainst Thursday next To go with Paris to Saint Peter's Church, Or I will drag thee on a hurdle thither. Out, you green-sickness carrion! Out, you baggage! You tallow-face!

LADY CAPULET. Fie, fie! What, are you mad?

JULIET. Good father, I beseech you on my knees, Hear me with patience but to speak a word.

CAPULET. Hang thee young baggage, disobedient wretch! I tell thee what,—get thee to church a Thursday, Or never after look me in the face. Speak not, reply not, do not answer me. My fingers itch. Wife, we scarce thought us blest That God had lent us but this only child; But now I see this one is one too much, And that we have a curse in having her. Out on her, hilding.

NURSE. God in heaven bless her. You are to blame, my lord, to rate her so.

CAPULET. And why, my lady wisdom? Hold your tongue, Good prudence; smatter with your gossips, go.

NURSE. I speak no treason.

CAPULET. O God ye good-en!

NURSE. May not one speak?

CAPULET. Peace, you mumbling fool! Utter your gravity o'er a gossip's bowl, For here we need it not.

LADY CAPULET. You are too hot.

CAPULET. God's bread, it makes me mad! Day, night, hour, ride, time, work, play, Alone, in company, still my care hath been To have her match'd, and having now provided A gentleman of noble parentage, Of fair demesnes, youthful, and nobly allied, Stuff'd, as they say, with honourable parts, Proportion'd as one's thought would wish a man, And then to have a wretched puling fool, A whining mammet, in her fortune's tender, To answer, 'I'll not wed, I cannot love, I am too young, I pray you pardon me.' But, and you will not wed, I'll pardon you. Graze where you will, you shall not house with me. Look to't, think on't, I do not use to jest. Thursday is near; lay hand on heart, advise. And you be mine, I'll give you to my friend; And you be not, hang, beg, starve, die in the streets, For by my soul, I'll ne'er acknowledge thee, Nor what is mine shall never do thee good. Trust to't, bethink you, I'll not be forsworn.

[_Exit._]

JULIET. Is there no pity sitting in the clouds, That sees into the bottom of my grief? O sweet my mother, cast me not away, Delay this marriage for a month, a week, Or, if you do not, make the bridal bed In that dim monument where Tybalt lies.

LADY CAPULET. Talk not to me, for I'll not speak a word. Do as thou wilt, for I have done with thee.

[_Exit._]

JULIET. O God! O Nurse, how shall this be prevented? My husband is on earth, my faith in heaven. How shall that faith return again to earth, Unless that husband send it me from heaven By leaving earth? Comfort me, counsel me. Alack, alack, that heaven should practise stratagems Upon so soft a subject as myself. What say'st thou? Hast thou not a word of joy? Some comfort, Nurse.

NURSE. Faith, here it is. Romeo is banished; and all the world to nothing That he dares ne'er come back to challenge you. Or if he do, it needs must be by stealth. Then, since the case so stands as now it doth, I think it best you married with the County. O, he's a lovely gentleman. Romeo's a dishclout to him. An eagle, madam, Hath not so green, so quick, so fair an eye As Paris hath. Beshrew my very heart, I think you are happy in this second match, For it excels your first: or if it did not, Your first is dead, or 'twere as good he were, As living here and you no use of him.

JULIET. Speakest thou from thy heart?

NURSE. And from my soul too, Or else beshrew them both.

JULIET. Amen.

NURSE. What?

JULIET. Well, thou hast comforted me marvellous much. Go in, and tell my lady I am gone, Having displeas'd my father, to Lawrence' cell, To make confession and to be absolv'd.

NURSE. Marry, I will; and this is wisely done.

[_Exit._]

JULIET. Ancient damnation! O most wicked fiend! Is it more sin to wish me thus forsworn, Or to dispraise my lord with that same tongue Which she hath prais'd him with above compare So many thousand times? Go, counsellor. Thou and my bosom henceforth shall be twain. I'll to the Friar to know his remedy. If all else fail, myself have power to die.

[_Exit._]

ACT IV

SCENE I. Friar Lawrence's Cell.

Enter Friar Lawrence and Paris.

FRIAR LAWRENCE. On Thursday, sir? The time is very short.

PARIS. My father Capulet will have it so; And I am nothing slow to slack his haste.

FRIAR LAWRENCE. You say you do not know the lady's mind. Uneven is the course; I like it not.

PARIS. Immoderately she weeps for Tybalt's death, And therefore have I little talk'd of love; For Venus smiles not in a house of tears. Now, sir, her father counts it dangerous That she do give her sorrow so much sway; And in his wisdom, hastes our marriage, To stop the inundation of her tears, Which, too much minded by herself alone, May be put from her by society. Now do you know the reason of this haste.

FRIAR LAWRENCE. [_Aside._] I would I knew not why it should be slow'd.— Look, sir, here comes the lady toward my cell.

Enter Juliet.

PARIS. Happily met, my lady and my wife!

JULIET. That may be, sir, when I may be a wife.

PARIS. That may be, must be, love, on Thursday next.

JULIET. What must be shall be.

FRIAR LAWRENCE. That's a certain text.

PARIS. Come you to make confession to this father?

JULIET. To answer that, I should confess to you.

PARIS. Do not deny to him that you love me.

JULIET. I will confess to you that I love him.

PARIS. So will ye, I am sure, that you love me.

JULIET. If I do so, it will be of more price, Being spoke behind your back than to your face.

PARIS. Poor soul, thy face is much abus'd with tears.

JULIET. The tears have got small victory by that; For it was bad enough before their spite.

PARIS. Thou wrong'st it more than tears with that report.

JULIET. That is no slander, sir, which is a truth, And what I spake, I spake it to my face.

PARIS. Thy face is mine, and thou hast slander'd it.

JULIET. It may be so, for it is not mine own. Are you at leisure, holy father, now, Or shall I come to you at evening mass?

FRIAR LAWRENCE. My leisure serves me, pensive daughter, now.— My lord, we must entreat the time alone.

PARIS. God shield I should disturb devotion!— Juliet, on Thursday early will I rouse ye, Till then, adieu; and keep this holy kiss.

[_Exit._]

JULIET. O shut the door, and when thou hast done so, Come weep with me, past hope, past cure, past help!

FRIAR LAWRENCE. O Juliet, I already know thy grief; It strains me past the compass of my wits. I hear thou must, and nothing may prorogue it, On Thursday next be married to this County.

JULIET. Tell me not, Friar, that thou hear'st of this, Unless thou tell me how I may prevent it. If in thy wisdom, thou canst give no help, Do thou but call my resolution wise, And with this knife I'll help it presently. God join'd my heart and Romeo's, thou our hands; And ere this hand, by thee to Romeo's seal'd, Shall be the label to another deed, Or my true heart with treacherous revolt Turn to another, this shall slay them both. Therefore, out of thy long-experienc'd time, Give me some present counsel, or behold 'Twixt my extremes and me this bloody knife Shall play the empire, arbitrating that Which the commission of thy years and art Could to no issue of true honour bring. Be not so long to speak. I long to die, If what thou speak'st speak not of remedy.

FRIAR LAWRENCE. Hold, daughter. I do spy a kind of hope, Which craves as desperate an execution As that is desperate which we would prevent. If, rather than to marry County Paris Thou hast the strength of will to slay thyself, Then is it likely thou wilt undertake A thing like death to chide away this shame, That cop'st with death himself to scape from it. And if thou dar'st, I'll give thee remedy.

JULIET. O, bid me leap, rather than marry Paris, From off the battlements of yonder tower, Or walk in thievish ways, or bid me lurk Where serpents are. Chain me with roaring bears; Or hide me nightly in a charnel-house, O'er-cover'd quite with dead men's rattling bones, With reeky shanks and yellow chapless skulls. Or bid me go into a new-made grave, And hide me with a dead man in his shroud; Things that, to hear them told, have made me tremble, And I will do it without fear or doubt, To live an unstain'd wife to my sweet love.

FRIAR LAWRENCE. Hold then. Go home, be merry, give consent To marry Paris. Wednesday is tomorrow; Tomorrow night look that thou lie alone, Let not thy Nurse lie with thee in thy chamber. Take thou this vial, being then in bed, And this distilled liquor drink thou off, When presently through all thy veins shall run A cold and drowsy humour; for no pulse Shall keep his native progress, but surcease. No warmth, no breath shall testify thou livest, The roses in thy lips and cheeks shall fade To paly ashes; thy eyes' windows fall, Like death when he shuts up the day of life. Each part depriv'd of supple government, Shall stiff and stark and cold appear like death. And in this borrow'd likeness of shrunk death Thou shalt continue two and forty hours, And then awake as from a pleasant sleep. Now when the bridegroom in the morning comes To rouse thee from thy bed, there art thou dead. Then as the manner of our country is, In thy best robes, uncover'd, on the bier, Thou shalt be borne to that same ancient vault Where all the kindred of the Capulets lie. In the meantime, against thou shalt awake, Shall Romeo by my letters know our drift, And hither shall he come, and he and I Will watch thy waking, and that very night Shall Romeo bear thee hence to Mantua. And this shall free thee from this present shame, If no inconstant toy nor womanish fear Abate thy valour in the acting it.

JULIET. Give me, give me! O tell not me of fear!

FRIAR LAWRENCE. Hold; get you gone, be strong and prosperous In this resolve. I'll send a friar with speed To Mantua, with my letters to thy lord.

JULIET. Love give me strength, and strength shall help afford. Farewell, dear father.

[_Exeunt._]

SCENE II. Hall in Capulet's House.

Enter Capulet, Lady Capulet, Nurse and Servants.

CAPULET. So many guests invite as here are writ.

[_Exit first Servant._]

Sirrah, go hire me twenty cunning cooks.

SECOND SERVANT. You shall have none ill, sir; for I'll try if they can lick their fingers.

CAPULET. How canst thou try them so?

SECOND SERVANT. Marry, sir, 'tis an ill cook that cannot lick his own fingers; therefore he that cannot lick his fingers goes not with me.

CAPULET. Go, begone.

[_Exit second Servant._]

We shall be much unfurnish'd for this time. What, is my daughter gone to Friar Lawrence?

NURSE. Ay, forsooth.

CAPULET. Well, he may chance to do some good on her. A peevish self-will'd harlotry it is.

Enter Juliet.

NURSE. See where she comes from shrift with merry look.

CAPULET. How now, my headstrong. Where have you been gadding?

JULIET. Where I have learnt me to repent the sin Of disobedient opposition To you and your behests; and am enjoin'd By holy Lawrence to fall prostrate here, To beg your pardon. Pardon, I beseech you. Henceforward I am ever rul'd by you.

CAPULET. Send for the County, go tell him of this. I'll have this knot knit up tomorrow morning.

JULIET. I met the youthful lord at Lawrence' cell, And gave him what becomed love I might, Not stepping o'er the bounds of modesty.

CAPULET. Why, I am glad on't. This is well. Stand up. This is as't should be. Let me see the County. Ay, marry. Go, I say, and fetch him hither. Now afore God, this reverend holy Friar, All our whole city is much bound to him.

JULIET. Nurse, will you go with me into my closet, To help me sort such needful ornaments As you think fit to furnish me tomorrow?

LADY CAPULET. No, not till Thursday. There is time enough.

CAPULET. Go, Nurse, go with her. We'll to church tomorrow.

[_Exeunt Juliet and Nurse._]

LADY CAPULET. We shall be short in our provision, 'Tis now near night.

CAPULET. Tush, I will stir about, And all things shall be well, I warrant thee, wife. Go thou to Juliet, help to deck up her. I'll not to bed tonight, let me alone. I'll play the housewife for this once.—What, ho!— They are all forth: well, I will walk myself To County Paris, to prepare him up Against tomorrow. My heart is wondrous light Since this same wayward girl is so reclaim'd.

[_Exeunt._]

SCENE III. Juliet's Chamber.

Enter Juliet and Nurse.

JULIET. Ay, those attires are best. But, gentle Nurse, I pray thee leave me to myself tonight; For I have need of many orisons To move the heavens to smile upon my state, Which, well thou know'st, is cross and full of sin.

Enter Lady Capulet.

LADY CAPULET. What, are you busy, ho? Need you my help?

JULIET. No, madam; we have cull'd such necessaries As are behoveful for our state tomorrow. So please you, let me now be left alone, And let the nurse this night sit up with you, For I am sure you have your hands full all In this so sudden business.

LADY CAPULET. Good night. Get thee to bed and rest, for thou hast need.

[_Exeunt Lady Capulet and Nurse._]

JULIET. Farewell. God knows when we shall meet again. I have a faint cold fear thrills through my veins That almost freezes up the heat of life. I'll call them back again to comfort me. Nurse!—What should she do here? My dismal scene I needs must act alone. Come, vial. What if this mixture do not work at all? Shall I be married then tomorrow morning? No, No! This shall forbid it. Lie thou there.

[_Laying down her dagger._]

What if it be a poison, which the Friar Subtly hath minister'd to have me dead, Lest in this marriage he should be dishonour'd, Because he married me before to Romeo? I fear it is. And yet methinks it should not, For he hath still been tried a holy man. How if, when I am laid into the tomb, I wake before the time that Romeo Come to redeem me? There's a fearful point! Shall I not then be stifled in the vault, To whose foul mouth no healthsome air breathes in, And there die strangled ere my Romeo comes? Or, if I live, is it not very like, The horrible conceit of death and night, Together with the terror of the place, As in a vault, an ancient receptacle, Where for this many hundred years the bones Of all my buried ancestors are pack'd, Where bloody Tybalt, yet but green in earth, Lies festering in his shroud; where, as they say, At some hours in the night spirits resort— Alack, alack, is it not like that I, So early waking, what with loathsome smells, And shrieks like mandrakes torn out of the earth, That living mortals, hearing them, run mad. O, if I wake, shall I not be distraught, Environed with all these hideous fears, And madly play with my forefathers' joints? And pluck the mangled Tybalt from his shroud? And, in this rage, with some great kinsman's bone, As with a club, dash out my desperate brains? O look, methinks I see my cousin's ghost Seeking out Romeo that did spit his body Upon a rapier's point. Stay, Tybalt, stay! Romeo, Romeo, Romeo, here's drink! I drink to thee.

[_Throws herself on the bed._]

SCENE IV. Hall in Capulet's House.

Enter Lady Capulet and Nurse.

LADY CAPULET. Hold, take these keys and fetch more spices, Nurse.

NURSE. They call for dates and quinces in the pastry.

Enter Capulet.

CAPULET. Come, stir, stir, stir! The second cock hath crow'd, The curfew bell hath rung, 'tis three o'clock. Look to the bak'd meats, good Angelica; Spare not for cost.

NURSE. Go, you cot-quean, go, Get you to bed; faith, you'll be sick tomorrow For this night's watching.

CAPULET. No, not a whit. What! I have watch'd ere now All night for lesser cause, and ne'er been sick.

LADY CAPULET. Ay, you have been a mouse-hunt in your time; But I will watch you from such watching now.

[_Exeunt Lady Capulet and Nurse._]

CAPULET. A jealous-hood, a jealous-hood!

Enter Servants, with spits, logs and baskets.

Now, fellow, what's there?

FIRST SERVANT. Things for the cook, sir; but I know not what.

CAPULET. Make haste, make haste.

[_Exit First Servant._]

—Sirrah, fetch drier logs. Call Peter, he will show thee where they are.

SECOND SERVANT. I have a head, sir, that will find out logs And never trouble Peter for the matter.

[_Exit._]

CAPULET. Mass and well said; a merry whoreson, ha. Thou shalt be loggerhead.—Good faith, 'tis day. The County will be here with music straight, For so he said he would. I hear him near.

[_Play music._]

Nurse! Wife! What, ho! What, Nurse, I say!

Re-enter Nurse.

Go waken Juliet, go and trim her up. I'll go and chat with Paris. Hie, make haste, Make haste; the bridegroom he is come already. Make haste I say.

[_Exeunt._]

SCENE V. Juliet's Chamber; Juliet on the bed.

Enter Nurse.

NURSE. Mistress! What, mistress! Juliet! Fast, I warrant her, she. Why, lamb, why, lady, fie, you slug-abed! Why, love, I say! Madam! Sweetheart! Why, bride! What, not a word? You take your pennyworths now. Sleep for a week; for the next night, I warrant, The County Paris hath set up his rest That you shall rest but little. God forgive me! Marry and amen. How sound is she asleep! I needs must wake her. Madam, madam, madam! Ay, let the County take you in your bed, He'll fright you up, i'faith. Will it not be? What, dress'd, and in your clothes, and down again? I must needs wake you. Lady! Lady! Lady! Alas, alas! Help, help! My lady's dead! O, well-a-day that ever I was born. Some aqua vitae, ho! My lord! My lady!

Enter Lady Capulet.

LADY CAPULET. What noise is here?

NURSE. O lamentable day!

LADY CAPULET. What is the matter?

NURSE. Look, look! O heavy day!

LADY CAPULET. O me, O me! My child, my only life. Revive, look up, or I will die with thee. Help, help! Call help.

Enter Capulet.

CAPULET. For shame, bring Juliet forth, her lord is come.

NURSE. She's dead, deceas'd, she's dead; alack the day!

LADY CAPULET. Alack the day, she's dead, she's dead, she's dead!

CAPULET. Ha! Let me see her. Out alas! She's cold, Her blood is settled and her joints are stiff. Life and these lips have long been separated. Death lies on her like an untimely frost Upon the sweetest flower of all the field.

NURSE. O lamentable day!

LADY CAPULET. O woful time!

CAPULET. Death, that hath ta'en her hence to make me wail, Ties up my tongue and will not let me speak.

Enter Friar Lawrence and Paris with Musicians.

FRIAR LAWRENCE. Come, is the bride ready to go to church?

CAPULET. Ready to go, but never to return. O son, the night before thy wedding day Hath death lain with thy bride. There she lies, Flower as she was, deflowered by him. Death is my son-in-law, death is my heir; My daughter he hath wedded. I will die And leave him all; life, living, all is death's.

PARIS. Have I thought long to see this morning's face, And doth it give me such a sight as this?

LADY CAPULET. Accurs'd, unhappy, wretched, hateful day. Most miserable hour that e'er time saw In lasting labour of his pilgrimage. But one, poor one, one poor and loving child, But one thing to rejoice and solace in, And cruel death hath catch'd it from my sight.

NURSE. O woe! O woeful, woeful, woeful day. Most lamentable day, most woeful day That ever, ever, I did yet behold! O day, O day, O day, O hateful day. Never was seen so black a day as this. O woeful day, O woeful day.

PARIS. Beguil'd, divorced, wronged, spited, slain. Most detestable death, by thee beguil'd, By cruel, cruel thee quite overthrown. O love! O life! Not life, but love in death!

CAPULET. Despis'd, distressed, hated, martyr'd, kill'd. Uncomfortable time, why cam'st thou now To murder, murder our solemnity? O child! O child! My soul, and not my child, Dead art thou. Alack, my child is dead, And with my child my joys are buried.

FRIAR LAWRENCE. Peace, ho, for shame. Confusion's cure lives not In these confusions. Heaven and yourself Had part in this fair maid, now heaven hath all, And all the better is it for the maid. Your part in her you could not keep from death, But heaven keeps his part in eternal life. The most you sought was her promotion, For 'twas your heaven she should be advanc'd, And weep ye now, seeing she is advanc'd Above the clouds, as high as heaven itself? O, in this love, you love your child so ill That you run mad, seeing that she is well. She's not well married that lives married long, But she's best married that dies married young. Dry up your tears, and stick your rosemary On this fair corse, and, as the custom is, And in her best array bear her to church; For though fond nature bids us all lament, Yet nature's tears are reason's merriment.

CAPULET. All things that we ordained festival Turn from their office to black funeral: Our instruments to melancholy bells, Our wedding cheer to a sad burial feast; Our solemn hymns to sullen dirges change; Our bridal flowers serve for a buried corse, And all things change them to the contrary.

FRIAR LAWRENCE. Sir, go you in, and, madam, go with him, And go, Sir Paris, everyone prepare To follow this fair corse unto her grave. The heavens do lower upon you for some ill; Move them no more by crossing their high will.

[_Exeunt Capulet, Lady Capulet, Paris and Friar._]

FIRST MUSICIAN. Faith, we may put up our pipes and be gone.

NURSE. Honest good fellows, ah, put up, put up, For well you know this is a pitiful case.

FIRST MUSICIAN. Ay, by my troth, the case may be amended.

[_Exit Nurse._]

Enter Peter.

PETER. Musicians, O, musicians, 'Heart's ease,' 'Heart's ease', O, and you will have me live, play 'Heart's ease.'

FIRST MUSICIAN. Why 'Heart's ease'?

PETER. O musicians, because my heart itself plays 'My heart is full'. O play me some merry dump to comfort me.

FIRST MUSICIAN. Not a dump we, 'tis no time to play now.

PETER. You will not then?

FIRST MUSICIAN. No.

PETER. I will then give it you soundly.

FIRST MUSICIAN. What will you give us?

PETER. No money, on my faith, but the gleek! I will give you the minstrel.

FIRST MUSICIAN. Then will I give you the serving-creature.

PETER. Then will I lay the serving-creature's dagger on your pate. I will carry no crotchets. I'll re you, I'll fa you. Do you note me?

FIRST MUSICIAN. And you re us and fa us, you note us.

SECOND MUSICIAN. Pray you put up your dagger, and put out your wit.

PETER. Then have at you with my wit. I will dry-beat you with an iron wit, and put up my iron dagger. Answer me like men. 'When griping griefs the heart doth wound, And doleful dumps the mind oppress, Then music with her silver sound'— Why 'silver sound'? Why 'music with her silver sound'? What say you, Simon Catling?

FIRST MUSICIAN. Marry, sir, because silver hath a sweet sound.

PETER. Prates. What say you, Hugh Rebeck?

SECOND MUSICIAN. I say 'silver sound' because musicians sound for silver.

PETER. Prates too! What say you, James Soundpost?

THIRD MUSICIAN. Faith, I know not what to say.

PETER. O, I cry you mercy, you are the singer. I will say for you. It is 'music with her silver sound' because musicians have no gold for sounding. 'Then music with her silver sound With speedy help doth lend redress.'

[_Exit._]

FIRST MUSICIAN. What a pestilent knave is this same!

SECOND MUSICIAN. Hang him, Jack. Come, we'll in here, tarry for the mourners, and stay dinner.

[_Exeunt._]

ACT V

SCENE I. Mantua. A Street.

Enter Romeo.

ROMEO. If I may trust the flattering eye of sleep, My dreams presage some joyful news at hand. My bosom's lord sits lightly in his throne; And all this day an unaccustom'd spirit Lifts me above the ground with cheerful thoughts. I dreamt my lady came and found me dead,— Strange dream, that gives a dead man leave to think!— And breath'd such life with kisses in my lips, That I reviv'd, and was an emperor. Ah me, how sweet is love itself possess'd, When but love's shadows are so rich in joy.

Enter Balthasar.

News from Verona! How now, Balthasar? Dost thou not bring me letters from the Friar? How doth my lady? Is my father well? How fares my Juliet? That I ask again; For nothing can be ill if she be well.

BALTHASAR. Then she is well, and nothing can be ill. Her body sleeps in Capel's monument, And her immortal part with angels lives. I saw her laid low in her kindred's vault, And presently took post to tell it you. O pardon me for bringing these ill news, Since you did leave it for my office, sir.

ROMEO. Is it even so? Then I defy you, stars! Thou know'st my lodging. Get me ink and paper, And hire post-horses. I will hence tonight.

BALTHASAR. I do beseech you sir, have patience. Your looks are pale and wild, and do import Some misadventure.

ROMEO. Tush, thou art deceiv'd. Leave me, and do the thing I bid thee do. Hast thou no letters to me from the Friar?

BALTHASAR. No, my good lord.

ROMEO. No matter. Get thee gone, And hire those horses. I'll be with thee straight.

[_Exit Balthasar._]

Well, Juliet, I will lie with thee tonight. Let's see for means. O mischief thou art swift To enter in the thoughts of desperate men. I do remember an apothecary,— And hereabouts he dwells,—which late I noted In tatter'd weeds, with overwhelming brows, Culling of simples, meagre were his looks, Sharp misery had worn him to the bones; And in his needy shop a tortoise hung, An alligator stuff'd, and other skins Of ill-shaped fishes; and about his shelves A beggarly account of empty boxes, Green earthen pots, bladders, and musty seeds, Remnants of packthread, and old cakes of roses Were thinly scatter'd, to make up a show. Noting this penury, to myself I said, And if a man did need a poison now, Whose sale is present death in Mantua, Here lives a caitiff wretch would sell it him. O, this same thought did but forerun my need, And this same needy man must sell it me. As I remember, this should be the house. Being holiday, the beggar's shop is shut. What, ho! Apothecary!

Enter Apothecary.

APOTHECARY. Who calls so loud?

ROMEO. Come hither, man. I see that thou art poor. Hold, there is forty ducats. Let me have A dram of poison, such soon-speeding gear As will disperse itself through all the veins, That the life-weary taker may fall dead, And that the trunk may be discharg'd of breath As violently as hasty powder fir'd Doth hurry from the fatal cannon's womb.

APOTHECARY. Such mortal drugs I have, but Mantua's law Is death to any he that utters them.

ROMEO. Art thou so bare and full of wretchedness, And fear'st to die? Famine is in thy cheeks, Need and oppression starveth in thine eyes, Contempt and beggary hangs upon thy back. The world is not thy friend, nor the world's law; The world affords no law to make thee rich; Then be not poor, but break it and take this.

APOTHECARY. My poverty, but not my will consents.

ROMEO. I pay thy poverty, and not thy will.

APOTHECARY. Put this in any liquid thing you will And drink it off; and, if you had the strength Of twenty men, it would despatch you straight.

ROMEO. There is thy gold, worse poison to men's souls, Doing more murder in this loathsome world Than these poor compounds that thou mayst not sell. I sell thee poison, thou hast sold me none. Farewell, buy food, and get thyself in flesh. Come, cordial and not poison, go with me To Juliet's grave, for there must I use thee.

[_Exeunt._]

SCENE II. Friar Lawrence's Cell.

Enter Friar John.

FRIAR JOHN. Holy Franciscan Friar! Brother, ho!

Enter Friar Lawrence.

FRIAR LAWRENCE. This same should be the voice of Friar John. Welcome from Mantua. What says Romeo? Or, if his mind be writ, give me his letter.

FRIAR JOHN. Going to find a barefoot brother out, One of our order, to associate me, Here in this city visiting the sick, And finding him, the searchers of the town, Suspecting that we both were in a house Where the infectious pestilence did reign, Seal'd up the doors, and would not let us forth, So that my speed to Mantua there was stay'd.

FRIAR LAWRENCE. Who bare my letter then to Romeo?

FRIAR JOHN. I could not send it,—here it is again,— Nor get a messenger to bring it thee, So fearful were they of infection.

FRIAR LAWRENCE. Unhappy fortune! By my brotherhood, The letter was not nice, but full of charge, Of dear import, and the neglecting it May do much danger. Friar John, go hence, Get me an iron crow and bring it straight Unto my cell.

FRIAR JOHN. Brother, I'll go and bring it thee.

[_Exit._]

FRIAR LAWRENCE. Now must I to the monument alone. Within this three hours will fair Juliet wake. She will beshrew me much that Romeo Hath had no notice of these accidents; But I will write again to Mantua, And keep her at my cell till Romeo come. Poor living corse, clos'd in a dead man's tomb.

[_Exit._]

SCENE III. A churchyard; in it a Monument belonging to the Capulets.

Enter Paris, and his Page bearing flowers and a torch.

PARIS. Give me thy torch, boy. Hence and stand aloof. Yet put it out, for I would not be seen. Under yond yew tree lay thee all along, Holding thy ear close to the hollow ground; So shall no foot upon the churchyard tread, Being loose, unfirm, with digging up of graves, But thou shalt hear it. Whistle then to me, As signal that thou hear'st something approach. Give me those flowers. Do as I bid thee, go.

PAGE. [_Aside._] I am almost afraid to stand alone Here in the churchyard; yet I will adventure.

[_Retires._]

PARIS. Sweet flower, with flowers thy bridal bed I strew. O woe, thy canopy is dust and stones, Which with sweet water nightly I will dew, Or wanting that, with tears distill'd by moans. The obsequies that I for thee will keep, Nightly shall be to strew thy grave and weep.

[_The Page whistles._]

The boy gives warning something doth approach. What cursed foot wanders this way tonight, To cross my obsequies and true love's rite? What, with a torch! Muffle me, night, awhile.

[_Retires._]

Enter Romeo and Balthasar with a torch, mattock, &c.

ROMEO. Give me that mattock and the wrenching iron. Hold, take this letter; early in the morning See thou deliver it to my lord and father. Give me the light; upon thy life I charge thee, Whate'er thou hear'st or seest, stand all aloof And do not interrupt me in my course. Why I descend into this bed of death Is partly to behold my lady's face, But chiefly to take thence from her dead finger A precious ring, a ring that I must use In dear employment. Therefore hence, be gone. But if thou jealous dost return to pry In what I further shall intend to do, By heaven I will tear thee joint by joint, And strew this hungry churchyard with thy limbs. The time and my intents are savage-wild; More fierce and more inexorable far Than empty tigers or the roaring sea.

BALTHASAR. I will be gone, sir, and not trouble you.

ROMEO. So shalt thou show me friendship. Take thou that. Live, and be prosperous, and farewell, good fellow.

BALTHASAR. For all this same, I'll hide me hereabout. His looks I fear, and his intents I doubt.

[_Retires_]

ROMEO. Thou detestable maw, thou womb of death, Gorg'd with the dearest morsel of the earth, Thus I enforce thy rotten jaws to open,

[_Breaking open the door of the monument._]

And in despite, I'll cram thee with more food.

PARIS. This is that banish’d haughty Montague That murder’d my love’s cousin,—with which grief, It is supposed, the fair creature died,— And here is come to do some villainous shame To the dead bodies. I will apprehend him.

[_Advances._]

Stop thy unhallow’d toil, vile Montague. Can vengeance be pursu’d further than death? Condemned villain, I do apprehend thee. Obey, and go with me, for thou must die.

ROMEO. I must indeed; and therefore came I hither. Good gentle youth, tempt not a desperate man. Fly hence and leave me. Think upon these gone; Let them affright thee. I beseech thee, youth, Put not another sin upon my head By urging me to fury. O be gone. By heaven I love thee better than myself; For I come hither arm’d against myself. Stay not, be gone, live, and hereafter say, A madman’s mercy bid thee run away.

PARIS. I do defy thy conjuration, And apprehend thee for a felon here.

ROMEO. Wilt thou provoke me? Then have at thee, boy!

[_They fight._]

PAGE. O lord, they fight! I will go call the watch.

[_Exit._]

PARIS. O, I am slain! [_Falls._] If thou be merciful, Open the tomb, lay me with Juliet.

[_Dies._]

ROMEO. In faith, I will. Let me peruse this face. Mercutio’s kinsman, noble County Paris! What said my man, when my betossed soul Did not attend him as we rode? I think He told me Paris should have married Juliet. Said he not so? Or did I dream it so? Or am I mad, hearing him talk of Juliet, To think it was so? O, give me thy hand, One writ with me in sour misfortune’s book. I’ll bury thee in a triumphant grave. A grave? O no, a lantern, slaught’red youth, For here lies Juliet, and her beauty makes This vault a feasting presence full of light. Death, lie thou there, by a dead man interr’d.

[_Laying Paris in the monument._]

How oft when men are at the point of death Have they been merry! Which their keepers call A lightning before death. O, how may I Call this a lightning? O my love, my wife, Death that hath suck’d the honey of thy breath, Hath had no power yet upon thy beauty. Thou art not conquer’d. Beauty’s ensign yet Is crimson in thy lips and in thy cheeks, And death’s pale flag is not advanced there. Tybalt, liest thou there in thy bloody sheet? O, what more favour can I do to thee Than with that hand that cut thy youth in twain To sunder his that was thine enemy? Forgive me, cousin. Ah, dear Juliet, Why art thou yet so fair? Shall I believe That unsubstantial death is amorous; And that the lean abhorred monster keeps Thee here in dark to be his paramour? For fear of that I still will stay with thee, And never from this palace of dim night Depart again. Here, here will I remain With worms that are thy chambermaids. O, here Will I set up my everlasting rest; And shake the yoke of inauspicious stars From this world-wearied flesh. Eyes, look your last. Arms, take your last embrace! And, lips, O you The doors of breath, seal with a righteous kiss A dateless bargain to engrossing death. Come, bitter conduct, come, unsavoury guide. Thou desperate pilot, now at once run on The dashing rocks thy sea-sick weary bark. Here’s to my love! [_Drinks._] O true apothecary! Thy drugs are quick. Thus with a kiss I die.

[_Dies._]

Enter, at the other end of the Churchyard, Friar Lawrence, with a lantern, crow, and spade.

FRIAR LAWRENCE. Saint Francis be my speed. How oft tonight Have my old feet stumbled at graves? Who’s there? Who is it that consorts, so late, the dead?

BALTHASAR. Here’s one, a friend, and one that knows you well.

FRIAR LAWRENCE. Bliss be upon you. Tell me, good my friend, What torch is yond that vainly lends his light To grubs and eyeless skulls? As I discern, It burneth in the Capels’ monument.

BALTHASAR. It doth so, holy sir, and there’s my master, One that you love.

FRIAR LAWRENCE. Who is it?

BALTHASAR. Romeo.

FRIAR LAWRENCE. How long hath he been there?

BALTHASAR. Full half an hour.

FRIAR LAWRENCE. Go with me to the vault.

BALTHASAR. I dare not, sir; My master knows not but I am gone hence, And fearfully did menace me with death If I did stay to look on his intents.

FRIAR LAWRENCE. Stay then, I'll go alone. Fear comes upon me. O, much I fear some ill unlucky thing.

BALTHASAR. As I did sleep under this yew tree here, I dreamt my master and another fought, And that my master slew him.

FRIAR LAWRENCE. Romeo! [_Advances._] Alack, alack, what blood is this which stains The stony entrance of this sepulchre? What mean these masterless and gory swords To lie discolour'd by this place of peace?

[_Enters the monument._]

Romeo! O, pale! Who else? What, Paris too? And steep'd in blood? Ah what an unkind hour Is guilty of this lamentable chance? The lady stirs.

[_Juliet wakes and stirs._]

JULIET. O comfortable Friar, where is my lord? I do remember well where I should be, And there I am. Where is my Romeo?

[_Noise within._]

FRIAR LAWRENCE. I hear some noise. Lady, come from that nest Of death, contagion, and unnatural sleep. A greater power than we can contradict Hath thwarted our intents. Come, come away. Thy husband in thy bosom there lies dead; And Paris too. Come, I'll dispose of thee Among a sisterhood of holy nuns. Stay not to question, for the watch is coming. Come, go, good Juliet. I dare no longer stay.

JULIET. Go, get thee hence, for I will not away.

[_Exit Friar Lawrence._]

What's here? A cup clos'd in my true love's hand? Poison, I see, hath been his timeless end. O churl. Drink all, and left no friendly drop To help me after? I will kiss thy lips. Haply some poison yet doth hang on them, To make me die with a restorative.

[_Kisses him._]

Thy lips are warm!

FIRST WATCH. [_Within._] Lead, boy. Which way?

JULIET. Yea, noise? Then I'll be brief. O happy dagger.

[_Snatching Romeo's dagger._]

This is thy sheath. [_stabs herself_] There rest, and let me die.

[_Falls on Romeo's body and dies._]

Enter Watch with the Page of Paris.

PAGE. This is the place. There, where the torch doth burn.

FIRST WATCH. The ground is bloody. Search about the churchyard. Go, some of you, whoe'er you find attach.

[_Exeunt some of the Watch._]

Pitiful sight! Here lies the County slain, And Juliet bleeding, warm, and newly dead, Who here hath lain this two days buried. Go tell the Prince; run to the Capulets. Raise up the Montagues, some others search.

[_Exeunt others of the Watch._]

We see the ground whereon these woes do lie, But the true ground of all these piteous woes We cannot without circumstance descry.

Re-enter some of the Watch with Balthasar.

SECOND WATCH. Here's Romeo's man. We found him in the churchyard.

FIRST WATCH. Hold him in safety till the Prince come hither.

Re-enter others of the Watch with Friar Lawrence.

THIRD WATCH. Here is a Friar that trembles, sighs, and weeps. We took this mattock and this spade from him As he was coming from this churchyard side.

FIRST WATCH. A great suspicion. Stay the Friar too.

Enter the Prince and Attendants.

PRINCE. What misadventure is so early up, That calls our person from our morning's rest?

Enter Capulet, Lady Capulet and others.

CAPULET. What should it be that they so shriek abroad?

LADY CAPULET. O the people in the street cry Romeo, Some Juliet, and some Paris, and all run With open outcry toward our monument.

PRINCE. What fear is this which startles in our ears?

FIRST WATCH. Sovereign, here lies the County Paris slain, And Romeo dead, and Juliet, dead before, Warm and new kill'd.

PRINCE. Search, seek, and know how this foul murder comes.

FIRST WATCH. Here is a Friar, and slaughter'd Romeo's man, With instruments upon them fit to open These dead men's tombs.

CAPULET. O heaven! O wife, look how our daughter bleeds! This dagger hath mista'en, for lo, his house Is empty on the back of Montague, And it mis-sheathed in my daughter's bosom.

LADY CAPULET. O me! This sight of death is as a bell That warns my old age to a sepulchre.

Enter Montague and others.

PRINCE. Come, Montague, for thou art early up, To see thy son and heir more early down.

MONTAGUE. Alas, my liege, my wife is dead tonight. Grief of my son's exile hath stopp'd her breath. What further woe conspires against mine age?

PRINCE. Look, and thou shalt see.

MONTAGUE. O thou untaught! What manners is in this, To press before thy father to a grave?

PRINCE. Seal up the mouth of outrage for a while, Till we can clear these ambiguities, And know their spring, their head, their true descent, And then will I be general of your woes, And lead you even to death. Meantime forbear, And let mischance be slave to patience. Bring forth the parties of suspicion.

FRIAR LAWRENCE. I am the greatest, able to do least, Yet most suspected, as the time and place Doth make against me, of this direful murder. And here I stand, both to impeach and purge Myself condemned and myself excus'd.

PRINCE. Then say at once what thou dost know in this.

FRIAR LAWRENCE. I will be brief, for my short date of breath Is not so long as is a tedious tale. Romeo, there dead, was husband to that Juliet, And she, there dead, that Romeo's faithful wife. I married them; and their stol'n marriage day Was Tybalt's doomsday, whose untimely death Banish'd the new-made bridegroom from this city; For whom, and not for Tybalt, Juliet pin'd. You, to remove that siege of grief from her, Betroth'd, and would have married her perforce To County Paris. Then comes she to me, And with wild looks, bid me devise some means To rid her from this second marriage, Or in my cell there would she kill herself. Then gave I her, so tutored by my art, A sleeping potion, which so took effect As I intended, for it wrought on her The form of death. Meantime I writ to Romeo That he should hither come as this dire night To help to take her from her borrow'd grave, Being the time the potion's force should cease. But he which bore my letter, Friar John, Was stay'd by accident; and yesternight Return'd my letter back. Then all alone At the prefixed hour of her waking Came I to take her from her kindred's vault, Meaning to keep her closely at my cell Till I conveniently could send to Romeo. But when I came, some minute ere the time Of her awaking, here untimely lay The noble Paris and true Romeo dead. She wakes; and I entreated her come forth And bear this work of heaven with patience. But then a noise did scare me from the tomb; And she, too desperate, would not go with me, But, as it seems, did violence on herself. All this I know; and to the marriage Her Nurse is privy. And if ought in this Miscarried by my fault, let my old life Be sacrific'd, some hour before his time, Unto the rigour of severest law.

PRINCE. We still have known thee for a holy man. Where's Romeo's man? What can he say to this?

BALTHASAR. I brought my master news of Juliet's death, And then in post he came from Mantua To this same place, to this same monument. This letter he early bid me give his father, And threaten'd me with death, going in the vault, If I departed not, and left him there.

PRINCE. Give me the letter, I will look on it. Where is the County's Page that rais'd the watch? Sirrah, what made your master in this place?

PAGE. He came with flowers to strew his lady's grave, And bid me stand aloof, and so I did. Anon comes one with light to ope the tomb, And by and by my master drew on him, And then I ran away to call the watch.

PRINCE. This letter doth make good the Friar's words, Their course of love, the tidings of her death. And here he writes that he did buy a poison Of a poor 'pothecary, and therewithal Came to this vault to die, and lie with Juliet. Where be these enemies? Capulet, Montague, See what a scourge is laid upon your hate, That heaven finds means to kill your joys with love! And I, for winking at your discords too, Have lost a brace of kinsmen. All are punish'd.

CAPULET. O brother Montague, give me thy hand. This is my daughter's jointure, for no more Can I demand.

MONTAGUE. But I can give thee more, For I will raise her statue in pure gold, That whiles Verona by that name is known, There shall no figure at such rate be set As that of true and faithful Juliet.

CAPULET. As rich shall Romeo's by his lady's lie, Poor sacrifices of our enmity.

PRINCE. A glooming peace this morning with it brings; The sun for sorrow will not show his head. Go hence, to have more talk of these sad things. Some shall be pardon'd, and some punished, For never was a story of more woe Than this of Juliet and her Romeo.

[_Exeunt._]

Dramatis Personæ

JULIUS CAESAR OCTAVIUS CAESAR, Triumvir after his death. MARCUS ANTONIUS, " " " M. AEMILIUS LEPIDUS, " " " CICERO, PUBLIUS, POPILIUS LENA, Senators. MARCUS BRUTUS, Conspirator against Caesar. CASSIUS, " " " CASCA, " " " TREBONIUS, " " " LIGARIUS," " " DECIUS BRUTUS, " " " METELLUS CIMBER, " " " CINNA, " " " FLAVIUS, tribune MARULLUS, tribune ARTEMIDORUS, a Sophist of Cnidos. A Soothsayer CINNA, a poet. Another Poet. LUCILIUS, TITINIUS, MESSALA, young CATO, and VOLUMNIUS, Friends to Brutus and Cassius. VARRO, CLITUS, CLAUDIUS, STRATO, LUCIUS, DARDANIUS, Servants to Brutus PINDARUS, Servant to Cassius

CALPHURNIA, wife to Caesar PORTIA, wife to Brutus

The Ghost of Caesar

Senators, Citizens, Soldiers, Commoners, Messengers, and Servants.

SCENE: Rome, the conspirators' camp near Sardis, and the plains of Philippi.

ACT I

SCENE I. Rome. A street.

Enter Flavius, Marullus and a throng of Citizens.

FLAVIUS. Hence! home, you idle creatures, get you home. Is this a holiday? What, know you not, Being mechanical, you ought not walk Upon a labouring day without the sign Of your profession? Speak, what trade art thou?

CARPENTER. Why, sir, a carpenter.

MARULLUS. Where is thy leather apron and thy rule? What dost thou with thy best apparel on? You, sir, what trade are you?

COBBLER. Truly, sir, in respect of a fine workman, I am but, as you would say, a cobbler.

MARULLUS. But what trade art thou? Answer me directly.

COBBLER. A trade, sir, that I hope I may use with a safe conscience, which is indeed, sir, a mender of bad soles.

MARULLUS. What trade, thou knave? Thou naughty knave, what trade?

COBBLER. Nay, I beseech you, sir, be not out with me; yet, if you be out, sir, I can mend you.

MARULLUS. What mean'st thou by that? Mend me, thou saucy fellow!

COBBLER. Why, sir, cobble you.

FLAVIUS. Thou art a cobbler, art thou?

COBBLER. Truly, sir, all that I live by is with the awl; I meddle with no tradesman's matters, nor women's matters, but withal I am indeed, sir, a surgeon to old shoes: when they are in great danger, I recover them. As proper men as ever trod upon neat's leather have gone upon my handiwork.

FLAVIUS. But wherefore art not in thy shop today? Why dost thou lead these men about the streets?

COBBLER. Truly, sir, to wear out their shoes, to get myself into more work. But indeed, sir, we make holiday to see Caesar, and to rejoice in his triumph.

MARULLUS. Wherefore rejoice? What conquest brings he home? What tributaries follow him to Rome, To grace in captive bonds his chariot wheels? You blocks, you stones, you worse than senseless things! O you hard hearts, you cruel men of Rome, Knew you not Pompey? Many a time and oft Have you climb'd up to walls and battlements, To towers and windows, yea, to chimney tops, Your infants in your arms, and there have sat The livelong day with patient expectation, To see great Pompey pass the streets of Rome. And when you saw his chariot but appear, Have you not made an universal shout, That Tiber trembled underneath her banks To hear the replication of your sounds Made in her concave shores? And do you now put on your best attire? And do you now cull out a holiday? And do you now strew flowers in his way, That comes in triumph over Pompey's blood? Be gone! Run to your houses, fall upon your knees, Pray to the gods to intermit the plague That needs must light on this ingratitude.

FLAVIUS. Go, go, good countrymen, and, for this fault Assemble all the poor men of your sort, Draw them to Tiber banks, and weep your tears Into the channel, till the lowest stream Do kiss the most exalted shores of all.

[_Exeunt Citizens._]

See whether their basest metal be not mov'd; They vanish tongue-tied in their guiltiness. Go you down that way towards the Capitol; This way will I. Disrobe the images, If you do find them deck'd with ceremonies.

MARULLUS. May we do so? You know it is the feast of Lupercal.

FLAVIUS. It is no matter; let no images Be hung with Caesar's trophies. I'll about And drive away the vulgar from the streets; So do you too, where you perceive them thick. These growing feathers pluck'd from Caesar's wing Will make him fly an ordinary pitch, Who else would soar above the view of men, And keep us all in servile fearfulness.

[_Exeunt._]

SCENE II. The same. A public place.

Enter, in procession, with music, Caesar; Antony, for the course; Calphurnia, Portia, Decius, Cicero, Brutus, Cassius and Casca; a great crowd following, among them a Soothsayer.

CAESAR. Calphurnia.

CASCA. Peace, ho! Caesar speaks.

[_Music ceases._]

CAESAR. Calphurnia.

CALPHURNIA. Here, my lord.

CAESAR. Stand you directly in Antonius' way, When he doth run his course. Antonius.

ANTONY. Caesar, my lord?

CAESAR. Forget not in your speed, Antonius, To touch Calphurnia; for our elders say, The barren, touched in this holy chase, Shake off their sterile curse.

ANTONY. I shall remember. When Caesar says “Do this,” it is perform’d.

CAESAR. Set on; and leave no ceremony out.

[_Music._]

SOOTHSAYER. Caesar!

CAESAR. Ha! Who calls?

CASCA. Bid every noise be still; peace yet again!

[_Music ceases._]

CAESAR. Who is it in the press that calls on me? I hear a tongue shriller than all the music, Cry “Caesar”! Speak. Caesar is turn’d to hear.

SOOTHSAYER. Beware the Ides of March.

CAESAR. What man is that?

BRUTUS. A soothsayer bids you beware the Ides of March.

CAESAR. Set him before me; let me see his face.

CASSIUS. Fellow, come from the throng; look upon Caesar.

CAESAR. What say’st thou to me now? Speak once again.

SOOTHSAYER. Beware the Ides of March.

CAESAR. He is a dreamer; let us leave him. Pass.

[_Sennet. Exeunt all but Brutus and Cassius._]

CASSIUS. Will you go see the order of the course?

BRUTUS. Not I.

CASSIUS. I pray you, do.

BRUTUS. I am not gamesome: I do lack some part Of that quick spirit that is in Antony. Let me not hinder, Cassius, your desires; I’ll leave you.

CASSIUS. Brutus, I do observe you now of late: I have not from your eyes that gentleness And show of love as I was wont to have. You bear too stubborn and too strange a hand Over your friend that loves you.

BRUTUS. Cassius, Be not deceived: if I have veil’d my look, I turn the trouble of my countenance Merely upon myself. Vexed I am Of late with passions of some difference, Conceptions only proper to myself, Which give some soil perhaps to my behaviors; But let not therefore my good friends be grieved (Among which number, Cassius, be you one) Nor construe any further my neglect, Than that poor Brutus, with himself at war, Forgets the shows of love to other men.

CASSIUS. Then, Brutus, I have much mistook your passion; By means whereof this breast of mine hath buried Thoughts of great value, worthy cogitations. Tell me, good Brutus, can you see your face?

BRUTUS. No, Cassius, for the eye sees not itself But by reflection, by some other thing.

CASSIUS. ’Tis just: And it is very much lamented, Brutus, That you have no such mirrors as will turn Your hidden worthiness into your eye, That you might see your shadow. I have heard Where many of the best respect in Rome, (Except immortal Caesar) speaking of Brutus, And groaning underneath this age’s yoke, Have wish’d that noble Brutus had his eyes.

BRUTUS. Into what dangers would you lead me, Cassius, That you would have me seek into myself For that which is not in me?

CASSIUS. Therefore, good Brutus, be prepared to hear; And since you know you cannot see yourself So well as by reflection, I, your glass, Will modestly discover to yourself That of yourself which you yet know not of. And be not jealous on me, gentle Brutus: Were I a common laugher, or did use To stale with ordinary oaths my love To every new protester; if you know That I do fawn on men, and hug them hard, And after scandal them; or if you know That I profess myself in banqueting, To all the rout, then hold me dangerous.

[_Flourish and shout._]

BRUTUS. What means this shouting? I do fear the people Choose Caesar for their king.

CASSIUS. Ay, do you fear it? Then must I think you would not have it so.

BRUTUS. I would not, Cassius; yet I love him well, But wherefore do you hold me here so long? What is it that you would impart to me? If it be aught toward the general good, Set honour in one eye and death i' the other, And I will look on both indifferently; For let the gods so speed me as I love The name of honour more than I fear death.

CASSIUS. I know that virtue to be in you, Brutus, As well as I do know your outward favour. Well, honour is the subject of my story. I cannot tell what you and other men Think of this life; but, for my single self, I had as lief not be as live to be In awe of such a thing as I myself. I was born free as Caesar; so were you; We both have fed as well, and we can both Endure the winter's cold as well as he: For once, upon a raw and gusty day, The troubled Tiber chafing with her shores, Caesar said to me, "Dar'st thou, Cassius, now Leap in with me into this angry flood, And swim to yonder point?" Upon the word, Accoutred as I was, I plunged in, And bade him follow: so indeed he did. The torrent roar'd, and we did buffet it With lusty sinews, throwing it aside And stemming it with hearts of controversy. But ere we could arrive the point propos'd, Caesar cried, "Help me, Cassius, or I sink!" I, as Aeneas, our great ancestor, Did from the flames of Troy upon his shoulder The old Anchises bear, so from the waves of Tiber Did I the tired Caesar. And this man Is now become a god; and Cassius is A wretched creature, and must bend his body, If Caesar carelessly but nod on him. He had a fever when he was in Spain, And when the fit was on him I did mark How he did shake: 'tis true, this god did shake: His coward lips did from their colour fly, And that same eye whose bend doth awe the world Did lose his lustre. I did hear him groan: Ay, and that tongue of his, that bade the Romans Mark him, and write his speeches in their books, Alas, it cried, "Give me some drink, Titinius," As a sick girl. Ye gods, it doth amaze me, A man of such a feeble temper should So get the start of the majestic world, And bear the palm alone.

[_Shout. Flourish._]

BRUTUS. Another general shout? I do believe that these applauses are For some new honours that are heap'd on Caesar.

CASSIUS. Why, man, he doth bestride the narrow world Like a Colossus, and we petty men Walk under his huge legs, and peep about To find ourselves dishonourable graves. Men at some time are masters of their fates: The fault, dear Brutus, is not in our stars, But in ourselves, that we are underlings. "Brutus" and "Caesar": what should be in that "Caesar"? Why should that name be sounded more than yours? Write them together, yours is as fair a name; Sound them, it doth become the mouth as well; Weigh them, it is as heavy; conjure with 'em, "Brutus" will start a spirit as soon as "Caesar." Now in the names of all the gods at once, Upon what meat doth this our Caesar feed, That he is grown so great? Age, thou art sham'd! Rome, thou hast lost the breed of noble bloods! When went there by an age since the great flood, But it was fam'd with more than with one man? When could they say, till now, that talk'd of Rome, That her wide walls encompass'd but one man? Now is it Rome indeed, and room enough, When there is in it but one only man. O, you and I have heard our fathers say, There was a Brutus once that would have brook'd Th' eternal devil to keep his state in Rome, As easily as a king!

BRUTUS. That you do love me, I am nothing jealous; What you would work me to, I have some aim: How I have thought of this, and of these times, I shall recount hereafter. For this present, I would not, so with love I might entreat you, Be any further mov'd. What you have said, I will consider; what you have to say I will with patience hear; and find a time Both meet to hear and answer such high things. Till then, my noble friend, chew upon this: Brutus had rather be a villager Than to repute himself a son of Rome Under these hard conditions as this time Is like to lay upon us.

CASSIUS. I am glad that my weak words Have struck but thus much show of fire from Brutus.

Enter Caesar and his Train.

BRUTUS. The games are done, and Caesar is returning.

CASSIUS. As they pass by, pluck Casca by the sleeve, And he will, after his sour fashion, tell you What hath proceeded worthy note today.

BRUTUS. I will do so. But, look you, Cassius, The angry spot doth glow on Caesar's brow, And all the rest look like a chidden train: Calphurnia's cheek is pale; and Cicero Looks with such ferret and such fiery eyes As we have seen him in the Capitol, Being cross'd in conference by some senators.

CASSIUS. Casca will tell us what the matter is.

CAESAR. Antonius.

ANTONY. Caesar?

CAESAR. Let me have men about me that are fat, Sleek-headed men, and such as sleep a-nights: Yond Cassius has a lean and hungry look; He thinks too much: such men are dangerous.

ANTONY. Fear him not, Caesar; he's not dangerous; He is a noble Roman and well given.

CAESAR. Would he were fatter! But I fear him not: Yet if my name were liable to fear, I do not know the man I should avoid So soon as that spare Cassius. He reads much, He is a great observer, and he looks Quite through the deeds of men. He loves no plays, As thou dost, Antony; he hears no music. Seldom he smiles; and smiles in such a sort As if he mock'd himself and scorn'd his spirit That could be mov'd to smile at anything. Such men as he be never at heart's ease Whiles they behold a greater than themselves, And therefore are they very dangerous. I rather tell thee what is to be fear'd Than what I fear; for always I am Caesar. Come on my right hand, for this ear is deaf, And tell me truly what thou think'st of him.

[_Exeunt Caesar and his Train. Casca stays._]

CASCA. You pull'd me by the cloak; would you speak with me?

BRUTUS. Ay, Casca, tell us what hath chanc'd today, That Caesar looks so sad.

CASCA. Why, you were with him, were you not?

BRUTUS. I should not then ask Casca what had chanc'd.

CASCA. Why, there was a crown offer'd him; and being offer'd him, he put it by with the back of his hand, thus; and then the people fell a-shouting.

BRUTUS. What was the second noise for?

CASCA. Why, for that too.

CASSIUS. They shouted thrice: what was the last cry for?

CASCA. Why, for that too.

BRUTUS. Was the crown offer'd him thrice?

CASCA. Ay, marry, was't, and he put it by thrice, every time gentler than other; and at every putting-by mine honest neighbours shouted.

CASSIUS. Who offer'd him the crown?

CASCA. Why, Antony.

BRUTUS. Tell us the manner of it, gentle Casca.

CASCA. I can as well be hang'd, as tell the manner of it: it was mere foolery; I did not mark it. I saw Mark Antony offer him a crown; yet 'twas not a crown neither, 'twas one of these coronets; and, as I told you, he put it by once: but, for all that, to my thinking, he would fain have had it. Then he offered it to him again: then he put it by again: but, to my thinking, he was very loath to lay his

fingers off it. And then he offered it the third time; he put it the third time by; and still, as he refus'd it, the rabblement hooted, and clapp'd their chopt hands, and threw up their sweaty night-caps, and uttered such a deal of stinking breath because Caesar refus'd the crown, that it had, almost, choked Caesar, for he swooned, and fell down at it. And for mine own part, I durst not laugh, for fear of opening my lips and receiving the bad air.

CASSIUS. But, soft! I pray you. What, did Caesar swoon?

CASCA. He fell down in the market-place, and foam'd at mouth, and was speechless.

BRUTUS. 'Tis very like: he hath the falling-sickness.

CASSIUS. No, Caesar hath it not; but you, and I, And honest Casca, we have the falling-sickness.

CASCA. I know not what you mean by that; but I am sure Caesar fell down. If the tag-rag people did not clap him and hiss him, according as he pleased and displeased them, as they use to do the players in the theatre, I am no true man.

BRUTUS. What said he when he came unto himself?

CASCA. Marry, before he fell down, when he perceived the common herd was glad he refused the crown, he pluck'd me ope his doublet, and offer'd them his throat to cut. And I had been a man of any occupation, if I would not have taken him at a word, I would I might go to hell among the rogues. And so he fell. When he came to himself again, he said, if he had done or said anything amiss, he desir'd their worships to think it was his infirmity. Three or four wenches where I stood cried, "Alas, good soul!" and forgave him with all their hearts. But there's no heed to be taken of them: if Caesar had stabb'd their mothers, they would have done no less.

BRUTUS. And, after that, he came thus sad away?

CASCA. Ay.

CASSIUS. Did Cicero say anything?

CASCA. Ay, he spoke Greek.

CASSIUS. To what effect?

CASCA. Nay, and I tell you that, I'll ne'er look you i' the face again. But those that understood him smil'd at one another and shook their heads; but for mine own part, it was Greek to me. I could tell you more news too: Marullus and Flavius, for pulling scarfs off Caesar's images, are put to silence. Fare you well. There was more foolery yet, if I could remember it.

CASSIUS. Will you sup with me tonight, Casca?

CASCA. No, I am promis'd forth.

CASSIUS. Will you dine with me tomorrow?

CASCA. Ay, if I be alive, and your mind hold, and your dinner worth the eating.

CASSIUS. Good. I will expect you.

CASCA. Do so; farewell both.

[_Exit Casca._]

BRUTUS. What a blunt fellow is this grown to be! He was quick mettle when he went to school.

CASSIUS. So is he now in execution Of any bold or noble enterprise, However he puts on this tardy form. This rudeness is a sauce to his good wit, Which gives men stomach to digest his words With better appetite.

BRUTUS. And so it is. For this time I will leave you: Tomorrow, if you please to speak with me, I will come home to you; or, if you will, Come home to me, and I will wait for you.

CASSIUS. I will do so: till then, think of the world.

[_Exit Brutus._]

Well, Brutus, thou art noble; yet I see, Thy honourable metal may be wrought From that it is dispos'd: therefore 'tis meet That noble minds keep ever with their likes; For who so firm that cannot be seduc'd? Caesar doth bear me hard, but he loves Brutus. If I were Brutus now, and he were Cassius, He should not humour me. I will this night, In several hands, in at his windows throw, As if they came from several citizens, Writings, all tending to the great opinion That Rome holds of his name; wherein obscurely Caesar's ambition shall be glanced at. And after this, let Caesar seat him sure, For we will shake him, or worse days endure.

[_Exit._]

SCENE III. The same. A street.

Thunder and lightning. Enter, from opposite sides, Casca with his sword drawn, and Cicero.

CICERO. Good even, Casca: brought you Caesar home? Why are you breathless, and why stare you so?

CASCA. Are not you moved, when all the sway of earth Shakes like a thing unfirm? O Cicero, I have seen tempests, when the scolding winds Have riv'd the knotty oaks; and I have seen Th' ambitious ocean swell and rage and foam, To be exalted with the threatening clouds: But never till tonight, never till now, Did I go through a tempest dropping fire. Either there is a civil strife in heaven, Or else the world too saucy with the gods, Incenses them to send destruction.

CICERO. Why, saw you anything more wonderful?

CASCA. A common slave, you'd know him well by sight, Held up his left hand, which did flame and burn Like twenty torches join'd, and yet his hand, Not sensible of fire remain'd unscorch'd. Besides, I ha' not since put up my sword, Against the Capitol I met a lion, Who glared upon me, and went surly by, Without annoying me. And there were drawn Upon a heap a hundred ghastly women, Transformed with their fear; who swore they saw Men, all in fire, walk up and down the streets. And yesterday the bird of night did sit, Even at noonday upon the marketplace, Hooting and shrieking. When these prodigies Do so conjointly meet, let not men say, "These are their reasons; they are natural"; For I believe, they are portentous things Unto the climate that they point upon.

CICERO. Indeed, it is a strange-disposed time. But men may construe things after their fashion, Clean from the purpose of the things themselves. Comes Caesar to the Capitol tomorrow?

CASCA. He doth, for he did bid Antonius Send word to you he would be there tomorrow.

CICERO. Goodnight then, Casca: this disturbed sky Is not to walk in.

CASCA. Farewell, Cicero.

[_Exit Cicero._]

Enter Cassius.

CASSIUS. Who's there?

CASCA. A Roman.

CASSIUS. Casca, by your voice.

CASCA. Your ear is good. Cassius, what night is this!

CASSIUS. A very pleasing night to honest men.

CASCA. Who ever knew the heavens menace so?

CASSIUS. Those that have known the earth so full of faults. For my part, I have walk'd about the streets, Submitting me unto the perilous night; And, thus unbraced, Casca, as you see, Have bar'd my bosom to the thunder-stone; And when the cross blue lightning seem'd to open The breast of heaven, I did present myself Even in the aim and very flash of it.

CASCA. But wherefore did you so much tempt the Heavens? It is the part of men to fear and tremble, When the most mighty gods by tokens send Such dreadful heralds to astonish us.

CASSIUS. You are dull, Casca; and those sparks of life That should be in a Roman you do want, Or else you use not. You look pale and gaze, And put on fear and cast yourself in wonder, To see the strange impatience of the Heavens: But if you would consider the true cause Why all these fires, why all these gliding ghosts, Why birds and beasts, from quality and kind; Why old men, fools, and children calculate, Why all these things change from their ordinance, Their natures, and pre-formed faculties, To monstrous quality; why, you shall find That Heaven hath infus'd them with these spirits, To make them instruments of fear and warning Unto some monstrous state. Now could I, Casca, name to thee a man Most like this dreadful night, That thunders, lightens, opens graves, and roars, As doth the lion in the Capitol; A man no mightier than thyself, or me, In personal action; yet prodigious grown, And fearful, as these strange eruptions are.

CASCA. 'Tis Caesar that you mean; is it not, Cassius?

CASSIUS. Let it be who it is: for Romans now Have thews and limbs like to their ancestors; But, woe the while! our fathers' minds are dead, And we are govern'd with our mothers' spirits; Our yoke and sufferance show us womanish.

CASCA. Indeed, they say the senators tomorrow Mean to establish Caesar as a king; And he shall wear his crown by sea and land, In every place, save here in Italy.

CASSIUS. I know where I will wear this dagger then; Cassius from bondage will deliver Cassius: Therein, ye gods, you make the weak most strong; Therein, ye gods, you tyrants do defeat. Nor stony tower, nor walls of beaten brass, Nor airless dungeon, nor strong links of iron, Can be retentive to the strength of spirit; But life, being weary of these worldly bars, Never lacks power to dismiss itself. If I know this, know all the world besides, That part of tyranny that I do bear I can shake off at pleasure.

[_Thunder still._]

CASCA. So can I: So every bondman in his own hand bears The power to cancel his captivity.

CASSIUS. And why should Caesar be a tyrant then? Poor man! I know he would not be a wolf, But that he sees the Romans are but sheep: He were no lion, were not Romans hinds. Those that with haste will make a mighty fire Begin it with weak straws. What trash is Rome, What rubbish, and what offal, when it serves For the base matter to illuminate So vile a thing as Caesar! But, O grief, Where hast thou led me? I, perhaps, speak this Before a willing bondman: then I know My answer must be made; but I am arm'd, And dangers are to me indifferent.

CASCA. You speak to Casca, and to such a man That is no fleering tell-tale. Hold, my hand: Be factious for redress of all these griefs, And I will set this foot of mine as far As who goes farthest.

CASSIUS. There's a bargain made. Now know you, Casca, I have mov'd already Some certain of the noblest-minded Romans To undergo with me an enterprise Of honourable-dangerous consequence; And I do know by this, they stay for me In Pompey's Porch: for now, this fearful night, There is no stir or walking in the streets; And the complexion of the element In favour's like the work we have in hand, Most bloody, fiery, and most terrible.

Enter Cinna.

CASCA. Stand close awhile, for here comes one in haste.

CASSIUS. 'Tis Cinna; I do know him by his gait; He is a friend. Cinna, where haste you so?

CINNA. To find out you. Who's that? Metellus Cimber?

CASSIUS. No, it is Casca, one incorporate To our attempts. Am I not stay'd for, Cinna?

CINNA. I am glad on't. What a fearful night is this! There's two or three of us have seen strange sights.

CASSIUS. Am I not stay'd for? tell me.

CINNA. Yes, you are. O Cassius, if you could But win the noble Brutus to our party—

CASSIUS. Be you content. Good Cinna, take this paper, And look you lay it in the praetor's chair, Where Brutus may but find it; and throw this In at his window; set this up with wax Upon old Brutus' statue: all this done, Repair to Pompey's Porch, where you shall find us. Is Decius Brutus and Trebonius there?

CINNA. All but Metellus Cimber, and he's gone To seek you at your house. Well, I will hie, And so bestow these papers as you bade me.

CASSIUS. That done, repair to Pompey's theatre.

[_Exit Cinna._]

Come, Casca, you and I will yet, ere day, See Brutus at his house: three parts of him Is ours already, and the man entire Upon the next encounter, yields him ours.

CASCA. O, he sits high in all the people's hearts! And that which would appear offence in us, His countenance, like richest alchemy, Will change to virtue and to worthiness.

CASSIUS. Him, and his worth, and our great need of him, You have right well conceited. Let us go, For it is after midnight; and ere day, We will awake him, and be sure of him.

[_Exeunt._]

ACT II

SCENE I. Rome. Brutus' orchard.

Enter Brutus.

BRUTUS. What, Lucius, ho! I cannot, by the progress of the stars, Give guess how near to day.—Lucius, I say! I would it were my fault to sleep so soundly. When, Lucius, when? Awake, I say! What, Lucius!

Enter Lucius.

LUCIUS. Call'd you, my lord?

BRUTUS. Get me a taper in my study, Lucius: When it is lighted, come and call me here.

LUCIUS. I will, my lord.

[_Exit._]

BRUTUS. It must be by his death: and for my part, I know no personal cause to spurn at him, But for the general. He would be crown'd: How that might change his nature, there's the question. It is the bright day that brings forth the adder, And that craves wary walking. Crown him?—that; And then, I grant, we put a sting in him, That at his will he may do danger with. Th' abuse of greatness is, when it disjoins Remorse from power; and, to speak truth of Caesar, I have not known when his affections sway'd More than his reason. But 'tis a common proof, That lowliness is young ambition's ladder, Whereto the climber-upward turns his face; But when he once attains the upmost round, He then unto the ladder turns his back, Looks in the clouds, scorning the base degrees By which he did ascend. So Caesar may; Then lest he may, prevent. And since the quarrel Will bear no colour for the thing he is, Fashion it thus: that what he is, augmented, Would run to these and these extremities: And therefore think him as a serpent's egg Which hatch'd, would, as his kind grow mischievous; And kill him in the shell.

Enter Lucius.

LUCIUS. The taper burneth in your closet, sir. Searching the window for a flint, I found This paper, thus seal'd up, and I am sure It did not lie there when I went to bed.

[_Gives him the letter._]

BRUTUS. Get you to bed again; it is not day. Is not tomorrow, boy, the Ides of March?

LUCIUS. I know not, sir.

BRUTUS. Look in the calendar, and bring me word.

LUCIUS. I will, sir.

[_Exit._]

BRUTUS. The exhalations, whizzing in the air Give so much light that I may read by them.

[_Opens the letter and reads._]

Brutus, thou sleep'st: awake and see thyself. Shall Rome, &c. Speak, strike, redress! "Brutus, thou sleep'st: awake!" Such instigations have been often dropp'd Where I have took them up. "Shall Rome, &c." Thus must I piece it out: Shall Rome stand under one man's awe? What, Rome? My ancestors did from the streets of Rome The Tarquin drive, when he was call'd a king. "Speak, strike, redress!" Am I entreated To speak and strike? O Rome, I make thee promise, If the redress will follow, thou receivest Thy full petition at the hand of Brutus.

Enter Lucius.

LUCIUS. Sir, March is wasted fifteen days.

[_Knock within._]

BRUTUS. 'Tis good. Go to the gate, somebody knocks.

[_Exit Lucius._]

Since Cassius first did whet me against Caesar, I have not slept. Between the acting of a dreadful thing And the first motion, all the interim is Like a phantasma, or a hideous dream: The genius and the mortal instruments Are then in council; and the state of man, Like to a little kingdom, suffers then The nature of an insurrection.

Enter Lucius.

LUCIUS. Sir, 'tis your brother Cassius at the door, Who doth desire to see you.

BRUTUS. Is he alone?

LUCIUS. No, sir, there are moe with him.

BRUTUS. Do you know them?

LUCIUS. No, sir, their hats are pluck'd about their ears, And half their faces buried in their cloaks, That by no means I may discover them By any mark of favour.

BRUTUS. Let 'em enter.

[_Exit Lucius._]

They are the faction. O conspiracy, Sham'st thou to show thy dangerous brow by night, When evils are most free? O, then, by day Where wilt thou find a cavern dark enough To mask thy monstrous visage? Seek none, conspiracy; Hide it in smiles and affability: For if thou path, thy native semblance on, Not Erebus itself were dim enough To hide thee from prevention.

Enter Cassius, Casca, Decius, Cinna, Metellus Cimber and Trebonius.

CASSIUS. I think we are too bold upon your rest: Good morrow, Brutus; do we trouble you?

BRUTUS. I have been up this hour, awake all night. Know I these men that come along with you?

CASSIUS. Yes, every man of them; and no man here But honours you; and everyone doth wish You had but that opinion of yourself Which every noble Roman bears of you. This is Trebonius.

BRUTUS. He is welcome hither.

CASSIUS. This Decius Brutus.

BRUTUS. He is welcome too.

CASSIUS. This, Casca; this, Cinna; and this, Metellus Cimber.

BRUTUS. They are all welcome. What watchful cares do interpose themselves Betwixt your eyes and night?

CASSIUS. Shall I entreat a word?

[_They whisper._]

DECIUS. Here lies the east: doth not the day break here?

CASCA. No.

CINNA. O, pardon, sir, it doth; and yon grey lines That fret the clouds are messengers of day.

CASCA. You shall confess that you are both deceiv'd. Here, as I point my sword, the Sun arises; Which is a great way growing on the South, Weighing the youthful season of the year. Some two months hence, up higher toward the North He first presents his fire; and the high East Stands, as the Capitol, directly here.

BRUTUS. Give me your hands all over, one by one.

CASSIUS. And let us swear our resolution.

BRUTUS. No, not an oath. If not the face of men, The sufferance of our souls, the time's abuse— If these be motives weak, break off betimes, And every man hence to his idle bed. So let high-sighted tyranny range on, Till each man drop by lottery. But if these, As I am sure they do, bear fire enough To kindle cowards, and to steel with valour The melting spirits of women; then, countrymen, What need we any spur but our own cause To prick us to redress? what other bond Than secret Romans, that have spoke the word, And will not palter? and what other oath Than honesty to honesty engag'd, That this shall be, or we will fall for it? Swear priests and cowards, and men cautelous, Old feeble carrions, and such suffering souls That welcome wrongs; unto bad causes swear Such creatures as men doubt; but do not stain The even virtue of our enterprise, Nor th' insuppressive mettle of our spirits, To think that or our cause or our performance Did need an oath; when every drop of blood That every Roman bears, and nobly bears, Is guilty of a several bastardy, If he do break the smallest particle Of any promise that hath pass'd from him.

CASSIUS. But what of Cicero? Shall we sound him? I think he will stand very strong with us.

CASCA. Let us not leave him out.

CINNA. No, by no means.

METELLUS. O, let us have him, for his silver hairs Will purchase us a good opinion, And buy men's voices to commend our deeds. It shall be said, his judgement rul'd our hands; Our youths and wildness shall no whit appear, But all be buried in his gravity.

BRUTUS. O, name him not; let us not break with him; For he will never follow anything That other men begin.

CASSIUS. Then leave him out.

CASCA. Indeed, he is not fit.

DECIUS. Shall no man else be touch'd but only Caesar?

CASSIUS. Decius, well urg'd. I think it is not meet, Mark Antony, so well belov'd of Caesar, Should outlive Caesar: we shall find of him A shrewd contriver; and you know, his means, If he improve them, may well stretch so far As to annoy us all; which to prevent, Let Antony and Caesar fall together.

BRUTUS. Our course will seem too bloody, Caius Cassius, To cut the head off, and then hack the limbs, Like wrath in death, and envy afterwards; For Antony is but a limb of Caesar. Let us be sacrificers, but not butchers, Caius. We all stand up against the spirit of Caesar, And in the spirit of men there is no blood. O, that we then could come by Caesar's spirit, And not dismember Caesar! But, alas, Caesar must bleed for it! And, gentle friends, Let's kill him boldly, but not wrathfully; Let's carve him as a dish fit for the gods, Not hew him as a carcass fit for hounds. And let our hearts, as subtle masters do, Stir up their servants to an act of rage, And after seem to chide 'em. This shall mark Our purpose necessary, and not envious; Which so appearing to the common eyes, We shall be call'd purgers, not murderers. And for Mark Antony, think not of him; For he can do no more than Caesar's arm When Caesar's head is off.

CASSIUS. Yet I fear him; For in the ingrafted love he bears to Caesar—

BRUTUS. Alas, good Cassius, do not think of him: If he love Caesar, all that he can do Is to himself; take thought and die for Caesar. And that were much he should; for he is given To sports, to wildness, and much company.

TREBONIUS. There is no fear in him; let him not die; For he will live, and laugh at this hereafter.

[_Clock strikes._]

BRUTUS. Peace! count the clock.

CASSIUS. The clock hath stricken three.

TREBONIUS. 'Tis time to part.

CASSIUS. But it is doubtful yet Whether Caesar will come forth today or no; For he is superstitious grown of late, Quite from the main opinion he held once Of fantasy, of dreams, and ceremonies. It may be these apparent prodigies, The unaccustom'd terror of this night, And the persuasion of his augurers, May hold him from the Capitol today.

DECIUS. Never fear that: if he be so resolved, I can o'ersway him, for he loves to hear That unicorns may be betray'd with trees, And bears with glasses, elephants with holes, Lions with toils, and men with flatterers. But when I tell him he hates flatterers, He says he does, being then most flattered. Let me work; For I can give his humour the true bent, And I will bring him to the Capitol.

CASSIUS. Nay, we will all of us be there to fetch him.

BRUTUS. By the eighth hour: is that the uttermost?

CINNA. Be that the uttermost; and fail not then.

METELLUS. Caius Ligarius doth bear Caesar hard, Who rated him for speaking well of Pompey; I wonder none of you have thought of him.

BRUTUS. Now, good Metellus, go along by him: He loves me well, and I have given him reason; Send him but hither, and I'll fashion him.

CASSIUS. The morning comes upon's. We'll leave you, Brutus. And, friends, disperse yourselves; but all remember What you have said, and show yourselves true Romans.

BRUTUS. Good gentlemen, look fresh and merrily; Let not our looks put on our purposes, But bear it as our Roman actors do, With untired spirits and formal constancy. And so, good morrow to you everyone.

[_Exeunt all but Brutus._]

Boy! Lucius! Fast asleep? It is no matter; Enjoy the honey-heavy dew of slumber: Thou hast no figures nor no fantasies, Which busy care draws in the brains of men; Therefore thou sleep'st so sound.

Enter Portia.

PORTIA. Brutus, my lord.

BRUTUS. Portia, what mean you? Wherefore rise you now? It is not for your health thus to commit Your weak condition to the raw cold morning.

PORTIA. Nor for yours neither. Y' have ungently, Brutus, Stole from my bed; and yesternight at supper, You suddenly arose, and walk'd about, Musing and sighing, with your arms across; And when I ask'd you what the matter was, You star'd upon me with ungentle looks. I urg'd you further; then you scratch'd your head, And too impatiently stamp'd with your foot; Yet I insisted, yet you answer'd not, But with an angry wafture of your hand Gave sign for me to leave you. So I did, Fearing to strengthen that impatience Which seem'd too much enkindled; and withal Hoping it was but an effect of humour, Which sometime hath his hour with every man. It will not let you eat, nor talk, nor sleep; And could it work so much upon your shape As it hath much prevail'd on your condition, I should not know you, Brutus. Dear my lord, Make me acquainted with your cause of grief.

BRUTUS. I am not well in health, and that is all.

PORTIA. Brutus is wise, and, were he not in health, He would embrace the means to come by it.

BRUTUS. Why, so I do. Good Portia, go to bed.

PORTIA. Is Brutus sick, and is it physical To walk unbraced and suck up the humours Of the dank morning? What, is Brutus sick, And will he steal out of his wholesome bed To dare the vile contagion of the night, And tempt the rheumy and unpurged air To add unto his sickness? No, my Brutus; You have some sick offence within your mind, Which, by the right and virtue of my place, I ought to know of: and, upon my knees, I charm you, by my once commended beauty, By all your vows of love, and that great vow Which did incorporate and make us one, That you unfold to me, your self, your half, Why you are heavy, and what men tonight Have had resort to you; for here have been Some six or seven, who did hide their faces Even from darkness.

BRUTUS. Kneel not, gentle Portia.

PORTIA. I should not need, if you were gentle Brutus. Within the bond of marriage, tell me, Brutus, Is it excepted I should know no secrets That appertain to you? Am I your self But, as it were, in sort or limitation, To keep with you at meals, comfort your bed, And talk to you sometimes? Dwell I but in the suburbs Of your good pleasure? If it be no more, Portia is Brutus' harlot, not his wife.

BRUTUS. You are my true and honourable wife, As dear to me as are the ruddy drops That visit my sad heart.

PORTIA. If this were true, then should I know this secret. I grant I am a woman; but withal A woman that Lord Brutus took to wife; I grant I am a woman; but withal A woman well reputed, Cato's daughter. Think you I am no stronger than my sex, Being so father'd and so husbanded? Tell me your counsels, I will not disclose 'em. I have made strong proof of my constancy, Giving myself a voluntary wound Here, in the thigh: can I bear that with patience And not my husband's secrets?

BRUTUS. O ye gods, Render me worthy of this noble wife!

[_Knock._]

Hark, hark, one knocks. Portia, go in awhile; And by and by thy bosom shall partake The secrets of my heart. All my engagements I will construe to thee, All the charactery of my sad brows. Leave me with haste.

[_Exit Portia._]

Enter Lucius with Ligarius.

Lucius, who's that knocks?

LUCIUS. Here is a sick man that would speak with you.

BRUTUS. Caius Ligarius, that Metellus spake of. Boy, stand aside. Caius Ligarius, how?

LIGARIUS. Vouchsafe good-morrow from a feeble tongue.

BRUTUS. O, what a time have you chose out, brave Caius, To wear a kerchief! Would you were not sick!

LIGARIUS. I am not sick, if Brutus have in hand Any exploit worthy the name of honour.

BRUTUS. Such an exploit have I in hand, Ligarius, Had you a healthful ear to hear of it.

LIGARIUS. By all the gods that Romans bow before, I here discard my sickness. Soul of Rome! Brave son, derived from honourable loins! Thou, like an exorcist, hast conjur'd up My mortified spirit. Now bid me run, And I will strive with things impossible, Yea, get the better of them. What's to do?

BRUTUS. A piece of work that will make sick men whole.

LIGARIUS. But are not some whole that we must make sick?

BRUTUS. That must we also. What it is, my Caius, I shall unfold to thee, as we are going, To whom it must be done.

LIGARIUS. Set on your foot, And with a heart new-fir'd I follow you, To do I know not what; but it sufficeth That Brutus leads me on.

[_Thunder._]

BRUTUS. Follow me then.

[_Exeunt._]

SCENE II. A room in Caesar's palace.

Thunder and lightning. Enter Caesar, in his nightgown.

CAESAR. Nor heaven nor earth have been at peace tonight: Thrice hath Calphurnia in her sleep cried out, "Help, ho! They murder Caesar!" Who's within?

Enter a Servant.

SERVANT. My lord?

CAESAR. Go bid the priests do present sacrifice, And bring me their opinions of success.

SERVANT. I will, my lord.

[_Exit._]

Enter Calphurnia.

CALPHURNIA. What mean you, Caesar? Think you to walk forth? You shall not stir out of your house today.

CAESAR. Caesar shall forth. The things that threaten'd me Ne'er look'd but on my back; when they shall see The face of Caesar, they are vanished.

CALPHURNIA. Caesar, I never stood on ceremonies, Yet now they fright me. There is one within, Besides the things that we have heard and seen, Recounts most horrid sights seen by the watch. A lioness hath whelped in the streets, And graves have yawn'd, and yielded up their dead; Fierce fiery warriors fight upon the clouds In ranks and squadrons and right form of war, Which drizzled blood upon the Capitol; The noise of battle hurtled in the air, Horses did neigh, and dying men did groan, And ghosts did shriek and squeal about the streets. O Caesar, these things are beyond all use, And I do fear them!

CAESAR. What can be avoided Whose end is purpos'd by the mighty gods? Yet Caesar shall go forth; for these predictions Are to the world in general as to Caesar.

CALPHURNIA. When beggars die, there are no comets seen; The heavens themselves blaze forth the death of princes.

CAESAR. Cowards die many times before their deaths; The valiant never taste of death but once. Of all the wonders that I yet have heard, It seems to me most strange that men should fear, Seeing that death, a necessary end, Will come when it will come.

Enter Servant.

What say the augurers?

SERVANT. They would not have you to stir forth today. Plucking the entrails of an offering forth, They could not find a heart within the beast.

CAESAR. The gods do this in shame of cowardice: Caesar should be a beast without a heart If he should stay at home today for fear. No, Caesar shall not. Danger knows full well That Caesar is more dangerous than he. We are two lions litter'd in one day, And I the elder and more terrible, And Caesar shall go forth.

CALPHURNIA. Alas, my lord, Your wisdom is consum'd in confidence. Do not go forth today: call it my fear That keeps you in the house, and not your own. We'll send Mark Antony to the Senate-house, And he shall say you are not well today. Let me upon my knee prevail in this.

CAESAR. Mark Antony shall say I am not well, And for thy humour, I will stay at home.

Enter Decius.

Here’s Decius Brutus, he shall tell them so.

DECIUS. Caesar, all hail! Good morrow, worthy Caesar. I come to fetch you to the Senate-house.

CAESAR. And you are come in very happy time To bear my greeting to the Senators, And tell them that I will not come today. Cannot, is false; and that I dare not, falser: I will not come today. Tell them so, Decius.

CALPHURNIA. Say he is sick.

CAESAR. Shall Caesar send a lie? Have I in conquest stretch’d mine arm so far, To be afeard to tell grey-beards the truth? Decius, go tell them Caesar will not come.

DECIUS. Most mighty Caesar, let me know some cause, Lest I be laugh’d at when I tell them so.

CAESAR. The cause is in my will; I will not come. That is enough to satisfy the Senate. But for your private satisfaction, Because I love you, I will let you know: Calphurnia here, my wife, stays me at home. She dreamt tonight she saw my statue, Which like a fountain with an hundred spouts Did run pure blood; and many lusty Romans Came smiling, and did bathe their hands in it. And these does she apply for warnings and portents And evils imminent; and on her knee Hath begg’d that I will stay at home today.

DECIUS. This dream is all amiss interpreted: It was a vision fair and fortunate. Your statue spouting blood in many pipes, In which so many smiling Romans bath’d, Signifies that from you great Rome shall suck Reviving blood, and that great men shall press For tinctures, stains, relics, and cognizance. This by Calphurnia’s dream is signified.

CAESAR. And this way have you well expounded it.

DECIUS. I have, when you have heard what I can say; And know it now. The Senate have concluded To give this day a crown to mighty Caesar. If you shall send them word you will not come, Their minds may change. Besides, it were a mock Apt to be render’d, for someone to say, “Break up the Senate till another time, When Caesar’s wife shall meet with better dreams.” If Caesar hide himself, shall they not whisper “Lo, Caesar is afraid”? Pardon me, Caesar; for my dear dear love To your proceeding bids me tell you this, And reason to my love is liable.

CAESAR. How foolish do your fears seem now, Calphurnia! I am ashamed I did yield to them. Give me my robe, for I will go.

Enter Brutus, Ligarius, Metellus, Casca, Trebonius, Cinna and Publius.

And look where Publius is come to fetch me.

PUBLIUS. Good morrow, Caesar.

CAESAR. Welcome, Publius. What, Brutus, are you stirr’d so early too? Good morrow, Casca. Caius Ligarius, Caesar was ne’er so much your enemy As that same ague which hath made you lean. What is’t o’clock?

BRUTUS. Caesar, ’tis strucken eight.

CAESAR. I thank you for your pains and courtesy.

Enter Antony.

See! Antony, that revels long a-nights, Is notwithstanding up. Good morrow, Antony.

ANTONY. So to most noble Caesar.

CAESAR. Bid them prepare within. I am to blame to be thus waited for. Now, Cinna; now, Metellus; what, Trebonius! I have an hour’s talk in store for you: Remember that you call on me today; Be near me, that I may remember you.

TREBONIUS. Caesar, I will. [_Aside._] and so near will I be, That your best friends shall wish I had been further.

CAESAR. Good friends, go in, and taste some wine with me; And we, like friends, will straightway go together.

BRUTUS. [_Aside._] That every like is not the same, O Caesar, The heart of Brutus yearns to think upon.

[_Exeunt._]

SCENE III. A street near the Capitol.

Enter Artemidorus, reading a paper.

ARTEMIDORUS. _“Caesar, beware of Brutus; take heed of Cassius; come not near Casca; have an eye to Cinna; trust not Trebonius; mark well Metellus Cimber; Decius Brutus loves thee not; thou hast wrong’d Caius Ligarius. There is but one mind in all these men, and it is bent against Caesar. If thou be’st not immortal, look about you: security gives way to conspiracy. The mighty gods defend thee! Thy lover, Artemidorus.”_ Here will I stand till Caesar pass along, And as a suitor will I give him this. My heart laments that virtue cannot live Out of the teeth of emulation. If thou read this, O Caesar, thou mayest live; If not, the Fates with traitors do contrive.

[_Exit._]

SCENE IV. Another part of the same street, before the house of Brutus.

Enter Portia and Lucius.

PORTIA. I pr’ythee, boy, run to the Senate-house; Stay not to answer me, but get thee gone. Why dost thou stay?

LUCIUS. To know my errand, madam.

PORTIA. I would have had thee there and here again, Ere I can tell thee what thou shouldst do there. [_Aside._] O constancy, be strong upon my side, Set a huge mountain ’tween my heart and tongue! I have a man’s mind, but a woman’s might. How hard it is for women to keep counsel! Art thou here yet?

LUCIUS. Madam, what should I do? Run to the Capitol, and nothing else? And so return to you, and nothing else?

PORTIA. Yes, bring me word, boy, if thy lord look well, For he went sickly forth: and take good note What Caesar doth, what suitors press to him. Hark, boy, what noise is that?

LUCIUS. I hear none, madam.

PORTIA. Pr’ythee, listen well. I heard a bustling rumour, like a fray, And the wind brings it from the Capitol.

LUCIUS. Sooth, madam, I hear nothing.

Enter the Soothsayer.

PORTIA. Come hither, fellow: Which way hast thou been?

SOOTHSAYER. At mine own house, good lady.

PORTIA. What is’t o’clock?

SOOTHSAYER. About the ninth hour, lady.

PORTIA. Is Caesar yet gone to the Capitol?

SOOTHSAYER. Madam, not yet. I go to take my stand, To see him pass on to the Capitol.

PORTIA. Thou hast some suit to Caesar, hast thou not?

SOOTHSAYER. That I have, lady, if it will please Caesar To be so good to Caesar as to hear me, I shall beseech him to befriend himself.

PORTIA. Why, know’st thou any harm’s intended towards him?

SOOTHSAYER. None that I know will be, much that I fear may chance. Good morrow to you. Here the street is narrow. The throng that follows Caesar at the heels, Of Senators, of Praetors, common suitors, Will crowd a feeble man almost to death: I’ll get me to a place more void, and there Speak to great Caesar as he comes along.

[_Exit._]

PORTIA. I must go in. [_Aside._] Ay me, how weak a thing The heart of woman is! O Brutus, The heavens speed thee in thine enterprise! Sure, the boy heard me. Brutus hath a suit That Caesar will not grant. O, I grow faint. Run, Lucius, and commend me to my lord; Say I am merry; come to me again, And bring me word what he doth say to thee.

[_Exeunt._]

ACT III

SCENE I. Rome. Before the Capitol; the Senate sitting.

A crowd of people in the street leading to the Capitol. Flourish. Enter Caesar, Brutus, Cassius, Casca, Decius, Metellus, Trebonius, Cinna, Antony, Lepidus, Artemidorus, Publius, Popilius and the Soothsayer.

CAESAR. The Ides of March are come.

SOOTHSAYER. Ay, Caesar; but not gone.

ARTEMIDORUS. Hail, Caesar! Read this schedule.

DECIUS. Trebonius doth desire you to o'er-read, At your best leisure, this his humble suit.

ARTEMIDORUS. O Caesar, read mine first; for mine's a suit That touches Caesar nearer. Read it, great Caesar.

CAESAR. What touches us ourself shall be last serv'd.

ARTEMIDORUS. Delay not, Caesar. Read it instantly.

CAESAR. What, is the fellow mad?

PUBLIUS. Sirrah, give place.

CASSIUS. What, urge you your petitions in the street? Come to the Capitol.

Caesar enters the Capitol, the rest following. All the Senators rise.

POPILIUS. I wish your enterprise today may thrive.

CASSIUS. What enterprise, Popilius?

POPILIUS. Fare you well.

[_Advances to Caesar._]

BRUTUS. What said Popilius Lena?

CASSIUS. He wish'd today our enterprise might thrive. I fear our purpose is discovered.

BRUTUS. Look how he makes to Caesar: mark him.

CASSIUS. Casca, be sudden, for we fear prevention. Brutus, what shall be done? If this be known, Cassius or Caesar never shall turn back, For I will slay myself.

BRUTUS. Cassius, be constant: Popilius Lena speaks not of our purposes; For look, he smiles, and Caesar doth not change.

CASSIUS. Trebonius knows his time, for look you, Brutus, He draws Mark Antony out of the way.

[_Exeunt Antony and Trebonius. Caesar and the Senators take their seats._]

DECIUS. Where is Metellus Cimber? Let him go, And presently prefer his suit to Caesar.

BRUTUS. He is address'd; press near and second him.

CINNA. Casca, you are the first that rears your hand.

CAESAR. Are we all ready? What is now amiss That Caesar and his Senate must redress?

METELLUS. Most high, most mighty, and most puissant Caesar, Metellus Cimber throws before thy seat An humble heart.

[_Kneeling._]

CAESAR. I must prevent thee, Cimber. These couchings and these lowly courtesies Might fire the blood of ordinary men, And turn pre-ordinance and first decree Into the law of children. Be not fond, To think that Caesar bears such rebel blood That will be thaw'd from the true quality With that which melteth fools; I mean sweet words, Low-crooked curtsies, and base spaniel fawning. Thy brother by decree is banished: If thou dost bend, and pray, and fawn for him, I spurn thee like a cur out of my way. Know, Caesar dost not wrong, nor without cause Will he be satisfied.

METELLUS. Is there no voice more worthy than my own, To sound more sweetly in great Caesar's ear For the repealing of my banish'd brother?

BRUTUS. I kiss thy hand, but not in flattery, Caesar; Desiring thee that Publius Cimber may Have an immediate freedom of repeal.

CAESAR. What, Brutus?

CASSIUS. Pardon, Caesar; Caesar, pardon: As low as to thy foot doth Cassius fall, To beg enfranchisement for Publius Cimber.

CAESAR. I could be well mov'd, if I were as you; If I could pray to move, prayers would move me: But I am constant as the northern star, Of whose true-fix'd and resting quality There is no fellow in the firmament. The skies are painted with unnumber'd sparks, They are all fire, and every one doth shine; But there's but one in all doth hold his place. So in the world; 'tis furnish'd well with men, And men are flesh and blood, and apprehensive; Yet in the number I do know but one That unassailable holds on his rank, Unshak'd of motion: and that I am he, Let me a little show it, even in this, That I was constant Cimber should be banish'd, And constant do remain to keep him so.

CINNA. O Caesar,—

CAESAR. Hence! wilt thou lift up Olympus?

DECIUS. Great Caesar,—

CAESAR. Doth not Brutus bootless kneel?

CASCA. Speak, hands, for me!

[_Casca stabs Caesar in the neck. Caesar catches hold of his arm. He is then stabbed by several other Conspirators, and at last by Marcus Brutus._]

CAESAR. _Et tu, Brute?_—Then fall, Caesar!

[_Dies. The Senators and People retire in confusion._]

CINNA. Liberty! Freedom! Tyranny is dead! Run hence, proclaim, cry it about the streets.

CASSIUS. Some to the common pulpits and cry out, "Liberty, freedom, and enfranchisement!"

BRUTUS. People and Senators, be not affrighted. Fly not; stand still; ambition's debt is paid.

CASCA. Go to the pulpit, Brutus.

DECIUS. And Cassius too.

BRUTUS. Where's Publius?

CINNA. Here, quite confounded with this mutiny.

METELLUS. Stand fast together, lest some friend of Caesar's Should chance—

BRUTUS. Talk not of standing. Publius, good cheer! There is no harm intended to your person, Nor to no Roman else. So tell them, Publius.

CASSIUS. And leave us, Publius; lest that the people Rushing on us, should do your age some mischief.

BRUTUS. Do so; and let no man abide this deed But we the doers.

Enter Trebonius.

CASSIUS. Where's Antony?

TREBONIUS. Fled to his house amaz'd. Men, wives, and children stare, cry out, and run, As it were doomsday.

BRUTUS. Fates, we will know your pleasures. That we shall die, we know; 'tis but the time And drawing days out, that men stand upon.

CASCA. Why, he that cuts off twenty years of life Cuts off so many years of fearing death.

BRUTUS. Grant that, and then is death a benefit: So are we Caesar's friends, that have abridg'd His time of fearing death. Stoop, Romans, stoop, And let us bathe our hands in Caesar's blood Up to the elbows, and besmear our swords: Then walk we forth, even to the market-place, And waving our red weapons o'er our heads, Let's all cry, "Peace, freedom, and liberty!"

CASSIUS. Stoop then, and wash. How many ages hence Shall this our lofty scene be acted over In States unborn, and accents yet unknown!

BRUTUS. How many times shall Caesar bleed in sport, That now on Pompey's basis lies along, No worthier than the dust!

CASSIUS. So oft as that shall be, So often shall the knot of us be call'd The men that gave their country liberty.

DECIUS. What, shall we forth?

CASSIUS. Ay, every man away. Brutus shall lead; and we will grace his heels With the most boldest and best hearts of Rome.

Enter a Servant.

BRUTUS. Soft, who comes here? A friend of Antony's.

SERVANT. Thus, Brutus, did my master bid me kneel; Thus did Mark Antony bid me fall down; And, being prostrate, thus he bade me say: Brutus is noble, wise, valiant, and honest; Caesar was mighty, bold, royal, and loving; Say I love Brutus and I honour him; Say I fear'd Caesar, honour'd him, and lov'd him. If Brutus will vouchsafe that Antony May safely come to him, and be resolv'd How Caesar hath deserv'd to lie in death, Mark Antony shall not love Caesar dead So well as Brutus living; but will follow The fortunes and affairs of noble Brutus Thorough the hazards of this untrod state, With all true faith. So says my master Antony.

BRUTUS. Thy master is a wise and valiant Roman; I never thought him worse. Tell him, so please him come unto this place, He shall be satisfied and, by my honour, Depart untouch'd.

SERVANT. I'll fetch him presently.

[_Exit._]

BRUTUS. I know that we shall have him well to friend.

CASSIUS. I wish we may: but yet have I a mind That fears him much; and my misgiving still Falls shrewdly to the purpose.

Enter Antony.

BRUTUS. But here comes Antony. Welcome, Mark Antony.

ANTONY. O mighty Caesar! Dost thou lie so low? Are all thy conquests, glories, triumphs, spoils, Shrunk to this little measure? Fare thee well. I know not, gentlemen, what you intend, Who else must be let blood, who else is rank: If I myself, there is no hour so fit As Caesar's death's hour; nor no instrument Of half that worth as those your swords, made rich With the most noble blood of all this world. I do beseech ye, if you bear me hard, Now, whilst your purpled hands do reek and smoke, Fulfill your pleasure. Live a thousand years, I shall not find myself so apt to die. No place will please me so, no means of death, As here by Caesar, and by you cut off, The choice and master spirits of this age.

BRUTUS. O Antony, beg not your death of us. Though now we must appear bloody and cruel, As by our hands and this our present act You see we do; yet see you but our hands And this the bleeding business they have done. Our hearts you see not; they are pitiful; And pity to the general wrong of Rome— As fire drives out fire, so pity pity— Hath done this deed on Caesar. For your part, To you our swords have leaden points, Mark Antony; Our arms in strength of malice, and our hearts Of brothers' temper, do receive you in With all kind love, good thoughts, and reverence.

CASSIUS. Your voice shall be as strong as any man's In the disposing of new dignities.

BRUTUS. Only be patient till we have appeas'd The multitude, beside themselves with fear, And then we will deliver you the cause Why I, that did love Caesar when I struck him, Have thus proceeded.

ANTONY. I doubt not of your wisdom. Let each man render me his bloody hand. First, Marcus Brutus, will I shake with you; Next, Caius Cassius, do I take your hand. Now, Decius Brutus, yours; now yours, Metellus; Yours, Cinna; and, my valiant Casca, yours; Though last, not least in love, yours, good Trebonius. Gentlemen all—alas, what shall I say? My credit now stands on such slippery ground, That one of two bad ways you must conceit me, Either a coward or a flatterer. That I did love thee, Caesar, O, 'tis true: If then thy spirit look upon us now, Shall it not grieve thee dearer than thy death, To see thy Antony making his peace, Shaking the bloody fingers of thy foes, Most noble, in the presence of thy corse? Had I as many eyes as thou hast wounds, Weeping as fast as they stream forth thy blood, It would become me better than to close In terms of friendship with thine enemies. Pardon me, Julius! Here wast thou bay'd, brave hart; Here didst thou fall; and here thy hunters stand, Sign'd in thy spoil, and crimson'd in thy lethe. O world, thou wast the forest to this hart; And this indeed, O world, the heart of thee. How like a deer strucken by many princes, Dost thou here lie!

CASSIUS. Mark Antony,—

ANTONY. Pardon me, Caius Cassius: The enemies of Caesar shall say this; Then, in a friend, it is cold modesty.

CASSIUS. I blame you not for praising Caesar so; But what compact mean you to have with us? Will you be prick'd in number of our friends, Or shall we on, and not depend on you?

ANTONY. Therefore I took your hands; but was indeed Sway'd from the point, by looking down on Caesar. Friends am I with you all, and love you all, Upon this hope, that you shall give me reasons Why, and wherein, Caesar was dangerous.

BRUTUS. Or else were this a savage spectacle. Our reasons are so full of good regard That were you, Antony, the son of Caesar, You should be satisfied.

ANTONY. That's all I seek, And am moreover suitor that I may Produce his body to the market-place; And in the pulpit, as becomes a friend, Speak in the order of his funeral.

BRUTUS. You shall, Mark Antony.

CASSIUS. Brutus, a word with you. [_Aside to Brutus._] You know not what you do. Do not consent That Antony speak in his funeral. Know you how much the people may be mov'd By that which he will utter?

BRUTUS. [_Aside to Cassius._] By your pardon: I will myself into the pulpit first, And show the reason of our Caesar's death. What Antony shall speak, I will protest He speaks by leave and by permission; And that we are contented Caesar shall Have all true rights and lawful ceremonies. It shall advantage more than do us wrong.

CASSIUS. [_Aside to Brutus._] I know not what may fall; I like it not.

BRUTUS. Mark Antony, here, take you Caesar's body. You shall not in your funeral speech blame us, But speak all good you can devise of Caesar, And say you do't by our permission; Else shall you not have any hand at all About his funeral. And you shall speak In the same pulpit whereto I am going, After my speech is ended.

ANTONY. Be it so; I do desire no more.

BRUTUS. Prepare the body, then, and follow us.

[_Exeunt all but Antony._]

ANTONY. O, pardon me, thou bleeding piece of earth, That I am meek and gentle with these butchers. Thou art the ruins of the noblest man That ever lived in the tide of times. Woe to the hand that shed this costly blood! Over thy wounds now do I prophesy, Which, like dumb mouths do ope their ruby lips To beg the voice and utterance of my tongue, A curse shall light upon the limbs of men; Domestic fury and fierce civil strife Shall cumber all the parts of Italy; Blood and destruction shall be so in use, And dreadful objects so familiar, That mothers shall but smile when they behold Their infants quartered with the hands of war; All pity chok'd with custom of fell deeds: And Caesar's spirit, ranging for revenge, With Ate by his side come hot from Hell, Shall in these confines with a monarch's voice Cry havoc and let slip the dogs of war, That this foul deed shall smell above the earth With carrion men, groaning for burial.

Enter a Servant.

You serve Octavius Caesar, do you not?

SERVANT. I do, Mark Antony.

ANTONY. Caesar did write for him to come to Rome.

SERVANT. He did receive his letters, and is coming, And bid me say to you by word of mouth,— [_Seeing the body._] O Caesar!

ANTONY. Thy heart is big, get thee apart and weep. Passion, I see, is catching; for mine eyes, Seeing those beads of sorrow stand in thine, Began to water. Is thy master coming?

SERVANT. He lies tonight within seven leagues of Rome.

ANTONY. Post back with speed, and tell him what hath chanc'd. Here is a mourning Rome, a dangerous Rome, No Rome of safety for Octavius yet. Hie hence, and tell him so. Yet stay awhile; Thou shalt not back till I have borne this corse Into the market-place: there shall I try, In my oration, how the people take The cruel issue of these bloody men; According to the which thou shalt discourse To young Octavius of the state of things. Lend me your hand.

[_Exeunt with Caesar's body._]

SCENE II. The same. The Forum.

Enter Brutus and goes into the pulpit, and Cassius, with a throng of Citizens.

CITIZENS. We will be satisfied; let us be satisfied.

BRUTUS. Then follow me, and give me audience, friends. Cassius, go you into the other street And part the numbers. Those that will hear me speak, let 'em stay here; Those that will follow Cassius, go with him; And public reasons shall be rendered Of Caesar's death.

FIRST CITIZEN. I will hear Brutus speak.

SECOND CITIZEN. I will hear Cassius; and compare their reasons, When severally we hear them rendered.

[_Exit Cassius, with some of the Citizens. Brutus goes into the rostrum._]

THIRD CITIZEN. The noble Brutus is ascended: silence!

BRUTUS. Be patient till the last. Romans, countrymen, and lovers, hear me for my cause; and be silent, that you may hear. Believe me for mine honour, and have respect to mine honour, that you may believe. Censure me in your wisdom, and awake your senses, that you may the better judge. If there be any in this assembly, any dear friend of Caesar's, to him I say that Brutus' love to Caesar was no less than his. If then that friend demand why Brutus rose against Caesar, this is my answer: Not that I loved Caesar less, but that I loved Rome more. Had you rather Caesar were living, and die all slaves, than that Caesar were dead, to live all free men? As Caesar loved me, I weep for him; as he was fortunate, I rejoice at it; as he was valiant, I honour him; but, as he was ambitious, I slew him. There is tears, for his love; joy for his fortune; honour for his valour; and death, for his ambition. Who is here so base, that would be a bondman? If any, speak; for him have I offended. Who is here so rude, that would not be a Roman? If any, speak; for him have I offended. Who is here so vile, that will not love his country? If any, speak; for him have I offended. I pause for a reply.

CITIZENS. None, Brutus, none.

BRUTUS. Then none have I offended. I have done no more to Caesar than you shall do to Brutus. The question of his death is enroll'd in the Capitol, his glory not extenuated, wherein he was worthy; nor his offences enforc'd, for which he suffered death.

Enter Antony and others, with Caesar's body.

Here comes his body, mourned by Mark Antony, who, though he had no hand in his death, shall receive the benefit of his dying, a place in the commonwealth; as which of you shall not? With this I depart, that, as I slew my best lover for the good of Rome, I have the same dagger for myself, when it shall please my country to need my death.

CITIZENS. Live, Brutus! live, live!

FIRST CITIZEN. Bring him with triumph home unto his house.

SECOND CITIZEN. Give him a statue with his ancestors.

THIRD CITIZEN. Let him be Caesar.

FOURTH CITIZEN. Caesar's better parts Shall be crown'd in Brutus.

FIRST CITIZEN. We'll bring him to his house with shouts and clamours.

BRUTUS. My countrymen,—

SECOND CITIZEN. Peace! Silence! Brutus speaks.

FIRST CITIZEN. Peace, ho!

BRUTUS. Good countrymen, let me depart alone, And, for my sake, stay here with Antony. Do grace to Caesar's corpse, and grace his speech Tending to Caesar's glories, which Mark Antony, By our permission, is allow'd to make. I do entreat you, not a man depart, Save I alone, till Antony have spoke.

[_Exit._]

FIRST CITIZEN. Stay, ho! and let us hear Mark Antony.

THIRD CITIZEN. Let him go up into the public chair. We'll hear him. Noble Antony, go up.

ANTONY. For Brutus' sake, I am beholding to you.

[_Goes up._]

FOURTH CITIZEN. What does he say of Brutus?

THIRD CITIZEN. He says, for Brutus' sake He finds himself beholding to us all.

FOURTH CITIZEN. 'Twere best he speak no harm of Brutus here!

FIRST CITIZEN. This Caesar was a tyrant.

THIRD CITIZEN. Nay, that's certain. We are blest that Rome is rid of him.

SECOND CITIZEN. Peace! let us hear what Antony can say.

ANTONY. You gentle Romans,—

CITIZENS. Peace, ho! let us hear him.

ANTONY. Friends, Romans, countrymen, lend me your ears; I come to bury Caesar, not to praise him. The evil that men do lives after them, The good is oft interred with their bones; So let it be with Caesar. The noble Brutus Hath told you Caesar was ambitious. If it were so, it was a grievous fault, And grievously hath Caesar answer'd it. Here, under leave of Brutus and the rest, For Brutus is an honourable man, So are they all, all honourable men, Come I to speak in Caesar's funeral. He was my friend, faithful and just to me; But Brutus says he was ambitious, And Brutus is an honourable man. He hath brought many captives home to Rome, Whose ransoms did the general coffers fill: Did this in Caesar seem ambitious? When that the poor have cried, Caesar hath wept; Ambition

should be made of sterner stuff: Yet Brutus says he was ambitious; And Brutus is an honourable man. You all did see that on the Lupercal I thrice presented him a kingly crown, Which he did thrice refuse. Was this ambition? Yet Brutus says he was ambitious; And sure he is an honourable man. I speak not to disprove what Brutus spoke, But here I am to speak what I do know. You all did love him once, not without cause; What cause withholds you then to mourn for him? O judgement, thou art fled to brutish beasts, And men have lost their reason. Bear with me. My heart is in the coffin there with Caesar, And I must pause till it come back to me.

FIRST CITIZEN. Methinks there is much reason in his sayings.

SECOND CITIZEN. If thou consider rightly of the matter, Caesar has had great wrong.

THIRD CITIZEN. Has he, masters? I fear there will a worse come in his place.

FOURTH CITIZEN. Mark'd ye his words? He would not take the crown; Therefore 'tis certain he was not ambitious.

FIRST CITIZEN. If it be found so, some will dear abide it.

SECOND CITIZEN. Poor soul, his eyes are red as fire with weeping.

THIRD CITIZEN. There's not a nobler man in Rome than Antony.

FOURTH CITIZEN. Now mark him; he begins again to speak.

ANTONY. But yesterday the word of Caesar might Have stood against the world; now lies he there, And none so poor to do him reverence. O masters! If I were dispos'd to stir Your hearts and minds to mutiny and rage, I should do Brutus wrong and Cassius wrong, Who, you all know, are honourable men. I will not do them wrong; I rather choose To wrong the dead, to wrong myself and you, Than I will wrong such honourable men. But here's a parchment with the seal of Caesar, I found it in his closet; 'tis his will: Let but the commons hear this testament, Which, pardon me, I do not mean to read, And they would go and kiss dead Caesar's wounds, And dip their napkins in his sacred blood; Yea, beg a hair of him for memory, And, dying, mention it within their wills, Bequeathing it as a rich legacy Unto their issue.

FOURTH CITIZEN. We'll hear the will. Read it, Mark Antony.

CITIZENS. The will, the will! We will hear Caesar's will.

ANTONY. Have patience, gentle friends, I must not read it. It is not meet you know how Caesar loved you. You are not wood, you are not stones, but men; And being men, hearing the will of Caesar, It will inflame you, it will make you mad. 'Tis good you know not that you are his heirs; For if you should, O, what would come of it?

FOURTH CITIZEN. Read the will! We'll hear it, Antony; You shall read us the will, Caesar's will!

ANTONY. Will you be patient? Will you stay awhile? I have o'ershot myself to tell you of it. I fear I wrong the honourable men Whose daggers have stabb'd Caesar; I do fear it.

FOURTH CITIZEN. They were traitors. Honourable men!

CITIZENS. The will! The testament!

SECOND CITIZEN. They were villains, murderers. The will! Read the will!

ANTONY. You will compel me then to read the will? Then make a ring about the corpse of Caesar, And let me show you him that made the will. Shall I descend? and will you give me leave?

CITIZENS. Come down.

SECOND CITIZEN. Descend.

[_He comes down._]

THIRD CITIZEN. You shall have leave.

FOURTH CITIZEN. A ring! Stand round.

FIRST CITIZEN. Stand from the hearse, stand from the body.

SECOND CITIZEN. Room for Antony, most noble Antony!

ANTONY. Nay, press not so upon me; stand far off.

CITIZENS. Stand back; room! bear back.

ANTONY. If you have tears, prepare to shed them now. You all do know this mantle. I remember The first time ever Caesar put it on; 'Twas on a Summer's evening, in his tent, That day he overcame the Nervii. Look, in this place ran Cassius' dagger through: See what a rent the envious Casca made: Through this the well-beloved Brutus stabb'd; And as he pluck'd his cursed steel away, Mark how the blood of Caesar follow'd it, As rushing out of doors, to be resolv'd If Brutus so unkindly knock'd, or no; For Brutus, as you know, was Caesar's angel. Judge, O you gods, how dearly Caesar lov'd him. This was the most unkindest cut of all; For when the noble Caesar saw him stab, Ingratitude, more strong than traitors' arms, Quite vanquish'd him: then burst his mighty heart; And in his mantle muffling up his face, Even at the base of Pompey's statue Which all the while ran blood, great Caesar fell. O, what a fall was there, my countrymen! Then I, and you, and all of us fell down, Whilst bloody treason flourish'd over us. O, now you weep; and I perceive you feel The dint of pity. These are gracious drops. Kind souls, what weep you when you but behold Our Caesar's vesture wounded? Look you here, Here is himself, marr'd, as you see, with traitors.

FIRST CITIZEN. O piteous spectacle!

SECOND CITIZEN. O noble Caesar!

THIRD CITIZEN. O woeful day!

FOURTH CITIZEN. O traitors, villains!

FIRST CITIZEN. O most bloody sight!

SECOND CITIZEN. We will be revenged.

CITIZENS. Revenge,—about,—seek,—burn,—fire,—kill,—slay,—let not a traitor live!

ANTONY. Stay, countrymen.

FIRST CITIZEN. Peace there! Hear the noble Antony.

SECOND CITIZEN. We'll hear him, we'll follow him, we'll die with him.

ANTONY. Good friends, sweet friends, let me not stir you up To such a sudden flood of mutiny. They that have done this deed are honourable. What private griefs they have, alas, I know not, That made them do it. They're wise and honourable, And will, no doubt, with reasons answer you. I come not, friends, to steal away your hearts. I am no orator, as Brutus is; But, as you know me all, a plain blunt man, That love my friend; and that they know full well That gave me public leave to speak of him. For I have neither wit, nor words, nor worth, Action, nor utterance, nor the power of speech, To stir men's blood. I only speak right on. I tell you that which you yourselves do know, Show you sweet Caesar's wounds, poor poor dumb mouths, And bid them speak for me. But were I Brutus, And Brutus Antony, there were an Antony Would ruffle up your spirits, and put a tongue In every wound of Caesar, that should move The stones of Rome to rise and mutiny.

CITIZENS. We'll mutiny.

FIRST CITIZEN. We'll burn the house of Brutus.

THIRD CITIZEN. Away, then! come, seek the conspirators.

ANTONY. Yet hear me, countrymen; yet hear me speak.

CITIZENS. Peace, ho! Hear Antony; most noble Antony.

ANTONY. Why, friends, you go to do you know not what. Wherein hath Caesar thus deserved your loves? Alas, you know not; I must tell you then. You have forgot the will I told you of.

CITIZENS. Most true; the will!—let’s stay, and hear the will.

ANTONY. Here is the will, and under Caesar’s seal. To every Roman citizen he gives, To every several man, seventy-five drachmas.

SECOND CITIZEN. Most noble Caesar! We’ll revenge his death.

THIRD CITIZEN. O, royal Caesar!

ANTONY. Hear me with patience.

CITIZENS. Peace, ho!

ANTONY. Moreover, he hath left you all his walks, His private arbors, and new-planted orchards, On this side Tiber; he hath left them you, And to your heirs forever; common pleasures, To walk abroad, and recreate yourselves. Here was a Caesar! when comes such another?

FIRST CITIZEN. Never, never. Come, away, away! We’ll burn his body in the holy place, And with the brands fire the traitors’ houses. Take up the body.

SECOND CITIZEN. Go, fetch fire.

THIRD CITIZEN. Pluck down benches.

FOURTH CITIZEN. Pluck down forms, windows, anything.

[_Exeunt Citizens, with the body._]

ANTONY. Now let it work. Mischief, thou art afoot, Take thou what course thou wilt!

Enter a Servant.

How now, fellow?

SERVANT. Sir, Octavius is already come to Rome.

ANTONY. Where is he?

SERVANT. He and Lepidus are at Caesar’s house.

ANTONY. And thither will I straight to visit him. He comes upon a wish. Fortune is merry, And in this mood will give us anything.

SERVANT. I heard him say Brutus and Cassius Are rid like madmen through the gates of Rome.

ANTONY. Belike they had some notice of the people, How I had moved them. Bring me to Octavius.

[_Exeunt._]

SCENE III. The same. A street.

Enter Cinna, the poet, and after him the citizens.

CINNA. I dreamt tonight that I did feast with Caesar, And things unluckily charge my fantasy. I have no will to wander forth of doors, Yet something leads me forth.

FIRST CITIZEN. What is your name?

SECOND CITIZEN. Whither are you going?

THIRD CITIZEN. Where do you dwell?

FOURTH CITIZEN. Are you a married man or a bachelor?

SECOND CITIZEN. Answer every man directly.

FIRST CITIZEN. Ay, and briefly.

FOURTH CITIZEN. Ay, and wisely.

THIRD CITIZEN. Ay, and truly, you were best.

CINNA. What is my name? Whither am I going? Where do I dwell? Am I a married man or a bachelor? Then, to answer every man directly and briefly, wisely and truly. Wisely I say I am a bachelor.

SECOND CITIZEN. That's as much as to say they are fools that marry; you'll bear me a bang for that, I fear. Proceed, directly.

CINNA. Directly, I am going to Caesar's funeral.

FIRST CITIZEN. As a friend, or an enemy?

CINNA. As a friend.

SECOND CITIZEN. That matter is answered directly.

FOURTH CITIZEN. For your dwelling, briefly.

CINNA. Briefly, I dwell by the Capitol.

THIRD CITIZEN. Your name, sir, truly.

CINNA. Truly, my name is Cinna.

FIRST CITIZEN. Tear him to pieces! He's a conspirator.

CINNA. I am Cinna the poet, I am Cinna the poet.

FOURTH CITIZEN. Tear him for his bad verses, tear him for his bad verses.

CINNA. I am not Cinna the conspirator.

FOURTH CITIZEN. It is no matter, his name's Cinna; pluck but his name out of his heart, and turn him going.

THIRD CITIZEN. Tear him, tear him! Come; brands, ho! firebrands. To Brutus', to Cassius'; burn all. Some to Decius' house, and some to Casca's, some to Ligarius'. Away, go!

[_Exeunt._]

ACT IV

SCENE I. Rome. A room in Antony's house.

Enter Antony, Octavius and Lepidus, seated at a table.

ANTONY. These many then shall die; their names are prick'd.

OCTAVIUS. Your brother too must die; consent you, Lepidus?

LEPIDUS. I do consent,—

OCTAVIUS. Prick him down, Antony.

LEPIDUS. Upon condition Publius shall not live, Who is your sister's son, Mark Antony.

ANTONY. He shall not live; look, with a spot I damn him. But, Lepidus, go you to Caesar's house; Fetch the will hither, and we shall determine How to cut off some charge in legacies.

LEPIDUS. What, shall I find you here?

OCTAVIUS. Or here, or at the Capitol.

[_Exit Lepidus._]

ANTONY. This is a slight unmeritable man, Meet to be sent on errands. Is it fit, The three-fold world divided, he should stand One of the three to share it?

OCTAVIUS. So you thought him, And took his voice who should be prick'd to die In our black sentence and proscription.

ANTONY. Octavius, I have seen more days than you; And though we lay these honours on this man, To ease ourselves of divers sland'rous loads, He shall but bear them as the ass bears gold, To groan and sweat under the business, Either led or driven, as we point the way; And having brought our treasure where we will, Then take we down his load, and turn him off, Like to the empty ass, to shake his ears, And graze in commons.

OCTAVIUS. You may do your will; But he's a tried and valiant soldier.

ANTONY. So is my horse, Octavius; and for that I do appoint him store of provender. It is a creature that I teach to fight, To wind, to stop, to run directly on, His corporal motion govern'd by my spirit. And, in some taste, is Lepidus but so: He must be taught, and train'd, and bid go forth: A barren-spirited fellow; one that feeds On objects, arts, and imitations, Which, out of use and stal'd by other men, Begin his fashion. Do not talk of him But as a property. And now, Octavius, Listen great things. Brutus and Cassius Are levying powers; we must straight make head. Therefore let our alliance be combin'd, Our best friends made, our means stretch'd; And let us presently go sit in council, How covert matters may be best disclos'd, And open perils surest answered.

OCTAVIUS. Let us do so: for we are at the stake, And bay'd about with many enemies; And some that smile have in their hearts, I fear, Millions of mischiefs.

[_Exeunt._]

SCENE II. Before Brutus' tent, in the camp near Sardis.

Drum. Enter Brutus, Lucilius, Titinius and Soldiers; Pindarus meeting them; Lucius at some distance.

BRUTUS. Stand, ho!

LUCILIUS. Give the word, ho! and stand.

BRUTUS. What now, Lucilius! is Cassius near?

LUCILIUS. He is at hand, and Pindarus is come To do you salutation from his master.

[_Pindarus gives a letter to Brutus._]

BRUTUS. He greets me well. Your master, Pindarus, In his own change, or by ill officers, Hath given me some worthy cause to wish Things done, undone: but, if he be at hand, I shall be satisfied.

PINDARUS. I do not doubt But that my noble master will appear Such as he is, full of regard and honour.

BRUTUS. He is not doubted. A word, Lucilius; How he received you, let me be resolv'd.

LUCILIUS. With courtesy and with respect enough, But not with such familiar instances, Nor with such free and friendly conference, As he hath us'd of old.

BRUTUS. Thou hast describ'd A hot friend cooling. Ever note, Lucilius, When love begins to sicken and decay It useth an enforced ceremony. There are no tricks in plain and simple faith; But hollow men, like horses hot at hand, Make gallant show and promise of their mettle;

[_Low march within._]

But when they should endure the bloody spur, They fall their crests, and like deceitful jades Sink in the trial. Comes his army on?

LUCILIUS. They meant this night in Sardis to be quarter'd; The greater part, the horse in general, Are come with Cassius.

Enter Cassius and Soldiers.

BRUTUS. Hark! he is arriv'd. March gently on to meet him.

CASSIUS. Stand, ho!

BRUTUS. Stand, ho! Speak the word along.

FIRST SOLDIER. Stand!

SECOND SOLDIER. Stand!

THIRD SOLDIER. Stand!

CASSIUS. Most noble brother, you have done me wrong.

BRUTUS. Judge me, you gods; wrong I mine enemies? And if not so, how should I wrong a brother?

CASSIUS. Brutus, this sober form of yours hides wrongs; And when you do them—

BRUTUS. Cassius, be content. Speak your griefs softly, I do know you well. Before the eyes of both our armies here, Which should perceive nothing but love from us, Let us not wrangle. Bid them move away; Then in my tent, Cassius, enlarge your griefs, And I will give you audience.

CASSIUS. Pindarus, Bid our commanders lead their charges off A little from this ground.

BRUTUS. Lucilius, do you the like; and let no man Come to our tent till we have done our conference. Lucius and Titinius, guard our door.

[_Exeunt._]

SCENE III. Within the tent of Brutus.

Enter Brutus and Cassius.

CASSIUS. That you have wrong'd me doth appear in this: You have condemn'd and noted Lucius Pella For taking bribes here of the Sardians; Wherein my letters, praying on his side Because I knew the man, were slighted off.

BRUTUS. You wrong'd yourself to write in such a case.

CASSIUS. In such a time as this it is not meet That every nice offence should bear his comment.

BRUTUS. Let me tell you, Cassius, you yourself Are much condemn'd to have an itching palm, To sell and mart your offices for gold To undeservers.

CASSIUS. I an itching palm! You know that you are Brutus that speak this, Or, by the gods, this speech were else your last.

BRUTUS. The name of Cassius honours this corruption, And chastisement doth therefore hide his head.

CASSIUS. Chastisement!

BRUTUS. Remember March, the Ides of March remember: Did not great Julius bleed for justice' sake? What villain touch'd his body, that did stab, And not for justice? What! Shall one of us, That struck the foremost man of all this world But for supporting robbers, shall we now Contaminate our fingers with base bribes, And sell the mighty space of our large honours For so much trash as may be grasped thus? I had rather be a dog, and bay the moon, Than such a Roman.

CASSIUS. Brutus, bait not me, I'll not endure it. You forget yourself, To hedge me in. I am a soldier, I, Older in practice, abler than yourself To make conditions.

BRUTUS. Go to; you are not, Cassius.

CASSIUS. I am.

BRUTUS. I say you are not.

CASSIUS. Urge me no more, I shall forget myself; Have mind upon your health, tempt me no farther.

BRUTUS. Away, slight man!

CASSIUS. Is't possible?

BRUTUS. Hear me, for I will speak. Must I give way and room to your rash choler? Shall I be frighted when a madman stares?

CASSIUS. O ye gods, ye gods! Must I endure all this?

BRUTUS. All this? ay, more: fret till your proud heart break; Go show your slaves how choleric you are, And make your bondmen tremble. Must I budge? Must I observe you? Must I stand and crouch Under your testy humour? By the gods, You shall digest the venom of your spleen, Though it do split you; for, from this day forth, I'll use you for my mirth, yea, for my laughter, When you are waspish.

CASSIUS. Is it come to this?

BRUTUS. You say you are a better soldier: Let it appear so; make your vaunting true, And it shall please me well. For mine own part, I shall be glad to learn of noble men.

CASSIUS. You wrong me every way, you wrong me, Brutus. I said, an elder soldier, not a better: Did I say better?

BRUTUS. If you did, I care not.

CASSIUS. When Caesar liv'd, he durst not thus have mov'd me.

BRUTUS. Peace, peace! you durst not so have tempted him.

CASSIUS. I durst not?

BRUTUS. No.

CASSIUS. What? durst not tempt him?

BRUTUS. For your life you durst not.

CASSIUS. Do not presume too much upon my love. I may do that I shall be sorry for.

BRUTUS. You have done that you should be sorry for. There is no terror, Cassius, in your threats, For I am arm'd so strong in honesty, That they pass by me as the idle wind, Which I respect not. I did send to you For certain sums of gold, which you denied me; For I can raise no money by vile means: By Heaven, I had rather coin my heart, And drop my blood for drachmas, than to wring From the hard hands of peasants their vile trash By any indirection. I did send To you for gold to pay my legions, Which you denied me: was that done like Cassius? Should I have answer'd Caius Cassius so? When Marcus Brutus grows so covetous, To lock such rascal counters from his friends, Be ready, gods, with all your thunderbolts, Dash him to pieces!

CASSIUS. I denied you not.

BRUTUS. You did.

CASSIUS. I did not. He was but a fool That brought my answer back. Brutus hath riv'd my heart. A friend should bear his friend's infirmities; But Brutus makes mine greater than they are.

BRUTUS. I do not, till you practise them on me.

CASSIUS. You love me not.

BRUTUS. I do not like your faults.

CASSIUS. A friendly eye could never see such faults.

BRUTUS. A flatterer's would not, though they do appear As huge as high Olympus.

CASSIUS. Come, Antony, and young Octavius, come, Revenge yourselves alone on Cassius, For Cassius is a-weary of the world: Hated by one he loves; brav'd by his brother; Check'd like a bondman; all his faults observ'd, Set in a note-book, learn'd and conn'd by rote, To cast into my teeth. O, I could weep My spirit from mine eyes! There is my dagger, And here my naked breast; within, a

heart Dearer than Plutus' mine, richer than gold: If that thou be'st a Roman, take it forth. I, that denied thee gold, will give my heart: Strike as thou didst at Caesar; for I know, When thou didst hate him worst, thou lovedst him better Than ever thou lovedst Cassius.

BRUTUS. Sheathe your dagger. Be angry when you will, it shall have scope; Do what you will, dishonour shall be humour. O Cassius, you are yoked with a lamb That carries anger as the flint bears fire, Who, much enforced, shows a hasty spark, And straight is cold again.

CASSIUS. Hath Cassius liv'd To be but mirth and laughter to his Brutus, When grief and blood ill-temper'd vexeth him?

BRUTUS. When I spoke that, I was ill-temper'd too.

CASSIUS. Do you confess so much? Give me your hand.

BRUTUS. And my heart too.

CASSIUS. O Brutus!

BRUTUS. What's the matter?

CASSIUS. Have not you love enough to bear with me, When that rash humour which my mother gave me Makes me forgetful?

BRUTUS. Yes, Cassius; and from henceforth, When you are over-earnest with your Brutus, He'll think your mother chides, and leave you so.

Enter Poet, followed by Lucilius, Titinius and Lucius.

POET. [_Within._] Let me go in to see the generals, There is some grudge between 'em; 'tis not meet They be alone.

LUCILIUS. [_Within._] You shall not come to them.

POET. [_Within._] Nothing but death shall stay me.

CASSIUS. How now! What's the matter?

POET. For shame, you generals! What do you mean? Love, and be friends, as two such men should be; For I have seen more years, I'm sure, than ye.

CASSIUS. Ha, ha! How vilely doth this cynic rhyme!

BRUTUS. Get you hence, sirrah. Saucy fellow, hence!

CASSIUS. Bear with him, Brutus; 'tis his fashion.

BRUTUS. I'll know his humour when he knows his time. What should the wars do with these jigging fools? Companion, hence!

CASSIUS. Away, away, be gone!

[_Exit Poet._]

BRUTUS. Lucilius and Titinius, bid the commanders Prepare to lodge their companies tonight.

CASSIUS. And come yourselves and bring Messala with you Immediately to us.

[_Exeunt Lucilius and Titinius._]

BRUTUS. Lucius, a bowl of wine.

[_Exit Lucius._]

CASSIUS. I did not think you could have been so angry.

BRUTUS. O Cassius, I am sick of many griefs.

CASSIUS. Of your philosophy you make no use, If you give place to accidental evils.

BRUTUS. No man bears sorrow better. Portia is dead.

CASSIUS. Ha? Portia?

BRUTUS. She is dead.

CASSIUS. How ’scap’d I killing, when I cross’d you so? O insupportable and touching loss! Upon what sickness?

BRUTUS. Impatient of my absence, And grief that young Octavius with Mark Antony Have made themselves so strong; for with her death That tidings came. With this she fell distract, And, her attendants absent, swallow’d fire.

CASSIUS. And died so?

BRUTUS. Even so.

CASSIUS. O ye immortal gods!

Enter Lucius, with wine and a taper.

BRUTUS. Speak no more of her. Give me a bowl of wine. In this I bury all unkindness, Cassius.

[_Drinks._]

CASSIUS. My heart is thirsty for that noble pledge. Fill, Lucius, till the wine o’erswell the cup. I cannot drink too much of Brutus’ love.

[_Drinks._]

[_Exit Lucius._]

Enter Titinius and Messala.

BRUTUS. Come in, Titinius! Welcome, good Messala. Now sit we close about this taper here, And call in question our necessities.

CASSIUS. Portia, art thou gone?

BRUTUS. No more, I pray you. Messala, I have here received letters, That young Octavius and Mark Antony Come down upon us with a mighty power, Bending their expedition toward Philippi.

MESSALA. Myself have letters of the selfsame tenor.

BRUTUS. With what addition?

MESSALA. That by proscription and bills of outlawry Octavius, Antony, and Lepidus Have put to death an hundred Senators.

BRUTUS. Therein our letters do not well agree. Mine speak of seventy Senators that died By their proscriptions, Cicero being one.

CASSIUS. Cicero one!

MESSALA. Cicero is dead, And by that order of proscription. Had you your letters from your wife, my lord?

BRUTUS. No, Messala.

MESSALA. Nor nothing in your letters writ of her?

BRUTUS. Nothing, Messala.

MESSALA. That, methinks, is strange.

BRUTUS. Why ask you? Hear you aught of her in yours?

MESSALA. No, my lord.

BRUTUS. Now as you are a Roman, tell me true.

MESSALA. Then like a Roman bear the truth I tell, For certain she is dead, and by strange manner.

BRUTUS. Why, farewell, Portia. We must die, Messala. With meditating that she must die once, I have the patience to endure it now.

MESSALA. Even so great men great losses should endure.

CASSIUS. I have as much of this in art as you, But yet my nature could not bear it so.

BRUTUS. Well, to our work alive. What do you think Of marching to Philippi presently?

CASSIUS. I do not think it good.

BRUTUS. Your reason?

CASSIUS. This it is: 'Tis better that the enemy seek us; So shall he waste his means, weary his soldiers, Doing himself offence, whilst we, lying still, Are full of rest, defence, and nimbleness.

BRUTUS. Good reasons must of force give place to better. The people 'twixt Philippi and this ground Do stand but in a forced affection; For they have grudg'd us contribution. The enemy, marching along by them, By them shall make a fuller number up, Come on refresh'd, new-added, and encourag'd; From which advantage shall we cut him off If at Philippi we do face him there, These people at our back.

CASSIUS. Hear me, good brother.

BRUTUS. Under your pardon. You must note besides, That we have tried the utmost of our friends, Our legions are brim-full, our cause is ripe. The enemy increaseth every day; We, at the height, are ready to decline. There is a tide in the affairs of men, Which, taken at the flood, leads on to fortune; Omitted, all the voyage of their life Is bound in shallows and in miseries. On such a full sea are we now afloat, And we must take the current when it serves, Or lose our ventures.

CASSIUS. Then, with your will, go on: We'll along ourselves, and meet them at Philippi.

BRUTUS. The deep of night is crept upon our talk, And nature must obey necessity, Which we will niggard with a little rest. There is no more to say?

CASSIUS. No more. Good night: Early tomorrow will we rise, and hence.

Enter Lucius.

BRUTUS. Lucius! My gown.

[_Exit Lucius._]

Farewell now, good Messala. Good night, Titinius. Noble, noble Cassius, Good night, and good repose.

CASSIUS. O my dear brother! This was an ill beginning of the night. Never come such division 'tween our souls! Let it not, Brutus.

Enter Lucius with the gown.

BRUTUS. Everything is well.

CASSIUS. Good night, my lord.

BRUTUS. Good night, good brother.

TITINIUS and MESSALA. Good night, Lord Brutus.

BRUTUS. Farewell, everyone.

[_Exeunt Cassius, Titinius and Messala._]

Give me the gown. Where is thy instrument?

LUCIUS. Here in the tent.

BRUTUS. What, thou speak’st drowsily? Poor knave, I blame thee not, thou art o’er-watch’d. Call Claudius and some other of my men; I’ll have them sleep on cushions in my tent.

LUCIUS. Varro and Claudius!

Enter Varro and Claudius.

VARRO. Calls my lord?

BRUTUS. I pray you, sirs, lie in my tent and sleep; It may be I shall raise you by-and-by On business to my brother Cassius.

VARRO. So please you, we will stand and watch your pleasure.

BRUTUS. I will not have it so; lie down, good sirs, It may be I shall otherwise bethink me. Look, Lucius, here’s the book I sought for so; I put it in the pocket of my gown.

[_Servants lie down._]

LUCIUS. I was sure your lordship did not give it me.

BRUTUS. Bear with me, good boy, I am much forgetful. Canst thou hold up thy heavy eyes awhile, And touch thy instrument a strain or two?

LUCIUS. Ay, my lord, an’t please you.

BRUTUS. It does, my boy. I trouble thee too much, but thou art willing.

LUCIUS. It is my duty, sir.

BRUTUS. I should not urge thy duty past thy might; I know young bloods look for a time of rest.

LUCIUS. I have slept, my lord, already.

BRUTUS. It was well done, and thou shalt sleep again; I will not hold thee long. If I do live, I will be good to thee.

[_Lucius plays and sings till he falls asleep._]

This is a sleepy tune. O murd’rous slumber, Layest thou thy leaden mace upon my boy, That plays thee music? Gentle knave, good night; I will not do thee so much wrong to wake thee. If thou dost nod, thou break’st thy instrument; I’ll take it from thee; and, good boy, good night. Let me see, let me see; is not the leaf turn’d down Where I left reading? Here it is, I think.

Enter the Ghost of Caesar.

How ill this taper burns! Ha! who comes here? I think it is the weakness of mine eyes That shapes this monstrous apparition. It comes upon me. Art thou anything? Art thou some god, some angel, or some devil, That mak’st my blood cold and my hair to stare? Speak to me what thou art.

GHOST. Thy evil spirit, Brutus.

BRUTUS. Why com’st thou?

GHOST. To tell thee thou shalt see me at Philippi.

BRUTUS. Well; then I shall see thee again?

GHOST. Ay, at Philippi.

BRUTUS. Why, I will see thee at Philippi then.

[_Ghost vanishes._]

Now I have taken heart, thou vanishest. Ill spirit, I would hold more talk with thee. Boy! Lucius! Varro! Claudius! Sirs, awake! Claudius!

LUCIUS. The strings, my lord, are false.

BRUTUS. He thinks he still is at his instrument. Lucius, awake!

LUCIUS. My lord?

BRUTUS. Didst thou dream, Lucius, that thou so criedst out?

LUCIUS. My lord, I do not know that I did cry.

BRUTUS. Yes, that thou didst. Didst thou see anything?

LUCIUS. Nothing, my lord.

BRUTUS. Sleep again, Lucius. Sirrah Claudius! Fellow thou, awake!

VARRO. My lord?

CLAUDIUS. My lord?

BRUTUS. Why did you so cry out, sirs, in your sleep?

VARRO. CLAUDIUS. Did we, my lord?

BRUTUS. Ay. Saw you anything?

VARRO. No, my lord, I saw nothing.

CLAUDIUS. Nor I, my lord.

BRUTUS. Go and commend me to my brother Cassius; Bid him set on his powers betimes before, And we will follow.

VARRO. CLAUDIUS. It shall be done, my lord.

[_Exeunt._]

ACT V

SCENE I. The plains of Philippi.

Enter Octavius, Antony and their Army.

OCTAVIUS. Now, Antony, our hopes are answered. You said the enemy would not come down, But keep the hills and upper regions. It proves not so; their battles are at hand, They mean to warn us at Philippi here, Answering before we do demand of them.

ANTONY. Tut, I am in their bosoms, and I know Wherefore they do it. They could be content To visit other places, and come down With fearful bravery, thinking by this face To fasten in our thoughts that they have courage; But 'tis not so.

Enter a Messenger.

MESSENGER. Prepare you, generals. The enemy comes on in gallant show; Their bloody sign of battle is hung out, And something to be done immediately.

ANTONY. Octavius, lead your battle softly on Upon the left hand of the even field.

OCTAVIUS. Upon the right hand I. Keep thou the left.

ANTONY. Why do you cross me in this exigent?

OCTAVIUS. I do not cross you; but I will do so.

[_March._]

Drum. Enter Brutus, Cassius and their Army; Lucilius, Titinius, Messala and others.

BRUTUS. They stand, and would have parley.

CASSIUS. Stand fast, Titinius; we must out and talk.

OCTAVIUS. Mark Antony, shall we give sign of battle?

ANTONY. No, Caesar, we will answer on their charge. Make forth; the generals would have some words.

OCTAVIUS. Stir not until the signal.

BRUTUS. Words before blows: is it so, countrymen?

OCTAVIUS. Not that we love words better, as you do.

BRUTUS. Good words are better than bad strokes, Octavius.

ANTONY. In your bad strokes, Brutus, you give good words; Witness the hole you made in Caesar's heart, Crying, "Long live! Hail, Caesar!"

CASSIUS. Antony, The posture of your blows are yet unknown; But for your words, they rob the Hybla bees, And leave them honeyless.

ANTONY. Not stingless too.

BRUTUS. O yes, and soundless too, For you have stol'n their buzzing, Antony, And very wisely threat before you sting.

ANTONY. Villains, you did not so when your vile daggers Hack'd one another in the sides of Caesar: You show'd your teeth like apes, and fawn'd like hounds, And bow'd like bondmen, kissing Caesar's feet; Whilst damned Casca, like a cur, behind Struck Caesar on the neck. O you flatterers!

CASSIUS. Flatterers! Now, Brutus, thank yourself. This tongue had not offended so today, If Cassius might have rul'd.

OCTAVIUS. Come, come, the cause. If arguing makes us sweat, The proof of it will turn to redder drops. Look, I draw a sword against conspirators. When think you that the sword goes up again? Never, till Caesar's three and thirty wounds Be well aveng'd; or till another Caesar Have added slaughter to the sword of traitors.

BRUTUS. Caesar, thou canst not die by traitors' hands, Unless thou bring'st them with thee.

OCTAVIUS. So I hope. I was not born to die on Brutus' sword.

BRUTUS. O, if thou wert the noblest of thy strain, Young man, thou couldst not die more honourable.

CASSIUS. A peevish school-boy, worthless of such honour, Join'd with a masker and a reveller.

ANTONY. Old Cassius still!

OCTAVIUS. Come, Antony; away! Defiance, traitors, hurl we in your teeth. If you dare fight today, come to the field; If not, when you have stomachs.

[_Exeunt Octavius, Antony and their Army._]

CASSIUS. Why now, blow wind, swell billow, and swim bark! The storm is up, and all is on the hazard.

BRUTUS. Ho, Lucilius! Hark, a word with you.

LUCILIUS. My lord?

[_Brutus and Lucilius talk apart._]

CASSIUS. Messala.

MESSALA. What says my General?

CASSIUS. Messala, This is my birth-day; as this very day Was Cassius born. Give me thy hand, Messala: Be thou my witness that against my will As Pompey was, am I compell'd to set Upon one battle all our liberties. You know that I held Epicurus strong, And his opinion. Now I change my mind, And partly credit things that do presage. Coming from Sardis, on our former ensign Two mighty eagles fell, and there they perch'd, Gorging and feeding from our soldiers' hands, Who to Philippi here consorted us. This morning are they fled away and gone, And in their steads do ravens, crows, and kites Fly o'er our heads, and downward look on us, As we were sickly prey: their shadows seem A canopy most fatal, under which Our army lies, ready to give up the ghost.

MESSALA. Believe not so.

CASSIUS. I but believe it partly, For I am fresh of spirit, and resolv'd To meet all perils very constantly.

BRUTUS. Even so, Lucilius.

CASSIUS. Now, most noble Brutus, The gods today stand friendly, that we may, Lovers in peace, lead on our days to age! But, since the affairs of men rest still incertain, Let's reason with the worst that may befall. If we do lose this battle, then is this The very last time we shall speak together: What are you then determined to do?

BRUTUS. Even by the rule of that philosophy By which I did blame Cato for the death Which he did give himself, I know not how, But I do find it cowardly and vile, For fear of what might fall, so to prevent The time of life, arming myself with patience To stay the providence of some high powers That govern us below.

CASSIUS. Then, if we lose this battle, You are contented to be led in triumph Thorough the streets of Rome?

BRUTUS. No, Cassius, no: think not, thou noble Roman, That ever Brutus will go bound to Rome; He bears too great a mind. But this same day Must end that work the Ides of March begun; And whether we shall meet again I know not. Therefore our everlasting farewell take. For ever, and for ever, farewell, Cassius. If we do meet again, why, we shall smile; If not, why then this parting was well made.

CASSIUS. For ever and for ever farewell, Brutus. If we do meet again, we'll smile indeed; If not, 'tis true this parting was well made.

BRUTUS. Why then, lead on. O, that a man might know The end of this day's business ere it come! But it sufficeth that the day will end, And then the end is known. Come, ho! away!

[_Exeunt._]

SCENE II. The same. The field of battle.

Alarum. Enter Brutus and Messala.

BRUTUS. Ride, ride, Messala, ride, and give these bills Unto the legions on the other side.

[_Loud alarum._]

Let them set on at once; for I perceive But cold demeanor in Octavius' wing, And sudden push gives them the overthrow. Ride, ride, Messala; let them all come down.

[_Exeunt._]

SCENE III. Another part of the field.

Alarum. Enter Cassius and Titinius.

CASSIUS. O, look, Titinius, look, the villains fly! Myself have to mine own turn'd enemy: This ensign here of mine was turning back; I slew the coward, and did take it from him.

TITINIUS. O Cassius, Brutus gave the word too early, Who, having some advantage on Octavius, Took it too eagerly: his soldiers fell to spoil, Whilst we by Antony are all enclos'd.

Enter Pindarus.

PINDARUS. Fly further off, my lord, fly further off; Mark Antony is in your tents, my lord. Fly, therefore, noble Cassius, fly far off.

CASSIUS. This hill is far enough. Look, look, Titinius; Are those my tents where I perceive the fire?

TITINIUS. They are, my lord.

CASSIUS. Titinius, if thou lovest me, Mount thou my horse and hide thy spurs in him, Till he have brought thee up to yonder troops And here again, that I may rest assur'd Whether yond troops are friend or enemy.

TITINIUS. I will be here again, even with a thought.

[_Exit._]

CASSIUS. Go, Pindarus, get higher on that hill, My sight was ever thick. Regard Titinius, And tell me what thou notest about the field.

[_Pindarus goes up._]

This day I breathed first. Time is come round, And where I did begin, there shall I end. My life is run his compass. Sirrah, what news?

PINDARUS. [_Above._] O my lord!

CASSIUS. What news?

PINDARUS. [_Above._] Titinius is enclosed round about With horsemen, that make to him on the spur, Yet he spurs on. Now they are almost on him. Now, Titinius! Now some light. O, he lights too. He's ta'en!

[_Shout._]

And, hark! they shout for joy.

CASSIUS. Come down; behold no more. O, coward that I am, to live so long, To see my best friend ta'en before my face!

[_Pindarus descends._]

Come hither, sirrah. In Parthia did I take thee prisoner; And then I swore thee, saving of thy life, That whatsoever I did bid thee do, Thou shouldst attempt it. Come now, keep thine oath. Now be a freeman; and with this good sword, That ran through Caesar's bowels, search this bosom. Stand not to answer. Here, take thou the hilts; And when my face is cover'd, as 'tis now, Guide thou the sword.—Caesar, thou art reveng'd, Even with the sword that kill'd thee.

[_Dies._]

PINDARUS. So, I am free, yet would not so have been, Durst I have done my will. O Cassius! Far from this country Pindarus shall run, Where never Roman shall take note of him.

[_Exit._]

Enter Titinius with Messala.

MESSALA. It is but change, Titinius; for Octavius Is overthrown by noble Brutus' power, As Cassius' legions are by Antony.

TITINIUS. These tidings would well comfort Cassius.

MESSALA. Where did you leave him?

TITINIUS. All disconsolate, With Pindarus his bondman, on this hill.

MESSALA. Is not that he that lies upon the ground?

TITINIUS. He lies not like the living. O my heart!

MESSALA. Is not that he?

TITINIUS. No, this was he, Messala, But Cassius is no more. O setting sun, As in thy red rays thou dost sink to night, So in his red blood Cassius' day is set. The sun of Rome is set. Our day is gone; Clouds, dews, and dangers come; our deeds are done. Mistrust

of my success hath done this deed.

MESSALA. Mistrust of good success hath done this deed. O hateful Error, Melancholy's child! Why dost thou show to the apt thoughts of men The things that are not? O Error, soon conceiv'd, Thou never com'st unto a happy birth, But kill'st the mother that engender'd thee!

TITINIUS. What, Pindarus! where art thou, Pindarus?

MESSALA. Seek him, Titinius, whilst I go to meet The noble Brutus, thrusting this report Into his ears. I may say thrusting it; For piercing steel and darts envenomed Shall be as welcome to the ears of Brutus As tidings of this sight.

TITINIUS. Hie you, Messala, And I will seek for Pindarus the while.

[_Exit Messala._]

Why didst thou send me forth, brave Cassius? Did I not meet thy friends? And did not they Put on my brows this wreath of victory, And bid me give it thee? Didst thou not hear their shouts? Alas, thou hast misconstrued everything! But, hold thee, take this garland on thy brow; Thy Brutus bid me give it thee, and I Will do his bidding. Brutus, come apace, And see how I regarded Caius Cassius. By your leave, gods. This is a Roman's part. Come, Cassius' sword, and find Titinius' heart.

[_Dies._]

Alarum. Enter Brutus, Messala, young Cato, Strato, Volumnius and Lucilius.

BRUTUS. Where, where, Messala, doth his body lie?

MESSALA. Lo, yonder, and Titinius mourning it.

BRUTUS. Titinius' face is upward.

CATO. He is slain.

BRUTUS. O Julius Caesar, thou art mighty yet! Thy spirit walks abroad, and turns our swords In our own proper entrails.

[_Low alarums._]

CATO. Brave Titinius! Look whether he have not crown'd dead Cassius!

BRUTUS. Are yet two Romans living such as these? The last of all the Romans, fare thee well! It is impossible that ever Rome Should breed thy fellow. Friends, I owe more tears To this dead man than you shall see me pay. I shall find time, Cassius, I shall find time. Come therefore, and to Thassos send his body. His funerals shall not be in our camp, Lest it discomfort us. Lucilius, come; And come, young Cato; let us to the field. Labeo and Flavius, set our battles on. 'Tis three o'clock; and Romans, yet ere night We shall try fortune in a second fight.

[_Exeunt._]

SCENE IV. Another part of the field.

Alarum. Enter fighting soldiers of both armies; then Brutus, Messala, young Cato, Lucilius, Flavius and others.

BRUTUS. Yet, countrymen, O, yet hold up your heads!

CATO. What bastard doth not? Who will go with me? I will proclaim my name about the field. I am the son of Marcus Cato, ho! A foe to tyrants, and my country's friend. I am the son of Marcus Cato, ho!

[_Charges the enemy._]

LUCILIUS. And I am Brutus, Marcus Brutus, I; Brutus, my country's friend; know me for Brutus!

[_Exit, charging the enemy. Cato is overpowered, and falls._]

LUCILIUS. O young and noble Cato, art thou down? Why, now thou diest as bravely as Titinius, And mayst be honour'd, being Cato's son.

FIRST SOLDIER. Yield, or thou diest.

LUCILIUS. Only I yield to die: There is so much that thou wilt kill me straight;

[_Offering money_]

Kill Brutus, and be honour'd in his death.

FIRST SOLDIER. We must not. A noble prisoner!

SECOND SOLDIER. Room, ho! Tell Antony, Brutus is ta'en.

FIRST SOLDIER. I'll tell the news. Here comes the General.

Enter Antony.

Brutus is ta'en, Brutus is ta'en, my lord.

ANTONY. Where is he?

LUCILIUS. Safe, Antony; Brutus is safe enough. I dare assure thee that no enemy Shall ever take alive the noble Brutus. The gods defend him from so great a shame! When you do find him, or alive or dead, He will be found like Brutus, like himself.

ANTONY. This is not Brutus, friend; but, I assure you, A prize no less in worth. Keep this man safe, Give him all kindness. I had rather have Such men my friends than enemies. Go on, And see whether Brutus be alive or dead; And bring us word unto Octavius' tent How everything is chanc'd.

[_Exeunt._]

SCENE V. Another part of the field.

Enter Brutus, Dardanius, Clitus, Strato and Volumnius.

BRUTUS. Come, poor remains of friends, rest on this rock.

CLITUS. Statilius show'd the torch-light; but, my lord, He came not back: he is or ta'en or slain.

BRUTUS. Sit thee down, Clitus. Slaying is the word; It is a deed in fashion. Hark thee, Clitus.

[_Whispering._]

CLITUS. What, I, my lord? No, not for all the world.

BRUTUS. Peace then, no words.

CLITUS. I'll rather kill myself.

BRUTUS. Hark thee, Dardanius.

[_Whispers him._]

DARDANIUS. Shall I do such a deed?

CLITUS. O Dardanius!

DARDANIUS. O Clitus!

CLITUS. What ill request did Brutus make to thee?

DARDANIUS. To kill him, Clitus. Look, he meditates.

CLITUS. Now is that noble vessel full of grief, That it runs over even at his eyes.

BRUTUS. Come hither, good Volumnius; list a word.

VOLUMNIUS. What says my lord?

BRUTUS. Why, this, Volumnius: The ghost of Caesar hath appear'd to me Two several times by night; at Sardis once, And this last night here in Philippi fields. I know my hour is come.

VOLUMNIUS. Not so, my lord.

BRUTUS. Nay I am sure it is, Volumnius. Thou seest the world, Volumnius, how it goes; Our enemies have beat us to the pit.

[_Low alarums._]

It is more worthy to leap in ourselves Than tarry till they push us. Good Volumnius, Thou know'st that we two went to school together; Even for that our love of old, I pr'ythee Hold thou my sword-hilts, whilst I run on it.

VOLUMNIUS. That's not an office for a friend, my lord.

[_Alarums still._]

CLITUS. Fly, fly, my lord! there is no tarrying here.

BRUTUS. Farewell to you; and you; and you, Volumnius. Strato, thou hast been all this while asleep; Farewell to thee too, Strato.—Countrymen, My heart doth joy, that yet in all my life I found no man but he was true to me. I shall have glory by this losing day More than Octavius and Mark Antony By this vile conquest shall attain unto. So fare you well at once; for Brutus' tongue Hath almost ended his life's history. Night hangs upon mine eyes; my bones would rest, That have but labour'd to attain this hour.

[_Alarums. Cry within, "Fly, fly, fly!"._]

CLITUS. Fly, my lord, fly!

BRUTUS. Hence! I will follow.

[_Exeunt Clitus, Dardanius and Volumnius._]

I pr'ythee, Strato, stay thou by thy lord. Thou art a fellow of a good respect; Thy life hath had some smatch of honour in it. Hold then my sword, and turn away thy face, While I do run upon it. Wilt thou, Strato?

STRATO. Give me your hand first. Fare you well, my lord.

BRUTUS. Farewell, good Strato.—Caesar, now be still: I kill'd not thee with half so good a will.

[_He runs on his sword, and dies._]

Alarum. Retreat. Enter Antony, Octavius, Messala, Lucilius and the Army.

OCTAVIUS. What man is that?

MESSALA. My master's man. Strato, where is thy master?

STRATO. Free from the bondage you are in, Messala. The conquerors can but make a fire of him; For Brutus only overcame himself, And no man else hath honour by his death.

LUCILIUS. So Brutus should be found. I thank thee, Brutus, That thou hast prov'd Lucilius' saying true.

OCTAVIUS. All that serv'd Brutus, I will entertain them. Fellow, wilt thou bestow thy time with me?

STRATO. Ay, if Messala will prefer me to you.

OCTAVIUS. Do so, good Messala.

MESSALA. How died my master, Strato?

STRATO. I held the sword, and he did run on it.

MESSALA. Octavius, then take him to follow thee, That did the latest service to my master.

ANTONY. This was the noblest Roman of them all. All the conspirators save only he, Did that they did in envy of great Caesar; He only, in a general honest thought And common good to all, made one of them. His life was gentle, and the elements So mix’d in him that Nature might stand up And say to all the world, “This was a man!”

OCTAVIUS. According to his virtue let us use him With all respect and rites of burial. Within my tent his bones tonight shall lie, Most like a soldier, order’d honourably. So call the field to rest, and let’s away, To part the glories of this happy day.

[_Exeunt._]

Within the castle. Scene VI. The same. A Plain before the Castle. Scene VII. The same. Another part of the Plain. Scene VIII. The same. Another part of the field.

Dramatis Personæ

DUNCAN, King of Scotland. MALCOLM, his Son. DONALBAIN, his Son. MACBETH, General in the King’s Army. BANQUO, General in the King’s Army. MACDUFF, Nobleman of Scotland. LENNOX, Nobleman of Scotland. ROSS, Nobleman of Scotland. MENTEITH, Nobleman of Scotland. ANGUS, Nobleman of Scotland. CAITHNESS, Nobleman of Scotland. FLEANCE, Son to Banquo. SIWARD, Earl of Northumberland, General of the English Forces. YOUNG SIWARD, his Son. SEYTON, an Officer attending on Macbeth. BOY, Son to Macduff. An English Doctor. A Scottish Doctor. A Soldier. A Porter. An Old Man.

LADY MACBETH. LADY MACDUFF. Gentlewoman attending on Lady Macbeth. HECATE, and three Witches.

Lords, Gentlemen, Officers, Soldiers, Murderers, Attendants and Messengers.

The Ghost of Banquo and several other Apparitions.

SCENE: In the end of the Fourth Act, in England; through the rest of the Play, in Scotland; and chiefly at Macbeth’s Castle.

ACT I

SCENE I. An open Place.

Thunder and Lightning. Enter three Witches.

FIRST WITCH. When shall we three meet again? In thunder, lightning, or in rain?

SECOND WITCH. When the hurlyburly’s done, When the battle’s lost and won.

THIRD WITCH. That will be ere the set of sun.

FIRST WITCH. Where the place?

SECOND WITCH. Upon the heath.

THIRD WITCH. There to meet with Macbeth.

FIRST WITCH. I come, Graymalkin!

SECOND WITCH. Paddock calls.

THIRD WITCH. Anon.

ALL. Fair is foul, and foul is fair: Hover through the fog and filthy air.

[_Exeunt._]

SCENE II. A Camp near Forres.

Alarum within. Enter King Duncan, Malcolm, Donalbain, Lennox, with Attendants, meeting a bleeding Captain.

DUNCAN. What bloody man is that? He can report, As seemeth by his plight, of the revolt The newest state.

MALCOLM. This is the sergeant Who, like a good and hardy soldier, fought 'Gainst my captivity.—Hail, brave friend! Say to the King the knowledge of the broil As thou didst leave it.

SOLDIER. Doubtful it stood; As two spent swimmers that do cling together And choke their art. The merciless Macdonwald (Worthy to be a rebel, for to that The multiplying villainies of nature Do swarm upon him) from the Western Isles Of kerns and gallowglasses is supplied; And Fortune, on his damned quarrel smiling, Show'd like a rebel's whore. But all's too weak; For brave Macbeth (well he deserves that name), Disdaining Fortune, with his brandish'd steel, Which smok'd with bloody execution, Like Valour's minion, carv'd out his passage, Till he fac'd the slave; Which ne'er shook hands, nor bade farewell to him, Till he unseam'd him from the nave to the chops, And fix'd his head upon our battlements.

DUNCAN. O valiant cousin! worthy gentleman!

SOLDIER. As whence the sun 'gins his reflection Shipwracking storms and direful thunders break, So from that spring, whence comfort seem'd to come Discomfort swells. Mark, King of Scotland, mark: No sooner justice had, with valour arm'd, Compell'd these skipping kerns to trust their heels, But the Norweyan lord, surveying vantage, With furbish'd arms and new supplies of men, Began a fresh assault.

DUNCAN. Dismay'd not this Our captains, Macbeth and Banquo?

SOLDIER. Yes; As sparrows eagles, or the hare the lion. If I say sooth, I must report they were As cannons overcharg'd with double cracks; So they Doubly redoubled strokes upon the foe: Except they meant to bathe in reeking wounds, Or memorize another Golgotha, I cannot tell— But I am faint, my gashes cry for help.

DUNCAN. So well thy words become thee as thy wounds: They smack of honour both.—Go, get him surgeons.

[_Exit Captain, attended._]

Enter Ross and Angus.

Who comes here?

MALCOLM. The worthy Thane of Ross.

LENNOX. What a haste looks through his eyes! So should he look That seems to speak things strange.

ROSS. God save the King!

DUNCAN. Whence cam'st thou, worthy thane?

ROSS. From Fife, great King, Where the Norweyan banners flout the sky And fan our people cold. Norway himself, with terrible numbers, Assisted by that most disloyal traitor, The Thane of Cawdor, began a dismal conflict; Till that Bellona's bridegroom, lapp'd in proof, Confronted him with self-comparisons, Point against point, rebellious arm 'gainst arm, Curbing his lavish spirit: and, to

conclude, The victory fell on us.

DUNCAN. Great happiness!

ROSS. That now Sweno, the Norways' king, craves composition; Nor would we deign him burial of his men Till he disbursed at Saint Colme's Inch Ten thousand dollars to our general use.

DUNCAN. No more that Thane of Cawdor shall deceive Our bosom interest. Go pronounce his present death, And with his former title greet Macbeth.

ROSS. I'll see it done.

DUNCAN. What he hath lost, noble Macbeth hath won.

[_Exeunt._]

SCENE III. A heath.

Thunder. Enter the three Witches.

FIRST WITCH. Where hast thou been, sister?

SECOND WITCH. Killing swine.

THIRD WITCH. Sister, where thou?

FIRST WITCH. A sailor's wife had chestnuts in her lap, And mounch'd, and mounch'd, and mounch'd. "Give me," quoth I. "Aroint thee, witch!" the rump-fed ronyon cries. Her husband's to Aleppo gone, master o' th' _Tiger:_ But in a sieve I'll thither sail, And, like a rat without a tail, I'll do, I'll do, and I'll do.

SECOND WITCH. I'll give thee a wind.

FIRST WITCH. Th'art kind.

THIRD WITCH. And I another.

FIRST WITCH. I myself have all the other, And the very ports they blow, All the quarters that they know I' the shipman's card. I will drain him dry as hay: Sleep shall neither night nor day Hang upon his pent-house lid; He shall live a man forbid. Weary sev'n-nights nine times nine, Shall he dwindle, peak, and pine: Though his bark cannot be lost, Yet it shall be tempest-tost. Look what I have.

SECOND WITCH. Show me, show me.

FIRST WITCH. Here I have a pilot's thumb, Wrack'd as homeward he did come.

[_Drum within._]

THIRD WITCH. A drum, a drum! Macbeth doth come.

ALL. The Weird Sisters, hand in hand, Posters of the sea and land, Thus do go about, about: Thrice to thine, and thrice to mine, And thrice again, to make up nine. Peace!—the charm's wound up.

Enter Macbeth and Banquo.

MACBETH. So foul and fair a day I have not seen.

BANQUO. How far is't call'd to Forres?—What are these, So wither'd, and so wild in their attire, That look not like the inhabitants o' th' earth, And yet are on't?—Live you? or are you aught That man may question? You seem to understand me, By each at once her choppy finger laying Upon her skinny lips. You should be women, And yet your beards forbid me to interpret That you are so.

MACBETH. Speak, if you can;—what are you?

FIRST WITCH. All hail, Macbeth! hail to thee, Thane of Glamis!

SECOND WITCH. All hail, Macbeth! hail to thee, Thane of Cawdor!

THIRD WITCH. All hail, Macbeth! that shalt be king hereafter!

BANQUO. Good sir, why do you start and seem to fear Things that do sound so fair?—I' th' name of truth, Are ye fantastical, or that indeed Which outwardly ye show? My noble partner You greet with present grace and great prediction Of noble having and of royal hope, That he seems rapt withal. To me you speak not. If you can look into the seeds of time, And say which grain will grow, and which will not, Speak then to me, who neither beg nor fear Your favours nor your hate.

FIRST WITCH. Hail!

SECOND WITCH. Hail!

THIRD WITCH. Hail!

FIRST WITCH. Lesser than Macbeth, and greater.

SECOND WITCH. Not so happy, yet much happier.

THIRD WITCH. Thou shalt get kings, though thou be none: So all hail, Macbeth and Banquo!

FIRST WITCH. Banquo and Macbeth, all hail!

MACBETH. Stay, you imperfect speakers, tell me more. By Sinel's death I know I am Thane of Glamis; But how of Cawdor? The Thane of Cawdor lives, A prosperous gentleman; and to be king Stands not within the prospect of belief, No more than to be Cawdor. Say from whence You owe this strange intelligence? or why Upon this blasted heath you stop our way With such prophetic greeting?—Speak, I charge you.

[_Witches vanish._]

BANQUO. The earth hath bubbles, as the water has, And these are of them. Whither are they vanish'd?

MACBETH. Into the air; and what seem'd corporal, Melted as breath into the wind. Would they had stay'd!

BANQUO. Were such things here as we do speak about? Or have we eaten on the insane root That takes the reason prisoner?

MACBETH. Your children shall be kings.

BANQUO. You shall be king.

MACBETH. And Thane of Cawdor too; went it not so?

BANQUO. To the selfsame tune and words. Who's here?

Enter Ross and Angus.

ROSS. The King hath happily receiv'd, Macbeth, The news of thy success, and when he reads Thy personal venture in the rebels' fight, His wonders and his praises do contend Which should be thine or his: silenc'd with that, In viewing o'er the rest o' th' selfsame day, He finds thee in the stout Norweyan ranks, Nothing afeard of what thyself didst make, Strange images of death. As thick as tale Came post with post; and everyone did bear Thy praises in his kingdom's great defence, And pour'd them down before him.

ANGUS. We are sent To give thee from our royal master thanks; Only to herald thee into his sight, Not pay thee.

ROSS. And, for an earnest of a greater honour, He bade me, from him, call thee Thane of Cawdor: In which addition, hail, most worthy thane, For it is thine.

BANQUO. What, can the devil speak true?

MACBETH. The Thane of Cawdor lives: why do you dress me In borrow'd robes?

ANGUS. Who was the Thane lives yet, But under heavy judgement bears that life Which he deserves to lose. Whether he was combin'd With those of Norway, or did line the rebel With hidden help and vantage, or that with both He labour'd in his country's wrack, I know not; But treasons capital, confess'd and prov'd, Have overthrown him.

MACBETH. [_Aside._] Glamis, and Thane of Cawdor: The greatest is behind. [_To Ross and Angus._] Thanks for your pains. [_To Banquo._] Do you not hope your children shall be kings, When those that gave the Thane of Cawdor to me Promis'd no less to them?

BANQUO. That, trusted home, Might yet enkindle you unto the crown, Besides the Thane of Cawdor. But 'tis strange: And oftentimes to win us to our harm, The instruments of darkness tell us truths; Win us with honest trifles, to betray's In deepest consequence.— Cousins, a word, I pray you.

MACBETH. [_Aside._] Two truths are told, As happy prologues to the swelling act Of the imperial theme.—I thank you, gentlemen.— [_Aside._] This supernatural soliciting Cannot be ill; cannot be good. If ill, Why hath it given me earnest of success, Commencing in a truth? I am Thane of Cawdor: If good, why do I yield to that suggestion Whose horrid image doth unfix my hair, And make my seated heart knock at my ribs, Against the use of nature? Present fears Are less than horrible imaginings. My thought, whose murder yet is but fantastical, Shakes so my single state of man That function is smother'd in surmise, And nothing is but what is not.

BANQUO. Look, how our partner's rapt.

MACBETH. [_Aside._] If chance will have me king, why, chance may crown me Without my stir.

BANQUO. New honours come upon him, Like our strange garments, cleave not to their mould But with the aid of use.

MACBETH. [_Aside._] Come what come may, Time and the hour runs through the roughest day.

BANQUO. Worthy Macbeth, we stay upon your leisure.

MACBETH. Give me your favour. My dull brain was wrought With things forgotten. Kind gentlemen, your pains Are register'd where every day I turn The leaf to read them.—Let us toward the King.— Think upon what hath chanc'd; and at more time, The interim having weigh'd it, let us speak Our free hearts each to other.

BANQUO. Very gladly.

MACBETH. Till then, enough.—Come, friends.

[_Exeunt._]

SCENE IV. Forres. A Room in the Palace.

Flourish. Enter Duncan, Malcolm, Donalbain, Lennox and Attendants.

DUNCAN. Is execution done on Cawdor? Are not Those in commission yet return'd?

MALCOLM. My liege, They are not yet come back. But I have spoke With one that saw him die, who did report, That very frankly he confess'd his treasons, Implor'd your Highness' pardon, and set forth A deep repentance. Nothing in his life Became him like the leaving it; he died As one that had been studied in his death, To throw away the dearest thing he ow'd As 'twere a careless trifle.

DUNCAN. There's no art To find the mind's construction in the face: He was a gentleman on whom I built An absolute trust.

Enter Macbeth, Banquo, Ross and Angus.

O worthiest cousin! The sin of my ingratitude even now Was heavy on me. Thou art so far before, That swiftest wing of recompense is slow To overtake thee. Would thou hadst less deserv'd; That the proportion both of thanks and payment Might have been mine! only I have left to say, More is thy due than more than all can pay.

MACBETH. The service and the loyalty I owe, In doing it, pays itself. Your Highness' part Is to receive our duties: and our duties Are to your throne and state, children and servants; Which do but what they should, by doing everything Safe toward your love and honour.

DUNCAN. Welcome hither: I have begun to plant thee, and will labour To make thee full of growing.—Noble Banquo, That hast no less deserv'd, nor must be known No less to have done so, let me infold thee And hold thee to my heart.

BANQUO. There if I grow, The harvest is your own.

DUNCAN. My plenteous joys, Wanton in fulness, seek to hide themselves In drops of sorrow.—Sons, kinsmen, thanes, And you whose places are the nearest, know, We will establish our estate upon Our eldest, Malcolm; whom we name hereafter The Prince of Cumberland: which honour must Not unaccompanied invest him only, But signs of nobleness, like stars, shall shine On all deservers.—From hence to Inverness, And bind us further to you.

MACBETH. The rest is labour, which is not us'd for you: I'll be myself the harbinger, and make joyful The hearing of my wife with your approach; So, humbly take my leave.

DUNCAN. My worthy Cawdor!

MACBETH. [_Aside._] The Prince of Cumberland!—That is a step On which I must fall down, or else o'erleap, For in my way it lies. Stars, hide your fires! Let not light see my black and deep desires. The eye wink at the hand, yet let that be, Which the eye fears, when it is done, to see.

[_Exit._]

DUNCAN. True, worthy Banquo! He is full so valiant; And in his commendations I am fed. It is a banquet to me. Let's after him, Whose care is gone before to bid us welcome: It is a peerless kinsman.

[_Flourish. Exeunt._]

SCENE V. Inverness. A Room in Macbeth's Castle.

Enter Lady Macbeth, reading a letter.

LADY MACBETH. "They met me in the day of success; and I have learned by the perfect'st report they have more in them than mortal knowledge. When I burned in desire to question them further, they made themselves air, into which they vanished. Whiles I stood rapt in the wonder of it, came missives from the King, who all-hailed me, 'Thane of Cawdor'; by which title, before, these Weird Sisters saluted me, and referred me to the coming on of time, with 'Hail, king that shalt be!' This have I thought good to deliver thee (my dearest partner of greatness) that thou might'st not lose the dues of rejoicing, by being ignorant of what greatness is promis'd thee. Lay it to thy heart, and farewell."

Glamis thou art, and Cawdor; and shalt be What thou art promis'd. Yet do I fear thy nature; It is too full o' th' milk of human kindness To catch the nearest way. Thou wouldst be great; Art not without ambition, but without The illness should attend it. What thou wouldst highly, That wouldst thou holily; wouldst not play false, And yet wouldst wrongly win. Thou'dst have, great Glamis, That which cries, "Thus thou must do," if thou have it; And that which rather thou dost fear to do, Than wishest should be undone. Hie thee hither, That I may pour my spirits in thine ear, And chastise with the valour of my tongue All that impedes thee from the golden round, Which fate and metaphysical aid doth seem To have thee crown'd withal.

Enter a Messenger.

What is your tidings?

MESSENGER. The King comes here tonight.

LADY MACBETH. Thou'rt mad to say it. Is not thy master with him? who, were't so, Would have inform'd for preparation.

MESSENGER. So please you, it is true. Our thane is coming. One of my fellows had the speed of him, Who, almost dead for breath, had scarcely more Than would make up his message.

LADY MACBETH. Give him tending. He brings great news.

[_Exit Messenger._]

The raven himself is hoarse That croaks the fatal entrance of Duncan Under my battlements. Come, you spirits That tend on mortal thoughts, unsex me here, And fill me, from the crown to the toe, top-full Of direst cruelty! make thick my blood, Stop up th' access and passage to remorse, That no compunctious visitings of nature Shake my fell purpose, nor keep peace between Th' effect and it! Come to my woman's breasts, And take my milk for gall, your murd'ring ministers, Wherever in your sightless substances You wait on nature's mischief! Come, thick night, And pall thee in the dunnest smoke of hell That my keen knife see not the wound it

makes, Nor heaven peep through the blanket of the dark To cry, “Hold, hold!”

Enter Macbeth.

Great Glamis, worthy Cawdor! Greater than both, by the all-hail hereafter! Thy letters have transported me beyond This ignorant present, and I feel now The future in the instant.

MACBETH. My dearest love, Duncan comes here tonight.

LADY MACBETH. And when goes hence?

MACBETH. Tomorrow, as he purposes.

LADY MACBETH. O, never Shall sun that morrow see! Your face, my thane, is as a book where men May read strange matters. To beguile the time, Look like the time; bear welcome in your eye, Your hand, your tongue: look like the innocent flower, But be the serpent under’t. He that’s coming Must be provided for; and you shall put This night’s great business into my dispatch; Which shall to all our nights and days to come Give solely sovereign sway and masterdom.

MACBETH. We will speak further.

LADY MACBETH. Only look up clear; To alter favour ever is to fear. Leave all the rest to me.

[_Exeunt._]

SCENE VI. The same. Before the Castle.

Hautboys. Servants of Macbeth attending.

Enter Duncan, Malcolm, Donalbain, Banquo, Lennox, Macduff, Ross, Angus and Attendants.

DUNCAN. This castle hath a pleasant seat. The air Nimbly and sweetly recommends itself Unto our gentle senses.

BANQUO. This guest of summer, The temple-haunting martlet, does approve, By his loved mansionry, that the heaven’s breath Smells wooingly here: no jutty, frieze, Buttress, nor coign of vantage, but this bird hath made his pendant bed and procreant cradle. Where they most breed and haunt, I have observ’d The air is delicate.

Enter Lady Macbeth.

DUNCAN. See, see, our honour’d hostess!— The love that follows us sometime is our trouble, Which still we thank as love. Herein I teach you How you shall bid God ’ild us for your pains, And thank us for your trouble.

LADY MACBETH. All our service, In every point twice done, and then done double, Were poor and single business to contend Against those honours deep and broad wherewith Your Majesty loads our house: for those of old, And the late dignities heap’d up to them, We rest your hermits.

DUNCAN. Where’s the Thane of Cawdor? We cours’d him at the heels, and had a purpose To be his purveyor: but he rides well; And his great love, sharp as his spur, hath holp him To his home before us. Fair and noble hostess, We are your guest tonight.

LADY MACBETH. Your servants ever Have theirs, themselves, and what is theirs, in compt, To make their audit at your Highness’ pleasure, Still to return your own.

DUNCAN. Give me your hand; Conduct me to mine host: we love him highly, And shall continue our graces towards him. By your leave, hostess.

[_Exeunt._]

SCENE VII. The same. A Lobby in the Castle.

Hautboys and torches. Enter, and pass over, a Sewer and divers Servants with dishes and service. Then enter Macbeth.

MACBETH. If it were done when ’tis done, then ’twere well It were done quickly. If th’ assassination Could trammel up the consequence, and catch With his surcease success; that but this blow Might be the be-all and the end-all—here, But here, upon

this bank and shoal of time, We'd jump the life to come. But in these cases We still have judgement here; that we but teach Bloody instructions, which being taught, return To plague th' inventor. This even-handed justice Commends th' ingredience of our poison'd chalice To our own lips. He's here in double trust: First, as I am his kinsman and his subject, Strong both against the deed; then, as his host, Who should against his murderer shut the door, Not bear the knife myself. Besides, this Duncan Hath borne his faculties so meek, hath been So clear in his great office, that his virtues Will plead like angels, trumpet-tongued, against The deep damnation of his taking-off; And pity, like a naked new-born babe, Striding the blast, or heaven's cherubin, hors'd Upon the sightless couriers of the air, Shall blow the horrid deed in every eye, That tears shall drown the wind.—I have no spur To prick the sides of my intent, but only Vaulting ambition, which o'erleaps itself And falls on th' other—

Enter Lady Macbeth.

How now! what news?

LADY MACBETH. He has almost supp'd. Why have you left the chamber?

MACBETH. Hath he ask'd for me?

LADY MACBETH. Know you not he has?

MACBETH. We will proceed no further in this business: He hath honour'd me of late; and I have bought Golden opinions from all sorts of people, Which would be worn now in their newest gloss, Not cast aside so soon.

LADY MACBETH. Was the hope drunk Wherein you dress'd yourself? Hath it slept since? And wakes it now, to look so green and pale At what it did so freely? From this time Such I account thy love. Art thou afeard To be the same in thine own act and valour As thou art in desire? Wouldst thou have that Which thou esteem'st the ornament of life, And live a coward in thine own esteem, Letting "I dare not" wait upon "I would," Like the poor cat i' th' adage?

MACBETH. Pr'ythee, peace! I dare do all that may become a man; Who dares do more is none.

LADY MACBETH. What beast was't, then, That made you break this enterprise to me? When you durst do it, then you were a man; And, to be more than what you were, you would Be so much more the man. Nor time nor place Did then adhere, and yet you would make both: They have made themselves, and that their fitness now Does unmake you. I have given suck, and know How tender 'tis to love the babe that milks me: I would, while it was smiling in my face, Have pluck'd my nipple from his boneless gums And dash'd the brains out, had I so sworn as you Have done to this.

MACBETH. If we should fail?

LADY MACBETH. We fail? But screw your courage to the sticking-place, And we'll not fail. When Duncan is asleep (Whereto the rather shall his day's hard journey Soundly invite him), his two chamberlains Will I with wine and wassail so convince That memory, the warder of the brain, Shall be a fume, and the receipt of reason A limbeck only: when in swinish sleep Their drenched natures lie as in a death, What cannot you and I perform upon Th' unguarded Duncan? what not put upon His spongy officers; who shall bear the guilt Of our great quell?

MACBETH. Bring forth men-children only; For thy undaunted mettle should compose Nothing but males. Will it not be receiv'd, When we have mark'd with blood those sleepy two Of his own chamber, and us'd their very daggers, That they have done't?

LADY MACBETH. Who dares receive it other, As we shall make our griefs and clamour roar Upon his death?

MACBETH. I am settled, and bend up Each corporal agent to this terrible feat. Away, and mock the time with fairest show: False face must hide what the false heart doth know.

[_Exeunt._]

ACT II

SCENE I. Inverness. Court within the Castle.

Enter Banquo and Fleance with a torch before him.

BANQUO. How goes the night, boy?

FLEANCE. The moon is down; I have not heard the clock.

BANQUO. And she goes down at twelve.

FLEANCE. I take't, 'tis later, sir.

BANQUO. Hold, take my sword.—There's husbandry in heaven; Their candles are all out. Take thee that too. A heavy summons lies like lead upon me, And yet I would not sleep. Merciful powers, Restrain in me the cursed thoughts that nature Gives way to in repose!

Enter Macbeth and a Servant with a torch.

Give me my sword.—Who's there?

MACBETH. A friend.

BANQUO. What, sir, not yet at rest? The King's abed: He hath been in unusual pleasure and Sent forth great largess to your offices. This diamond he greets your wife withal, By the name of most kind hostess, and shut up In measureless content.

MACBETH. Being unprepar'd, Our will became the servant to defect, Which else should free have wrought.

BANQUO. All's well. I dreamt last night of the three Weird Sisters: To you they have show'd some truth.

MACBETH. I think not of them: Yet, when we can entreat an hour to serve, We would spend it in some words upon that business, If you would grant the time.

BANQUO. At your kind'st leisure.

MACBETH. If you shall cleave to my consent, when 'tis, It shall make honour for you.

BANQUO. So I lose none In seeking to augment it, but still keep My bosom franchis'd, and allegiance clear, I shall be counsell'd.

MACBETH. Good repose the while!

BANQUO. Thanks, sir: the like to you.

[_Exeunt Banquo and Fleance._]

MACBETH. Go bid thy mistress, when my drink is ready, She strike upon the bell. Get thee to bed.

[_Exit Servant._]

Is this a dagger which I see before me, The handle toward my hand? Come, let me clutch thee:— I have thee not, and yet I see thee still. Art thou not, fatal vision, sensible To feeling as to sight? or art thou but A dagger of the mind, a false creation, Proceeding from the heat-oppressed brain? I see thee yet, in form as palpable As this which now I draw. Thou marshall'st me the way that I was going; And such an instrument I was to use. Mine eyes are made the fools o' the other senses, Or else worth all the rest: I see thee still; And on thy blade and dudgeon, gouts of blood, Which was not so before.—There's no such thing. It is the bloody business which informs Thus to mine eyes.—Now o'er the one half-world Nature seems dead, and wicked dreams abuse The curtain'd sleep. Witchcraft celebrates Pale Hecate's off'rings; and wither'd murder, Alarum'd by his sentinel, the wolf, Whose howl's his watch, thus with his stealthy pace, With Tarquin's ravishing strides, towards his design Moves like a ghost.—Thou sure and firm-set earth, Hear not my steps, which way they walk, for fear Thy very stones prate of my whereabout, And take the present horror from the time, Which now suits with it.—Whiles I threat, he lives. Words to the heat of deeds too cold breath gives.

[_A bell rings._]

I go, and it is done. The bell invites me. Hear it not, Duncan, for it is a knell That summons thee to heaven or to hell.

[_Exit._]

SCENE II. The same.

Enter Lady Macbeth.

LADY MACBETH. That which hath made them drunk hath made me bold: What hath quench’d them hath given me fire.—Hark!—Peace! It was the owl that shriek’d, the fatal bellman, Which gives the stern’st good night. He is about it. The doors are open; and the surfeited grooms Do mock their charge with snores: I have drugg’d their possets, That death and nature do contend about them, Whether they live or die.

MACBETH. [_Within._] Who’s there?—what, ho!

LADY MACBETH. Alack! I am afraid they have awak’d, And ’tis not done. Th’ attempt and not the deed Confounds us.—Hark!—I laid their daggers ready; He could not miss ’em.—Had he not resembled My father as he slept, I had done’t.—My husband!

Enter Macbeth.

MACBETH. I have done the deed.—Didst thou not hear a noise?

LADY MACBETH. I heard the owl scream and the crickets cry. Did not you speak?

MACBETH. When?

LADY MACBETH. Now.

MACBETH. As I descended?

LADY MACBETH. Ay.

MACBETH. Hark!—Who lies i’ th’ second chamber?

LADY MACBETH. Donalbain.

MACBETH. This is a sorry sight.

[_Looking on his hands._]

LADY MACBETH. A foolish thought, to say a sorry sight.

MACBETH. There’s one did laugh in’s sleep, and one cried, “Murder!” That they did wake each other: I stood and heard them. But they did say their prayers, and address’d them Again to sleep.

LADY MACBETH. There are two lodg’d together.

MACBETH. One cried, “God bless us!” and, “Amen,” the other, As they had seen me with these hangman’s hands. List’ning their fear, I could not say “Amen,” When they did say, “God bless us.”

LADY MACBETH. Consider it not so deeply.

MACBETH. But wherefore could not I pronounce “Amen”? I had most need of blessing, and “Amen” Stuck in my throat.

LADY MACBETH. These deeds must not be thought After these ways; so, it will make us mad.

MACBETH. Methought I heard a voice cry, “Sleep no more! Macbeth does murder sleep,”—the innocent sleep; Sleep that knits up the ravell’d sleave of care, The death of each day’s life, sore labour’s bath, Balm of hurt minds, great nature’s second course, Chief nourisher in life’s feast.

LADY MACBETH. What do you mean?

MACBETH. Still it cried, “Sleep no more!” to all the house: “Glamis hath murder’d sleep, and therefore Cawdor Shall sleep no more. Macbeth shall sleep no more!”

LADY MACBETH. Who was it that thus cried? Why, worthy thane, You do unbend your noble strength to think So brainsickly of things. Go get some water, And wash this filthy witness from your hand.— Why did you bring these daggers from the place? They must lie there: go carry them, and smear The sleepy grooms with blood.

MACBETH. I'll go no more: I am afraid to think what I have done; Look on't again I dare not.

LADY MACBETH. Infirm of purpose! Give me the daggers. The sleeping and the dead Are but as pictures. 'Tis the eye of childhood That fears a painted devil. If he do bleed, I'll gild the faces of the grooms withal, For it must seem their guilt.

[_Exit. Knocking within._]

MACBETH. Whence is that knocking? How is't with me, when every noise appals me? What hands are here? Ha, they pluck out mine eyes! Will all great Neptune's ocean wash this blood Clean from my hand? No, this my hand will rather The multitudinous seas incarnadine, Making the green one red.

Enter Lady Macbeth.

LADY MACBETH. My hands are of your color, but I shame To wear a heart so white. [_Knocking within._] I hear knocking At the south entry:—retire we to our chamber. A little water clears us of this deed: How easy is it then! Your constancy Hath left you unattended.—[_Knocking within._] Hark, more knocking. Get on your nightgown, lest occasion call us And show us to be watchers. Be not lost So poorly in your thoughts.

MACBETH. To know my deed, 'twere best not know myself. [_Knocking within._] Wake Duncan with thy knocking! I would thou couldst!

[_Exeunt._]

SCENE III. The same.

Enter a Porter. Knocking within.

PORTER. Here's a knocking indeed! If a man were porter of hell gate, he should have old turning the key. [_Knocking._] Knock, knock, knock. Who's there, i' th' name of Belzebub? Here's a farmer that hanged himself on the expectation of plenty: come in time; have napkins enow about you; here you'll sweat for't. [_Knocking._] Knock, knock! Who's there, i' th' other devil's name? Faith, here's an equivocator, that could swear in both the scales against either scale, who committed treason enough for God's sake, yet could not equivocate to heaven: O, come in, equivocator. [_Knocking._] Knock, knock, knock! Who's there? Faith, here's an English tailor come hither, for stealing out of a French hose: come in, tailor; here you may roast your goose. [_Knocking._] Knock, knock. Never at quiet! What are you?—But this place is too cold for hell. I'll devil-porter it no further: I had thought to have let in some of all professions, that go the primrose way to th' everlasting bonfire. [_Knocking._] Anon, anon! I pray you, remember the porter.

[_Opens the gate._]

Enter Macduff and Lennox.

MACDUFF. Was it so late, friend, ere you went to bed, That you do lie so late?

PORTER. Faith, sir, we were carousing till the second cock; and drink, sir, is a great provoker of three things.

MACDUFF. What three things does drink especially provoke?

PORTER. Marry, sir, nose-painting, sleep, and urine. Lechery, sir, it provokes and unprovokes; it provokes the desire, but it takes away the performance. Therefore much drink may be said to be an equivocator with lechery: it makes him, and it mars him; it sets him on, and it takes him off; it persuades him, and disheartens him; makes him stand to, and not stand to; in conclusion, equivocates him in a sleep, and giving him the lie, leaves him.

MACDUFF. I believe drink gave thee the lie last night.

PORTER. That it did, sir, i' the very throat on me; but I requited him for his lie; and (I think) being too strong for him, though he took up my legs sometime, yet I made a shift to cast him.

MACDUFF. Is thy master stirring?

Enter Macbeth.

Our knocking has awak'd him; here he comes.

LENNOX. Good morrow, noble sir!

MACBETH. Good morrow, both!

MACDUFF. Is the King stirring, worthy thane?

MACBETH. Not yet.

MACDUFF. He did command me to call timely on him. I have almost slipp'd the hour.

MACBETH. I'll bring you to him.

MACDUFF. I know this is a joyful trouble to you; But yet 'tis one.

MACBETH. The labour we delight in physics pain. This is the door.

MACDUFF. I'll make so bold to call. For 'tis my limited service.

[_Exit Macduff._]

LENNOX. Goes the King hence today?

MACBETH. He does. He did appoint so.

LENNOX. The night has been unruly: where we lay, Our chimneys were blown down and, as they say, Lamentings heard i' th' air, strange screams of death, And prophesying, with accents terrible, Of dire combustion and confus'd events, New hatch'd to the woeful time. The obscure bird Clamour'd the live-long night. Some say the earth Was feverous, and did shake.

MACBETH. 'Twas a rough night.

LENNOX. My young remembrance cannot parallel A fellow to it.

Enter Macduff.

MACDUFF. O horror, horror, horror! Tongue nor heart cannot conceive nor name thee!

MACBETH, LENNOX. What's the matter?

MACDUFF. Confusion now hath made his masterpiece! Most sacrilegious murder hath broke ope The Lord's anointed temple, and stole thence The life o' th' building.

MACBETH. What is't you say? the life?

LENNOX. Mean you his majesty?

MACDUFF. Approach the chamber, and destroy your sight With a new Gorgon. Do not bid me speak. See, and then speak yourselves.

[_Exeunt Macbeth and Lennox._]

Awake, awake!— Ring the alarum bell.—Murder and treason! Banquo and Donalbain! Malcolm! awake! Shake off this downy sleep, death's counterfeit, And look on death itself! Up, up, and see The great doom's image. Malcolm! Banquo! As from your graves rise up, and walk like sprites To countenance this horror!

[_Alarum-bell rings._]

Enter Lady Macbeth.

LADY MACBETH. What's the business, That such a hideous trumpet calls to parley The sleepers of the house? Speak, speak!

MACDUFF. O gentle lady, 'Tis not for you to hear what I can speak: The repetition, in a woman's ear, Would murder as it fell.

Enter Banquo.

O Banquo, Banquo! Our royal master’s murder’d!

LADY MACBETH. Woe, alas! What, in our house?

BANQUO. Too cruel anywhere.— Dear Duff, I pr’ythee, contradict thyself, And say it is not so.

Enter Macbeth and Lennox with Ross.

MACBETH. Had I but died an hour before this chance, I had liv’d a blessed time; for, from this instant There’s nothing serious in mortality. All is but toys: renown and grace is dead; The wine of life is drawn, and the mere lees Is left this vault to brag of.

Enter Malcolm and Donalbain.

DONALBAIN. What is amiss?

MACBETH. You are, and do not know’t: The spring, the head, the fountain of your blood Is stopp’d; the very source of it is stopp’d.

MACDUFF. Your royal father’s murder’d.

MALCOLM. O, by whom?

LENNOX. Those of his chamber, as it seem’d, had done’t: Their hands and faces were all badg’d with blood; So were their daggers, which, unwip’d, we found Upon their pillows. They star’d, and were distracted; No man’s life was to be trusted with them.

MACBETH. O, yet I do repent me of my fury, That I did kill them.

MACDUFF. Wherefore did you so?

MACBETH. Who can be wise, amaz’d, temperate, and furious, Loyal and neutral, in a moment? No man: Th’ expedition of my violent love Outrun the pauser, reason. Here lay Duncan, His silver skin lac’d with his golden blood; And his gash’d stabs look’d like a breach in nature For ruin’s wasteful entrance: there, the murderers, Steep’d in the colours of their trade, their daggers Unmannerly breech’d with gore. Who could refrain, That had a heart to love, and in that heart Courage to make’s love known?

LADY MACBETH. Help me hence, ho!

MACDUFF. Look to the lady.

MALCOLM. Why do we hold our tongues, That most may claim this argument for ours?

DONALBAIN. What should be spoken here, where our fate, Hid in an auger hole, may rush, and seize us? Let’s away. Our tears are not yet brew’d.

MALCOLM. Nor our strong sorrow Upon the foot of motion.

BANQUO. Look to the lady:—

[_Lady Macbeth is carried out._]

And when we have our naked frailties hid, That suffer in exposure, let us meet, And question this most bloody piece of work To know it further. Fears and scruples shake us: In the great hand of God I stand; and thence Against the undivulg’d pretence I fight Of treasonous malice.

MACDUFF. And so do I.

ALL. So all.

MACBETH. Let’s briefly put on manly readiness, And meet i’ th’ hall together.

ALL. Well contented.

[_Exeunt all but Malcolm and Donalbain._]

MALCOLM. What will you do? Let’s not consort with them: To show an unfelt sorrow is an office Which the false man does easy. I’ll to England.

DONALBAIN. To Ireland, I. Our separated fortune Shall keep us both the safer. Where we are, There’s daggers in men’s smiles: the near in blood, The nearer bloody.

MALCOLM. This murderous shaft that’s shot Hath not yet lighted; and our safest way Is to avoid the aim. Therefore to horse; And let us not be dainty of leave-taking, But shift away. There’s warrant in that theft Which steals itself, when there’s no mercy left.

[_Exeunt._]

SCENE IV. The same. Without the Castle.

Enter Ross and an Old Man.

OLD MAN. Threescore and ten I can remember well, Within the volume of which time I have seen Hours dreadful and things strange, but this sore night Hath trifled former knowings.

ROSS. Ha, good father, Thou seest the heavens, as troubled with man’s act, Threatens his bloody stage: by the clock ’tis day, And yet dark night strangles the travelling lamp. Is’t night’s predominance, or the day’s shame, That darkness does the face of earth entomb, When living light should kiss it?

OLD MAN. ’Tis unnatural, Even like the deed that’s done. On Tuesday last, A falcon, towering in her pride of place, Was by a mousing owl hawk’d at and kill’d.

ROSS. And Duncan’s horses (a thing most strange and certain) Beauteous and swift, the minions of their race, Turn’d wild in nature, broke their stalls, flung out, Contending ’gainst obedience, as they would make War with mankind.

OLD MAN. ’Tis said they eat each other.

ROSS. They did so; to the amazement of mine eyes, That look’d upon’t. Here comes the good Macduff.

Enter Macduff.

How goes the world, sir, now?

MACDUFF. Why, see you not?

ROSS. Is’t known who did this more than bloody deed?

MACDUFF. Those that Macbeth hath slain.

ROSS. Alas, the day! What good could they pretend?

MACDUFF. They were suborn’d. Malcolm and Donalbain, the King’s two sons, Are stol’n away and fled; which puts upon them Suspicion of the deed.

ROSS. ’Gainst nature still: Thriftless ambition, that will ravin up Thine own life’s means!—Then ’tis most like The sovereignty will fall upon Macbeth.

MACDUFF. He is already nam’d; and gone to Scone To be invested.

ROSS. Where is Duncan’s body?

MACDUFF. Carried to Colmekill, The sacred storehouse of his predecessors, And guardian of their bones.

ROSS. Will you to Scone?

MACDUFF. No, cousin, I’ll to Fife.

ROSS. Well, I will thither.

MACDUFF. Well, may you see things well done there. Adieu! Lest our old robes sit easier than our new!

ROSS. Farewell, father.

OLD MAN. God’s benison go with you; and with those That would make good of bad, and friends of foes!

[_Exeunt._]

ACT III

SCENE I. Forres. A Room in the Palace.

Enter Banquo.

BANQUO. Thou hast it now, King, Cawdor, Glamis, all, As the Weird Women promis’d; and, I fear, Thou play’dst most foully for’t; yet it was said It should not stand in thy posterity; But that myself should be the root and father Of many kings. If there come truth from them (As upon thee, Macbeth, their speeches shine) Why, by the verities on thee made good, May they not be my oracles as well, And set me up in hope? But hush; no more.

Sennet sounded. Enter Macbeth as King, Lady Macbeth as Queen; Lennox, Ross, Lords, and Attendants.

MACBETH. Here’s our chief guest.

LADY MACBETH. If he had been forgotten, It had been as a gap in our great feast, And all-thing unbecoming.

MACBETH. Tonight we hold a solemn supper, sir, And I’ll request your presence.

BANQUO. Let your Highness Command upon me, to the which my duties Are with a most indissoluble tie For ever knit.

MACBETH. Ride you this afternoon?

BANQUO. Ay, my good lord.

MACBETH. We should have else desir’d your good advice (Which still hath been both grave and prosperous) In this day’s council; but we’ll take tomorrow. Is’t far you ride?

BANQUO. As far, my lord, as will fill up the time ’Twixt this and supper: go not my horse the better, I must become a borrower of the night, For a dark hour or twain.

MACBETH. Fail not our feast.

BANQUO. My lord, I will not.

MACBETH. We hear our bloody cousins are bestow’d In England and in Ireland; not confessing Their cruel parricide, filling their hearers With strange invention. But of that tomorrow, When therewithal we shall have cause of state Craving us jointly. Hie you to horse: adieu, Till you return at night. Goes Fleance with you?

BANQUO. Ay, my good lord: our time does call upon’s.

MACBETH. I wish your horses swift and sure of foot; And so I do commend you to their backs. Farewell.—

[_Exit Banquo._]

Let every man be master of his time Till seven at night; to make society The sweeter welcome, we will keep ourself Till supper time alone: while then, God be with you.

[_Exeunt Lady Macbeth, Lords, &c._]

Sirrah, a word with you. Attend those men Our pleasure?

SERVANT. They are, my lord, without the palace gate.

MACBETH. Bring them before us.

[_Exit Servant._]

To be thus is nothing, But to be safely thus. Our fears in Banquo Stick deep, and in his royalty of nature Reigns that which would be fear'd: 'tis much he dares; And, to that dauntless temper of his mind, He hath a wisdom that doth guide his valour To act in safety. There is none but he Whose being I do fear: and under him My genius is rebuk'd; as, it is said, Mark Antony's was by Caesar. He chid the sisters When first they put the name of king upon me, And bade them speak to him; then, prophet-like, They hail'd him father to a line of kings: Upon my head they plac'd a fruitless crown, And put a barren sceptre in my gripe, Thence to be wrench'd with an unlineal hand, No son of mine succeeding. If't be so, For Banquo's issue have I fil'd my mind; For them the gracious Duncan have I murder'd; Put rancours in the vessel of my peace Only for them; and mine eternal jewel Given to the common enemy of man, To make them kings, the seed of Banquo kings! Rather than so, come, fate, into the list, And champion me to th' utterance!—Who's there?—

Enter Servant with two Murderers.

Now go to the door, and stay there till we call.

[_Exit Servant._]

Was it not yesterday we spoke together?

FIRST MURDERER. It was, so please your Highness.

MACBETH. Well then, now Have you consider'd of my speeches? Know That it was he, in the times past, which held you So under fortune, which you thought had been Our innocent self? This I made good to you In our last conference, pass'd in probation with you How you were borne in hand, how cross'd, the instruments, Who wrought with them, and all things else that might To half a soul and to a notion craz'd Say, "Thus did Banquo."

FIRST MURDERER. You made it known to us.

MACBETH. I did so; and went further, which is now Our point of second meeting. Do you find Your patience so predominant in your nature, That you can let this go? Are you so gospell'd, To pray for this good man and for his issue, Whose heavy hand hath bow'd you to the grave, And beggar'd yours forever?

FIRST MURDERER. We are men, my liege.

MACBETH. Ay, in the catalogue ye go for men; As hounds, and greyhounds, mongrels, spaniels, curs, Shoughs, water-rugs, and demi-wolves are clept All by the name of dogs: the valu'd file Distinguishes the swift, the slow, the subtle, The housekeeper, the hunter, every one According to the gift which bounteous nature Hath in him clos'd; whereby he does receive Particular addition, from the bill That writes them all alike: and so of men. Now, if you have a station in the file, Not i' th' worst rank of manhood, say't; And I will put that business in your bosoms, Whose execution takes your enemy off, Grapples you to the heart and love of us, Who wear our health but sickly in his life, Which in his death were perfect.

SECOND MURDERER. I am one, my liege, Whom the vile blows and buffets of the world Hath so incens'd that I am reckless what I do to spite the world.

FIRST MURDERER. And I another, So weary with disasters, tugg'd with fortune, That I would set my life on any chance, To mend it or be rid on't.

MACBETH. Both of you Know Banquo was your enemy.

BOTH MURDERERS. True, my lord.

MACBETH. So is he mine; and in such bloody distance, That every minute of his being thrusts Against my near'st of life; and though I could With barefac'd power sweep him from my sight, And bid my will avouch it, yet I must not, For certain friends that are both his and mine, Whose loves I may not drop, but wail his fall Who I myself struck down: and thence it is That I to your assistance do make love, Masking the business from the common eye For sundry weighty reasons.

SECOND MURDERER. We shall, my lord, Perform what you command us.

FIRST MURDERER. Though our lives—

MACBETH. Your spirits shine through you. Within this hour at most, I will advise you where to plant yourselves, Acquaint you with the perfect spy o' th' time, The moment on't; for't must be done tonight And something from the palace; always thought That I require a clearness. And with him (To leave no rubs nor botches in the work) Fleance his son, that keeps him company, Whose absence is no less material to me Than is his father's, must embrace the fate Of that dark hour. Resolve yourselves apart. I'll come to you anon.

BOTH MURDERERS. We are resolv'd, my lord.

MACBETH. I'll call upon you straight: abide within.

[_Exeunt Murderers._]

It is concluded. Banquo, thy soul's flight, If it find heaven, must find it out tonight.

[_Exit._]

SCENE II. The same. Another Room in the Palace.

Enter Lady Macbeth and a Servant.

LADY MACBETH. Is Banquo gone from court?

SERVANT. Ay, madam, but returns again tonight.

LADY MACBETH. Say to the King, I would attend his leisure For a few words.

SERVANT. Madam, I will.

[_Exit._]

LADY MACBETH. Naught's had, all's spent, Where our desire is got without content: 'Tis safer to be that which we destroy, Than by destruction dwell in doubtful joy.

Enter Macbeth.

How now, my lord, why do you keep alone, Of sorriest fancies your companions making, Using those thoughts which should indeed have died With them they think on? Things without all remedy Should be without regard: what's done is done.

MACBETH. We have scorch'd the snake, not kill'd it. She'll close, and be herself; whilst our poor malice Remains in danger of her former tooth. But let the frame of things disjoint, Both the worlds suffer, Ere we will eat our meal in fear, and sleep In the affliction of these terrible dreams That shake us nightly. Better be with the dead, Whom we, to gain our peace, have sent to peace, Than on the torture of the mind to lie In restless ecstasy. Duncan is in his grave; After life's fitful fever he sleeps well; Treason has done his worst: nor steel, nor poison, Malice domestic, foreign levy, nothing Can touch him further.

LADY MACBETH. Come on, Gently my lord, sleek o'er your rugged looks; Be bright and jovial among your guests tonight.

MACBETH. So shall I, love; and so, I pray, be you. Let your remembrance apply to Banquo; Present him eminence, both with eye and tongue: Unsafe the while, that we Must lave our honours in these flattering streams, And make our faces vizards to our hearts, Disguising what they are.

LADY MACBETH. You must leave this.

MACBETH. O, full of scorpions is my mind, dear wife! Thou know'st that Banquo, and his Fleance, lives.

LADY MACBETH. But in them nature's copy's not eterne.

MACBETH. There's comfort yet; they are assailable. Then be thou jocund. Ere the bat hath flown His cloister'd flight, ere to black Hecate's summons The shard-born beetle, with his drowsy hums, Hath rung night's yawning peal, there shall be done A deed of dreadful note.

LADY MACBETH. What's to be done?

MACBETH. Be innocent of the knowledge, dearest chuck, Till thou applaud the deed. Come, seeling night, Scarf up the tender eye of pitiful day, And with thy bloody and invisible hand Cancel and tear to pieces that great bond Which keeps me pale!—Light thickens; and the crow Makes wing to th' rooky wood. Good things of day begin to droop and drowse, Whiles night's black agents to their preys do rouse. Thou marvell'st at my words: but hold thee still; Things bad begun make strong themselves by ill. So, pr'ythee, go with me.

[_Exeunt._]

SCENE III. The same. A Park or Lawn, with a gate leading to the Palace.

Enter three Murderers.

FIRST MURDERER. But who did bid thee join with us?

THIRD MURDERER. Macbeth.

SECOND MURDERER. He needs not our mistrust; since he delivers Our offices and what we have to do To the direction just.

FIRST MURDERER. Then stand with us. The west yet glimmers with some streaks of day. Now spurs the lated traveller apace, To gain the timely inn; and near approaches The subject of our watch.

THIRD MURDERER. Hark! I hear horses.

BANQUO. [_Within._] Give us a light there, ho!

SECOND MURDERER. Then 'tis he; the rest That are within the note of expectation Already are i' th' court.

FIRST MURDERER. His horses go about.

THIRD MURDERER. Almost a mile; but he does usually, So all men do, from hence to the palace gate Make it their walk.

Enter Banquo and Fleance with a torch.

SECOND MURDERER. A light, a light!

THIRD MURDERER. 'Tis he.

FIRST MURDERER. Stand to't.

BANQUO. It will be rain tonight.

FIRST MURDERER. Let it come down.

[_Assaults Banquo._]

BANQUO. O, treachery! Fly, good Fleance, fly, fly, fly! Thou mayst revenge—O slave!

[_Dies. Fleance escapes._]

THIRD MURDERER. Who did strike out the light?

FIRST MURDERER. Was't not the way?

THIRD MURDERER. There's but one down: the son is fled.

SECOND MURDERER. We have lost best half of our affair.

FIRST MURDERER. Well, let's away, and say how much is done.

[_Exeunt._]

SCENE IV. The same. A Room of state in the Palace.

A banquet prepared. Enter Macbeth, Lady Macbeth, Ross, Lennox, Lords and Attendants.

MACBETH. You know your own degrees, sit down. At first And last the hearty welcome.

LORDS. Thanks to your Majesty.

MACBETH. Ourself will mingle with society, And play the humble host. Our hostess keeps her state; but, in best time, We will require her welcome.

LADY MACBETH. Pronounce it for me, sir, to all our friends; For my heart speaks they are welcome.

Enter first Murderer to the door.

MACBETH. See, they encounter thee with their hearts' thanks. Both sides are even: here I'll sit i' th' midst.

Be large in mirth; anon we'll drink a measure The table round. There's blood upon thy face.

MURDERER. 'Tis Banquo's then.

MACBETH. 'Tis better thee without than he within. Is he dispatch'd?

MURDERER. My lord, his throat is cut. That I did for him.

MACBETH. Thou art the best o' th' cut-throats; Yet he's good that did the like for Fleance: If thou didst it, thou art the nonpareil.

MURDERER. Most royal sir, Fleance is 'scap'd.

MACBETH. Then comes my fit again: I had else been perfect; Whole as the marble, founded as the rock, As broad and general as the casing air: But now I am cabin'd, cribb'd, confin'd, bound in To saucy doubts and fears. But Banquo's safe?

MURDERER. Ay, my good lord. Safe in a ditch he bides, With twenty trenched gashes on his head; The least a death to nature.

MACBETH. Thanks for that. There the grown serpent lies; the worm that's fled Hath nature that in time will venom breed, No teeth for th' present.—Get thee gone; tomorrow We'll hear, ourselves, again.

[_Exit Murderer._]

LADY MACBETH. My royal lord, You do not give the cheer: the feast is sold That is not often vouch'd, while 'tis a-making, 'Tis given with welcome. To feed were best at home; From thence the sauce to meat is ceremony; Meeting were bare without it.

The Ghost of Banquo rises, and sits in Macbeth's place.

MACBETH. Sweet remembrancer!— Now, good digestion wait on appetite, And health on both!

LENNOX. May't please your Highness sit.

MACBETH. Here had we now our country's honour roof'd, Were the grac'd person of our Banquo present; Who may I rather challenge for unkindness Than pity for mischance!

ROSS. His absence, sir, Lays blame upon his promise. Please't your Highness To grace us with your royal company?

MACBETH. The table's full.

LENNOX. Here is a place reserv'd, sir.

MACBETH. Where?

LENNOX. Here, my good lord. What is't that moves your Highness?

MACBETH. Which of you have done this?

LORDS. What, my good lord?

MACBETH. Thou canst not say I did it. Never shake Thy gory locks at me.

ROSS. Gentlemen, rise; his Highness is not well.

LADY MACBETH. Sit, worthy friends. My lord is often thus, And hath been from his youth: pray you, keep seat; The fit is momentary; upon a thought He will again be well. If much you note him, You shall offend him, and extend his passion. Feed, and regard him not.—Are you a man?

MACBETH. Ay, and a bold one, that dare look on that Which might appal the devil.

LADY MACBETH. O proper stuff! This is the very painting of your fear: This is the air-drawn dagger which you said, Led you to Duncan. O, these flaws, and starts (Impostors to true fear), would well become A woman's story at a winter's fire, Authoris'd by her grandam. Shame itself! Why do you make such faces? When all's done, You look but on a stool.

MACBETH. Pr'ythee, see there! Behold! look! lo! how say you? Why, what care I? If thou canst nod, speak too.— If charnel houses and our graves must send Those that we bury back, our monuments Shall be the maws of kites.

[_Ghost disappears._]

LADY MACBETH. What, quite unmann'd in folly?

MACBETH. If I stand here, I saw him.

LADY MACBETH. Fie, for shame!

MACBETH. Blood hath been shed ere now, i' th' olden time, Ere humane statute purg'd the gentle weal; Ay, and since too, murders have been perform'd Too terrible for the ear: the time has been, That, when the brains were out, the man would die, And there an end; but now they rise again, With twenty mortal murders on their crowns, And push us from our stools. This is more strange Than such a murder is.

LADY MACBETH. My worthy lord, Your noble friends do lack you.

MACBETH. I do forget.— Do not muse at me, my most worthy friends. I have a strange infirmity, which is nothing To those that know me. Come, love and health to all; Then I'll sit down.—Give me some wine, fill full.— I drink to the general joy o' th' whole table, And to our dear friend Banquo, whom we miss: Would he were here.

Ghost rises again.

To all, and him, we thirst, And all to all.

LORDS. Our duties, and the pledge.

MACBETH. Avaunt! and quit my sight! let the earth hide thee! Thy bones are marrowless, thy blood is cold; Thou hast no speculation in those eyes Which thou dost glare with!

LADY MACBETH. Think of this, good peers, But as a thing of custom: 'tis no other, Only it spoils the pleasure of the time.

MACBETH. What man dare, I dare: Approach thou like the rugged Russian bear, The arm'd rhinoceros, or th' Hyrcan tiger; Take any shape but that, and my firm nerves Shall never tremble: or be alive again, And dare me to the desert with thy sword; If trembling I inhabit then, protest me The baby of a girl. Hence, horrible shadow! Unreal mock'ry, hence!

[_Ghost disappears._]

Why, so;—being gone, I am a man again.—Pray you, sit still.

LADY MACBETH. You have displaced the mirth, broke the good meeting With most admir'd disorder.

MACBETH. Can such things be, And overcome us like a summer's cloud, Without our special wonder? You make me strange Even to the disposition that I owe, When now I think you can behold such sights, And keep the natural ruby of your cheeks, When mine are blanch'd with fear.

ROSS. What sights, my lord?

LADY MACBETH. I pray you, speak not; he grows worse and worse; Question enrages him. At once, good night:— Stand not upon the order of your going, But go at once.

LENNOX. Good night; and better health Attend his Majesty!

LADY MACBETH. A kind good night to all!

[_Exeunt all Lords and Attendants._]

MACBETH. It will have blood, they say, blood will have blood. Stones have been known to move, and trees to speak; Augurs, and understood relations, have By magot-pies, and choughs, and rooks, brought forth The secret'st man of blood.—What is the night?

LADY MACBETH. Almost at odds with morning, which is which.

MACBETH. How say'st thou, that Macduff denies his person At our great bidding?

LADY MACBETH. Did you send to him, sir?

MACBETH. I hear it by the way; but I will send. There's not a one of them but in his house I keep a servant fee'd. I will tomorrow (And betimes I will) to the Weird Sisters: More shall they speak; for now I am bent to know, By the worst means, the worst. For mine own good, All causes shall give way: I am in blood Stepp'd in so far that, should I wade no more, Returning were as tedious as go o'er. Strange things I have in head, that will to hand, Which must be acted ere they may be scann'd.

LADY MACBETH. You lack the season of all natures, sleep.

MACBETH. Come, we'll to sleep. My strange and self-abuse Is the initiate fear that wants hard use. We are yet but young in deed.

[_Exeunt._]

SCENE V. The heath.

Thunder. Enter the three Witches meeting Hecate.

FIRST WITCH. Why, how now, Hecate? you look angerly.

HECATE. Have I not reason, beldams as you are, Saucy and overbold? How did you dare To trade and traffic with Macbeth In riddles and affairs of death; And I, the mistress of your charms, The close contriver of all harms, Was never call'd to bear my part, Or show the glory of our art? And, which is worse, all you have done Hath been but for a wayward son, Spiteful and wrathful; who, as others do, Loves for his own ends, not for you. But make amends now: get you gone, And at the pit of Acheron Meet me i' th' morning: thither he Will come to know his destiny. Your vessels and your spells provide, Your charms, and everything beside. I am for th' air; this night I'll spend Unto a dismal and a fatal end. Great business must be wrought ere noon. Upon the corner of the moon There hangs a vap'rous drop profound; I'll catch it ere it come to ground: And that, distill'd by magic sleights, Shall raise such artificial sprites, As, by the strength of their illusion, Shall draw him on to his confusion. He shall spurn fate, scorn death, and bear His hopes 'bove wisdom, grace, and fear. And you all know, security Is mortals' chiefest enemy.

[_Music and song within, "Come away, come away" &c._]

Hark! I am call'd; my little spirit, see, Sits in a foggy cloud and stays for me.

[_Exit._]

FIRST WITCH. Come, let's make haste; she'll soon be back again.

[_Exeunt._]

SCENE VI. Forres. A Room in the Palace.

Enter Lennox and another Lord.

LENNOX. My former speeches have but hit your thoughts, Which can interpret farther: only, I say, Thing's have been strangely borne. The gracious Duncan Was pitied of Macbeth:—marry, he was dead:— And the right valiant Banquo walk'd too late; Whom, you may say, if't please you, Fleance kill'd, For Fleance fled. Men must not walk too late. Who cannot want the thought, how monstrous It was for Malcolm and for Donalbain To kill their gracious father? damned fact! How it did grieve Macbeth! did he not straight, In pious rage, the two delinquents tear That were the slaves of drink and thralls of sleep? Was not that nobly done? Ay,

and wisely too; For 'twould have anger'd any heart alive, To hear the men deny't. So that, I say, He has borne all things well: and I do think, That had he Duncan's sons under his key (As, and't please heaven, he shall not) they should find What 'twere to kill a father; so should Fleance. But, peace!—for from broad words, and 'cause he fail'd His presence at the tyrant's feast, I hear, Macduff lives in disgrace. Sir, can you tell Where he bestows himself?

LORD. The son of Duncan, From whom this tyrant holds the due of birth, Lives in the English court and is receiv'd Of the most pious Edward with such grace That the malevolence of fortune nothing Takes from his high respect. Thither Macduff Is gone to pray the holy king, upon his aid To wake Northumberland, and warlike Siward That, by the help of these (with Him above To ratify the work), we may again Give to our tables meat, sleep to our nights; Free from our feasts and banquets bloody knives, Do faithful homage, and receive free honours, All which we pine for now. And this report Hath so exasperate the King that he Prepares for some attempt of war.

LENNOX. Sent he to Macduff?

LORD. He did: and with an absolute "Sir, not I," The cloudy messenger turns me his back, And hums, as who should say, "You'll rue the time That clogs me with this answer."

LENNOX. And that well might Advise him to a caution, t' hold what distance His wisdom can provide. Some holy angel Fly to the court of England, and unfold His message ere he come, that a swift blessing May soon return to this our suffering country Under a hand accurs'd!

LORD. I'll send my prayers with him.

[_Exeunt._]

ACT IV

SCENE I. A dark Cave. In the middle, a Cauldron Boiling.

Thunder. Enter the three Witches.

FIRST WITCH. Thrice the brinded cat hath mew'd.

SECOND WITCH. Thrice, and once the hedge-pig whin'd.

THIRD WITCH. Harpier cries:—'Tis time, 'tis time.

FIRST WITCH. Round about the cauldron go; In the poison'd entrails throw.— Toad, that under cold stone Days and nights has thirty-one Swelter'd venom sleeping got, Boil thou first i' th' charmed pot!

ALL. Double, double, toil and trouble; Fire, burn; and cauldron, bubble.

SECOND WITCH. Fillet of a fenny snake, In the cauldron boil and bake; Eye of newt, and toe of frog, Wool of bat, and tongue of dog, Adder's fork, and blind-worm's sting, Lizard's leg, and howlet's wing, For a charm of powerful trouble, Like a hell-broth boil and bubble.

ALL. Double, double, toil and trouble; Fire, burn; and cauldron, bubble.

THIRD WITCH. Scale of dragon, tooth of wolf, Witch's mummy, maw and gulf Of the ravin'd salt-sea shark, Root of hemlock digg'd i' th' dark, Liver of blaspheming Jew, Gall of goat, and slips of yew Sliver'd in the moon's eclipse, Nose of Turk, and Tartar's lips, Finger of birth-strangled babe Ditch-deliver'd by a drab, Make the gruel thick and slab: Add thereto a tiger's chaudron, For th' ingredients of our cauldron.

ALL. Double, double, toil and trouble; Fire, burn; and cauldron, bubble.

SECOND WITCH. Cool it with a baboon's blood. Then the charm is firm and good.

Enter Hecate.

HECATE. O, well done! I commend your pains, And everyone shall share i’ th’ gains. And now about the cauldron sing, Like elves and fairies in a ring, Enchanting all that you put in.

[_Music and a song: “Black Spirits,” &c._]

[_Exit Hecate._]

SECOND WITCH. By the pricking of my thumbs, Something wicked this way comes. Open, locks, Whoever knocks!

Enter Macbeth.

MACBETH. How now, you secret, black, and midnight hags! What is’t you do?

ALL. A deed without a name.

MACBETH. I conjure you, by that which you profess, (Howe’er you come to know it) answer me: Though you untie the winds, and let them fight Against the churches; though the yesty waves Confound and swallow navigation up; Though bladed corn be lodg’d, and trees blown down; Though castles topple on their warders’ heads; Though palaces and pyramids do slope Their heads to their foundations; though the treasure Of nature’s germens tumble all together, Even till destruction sicken, answer me To what I ask you.

FIRST WITCH. Speak.

SECOND WITCH. Demand.

THIRD WITCH. We’ll answer.

FIRST WITCH. Say, if thou’dst rather hear it from our mouths, Or from our masters?

MACBETH. Call ’em, let me see ’em.

FIRST WITCH. Pour in sow’s blood, that hath eaten Her nine farrow; grease that’s sweaten From the murderer’s gibbet throw Into the flame.

ALL. Come, high or low; Thyself and office deftly show!

[_Thunder. An Apparition of an armed Head rises._]

MACBETH. Tell me, thou unknown power,—

FIRST WITCH. He knows thy thought: Hear his speech, but say thou naught.

APPARITION. Macbeth! Macbeth! Macbeth! Beware Macduff; Beware the Thane of Fife.—Dismiss me.—Enough.

[_Descends._]

MACBETH. Whate’er thou art, for thy good caution, thanks; Thou hast harp’d my fear aright.—But one word more.

FIRST WITCH. He will not be commanded. Here’s another, More potent than the first.

[_Thunder. An Apparition of a bloody Child rises._]

APPARITION. Macbeth! Macbeth! Macbeth!

MACBETH. Had I three ears, I’d hear thee.

APPARITION. Be bloody, bold, and resolute. Laugh to scorn The power of man, for none of woman born Shall harm Macbeth.

[_Descends._]

MACBETH. Then live, Macduff: what need I fear of thee? But yet I’ll make assurance double sure, And take a bond of fate. Thou shalt not live; That I may tell pale-hearted fear it lies, And sleep in spite of thunder.

[_Thunder. An Apparition of a Child crowned, with a tree in his hand, rises._]

What is this, That rises like the issue of a king, And wears upon his baby brow the round And top of sovereignty?

ALL. Listen, but speak not to't.

APPARITION. Be lion-mettled, proud, and take no care Who chafes, who frets, or where conspirers are: Macbeth shall never vanquish'd be, until Great Birnam wood to high Dunsinane hill Shall come against him.

[_Descends._]

MACBETH. That will never be: Who can impress the forest; bid the tree Unfix his earth-bound root? Sweet bodements, good! Rebellious head, rise never till the wood Of Birnam rise, and our high-plac'd Macbeth Shall live the lease of nature, pay his breath To time and mortal custom.—Yet my heart Throbs to know one thing: tell me, if your art Can tell so much, shall Banquo's issue ever Reign in this kingdom?

ALL. Seek to know no more.

MACBETH. I will be satisfied: deny me this, And an eternal curse fall on you! Let me know. Why sinks that cauldron? and what noise is this?

[_Hautboys._]

FIRST WITCH. Show!

SECOND WITCH. Show!

THIRD WITCH. Show!

ALL. Show his eyes, and grieve his heart; Come like shadows, so depart!

[_A show of eight kings appear, and pass over in order, the last with a glass in his hand; Banquo following._]

MACBETH. Thou are too like the spirit of Banquo. Down! Thy crown does sear mine eyeballs:—and thy hair, Thou other gold-bound brow, is like the first. A third is like the former.—Filthy hags! Why do you show me this?—A fourth!—Start, eyes! What, will the line stretch out to th' crack of doom? Another yet!—A seventh!—I'll see no more:— And yet the eighth appears, who bears a glass Which shows me many more; and some I see That twofold balls and treble sceptres carry. Horrible sight!—Now I see 'tis true; For the blood-bolter'd Banquo smiles upon me, And points at them for his.—What! is this so?

FIRST WITCH. Ay, sir, all this is so:—but why Stands Macbeth thus amazedly?— Come, sisters, cheer we up his sprites, And show the best of our delights. I'll charm the air to give a sound, While you perform your antic round; That this great king may kindly say, Our duties did his welcome pay.

[_Music. The Witches dance, and vanish._]

MACBETH. Where are they? Gone?—Let this pernicious hour Stand aye accursed in the calendar!— Come in, without there!

Enter Lennox.

LENNOX. What's your Grace's will?

MACBETH. Saw you the Weird Sisters?

LENNOX. No, my lord.

MACBETH. Came they not by you?

LENNOX. No, indeed, my lord.

MACBETH. Infected be the air whereon they ride; And damn'd all those that trust them!—I did hear The galloping of horse: who was't came by?

LENNOX. 'Tis two or three, my lord, that bring you word Macduff is fled to England.

MACBETH. Fled to England!

LENNOX. Ay, my good lord.

MACBETH. Time, thou anticipat'st my dread exploits: The flighty purpose never is o'ertook Unless the deed go with it. From this moment The very firstlings of my heart shall be The firstlings of my hand. And even now, To crown my thoughts with acts, be it thought and done: The castle of Macduff I will surprise; Seize upon Fife; give to th' edge o' th' sword His wife, his babes, and all unfortunate souls That trace him in his line. No boasting like a fool; This deed I'll do before this purpose cool: But no more sights!—Where are these gentlemen? Come, bring me where they are.

[_Exeunt._]

SCENE II. Fife. A Room in Macduff's Castle.

Enter Lady Macduff her Son and Ross.

LADY MACDUFF. What had he done, to make him fly the land?

ROSS. You must have patience, madam.

LADY MACDUFF. He had none: His flight was madness: when our actions do not, Our fears do make us traitors.

ROSS. You know not Whether it was his wisdom or his fear.

LADY MACDUFF. Wisdom! to leave his wife, to leave his babes, His mansion, and his titles, in a place From whence himself does fly? He loves us not: He wants the natural touch; for the poor wren, The most diminutive of birds, will fight, Her young ones in her nest, against the owl. All is the fear, and nothing is the love; As little is the wisdom, where the flight So runs against all reason.

ROSS. My dearest coz, I pray you, school yourself: but, for your husband, He is noble, wise, judicious, and best knows The fits o' th' season. I dare not speak much further: But cruel are the times, when we are traitors, And do not know ourselves; when we hold rumour From what we fear, yet know not what we fear, But float upon a wild and violent sea Each way and move—I take my leave of you: Shall not be long but I'll be here again. Things at the worst will cease, or else climb upward To what they were before.—My pretty cousin, Blessing upon you!

LADY MACDUFF. Father'd he is, and yet he's fatherless.

ROSS. I am so much a fool, should I stay longer, It would be my disgrace and your discomfort: I take my leave at once.

[_Exit._]

LADY MACDUFF. Sirrah, your father's dead. And what will you do now? How will you live?

SON. As birds do, mother.

LADY MACDUFF. What, with worms and flies?

SON. With what I get, I mean; and so do they.

LADY MACDUFF. Poor bird! thou'dst never fear the net nor lime, The pit-fall nor the gin.

SON. Why should I, mother? Poor birds they are not set for. My father is not dead, for all your saying.

LADY MACDUFF. Yes, he is dead: how wilt thou do for a father?

SON. Nay, how will you do for a husband?

LADY MACDUFF. Why, I can buy me twenty at any market.

SON. Then you'll buy 'em to sell again.

LADY MACDUFF. Thou speak'st with all thy wit; And yet, i' faith, with wit enough for thee.

SON. Was my father a traitor, mother?

LADY MACDUFF. Ay, that he was.

SON. What is a traitor?

LADY MACDUFF. Why, one that swears and lies.

SON. And be all traitors that do so?

LADY MACDUFF. Every one that does so is a traitor, and must be hanged.

SON. And must they all be hanged that swear and lie?

LADY MACDUFF. Every one.

SON. Who must hang them?

LADY MACDUFF. Why, the honest men.

SON. Then the liars and swearers are fools: for there are liars and swearers enow to beat the honest men and hang up them.

LADY MACDUFF. Now, God help thee, poor monkey! But how wilt thou do for a father?

SON. If he were dead, you'ld weep for him: if you would not, it were a good sign that I should quickly have a new father.

LADY MACDUFF. Poor prattler, how thou talk'st!

Enter a Messenger.

MESSENGER. Bless you, fair dame! I am not to you known, Though in your state of honour I am perfect. I doubt some danger does approach you nearly: If you will take a homely man's advice, Be not found here; hence, with your little ones. To fright you thus, methinks, I am too savage; To do worse to you were fell cruelty, Which is too nigh your person. Heaven preserve you! I dare abide no longer.

[_Exit._]

LADY MACDUFF. Whither should I fly? I have done no harm. But I remember now I am in this earthly world, where to do harm Is often laudable; to do good sometime Accounted dangerous folly: why then, alas, Do I put up that womanly defence, To say I have done no harm? What are these faces?

Enter Murderers.

FIRST MURDERER. Where is your husband?

LADY MACDUFF. I hope, in no place so unsanctified Where such as thou mayst find him.

FIRST MURDERER. He's a traitor.

SON. Thou liest, thou shag-ear'd villain!

FIRST MURDERER. What, you egg!

[_Stabbing him._]

Young fry of treachery!

SON. He has kill'd me, mother: Run away, I pray you!

[_Dies. Exit Lady Macduff, crying "Murder!" and pursued by the Murderers._]

SCENE III. England. Before the King's Palace.

Enter Malcolm and Macduff.

MALCOLM. Let us seek out some desolate shade and there Weep our sad bosoms empty.

MACDUFF. Let us rather Hold fast the mortal sword, and, like good men, Bestride our down-fall'n birthdom. Each new morn New widows howl, new orphans cry; new sorrows Strike heaven on the face, that it resounds As if it felt with Scotland, and yell'd out Like syllable of dolour.

MALCOLM. What I believe, I'll wail; What know, believe; and what I can redress, As I shall find the time to friend, I will. What you have spoke, it may be so, perchance. This tyrant, whose sole name blisters our tongues, Was once thought honest: you have loved him well; He hath not touch'd you yet. I am young; but something You may deserve of him through me; and wisdom To offer up a weak, poor, innocent lamb To appease an angry god.

MACDUFF. I am not treacherous.

MALCOLM. But Macbeth is. A good and virtuous nature may recoil In an imperial charge. But I shall crave your pardon. That which you are, my thoughts cannot transpose. Angels are bright still, though the brightest fell: Though all things foul would wear the brows of grace, Yet grace must still look so.

MACDUFF. I have lost my hopes.

MALCOLM. Perchance even there where I did find my doubts. Why in that rawness left you wife and child, Those precious motives, those strong knots of love, Without leave-taking?—I pray you, Let not my jealousies be your dishonours, But mine own safeties. You may be rightly just, Whatever I shall think.

MACDUFF. Bleed, bleed, poor country! Great tyranny, lay thou thy basis sure, For goodness dare not check thee! wear thou thy wrongs; The title is affeer'd.—Fare thee well, lord: I would not be the villain that thou think'st For the whole space that's in the tyrant's grasp And the rich East to boot.

MALCOLM. Be not offended: I speak not as in absolute fear of you. I think our country sinks beneath the yoke; It weeps, it bleeds; and each new day a gash Is added to her wounds. I think, withal, There would be hands uplifted in my right; And here, from gracious England, have I offer Of goodly thousands: but, for all this, When I shall tread upon the tyrant's head, Or wear it on my sword, yet my poor country Shall have more vices than it had before, More suffer, and more sundry ways than ever, By him that shall succeed.

MACDUFF. What should he be?

MALCOLM. It is myself I mean; in whom I know All the particulars of vice so grafted That, when they shall be open'd, black Macbeth Will seem as pure as snow; and the poor state Esteem him as a lamb, being compar'd With my confineless harms.

MACDUFF. Not in the legions Of horrid hell can come a devil more damn'd In evils to top Macbeth.

MALCOLM. I grant him bloody, Luxurious, avaricious, false, deceitful, Sudden, malicious, smacking of every sin That has a name: but there's no bottom, none, In my voluptuousness: your wives, your daughters, Your matrons, and your maids, could not fill up The cistern of my lust; and my desire All continent impediments would o'erbear, That did oppose my will: better Macbeth Than such an one to reign.

MACDUFF. Boundless intemperance In nature is a tyranny; it hath been Th' untimely emptying of the happy throne, And fall of many kings. But fear not yet To take upon you what is yours: you may Convey your pleasures in a spacious plenty, And yet seem cold—the time you may so hoodwink. We have willing dames enough; there cannot be That vulture in you, to devour so many As will to greatness dedicate themselves, Finding it so inclin'd.

MALCOLM. With this there grows In my most ill-compos'd affection such A staunchless avarice, that, were I king, I should cut off the nobles for their lands; Desire his jewels, and this other's house: And my more-having would be as a sauce To make me hunger more; that I should forge Quarrels unjust against the good and loyal, Destroying them for wealth.

MACDUFF. This avarice Sticks deeper; grows with more pernicious root Than summer-seeming lust; and it hath been The sword of our slain kings: yet do not fear; Scotland hath foisons to fill up your will, Of your mere own. All these are portable, With other graces weigh'd.

MALCOLM. But I have none: the king-becoming graces, As justice, verity, temp'rance, stableness, Bounty, perseverance, mercy, lowliness, Devotion, patience, courage, fortitude, I have no relish of them; but abound In the division of each several crime, Acting it

many ways. Nay, had I power, I should Pour the sweet milk of concord into hell, Uproar the universal peace, confound All unity on earth.

MACDUFF. O Scotland, Scotland!

MALCOLM. If such a one be fit to govern, speak: I am as I have spoken.

MACDUFF. Fit to govern? No, not to live.—O nation miserable, With an untitled tyrant bloody-scepter'd, When shalt thou see thy wholesome days again, Since that the truest issue of thy throne By his own interdiction stands accus'd, And does blaspheme his breed? Thy royal father Was a most sainted king. The queen that bore thee, Oft'ner upon her knees than on her feet, Died every day she lived. Fare thee well! These evils thou repeat'st upon thyself Have banish'd me from Scotland.—O my breast, Thy hope ends here!

MALCOLM. Macduff, this noble passion, Child of integrity, hath from my soul Wiped the black scruples, reconcil'd my thoughts To thy good truth and honour. Devilish Macbeth By many of these trains hath sought to win me Into his power, and modest wisdom plucks me From over-credulous haste: but God above Deal between thee and me! for even now I put myself to thy direction, and Unspeak mine own detraction; here abjure The taints and blames I laid upon myself, For strangers to my nature. I am yet Unknown to woman; never was forsworn; Scarcely have coveted what was mine own; At no time broke my faith; would not betray The devil to his fellow; and delight No less in truth than life: my first false speaking Was this upon myself. What I am truly, Is thine and my poor country's to command: Whither, indeed, before thy here-approach, Old Siward, with ten thousand warlike men, Already at a point, was setting forth. Now we'll together, and the chance of goodness Be like our warranted quarrel. Why are you silent?

MACDUFF. Such welcome and unwelcome things at once 'Tis hard to reconcile.

Enter a Doctor.

MALCOLM. Well; more anon.—Comes the King forth, I pray you?

DOCTOR. Ay, sir. There are a crew of wretched souls That stay his cure: their malady convinces The great assay of art; but at his touch, Such sanctity hath heaven given his hand, They presently amend.

MALCOLM. I thank you, doctor.

[_Exit Doctor._]

MACDUFF. What's the disease he means?

MALCOLM. 'Tis call'd the evil: A most miraculous work in this good king; Which often, since my here-remain in England, I have seen him do. How he solicits heaven, Himself best knows, but strangely-visited people, All swoln and ulcerous, pitiful to the eye, The mere despair of surgery, he cures; Hanging a golden stamp about their necks, Put on with holy prayers: and 'tis spoken, To the succeeding royalty he leaves The healing benediction. With this strange virtue, He hath a heavenly gift of prophecy; And sundry blessings hang about his throne, That speak him full of grace.

Enter Ross.

MACDUFF. See, who comes here?

MALCOLM. My countryman; but yet I know him not.

MACDUFF. My ever-gentle cousin, welcome hither.

MALCOLM. I know him now. Good God, betimes remove The means that makes us strangers!

ROSS. Sir, amen.

MACDUFF. Stands Scotland where it did?

ROSS. Alas, poor country, Almost afraid to know itself! It cannot Be call'd our mother, but our grave, where nothing, But who knows nothing, is once seen to smile; Where sighs, and groans, and shrieks, that rent the air, Are made, not mark'd; where violent sorrow seems A modern ecstasy. The dead man's knell Is there scarce ask'd for who; and good men's lives Expire before the flowers in

their caps, Dying or ere they sicken.

MACDUFF. O, relation Too nice, and yet too true!

MALCOLM. What's the newest grief?

ROSS. That of an hour's age doth hiss the speaker; Each minute teems a new one.

MACDUFF. How does my wife?

ROSS. Why, well.

MACDUFF. And all my children?

ROSS. Well too.

MACDUFF. The tyrant has not batter'd at their peace?

ROSS. No; they were well at peace when I did leave 'em.

MACDUFF. Be not a niggard of your speech: how goes't?

ROSS. When I came hither to transport the tidings, Which I have heavily borne, there ran a rumour Of many worthy fellows that were out; Which was to my belief witness'd the rather, For that I saw the tyrant's power afoot. Now is the time of help. Your eye in Scotland Would create soldiers, make our women fight, To doff their dire distresses.

MALCOLM. Be't their comfort We are coming thither. Gracious England hath Lent us good Siward and ten thousand men; An older and a better soldier none That Christendom gives out.

ROSS. Would I could answer This comfort with the like! But I have words That would be howl'd out in the desert air, Where hearing should not latch them.

MACDUFF. What concern they? The general cause? or is it a fee-grief Due to some single breast?

ROSS. No mind that's honest But in it shares some woe, though the main part Pertains to you alone.

MACDUFF. If it be mine, Keep it not from me, quickly let me have it.

ROSS. Let not your ears despise my tongue for ever, Which shall possess them with the heaviest sound That ever yet they heard.

MACDUFF. Humh! I guess at it.

ROSS. Your castle is surpris'd; your wife and babes Savagely slaughter'd. To relate the manner Were, on the quarry of these murder'd deer, To add the death of you.

MALCOLM. Merciful heaven!— What, man! ne'er pull your hat upon your brows. Give sorrow words. The grief that does not speak Whispers the o'er-fraught heart, and bids it break.

MACDUFF. My children too?

ROSS. Wife, children, servants, all That could be found.

MACDUFF. And I must be from thence! My wife kill'd too?

ROSS. I have said.

MALCOLM. Be comforted: Let's make us med'cines of our great revenge, To cure this deadly grief.

MACDUFF. He has no children.—All my pretty ones? Did you say all?—O hell-kite!—All? What, all my pretty chickens and their dam At one fell swoop?

MALCOLM. Dispute it like a man.

MACDUFF. I shall do so; But I must also feel it as a man: I cannot but remember such things were, That were most precious to me.—Did heaven look on, And would not take their part? Sinful Macduff, They were all struck for thee! Naught that I am, Not for their own demerits, but for mine, Fell slaughter on their souls: heaven rest them now!

MALCOLM. Be this the whetstone of your sword. Let grief Convert to anger; blunt not the heart, enrage it.

MACDUFF. O, I could play the woman with mine eyes, And braggart with my tongue!—But, gentle heavens, Cut short all intermission; front to front, Bring thou this fiend of Scotland and myself; Within my sword's length set him; if he 'scape, Heaven forgive him too!

MALCOLM. This tune goes manly. Come, go we to the King. Our power is ready; Our lack is nothing but our leave. Macbeth Is ripe for shaking, and the powers above Put on their instruments. Receive what cheer you may; The night is long that never finds the day.

[_Exeunt._]

ACT V

SCENE I. Dunsinane. A Room in the Castle.

Enter a Doctor of Physic and a Waiting-Gentlewoman.

DOCTOR. I have two nights watched with you, but can perceive no truth in your report. When was it she last walked?

GENTLEWOMAN. Since his Majesty went into the field, I have seen her rise from her bed, throw her nightgown upon her, unlock her closet, take forth paper, fold it, write upon't, read it, afterwards seal it, and again return to bed; yet all this while in a most fast sleep.

DOCTOR. A great perturbation in nature, to receive at once the benefit of sleep, and do the effects of watching. In this slumbery agitation, besides her walking and other actual performances, what, at any time, have you heard her say?

GENTLEWOMAN. That, sir, which I will not report after her.

DOCTOR. You may to me; and 'tis most meet you should.

GENTLEWOMAN. Neither to you nor anyone; having no witness to confirm my speech.

Enter Lady Macbeth with a taper.

Lo you, here she comes! This is her very guise; and, upon my life, fast asleep. Observe her; stand close.

DOCTOR. How came she by that light?

GENTLEWOMAN. Why, it stood by her: she has light by her continually; 'tis her command.

DOCTOR. You see, her eyes are open.

GENTLEWOMAN. Ay, but their sense are shut.

DOCTOR. What is it she does now? Look how she rubs her hands.

GENTLEWOMAN. It is an accustomed action with her, to seem thus washing her hands. I have known her continue in this a quarter of an hour.

LADY MACBETH. Yet here's a spot.

DOCTOR. Hark, she speaks. I will set down what comes from her, to satisfy my remembrance the more strongly.

LADY MACBETH. Out, damned spot! out, I say! One; two. Why, then 'tis time to do't. Hell is murky! Fie, my lord, fie! a soldier, and afeard? What need we fear who knows it, when none can call our power to account? Yet who would have thought the old man to have had so much blood in him?

DOCTOR. Do you mark that?

LADY MACBETH. The Thane of Fife had a wife. Where is she now?—What, will these hands ne’er be clean? No more o’ that, my lord, no more o’ that: you mar all with this starting.

DOCTOR. Go to, go to. You have known what you should not.

GENTLEWOMAN. She has spoke what she should not, I am sure of that: heaven knows what she has known.

LADY MACBETH. Here’s the smell of the blood still: all the perfumes of Arabia will not sweeten this little hand. Oh, oh, oh!

DOCTOR. What a sigh is there! The heart is sorely charged.

GENTLEWOMAN. I would not have such a heart in my bosom for the dignity of the whole body.

DOCTOR. Well, well, well.

GENTLEWOMAN. Pray God it be, sir.

DOCTOR. This disease is beyond my practice: yet I have known those which have walked in their sleep, who have died holily in their beds.

LADY MACBETH. Wash your hands, put on your nightgown; look not so pale. I tell you yet again, Banquo’s buried; he cannot come out on’s grave.

DOCTOR. Even so?

LADY MACBETH. To bed, to bed. There’s knocking at the gate. Come, come, come, come, give me your hand. What’s done cannot be undone. To bed, to bed, to bed.

[_Exit._]

DOCTOR. Will she go now to bed?

GENTLEWOMAN. Directly.

DOCTOR. Foul whisp’rings are abroad. Unnatural deeds Do breed unnatural troubles: infected minds To their deaf pillows will discharge their secrets. More needs she the divine than the physician.— God, God, forgive us all! Look after her; Remove from her the means of all annoyance, And still keep eyes upon her. So, good night: My mind she has mated, and amaz’d my sight. I think, but dare not speak.

GENTLEWOMAN. Good night, good doctor.

[_Exeunt._]

SCENE II. The Country near Dunsinane.

Enter, with drum and colours Menteith, Caithness, Angus, Lennox and Soldiers.

MENTEITH. The English power is near, led on by Malcolm, His uncle Siward, and the good Macduff. Revenges burn in them; for their dear causes Would to the bleeding and the grim alarm Excite the mortified man.

ANGUS. Near Birnam wood Shall we well meet them. That way are they coming.

CAITHNESS. Who knows if Donalbain be with his brother?

LENNOX. For certain, sir, he is not. I have a file Of all the gentry: there is Siward’s son And many unrough youths, that even now Protest their first of manhood.

MENTEITH. What does the tyrant?

CAITHNESS. Great Dunsinane he strongly fortifies. Some say he’s mad; others, that lesser hate him, Do call it valiant fury: but, for certain, He cannot buckle his distemper’d cause Within the belt of rule.

ANGUS. Now does he feel His secret murders sticking on his hands; Now minutely revolts upbraid his faith-breach; Those he commands move only in command, Nothing in love: now does he feel his title Hang loose about him, like a giant's robe Upon a dwarfish thief.

MENTEITH. Who, then, shall blame His pester'd senses to recoil and start, When all that is within him does condemn Itself for being there?

CAITHNESS. Well, march we on, To give obedience where 'tis truly ow'd: Meet we the med'cine of the sickly weal; And with him pour we, in our country's purge, Each drop of us.

LENNOX. Or so much as it needs To dew the sovereign flower, and drown the weeds. Make we our march towards Birnam.

[_Exeunt, marching._]

SCENE III. Dunsinane. A Room in the Castle.

Enter Macbeth, Doctor and Attendants.

MACBETH. Bring me no more reports; let them fly all: Till Birnam wood remove to Dunsinane I cannot taint with fear. What's the boy Malcolm? Was he not born of woman? The spirits that know All mortal consequences have pronounc'd me thus: "Fear not, Macbeth; no man that's born of woman Shall e'er have power upon thee."—Then fly, false thanes, And mingle with the English epicures: The mind I sway by, and the heart I bear, Shall never sag with doubt nor shake with fear.

Enter a Servant.

The devil damn thee black, thou cream-fac'd loon! Where gott'st thou that goose look?

SERVANT. There is ten thousand—

MACBETH. Geese, villain?

SERVANT. Soldiers, sir.

MACBETH. Go prick thy face and over-red thy fear, Thou lily-liver'd boy. What soldiers, patch? Death of thy soul! those linen cheeks of thine Are counsellors to fear. What soldiers, whey-face?

SERVANT. The English force, so please you.

MACBETH. Take thy face hence.

[_Exit Servant._]

Seyton!—I am sick at heart, When I behold—Seyton, I say!—This push Will cheer me ever or disseat me now. I have liv'd long enough: my way of life Is fall'n into the sere, the yellow leaf; And that which should accompany old age, As honour, love, obedience, troops of friends, I must not look to have; but, in their stead, Curses, not loud but deep, mouth-honour, breath, Which the poor heart would fain deny, and dare not. Seyton!—

Enter Seyton.

SEYTON. What's your gracious pleasure?

MACBETH. What news more?

SEYTON. All is confirm'd, my lord, which was reported.

MACBETH. I'll fight till from my bones my flesh be hack'd. Give me my armour.

SEYTON. 'Tis not needed yet.

MACBETH. I'll put it on. Send out more horses, skirr the country round; Hang those that talk of fear. Give me mine armour.— How does your patient, doctor?

DOCTOR. Not so sick, my lord, As she is troubled with thick-coming fancies, That keep her from her rest.

MACBETH. Cure her of that: Canst thou not minister to a mind diseas'd, Pluck from the memory a rooted sorrow, Raze out the written troubles of the brain, And with some sweet oblivious antidote Cleanse the stuff'd bosom of that perilous stuff Which weighs upon the heart?

DOCTOR. Therein the patient Must minister to himself.

MACBETH. Throw physic to the dogs, I'll none of it. Come, put mine armour on; give me my staff: Seyton, send out.—Doctor, the Thanes fly from me.— Come, sir, despatch.—If thou couldst, doctor, cast The water of my land, find her disease, And purge it to a sound and pristine health, I would applaud thee to the very echo, That should applaud again.—Pull't off, I say.— What rhubarb, senna, or what purgative drug, Would scour these English hence? Hear'st thou of them?

DOCTOR. Ay, my good lord. Your royal preparation Makes us hear something.

MACBETH. Bring it after me.— I will not be afraid of death and bane, Till Birnam forest come to Dunsinane.

[_Exeunt all except Doctor._]

DOCTOR. Were I from Dunsinane away and clear, Profit again should hardly draw me here.

[_Exit._]

SCENE IV. Country near Dunsinane: a Wood in view.

Enter, with drum and colours Malcolm, old Siward and his Son, Macduff, Menteith, Caithness, Angus, Lennox, Ross and Soldiers, marching.

MALCOLM. Cousins, I hope the days are near at hand That chambers will be safe.

MENTEITH. We doubt it nothing.

SIWARD. What wood is this before us?

MENTEITH. The wood of Birnam.

MALCOLM. Let every soldier hew him down a bough, And bear't before him. Thereby shall we shadow The numbers of our host, and make discovery Err in report of us.

SOLDIERS. It shall be done.

SIWARD. We learn no other but the confident tyrant Keeps still in Dunsinane, and will endure Our setting down before't.

MALCOLM. 'Tis his main hope; For where there is advantage to be given, Both more and less have given him the revolt, And none serve with him but constrained things, Whose hearts are absent too.

MACDUFF. Let our just censures Attend the true event, and put we on Industrious soldiership.

SIWARD. The time approaches, That will with due decision make us know What we shall say we have, and what we owe. Thoughts speculative their unsure hopes relate, But certain issue strokes must arbitrate; Towards which advance the war.

[_Exeunt, marching._]

SCENE V. Dunsinane. Within the castle.

Enter with drum and colours, Macbeth, Seyton and Soldiers.

MACBETH. Hang out our banners on the outward walls; The cry is still, "They come!" Our castle's strength Will laugh a siege to scorn: here let them lie Till famine and the ague eat them up. Were they not forc'd with those that should be ours, We might have met them dareful, beard to beard, And beat them backward home.

[_A cry of women within._]

What is that noise?

SEYTON. It is the cry of women, my good lord.

[_Exit._]

MACBETH. I have almost forgot the taste of fears. The time has been, my senses would have cool'd To hear a night-shriek; and my fell of hair Would at a dismal treatise rouse and stir As life were in't. I have supp'd full with horrors; Direness, familiar to my slaughterous thoughts, Cannot once start me.

Enter Seyton.

Wherefore was that cry?

SEYTON. The Queen, my lord, is dead.

MACBETH. She should have died hereafter. There would have been a time for such a word. Tomorrow, and tomorrow, and tomorrow, Creeps in this petty pace from day to day, To the last syllable of recorded time; And all our yesterdays have lighted fools The way to dusty death. Out, out, brief candle! Life's but a walking shadow; a poor player, That struts and frets his hour upon the stage, And then is heard no more: it is a tale Told by an idiot, full of sound and fury, Signifying nothing.

Enter a Messenger.

Thou com'st to use thy tongue; thy story quickly.

MESSENGER. Gracious my lord, I should report that which I say I saw, But know not how to do't.

MACBETH. Well, say, sir.

MESSENGER. As I did stand my watch upon the hill, I look'd toward Birnam, and anon, methought, The wood began to move.

MACBETH. Liar, and slave!

MESSENGER. Let me endure your wrath, if't be not so. Within this three mile may you see it coming; I say, a moving grove.

MACBETH. If thou speak'st false, Upon the next tree shalt thou hang alive, Till famine cling thee: if thy speech be sooth, I care not if thou dost for me as much.— I pull in resolution; and begin To doubt th' equivocation of the fiend, That lies like truth. "Fear not, till Birnam wood Do come to Dunsinane;" and now a wood Comes toward Dunsinane.—Arm, arm, and out!— If this which he avouches does appear, There is nor flying hence nor tarrying here. I 'gin to be aweary of the sun, And wish th' estate o' th' world were now undone.— Ring the alarum bell!—Blow, wind! come, wrack! At least we'll die with harness on our back.

[_Exeunt._]

SCENE VI. The same. A Plain before the Castle.

Enter, with drum and colours, Malcolm, old Siward, Macduff and their Army, with boughs.

MALCOLM. Now near enough. Your leafy screens throw down, And show like those you are.—You, worthy uncle, Shall with my cousin, your right noble son, Lead our first battle: worthy Macduff and we Shall take upon's what else remains to do, According to our order.

SIWARD. Fare you well.— Do we but find the tyrant's power tonight, Let us be beaten, if we cannot fight.

MACDUFF. Make all our trumpets speak; give them all breath, Those clamorous harbingers of blood and death.

[_Exeunt._]

SCENE VII. The same. Another part of the Plain.

Alarums. Enter Macbeth.

MACBETH. They have tied me to a stake. I cannot fly, But, bear-like I must fight the course.—What's he That was not born of woman? Such a one Am I to fear, or none.

Enter young Siward.

YOUNG SIWARD. What is thy name?

MACBETH. Thou'lt be afraid to hear it.

YOUNG SIWARD. No; though thou call'st thyself a hotter name Than any is in hell.

MACBETH. My name's Macbeth.

YOUNG SIWARD. The devil himself could not pronounce a title More hateful to mine ear.

MACBETH. No, nor more fearful.

YOUNG SIWARD. Thou liest, abhorred tyrant. With my sword I'll prove the lie thou speak'st.

[_They fight, and young Siward is slain._]

MACBETH. Thou wast born of woman. But swords I smile at, weapons laugh to scorn, Brandish'd by man that's of a woman born.

[_Exit._]

Alarums. Enter Macduff.

MACDUFF. That way the noise is.—Tyrant, show thy face! If thou be'st slain and with no stroke of mine, My wife and children's ghosts will haunt me still. I cannot strike at wretched kerns, whose arms Are hired to bear their staves. Either thou, Macbeth, Or else my sword, with an unbatter'd edge, I sheathe again undeeded. There thou shouldst be; By this great clatter, one of greatest note Seems bruited. Let me find him, Fortune! And more I beg not.

[_Exit. Alarums._]

Enter Malcolm and old Siward.

SIWARD. This way, my lord;—the castle's gently render'd: The tyrant's people on both sides do fight; The noble thanes do bravely in the war, The day almost itself professes yours, And little is to do.

MALCOLM. We have met with foes That strike beside us.

SIWARD. Enter, sir, the castle.

[_Exeunt. Alarums._]

SCENE VIII. The same. Another part of the field.

Enter Macbeth.

MACBETH. Why should I play the Roman fool, and die On mine own sword? whiles I see lives, the gashes Do better upon them.

Enter Macduff.

MACDUFF. Turn, hell-hound, turn!

MACBETH. Of all men else I have avoided thee: But get thee back; my soul is too much charg'd With blood of thine already.

MACDUFF. I have no words; My voice is in my sword: thou bloodier villain Than terms can give thee out!

[_They fight._]

MACBETH. Thou losest labour: As easy mayst thou the intrenchant air With thy keen sword impress, as make me bleed: Let fall thy blade on vulnerable crests; I bear a charmed life, which must not yield To one of woman born.

MACDUFF. Despair thy charm; And let the angel whom thou still hast serv'd Tell thee, Macduff was from his mother's womb Untimely ripp'd.

MACBETH. Accursed be that tongue that tells me so, For it hath cow'd my better part of man! And be these juggling fiends no more believ'd, That palter with us in a double sense; That keep the word of promise to our ear, And break it to our hope!—I'll not fight with

thee.

MACDUFF. Then yield thee, coward, And live to be the show and gaze o' th' time. We'll have thee, as our rarer monsters are, Painted upon a pole, and underwrit, "Here may you see the tyrant."

MACBETH. I will not yield, To kiss the ground before young Malcolm's feet, And to be baited with the rabble's curse. Though Birnam wood be come to Dunsinane, And thou oppos'd, being of no woman born, Yet I will try the last. Before my body I throw my warlike shield: lay on, Macduff; And damn'd be him that first cries, "Hold, enough!"

[_Exeunt fighting. Alarums._]

Retreat. Flourish. Enter, with drum and colours, Malcolm, old Siward, Ross, Thanes and Soldiers.

MALCOLM. I would the friends we miss were safe arriv'd.

SIWARD. Some must go off; and yet, by these I see, So great a day as this is cheaply bought.

MALCOLM. Macduff is missing, and your noble son.

ROSS. Your son, my lord, has paid a soldier's debt: He only liv'd but till he was a man; The which no sooner had his prowess confirm'd In the unshrinking station where he fought, But like a man he died.

SIWARD. Then he is dead?

ROSS. Ay, and brought off the field. Your cause of sorrow Must not be measur'd by his worth, for then It hath no end.

SIWARD. Had he his hurts before?

ROSS. Ay, on the front.

SIWARD. Why then, God's soldier be he! Had I as many sons as I have hairs, I would not wish them to a fairer death: And so his knell is knoll'd.

MALCOLM. He's worth more sorrow, And that I'll spend for him.

SIWARD. He's worth no more. They say he parted well and paid his score: And so, God be with him!—Here comes newer comfort.

Enter Macduff with Macbeth's head.

MACDUFF. Hail, King, for so thou art. Behold, where stands Th' usurper's cursed head: the time is free. I see thee compass'd with thy kingdom's pearl, That speak my salutation in their minds; Whose voices I desire aloud with mine,— Hail, King of Scotland!

ALL. Hail, King of Scotland!

[_Flourish._]

MALCOLM. We shall not spend a large expense of time Before we reckon with your several loves, And make us even with you. My thanes and kinsmen, Henceforth be earls, the first that ever Scotland In such an honour nam'd. What's more to do, Which would be planted newly with the time,— As calling home our exil'd friends abroad, That fled the snares of watchful tyranny; Producing forth the cruel ministers Of this dead butcher, and his fiend-like queen, Who, as 'tis thought, by self and violent hands Took off her life;—this, and what needful else That calls upon us, by the grace of Grace, We will perform in measure, time, and place. So thanks to all at once, and to each one, Whom we invite to see us crown'd at Scone.

[_Flourish. Exeunt._]

Apology

by Plato

Translated by Benjamin Jowett

Contents

INTRODUCTION APOLOGY

INTRODUCTION.

In what relation the “Apology” of Plato stands to the real defence of Socrates, there are no means of determining. It certainly agrees in tone and character with the description of Xenophon, who says in the “Memorabilia” that Socrates might have been acquitted “if in any moderate degree he would have conciliated the favour of the dicasts;” and who informs us in another passage, on the testimony of Hermogenes, the friend of Socrates, that he had no wish to live; and that the divine sign refused to allow him to prepare a defence, and also that Socrates himself declared this to be unnecessary, on the ground that all his life long he had been preparing against that hour. For the speech breathes throughout a spirit of defiance, “_ut non supplex aut reus sed magister aut dominus videretur esse judicum_” (Cic. “de Orat.” i. 54); and the loose and desultory style is an imitation of the “accustomed manner” in which Socrates spoke in “the _agora_ and among the tables of the money-changers.” The allusion in the “Crito” (45 B) may, perhaps, be adduced as a further evidence of the literal accuracy of some parts (37 C, D). But in the main it must be regarded as the ideal of Socrates, according to Plato’s conception of him, appearing in the greatest and most public scene of his life, and in the height of his triumph, when he is weakest, and yet his mastery over mankind is greatest, and his habitual irony acquires a new meaning and a sort of tragic pathos in the face of death. The facts of his life are summed up, and the features of his character are brought out as if by accident in the course of the defence. The conversational manner, the seeming want of arrangement, the ironical simplicity, are found to result in a perfect work of art, which is the portrait of Socrates.

Yet some of the topics may have been actually used by Socrates; and the recollection of his very words may have rung in the ears of his disciple. The “Apology” of Plato may be compared generally with those speeches of Thucydides in which he has embodied his conception of the lofty character and policy of the great Pericles, and which at the same time furnish a commentary on the situation of affairs from the point of view of the historian. So in the “Apology” there is an ideal rather than a literal truth; much is said which was not said, and is only Plato’s view of the situation. Plato was not, like Xenophon, a chronicler of facts; he does not appear in any of his writings to have aimed at literal accuracy. He is not therefore to be supplemented from the Memorabilia and Symposium of Xenophon, who belongs to an entirely different class of writers. The Apology of Plato is not the report of what Socrates said, but an elaborate composition, quite as much so in fact as one of the Dialogues. And we may perhaps even indulge in the fancy that the actual defence of Socrates was as much greater than the Platonic defence as the master was greater than the disciple. But in any case, some of the words used by him must have been remembered, and some of the facts recorded must have actually occurred. It is significant that Plato is said to have been present at the defence (Apol.), as he is also said to have been absent at the last scene in the “Phædo”. Is it fanciful to suppose that he meant to give the stamp of authenticity to the one and not to the other?—especially when we consider that these two passages are the only ones in which Plato makes mention of himself. The circumstance that Plato was to be one of his sureties for the payment of the fine which he proposed has the appearance of truth. More suspicious is the statement that Socrates received the first impulse to his favourite calling of cross-examining the world from the Oracle of Delphi; for he must already have been famous before Chaerephon went to consult the Oracle (Riddell), and the story is of a kind which is very likely to have been invented. On the whole we arrive at the conclusion that the “Apology” is true to the character of Socrates, but we cannot show that any single sentence in it was actually spoken by him. It breathes the spirit of

Socrates, but has been cast anew in the mould of Plato.

There is not much in the other Dialogues which can be compared with the “Apology”. The same recollection of his master may have been present to the mind of Plato when depicting the sufferings of the Just in the “Republic”. The “Crito” may also be regarded as a sort of appendage to the “Apology”, in which Socrates, who has defied the judges, is nevertheless represented as scrupulously obedient to the laws. The idealization of the sufferer is carried still further in the “Georgias”, in which the thesis is maintained, that “to suffer is better than to do evil;” and the art of rhetoric is described as only useful for the purpose of self-accusation. The parallelisms which occur in the so-called “Apology” of Xenophon are not worth noticing, because the writing in which they are contained is manifestly spurious. The statements of the “Memorabilia” respecting the trial and death of Socrates agree generally with Plato; but they have lost the flavour of Socratic irony in the narrative of Xenophon.

The “Apology” or Platonic defence of Socrates is divided into three parts: 1st. The defence properly so called; 2nd. The shorter address in mitigation of the penalty; 3rd. The last words of prophetic rebuke and exhortation.

The first part commences with an apology for his colloquial style; he is, as he has always been, the enemy of rhetoric, and knows of no rhetoric but truth; he will not falsify his character by making a speech. Then he proceeds to divide his accusers into two classes; first, there is the nameless accuser—public opinion. All the world from their earliest years had heard that he was a corrupter of youth, and had seen him caricatured in the “Clouds” of Aristophanes. Secondly, there are the professed accusers, who are but the mouth-piece of the others. The accusations of both might be summed up in a formula. The first say, “Socrates is an evil-doer and a curious person, searching into things under the earth and above the heaven; and making the worse appear the better cause, and teaching all this to others.” The second, “Socrates is an evil-doer and corrupter of the youth, who does not receive the gods whom the state receives, but introduces other new divinities.” These last words appear to have been the actual indictment (compare Xen. Mem.); and the previous formula, which is a summary of public opinion, assumes the same legal style.

The answer begins by clearing up a confusion. In the representations of the Comic poets, and in the opinion of the multitude, he had been identified with the teachers of physical science and with the Sophists. But this was an error. For both of them he professes a respect in the open court, which contrasts with his manner of speaking about them in other places. (Compare for Anaxagoras, Phædo, Laws; for the Sophists, Meno, Republic, Tim., Theaet., Soph., etc.) But at the same time he shows that he is not one of them. Of natural philosophy he knows nothing; not that he despises such pursuits, but the fact is that he is ignorant of them, and never says a word about them. Nor is he paid for giving instruction—that is another mistaken notion:—he has nothing to teach. But he commends Evenus for teaching virtue at such a “moderate” rate as five minæ. Something of the “accustomed irony,” which may perhaps be expected to sleep in the ear of the multitude, is lurking here.

He then goes on to explain the reason why he is in such an evil name. That had arisen out of a peculiar mission which he had taken upon himself. The enthusiastic Chaerephon (probably in anticipation of the answer which he received) had gone to Delphi and asked the oracle if there was any man wiser than Socrates; and the answer was, that there was no man wiser. What could be the meaning of this—that he who knew nothing, and knew that he knew nothing, should be declared by the oracle to be the wisest of men? Reflecting upon the answer, he determined to refute it by finding “a wiser;” and first he went to the politicians, and then to the poets, and then to the craftsmen, but always with the same result—he found that they knew nothing, or hardly anything more than himself; and that the little advantage which in some cases they possessed was more than counter-balanced by their conceit of knowledge. He knew nothing, and knew that he knew nothing: they knew little or nothing, and imagined that they knew all things. Thus he had passed his life as a sort of missionary in detecting the pretended wisdom of mankind; and this occupation had quite absorbed him and taken him away both from public and private affairs. Young men of the richer sort had made a pastime of the same pursuit, “which was not unamusing.” And hence bitter enmities had arisen; the professors of knowledge had revenged themselves by calling him a villainous corrupter of youth, and by repeating the commonplaces about atheism and materialism and sophistry, which are the stock-accusations against all philosophers when there is nothing else to be said of them.

The second accusation he meets by interrogating Meletus, who is present and can be interrogated. “If he is the corrupter, who is the improver of the citizens?” (Compare Meno.) “All men everywhere.” But how absurd, how contrary to analogy is this! How inconceivable too, that he should make the citizens worse when he has to live with them. This surely cannot be intentional; and if unintentional, he ought to have been instructed by Meletus, and not accused in the court.

But there is another part of the indictment which says that he teaches men not to receive the gods whom the city receives, and has other new gods. “Is that the way in which he is supposed to corrupt the youth?” “Yes, it is.” “Has he only new gods, or none at all?”

“None at all.” “What, not even the sun and moon?” “No; why, he says that the sun is a stone, and the moon earth.” That, replies Socrates, is the old confusion about Anaxagoras; the Athenian people are not so ignorant as to attribute to the influence of Socrates notions which have found their way into the drama, and may be learned at the theatre. Socrates undertakes to show that Meletus (rather unjustifiably) has been compounding a riddle in this part of the indictment: “There are no gods, but Socrates believes in the existence of the sons of gods, which is absurd.”

Leaving Meletus, who has had enough words spent upon him, he returns to the original accusation. The question may be asked, Why will he persist in following a profession which leads him to death? Why?—because he must remain at his post where the god has placed him, as he remained at Potidaea, and Amphipolis, and Delium, where the generals placed him. Besides, he is not so overwise as to imagine that he knows whether death is a good or an evil; and he is certain that desertion of his duty is an evil. Anytus is quite right in saying that they should never have indicted him if they meant to let him go. For he will certainly obey God rather than man; and will continue to preach to all men of all ages the necessity of virtue and improvement; and if they refuse to listen to him he will still persevere and reprove them. This is his way of corrupting the youth, which he will not cease to follow in obedience to the god, even if a thousand deaths await him.

He is desirous that they should let him live—not for his own sake, but for theirs; because he is their heaven-sent friend (and they will never have such another), or, as he may be ludicrously described, he is the gadfly who stirs the generous steed into motion. Why then has he never taken part in public affairs? Because the familiar divine voice has hindered him; if he had been a public man, and had fought for the right, as he would certainly have fought against the many, he would not have lived, and could therefore have done no good. Twice in public matters he has risked his life for the sake of justice—once at the trial of the generals; and again in resistance to the tyrannical commands of the Thirty.

But, though not a public man, he has passed his days in instructing the citizens without fee or reward—this was his mission. Whether his disciples have turned out well or ill, he cannot justly be charged with the result, for he never promised to teach them anything. They might come if they liked, and they might stay away if they liked: and they did come, because they found an amusement in hearing the pretenders to wisdom detected. If they have been corrupted, their elder relatives (if not themselves) might surely come into court and witness against him, and there is an opportunity still for them to appear. But their fathers and brothers all appear in court (including “this” Plato), to witness on his behalf; and if their relatives are corrupted, at least they are uncorrupted; “and they are my witnesses. For they know that I am speaking the truth, and that Meletus is lying.”

This is about all that he has to say. He will not entreat the judges to spare his life; neither will he present a spectacle of weeping children, although he, too, is not made of “rock or oak.” Some of the judges themselves may have complied with this practice on similar occasions, and he trusts that they will not be angry with him for not following their example. But he feels that such conduct brings discredit on the name of Athens: he feels too, that the judge has sworn not to give away justice; and he cannot be guilty of the impiety of asking the judge to break his oath, when he is himself being tried for impiety.

As he expected, and probably intended, he is convicted. And now the tone of the speech, instead of being more conciliatory, becomes more lofty and commanding. Anytus proposes death as the penalty: and what counter-proposition shall he make? He, the benefactor of the Athenian people, whose whole life has been spent in doing them good, should at least have the Olympic victor’s reward of maintenance in the Prytaneum. Or why should he propose any counter-penalty when he does not know whether death, which Anytus proposes, is a good or an evil? And he is certain that imprisonment is an evil, exile is an evil. Loss of money might be an evil, but then he has none to give; perhaps he can make up a mina. Let that be the penalty, or, if his friends wish, thirty minæ; for which they will be excellent securities.

[_He is condemned to death._]

He is an old man already, and the Athenians will gain nothing but disgrace by depriving him of a few years of life. Perhaps he could have escaped, if he had chosen to throw down his arms and entreat for his life. But he does not at all repent of the manner of his defence; he would rather die in his own fashion than live in theirs. For the penalty of unrighteousness is swifter than death; that penalty has already overtaken his accusers as death will soon overtake him.

And now, as one who is about to die, he will prophesy to them. They have put him to death in order to escape the necessity of giving an account of their lives. But his death “will be the seed” of many disciples who will convince them of their evil ways, and will come forth to reprove them in harsher terms, because they are younger and more inconsiderate.

He would like to say a few words, while there is time, to those who would have acquitted him. He wishes them to know that the divine sign never interrupted him in the course of his defence; the reason of which, as he conjectures, is that the death to which he is going is a good and not an evil. For either death is a long sleep, the best of sleeps, or a journey to another world in which the souls of the dead are gathered together, and in which there may be a hope of seeing the heroes of old—in which, too, there are just judges; and as all are immortal, there can be no fear of any one suffering death for his opinions.

Nothing evil can happen to the good man either in life or death, and his own death has been permitted by the gods, because it was better for him to depart; and therefore he forgives his judges because they have done him no harm, although they never meant to do him any good.

He has a last request to make to them—that they will trouble his sons as he has troubled them, if they appear to prefer riches to virtue, or to think themselves something when they are nothing.

"Few persons will be found to wish that Socrates should have defended himself otherwise,"—if, as we must add, his defence was that with which Plato has provided him. But leaving this question, which does not admit of a precise solution, we may go on to ask what was the impression which Plato in the "Apology" intended to give of the character and conduct of his master in the last great scene? Did he intend to represent him (1) as employing sophistries; (2) as designedly irritating the judges? Or are these sophistries to be regarded as belonging to the age in which he lived and to his personal character, and this apparent haughtiness as flowing from the natural elevation of his position?

For example, when he says that it is absurd to suppose that one man is the corrupter and all the rest of the world the improvers of the youth; or, when he argues that he never could have corrupted the men with whom he had to live; or, when he proves his belief in the gods because he believes in the sons of gods, is he serious or jesting? It may be observed that these sophisms all occur in his cross-examination of Meletus, who is easily foiled and mastered in the hands of the great dialectician. Perhaps he regarded these answers as good enough for his accuser, of whom he makes very light. Also there is a touch of irony in them, which takes them out of the category of sophistry. (Compare Euthyph.)

That the manner in which he defends himself about the lives of his disciples is not satisfactory, can hardly be denied. Fresh in the memory of the Athenians, and detestable as they deserved to be to the newly restored democracy, were the names of Alcibiades, Critias, Charmides. It is obviously not a sufficient answer that Socrates had never professed to teach them anything, and is therefore not justly chargeable with their crimes. Yet the defence, when taken out of this ironical form, is doubtless sound: that his teaching had nothing to do with their evil lives. Here, then, the sophistry is rather in form than in substance, though we might desire that to such a serious charge Socrates had given a more serious answer.

Truly characteristic of Socrates is another point in his answer, which may also be regarded as sophistical. He says that "if he has corrupted the youth, he must have corrupted them involuntarily." But if, as Socrates argues, all evil is involuntary, then all criminals ought to be admonished and not punished. In these words the Socratic doctrine of the involuntariness of evil is clearly intended to be conveyed. Here again, as in the former instance, the defence of Socrates is untrue practically, but may be true in some ideal or transcendental sense. The commonplace reply, that if he had been guilty of corrupting the youth their relations would surely have witnessed against him, with which he concludes this part of his defence, is more satisfactory.

Again, when Socrates argues that he must believe in the gods because he believes in the sons of gods, we must remember that this is a refutation not of the original indictment, which is consistent enough—"Socrates does not receive the gods whom the city receives, and has other new divinities"—but of the interpretation put upon the words by Meletus, who has affirmed that he is a downright atheist. To this Socrates fairly answers, in accordance with the ideas of the time, that a downright atheist cannot believe in the sons of gods or in divine things. The notion that demons or lesser divinities are the sons of gods is not to be regarded as ironical or sceptical. He is arguing "ad hominem" according to the notions of mythology current in his age. Yet he abstains from saying that he believed in the gods whom the State approved. He does not defend himself, as Xenophon has defended him, by appealing to his practice of religion. Probably he neither wholly believed, nor disbelieved, in the existence of the popular gods; he had no means of knowing about them. According to Plato (compare Phædo; Symp.), as well as Xenophon (Memor.), he was punctual in the performance of the least religious duties; and he must have believed in his own oracular sign, of which he seemed to have an internal witness. But the existence of Apollo or Zeus, or the other gods whom the State approves, would have appeared to him both uncertain and unimportant in comparison of the duty of self-examination, and of those principles of truth and right which he deemed to be the foundation of religion. (Compare Phaedr.; Euthyph.; Republic.)

The second question, whether Plato meant to represent Socrates as braving or irritating his judges, must also be answered in the negative. His irony, his superiority, his audacity, “regarding not the person of man,” necessarily flow out of the loftiness of his situation. He is not acting a part upon a great occasion, but he is what he has been all his life long, “a king of men.” He would rather not appear insolent, if he could avoid it (ouch os authadizomenos touto lego). Neither is he desirous of hastening his own end, for life and death are simply indifferent to him. But such a defence as would be acceptable to his judges and might procure an acquittal, it is not in his nature to make. He will not say or do anything that might pervert the course of justice; he cannot have his tongue bound even “in the throat of death.” With his accusers he will only fence and play, as he had fenced with other “improvers of youth,” answering the Sophist according to his sophistry all his life long. He is serious when he is speaking of his own mission, which seems to distinguish him from all other reformers of mankind, and originates in an accident. The dedication of himself to the improvement of his fellow-citizens is not so remarkable as the ironical spirit in which he goes about doing good only in vindication of the credit of the oracle, and in the vain hope of finding a wiser man than himself. Yet this singular and almost accidental character of his mission agrees with the divine sign which, according to our notions, is equally accidental and irrational, and is nevertheless accepted by him as the guiding principle of his life. Socrates is nowhere represented to us as a freethinker or sceptic. There is no reason to doubt his sincerity when he speculates on the possibility of seeing and knowing the heroes of the Trojan war in another world. On the other hand, his hope of immortality is uncertain;—he also conceives of death as a long sleep (in this respect differing from the Phædo), and at last falls back on resignation to the divine will, and the certainty that no evil can happen to the good man either in life or death. His absolute truthfulness seems to hinder him from asserting positively more than this; and he makes no attempt to veil his ignorance in mythology and figures of speech. The gentleness of the first part of the speech contrasts with the aggravated, almost threatening, tone of the conclusion. He characteristically remarks that he will not speak as a rhetorician, that is to say, he will not make a regular defence such as Lysias or one of the orators might have composed for him, or, according to some accounts, did compose for him. But he first procures himself a hearing by conciliatory words. He does not attack the Sophists; for they were open to the same charges as himself; they were equally ridiculed by the Comic poets, and almost equally hateful to Anytus and Meletus. Yet incidentally the antagonism between Socrates and the Sophists is allowed to appear. He is poor and they are rich; his profession that he teaches nothing is opposed to their readiness to teach all things; his talking in the marketplace to their private instructions; his tarry-at-home life to their wandering from city to city. The tone which he assumes towards them is one of real friendliness, but also of concealed irony. Towards Anaxagoras, who had disappointed him in his hopes of learning about mind and nature, he shows a less kindly feeling, which is also the feeling of Plato in other passages (Laws). But Anaxagoras had been dead thirty years, and was beyond the reach of persecution.

It has been remarked that the prophecy of a new generation of teachers who would rebuke and exhort the Athenian people in harsher and more violent terms was, as far as we know, never fulfilled. No inference can be drawn from this circumstance as to the probability of the words attributed to him having been actually uttered. They express the aspiration of the first martyr of philosophy, that he would leave behind him many followers, accompanied by the not unnatural feeling that they would be fiercer and more inconsiderate in their words when emancipated from his control.

The above remarks must be understood as applying with any degree of certainty to the Platonic Socrates only. For, although these or similar words may have been spoken by Socrates himself, we cannot exclude the possibility, that like so much else, _e.g._ the wisdom of Critias, the poem of Solon, the virtues of Charmides, they may have been due only to the imagination of Plato. The arguments of those who maintain that the Apology was composed during the process, resting on no evidence, do not require a serious refutation. Nor are the reasonings of Schleiermacher, who argues that the Platonic defence is an exact or nearly exact reproduction of the words of Socrates, partly because Plato would not have been guilty of the impiety of altering them, and also because many points of the defence might have been improved and strengthened, at all more conclusive. (See English Translation.) What effect the death of Socrates produced on the mind of Plato, we cannot certainly determine; nor can we say how he would or must have written under the circumstances. We observe that the enmity of Aristophanes to Socrates does not prevent Plato from introducing them together in the Symposium engaged in friendly intercourse. Nor is there any trace in the Dialogues of an attempt to make Anytus or Meletus personally odious in the eyes of the Athenian public.

APOLOGY

How you, O Athenians, have been affected by my accusers, I cannot tell; but I know that they almost made me forget who I was—so persuasively did they speak; and yet they have hardly uttered a word of truth. But of the many falsehoods told by them, there was one which quite amazed me;—I mean when they said that you should be upon your guard and not allow yourselves to be

deceived by the force of my eloquence. To say this, when they were certain to be detected as soon as I opened my lips and proved myself to be anything but a great speaker, did indeed appear to me most shameless—unless by the force of eloquence they mean the force of truth; for if such is their meaning, I admit that I am eloquent. But in how different a way from theirs! Well, as I was saying, they have scarcely spoken the truth at all; but from me you shall hear the whole truth: not, however, delivered after their manner in a set oration duly ornamented with words and phrases. No, by heaven! but I shall use the words and arguments which occur to me at the moment; for I am confident in the justice of my cause (Or, I am certain that I am right in taking this course.): at my time of life I ought not to be appearing before you, O men of Athens, in the character of a juvenile orator—let no one expect it of me. And I must beg of you to grant me a favour:—If I defend myself in my accustomed manner, and you hear me using the words which I have been in the habit of using in the agora, at the tables of the money-changers, or anywhere else, I would ask you not to be surprised, and not to interrupt me on this account. For I am more than seventy years of age, and appearing now for the first time in a court of law, I am quite a stranger to the language of the place; and therefore I would have you regard me as if I were really a stranger, whom you would excuse if he spoke in his native tongue, and after the fashion of his country:—Am I making an unfair request of you? Never mind the manner, which may or may not be good; but think only of the truth of my words, and give heed to that: let the speaker speak truly and the judge decide justly.

And first, I have to reply to the older charges and to my first accusers, and then I will go on to the later ones. For of old I have had many accusers, who have accused me falsely to you during many years; and I am more afraid of them than of Anytus and his associates, who are dangerous, too, in their own way. But far more dangerous are the others, who began when you were children, and took possession of your minds with their falsehoods, telling of one Socrates, a wise man, who speculated about the heaven above, and searched into the earth beneath, and made the worse appear the better cause. The disseminators of this tale are the accusers whom I dread; for their hearers are apt to fancy that such enquirers do not believe in the existence of the gods. And they are many, and their charges against me are of ancient date, and they were made by them in the days when you were more impressible than you are now—in childhood, or it may have been in youth—and the cause when heard went by default, for there was none to answer. And hardest of all, I do not know and cannot tell the names of my accusers; unless in the chance case of a Comic poet. All who from envy and malice have persuaded you—some of them having first convinced themselves—all this class of men are most difficult to deal with; for I cannot have them up here, and cross-examine them, and therefore I must simply fight with shadows in my own defence, and argue when there is no one who answers. I will ask you then to assume with me, as I was saying, that my opponents are of two kinds; one recent, the other ancient: and I hope that you will see the propriety of my answering the latter first, for these accusations you heard long before the others, and much oftener.

Well, then, I must make my defence, and endeavour to clear away in a short time, a slander which has lasted a long time. May I succeed, if to succeed be for my good and yours, or likely to avail me in my cause! The task is not an easy one; I quite understand the nature of it. And so leaving the event with God, in obedience to the law I will now make my defence.

I will begin at the beginning, and ask what is the accusation which has given rise to the slander of me, and in fact has encouraged Meletus to proof this charge against me. Well, what do the slanderers say? They shall be my prosecutors, and I will sum up their words in an affidavit: “Socrates is an evil-doer, and a curious person, who searches into things under the earth and in heaven, and he makes the worse appear the better cause; and he teaches the aforesaid doctrines to others.” Such is the nature of the accusation: it is just what you have yourselves seen in the comedy of Aristophanes (Aristoph., Clouds.), who has introduced a man whom he calls Socrates, going about and saying that he walks in air, and talking a deal of nonsense concerning matters of which I do not pretend to know either much or little—not that I mean to speak disparagingly of any one who is a student of natural philosophy. I should be very sorry if Meletus could bring so grave a charge against me. But the simple truth is, O Athenians, that I have nothing to do with physical speculations. Very many of those here present are witnesses to the truth of this, and to them I appeal. Speak then, you who have heard me, and tell your neighbours whether any of you have ever known me hold forth in few words or in many upon such matters...You hear their answer. And from what they say of this part of the charge you will be able to judge of the truth of the rest.

As little foundation is there for the report that I am a teacher, and take money; this accusation has no more truth in it than the other. Although, if a man were really able to instruct mankind, to receive money for giving instruction would, in my opinion, be an honour to him. There is Gorgias of Leontium, and Prodicus of Ceos, and Hippias of Elis, who go the round of the cities, and are able to persuade the young men to leave their own citizens by whom they might be taught for nothing, and come to them whom they not only pay, but are thankful if they may be allowed to pay them. There is at this time a Parian philosopher residing in Athens, of whom I have heard; and I came to hear of him in this way:—I came across a man who has spent a world of money on the Sophists,

Callias, the son of Hipponicus, and knowing that he had sons, I asked him: “Callias,” I said, “if your two sons were foals or calves, there would be no difficulty in finding some one to put over them; we should hire a trainer of horses, or a farmer probably, who would improve and perfect them in their own proper virtue and excellence; but as they are human beings, whom are you thinking of placing over them? Is there any one who understands human and political virtue? You must have thought about the matter, for you have sons; is there any one?” “There is,” he said. “Who is he?” said I; “and of what country? and what does he charge?” “Evenus the Parian,” he replied; “he is the man, and his charge is five minæ.” Happy is Evenus, I said to myself, if he really has this wisdom, and teaches at such a moderate charge. Had I the same, I should have been very proud and conceited; but the truth is that I have no knowledge of the kind.

I dare say, Athenians, that some one among you will reply, “Yes, Socrates, but what is the origin of these accusations which are brought against you; there must have been something strange which you have been doing? All these rumours and this talk about you would never have arisen if you had been like other men: tell us, then, what is the cause of them, for we should be sorry to judge hastily of you.” Now I regard this as a fair challenge, and I will endeavour to explain to you the reason why I am called wise and have such an evil fame. Please to attend then. And although some of you may think that I am joking, I declare that I will tell you the entire truth. Men of Athens, this reputation of mine has come of a certain sort of wisdom which I possess. If you ask me what kind of wisdom, I reply, wisdom such as may perhaps be attained by man, for to that extent I am inclined to believe that I am wise; whereas the persons of whom I was speaking have a superhuman wisdom which I may fail to describe, because I have it not myself; and he who says that I have, speaks falsely, and is taking away my character. And here, O men of Athens, I must beg you not to interrupt me, even if I seem to say something extravagant. For the word which I will speak is not mine. I will refer you to a witness who is worthy of credit; that witness shall be the God of Delphi—he will tell you about my wisdom, if I have any, and of what sort it is. You must have known Chaerephon; he was early a friend of mine, and also a friend of yours, for he shared in the recent exile of the people, and returned with you. Well, Chaerephon, as you know, was very impetuous in all his doings, and he went to Delphi and boldly asked the oracle to tell him whether—as I was saying, I must beg you not to interrupt—he asked the oracle to tell him whether anyone was wiser than I was, and the Pythian prophetess answered, that there was no man wiser. Chaerephon is dead himself; but his brother, who is in court, will confirm the truth of what I am saying.

Why do I mention this? Because I am going to explain to you why I have such an evil name. When I heard the answer, I said to myself, What can the god mean? and what is the interpretation of his riddle? for I know that I have no wisdom, small or great. What then can he mean when he says that I am the wisest of men? And yet he is a god, and cannot lie; that would be against his nature. After long consideration, I thought of a method of trying the question. I reflected that if I could only find a man wiser than myself, then I might go to the god with a refutation in my hand. I should say to him, “Here is a man who is wiser than I am; but you said that I was the wisest.” Accordingly I went to one who had the reputation of wisdom, and observed him—his name I need not mention; he was a politician whom I selected for examination—and the result was as follows: When I began to talk with him, I could not help thinking that he was not really wise, although he was thought wise by many, and still wiser by himself; and thereupon I tried to explain to him that he thought himself wise, but was not really wise; and the consequence was that he hated me, and his enmity was shared by several who were present and heard me. So I left him, saying to myself, as I went away: Well, although I do not suppose that either of us knows anything really beautiful and good, I am better off than he is,—for he knows nothing, and thinks that he knows; I neither know nor think that I know. In this latter particular, then, I seem to have slightly the advantage of him. Then I went to another who had still higher pretensions to wisdom, and my conclusion was exactly the same. Whereupon I made another enemy of him, and of many others besides him.

Then I went to one man after another, being not unconscious of the enmity which I provoked, and I lamented and feared this: but necessity was laid upon me,—the word of God, I thought, ought to be considered first. And I said to myself, Go I must to all who appear to know, and find out the meaning of the oracle. And I swear to you, Athenians, by the dog I swear!—for I must tell you the truth—the result of my mission was just this: I found that the men most in repute were all but the most foolish; and that others less esteemed were really wiser and better. I will tell you the tale of my wanderings and of the “Herculean” labours, as I may call them, which I endured only to find at last the oracle irrefutable. After the politicians, I went to the poets; tragic, dithyrambic, and all sorts. And there, I said to myself, you will be instantly detected; now you will find out that you are more ignorant than they are. Accordingly, I took them some of the most elaborate passages in their own writings, and asked what was the meaning of them—thinking that they would teach me something. Will you believe me? I am almost ashamed to confess the truth, but I must say that there is hardly a person present who would not have talked better about their poetry than they did themselves. Then I knew that not by wisdom do poets write poetry, but by a sort of genius and inspiration; they are like diviners or soothsayers who also say many fine things, but do not understand the meaning of them. The poets appeared to me to be much in the same case; and I

further observed that upon the strength of their poetry they believed themselves to be the wisest of men in other things in which they were not wise. So I departed, conceiving myself to be superior to them for the same reason that I was superior to the politicians.

At last I went to the artisans. I was conscious that I knew nothing at all, as I may say, and I was sure that they knew many fine things; and here I was not mistaken, for they did know many things of which I was ignorant, and in this they certainly were wiser than I was. But I observed that even the good artisans fell into the same error as the poets;—because they were good workmen they thought that they also knew all sorts of high matters, and this defect in them overshadowed their wisdom; and therefore I asked myself on behalf of the oracle, whether I would like to be as I was, neither having their knowledge nor their ignorance, or like them in both; and I made answer to myself and to the oracle that I was better off as I was.

This inquisition has led to my having many enemies of the worst and most dangerous kind, and has given occasion also to many calumnies. And I am called wise, for my hearers always imagine that I myself possess the wisdom which I find wanting in others: but the truth is, O men of Athens, that God only is wise; and by his answer he intends to show that the wisdom of men is worth little or nothing; he is not speaking of Socrates, he is only using my name by way of illustration, as if he said, He, O men, is the wisest, who, like Socrates, knows that his wisdom is in truth worth nothing. And so I go about the world, obedient to the god, and search and make enquiry into the wisdom of any one, whether citizen or stranger, who appears to be wise; and if he is not wise, then in vindication of the oracle I show him that he is not wise; and my occupation quite absorbs me, and I have no time to give either to any public matter of interest or to any concern of my own, but I am in utter poverty by reason of my devotion to the god.

There is another thing:—young men of the richer classes, who have not much to do, come about me of their own accord; they like to hear the pretenders examined, and they often imitate me, and proceed to examine others; there are plenty of persons, as they quickly discover, who think that they know something, but really know little or nothing; and then those who are examined by them instead of being angry with themselves are angry with me: This confounded Socrates, they say; this villainous misleader of youth!—and then if somebody asks them, Why, what evil does he practise or teach? they do not know, and cannot tell; but in order that they may not appear to be at a loss, they repeat the ready-made charges which are used against all philosophers about teaching things up in the clouds and under the earth, and having no gods, and making the worse appear the better cause; for they do not like to confess that their pretence of knowledge has been detected—which is the truth; and as they are numerous and ambitious and energetic, and are drawn up in battle array and have persuasive tongues, they have filled your ears with their loud and inveterate calumnies. And this is the reason why my three accusers, Meletus and Anytus and Lycon, have set upon me; Meletus, who has a quarrel with me on behalf of the poets; Anytus, on behalf of the craftsmen and politicians; Lycon, on behalf of the rhetoricians: and as I said at the beginning, I cannot expect to get rid of such a mass of calumny all in a moment. And this, O men of Athens, is the truth and the whole truth; I have concealed nothing, I have dissembled nothing. And yet, I know that my plainness of speech makes them hate me, and what is their hatred but a proof that I am speaking the truth?—Hence has arisen the prejudice against me; and this is the reason of it, as you will find out either in this or in any future enquiry.

I have said enough in my defence against the first class of my accusers; I turn to the second class. They are headed by Meletus, that good man and true lover of his country, as he calls himself. Against these, too, I must try to make a defence:—Let their affidavit be read: it contains something of this kind: It says that Socrates is a doer of evil, who corrupts the youth; and who does not believe in the gods of the state, but has other new divinities of his own. Such is the charge; and now let us examine the particular counts. He says that I am a doer of evil, and corrupt the youth; but I say, O men of Athens, that Meletus is a doer of evil, in that he pretends to be in earnest when he is only in jest, and is so eager to bring men to trial from a pretended zeal and interest about matters in which he really never had the smallest interest. And the truth of this I will endeavour to prove to you.

Come hither, Meletus, and let me ask a question of you. You think a great deal about the improvement of youth?

Yes, I do.

Tell the judges, then, who is their improver; for you must know, as you have taken the pains to discover their corrupter, and are citing and accusing me before them. Speak, then, and tell the judges who their improver is.—Observe, Meletus, that you are silent, and have nothing to say. But is not this rather disgraceful, and a very considerable proof of what I was saying, that you have no interest in the matter? Speak up, friend, and tell us who their improver is.

The laws.

But that, my good sir, is not my meaning. I want to know who the person is, who, in the first place, knows the laws.

The judges, Socrates, who are present in court.

What, do you mean to say, Meletus, that they are able to instruct and improve youth?

Certainly they are.

What, all of them, or some only and not others?

All of them.

By the goddess Here, that is good news! There are plenty of improvers, then. And what do you say of the audience,—do they improve them?

Yes, they do.

And the senators?

Yes, the senators improve them.

But perhaps the members of the assembly corrupt them?—or do they too improve them?

They improve them.

Then every Athenian improves and elevates them; all with the exception of myself; and I alone am their corrupter? Is that what you affirm?

That is what I stoutly affirm.

I am very unfortunate if you are right. But suppose I ask you a question: How about horses? Does one man do them harm and all the world good? Is not the exact opposite the truth? One man is able to do them good, or at least not many;—the trainer of horses, that is to say, does them good, and others who have to do with them rather injure them? Is not that true, Meletus, of horses, or of any other animals? Most assuredly it is; whether you and Anytus say yes or no. Happy indeed would be the condition of youth if they had one corrupter only, and all the rest of the world were their improvers. But you, Meletus, have sufficiently shown that you never had a thought about the young: your carelessness is seen in your not caring about the very things which you bring against me.

And now, Meletus, I will ask you another question—by Zeus I will: Which is better, to live among bad citizens, or among good ones? Answer, friend, I say; the question is one which may be easily answered. Do not the good do their neighbours good, and the bad do them evil?

Certainly.

And is there anyone who would rather be injured than benefited by those who live with him? Answer, my good friend, the law requires you to answer—does any one like to be injured?

Certainly not.

And when you accuse me of corrupting and deteriorating the youth, do you allege that I corrupt them intentionally or unintentionally?

Intentionally, I say.

But you have just admitted that the good do their neighbours good, and the evil do them evil. Now, is that a truth which your superior wisdom has recognized thus early in life, and am I, at my age, in such darkness and ignorance as not to know that if a man with whom I have to live is corrupted by me, I am very likely to be harmed by him; and yet I corrupt him, and intentionally, too—so you say, although neither I nor any other human being is ever likely to be convinced by you. But either I do not corrupt them, or I corrupt them unintentionally; and on either view of the case you lie. If my offence is unintentional, the law has no cognizance of unintentional offences: you ought to have taken me privately, and warned and admonished me; for if I had been better advised, I should have left off doing what I only did unintentionally—no doubt I should; but you would have nothing to say to me and refused

to teach me. And now you bring me up in this court, which is a place not of instruction, but of punishment.

It will be very clear to you, Athenians, as I was saying, that Meletus has no care at all, great or small, about the matter. But still I should like to know, Meletus, in what I am affirmed to corrupt the young. I suppose you mean, as I infer from your indictment, that I teach them not to acknowledge the gods which the state acknowledges, but some other new divinities or spiritual agencies in their stead. These are the lessons by which I corrupt the youth, as you say.

Yes, that I say emphatically.

Then, by the gods, Meletus, of whom we are speaking, tell me and the court, in somewhat plainer terms, what you mean! for I do not as yet understand whether you affirm that I teach other men to acknowledge some gods, and therefore that I do believe in gods, and am not an entire atheist—this you do not lay to my charge,—but only you say that they are not the same gods which the city recognizes—the charge is that they are different gods. Or, do you mean that I am an atheist simply, and a teacher of atheism?

I mean the latter—that you are a complete atheist.

What an extraordinary statement! Why do you think so, Meletus? Do you mean that I do not believe in the godhead of the sun or moon, like other men?

I assure you, judges, that he does not: for he says that the sun is stone, and the moon earth.

Friend Meletus, you think that you are accusing Anaxagoras: and you have but a bad opinion of the judges, if you fancy them illiterate to such a degree as not to know that these doctrines are found in the books of Anaxagoras the Clazomenian, which are full of them. And so, forsooth, the youth are said to be taught them by Socrates, when there are not unfrequently exhibitions of them at the theatre (Probably in allusion to Aristophanes who caricatured, and to Euripides who borrowed the notions of Anaxagoras, as well as to other dramatic poets.) (price of admission one drachma at the most); and they might pay their money, and laugh at Socrates if he pretends to father these extraordinary views. And so, Meletus, you really think that I do not believe in any god?

I swear by Zeus that you believe absolutely in none at all.

Nobody will believe you, Meletus, and I am pretty sure that you do not believe yourself. I cannot help thinking, men of Athens, that Meletus is reckless and impudent, and that he has written this indictment in a spirit of mere wantonness and youthful bravado. Has he not compounded a riddle, thinking to try me? He said to himself:—I shall see whether the wise Socrates will discover my facetious contradiction, or whether I shall be able to deceive him and the rest of them. For he certainly does appear to me to contradict himself in the indictment as much as if he said that Socrates is guilty of not believing in the gods, and yet of believing in them—but this is not like a person who is in earnest.

I should like you, O men of Athens, to join me in examining what I conceive to be his inconsistency; and do you, Meletus, answer. And I must remind the audience of my request that they would not make a disturbance if I speak in my accustomed manner:

Did ever man, Meletus, believe in the existence of human things, and not of human beings?...I wish, men of Athens, that he would answer, and not be always trying to get up an interruption. Did ever any man believe in horsemanship, and not in horses? or in flute-playing, and not in flute-players? No, my friend; I will answer to you and to the court, as you refuse to answer for yourself. There is no man who ever did. But now please to answer the next question: Can a man believe in spiritual and divine agencies, and not in spirits or demigods?

He cannot.

How lucky I am to have extracted that answer, by the assistance of the court! But then you swear in the indictment that I teach and believe in divine or spiritual agencies (new or old, no matter for that); at any rate, I believe in spiritual agencies,—so you say and swear in the affidavit; and yet if I believe in divine beings, how can I help believing in spirits or demigods;—must I not? To be sure I must; and therefore I may assume that your silence gives consent. Now what are spirits or demigods? Are they not either gods or the sons of gods?

Certainly they are.

But this is what I call the facetious riddle invented by you: the demigods or spirits are gods, and you say first that I do not believe in gods, and then again that I do believe in gods; that is, if I believe in demigods. For if the demigods are the illegitimate sons of gods,

whether by the nymphs or by any other mothers, of whom they are said to be the sons—what human being will ever believe that there are no gods if they are the sons of gods? You might as well affirm the existence of mules, and deny that of horses and asses. Such nonsense, Meletus, could only have been intended by you to make trial of me. You have put this into the indictment because you had nothing real of which to accuse me. But no one who has a particle of understanding will ever be convinced by you that the same men can believe in divine and superhuman things, and yet not believe that there are gods and demigods and heroes.

I have said enough in answer to the charge of Meletus: any elaborate defence is unnecessary, but I know only too well how many are the enmities which I have incurred, and this is what will be my destruction if I am destroyed;—not Meletus, nor yet Anytus, but the envy and detraction of the world, which has been the death of many good men, and will probably be the death of many more; there is no danger of my being the last of them.

Some one will say: And are you not ashamed, Socrates, of a course of life which is likely to bring you to an untimely end? To him I may fairly answer: There you are mistaken: a man who is good for anything ought not to calculate the chance of living or dying; he ought only to consider whether in doing anything he is doing right or wrong—acting the part of a good man or of a bad. Whereas, upon your view, the heroes who fell at Troy were not good for much, and the son of Thetis above all, who altogether despised danger in comparison with disgrace; and when he was so eager to slay Hector, his goddess mother said to him, that if he avenged his companion Patroclus, and slew Hector, he would die himself—"Fate," she said, in these or the like words, "waits for you next after Hector;" he, receiving this warning, utterly despised danger and death, and instead of fearing them, feared rather to live in dishonour, and not to avenge his friend. "Let me die forthwith," he replies, "and be avenged of my enemy, rather than abide here by the beaked ships, a laughing-stock and a burden of the earth." Had Achilles any thought of death and danger? For wherever a man's place is, whether the place which he has chosen or that in which he has been placed by a commander, there he ought to remain in the hour of danger; he should not think of death or of anything but of disgrace. And this, O men of Athens, is a true saying.

Strange, indeed, would be my conduct, O men of Athens, if I who, when I was ordered by the generals whom you chose to command me at Potidaea and Amphipolis and Delium, remained where they placed me, like any other man, facing death—if now, when, as I conceive and imagine, God orders me to fulfil the philosopher's mission of searching into myself and other men, I were to desert my post through fear of death, or any other fear; that would indeed be strange, and I might justly be arraigned in court for denying the existence of the gods, if I disobeyed the oracle because I was afraid of death, fancying that I was wise when I was not wise. For the fear of death is indeed the pretence of wisdom, and not real wisdom, being a pretence of knowing the unknown; and no one knows whether death, which men in their fear apprehend to be the greatest evil, may not be the greatest good. Is not this ignorance of a disgraceful sort, the ignorance which is the conceit that a man knows what he does not know? And in this respect only I believe myself to differ from men in general, and may perhaps claim to be wiser than they are:—that whereas I know but little of the world below, I do not suppose that I know: but I do know that injustice and disobedience to a better, whether God or man, is evil and dishonourable, and I will never fear or avoid a possible good rather than a certain evil. And therefore if you let me go now, and are not convinced by Anytus, who said that since I had been prosecuted I must be put to death; (or if not that I ought never to have been prosecuted at all); and that if I escape now, your sons will all be utterly ruined by listening to my words—if you say to me, Socrates, this time we will not mind Anytus, and you shall be let off, but upon one condition, that you are not to enquire and speculate in this way any more, and that if you are caught doing so again you shall die;—if this was the condition on which you let me go, I should reply: Men of Athens, I honour and love you; but I shall obey God rather than you, and while I have life and strength I shall never cease from the practice and teaching of philosophy, exhorting any one whom I meet and saying to him after my manner: You, my friend,—a citizen of the great and mighty and wise city of Athens,—are you not ashamed of heaping up the greatest amount of money and honour and reputation, and caring so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? And if the person with whom I am arguing, says: Yes, but I do care; then I do not leave him or let him go at once; but I proceed to interrogate and examine and cross-examine him, and if I think that he has no virtue in him, but only says that he has, I reproach him with undervaluing the greater, and overvaluing the less. And I shall repeat the same words to every one whom I meet, young and old, citizen and alien, but especially to the citizens, inasmuch as they are my brethren. For know that this is the command of God; and I believe that no greater good has ever happened in the state than my service to the God. For I do nothing but go about persuading you all, old and young alike, not to take thought for your persons or your properties, but first and chiefly to care about the greatest improvement of the soul. I tell you that virtue is not given by money, but that from virtue comes money and every other good of man, public as well as private. This is my teaching, and if this is the doctrine which corrupts the youth, I am a mischievous person. But if any one says that this is not my teaching, he is speaking an untruth. Wherefore, O men of Athens, I say to you, do as Anytus bids or not as Anytus bids, and either acquit me or not; but

whichever you do, understand that I shall never alter my ways, not even if I have to die many times.

Men of Athens, do not interrupt, but hear me; there was an understanding between us that you should hear me to the end: I have something more to say, at which you may be inclined to cry out; but I believe that to hear me will be good for you, and therefore I beg that you will not cry out. I would have you know, that if you kill such an one as I am, you will injure yourselves more than you will injure me. Nothing will injure me, not Meletus nor yet Anytus—they cannot, for a bad man is not permitted to injure a better than himself. I do not deny that Anytus may, perhaps, kill him, or drive him into exile, or deprive him of civil rights; and he may imagine, and others may imagine, that he is inflicting a great injury upon him: but there I do not agree. For the evil of doing as he is doing—the evil of unjustly taking away the life of another—is greater far.

And now, Athenians, I am not going to argue for my own sake, as you may think, but for yours, that you may not sin against the God by condemning me, who am his gift to you. For if you kill me you will not easily find a successor to me, who, if I may use such a ludicrous figure of speech, am a sort of gadfly, given to the state by God; and the state is a great and noble steed who is tardy in his motions owing to his very size, and requires to be stirred into life. I am that gadfly which God has attached to the state, and all day long and in all places am always fastening upon you, arousing and persuading and reproaching you. You will not easily find another like me, and therefore I would advise you to spare me. I dare say that you may feel out of temper (like a person who is suddenly awakened from sleep), and you think that you might easily strike me dead as Anytus advises, and then you would sleep on for the remainder of your lives, unless God in his care of you sent you another gadfly. When I say that I am given to you by God, the proof of my mission is this:—if I had been like other men, I should not have neglected all my own concerns or patiently seen the neglect of them during all these years, and have been doing yours, coming to you individually like a father or elder brother, exhorting you to regard virtue; such conduct, I say, would be unlike human nature. If I had gained anything, or if my exhortations had been paid, there would have been some sense in my doing so; but now, as you will perceive, not even the impudence of my accusers dares to say that I have ever exacted or sought pay of any one; of that they have no witness. And I have a sufficient witness to the truth of what I say—my poverty.

Some one may wonder why I go about in private giving advice and busying myself with the concerns of others, but do not venture to come forward in public and advise the state. I will tell you why. You have heard me speak at sundry times and in divers places of an oracle or sign which comes to me, and is the divinity which Meletus ridicules in the indictment. This sign, which is a kind of voice, first began to come to me when I was a child; it always forbids but never commands me to do anything which I am going to do. This is what deters me from being a politician. And rightly, as I think. For I am certain, O men of Athens, that if I had engaged in politics, I should have perished long ago, and done no good either to you or to myself. And do not be offended at my telling you the truth: for the truth is, that no man who goes to war with you or any other multitude, honestly striving against the many lawless and unrighteous deeds which are done in a state, will save his life; he who will fight for the right, if he would live even for a brief space, must have a private station and not a public one.

I can give you convincing evidence of what I say, not words only, but what you value far more—actions. Let me relate to you a passage of my own life which will prove to you that I should never have yielded to injustice from any fear of death, and that “as I should have refused to yield” I must have died at once. I will tell you a tale of the courts, not very interesting perhaps, but nevertheless true. The only office of state which I ever held, O men of Athens, was that of senator: the tribe Antiochis, which is my tribe, had the presidency at the trial of the generals who had not taken up the bodies of the slain after the battle of Arginusae; and you proposed to try them in a body, contrary to law, as you all thought afterwards; but at the time I was the only one of the Prytanes who was opposed to the illegality, and I gave my vote against you; and when the orators threatened to impeach and arrest me, and you called and shouted, I made up my mind that I would run the risk, having law and justice with me, rather than take part in your injustice because I feared imprisonment and death. This happened in the days of the democracy. But when the oligarchy of the Thirty was in power, they sent for me and four others into the rotunda, and bade us bring Leon the Salaminian from Salamis, as they wanted to put him to death. This was a specimen of the sort of commands which they were always giving with the view of implicating as many as possible in their crimes; and then I showed, not in word only but in deed, that, if I may be allowed to use such an expression, I cared not a straw for death, and that my great and only care was lest I should do an unrighteous or unholy thing. For the strong arm of that oppressive power did not frighten me into doing wrong; and when we came out of the rotunda the other four went to Salamis and fetched Leon, but I went quietly home. For which I might have lost my life, had not the power of the Thirty shortly afterwards come to an end. And many will witness to my words.

Now do you really imagine that I could have survived all these years, if I had led a public life, supposing that like a good man I had always maintained the right and had made justice, as I ought, the first thing? No indeed, men of Athens, neither I nor any other

man. But I have been always the same in all my actions, public as well as private, and never have I yielded any base compliance to those who are slanderously termed my disciples, or to any other. Not that I have any regular disciples. But if any one likes to come and hear me while I am pursuing my mission, whether he be young or old, he is not excluded. Nor do I converse only with those who pay; but any one, whether he be rich or poor, may ask and answer me and listen to my words; and whether he turns out to be a bad man or a good one, neither result can be justly imputed to me; for I never taught or professed to teach him anything. And if any one says that he has ever learned or heard anything from me in private which all the world has not heard, let me tell you that he is lying.

But I shall be asked, Why do people delight in continually conversing with you? I have told you already, Athenians, the whole truth about this matter: they like to hear the cross-examination of the pretenders to wisdom; there is amusement in it. Now this duty of cross-examining other men has been imposed upon me by God; and has been signified to me by oracles, visions, and in every way in which the will of divine power was ever intimated to any one. This is true, O Athenians, or, if not true, would be soon refuted. If I am or have been corrupting the youth, those of them who are now grown up and have become sensible that I gave them bad advice in the days of their youth should come forward as accusers, and take their revenge; or if they do not like to come themselves, some of their relatives, fathers, brothers, or other kinsmen, should say what evil their families have suffered at my hands. Now is their time. Many of them I see in the court. There is Crito, who is of the same age and of the same deme with myself, and there is Critobulus his son, whom I also see. Then again there is Lysanias of Sphettus, who is the father of Aeschines—he is present; and also there is Antiphon of Cephisus, who is the father of Epigenes; and there are the brothers of several who have associated with me. There is Nicostratus the son of Theosdotides, and the brother of Theodotus (now Theodotus himself is dead, and therefore he, at any rate, will not seek to stop him); and there is Paralus the son of Demodocus, who had a brother Theages; and Adeimantus the son of Ariston, whose brother Plato is present; and Aeantodorus, who is the brother of Apollodorus, whom I also see. I might mention a great many others, some of whom Meletus should have produced as witnesses in the course of his speech; and let him still produce them, if he has forgotten—I will make way for him. And let him say, if he has any testimony of the sort which he can produce. Nay, Athenians, the very opposite is the truth. For all these are ready to witness on behalf of the corrupter, of the injurer of their kindred, as Meletus and Anytus call me; not the corrupted youth only—there might have been a motive for that—but their uncorrupted elder relatives. Why should they too support me with their testimony? Why, indeed, except for the sake of truth and justice, and because they know that I am speaking the truth, and that Meletus is a liar.

Well, Athenians, this and the like of this is all the defence which I have to offer. Yet a word more. Perhaps there may be some one who is offended at me, when he calls to mind how he himself on a similar, or even a less serious occasion, prayed and entreated the judges with many tears, and how he produced his children in court, which was a moving spectacle, together with a host of relations and friends; whereas I, who am probably in danger of my life, will do none of these things. The contrast may occur to his mind, and he may be set against me, and vote in anger because he is displeased at me on this account. Now if there be such a person among you,—mind, I do not say that there is,—to him I may fairly reply: My friend, I am a man, and like other men, a creature of flesh and blood, and not “of wood or stone,” as Homer says; and I have a family, yes, and sons, O Athenians, three in number, one almost a man, and two others who are still young; and yet I will not bring any of them hither in order to petition you for an acquittal. And why not? Not from any self-assertion or want of respect for you. Whether I am or am not afraid of death is another question, of which I will not now speak. But, having regard to public opinion, I feel that such conduct would be discreditable to myself, and to you, and to the whole state. One who has reached my years, and who has a name for wisdom, ought not to demean himself. Whether this opinion of me be deserved or not, at any rate the world has decided that Socrates is in some way superior to other men. And if those among you who are said to be superior in wisdom and courage, and any other virtue, demean themselves in this way, how shameful is their conduct! I have seen men of reputation, when they have been condemned, behaving in the strangest manner: they seemed to fancy that they were going to suffer something dreadful if they died, and that they could be immortal if you only allowed them to live; and I think that such are a dishonour to the state, and that any stranger coming in would have said of them that the most eminent men of Athens, to whom the Athenians themselves give honour and command, are no better than women. And I say that these things ought not to be done by those of us who have a reputation; and if they are done, you ought not to permit them; you ought rather to show that you are far more disposed to condemn the man who gets up a doleful scene and makes the city ridiculous, than him who holds his peace.

But, setting aside the question of public opinion, there seems to be something wrong in asking a favour of a judge, and thus procuring an acquittal, instead of informing and convincing him. For his duty is, not to make a present of justice, but to give judgment; and he has sworn that he will judge according to the laws, and not according to his own good pleasure; and we ought not to encourage you, nor should you allow yourselves to be encouraged, in this habit of perjury—there can be no piety in that. Do not

then require me to do what I consider dishonourable and impious and wrong, especially now, when I am being tried for impiety on the indictment of Meletus. For if, O men of Athens, by force of persuasion and entreaty I could overpower your oaths, then I should be teaching you to believe that there are no gods, and in defending should simply convict myself of the charge of not believing in them. But that is not so—far otherwise. For I do believe that there are gods, and in a sense higher than that in which any of my accusers believe in them. And to you and to God I commit my cause, to be determined by you as is best for you and me.

There are many reasons why I am not grieved, O men of Athens, at the vote of condemnation. I expected it, and am only surprised that the votes are so nearly equal; for I had thought that the majority against me would have been far larger; but now, had thirty votes gone over to the other side, I should have been acquitted. And I may say, I think, that I have escaped Meletus. I may say more; for without the assistance of Anytus and Lycon, any one may see that he would not have had a fifth part of the votes, as the law requires, in which case he would have incurred a fine of a thousand drachmae.

And so he proposes death as the penalty. And what shall I propose on my part, O men of Athens? Clearly that which is my due. And what is my due? What return shall be made to the man who has never had the wit to be idle during his whole life; but has been careless of what the many care for—wealth, and family interests, and military offices, and speaking in the assembly, and magistracies, and plots, and parties. Reflecting that I was really too honest a man to be a politician and live, I did not go where I could do no good to you or to myself; but where I could do the greatest good privately to every one of you, thither I went, and sought to persuade every man among you that he must look to himself, and seek virtue and wisdom before he looks to his private interests, and look to the state before he looks to the interests of the state; and that this should be the order which he observes in all his actions. What shall be done to such an one? Doubtless some good thing, O men of Athens, if he has his reward; and the good should be of a kind suitable to him. What would be a reward suitable to a poor man who is your benefactor, and who desires leisure that he may instruct you? There can be no reward so fitting as maintenance in the Prytaneum, O men of Athens, a reward which he deserves far more than the citizen who has won the prize at Olympia in the horse or chariot race, whether the chariots were drawn by two horses or by many. For I am in want, and he has enough; and he only gives you the appearance of happiness, and I give you the reality. And if I am to estimate the penalty fairly, I should say that maintenance in the Prytaneum is the just return.

Perhaps you think that I am braving you in what I am saying now, as in what I said before about the tears and prayers. But this is not so. I speak rather because I am convinced that I never intentionally wronged any one, although I cannot convince you—the time has been too short; if there were a law at Athens, as there is in other cities, that a capital cause should not be decided in one day, then I believe that I should have convinced you. But I cannot in a moment refute great slanders; and, as I am convinced that I never wronged another, I will assuredly not wrong myself. I will not say of myself that I deserve any evil, or propose any penalty. Why should I? because I am afraid of the penalty of death which Meletus proposes? When I do not know whether death is a good or an evil, why should I propose a penalty which would certainly be an evil? Shall I say imprisonment? And why should I live in prison, and be the slave of the magistrates of the year—of the Eleven? Or shall the penalty be a fine, and imprisonment until the fine is paid? There is the same objection. I should have to lie in prison, for money I have none, and cannot pay. And if I say exile (and this may possibly be the penalty which you will affix), I must indeed be blinded by the love of life, if I am so irrational as to expect that when you, who are my own citizens, cannot endure my discourses and words, and have found them so grievous and odious that you will have no more of them, others are likely to endure me. No indeed, men of Athens, that is not very likely. And what a life should I lead, at my age, wandering from city to city, ever changing my place of exile, and always being driven out! For I am quite sure that wherever I go, there, as here, the young men will flock to me; and if I drive them away, their elders will drive me out at their request; and if I let them come, their fathers and friends will drive me out for their sakes.

Some one will say: Yes, Socrates, but cannot you hold your tongue, and then you may go into a foreign city, and no one will interfere with you? Now I have great difficulty in making you understand my answer to this. For if I tell you that to do as you say would be a disobedience to the God, and therefore that I cannot hold my tongue, you will not believe that I am serious; and if I say again that daily to discourse about virtue, and of those other things about which you hear me examining myself and others, is the greatest good of man, and that the unexamined life is not worth living, you are still less likely to believe me. Yet I say what is true, although a thing of which it is hard for me to persuade you. Also, I have never been accustomed to think that I deserve to suffer any harm. Had I money I might have estimated the offence at what I was able to pay, and not have been much the worse. But I have none, and therefore I must ask you to proportion the fine to my means. Well, perhaps I could afford a mina, and therefore I propose that penalty: Plato, Crito, Critobulus, and Apollodorus, my friends here, bid me say thirty minæ, and they will be the sureties. Let thirty minæ be the penalty; for which sum they will be ample security to you.

Not much time will be gained, O Athenians, in return for the evil name which you will get from the detractors of the city, who will say that you killed Socrates, a wise man; for they will call me wise, even although I am not wise, when they want to reproach you. If you had waited a little while, your desire would have been fulfilled in the course of nature. For I am far advanced in years, as you may perceive, and not far from death. I am speaking now not to all of you, but only to those who have condemned me to death. And I have another thing to say to them: you think that I was convicted because I had no words of the sort which would have procured my acquittal—I mean, if I had thought fit to leave nothing undone or unsaid. Not so; the deficiency which led to my conviction was not of words—certainly not. But I had not the boldness or impudence or inclination to address you as you would have liked me to do, weeping and wailing and lamenting, and saying and doing many things which you have been accustomed to hear from others, and which, as I maintain, are unworthy of me. I thought at the time that I ought not to do anything common or mean when in danger: nor do I now repent of the style of my defence; I would rather die having spoken after my manner, than speak in your manner and live. For neither in war nor yet at law ought I or any man to use every way of escaping death. Often in battle there can be no doubt that if a man will throw away his arms, and fall on his knees before his pursuers, he may escape death; and in other dangers there are other ways of escaping death, if a man is willing to say and do anything. The difficulty, my friends, is not to avoid death, but to avoid unrighteousness; for that runs faster than death. I am old and move slowly, and the slower runner has overtaken me, and my accusers are keen and quick, and the faster runner, who is unrighteousness, has overtaken them. And now I depart hence condemned by you to suffer the penalty of death,—they too go their ways condemned by the truth to suffer the penalty of villainy and wrong; and I must abide by my award—let them abide by theirs. I suppose that these things may be regarded as fated,—and I think that they are well.

And now, O men who have condemned me, I would fain prophesy to you; for I am about to die, and in the hour of death men are gifted with prophetic power. And I prophesy to you who are my murderers, that immediately after my departure punishment far heavier than you have inflicted on me will surely await you. Me you have killed because you wanted to escape the accuser, and not to give an account of your lives. But that will not be as you suppose: far otherwise. For I say that there will be more accusers of you than there are now; accusers whom hitherto I have restrained: and as they are younger they will be more inconsiderate with you, and you will be more offended at them. If you think that by killing men you can prevent some one from censuring your evil lives, you are mistaken; that is not a way of escape which is either possible or honourable; the easiest and the noblest way is not to be disabling others, but to be improving yourselves. This is the prophecy which I utter before my departure to the judges who have condemned me.

Friends, who would have acquitted me, I would like also to talk with you about the thing which has come to pass, while the magistrates are busy, and before I go to the place at which I must die. Stay then a little, for we may as well talk with one another while there is time. You are my friends, and I should like to show you the meaning of this event which has happened to me. O my judges—for you I may truly call judges—I should like to tell you of a wonderful circumstance. Hitherto the divine faculty of which the internal oracle is the source has constantly been in the habit of opposing me even about trifles, if I was going to make a slip or error in any matter; and now as you see there has come upon me that which may be thought, and is generally believed to be, the last and worst evil. But the oracle made no sign of opposition, either when I was leaving my house in the morning, or when I was on my way to the court, or while I was speaking, at anything which I was going to say; and yet I have often been stopped in the middle of a speech, but now in nothing I either said or did touching the matter in hand has the oracle opposed me. What do I take to be the explanation of this silence? I will tell you. It is an intimation that what has happened to me is a good, and that those of us who think that death is an evil are in error. For the customary sign would surely have opposed me had I been going to evil and not to good.

Let us reflect in another way, and we shall see that there is great reason to hope that death is a good; for one of two things—either death is a state of nothingness and utter unconsciousness, or, as men say, there is a change and migration of the soul from this world to another. Now if you suppose that there is no consciousness, but a sleep like the sleep of him who is undisturbed even by dreams, death will be an unspeakable gain. For if a person were to select the night in which his sleep was undisturbed even by dreams, and were to compare with this the other days and nights of his life, and then were to tell us how many days and nights he had passed in the course of his life better and more pleasantly than this one, I think that any man, I will not say a private man, but even the great king will not find many such days or nights, when compared with the others. Now if death be of such a nature, I say that to die is gain; for eternity is then only a single night. But if death is the journey to another place, and there, as men say, all the dead abide, what good, O my friends and judges, can be greater than this? If indeed when the pilgrim arrives in the world below, he is delivered from the professors of justice in this world, and finds the true judges who are said to give judgment there, Minos and Rhadamanthus and Aeacus and Triptolemus, and other sons of God who were righteous in their own life, that pilgrimage will be

worth making. What would not a man give if he might converse with Orpheus and Musaeus and Hesiod and Homer? Nay, if this be true, let me die again and again. I myself, too, shall have a wonderful interest in there meeting and conversing with Palamedes, and Ajax the son of Telamon, and any other ancient hero who has suffered death through an unjust judgment; and there will be no small pleasure, as I think, in comparing my own sufferings with theirs. Above all, I shall then be able to continue my search into true and false knowledge; as in this world, so also in the next; and I shall find out who is wise, and who pretends to be wise, and is not. What would not a man give, O judges, to be able to examine the leader of the great Trojan expedition; or Odysseus or Sisyphus, or numberless others, men and women too! What infinite delight would there be in conversing with them and asking them questions! In another world they do not put a man to death for asking questions: assuredly not. For besides being happier than we are, they will be immortal, if what is said is true.

Wherefore, O judges, be of good cheer about death, and know of a certainty, that no evil can happen to a good man, either in life or after death. He and his are not neglected by the gods; nor has my own approaching end happened by mere chance. But I see clearly that the time had arrived when it was better for me to die and be released from trouble; wherefore the oracle gave no sign. For which reason, also, I am not angry with my condemners, or with my accusers; they have done me no harm, although they did not mean to do me any good; and for this I may gently blame them.

Still I have a favour to ask of them. When my sons are grown up, I would ask you, O my friends, to punish them; and I would have you trouble them, as I have troubled you, if they seem to care about riches, or anything, more than about virtue; or if they pretend to be something when they are really nothing,—then reprove them, as I have reproved you, for not caring about that for which they ought to care, and thinking that they are something when they are really nothing. And if you do this, both I and my sons will have received justice at your hands.

The hour of departure has arrived, and we go our ways—I to die, and you to live. Which is better God only knows.

SIDDHARTHA

Eine indische Dichtung

von Hermann Hesse

ERSTER TEIL

Romain Rolland dem verehrten Freunde gewidmet

DER SOHN DES BRAHMANEN

Im Schatten des Hauses, in der Sonne des Flußufers bei den Booten, im Schatten des Salwaldes, im Schatten des Feigenbaumes wuchs Siddhartha auf, der schöne Sohn des Brahmanen, der junge Falke, zusammen mit Govinda, seinem Freunde, dem Brahmanensohn. Sonne bräunte seine lichten Schultern am Flußufer, beim Bade, bei den heiligen Waschungen, bei den heiligen Opfern. Schatten floß in seine schwarzen Augen im Mangohain, bei den Knabenspielen, beim Gesang der Mutter, bei den heiligen Opfern, bei den Lehren seines Vaters, des Gelehrten, beim Gespräch der Weisen. Lange schon nahm Siddhartha am Gespräch der Weisen teil, übte sich mit Govinda im Redekampf, übte sich mit Govinda in der Kunst der Betrachtung, im Dienst der Versenkung. Schon verstand er, lautlos das Om zu sprechen, das Wort der Worte, es lautlos in sich hinein zu sprechen mit dem Einhauch, es lautlos aus sich heraus zu sprechen mit dem Aushauch, mit gesammelter Seele, die Stirn umgeben vom Glanz des klardenkenden Geistes. Schon verstand er, im Innern seines Wesens Atman zu wissen, unzerstörbar, eins mit dem Weltall.

Freude sprang in seines Vaters Herzen über den Sohn, den Gelehrigen, den Wissensdurstigen, einen großen Weisen und Priester sah er in ihm heranwachsen, einen Fürsten unter den Brahmanen.

Wonne sprang in seiner Mutter Brust, wenn sie ihn sah, wenn sie ihn schreiten, wenn sie ihn niedersitzen und aufstehen sah, Siddhartha, den Starken, den Schönen, den auf schlanken Beinen Schreitenden, den mit vollkommenem Anstand sie Begrüßenden.

Liebe rührte sich in den Herzen der jungen Brahmanentöchter, wenn Siddhartha durch die Gassen der Stadt ging, mit der leuchtenden Stirn, mit dem Königsauge, mit den schmalen Hüften.

Mehr als sie alle aber liebte ihn Govinda, sein Freund, der Brahmanensohn. Er liebte Siddharthas Auge und holde Stimme, er liebte seinen Gang und den vollkommenen Anstand seiner Bewegungen, er liebte alles, was Siddhartha tat und sagte, und am meisten liebte er seinen Geist, seine hohen, feurigen Gedanken, seinen glühenden Willen, seine hohe Berufung. Govinda wußte: dieser wird kein gemeiner Brahmane werden, kein fauler Opferbeamter, kein habgieriger Händler mit Zaubersprüchen, kein eitler, leerer Redner, kein böser, hinterlistiger Priester, und auch kein gutes, dummes Schaf in der Herde der Vielen. Nein, und auch er, Govinda, wollte kein solcher werden, kein Brahmane, wie es zehntausend gibt. Er wollte Siddhartha folgen, dem Geliebten, dem Herrlichen. Und wenn Siddhartha einstmals ein Gott würde, wenn er einstmals eingehen würde zu den Strahlenden, dann wollte Govinda ihm folgen, als sein Freund, als sein Begleiter, als sein Diener, als sein Speerträger, sein Schatten.

So liebten den Siddhartha alle. Allen schuf er Freude, allen war er zur Lust.

Er aber, Siddhartha, schuf sich nicht Freude, er war sich nicht zur Lust. Wandelnd auf den rosigen Wegen des Feigengartens, sitzend im bläulichen Schatten des Hains der Betrachtung, waschend seine Glieder im täglichen Sühnebad, opfernd im tiefschattigen Mangowald, von vollkommenem Anstand der Gebärden, von allen geliebt, aller Freude, trug er doch keine Freude im

Herzen. Träume kamen ihm und rastlose Gedanken aus dem Wasser des Flusses geflossen, aus den Sternen der Nacht gefunkelt, aus den Strahlen der Sonne geschmolzen, Träume kamen ihm und Ruhelosigkeit der Seele, aus den Opfern geraucht, aus den Versen der Rig-Veda gehaucht, aus den Lehren der alten Brahmanen geträufelt.

Siddhartha hatte begonnen, Unzufriedenheit in sich zu nähren. Er hatte begonnen zu fühlen, daß die Liebe seines Vaters, und die Liebe seiner Mutter, und auch die Liebe seines Freundes, Govindas, nicht immer und für alle Zeit ihn beglücken, ihn stillen, ihn sättigen, ihm genügen werde. Er hatte begonnen zu ahnen, daß sein ehrwürdiger Vater und seine anderen Lehrer, daß die weisen Brahmanen ihm von ihrer Weisheit das meiste und beste schon mitgeteilt, daß sie ihre Fülle schon in sein wartendes Gefäß gegossen hätten, und das Gefäß war nicht voll, der Geist war nicht begnügt, die Seele war nicht ruhig, das Herz nicht gestillt. Die Waschungen waren gut, aber sie waren Wasser, sie wuschen nicht Sünde ab, sie heilten nicht Geistesdurst, sie lösten nicht Herzensangst. Vortrefflich waren die Opfer und die Anrufung der Götter--aber war dies alles? Gaben die Opfer Glück? Und wie war das mit den Göttern? War es wirklich Prajapati, der die Welt erschaffen hat? War es nicht der Atman, Er, der Einzige, der All-Eine? Waren nicht die Götter Gestaltungen, erschaffen wie ich und du, der Zeit untertan, vergänglich? War es also gut, war es richtig, war es ein sinnvolles und höchstes Tun, den Göttern zu opfern? Wem anders war zu opfern, wem anders war Verehrung darzubringen als Ihm, dem Einzigen, dem Atman? Und wo war Atman zu finden, wo wohnte Er, wo schlug Sein ewiges Herz, wo anders als im eigenen Ich, im Innersten, im Unzerstörbaren, das ein jeder in sich trug? Aber wo, wo war dies Ich, dies Innerste, dies Letzte? Es war nicht Fleisch und Bein, es war nicht Denken noch Bewußtsein, so lehrten die Weisesten. Wo, wo also war es? Dorthin zu dringen, zum Ich, zu mir, zum Atman,--gab es einen andern Weg, den zu suchen sich lohnte? Ach, und niemand zeigte diesen Weg, niemand wußte ihn, nicht der Vater, nicht die Lehrer und Weisen, nicht die heiligen Opfergesänge! Alles wußten sie, die Brahmanen und ihre heiligen Bücher, alles wußten sie, um alles hatten sie sich gekümmert und um mehr als alles, die Erschaffung der Welt, das Entstehen der Rede, der Speise, des Einatmens, des Ausatmens, die Ordnungen der Sinne, die Taten der Götter--unendlich vieles wußten sie--aber war es wertvoll, dies alles zu wissen, wenn man das Eine und Einzige nicht wußte, das Wichtigste, das allein Wichtige?

Gewiß, viele Verse der heiligen Bücher, zumal in den Upanishaden des Samaveda, sprachen von diesem Innersten und Letzten, herrliche Verse. "Deine Seele ist die ganze Welt", stand da geschrieben, und geschrieben stand, daß der Mensch im Schlafe, im Tiefschlaf, zu seinem Innersten eingehe und im Atman wohne. Wunderbare Weisheit stand in diesen Versen, alles Wissen der Weisesten stand hier in magischen Worten gesammelt, rein wie von Bienen gesammelter Honig. Nein, nicht gering zu achten war das Ungeheure an Erkenntnis, das hier von unzählbaren Geschlechterfolgen weiser Brahmanen gesammelt und bewahrt lag.--Aber wo waren die Brahmanen, wo die Priester, wo die Weisen oder Büßer, denen es gelungen war, dieses tiefste Wissen nicht bloß zu wissen, sondern zu leben? Wo war der Kundige, der das Daheimsein im Atman aus dem Schlafe herüberzauberte ins Wachsein, in das Leben, in Schritt und Tritt, in Wort und Tat? Viele ehrwürdige Brahmanen kannte Siddhartha, seinen Vater vor allen, den Reinen, den Gelehrten, den höchst Ehrwürdigen. Zu bewundern war sein Vater, still und edel war sein Gehaben, rein sein Leben, weise sein Wort, feine und adlige Gedanken wohnten in seiner Stirn--aber auch er, der so viel Wissende, lebte er denn in Seligkeit, hatte er Frieden, war er nicht auch nur ein Suchender, ein Dürstender? Mußte er nicht immer und immer wieder an heiligen Quellen, ein Durstender, trinken, am Opfer, an den Büchern, an der Wechselrede der Brahmanen? Warum mußte er, der Untadelige, jeden Tag Sünde abwaschen, jeden Tag sich um Reinigung mühen, jeden Tag von neuem? War denn nicht Atman in ihm, floß denn nicht in seinem eigenen Herzen der Urquell? Ihn mußte man finden, den Urquell im eigenen Ich, ihn mußte man zu eigen haben! Alles andre war Suchen, war Umweg, war Verirrung.

So waren Siddharthas Gedanken, dies war sein Durst, dies sein Leiden.

Oft sprach er aus einem Chandogya-Upanishad sich die Worte vor: "Fürwahr, der Name des Brahman ist Satyam--wahrlich, wer solches weiß, der geht täglich ein in die himmlische Welt." Oft schien sie nahe, die himmlische Welt, aber niemals hatte er sie ganz erreicht, nie den letzten Durst gelöscht. Und von allen Weisen und Weisesten, die er kannte und deren Belehrung er genoß, von ihnen allen war keiner, der sie ganz erreicht hatte, die himmlische Welt, der ihn ganz gelöscht hatte, den ewigen Durst.

"Govinda," sprach Siddhartha zu seinem Freunde, "Govinda, Lieber, komm mit mir unter den Banyanenbaum, wir wollen der Versenkung pflegen."

Sie gingen zum Banyanenbaum, sie setzten sich nieder, hier Siddhartha, zwanzig Schritte weiter Govinda. Indem er sich niedersetzte, bereit, das Om zu sprechen, wiederholte Siddhartha murmelnd den Vers:

Om ist Bogen, der Pfeil ist Seele, Das Brahman ist des Pfeiles Ziel, Das soll man unentwegt treffen.

Als die gewohnte Zeit der Versenkungsübung hingegangen war, erhob sich Govinda. Der Abend war gekommen, Zeit war es, die Waschung der Abendstunde vorzunehmen. Er rief Siddharthas Namen. Siddhartha gab nicht Antwort. Siddhartha saß versunken, seine Augen standen starr auf ein sehr fernes Ziel gerichtet, seine Zungenspitze stand ein wenig zwischen den Zähnen hervor, er schien nicht zu atmen. So saß er, in Versenkung gehüllt, Om denkend, seine Seele als Pfeil nach dem Brahman ausgesandt.

Einst waren Samanas durch Siddharthas Stadt gezogen, pilgernde Asketen, drei dürre, erloschene Männer, nicht alt noch jung, mit staubigen und blutigen Schultern, nahezu nackt von der Sonne versengt, von Einsamkeit umgeben, fremd und feind der Welt, Fremdlinge und hagere Schakale im Reich der Menschen. Hinter ihnen her wehte heiß ein Duft von stiller Leidenschaft, von zerstörendem Dienst, von mitleidloser Entselbstung.

Am Abend, nach der Stunde der Betrachtung, sprach Siddhartha zu Govinda: "Morgen in der Frühe, mein Freund, wird Siddhartha zu den Samanas gehen. Er wird ein Samana werden."

Govinda erbleichte, da er die Worte hörte und im unbewegten Gesicht seines Freundes den Entschluß las, unablenkbar wie der vom Bogen losgeschnellte Pfeil. Alsbald und beim ersten Blick erkannte Govinda: Nun beginnt es, nun geht Siddhartha seinen Weg, nun beginnt sein Schicksal zu sprossen, und mit seinem das meine. Und er wurde bleich wie eine trockene Bananenschale.

"O Siddhartha," rief er, "wird das dein Vater dir erlauben?"

Siddhartha blickte herüber wie ein Erwachender. Pfeilschnell las er in Govindas Seele, las die Angst, las die Ergebung.

"O Govinda," sprach er leise, "wir wollen nicht Worte verschwenden. Morgen mit Tagesanbruch werde ich das Leben der Samanas beginnen. Rede nicht mehr davon."

Siddhartha trat in die Kammer, wo sein Vater auf einer Matte aus Bast saß, und trat hinter seinen Vater und blieb da stehen, bis sein Vater fühlte, daß einer hinter ihm stehe. Sprach der Brahmane: "Bist du es, Siddhartha? So sage, was zu sagen du gekommen bist."

Sprach Siddhartha: "Mit deiner Erlaubnis, mein Vater. Ich bin gekommen, dir zu sagen, daß mich verlangt, morgen dein Haus zu verlassen und zu den Asketen zu gehen. Ein Samana zu werden ist mein Verlangen. Möge mein Vater dem nicht entgegen sein."

Der Brahmane schwieg, und schwieg so lange, daß im kleinen Fenster die Sterne wanderten und ihre Figur veränderten, ehe das Schweigen in der Kammer ein Ende fand. Stumm und regungslos stand mit gekreuzten Armen der Sohn, stumm und regungslos saß auf der Matte der Vater, und die Sterne zogen am Himmel. Da sprach der Vater: "Nicht ziemt es dem Brahmanen, heftige und zornige Worte zu reden. Aber Unwille bewegt mein Herz. Nicht möchte ich diese Bitte zum zweiten Male aus deinem Munde hören."

Langsam erhob sich der Brahmane, Siddhartha stand stumm mit gekreuzten Armen.

"Worauf wartest du?" fragte der Vater.

Sprach Siddhartha: "Du weißt es."

Unwillig ging der Vater aus der Kammer, unwillig suchte er sein Lager auf und legte sich nieder.

Nach einer Stunde, da kein Schlaf in seine Augen kam, stand der Brahmane auf, tat Schritte hin und her, trat aus dem Hause. Durch das kleine Fenster der Kammer blickte er hinein, da sah er Siddhartha stehen, mit gekreuzten Armen, unverrückt. Bleich schimmerte sein helles Obergewand. Unruhe im Herzen, kehrte der Vater zu seinem Lager zurück.

Nach einer Stunde, da kein Schlaf in seine Augen kam, stand der Brahmane von neuem auf, tat Schritte hin und her, trat vor das Haus, sah den Mond aufgegangen. Durch das Fenster der Kammer blickte er hinein, da stand Siddhartha, unverrückt, mit gekreuzten Armen, an seinen bloßen Schienbeinen spiegelte das Mondlicht. Besorgnis im Herzen, suchte der Vater sein Lager auf.

Und er kam wieder nach einer Stunde, und kam wieder nach zweien Stunden, blickte durchs kleine Fenster, sah Siddhartha stehen, im Mond, im Sternenschein, in der Finsternis. Und kam wieder von Stunde zu Stunde, schweigend, blickte in die Kammer, sah den unverrückt Stehenden, füllte sein Herz mit Zorn, füllte sein Herz mit Unruhe, füllte sein Herz mit Zagen, füllte es mit Leid.

Und in der letzten Nachtstunde, ehe der Tag begann, kehrte er wieder, trat in die Kammer, sah den Jüngling stehen, der ihm groß und wie fremd erschien.

"Siddhartha," sprach er, "worauf wartest du?"

"Du weißt es."

"Wirst du immer so stehen und warten, bis es Tag wird, Mittag wird, Abend wird?"

"Ich werde stehen und warten."

"Du wirst müde werden, Siddhartha."

"Ich werde müde werden."

"Du wirst einschlafen, Siddhartha."

"Ich werde nicht einschlafen."

"Du wirst sterben, Siddhartha."

"Ich werde sterben."

"Und willst lieber sterben, als deinem Vater gehorchen?"

"Siddhartha hat immer seinem Vater gehorcht."

"So willst du dein Vorhaben aufgeben?"

"Siddhartha wird tun, was sein Vater ihm sagen wird."

Der erste Schein des Tages fiel in die Kammer. Der Brahmane sah, daß Siddhartha in den Knien leise zitterte. In Siddharthas Gesicht sah er kein Zittern, fernhin blickten die Augen. Da erkannte der Vater, daß Siddhartha schon jetzt nicht mehr bei ihm und in der Heimat weile, daß er ihn schon jetzt verlassen habe.

Der Vater berührte Siddharthas Schulter.

"Du wirst," sprach er, "in den Wald gehen und ein Samana sein. Hast du Seligkeit gefunden im Walde, so komm und lehre mich Seligkeit. Findest du Enttäuschung, dann kehre wieder und laß uns wieder gemeinsam den Göttern opfern. Nun gehe und küsse deine Mutter, sage ihr, wohin du gehst. Für mich aber ist es Zeit, an den Fluß zu gehen und die erste Waschung vorzunehmen."

Er nahm die Hand von der Schulter seines Sohnes und ging hinaus. Siddhartha schwankte zur Seite, als er zu gehen versuchte. Er bezwang seine Glieder, verneigte sich vor seinem Vater und ging zur Mutter, um zu tun, wie der Vater gesagt hatte.

Als er im ersten Tageslicht langsam auf erstarrten Beinen die noch stille Stadt verließ, erhob sich bei der letzten Hütte ein Schatten, der dort gekauert war, und schloß sich an den Pilgernden an--Govinda.

"Du bist gekommen", sagte Siddhartha und lächelte.

"Ich bin gekommen," sagte Govinda.

BEI DEN SAMANAS

Am Abend dieses Tages holten sie die Asketen ein, die dürren Samanas, und boten ihnen Begleitschaft und Gehorsam an. Sie wurden angenommen.

Siddhartha schenkte sein Gewand einem armen Brahmanen auf der Straße. Er trug nur noch die Schambinde und den erdfarbenen ungenähten Überwurf. Er aß nur einmal am Tage, und niemals Gekochtes. Er fastete fünfzehn Tage. Er fastete acht und zwanzig Tage. Das Fleisch schwand ihm von Schenkeln und Wangen. Heiße Träume flackerten aus seinen vergrößerten Augen, an seinen dorrenden Fingern wuchsen lang die Nägel und am Kinn der trockne, struppige Bart. Eisig wurde sein Blick, wenn er Weibern begegnete; sein Mund zuckte Verachtung, wenn er durch eine Stadt mit schön gekleideten Menschen ging. Er sah Händler handeln, Fürsten zur Jagd gehen, Leidtragende ihre Toten beweinen, Huren sich anbieten, Ärzte sich um Kranke mühen, Priester den Tag für die Aussaat bestimmen, Liebende lieben, Mütter ihre Kinder stillen--und alles war nicht den Blick seines Auges wert, alles log, alles stank, alles stank nach Lüge, alles täuschte Sinn und Glück und Schönheit vor, und alles war

uneingestandene Verwesung. Bitter schmeckte die Welt. Qual war das Leben.

Ein Ziel stand vor Siddhartha, ein einziges: leer werden, leer von Durst, leer von Wunsch, leer von Traum, leer von Freude und Leid. Von sich selbst wegsterben, nicht mehr Ich sein, entleerten Herzens Ruhe zu finden, im entselbsteten Denken dem Wunder offen zu stehen, das war sein Ziel. Wenn alles Ich überwunden und gestorben war, wenn jede Sucht und jeder Trieb im Herzen schwieg, dann mußte das Letzte erwachen, das Innerste im Wesen, das nicht mehr Ich ist, das große Geheimnis.

Schweigend stand Siddhartha im senkrechten Sonnenbrand, glühend vor Schmerz, glühend vor Durst, und stand, bis er nicht Schmerz noch Durst mehr fühlte. Schweigend stand er in der Regenzeit, aus seinem Haare troff das Wasser über frierende Schultern, über frierende Hüften und Beine, und der Büßer stand, bis Schultern und Beine nicht mehr froren, bis sie schwiegen, bis sie still waren. Schweigend kauerte er im Dorngerank, aus der brennenden Haut tropfte das Blut, aus Schwären der Eiter, und Siddhartha verweilte starr, verweilte regungslos, bis kein Blut mehr floß, bis nichts mehr stach, bis nichts mehr brannte.

Siddhartha saß aufrecht und lernte den Atem sparen, lernte mit wenig Atem auskommen, lernte den Atem abzustellen. Er lernte, mit dem Atem beginnend, seinen Herzschlag beruhigen, lernte die Schläge seines Herzens vermindern, bis es wenige und fast keine mehr waren.

Vom Ältesten der Samanas belehrt, übte Siddhartha Entselbstung, übte Versenkung, nach neuen Samanaregeln. Ein Reiher flog überm Bambuswald--und Siddhartha nahm den Reiher in seine Seele auf, flog über Wald und Gebirg, war Reiher, fraß Fische, hungerte Reiherhunger, sprach Reihergekrächz, starb Reihertod. Ein toter Schakal lag am Sandufer, und Siddharthas Seele schlüpfte in den Leichnam hinein, war toter Schakal, lag am Strande, blähte sich, stank, verweste, ward von Hyänen zerstückt, ward von Geiern enthäutet, ward Gerippe, ward Staub, wehte ins Gefild. Und Siddharthas Seele kehrte zurück, war gestorben, war verwest, war zerstäubt, hatte den trüben Rausch des Kreislaufs geschmeckt, harrte in neuem Durst wie ein Jäger auf die Lücke, wo dem Kreislauf zu entrinnen wäre, wo das Ende der Ursachen, wo leidlose Ewigkeit begänne. Er tötete seine Sinne, er tötete seine Erinnerung, er schlüpfte aus seinem Ich in tausend fremde Gestaltungen, war Tier, war Aas, war Stein, war Holz, war Wasser, und fand sich jedesmal erwachend wieder, Sonne schien oder Mond, war wieder Ich, schwang im Kreislauf, fühlte Durst, überwand den Durst, fühlte neuen Durst.

Vieles lernte Siddhartha bei den Samanas, viele Wege vom Ich hinweg lernte er gehen. Er ging den Weg der Entselbstung durch den Schmerz, durch das freiwillige Erleiden und Überwinden des Schmerzes, des Hungers, des Dursts, der Müdigkeit. Er ging den Weg der Entselbstung durch Meditation, durch das Leerdenken des Sinnes von allen Vorstellungen. Diese und andere Wege lernte er gehen, tausendmal verließ er sein Ich, stundenlang und tagelang verharrte er im Nicht-Ich. Aber ob auch die Wege vom Ich hinwegführten, ihr Ende führte doch immer zum Ich zurück. Ob Siddhartha tausendmal dem Ich entfloh, im Nichts verweilte, im Tier, im Stein verweilte, unvermeidlich war die Rückkehr, unentrinnbar die Stunde, da er sich wiederfand, im Sonnenschein oder im Mondschein, im Schatten oder im Regen, und wieder Ich und Siddhartha war, und wieder die Qual des auferlegten Kreislaufes empfand.

Neben ihm lebte Govinda, sein Schatten, ging dieselben Wege, unterzog sich denselben Bemühungen. Selten sprachen sie anderes miteinander, als der Dienst und die Übungen erforderten. Zuweilen gingen sie zu zweien durch die Dörfer, um Nahrung für sich und ihre Lehrer zu betteln.

"Wie denkst du, Govinda," sprach einst auf diesem Bettelgang Siddhartha, "wie denkst du, sind wir weiter gekommen? Haben wir Ziele erreicht?"

Antwortete Govinda: "Wir haben gelernt, und wir lernen weiter. Du wirst ein großer Samana sein, Siddhartha. Schnell hast du jede Übung gelernt, oft haben die alten Samanas dich bewundert. Du wirst einst ein Heiliger sein, o Siddhartha."

Sprach Siddhartha: "Mir will es nicht so erscheinen, mein Freund. Was ich bis zu diesem Tage bei den Samanas gelernt habe, das, o Govinda, hätte ich schneller und einfacher lernen können. In jeder Kneipe eines Hurenviertels, mein Freund, unter den Fuhrleuten und Würfelspielern hätte ich es lernen können."

Sprach Govinda: "Siddhartha macht sich einen Scherz mit mir. Wie hättest du Versenkung, wie hättest du Anhalten des Atems, wie hättest du Unempfindsamkeit gegen Hunger und Schmerz dort bei jenen Elenden lernen sollen?"

Und Siddhartha sagte leise, als spräche er zu sich selber: "Was ist Versenkung? Was ist Verlassen des Körpers? Was ist Fasten? Was ist Anhalten des Atems? Es ist Flucht vor dem Ich, es ist ein kurzes Entrinnen aus der Qual des Ichseins, es ist eine kurze

Betäubung gegen den Schmerz und die Unsinnigkeit des Lebens. Dieselbe Flucht, dieselbe kurze Betäubung findet der Ochsentreiber in der Herberge, wenn er einige Schalen Reiswein trinkt oder gegorene Kokosmilch. Dann fühlt er sein Selbst nicht mehr, dann fühlt er die Schmerzen des Lebens nicht mehr, dann findet er kurze Betäubung. Er findet, über seiner Schale mit Reiswein eingeschlummert, dasselbe, was Siddhartha und Govinda finden, wenn sie in langen Übungen aus ihrem Körper entweichen, im Nicht-Ich verweilen. So ist es, o Govinda."

Sprach Govinda: "So sagst du, o Freund, und weißt doch, daß Siddhartha kein Ochsentreiber ist und ein Samana kein Trunkenbold. Wohl findet der Trinker Betäubung, wohl findet er kurze Flucht und Rast, aber er kehrt zurück aus dem Wahn und findet alles beim alten, ist nicht weiser geworden, hat nicht Erkenntnis gesammelt, ist nicht um Stufen höher gestiegen."

Und Siddhartha sprach mit Lächeln: "Ich weiß es nicht, ich bin nie ein Trinker gewesen. Aber daß ich, Siddhartha, in meinen Übungen und Versenkungen nur kurze Betäubung finde und ebenso weit von der Weisheit, von der Erlösung entfernt bin wie als Kind im Mutterleibe, das weiß ich, o Govinda, das weiß ich."

Und wieder ein anderes Mal, da Siddhartha mit Govinda den Wald verließ, um im Dorfe etwas Nahrung für ihre Brüder und Lehrer zu betteln, begann Siddhartha zu sprechen und sagte: "Wie nun, o Govinda, sind wir wohl auf dem rechten Wege? Nähern wir uns wohl der Erkenntnis? Nähern wir uns wohl der Erlösung? Oder gehen wir nicht vielleicht im Kreise--wir, die wir doch dem Kreislauf zu entrinnen dachten?"

Sprach Govinda: "Viel haben wir gelernt, Siddhartha, viel bleibt noch zu lernen. Wir gehen nicht im Kreise, wir gehen nach oben, der Kreis ist eine Spirale, manche Stufe sind wir schon gestiegen."

Antwortete Siddhartha: "Wie alt wohl, meinst du, ist unser ältester Samana, unser ehrwürdiger Lehrer?"

Sprach Govinda: "Vielleicht sechzig Jahre mag unser Ältester zählen."

Und Siddhartha: "Sechzig Jahre ist er alt geworden und hat Nirwana nicht erreicht. Er wird siebzig werden und achtzig, und du und ich, wir werden ebenso alt werden und werden uns üben, und werden fasten, und werden meditieren. Aber Nirwana werden wir nicht erreichen, er nicht, wir nicht. O Govinda, ich glaube, von allen Samanas, die es gibt, wird vielleicht nicht einer, nicht einer Nirwana erreichen. Wir finden Tröstungen, wir finden Betäubungen, wir lernen Kunstfertigkeiten, mit denen wir uns täuschen. Das Wesentliche aber, den Weg der Wege finden wir nicht."

"Mögest du doch," sprach Govinda, "nicht so erschreckende Worte aussprechen, Siddhartha! Wie sollte denn unter so vielen gelehrten Männern, unter so viel Brahmanen, unter so vielen strengen und ehrwürdigen Samanas, unter so viel suchenden, so viel innig beflissenen, so viel heiligen Männern keiner den Weg der Wege finden?"

Siddhartha aber sagte mit einer Stimme, welche so viel Trauer wie Spott enthielt, mit einer leisen, einer etwas traurigen, einer etwas spöttischen Stimme: "Bald, Govinda, wird dein Freund diesen Pfad der Samanas verlassen, den er so lang mit dir gegangen ist. Ich leide Durst, o Govinda, und auf diesem langen Samanawege ist mein Durst um nichts kleiner geworden. Immer habe ich nach Erkenntnis gedürstet, immer bin ich voll von Fragen gewesen. Ich habe die Brahmanen befragt, Jahr um Jahr, und habe die heiligen Vedas befragt, Jahr um Jahr, und habe die frommen Samanas befragt, Jahr um Jahr. Vielleicht, o Govinda, wäre es ebenso gut, wäre es ebenso klug und ebenso heilsam gewesen, wenn ich den Nashornvogel oder den Schimpansen befragt hätte. Lange Zeit habe ich gebraucht und bin noch nicht damit zu Ende, um dies zu lernen, o Govinda: daß man nichts lernen kann! Es gibt, so glaube ich, in der Tat jenes Ding nicht, das wir 'Lernen' nennen. Es gibt, o mein Freund, nur ein Wissen, das ist überall, das ist Atman, das ist in mir und in dir und in jedem Wesen. Und so beginne ich zu glauben dies Wissen hat keinen ärgeren Feind als das Wissenwollen, als das Lernen."

Da blieb Govinda auf dem Wege stehen, erhob die Hände und sprach: "Mögest du, Siddhartha, deinen Freund doch nicht mit solchen Reden beängstigen! Wahrlich, Angst erwecken deine Worte in meinem Herzen. Und denke doch nur: wo bliebe die Heiligkeit der Gebete, wo bliebe die Ehrwürdigkeit des Brahmanenstandes, wo die Heiligkeit der Samanas, wenn es so wäre wie du sagst, wenn es kein Lernen gäbe?! Was, o Siddhartha, was würde dann aus alledem werden, was auf Erden heilig, was wertvoll, was ehrwürdig ist?!"

Und Govinda murmelte einen Vers vor sich hin, einen Vers aus einer Upanishad:

Wer nachsinnend, geläuterten Geistes, in Atman sich versenkt, Unaussprechlich durch Worte ist seines Herzens Seligkeit.

Siddhartha aber schwieg. Er dachte der Worte, welche Govinda zu ihm gesagt hatte, und dachte die Worte bis an ihr Ende.

Ja, dachte er, gesenkten Hauptes stehend, was bliebe noch übrig von allem, was uns heilig schien? Was bleibt? Was bewährt sich? Und er schüttelte den Kopf.

Einstmals, als die beiden Jünglinge gegen drei Jahre bei den Samanas gelebt und ihre Übungen geteilt hatten, da erreichte sie auf mancherlei Wegen und Umwegen eine Kunde, ein Gerücht, eine Sage: Einer sei erschienen, Gotama genannt, der Erhabene, der Buddha, der habe in sich das Leid der Welt überwunden und das Rad der Wiedergeburten zum Stehen gebracht. Lehrend ziehe er, von Jüngern umgeben, durch das Land, besitzlos, heimatlos, weiblos, im gelben Mantel eines Asketen, aber mit heiterer Stirn, ein Seliger, und Brahmanen und Fürsten beugten sich vor ihm und würden seine Schüler.

Diese Sage, dies Gerücht, dies Märchen klang auf, duftete empor, hier und dort, in den Städten sprachen die Brahmanen davon, im Wald die Samanas, immer wieder drang der Name Gotamas, des Buddha, zu den Ohren der Jünglinge, im Guten und im Bösen, in Lobpreisung und in Schmähung.

Wie wenn in einem Lande die Pest herrscht, und es erhebt sich die Kunde, da und dort sei ein Mann, ein Weiser, ein Kundiger, dessen Wort und Anhauch genüge, um jeden von der Seuche Befallenen zu heilen, und wie dann diese Kunde das Land durchläuft und jedermann davon spricht, viele glauben, viele zweifeln, viele aber sich alsbald auf den Weg machen, um den Weisen, den Helfer aufzusuchen, so durchlief das Land jene Sage, jene duftende Sage von Gotama, dem Buddha, dem Weisen aus dem Geschlecht der Sakya. Ihm war, so sprachen die Gläubigen, höchste Erkenntnis zu eigen, er erinnerte sich seiner vormaligen Leben, er hatte Nirwana erreicht und kehrte nie mehr in den Kreislauf zurück, tauchte nie mehr in den trüben Strom der Gestaltungen unter. Vieles Herrliche und Unglaubliche wurde von ihm berichtet, er hatte Wunder getan, hatte den Teufel überwunden, hatte mit den Göttern gesprochen. Seine Feinde und Ungläubigen aber sagten, dieser Gotama sei ein eitler Verführer, er bringe seine Tage in Wohlleben hin, verachte die Opfer, sei ohne Gelehrsamkeit und kenne weder Übung noch Kasteiung.

Süß klang die Sage von Buddha, Zauber duftete aus diesen Berichten. Krank war ja die Welt, schwer zu ertragen war das Leben--und siehe, hier schien eine Quelle zu springen, hier schien ein Botenruf zu tönen, trostvoll, mild, edler Versprechungen voll. Überall, wohin das Gerücht vom Buddha erscholl, überall in den Ländern Indiens horchten die Jünglinge auf, fühlten Sehnsucht, fühlten Hoffnung, und unter den Brahmanensöhnen der Städte und Dörfer war jeder Pilger und Fremdling willkommen, wenn er Kunde von ihm, dem Erhabenen, dem Sakyamuni, brachte.

Auch zu den Samanas im Walde, auch zu Siddhartha, auch zu Govinda war die Sage gedrungen, langsam, in Tropfen, jeder Tropfen schwer von Hoffnung, jeder Tropfen schwer von Zweifel. Sie sprachen wenig davon, denn der Älteste der Samanas war kein Freund dieser Sage. Er hatte vernommen, daß jener angebliche Buddha vormals Asket gewesen und im Walde gelebt, sich dann aber zu Wohlleben und Weltlust zurückgewendet habe, und er hielt nichts von diesem Gotama.

"O Siddhartha", sprach einst Govinda zu seinem Freunde. "Heute war ich im Dorf, und ein Brahmane lud mich ein, in sein Haus zu treten, und in seinem Hause war ein Brahmanensohn aus Magadha, dieser hat mit seinen eigenen Augen den Buddha gesehen und hat ihn lehren hören. Wahrlich, da schmerzte mich der Atem in der Brust, und ich dachte bei mir: Möchte doch auch ich, möchten doch auch wir beide, Siddhartha und ich, die Stunde erleben, da wir die Lehre aus dem Munde jenes Vollendeten vernehmen! Sprich, Freund, wollen wir nicht auch dorthin gehen und die Lehre aus dem Munde des Buddha anhören?"

Sprach Siddhartha: "Immer, o Govinda, hatte ich gedacht, Govinda würde bei den Samanas bleiben, immer hatte ich geglaubt, es wäre sein Ziel, sechzig und siebzig Jahre alt zu worden und immer weiter die Künste und Übungen zu treiben, welche den Samana zieren. Aber sieh, ich hatte Govinda zu wenig gekannt, wenig wußte ich von seinem Herzen. Nun also willst du, Teuerster, einen neuen Pfad einschlagen und dorthin gehen, wo der Buddha seine Lehre verkündet."

Sprach Govinda: "Dir beliebt es zu spotten. Mögest du immerhin spotten, Siddhartha! Ist aber nicht auch in dir ein Verlangen, eine Lust erwacht, diese Lehre zu hören? Und hast du nicht einst zu mir gesagt, nicht lange mehr werdest du den Weg der Samanas gehen?"

Da lachte Siddhartha, auf seine Weise, wobei der Ton seiner Stimme einen Schatten von Trauer und einen Schatten von Spott annahm, und sagte: "Wohl, Govinda, wohl hast du gesprochen, richtig hast du dich erinnert. Mögest du doch auch des andern dich erinnern, das du von mir gehört hast, daß ich nämlich mißtrauisch und müde gegen Lehre und Lernen geworden bin, und daß mein Glaube klein ist an Worte, die von Lehrern zu uns kommen. Aber wohlan, Lieber, ich bin bereit, jene Lehre zu hören--obschon ich

im Herzen glaube, daß wir die beste Frucht jener Lehre schon gekostet haben."

Sprach Govinda: "Deine Bereitschaft erfreut mein Herz. Aber sage, wie sollte das möglich sein? Wie sollte die Lehre des Gotama, noch ehe wir sie vernommen, uns schon ihre beste Frucht erschlossen haben?"

Sprach Siddhartha: "Laß diese Frucht uns genießen und das weitere abwarten, o Govinda! Diese Frucht aber, die wir schon jetzt dem Gotama verdanken, besteht darin, daß er uns von den Samanas hinwegruft! Ob er uns noch anderes und Besseres zu geben hat, o Freund, darauf laß uns ruhigen Herzens warten."

An diesem selben Tage gab Siddhartha dem Ältesten der Samanas seinen Entschluß zu wissen, daß er ihn verlassen wollte. Er gab ihn dem Ältesten zu wissen mit der Höflichkeit und Bescheidenheit, welche dem Jüngeren und Schüler ziemt. Der Samana aber geriet in Zorn, daß die beiden Jünglinge ihn verlassen wollten, und redete laut und brauchte grobe Schimpfworte.

Govinda erschrak und kam in Verlegenheit, Siddhartha aber neigte den Mund zu Govindas Ohr und flüsterte ihm zu: "Nun will ich dem Alten zeigen, daß ich etwas bei ihm gelernt habe."

Indem er sich nahe vor dem Samana aufstellte, mit gesammelter Seele, fing er den Blick des Alten mit seinen Blicken ein, bannte ihn, machte ihn stumm, machte ihn willenlos, unterwarf ihn seinem Willen, befahl ihm, lautlos zu tun, was er von ihm verlangte. Der alte Mann wurde stumm, sein Auge wurde starr, sein Wille gelähmt, seine Arme hingen herab, machtlos war er Siddharthas Bezauberung erlegen. Siddharthas Gedanken aber bemächtigten sich des Samana, er mußte vollführen, was sie befahlen. Und so verneigte sich der Alte mehrmals, vollzog segnende Gebärden, sprach stammelnd einen frommen Reisewunsch. Und die Jünglinge erwiderten dankend die Verneigungen, erwiderten den Wunsch, zogen grüßend von dannen.

Unterwegs sagte Govinda: "O Siddhartha, du hast bei den Samanas mehr gelernt, als ich wußte. Es ist schwer, es ist sehr schwer, einen alten Samana zu bezaubern. Wahrlich, wärest du dort geblieben, du hättest bald gelernt, auf dem Wasser zu gehen."

"Ich begehre nicht, auf dem Wasser zu gehen", sagte Siddhartha. "Mögen alte Samanas mit solchen Künsten sich zufrieden geben!"

GOTAMA

In der Stadt Savathi kannte jedes Kind den Namen des Erhabenen Buddha, und jedes Haus war gerüstet, den Jüngern Gotamas, den schweigend Bittenden, die Almosenschale zu füllen. Nahe bei der Stadt lag Gotamas liebster Aufenthalt, der Hain Jetavana, welchen der reiche Kaufherr Anathapindika, ein ergebener Verehrer des Erhabenen, ihm und den Seinen zum Geschenk gemacht hatte.

Nach dieser Gegend hatten alle Erzählungen und Antworten hingewiesen, welche den beiden jungen Asketen auf der Suche nach Gotamas Aufenthalt zuteil wurden. Und da sie in Savathi ankamen, ward ihnen gleich im ersten Hause, vor dessen Tür sie bittend stehen blieben, Speise angeboten, und sie nahmen Speise an, und Siddhartha fragte die Frau, welche ihnen die Speise reichte:

"Gerne, du Mildtätige, gerne möchten wir erfahren, wo der Buddha weilt, der Ehrwürdigste, denn wir sind zwei Samanas aus dem Walde, und sind gekommen, um ihn, den Vollendeten, zu sehen und die Lehre aus seinem Munde zu vernehmen."

Sprach die Frau: "Am richtigen Orte wahrlich seid Ihr hier abgestiegen, Ihr Samanas aus dem Walde. Wisset, in Jetavana, im Garten Anathapindikas, weilt der Erhabene. Dort möget Ihr, Pilger, die Nacht verbringen, denn genug Raum ist daselbst für die Unzähligen, die herbeiströmen, um aus seinem Munde die Lehre zu hören."

Da freute sich Govinda, und voll Freude rief er: "Wohl denn, so ist unser Ziel erreicht und unser Weg zu Ende! Aber sage uns, du Mutter der Pilgernden, kennst du ihn, den Buddha, hast du ihn mit deinen Augen gesehen?"

Sprach die Frau: "Viele Male habe ich ihn gesehen, den Erhabenen. An vielen Tagen habe ich ihn gesehen, wie er durch die Gassen geht, schweigend, im gelben Mantel, wie er schweigend an den Haustüren seine Almosenschale darreicht, wie er die gefüllte Schale von dannen trägt."

Entzückt lauschte Govinda und wollte noch vieles fragen und hören. Aber Siddhartha mahnte zum Weitergehen. Sie sagten Dank und gingen und brauchten kaum nach dem Wege zu fragen, denn nicht wenige Pilger und auch Mönche aus Gotamas Gemeinschaft waren nach dem Jetavana unterwegs. Und da sie in der Nacht dort anlangten, war daselbst ein beständiges Ankommen, Rufen und Reden von solchen, welche Herberge heischten und bekamen. Die beiden Samanas, des Lebens im Walde

gewohnt, fanden schnell und geräuschlos einen Unterschlupf und ruhten da bis zum Morgen.

Beim Aufgang der Sonne sahen sie mit Erstaunen, welch große Schar, Gläubige und Neugierige, hier genächtigt hatte. In allen Wegen des herrlichen Haines wandelten Mönche im gelben Gewand, unter den Bäumen saßen sie hier und dort, in Betrachtung versenkt--oder im geistlichen Gespräch, wie eine Stadt waren die schattigen Gärten zu sehen, voll von Menschen, wimmelnd wie Bienen. Die Mehrzahl der Mönche zog mit der Almosenschale aus, um in der Stadt Nahrung für die Mittagsmahlzeit, die einzige des Tages, zu sammeln. Auch der Buddha selbst, der Erleuchtete, pflegte am Morgen den Bettelgang zu tun.

Siddhartha sah ihn, und er erkannte ihn alsbald, als hätte ihm ein Gott ihn gezeigt. Er sah ihn, einen schlichten Mann in gelber Kutte, die Almosenschale in der Hand tragend, still dahin gehen.

"Sieh hier!" sagte Siddhartha leise zu Govinda. "Dieser hier ist der Buddha."

Aufmerksam blickte Govinda den Mönch in der gelben Kutte an, der sich in nichts von den Hunderten der Mönche zu unterscheiden schien. Und bald erkannte auch Govinda: Dieser ist es. Und sie folgten ihm nach und betrachteten ihn.

Der Buddha ging seines Weges bescheiden und in Gedanken versunken, sein stilles Gesicht war weder fröhlich noch traurig, es schien leise nach innen zu lächeln. Mit einem verborgenen Lächeln, still, ruhig, einem gesunden Kinde nicht unähnlich, wandelte der Buddha, trug das Gewand und setzte den Fuß gleich wie alle seine Mönche, nach genauer Vorschrift. Aber sein Gesicht und sein Schritt, sein still gesenkter Blick, seine still herabhängende Hand, und noch jeder Finger an seiner still herabhängenden Hand sprach Friede, sprach Vollkommenheit, suchte nicht, ahmte nicht nach, atmete sanft in einer unverwelklichen Ruhe, in einem unverwelklichen Licht, einem unantastbaren Frieden.

So wandelte Gotama, der Stadt entgegen, um Almosen zu sammeln, und die beiden Samanas erkannten ihn einzig an der Vollkommenheit seiner Ruhe, an der Stille seiner Gestalt, in welcher kein Suchen, kein Wollen, kein Nachahmen, kein Bemühen zu erkennen war, nur Licht und Frieden.

"Heute werden wir die Lehre aus seinem Munde vernehmen," sagte Govinda.

Siddhartha gab nicht Antwort. Er war wenig neugierig auf die Lehre, er glaubte nicht, daß sie ihn Neues lehren werde, hatte er doch, ebenso wie Govinda, wieder und wieder den Inhalt dieser Buddhalehre vernommen, wenn schon aus Berichten von zweiter und dritter Hand. Aber er blickte aufmerksam auf Gotamas Haupt, auf seine Schultern, auf seine Füße, auf seine still herabhängende Hand, und ihm schien, jedes Glied an jedem Finger dieser Hand war Lehre, sprach, atmete, duftete, glänzte Wahrheit. Dieser Mann, dieser Buddha, war wahrhaftig bis in die Gebärde seines letzten Fingers. Dieser Mann war heilig. Nie hatte Siddhartha einen Menschen so verehrt, nie hatte er einen Menschen so geliebt wie diesen.

Die beiden folgten dem Buddha bis zur Stadt und kehrten schweigend zurück, denn sie selbst gedachten diesen Tag sich der Speise zu enthalten. Sie sahen Gotama wiederkehren, sahen ihn im Kreise seiner Jünger die Mahlzeit einnehmen--was er aß, hätte keinen Vogel satt gemacht--und sahen ihn sich zurückziehen in den Schatten der Mangobäume.

Am Abend aber, als die Hitze sich legte und alles im Lager lebendig ward und sich versammelte, hörten sie den Buddha lehren. Sie hörten seine Stimme, und auch sie war vollkommen, war von vollkommener Ruhe, war voll von Frieden. Gotama lehrte die Lehre vom Leiden, von der Herkunft des Leidens, vom Weg zur Aufhebung des Leidens. Ruhig floß und klar seine stille Rede. Leiden war das Leben, voll Leid war die Welt, aber Erlösung vom Leid war gefunden: Erlösung fand, wer den Weg des Buddha ging. Mit sanfter, doch fester Stimme sprach der Erhabene, lehrte die vier Hauptsätze, lehrte den achtfachen Pfad, geduldig ging er den gewohnten Weg der Lehre, der Beispiele, der Wiederholungen, hell und still schwebte seine Stimme über den Hörenden, wie ein Licht, wie ein Sternhimmel.

Als der Buddha--es war schon Nacht geworden--seine Rede schloß, traten manche Pilger hervor und baten um Aufnahme in die Gemeinschaft, nahmen ihre Zuflucht zur Lehre. Und Gotama nahm sie auf, indem er sprach: "Wohl habt ihr die Lehre vernommen, wohl ist sie verkündigt. Tretet denn herzu und wandelt in Heiligkeit, allem Leid ein Ende zu bereiten."

Siehe, da trat auch Govinda hervor, der Schüchterne, und sprach: "Auch ich nehme meine Zuflucht zum Erhabenen und zu seiner Lehre," und bat um Aufnahme in die Jüngerschaft, und ward aufgenommen.

Gleich darauf, da sich der Buddha zur Nachtruhe zurückgezogen hatte, wendete sich Govinda zu Siddhartha und sprach eifrig: "Siddhartha, nicht steht es mir zu, dir einen Vorwurf zu machen. Beide haben wir den Erhabenen gehört, beide haben wir die Lehre

vernommen. Govinda hat die Lehre gehört, er hat seine Zuflucht zu ihr genommen. Du aber, Verehrter, willst denn nicht auch du den Pfad der Erlösung gehen? Willst du zögern, willst du noch warten?"

Siddhartha erwachte wie aus einem Schlafe, als er Govindas Worte vernahm. Lange blickte er in Govindas Gesicht. Dann sprach er leise, mit einer Stimme ohne Spott: "Govinda, mein Freund, nun hast du den Schritt getan, nun hast du den Weg erwählt. Immer, o Govinda, bist du mein Freund gewesen, immer bist du einen Schritt hinter mir gegangen. Oft habe ich gedacht: Wird Govinda nicht auch einmal einen Schritt allein tun, ohne mich, aus der eigenen Seele? Siehe, nun bist du ein Mann geworden und wählst selber deinen Weg. Mögest du ihn zu Ende gehen, o mein Freund! Mögest du Erlösung finden!"

Govinda, welcher noch nicht völlig verstand, wiederholte mit einem Ton von Ungeduld seine Frage: "Sprich doch, ich bitte dich, mein Lieber! Sage mir, wie es ja nicht anders sein kann, daß auch du, mein gelehrter Freund, deine Zuflucht zum erhabenen Buddha nehmen wirst!"

Siddhartha legte seine Hand auf die Schulter Govindas: "Du hast meinen Segenswunsch überhört, o Govinda. Ich wiederhole ihn: Mögest du diesen Weg zu Ende gehen! Mögest du Erlösung finden!"

In diesem Augenblick erkannte Govinda, daß sein Freund ihn verlassen habe, und er begann zu weinen.

"Siddhartha!" rief er klagend.

Siddhartha sprach freundlich zu ihm: "Vergiß nicht, Govinda, daß du nun zu den Samanas des Buddha gehörst! Abgesagt hast du Heimat und Eltern, abgesagt Herkunft und Eigentum, abgesagt deinem eigenen Willen, abgesagt der Freundschaft. So will es die Lehre, so will es der Erhabene. So hast du selbst es gewollt. Morgen, o Govinda, werde ich dich verlassen."

Lange noch wandelten die Freunde im Gehölz, lange lagen sie und fanden nicht den Schlaf. Und immer von neuem drang Govinda in seinen Freund, er möge ihm sagen, warum er nicht seine Zuflucht zu Gotamas Lehre nehmen wolle, welchen Fehler denn er in dieser Lehre finde. Siddhartha aber wies ihn jedesmal zurück und sagte: "Gib dich zufrieden, Govinda! Sehr gut ist des Erhabenen Lehre, wie sollte ich einen Fehler an ihr finden?"

Am frühesten Morgen ging ein Nachfolger Buddhas, einer seiner ältesten Mönche, durch den Garten und rief alle jene zu sich, welche als Neulinge ihre Zuflucht zur Lehre genommen hatten, um ihnen das gelbe Gewand anzulegen und sie in den ersten Lehren und Pflichten ihres Standes zu unterweisen. Da riß Govinda sich los, umarmte noch einmal den Freund seiner Jugend und schloß sich dem Zuge der Novizen an.

Siddhartha aber wandelte in Gedanken durch den Hain.

Da begegnete ihm Gotama, der Erhabene, und als er ihn mit Ehrfurcht begrüßte und der Blick des Buddha so voll Güte und Stille war, faßte der Jüngling Mut und bat den Ehrwürdigen um Erlaubnis, zu ihm zu sprechen. Schweigend nickte der Erhabene Gewährung.

Sprach Siddhartha: "Gestern, o Erhabener, war es mir vergönnt, deine wundersame Lehre zu hören. Zusammen mit meinem Freunde kam ich aus der Ferne her, um die Lehre zu hören. Und nun wird mein Freund bei den Deinen bleiben, zu dir hat er seine Zuflucht genommen. Ich aber trete meine Pilgerschaft aufs neue an."

"Wie es dir beliebt", sprach der Ehrwürdige höflich.

"Allzu kühn ist meine Rede," fuhr Siddhartha fort, "aber ich möchte den Erhabenen nicht verlassen, ohne ihm meine Gedanken in Aufrichtigkeit mitgeteilt zu haben. Will mir der Ehrwürdige noch einen Augenblick Gehör schenken?"

Schweigend nickte der Buddha Gewährung.

Sprach Siddhartha: "Eines, o Ehrwürdigster, habe ich an deiner Lehre vor allem bewundert. Alles in deiner Lehre ist vollkommen klar, ist bewiesen; als eine vollkommene, als eine nie und nirgends unterbrochene Kette zeigst du die Welt als eine ewige Kette, gefügt aus Ursachen und Wirkungen. Niemals ist dies so klar gesehen, nie so unwiderleglich dargestellt worden; höher wahrlich muß jedem Brahmanen das Herz im Leibe schlagen, wenn er, durch deine Lehre hindurch, die Welt erblickt als vollkommenen Zusammenhang, lückenlos, klar wie ein Kristall, nicht vom Zufall abhängig, nicht von Göttern abhängig. Ob sie gut oder böse, ob das Leben in ihr Leid oder Freude sei, möge dahingestellt bleiben, es mag vielleicht sein, daß dies nicht wesentlich ist--aber die Einheit der Welt, der Zusammenhang alles Geschehens, das Umschlossensein alles Großen und Kleinen vom selben Strome, vom

selben Gesetz der Ursachen, des Werdens und des Sterbens, dies leuchtet hell aus deiner erhabenen Lehre, o Vollendeter. Nun aber ist, deiner selben Lehre nach, diese Einheit und Folgerichtigkeit aller Dinge dennoch an einer Stelle unterbrochen, durch eine kleine Lücke strömt in diese Welt der Einheit etwas Fremdes, etwas Neues, etwas, das vorher nicht war, und das nicht gezeigt und nicht bewiesen werden kann: das ist deine Lehre von der Überwindung der Welt, von der Erlösung. Mit dieser kleinen Lücke, mit dieser kleinen Durchbrechung aber ist das ganze ewige und einheitliche Weltgesetz wieder zerbrochen und aufgehoben. Mögest du mir verzeihen, wenn ich diesen Einwand ausspreche."

Still hatte Gotama ihm zugehört, unbewegt. Mit seiner gütigen, mit seiner höflichen und klaren Stimme sprach er nun, der Vollendete: "Du hast die Lehre gehört, o Brahmanensohn, und wohl dir, daß du über sie so tief nachgedacht hast. Du hast eine Lücke in ihr gefunden, einen Fehler. Mögest du weiter darüber nachdenken. Laß dich aber warnen, du Wißbegieriger, vor dem Dickicht der Meinungen und vor dem Streit um Worte. Es ist an Meinungen nichts gelegen, sie mögen schön oder häßlich, klug oder töricht sein, jeder kann ihnen anhängen oder sie verwerfen. Die Lehre aber, die du von mir gehört hast, ist nicht eine Meinung, und ihr Ziel ist nicht, die Welt für Wißbegierige zu erklären. Ihr Ziel ist ein anderes; ihr Ziel ist Erlösung vom Leiden. Diese ist es, welche Gotama lehrt, nichts anderes."

"Mögest du mir, o Erhabener, nicht zürnen", sagte der Jüngling. "Nicht um Streit mit dir zu suchen, Streit um Worte, habe ich so zu dir gesprochen. Du hast wahrlich recht, wenig ist an Meinungen gelegen. Aber laß mich dies eine noch sagen: Nicht einen Augenblick habe ich an dir gezweifelt. Ich habe nicht einen Augenblick gezweifelt, daß du Buddha bist, daß du das Ziel erreicht hast, das höchste, nach welchem so viel tausend Brahmanen und Brahmanensöhne unterwegs sind. Du hast die Erlösung vom Tode gefunden. Sie ist dir geworden aus deinem eigenen Suchen, auf deinem eigenen Wege, durch Gedanken, durch Versenkung, durch Erkenntnis, durch Erleuchtung. Nicht ist sie dir geworden durch Lehre! Und--so ist mein Gedanke, o Erhabener--keinem wird Erlösung zu teil durch Lehre! Keinem, o Ehrwürdiger, wirst du in Worten und durch Lehre mitteilen und sagen können, was dir geschehen ist in der Stunde deiner Erleuchtung! Vieles enthält die Lehre des erleuchteten Buddha, viele lehrt sie, rechtschaffen zu leben, Böses zu meiden. Eines aber enthält die so klare, die so ehrwürdige Lehre nicht: sie enthält nicht das Geheimnis dessen, was der Erhabene selbst erlebt hat, er allein unter den Hunderttausenden. Dies ist es, was ich gedacht und erkannt habe, als ich die Lehre hörte. Dies ist es, weswegen ich meine Wanderschaft fortsetze--nicht um eine andere, eine bessere Lehre zu suchen, denn ich weiß, es gibt keine, sondern um alle Lehren und alle Lehrer zu verlassen und allein mein Ziel zu erreichen oder zu sterben. Oftmals aber werde ich dieses Tages denken, o Erhabener, und dieser Stunde, da meine Augen einen Heiligen sahen."

Die Augen des Buddha blickten still zu Boden, still in vollkommenem Gleichmut strahlte sein unerforschliches Gesicht.

"Mögen deine Gedanken," sprach der Ehrwürdige langsam, "keine Irrtümer sein! Mögest du ans Ziel kommen! Aber sage mir: Hast du die Schar meiner Samanas gesehen, meiner vielen Brüder, welche ihre Zuflucht zur Lehre genommen haben? Und glaubst du, fremder Samana, glaubst du, daß es diesen allen besser wäre, die Lehre zu verlassen und in das Leben der Welt und der Lüste zurückzukehren?"

"Fern ist ein solcher Gedanke von mir", rief Siddhartha. "Mögen sie alle bei der Lehre bleiben, mögen sie ihr Ziel erreichen! Nicht steht mir zu, über eines andern Leben zu urteilen. Einzig für mich, für mich allein muß ich urteilen, muß ich wählen, muß ich ablehnen. Erlösung vom Ich suchen wir Samanas, o Erhabener. Wäre ich nun einer deiner Jünger, o Ehrwürdiger, so fürchte ich, es möchte mir geschehen, daß nur scheinbar, nur trügerisch mein Ich zur Ruhe käme und erlöst würde, daß es aber in Wahrheit weiterlebte und groß würde, denn ich hätte dann die Lehre, hätte meine Nachfolge, hätte meine Liebe zu dir, hätte die Gemeinschaft der Mönche zu meinem Ich gemacht!"

Mit halbem Lächeln, mit einer unerschütterten Helle und Freundlichkeit sah Gotama dem Fremdling ins Auge und verabschiedete ihn mit einer kaum sichtbaren Gebärde.

"Klug bist du, o Samana", sprach der Ehrwürdige.

"Klug weißt du zu reden, mein Freund. Hüte dich vor allzu großer Klugheit!"

Hinweg wandelte der Buddha, und sein Blick und halbes Lächeln blieb für immer in Siddharthas Gedächtnis eingegraben.

So habe ich noch keinen Menschen blicken und lächeln, sitzen und schreiten sehen, dachte er, so wahrlich wünsche auch ich blicken und lächeln, sitzen und schreiten zu können, so frei, so ehrwürdig, so verborgen, so offen, so kindlich und geheimnisvoll. So wahrlich blickt und schreitet nur der Mensch, der ins Innerste seines Selbst gedrungen ist. Wohl, auch ich werde ins Innerste

meines Selbst zu dringen suchen.

Einen Menschen sah ich, dachte Siddhartha, einen einzigen, vor dem ich meine Augen niederschlagen mußte. Vor keinem andern mehr will ich meine Augen niederschlagen, vor keinem mehr. Keine Lehre mehr wird mich verlocken, da dieses Menschen Lehre mich nicht verlockt hat.

Beraubt hat mich der Buddha, dachte Siddhartha, beraubt hat er mich, und mehr noch hat er mich beschenkt. Beraubt hat er mich meines Freundes, dessen, der an mich glaubte und der nun an ihn glaubt, der mein Schatten war und nun Gotamas Schatten ist. Geschenkt aber hat er mir Siddhartha, mich selbst.

ERWACHEN

Als Siddhartha den Hain verließ, in welchem der Buddha, der Vollendete, zurückblieb, in welchem Govinda zurückblieb, da fühlte er, daß in diesem Hain auch sein bisheriges Leben hinter ihm zurückblieb und sich von ihm trennte. Dieser Empfindung, die ihn ganz erfüllte, sann er im langsamen Dahingehen nach. Tief sann er nach, wie durch ein tiefes Wasser ließ er sich bis auf den Boden dieser Empfindung hinab, bis dahin, wo die Ursachen ruhen, denn Ursachen erkennen, so schien ihm, das eben ist Denken, und dadurch allein werden Empfindungen zu Erkenntnissen und gehen nicht verloren, sondern werden wesenhaft und beginnen auszustrahlen, was in ihnen ist.

Im langsamen Dahingehen dachte Siddhartha nach. Er stellte fest, daß er kein Jüngling mehr, sondern ein Mann geworden sei. Er stellte fest, daß eines ihn verlassen hatte, wie die Schlange von ihrer alten Haut verlassen wird, daß eines nicht mehr in ihm vorhanden war, das durch seine ganze Jugend ihn begleitet und zu ihm gehört hatte: der Wunsch, Lehrer zu haben und Lehren zu hören. Den letzten Lehrer, der an seinem Wege ihm erschienen war, auch ihn, den höchsten und weisesten Lehrer, den Heiligsten, Buddha, hatte er verlassen, hatte sich von ihm trennen müssen, hatte seine Lehre nicht annehmen können.

Langsamer ging der Denkende dahin und fragte sich selbst: "Was nun ist es aber, das du aus Lehren und von Lehrern hattest lernen wollen, und was sie, die dich viel gelehrt haben, dich doch nicht lehren konnten?" Und er fand: "Das Ich war es, dessen Sinn und Wesen ich lernen wollte. Das Ich war es, von dem ich loskommen, das ich überwinden wollte. Ich konnte es aber nicht überwinden, konnte es nur täuschen, konnte nur vor ihm fliehen, mich nur vor ihm verstecken. Wahrlich, kein Ding in der Welt hat so viel meine Gedanken beschäftigt wie dieses mein Ich, dies Rätsel, daß ich lebe, daß ich einer und von allen andern getrennt und abgesondert bin, daß ich Siddhartha bin! Und über kein Ding in der Welt weiß ich weniger als über mich, über Siddhartha!"

Der im langsamen Dahingehen Denkende blieb stehen, von diesem Gedanken erfaßt, und alsbald sprang aus diesem Gedanken ein anderer hervor, ein neuer Gedanke, der lautete: "Daß ich nichts von mir weiß, daß Siddhartha mir so fremd und unbekannt geblieben ist, das kommt aus einer Ursache, einer einzigen: Ich hatte Angst vor mir, ich war auf der Flucht vor mir! Atman suchte ich, Brahman suchte ich, ich war gewillt, mein Ich zu zerstücken und auseinander zu schälen, um in seinem unbekannten Innersten den Kern aller Schalen zu finden, den Atman, das Leben, das Göttliche, das Letzte. Ich selbst aber ging mir dabei verloren."

Siddhartha schlug die Augen auf und sah um sich, ein Lächeln erfüllte sein Gesicht, und ein tiefes Gefühl von Erwachen aus langen Träumen durchströmte ihn bis in die Zehen. Und alsbald lief er wieder, lief rasch, wie ein Mann, welcher weiß, was er zu tun hat.

"O," dachte er aufatmend mit tiefem Atemzug, "nun will ich mir den Siddhartha nicht mehr entschlüpfen lassen! Nicht mehr will ich mein Denken und mein Leben beginnen mit Atman und mit dem Leid der Welt. Ich will mich nicht mehr töten und zerstücken, um hinter den Trümmern ein Geheimnis zu finden. Nicht Yoga-Veda mehr soll mich lehren, noch Atharva-Veda, noch die Asketen, noch irgendwelche Lehre. Bei mir selbst will ich lernen, will ich Schüler sein, will ich mich kennen lernen, das Geheimnis Siddhartha."

Er blickte um sich, als sähe er zum ersten Male die Welt. Schön war die Welt, bunt war die Welt, seltsam und rätselhaft war die Welt! Hier war Blau, hier war Gelb, hier war Grün, Himmel floß und Fluß, Wald starrte und Gebirg, alles schön, alles rätselvoll und magisch, und inmitten er, Siddhartha, der Erwachende, auf dem Wege zu sich selbst. All dieses, all dies Gelb und Blau, Fluß und Wald, ging zum erstenmal durchs Auge in Siddhartha ein, war nicht mehr Zauber Maras, war nicht mehr der Schleier der Maya, war nicht mehr sinnlose und zufällige Vielfalt der Erscheinungswelt, verächtlich dem tief denkenden Brahmanen, der die Vielfalt verschmäht, der die Einheit sucht. Blau war Blau, Fluß war Fluß, und wenn auch im Blau und Fluß in Siddhartha das Eine und Göttliche verborgen lebte, so war es doch eben des Göttlichen Art und Sinn, hier Gelb, hier Blau, dort Himmel, dort Wald und hier

Siddhartha zu sein. Sinn und Wesen war nicht irgendwo hinter den Dingen, sie waren in ihnen, in allem.

"Wie bin ich taub und stumpf gewesen!" dachte der rasch dahin Wandelnde. "Wenn einer eine Schrift liest, deren Sinn er suchen will, so verachtet er nicht die Zeichen und Buchstaben und nennt sie Täuschung, Zufall und wertlose Schale, sondern er liest sie, er studiert und liebt sie, Buchstabe um Buchstabe. Ich aber, der ich das Buch der Welt und das Buch meines eigenen Wesens lesen wollte, ich habe, einem im voraus vermuteten Sinn zuliebe, die Zeichen und Buchstaben verachtet, ich nannte die Welt der Erscheinungen Täuschung, nannte mein Auge und meine Zunge zufällige und wertlose Erscheinungen. Nein, dies ist vorüber, ich bin erwacht, ich bin in der Tat erwacht und heute erst geboren."

Indem Siddhartha diesen Gedanken dachte, blieb er abermals stehen, plötzlich, als läge eine Schlange vor ihm auf dem Weg.

Denn plötzlich war auch dies ihm klar geworden: Er, der in der Tat wie ein Erwachter oder Neugeborener war, er mußte sein Leben neu und völlig von vorn beginnen. Als er an diesem selben Morgen den Hain Jetavana, den Hain jenes Erhabenen, verlassen hatte, schon erwachend, schon auf dem Wege zu sich selbst, da war es seine Absicht gewesen und war ihm natürlich und selbstverständlich erschienen, daß er, nach den Jahren seines Asketentums, in seine Heimat und zu seinem Vater zurückkehre. Jetzt aber, erst in diesem Augenblick, da er stehen blieb, als läge eine Schlange auf seinem Wege, erwachte er auch zu dieser Einsicht: "Ich bin ja nicht mehr, der ich war, ich bin nicht mehr Asket, ich bin nicht mehr Priester, ich bin nicht mehr Brahmane. Was denn soll ich zu Hause und bei meinem Vater tun? Studieren? Opfern? Die Versenkung pflegen? Dies alles ist ja vorüber, dies alles liegt nicht mehr an meinem Wege."

Regungslos blieb Siddhartha stehen, und einen Augenblick und Atemzug lang fror sein Herz, er fühlte es in der Brust innen frieren wie ein kleines Tier, einen Vogel oder einen Hasen, als er sah, wie allein er sei. Jahrelang war er heimatlos gewesen und hatte es nicht gefühlt. Nun fühlte er es. Immer noch, auch in der fernsten Versenkung, war er seines Vaters Sohn gewesen, war Brahmane gewesen, hohen Standes, ein Geistiger. Jetzt war er nur noch Siddhartha, der Erwachte, sonst nichts mehr. Tief sog er den Atem ein, und einen Augenblick fror er und schauderte. Niemand war so allein wie er. Kein Adliger, der nicht zu den Adligen, kein Handwerker, der nicht zu den Handwerkern gehörte und Zuflucht bei ihnen fand, ihr Leben teilte, ihre Sprache sprach. Kein Brahmane, der nicht zu den Brahmanen zählte und mit ihnen lebte, kein Asket, der nicht im Stande der Samanas seine Zuflucht fand, und auch der verlorenste Einsiedler im Walde war nicht einer und allein, auch ihn umgab Zugehörigkeit, auch er gehörte einem Stande an, der ihm Heimat war. Govinda war Mönch geworden, und tausend Mönche waren seine Brüder, trugen sein Kleid, glaubten seinen Glauben, sprachen seine Sprache. Er aber, Siddhartha, wo war er zugehörig? Wessen Leben würde er teilen? Wessen Sprache würde er sprechen?

Aus diesem Augenblick, wo die Welt rings von ihm wegschmolz, wo er allein stand wie ein Stern am Himmel, aus diesem Augenblick einer Kälte und Verzagtheit tauchte Siddhartha empor, mehr Ich als zuvor, fester geballt. Er fühlte: Dies war der letzte Schauder des Erwachens gewesen, der letzte Krampf der Geburt. Und alsbald schritt er wieder aus, begann rasch und ungeduldig zu gehen, nicht mehr nach Hause, nicht mehr zum Vater, nicht mehr zurück.

ZWEITER TEIL--Wilhelm Gundert

meinem Vetter in Japan gewidmet

KAMALA

Siddhartha lernte Neues auf jedem Schritt seines Weges, denn die Welt war verwandelt, und sein Herz war bezaubert. Er sah die Sonne überm Waldgebirge aufgehen und überm fernen Palmenstrande untergehen. Er sah nachts am Himmel die Sterne geordnet, und den Sichelmond wie ein Boot im Blauen schwimmend. Er sah Bäume, Sterne, Tiere, Wolken, Regenbogen, Felsen, Kräuter, Blumen, Bach und Fluß, Taublitz im morgendlichen Gesträuch, ferne hohe Berge blau und bleich, Vögel sangen und Bienen, Wind wehte silbern im Reisfelde. Dies alles, tausendfalt und bunt, war immer dagewesen, immer hatten Sonne und Mond geschienen, immer Flüsse gerauscht und Bienen gesummt, aber es war in den früheren Zeiten für Siddhartha dies alles nichts gewesen als ein flüchtiger und trügerischer Schleier vor seinem Auge, mit Mißtrauen betrachtet, dazu bestimmt, vom Gedanken durchdrungen und vernichtet zu werden, da es nicht Wesen war, da das Wesen jenseits der Sichtbarkeit lag. Nun aber weilte sein befreites Auge diesseits, es sah und erkannte die Sichtbarkeit, suchte Heimat in dieser Welt, suchte nicht das Wesen, zielte in kein Jenseits. Schön war die Welt, wenn man sie so betrachtete, so ohne Suchen, so einfach, so kinderhaft. Schön war Mond und Gestirn, schön war Bach und Ufer, Wald und Fels, Ziege und Goldkäfer, Blume und Schmetterling. Schön und lieblich war es, so

durch die Welt zu gehen, so kindlich, so erwacht, so dem Nahen aufgetan, so ohne Mißtrauen. Anders brannte die Sonne aufs Haupt, anders kühlte der Waldschatten, anders schmeckte Bach und Zisterne, anders Kürbis und Banane. Kurz waren die Tage, kurz die Nächte, jede Stunde floh schnell hinweg wie ein Segel auf dem Meere, unterm Segel ein Schiff voll von Schätzen, voll von Freuden. Siddhartha sah ein Affenvolk im hohen Waldgewölbe wandern, hoch im Geäst, und hörte seinen wilden, gierigen Gesang. Siddhartha sah einen Schafbock ein Schaf verfolgen und begatten. Er sah in einem Schilfsee den Hecht im Abendhunger jagen, vor ihm her schnellten angstvoll, flatternd und blitzend die jungen Fische in Scharen aus dem Wasser, Kraft und Leidenschaft duftete dringlich aus den hastigen Wasserwirbeln, die der ungestüm Jagende zog.

All dieses war immer gewesen, und er hatte es nicht gesehen; er war nicht dabei gewesen. Jetzt war er dabei, er gehörte dazu. Durch sein Auge lief Licht und Schatten, durch sein Herz lief Stern und Mond.

Siddhartha erinnerte sich unterwegs auch alles dessen, was er im Garten Jetavana erlebt hatte, der Lehre, die er dort gehört, des göttlichen Buddha, des Abschiedes von Govinda, des Gespräches mit dem Erhabenen. Seiner eigenen Worte, die er zum Erhabenen gesprochen hatte, erinnerte er sich wieder, jedes Wortes, und mit Erstaunen wurde er dessen inne, daß er da Dinge gesagt hatte, die er damals noch gar nicht eigentlich wußte. Was er zu Gotama gesagt hatte: sein, des Buddha, Schatz und Geheimnis sei nicht die Lehre, sondern das Unaussprechliche und nicht Lehrbare, das er einst zur Stunde seiner Erleuchtung erlebt habe--dies war es ja eben, was zu erleben er jetzt auszog, was zu erleben er jetzt begann. Sich selbst mußte er jetzt erleben. Wohl hatte er schon lange gewußt, daß sein Selbst Atman sei, vom selben ewigen Wesen wie Brahman. Aber nie hatte er dies Selbst wirklich gefunden, weil er es mit dem Netz des Gedankens hatte fangen wollen. War auch gewiß der Körper nicht das Selbst, und nicht das Spiel der Sinne, so war es doch auch das Denken nicht, nicht der Verstand, nicht die erlernte Weisheit, nicht die erlernte Kunst, Schlüsse zu ziehen und aus schon Gedachtem neue Gedanken zu spinnen. Nein, auch diese Gedankenwelt war noch diesseits, und es führte zu keinem Ziele, wenn man das zufällige Ich der Sinne tötete, dafür aber das zufällige Ich der Gedanken und Gelehrsamkeiten mästete. Beide, die Gedanken wie die Sinne, waren hübsche Dinge, hinter beiden lag der letzte Sinn verborgen, beide galt es zu hören, mit beiden zu spielen, beide weder zu verachten noch zu überschätzen, aus beiden die geheimen Stimmen des Innersten zu erlauschen. Nach nichts wollte er trachten, als wonach die Stimme ihm zu trachten beföhle, bei nichts verweilen, als wo die Stimme es riete. Warum war Gotama einst, in der Stunde der Stunden, unter dem Bo-Baume niedergesessen, wo die Erleuchtung ihn traf? Er hatte eine Stimme gehört, eine Stimme im eigenen Herzen, die ihm befahl, unter diesem Baume Rast zu suchen, und er hatte nicht Kasteiung, Opfer, Bad oder Gebet, nicht Essen noch Trinken, nicht Schlaf noch Traum vorgezogen, er hatte der Stimme gehorcht. So zu gehorchen, nicht äußerm Befehl, nur der Stimme, so bereit zu sein, das war gut, das war notwendig, nichts anderes war notwendig.

In der Nacht, da er in der strohernen Hütte eines Fährmanns am Flusse schlief, hatte Siddhartha einen Traum: Govinda stand vor ihm, in einem gelben Asketengewand. Traurig sah Govinda aus, traurig fragte er: Warum hast du mich verlassen? Da umarmte er Govinda, schlang seine Arme um ihn, und indem er ihn an seine Brust zog und küßte, war es nicht Govinda mehr, sondern ein Weib, und aus des Weibes Gewand quoll eine volle Brust, an der lag Siddhartha und trank, süß und stark schmeckte die Milch dieser Brust. Sie schmeckte nach Weib und Mann, nach Sonne und Wald, nach Tier und Blume, nach jeder Frucht, nach jeder Lust. Sie machte trunken und bewußtlos.--Als Siddhartha erwachte, schimmerte der bleiche Fluß durch die Tür der Hütte, und im Walde klang tief und wohllaut ein dunkler Eulenruf.

Als der Tag begann, bat Siddhartha seinen Gastgeber, den Fährmann, ihn über den Fluß zu setzen. Der Fährmann setzte ihn auf seinem Bambusfloß über den Fluß, rötlich schimmerte im Morgenschein das breite Wasser.

"Das ist ein schöner Fluß," sagte er zu seinem Begleiter.

"Ja," sagte der Fährmann, "ein sehr schöner Fluß, ich liebe ihn über alles. Oft habe ich ihm zugehört, oft in seine Augen gesehen, und immer habe ich von ihm gelernt. Man kann viel von einem Flusse lernen."

"Ich danke dir, mein Wohltäter," sprach Siddhartha, da er ans andere Ufer stieg. "Kein Gastgeschenk habe ich dir zu geben, Lieber, und keinen Lohn zu geben. Ein Heimatloser bin ich, ein Brahmanensohn und Samana."

"Ich sah es wohl," sprach der Fährmann, "und ich habe keinen Lohn vor dir erwartet, und kein Gastgeschenk. Du wirst mir das Geschenk ein anderes Mal geben."

"Glaubst du?" sagte Siddhartha lustig.

"Gewiß. Auch das habe ich vom Flusse gelernt: alles kommt wieder! Auch du, Samana, wirst wieder kommen. Nun lebe wohl! Möge deine Freundschaft mein Lohn sein. Mögest du meiner gedenken, wenn du den Göttern opferst."

Lächelnd schieden sie voneinander. Lächelnd freute sich Siddhartha über die Freundschaft und Freundlichkeit des Fährmanns. "Wie Govinda ist er," dachte er lächelnd, "alle, die ich auf meinem Wege antreffe, sind wie Govinda. Alle sind dankbar, obwohl sie selbst Anspruch auf Dank hätten. Alle sind unterwürfig, alle mögen gern Freund sein, gern gehorchen, wenig denken. Kinder sind die Menschen."

Um die Mittagszeit kam er durch ein Dorf. Vor den Lehmhütten wälzten sich Kinder auf der Gasse, spielten mit Kürbiskernen und Muscheln, schrien und balgten sich, flohen aber alle scheu vor dem fremden Samana. Am Ende des Dorfes führte der Weg durch einen Bach, und am Rande des Baches kniete ein junges Weib und wusch Kleider. Als Siddhartha sie grüßte, hob sie den Kopf, und blickte mit Lächeln zu ihm auf, daß er das Weiße in ihrem Auge blitzen sah. Er rief einen Segensspruch hinüber, wie er unter Reisenden üblich ist, und fragte, wie weit der Weg bis zur großen Stadt noch sei. Da stand sie auf und trat zu ihm her, schön schimmerte ihr feuchter Mund im jungen Gesicht. Sie tauschte Scherzreden mit ihm, fragte, ob er schon gegessen habe, und ob es wahr sei, daß die Samanas nachts allein im Walde schliefen und keine Frauen bei sich haben dürfen. Dabei setzte sie ihren linken Fuß auf seinen rechten und machte eine Bewegung, wie die Frau sie macht, wenn sie den Mann zu jener Art des Liebesgenusses auffordert, welchen die Lehrbücher "das Baumbesteigen" nennen. Siddhartha fühlte sein Blut erwarmen, und da sein Traum ihm in diesem Augenblick wieder einfiel, bückte er sich ein wenig zu dem Weibe herab und küßte mit den Lippen die braune Spitze ihrer Brust. Aufschauend sah er ihr Gesicht voll Verlangen lächeln und die verkleinerten Augen in Sehnsucht flehen.

Auch Siddhartha fühlte Sehnsucht und den Quell des Geschlechts sich bewegen; da er aber noch nie ein Weib berührt hatte, zögerte er einen Augenblick, während seine Hände schon bereit waren, nach ihr zu greifen. Und in diesem Augenblick hörte er, erschauernd, die Stimme seines Innern, und die Stimme sagte Nein. Da wich vom lächelnden Gesicht der jungen Frau aller Zauber, er sah nichts mehr als den feuchten Blick eines brünstigen Tierweibchens. Freundlich streichelte er ihre Wange, wandte sich von ihr und verschwand vor der Enttäuschten leichtfüßig in das Bambusgehölze.

An diesem Tage erreichte er vor Abend eine große Stadt, und freute sich, denn er begehrte nach Menschen. Lange hatte er in den Wäldern gelebt, und die stroherne Hütte des Fährmanns, in welcher er diese Nacht geschlafen hatte, war seit langer Zeit das erste Dach, das er über sich gehabt hatte.

Vor der Stadt, bei einem schönen umzäunten Haine, begegnete dem Wandernden ein kleiner Troß von Dienern und Dienerinnen, mit Körben beladen. Inmitten in einer geschmückten Sänfte, von Vieren getragen, saß auf roten Kissen unter einem bunten Sonnendach eine Frau, die Herrin. Siddhartha blieb beim Eingang des Lusthaines stehen und sah dem Aufzuge zu, sah die Diener, die Mägde, die Körbe, sah die Sänfte, und sah in der Sänfte die Dame. Unter hochgetürmten schwarzen Haaren sah er ein sehr helles, sehr zartes, sehr kluges Gesicht, hellroten Mund wie eine frisch aufgebrochene Feige, Augenbrauen gepflegt und gemalt in hohen Bogen, dunkle Augen klug und wachsam, lichten hohen Hals aus grün und goldenem Oberkleide steigend, ruhende helle Hände lang und schmal mit breiten Goldreifen über den Gelenken.

Siddhartha sah, wie schön sie war, und sein Herz lachte. Tief verneigte er sich, als die Sänfte nahe kam, und sich wieder aufrichtend blickte er in das helle holde Gesicht, las einen Augenblick in den klugen hochüberwölbten Augen, atmete einen Hauch von Duft, den er nicht kannte. Lächelnd nickte die schöne Frau, einen Augenblick, und verschwand im Hain, und hinter ihr die Diener.

So betrete ich diese Stadt, dachte Siddhartha, unter einem holden Zeichen. Es zog ihn, sogleich in den Hain zu treten, doch bedachte er sich, und nun erst ward ihm bewußt, wie ihn die Diener und Mägde am Eingang betrachtet hatten, wie verächtlich, wie mißtrauisch, wie abweisend.

Noch bin ich ein Samana, dachte er, noch immer, ein Asket und Bettler. Nicht so werde ich bleiben dürfen, nicht so in den Hain treten. Und er lachte.

Den nächsten Menschen, der des Weges kam, fragte er nach dem Hain und nach dem Namen dieser Frau, und erfuhr, daß dies der Hain der Kamala war, der berühmten Kurtisane, und daß sie außer dem Haine ein Haus in der Stadt besaß.

Dann betrat er die Stadt. Er hatte nun ein Ziel.

Sein Ziel verfolgend, ließ er sich von der Stadt einschlürfen, trieb im Strom der Gassen, stand auf Plätzen still, ruhte auf Steintreppen am Flusse aus. Gegen den Abend befreundete er sich mit einem Barbiergehilfen, den er im Schatten eines Gewölbes hatte arbeiten sehen, den er betend in einem Tempel Vishnus wiederfand, dem er von den Geschichten Vishnu's und der Lakschmi erzählte. Bei den Booten am Flusse schlief er die Nacht, und früh am Morgen, ehe die ersten Kunden in seinen Laden kamen, ließ er sich von dem Barbiergehilfen den Bart rasieren und das Haar beschneiden, das Haar kämmen und mit feinem Öle salben. Dann ging er im Flusse baden.

Als am Spätnachmittag die schöne Kamala in der Sänfte sich ihrem Haine näherte, stand am Eingang Siddhartha, verbeugte sich und empfing den Gruß der Kurtisane. Demjenigen Diener aber, der zuletzt im Zuge ging, winkte er und bat ihn, der Herrin zu melden, daß ein junger Brahmane mit ihr zu sprechen begehre. Nach einer Weile kam der Diener zurück, forderte den Wartenden auf, ihm zu folgen, führte den ihm Folgenden schweigend in einen Pavillon, wo Kamala auf einem Ruhebette lag, und ließ ihn bei ihr allein.

"Bist du nicht gestern schon da draußen gestanden und hast mich begrüßt?" fragte Kamala.

"Wohl habe ich gestern schon dich gesehen und begrüßt."

"Aber trugst du nicht gestern einen Bart, und lange Haare, und Staub in den Haaren?"

"Wohl hast du beobachtet, alles hast du gesehen. Du hast Siddhartha gesehen, den Brahmanensohn, welcher seine Heimat verlassen hat, um ein Samana zu werden, und drei Jahre lang ein Samana gewesen ist. Nun aber habe ich jenen Pfad verlassen, und kam in diese Stadt, und die erste, die mir noch vor dem Betreten der Stadt begegnete, warst du. Dies zu sagen, bin ich zu dir gekommen, o Kamala! Du bist die erste Frau, zu welcher Siddhartha anders als mit niedergeschlagenen Augen redet. Nie mehr will ich meine Augen niederschlagen, wenn eine schöne Frau mir begegnet."

Kamala lächelte und spielte mit ihrem Fächer aus Pfauenfedern. Und fragte: "Und nur um mir dies zu sagen, ist Siddhartha zu mir gekommen?"

"Um dir dies zu sagen, und um dir zu danken, daß du so schön bist. Und wenn es dir nicht mißfällt, Kamala, möchte ich dich bitten, meine Freundin und Lehrerin zu sein, denn ich weiß noch nichts von der Kunst, in welcher du Meisterin bist."

Da lachte Kamala laut.

"Nie ist mir das geschehen, Freund, daß ein Samana aus dem Walde zu mir kam und von mir lernen wollte! Nie ist mir das geschehen, daß ein Samana mit langen Haaren und in einem alten zerrissenen Schamtuche zu mir kam! Viele Jünglinge kommen zu mir, und auch Brahmanensöhne sind darunter, aber sie kommen in schönen Kleidern, sie kommen in feinen Schuhen, sie haben Wohlgeruch im Haar und Geld in den Beuteln. So, du Samana, sind die Jünglinge beschaffen, welche zu mir kommen."

Sprach Siddhartha: "Schon fange ich an, von dir zu lernen. Auch gestern schon habe ich gelernt. Schon habe ich den Bart abgelegt, habe das Haar gekämmt, habe Öl im Haare. Weniges ist, das mir noch fehlt, du Vortreffliche: feine Kleider, feine Schuhe, Geld im Beutel. Wisse, Schwereres hat Siddhartha sich vorgenommen, als solche Kleinigkeiten sind, und hat es erreicht. Wie sollte ich nicht erreichen, was ich gestern mir vorgenommen habe: dein Freund zu sein und die Freuden der Liebe von dir zu lernen! Du wirst mich gelehrig sehen, Kamala, Schwereres habe ich gelernt, als was du mich lehren sollst. Und nun also: Siddhartha genügt dir nicht, so wie er ist, mit Öl im Haar, aber ohne Kleider, ohne Schuhe, ohne Geld?"

Lachend rief Kamala: "Nein, Werter, er genügt noch nicht. Kleider muß er haben, hübsche Kleider, und Schuhe, hübsche Schuhe, und viel Geld im Beutel, und Geschenke für Kamala. Weißt du es nun, Samana aus dem Walde? Hast du es dir gemerkt?"

"Wohl habe ich es mir gemerkt," rief Siddhartha. "Wie sollte ich mir nicht merken, was aus einem solchen Munde kommt! Dein Mund ist wie eine frisch aufgebrochene Feige, Kamala. Auch mein Mund ist rot und frisch, er wird zu deinem passen, du wirst sehen.--Aber sage, schöne Kamala, hast du gar keine Furcht vor dem Samana aus dem Walde, der gekommen ist, um Liebe zu lernen?"

"Warum sollte ich denn Furcht vor einem Samana haben, einem dummen Samana aus dem Walde, der von den Schakalen kommt und noch gar nicht weiß, was Frauen sind?"

"O, er ist stark, der Samana, und er fürchtet nichts. Er könnte dich zwingen, schönes Mädchen. Er könnte dich rauben. Er könnte dir weh tun."

"Nein, Samana, das fürchte ich nicht. Hat je ein Samana oder ein Brahmane gefürchtet, einer könnte kommen und ihn packen und ihm seine Gelehrsamkeit, und seine Frömmigkeit, und seinen Tiefsinn rauben? Nein, denn die gehören ihm zu eigen und er gibt davon nur, was er geben will und wem er geben will. So ist es, genau ebenso ist es auch mit Kamala, und mit den Freuden der Liebe. Schön und rot ist Kamalas Mund, aber versuche, ihn gegen Kamalas Willen zu küssen, und nicht einen Tropfen Süßigkeit wirst du von ihm haben, der so viel Süßes zu geben versteht! Du bist gelehrig, Siddhartha, so lerne auch dies: Liebe kann man erbetteln, erkaufen, geschenkt bekommen, auf der Gasse finden, aber rauben kann man sie nicht. Da hast du dir einen falschen Weg ausgedacht. Nein, schade wäre es, wenn ein hübscher Jüngling wie du es so falsch angreifen wollte."

Siddhartha verneigte sich lächelnd. "Schade wäre es, Kamala, wie sehr hast du recht! Überaus schade wäre es. Nein, von deinem Munde soll mir kein Tropfen Süßigkeit verloren gehen, noch dir von dem meinen! Es bleibt also dabei: Siddhartha wird wiederkommen, wenn er hat, was ihm noch fehlt: Kleider, Schuhe, Geld. Aber sprich, holde Kamala, kannst du mir nicht noch einen kleinen Rat geben?"

"Einen Rat? Warum nicht? Wer wollte nicht gerne einem armen, unwissenden Samana, der von den Schakalen aus dem Walde kommt, einen Rat geben?"

"Liebe Kamala, so rate mir wohin soll ich gehen, daß ich am raschesten jene drei Dinge finde?"

"Freund, das möchten viele wissen. Du mußt tun, was du gelernt hast, und dir dafür Geld geben lassen, und Kleider, und Schuhe. Anders kommt ein Armer nicht zu Geld. Was kannst du denn?"

"Ich kann denken. Ich kann warten. Ich kann fasten."

"Nichts sonst?"

"Nichts. Doch, ich kann auch dichten. Willst du mir für ein Gedicht einen Kuß geben?"

"Das will ich tun, wenn dein Gedicht mir gefällt. Wie heißt es denn?"

Siddhartha sprach, nachdem er sich einen Augenblick besonnen hatte, diese Verse:

In ihren schattigen Hain trat die schöne Kamala,

An Haines Eingang stand der braune Samana.

Tief, da er die Lotusblüte erblickte,

Beugte sich jener, lächelnd dankte Kamala.

Lieblicher, dachte der Jüngling, als Göttern zu opfern,

Lieblicher ist es zu opfern der schönen Kamala.

Laut klatschte Kamala in die Hände, daß die goldenen Armringe klangen.

"Schön sind deine Verse, brauner Samana, und wahrlich, ich verliere nichts, wenn ich dir einen Kuß für sie gebe."

Sie zog ihn mit den Augen zu sich, er beugte sein Gesicht auf ihres, und legte seinen Mund auf den Mund, der wie eine frisch aufgebrochene Feige war. Lange küßte ihn Kamala, und mit tiefem Erstaunen fühlte Siddhartha, wie sie ihn lehrte, wie sie weise war, wie sie ihn beherrschte, ihn zurückwies, ihn lockte, und wie hinter diesem ersten eine lange, eine wohlgeordnete, wohlerprobte Reihe von Küssen stand, jeder vom andern verschieden, die ihn noch erwarteten. Tief atmend blieb er stehen, und war in diesem Augenblick wie ein Kind erstaunt über die Fülle des Wissens und Lernenswerten, die sich vor seinen Augen erschloß.

"Sehr schön sind deine Verse," rief Kamala, "wenn ich reich wäre, gäbe ich dir Goldstücke dafür. Aber schwer wird es dir werden, mit Versen so viel Geld zu erwerben, wie du brauchst. Denn du brauchst viel Geld, wenn du Kamalas Freund sein willst."

"Wie kannst du küssen, Kamala!" stammelte Siddhartha.

"Ja, das kann ich schon, darum fehlt es mir auch nicht an Kleidern, Schuhen, Armbändern und allen schönen Dingen. Aber was wird aus dir werden? Kannst du nichts als denken, fasten, dichten?"

"Ich kann auch die Opferlieder," sagte Siddhartha, "aber ich will sie nicht mehr singen. Ich kann auch Zaubersprüche, aber ich will sie nicht mehr sprechen. Ich habe die Schriften gelesen--"

"Halt," unterbrach ihn Kamala. "Du kannst lesen? Und schreiben?"

"Gewiß kann ich das. Manche können das."

"Die meisten können es nicht. Auch ich kann es nicht. Es ist sehr gut, daß du lesen und schreiben kannst, sehr gut. Auch die Zaubersprüche wirst du noch brauchen können."

In diesem Augenblick kam eine Dienerin gelaufen und flüsterte der Herrin eine Nachricht ins Ohr.

"Ich bekomme Besuch," rief Kamala. "Eile und verschwinde, Siddhartha, niemand darf dich hier sehen, das merke dir! Morgen sehe ich dich wieder."

Der Magd aber befahl sie, dem frommen Brahmanen ein weißes Obergewand zu geben. Ohne zu wissen, wie ihm geschah, sah sich Siddhartha von der Magd hinweggezogen, auf Umwegen in ein Gartenhaus gebracht, mit einem Oberkleid beschenkt, ins Gebüsch geführt und dringlich ermahnt, sich alsbald ungesehen aus dem Hain zu verlieren.

Zufrieden tat er, wie ihm geheißen war. Des Waldes gewohnt, brachte er sich lautlos aus dem Hain und über die Hecke. Zufrieden kehrte er in die Stadt zurück, das zusammengerollte Kleid unterm Arme tragend. In einer Herberge, wo Reisende einkehrten, stellte er sich an die Tür, bat schweigend um Essen, nahm schweigend ein Stück Reiskuchen an. Vielleicht schon morgen, dachte er, werde ich niemand mehr um Essen bitten.

Stolz flammte plötzlich in ihm auf. Er war kein Samana mehr, nicht mehr stand es ihm an, zu betteln. Er gab den Reiskuchen einem Hunde und blieb ohne Speise.

"Einfach ist das Leben, das man in der Welt hier führt," dachte Siddhartha. "Es hat keine Schwierigkeiten. Schwer war alles, mühsam und am Ende hoffnungslos, als ich noch Samana war. Nun ist alles leicht, leicht wie der Unterricht im Küssen, den mir Kamala gibt. Ich brauche Kleider und Geld, sonst nichts, das sind kleine nahe Ziele, sie stören einem nicht den Schlaf."

Längst hatte er das Stadthaus Kamalas erkundet, dort fand er sich am andern Tage ein.

"Es geht gut," rief sie ihm entgegen. "Du wirst bei Kamaswami erwartet, er ist der reichste Kaufmann dieser Stadt. Wenn du ihm gefällst, wird er dich in Dienst nehmen. Sei klug, brauner Samana. Ich habe ihm durch andre von dir erzählen lassen. Sei freundlich gegen ihn, er ist sehr mächtig. Aber sei nicht zu bescheiden! Ich will nicht, daß du sein Diener wirst, du sollst seinesgleichen werden, sonst bin ich nicht mit dir zufrieden. Kamaswami fängt an, alt und bequem zu werden. Gefällst du ihm, so wird er dir viel anvertrauen."

Siddhartha dankte ihr und lachte, und da sie erfuhr, er habe gestern und heute nichts gegessen, ließ sie Brot und Früchte bringen und bewirtete ihn.

"Du hast Glück gehabt," sagte sie beim Abschied, "eine Tür um die andre tut sich dir auf. Wie kommt das wohl? Hast du einen Zauber?"

Siddhartha sagte: "Gestern erzählte ich dir, ich verstünde zu denken, zu warten und zu fasten, du aber fandest, das sei zu nichts nütze. Es ist aber zu vielem nütze, Kamala, du wirst es sehen. Du wirst sehen, daß die dummen Samanas im Walde viel Hübsches lernen und können, das Ihr nicht könnet. Vorgestern war ich noch ein struppiger Bettler, gestern habe ich schon Kamala geküßt, und bald werde ich ein Kaufmann sein und Geld haben und all diese Dinge, auf die du Wert legst."

"Nun ja," gab sie zu. "Aber wie stünde es mit dir ohne mich? Was wärest du, wenn Kamala dir nicht hülfe?"

"Liebe Kamala," sagte Siddhartha und richtete sich hoch auf, "als ich zu dir in deinen Hain kam, tat ich den ersten Schritt. Es war mein Vorsatz, bei dieser schönsten Frau die Liebe zu lernen. Von jenem Augenblick an, da ich den Vorsatz faßte, wußte ich auch, daß ich ihn ausführen werde. Ich wußte, daß du mir helfen würdest, bei deinem ersten Blick am Eingang des Haines wußte ich es schon."

"Wenn ich aber nicht gewollt hätte?"

"Du hast gewollt. Sieh, Kamala: Wenn du einen Stein ins Wasser wirfst, so eilt er auf dem schnellsten Wege zum Grunde des Wassers. So ist es, wenn Siddhartha ein Ziel, einen Vorsatz hat. Siddhartha tut nichts, er wartet, er denkt, er fastet, aber er geht durch die Dinge der Welt hindurch wie der Stein durchs Wasser, ohne etwas zu tun, ohne sich zu rühren; er wird gezogen, er läßt sich fallen. Sein Ziel zieht ihn an sich, denn er läßt nichts in seine Seele ein, was dem Ziel widerstreben könnte. Das ist es, was Siddhartha bei den Samanas gelernt hat. Es ist das, was die Toren Zauber nennen und wovon sie meinen, es werde durch die Dämonen bewirkt. Nichts wird von Dämonen bewirkt, es gibt keine Dämonen. Jeder kann zaubern, jeder kann seine Ziele erreichen, wenn er denken kann, wenn er warten kann, wenn er fasten kann."

Kamala hörte ihm zu. Sie liebte seine Stimme, sie liebte den Blick seiner Augen.

"Vielleicht ist es so," sagte sie leise, "wie du sprichst, Freund. Vielleicht ist es aber auch so, daß Siddhartha ein hübscher Mann ist, daß sein Blick den Frauen gefällt, daß darum das Glück ihm entgegenkommt."

Mit einem Kuß nahm Siddhartha Abschied. "Möge es so sein, meine Lehrerin. Möge immer mein Blick dir gefallen, möge immer von dir mir Glück entgegenkommen!"

BEI DEN KINDERMENSCHEN

Siddhartha ging zum Kaufmann Kamaswami, in ein reiches Haus ward er gewiesen, Diener führten ihn zwischen kostbaren Teppichen in ein Gemach, wo er den Hausherrn erwartete.

Kamaswami trat ein, ein rascher, geschmeidiger Mann mit stark ergrauendem Haar, mit sehr klugen, vorsichtigen Augen, mit einem begehrlichen Mund. Freundlich begrüßten sich Herr und Gast.

"Man hat mir gesagt," begann der Kaufmann, "daß du ein Brahmane bist, ein Gelehrter, daß du aber Dienste bei einem Kaufmann suchst. Bist du denn in Not geraten, Brahmane, daß du Dienste suchst?"

"Nein," sagte Siddhartha, "ich bin nicht in Not geraten und bin nie in Not gewesen. Wisse, daß ich von den Samanas komme, bei welchen ich lange Zeit gelebt habe."

"Wenn du von den Samanas kommst, wie solltest du da nicht in Not sein? Sind nicht die Samanas völlig besitzlos?",

"Besitzlos bin ich," sagte Siddhartha, "wenn es das ist, was du meinst. Gewiß bin ich besitzlos. Doch bin ich es freiwillig, bin also nicht in Not."

"Wovon aber willst du leben, wenn du besitzlos bist?"

"Ich habe daran noch nie gedacht, Herr. Ich bin mehr als drei Jahre besitzlos gewesen, und habe niemals daran gedacht, wovon ich leben solle."

"So hast du vom Besitz anderer gelebt."

"Vermutlich ist es so. Auch der Kaufmann lebt ja von der Habe anderer."

"Wohl gesprochen. Doch nimmt er von den andern das Ihre nicht umsonst; er gibt ihnen seine Waren dafür."

"So scheint es sich in der Tat zu verhalten. Jeder nimmt, jeder gibt, so ist das Leben."

"Aber erlaube: wenn du besitzlos bist, was willst du da geben?"

"Jeder gibt, was er hat. Der Krieger gibt Kraft, der Kaufmann gibt Ware, der Lehrer Lehre, der Bauer Reis, der Fischer Fische."

"Sehr wohl. Und was ist es nun, was du zu geben hast? Was ist es, das du gelernt hast, das du kannst?"

"Ich kann denken. Ich kann warten. Ich kann fasten."

"Das ist alles?"

"Ich glaube, es ist alles!"

"Und wozu nützt es? Zum Beispiel das Fasten--wozu ist es gut?"

"Es ist sehr gut, Herr. Wenn ein Mensch nichts zu essen hat, so ist Fasten das Allerklügste, was er tun kann. Wenn, zum Beispiel, Siddhartha nicht fasten gelernt hätte, so müßte er heute noch irgendeinen Dienst annehmen, sei es bei dir oder wo immer, denn der Hunger würde ihn dazu zwingen. So aber kann Siddhartha ruhig warten, er kennt keine Ungeduld, er kennt keine Notlage, lange kann er sich vom Hunger belagern lassen und kann dazu lachen. Dazu, Herr, ist Fasten gut."

"Du hast Recht, Samana. Warte einen Augenblick."

Kamaswami ging hinaus und kehrte mit einer Rolle wieder, die er seinem Gaste hinreichte, indem er fragte: "Kannst du dies lesen?"

Siddhartha betrachtete die Rolle, in welcher ein Kaufvertrag niedergeschrieben war, und begann ihren Inhalt vorzulesen.

"Vortrefflich", sagte Kamaswami. "Und willst du mir etwas auf dieses Blatt schreiben?"

Er gab ihm ein Blatt und einen Griffel, und Siddhartha schrieb und gab das Blatt zurück.

Kamaswami las: "Schreiben ist gut, Denken ist besser. Klugheit ist gut, Geduld ist besser."

"Vorzüglich verstehst du zu schreiben," lobte der Kaufmann. "Manches werden wir noch miteinander zu sprechen haben. Für heute bitte ich dich, sei mein Gast und nimm in diesem Hause Wohnung."

Siddhartha dankte und nahm an, und wohnte nun im Hause des Händlers. Kleider wurden ihm gebracht, und Schuhe, und ein Diener bereitete ihm täglich das Bad. Zweimal am Tage wurde eine reichliche Mahlzeit aufgetragen, Siddhartha aber aß nur einmal am Tage, und aß weder Fleisch noch trank er Wein. Kamaswami erzählte ihm von seinem Handel, zeigte ihm Waren und Magazine, zeigte ihm Berechnungen. Vieles Neue lernte Siddhartha kennen, er hörte viel und sprach wenig. Und der Worte Kamalas eingedenk, ordnete er sich niemals dem Kaufmanne unter, zwang ihn, daß er ihn als seinesgleichen, ja als mehr denn seinesgleichen behandle. Kamaswami betrieb seine Geschäfte mit Sorglichkeit und oft mit Leidenschaft, Siddhartha aber betrachtete dies alles wie ein Spiel, dessen Regeln genau zu lernen er bemüht war, dessen Inhalt aber sein Herz nicht berührte.

Nicht lange war er in Kamaswamis Hause, da nahm er schon an seines Hausherrn Handel teil. Täglich aber zu der Stunde, die sie ihm nannte, besuchte er die schöne Kamala, in hübschen Kleidern, in feinen Schuhen, und bald brachte er ihr auch Geschenke mit. Vieles lehrte ihn ihr roter, kluger Mund. Vieles lehrte ihn ihre zarte, geschmeidige Hand. Ihm, der in der Liebe noch ein Knabe war und dazu neigte, sich blindlings und unersättlich in die Lust zu stürzen wie ins Bodenlose, lehrte sie von Grund auf die Lehre, daß man Lust nicht nehmen kann, ohne Lust zu geben, und daß jede Gebärde, jedes Streicheln, jede Berührung, jeder Anblick, jede kleinste Stelle des Körpers ihr Geheimnis hat, das zu wecken dem Wissenden Glück bereitet. Sie lehrte ihn, daß Liebende nach einer Liebesfeier nicht voneinander gehen dürfen, ohne eins das andere zu bewundern, ohne ebenso besiegt zu sein, wie gesiegt zu haben, so daß bei keinem von beiden Übersättigung und Öde entstehe und das böse Gefühl, mißbraucht zu haben oder mißbraucht worden zu sein. Wunderbare Stunden brachte er bei der schönen und klugen Künstlerin zu, wurde ihr Schüler, ihr Liebhaber, ihr Freund. Hier bei Kamala lag der Wert und Sinn seines jetzigen Lebens, nicht im Handel des Kamaswami.

Der Kaufmann übertrug ihm das Schreiben wichtiger Briefe und Verträge, und gewöhnte sich daran, alle wichtigen Angelegenheiten mit ihm zu beraten. Er sah bald, daß Siddhartha von Reis und Wolle, von Schiffahrt und Handel wenig verstand, daß aber seine Hand eine glückliche war, und daß Siddhartha ihn, den Kaufmann, übertraf an Ruhe und Gleichmut, und in der Kunst des Zuhörenkönnens und Eindringens in fremde Menschen. "Dieser Brahmane," sagte er zu einem Freunde, "ist kein richtiger Kaufmann und wird nie einer werden, nie ist seine Seele mit Leidenschaft bei den Geschäften. Aber er hat das Geheimnis jener Menschen, zu welchen der Erfolg von selber kommt, sei das nun ein angeborener guter Stern, sei es Zauber, sei es etwas, das er bei den Samanas gelernt hat. Immer scheint er mit den Geschäften nur zu spielen, nie gehen sie ganz in ihn ein, nie beherrschen sie ihn, nie fürchtet er Mißerfolg, nie bekümmert ihn ein Verlust."

Der Freund riet dem Händler: "Gib ihm von den Geschäften, die er für dich treibt, einen Drittel vom Gewinn, laß ihn aber auch denselben Anteil des Verlustes treffen, wenn Verlust entsteht. So wird er eifriger werden."

Kamaswami folgte dem Rat. Siddhartha aber kümmerte sich wenig darum. Traf ihn Gewinn, so nahm er ihn gleichmütig hin; traf ihn Verlust, so lachte er und sagte: "Ei sieh, dies ist also schlecht gegangen!"

Es schien in der Tat, als seien die Geschäfte ihm gleichgültig. Einmal reiste er in ein Dorf, um dort eine große Reisernte aufzukaufen. Als er ankam, war aber der Reis schon an einen andern Händler verkauft. Dennoch blieb Siddhartha manche Tage in

jenem Dorf, bewirtete die Bauern, schenkte ihren Kindern Kupfermünzen, feierte eine Hochzeit mit und kam überaus zufrieden von der Reise zurück. Kamaswami machte ihm Vorwürfe, daß er nicht sogleich umgekehrt sei, daß er Zeit und Geld vergeudet habe. Siddhartha antwortete: "Laß das Schelten, lieber Freund! Noch nie ist mit Schelten etwas erreicht worden. Ist Verlust entstanden, so laß mich den Verlust tragen. Ich bin sehr zufrieden mit dieser Reise. Ich habe vielerlei Menschen kennengelernt, ein Brahmane ist mein Freund geworden, Kinder sind auf meinen Knien geritten, Bauern haben mir ihre Felder gezeigt, niemand hat mich für einen Händler gehalten."

"Sehr hübsch ist dies alles," rief Kamaswami unwillig, "aber tatsächlich bist du doch ein Händler, sollte ich meinen! Oder bist du denn nur zu deinem Vergnügen gereist?"

"Gewiß," lachte Siddhartha, "gewiß bin ich zu meinem Vergnügen gereist. Wozu denn sonst? Ich habe Menschen und Gegenden kennengelernt, ich habe Freundlichkeit und Vertrauen genossen, ich habe Freundschaft gefunden. Sieh, Lieber, wenn ich Kamaswami gewesen wäre, so wäre ich sofort, als ich meinen Kauf vereitelt sah, voll Ärger und in Eile wieder zurückgereist, und Zeit und Geld wäre in der Tat verloren gewesen. So aber habe ich gute Tage gehabt, habe gelernt, habe Freude genossen, habe weder mich noch andre durch Ärger und durch Eilfertigkeit geschädigt. Und wenn ich jemals wieder dorthin komme, vielleicht um eine spätere Ernte zu kaufen, oder zu welchem Zwecke es sei, so werden freundliche Menschen mich freundlich und heiter empfangen, und ich werde mich dafür loben, daß ich damals nicht Eile und Unmut gezeigt habe. Also laß gut sein, Freund, und schade dir nicht durch Schelten! Wenn der Tag kommt, an dem du sehen wirst: Schaden bringt mir dieser Siddhartha, dann sprich ein Wort, und Siddhartha wird seiner Wege gehen. Bis dahin aber laß uns einer mit dem andern zufrieden sein."

Vergeblich waren auch die Versuche des Kaufmanns, Siddhartha zu überzeugen, daß er sein, Kamaswamis, Brot esse. Siddhartha aß sein eignes Brot, vielmehr sie beide aßen das Brot anderer, das Brot aller. Niemals hatte Siddhartha ein Ohr für Kamaswamis Sorgen, und Kamaswami machte sich viele Sorgen. War ein Geschäft im Gange, welchem Mißerfolg drohte, schien eine Warensendung verloren, schien ein Schuldner nicht zahlen zu können, nie konnte Kamaswami seinen Mitarbeiter überzeugen, daß es nützlich sei, Worte des Kummers oder des Zornes zu verlieren, Falten auf der Stirn zu haben, schlecht zu schlafen. Als ihm Kamaswami einstmals vorhielt, er habe alles, was er verstehe, von ihm gelernt, gab er zur Antwort: "Wolle mich doch nicht mit solchen Späßen zum Besten haben! Von dir habe ich gelernt, wieviel ein Korb voll Fische kostet, und wieviel Zins man für geliehenes Geld fordern kann. Das sind deine Wissenschaften. Denken habe ich nicht bei dir gelernt, teurer Kamaswami, suche lieber du es von mir zu lernen."

In der Tat war seine Seele nicht beim Handel. Die Geschäfte waren gut, um ihm Geld für Kamala einzubringen, und sie brachten weit mehr ein, als er brauchte. Im übrigen war Siddharthas Teilnahme und Neugierde nur bei den Menschen, deren Geschäfte, Handwerke, Sorgen, Lustbarkeiten und Torheiten ihm früher fremd und fern gewesen waren wie der Mond. So leicht es ihm gelang, mit allen zu sprechen, mit allen zu leben, von allen zu lernen, so sehr ward ihm dennoch bewußt, daß etwas sei, was ihn von ihnen trenne, und dies Trennende war sein Samanatum. Er sah die Menschen auf eine kindliche oder tierhafte Art dahinleben, welche er zugleich liebte und auch verachtete. Er sah sie sich mühen, sah sie leiden und grau werden um Dinge, die ihm dieses Preises ganz unwert schienen, um Geld, um kleine Lust, um kleine Ehren, er sah sie einander schelten und beleidigen, er sah sie um Schmerzen wehklagen, über die der Samana lächelt, und unter Entbehrungen leiden, die ein Samana nicht fühlt.

Allem stand er offen, was diese Menschen ihm zubrachten. Willkommen war ihm der Händler, der ihm Leinwand zum Kauf anbot, willkommen der Verschuldete, der ein Darlehen suchte, willkommen der Bettler, der ihm eine Stunde lang die Geschichte seiner Armut erzählte, und welcher nicht halb so arm war als ein jeder Samana. Den reichen ausländischen Händler behandelte er nicht anders als den Diener, der ihn rasierte, und den Straßenverkäufer, von dem er sich beim Bananenkauf um kleine Münze betrügen ließ. Wenn Kamaswami zu ihm kam, um über seine Sorgen zu klagen oder ihm wegen eines Geschäftes Vorwürfe zu machen, so hörte er neugierig und heiter zu, wunderte sich über ihn, suchte ihn zu verstehen, ließ ihn ein wenig Recht haben, eben soviel als ihm unentbehrlich schien, und wandte sich von ihm ab, dem Nächsten zu, der ihn begehrte. Und es kamen viele zu ihm, viele um mit ihm zu handeln, viele um ihn zu betrügen, viele um ihn auszuhorchen, viele um sein Mitleid anzurufen, viele um seinen Rat zu hören. Er gab Rat, er bemitleidete, er schenkte, er ließ sich ein wenig betrügen, und dieses ganze Spiel und die Leidenschaft, mit welcher alle Menschen dies Spiel betrieben, beschäftigte seine Gedanken ebensosehr, wie einst die Götter und das Brahman sie beschäftigt hatten.

Zuzeiten spürte er, tief in der Brust, eine sterbende, leise Stimme, die mahnte leise, klagte leise, kaum daß er sie vernahm. Alsdann kam ihm für eine Stunde zum Bewußtsein, daß er ein seltsames Leben führe, daß er da lauter Dinge tue, die bloß ein Spiel waren, daß er wohl heiter sei und zuweilen Freude fühle, daß aber das eigentliche Leben dennoch an ihm vorbeifließe und

ihn nicht berühre. Wie ein Ballspieler mit seinen Bällen spielt, so spielte er mit seinen Geschäften, mit den Menschen seiner Umgebung, sah ihnen zu, fand seinen Spaß an ihnen; mit dem Herzen, mit der Quelle seines Wesens war er nicht dabei. Die Quelle lief irgendwo, wie fern von ihm, lief und lief unsichtbar, hatte nichts mehr mit seinem Leben zu tun. Und einigemal erschrak er ob solchen Gedanken und wünschte sich, es möge doch auch ihm gegeben sein, bei all dem kindlichen Tun des Tages mit Leidenschaft und mit dem Herzen beteiligt zu sein, wirklich zu leben, wirklich zu tun, wirklich zu genießen und zu leben, statt nur so als ein Zuschauer daneben zu stehen. Immer aber kam er wieder zur schönen Kamala, lernte Liebeskunst, übte den Kult der Lust, bei welchem mehr als irgendwo geben und nehmen zu einem wird, plauderte mit ihr, lernte von ihr, gab ihr Rat, empfing Rat. Sie verstand ihn besser, als Govinda ihn einst verstanden hatte, sie war ihm ähnlicher.

Einmal sagte er zu ihr: "Du bist wie ich, du bist anders als die meisten Menschen. Du bist Kamala, nichts andres, und in dir innen ist eine Stille und Zuflucht, in welche du zu jeder Stunde eingehen und bei dir daheim sein kannst, so wie auch ich es kann. Wenige Menschen haben das, und doch könnten alle es haben."

"Nicht alle Menschen sind klug," sagte Kamala.

"Nein," sagte Siddhartha, "nicht daran liegt es. Kamaswami ist ebenso klug wie ich, und hat doch keine Zuflucht in sich. Andre haben sie, die an Verstand kleine Kinder sind. Die meisten Menschen, Kamala, sind wie ein fallendes Blatt, das weht und dreht sich durch die Luft, und schwankt, und taumelt zu Boden. Andre aber, wenige, sind wie Sterne, die gehen eine feste Bahn, kein Wind erreicht sie, in sich selber haben sie ihr Gesetz und ihre Bahn. Unter allen Gelehrten und Samanas, deren ich viele kannte, war einer von dieser Art, ein Vollkommener, nie kann ich ihn vergessen. Es ist jener Gotama, der Erhabene, der Verkündiger jener Lehre. Tausend Jünger hören jeden Tag seine Lehre, folgen jede Stunde seiner Vorschrift, aber sie alle sind fallendes Laub, nicht in sich selbst haben sie Lehre und Gesetz."

Kamala betrachtete ihn mit Lächeln. "Wieder redest du von ihm," sagte sie, "wieder hast du Samana-Gedanken."

Siddhartha schwieg, und sie spielten das Spiel der Liebe, eines von den dreißig oder vierzig verschiedenen Spielen, welche Kamala wußte. Ihr Leib war biegsam wie der eines Jaguars, und wie der Bogen eines Jägers; wer von ihr die Liebe gelernt hatte, war vieler Lüste, vieler Geheimnisse kundig. Lange spielte sie mit Siddhartha, lockte ihn, wies ihn zurück, zwang ihn, umspannte ihn: freute sich seiner Meisterschaft, bis er besiegt war und erschöpft an ihrer Seite ruhte.

Die Hetäre beugte sich über ihn, sah lang in sein Gesicht, in seine müdgewordenen Augen.

"Du bist der beste Liebende," sagte sie nachdenklich, "den ich gesehen habe. Du bist stärker als andre, biegsamer, williger. Gut hast du meine Kunst gelernt, Siddhartha. Einst, wenn ich älter bin, will ich von dir ein Kind haben. Und dennoch, Lieber, bist du ein Samana geblieben, dennoch liebst du mich nicht, du liebst keinen Menschen. Ist es nicht so?"

"Es mag wohl so sein", sagte Siddhartha müde. "Ich bin wie du. Auch du liebst nicht--wie könntest du sonst die Liebe als eine Kunst betreiben? Die Menschen von unserer Art können vielleicht nicht lieben. Die Kindermenschen können es; das ist ihr Geheimnis."

SANSARA

Lange Zeit hatte Siddhartha das Leben der Welt und der Lüste gelebt, ohne ihm doch anzugehören. Seine Sinne, die er in heißen Samana-Jahren ertötet hatte, waren wieder erwacht, er hatte Reichtum gekostet, hatte Wollust gekostet, hatte Macht gekostet; dennoch war er lange Zeit im Herzen noch ein Samana geblieben, dies hatte Kamala, die Kluge, richtig erkannt. Immer noch war es die Kunst des Denkens, des Wartens, des Fastens, von welcher sein Leben gelenkt wurde, immer noch waren die Menschen der Welt, die Kindermenschen, ihm fremd geblieben, wie er ihnen fremd war.

Die Jahre liefen dahin, in Wohlergehen eingehüllt fühlte Siddhartha ihr Schwinden kaum. Er war reich geworden, er besaß längst ein eigenes Haus und eigene Dienerschaft, und einen Garten vor der Stadt am Flusse. Die Menschen hatten ihn gerne, sie kamen zu ihm, wenn sie Geld oder Rat brauchten, niemand aber stand ihm nahe, außer Kamala.

Jenes hohe, helle Wachsein, welches er einst, auf der Höhe seiner Jugend, erlebt hatte, in den Tagen nach Gotamas Predigt, nach der Trennung von Govinda, jene gespannte Erwartung, jenes stolze Alleinstehen ohne Lehren und ohne Lehrer, jene geschmeidige Bereitschaft, die göttliche Stimme im eigenen Herzen zu hören, war allmählich Erinnerung geworden, war vergänglich gewesen; fern und leise rauschte die heilige Quelle, die einst nahe gewesen war, die einst in ihm selber gerauscht hatte. Vieles zwar, das er

von den Samanas gelernt, das er von Gotama gelernt, das er von seinem Vater, dem Brahmanen, gelernt hatte, war noch lange Zeit in ihm geblieben: mäßiges Leben, Freude am Denken, Stunden der Versenkung, heimliches Wissen vom Selbst, vom ewigen Ich, das nicht Körper noch Bewußtsein ist. Manches davon war in ihm geblieben, eines ums andre aber war untergesunken und hatte sich mit Staub bedeckt. Wie die Scheibe des Töpfers, einmal angetrieben, sich noch lange dreht und nur langsam ermüdet und ausschwingt, so hatte in Siddharthas Seele das Rad der Askese, das Rad des Denkens, das Rad der Unterscheidung lange weiter geschwungen, schwang immer noch, aber es schwang langsam und zögernd und war dem Stillstand nahe. Langsam, wie Feuchtigkeit in den absterbenden Baumstrunk dringt, ihn langsam füllt und faulen macht, war Welt und Trägheit in Siddharthas Seele gedrungen, langsam füllte sie seine Seele, machte sie schwer, machte sie müde, schläferte sie ein. Dafür waren seine Sinne lebendig geworden, viel hatten sie gelernt, viel erfahren.

Siddhartha hatte gelernt, Handel zu treiben, Macht über Menschen auszuüben, sich mit dem Weibe zu vergnügen, er hatte gelernt, schöne Kleider zu tragen, Dienern zu befehlen, sich in wohlriechenden Wassern zu baden. Er hatte gelernt, zart und sorgfältig bereitete Speisen zu essen, auch den Fisch, auch Fleisch und Vogel, Gewürze und Süßigkeiten, und den Wein zu trinken, der träge und vergessen macht. Er hatte gelernt, mit Würfeln und auf dem Schachbrette zu spielen, Tänzerinnen zuzusehen, sich in der Sänfte tragen zu lassen, auf einem weichen Bett zu schlafen. Aber immer noch hatte er sich von den andern verschieden und ihnen überlegen gefühlt, immer hatte er ihnen mit ein wenig Spott zugesehen, mit ein wenig spöttischer Verachtung, mit eben jener Verachtung, wie sie ein Samana stets für Weltleute fühlt. Wenn Kamaswami kränklich war, wenn er ärgerlich war, wenn er sich beleidigt fühlte, wenn er von seinen Kaufmannssorgen geplagt wurde, immer hatte Siddhartha es mit Spott angesehen. Langsam und unmerklich nur, mit den dahingehenden Erntezeiten und Regenzeiten, war sein Spott müder geworden, war seine Überlegenheit stiller geworden. Langsam nur, zwischen seinen wachsenden Reichtümern, hatte Siddhartha selbst etwas von der Art der Kindermenschen angenommen, etwas von ihrer Kindlichkeit und von ihrer Ängstlichkeit. Und doch beneidete er sie, beneidete sie desto mehr, je ähnlicher er ihnen wurde. Er beneidete sie um das Eine, was ihm fehlte und was sie hatten, um die Wichtigkeit, welche sie ihrem Leben beizulegen vermochten, um die Leidenschaftlichkeit ihrer Freuden und Ängste, um das bange aber süße Glück ihrer ewigen Verliebtheit. In sich selbst, in Frauen, in ihre Kinder, in Ehre oder Geld, in Pläne oder Hoffnungen verliebt waren diese Menschen immerzu. Er aber lernte dies nicht von ihnen, gerade dies nicht, diese Kinderfreude und Kindertorheit; er lernte von ihnen gerade das Unangenehme, was er selbst verachtete. Es geschah immer öfter, daß er am Morgen nach einem geselligen Abend lange liegen blieb und sich dumpf und müde fühlte. Es geschah, daß er ärgerlich und ungeduldig wurde, wenn Kamaswami ihn mit seinen Sorgen lang weilte. Es geschah, daß er allzu laut lachte, wenn er im Würfelspiel verlor. Sein Gesicht war noch immer klüger und geistiger als andre, aber es lachte selten, und nahm einen um den andern jene Züge an, die man im Gesicht reicher Leute so häufig findet, jene Züge der Unzufriedenheit, der Kränklichkeit, des Mißmutes, der Trägheit, der Lieblosigkeit. Langsam ergriff ihn die Seelenkrankheit der Reichen.

Wie ein Schleier, wie ein dünner Nebel senkte sich Müdigkeit über Siddhartha, langsam, jeden Tag ein wenig dichter, jeden Monat ein wenig trüber, jedes Jahr ein wenig schwerer. Wie ein neues Kleid mit der Zeit alt wird, mit der Zeit seine schöne Farbe verliert, Flecken bekommt, Falten bekommt, an den Säumen abgestoßen wird und hier und dort blöde, fädige Stellen zu zeigen beginnt, so war Siddharthas neues Leben, das er nach seiner Trennung von Govinda begonnen hatte, alt geworden, so verlor es mit den hinrinnenden Jahren Farbe und Glanz, so sammelten sich Falten und Flecken auf ihm, und im Grunde verborgen, hier und dort schon häßlich hervorblickend, wartete Enttäuschung und Ekel. Siddhartha merkte es nicht. Er merkte nur, dass jene helle und sichere Stimme seines Innern, die einst in ihm erwacht war und ihn in seinen glänzenden Zeiten je und je geleitet hatte, schweigsam geworden war.

Die Welt hatte ihn eingefangen, die Lust, die Begehrlichkeit, die Trägheit, und zuletzt auch noch jenes Laster, das er als das törichteste stets am meisten verachtet und gehöhnt hatte: die Habgier. Auch das Eigentum, der Besitz und Reichtum hatte ihn schließlich eingefangen, war ihm kein Spiel und Tand mehr, war Kette und Last geworden. Auf einem seltsamen und listigen Wege war Siddhartha in diese letzte und schnödeste Abhängigkeit geraten, durch das Würfelspiel. Seit der Zeit nämlich, da er im Herzen aufgehört hatte, ein Samana zu sein, begann Siddhartha das Spiel um Geld und Kostbarkeiten, das er sonst lächelnd und lässig als eine Sitte der Kindermenschen mitgemacht hatte, mit einer zunehmenden Wut und Leidenschaft zu treiben. Er war ein gefürchteter Spieler, wenige wagten es mit ihm, so hoch und frech waren seine Einsätze. Er trieb das Spiel aus der Not seines Herzens, das Verspielen und Verschleudern des elenden Geldes schuf ihm eine zornige Freude, auf keine andre Weise konnte er seine Verachtung des Reichtums, des Götzen der Kaufleute, deutlicher und höhnischer zeigen. So spielte er hoch und schonungslos, sich selbst hassend, sich selbst verhöhnend, strich Tausende ein, warf Tausende weg, verspielte Geld, verspielte Schmuck, verspielte ein Landhaus, gewann wieder, verspielte wieder. Jene Angst, jene furchtbare und beklemmende Angst, welche er während des Würfelns, während des Bangens um hohe Einsätze empfand, jene Angst liebte er und suchte sie immer zu

erneuern, immer zu steigern, immer höher zu kitzeln, denn in diesem Gefühl allein noch fühlte er etwas wie Glück, etwas wie Rausch, etwas wie erhöhtes Leben inmitten seines gesättigten, lauen, faden Lebens.

Und nach jedem großen Verluste sann er auf neuen Reichtum, ging eifriger dem Handel nach, zwang strenger seine Schuldner zum Zahlen, denn er wollte weiter spielen, er wollte weiter vergeuden, weiter dem Reichtum seine Verachtung zeigen. Siddhartha verlor die Gelassenheit bei Verlusten, er verlor die Geduld gegen säumige Zahler, verlor die Gutmütigkeit gegen Bettler, verlor die Lust am Verschenken und Wegleihen des Geldes an Bittende. Er, der zehntausend auf einen Wurf verspielte und dazu lachte, wurde im Handel strenger und kleinlicher, träumte nachts zuweilen von Geld! Und so oft er aus dieser häßlichen Bezauberung erwachte, so oft er sein Gesicht im Spiegel an der Schlafzimmerwand gealtert und häßlicher geworden sah, so oft Scham und Ekel ihn überfiel, floh er weiter, floh in neues Glücksspiel, floh in Betäubungen der Wollust, des Weines, und von da zurück in den Trieb des Häufens und Erwerbens. In diesem sinnlosen Kreislauf lief er sich müde, lief er sich alt, lief sich krank.

Da mahnte ihn einst ein Traum. Er war die Abendstunden bei Kamala gewesen, in ihrem schönen Lustgarten. Sie waren unter den Bäumen gesessen, im Gespräch, und Kamala hatte nachdenkliche Worte gesagt, Worte, hinter welchen sich eine Trauer und Müdigkeit verbarg. Von Gotama hatte sie ihn gebeten zu erzählen, und konnte nicht genug von ihm hören, wie rein sein Auge, wie still und schön sein Mund, wie gütig sein Lächeln, wie friedevoll sein Gang gewesen. Lange hatte er ihr vom erhabenen Buddha erzählen müssen, und Kamala hatte geseufzt, und hatte gesagt: "Einst, vielleicht bald, werde auch ich diesem Buddha folgen. Ich werde ihm meinen Lustgarten schenken, und werde meine Zuflucht zu seiner Lehre nehmen." Darauf aber hatte sie ihn gereizt, und ihn im Liebesspiel mit schmerzlicher Inbrunst an sich gefesselt, unter Bissen und unter Tränen, als wolle sie noch einmal aus dieser eiteln, vergänglichen Lust den letzten süßen Tropfen pressen. Nie war es Siddhartha so seltsam klar geworden, wie nahe die Wollust dem Tode verwandt ist. Dann war er an ihrer Seite gelegen, und Kamalas Antlitz war ihm nahe gewesen, und unter ihren Augen und neben ihren Mundwinkeln hatte er, deutlich wie noch niemals, eine bange Schrift gelesen, eine Schrift von feinen Linien, von leisen Furchen, eine Schrift, die an den Herbst und an das Alter erinnerte, wie denn auch Siddhartha selbst, der erst in den Vierzigen stand, schon hier und dort ergraute Haare zwischen seinen schwarzen bemerkt hatte. Müdigkeit stand auf Kamalas schönem Gesicht geschrieben, Müdigkeit vom Gehen eines langen Weges, der kein frohes Ziel hat, Müdigkeit und beginnende Welke, und verheimlichte, noch nicht gesagte, vielleicht noch nicht einmal gewußte Bangigkeit: Furcht vor dem Alter, Furcht vor dem Herbste, Furcht vor dem Sterbenmüssen. Seufzend hatte er von ihr Abschied genommen, die Seele voll Unlust, und voll verheimlichter Bangigkeit.

Dann hatte Siddhartha die Nacht in seinem Hause mit Tänzerinnen beim Weine zugebracht, hatte gegen seine Standesgenossen den überlegenen gespielt, welcher er nicht mehr war, hatte viel Wein getrunken und spät nach Mitternacht sein Lager aufgesucht, müde und dennoch erregt, dem Weinen und der Verzweiflung nahe, und hatte lang vergeblich den Schlaf gesucht, das Herz voll eines Elendes, das er nicht mehr ertragen zu können meinte, voll eines Ekels, von dem er sich durchdrungen fühlte wie vom lauen, widerlichen Geschmack des Weines, der allzu süßen, öden Musik, dem allzu weichen Lächeln der Tänzerinnen, dem allzu süßen Duft ihrer Haare und Brüste. Mehr aber als vor allem anderen ekelte ihm vor sich selbst, vor seinen duftenden Haaren, vor dem Weingeruch seines Mundes, vor der schlaffen Müdigkeit und Unlust seiner Haut. Wie wenn einer, der allzuviel gegessen oder getrunken hat, es unter Qualen wieder erbricht und doch der Erleichterung froh ist, so wünschte sich der Schlaflose, in einem ungeheuren Schwall von Ekel sich dieser Genüsse, dieser Gewohnheiten, dieses ganzen sinnlosen Lebens und seiner selbst zu entledigen. Erst beim Schein des Morgens und dem Erwachen der ersten Geschäftigkeit auf der Straße vor seinem Stadthause war er eingeschlummert, hatte für wenige Augenblicke eine halbe Betäubung, eine Ahnung von Schlaf gefunden. In diesen Augenblicken hatte er einen Traum:

Kamala besaß in einem goldenen Käfig einen kleinen seltenen Singvogel. Von diesem Vogel träumte er. Er träumte: dieser Vogel war stumm geworden, der sonst stets in der Morgenstunde sang, und da dies ihm auffiel, trat er vor den Käfig und blickte hinein, da war der kleine Vogel tot und lag steif am Boden. Er nahm ihn heraus, wog ihn einen Augenblick in der Hand und warf ihn dann weg, auf die Gasse hinaus, und im gleichen Augenblick erschrak er furchtbar, und das Herz tat ihm weh, so, als habe er mit diesem toten Vogel allen Wert und alles Gute von sich geworfen.

Aus diesem Traum auffahrend, fühlte er sich von tiefer Traurigkeit umfangen. Wertlos, so schien ihm, wertlos und sinnlos hatte er sein Leben dahingeführt; nichts Lebendiges, nichts irgendwie Köstliches oder Behaltenswertes war ihm in Händen geblieben. Allein stand er und leer, wie ein Schiffbrüchiger am Ufer.

Finster begab sich Siddhartha in einen Lustgarten, der ihm gehörte, verschloß die Pforte, setzte sich unter einem Mangobaum nieder, fühlte den Tod im Herzen und das Grauen in der Brust, saß und spürte, wie es in ihm starb, in ihm welkte, in ihm zu Ende

ging. Allmählich sammelte er seine Gedanken, und ging im Geiste nochmals den ganzen Weg seines Lebens, von den ersten Tagen an, auf welche er sich besinnen konnte. Wann denn hatte er ein Glück erlebt, eine wahre Wonne gefühlt? O ja, mehrere Male hatte er solches erlebt. In den Knabenjahren hatte er es gekostet, wenn er von den Brahmanen Lob errungen hatte er es in seinem Herzen gefühlt: "Ein Weg liegt vor dem Hersagen der heiligen Verse, im Disput mit den Gelehrten, als Gehilfe beim Opfer ausgezeichnet hatte." Da hatte er es in seinem Herzen gefühlt: "Ein Weg liegt vor dir, zu dem du berufen bist, auf dich warten die Götter." Und wieder als Jüngling, da ihn das immer höher emporfliehende Ziel alles Nachdenkens aus der Schar Gleichstrebender heraus- und hinangerissen hatte, da er in Schmerzen um den Sinn des Brahman rang, da jedes erreichte Wissen nur neuen Durst in ihm entfachte, da wieder hatte er, mitten im Durst, mitten im Schmerze dieses selbe gefühlt: "Weiter! Weiter! Du bist berufen!" Diese Stimme hatte er vernommen, als er seine Heimat verlassen und das Leben des Samana gewählt hatte, und wieder, als er von den Samanas hinweg zu jenem Vollendeten, und auch von ihm hinweg ins Ungewisse gegangen war. Wie lange hatte er diese Stimme nicht mehr gehört, wie lange keine Höhe mehr erreicht, wie eben und öde war sein Weg dahingegangen, viele lange Jahre, ohne hohes Ziel, ohne Durst, ohne Erhebung, mit kleinen Lüsten zufrieden und dennoch nie begnügt! Alle diese Jahre hatte er, ohne es selbst zu wissen, sich bemüht und danach gesehnt, ein Mensch wie diese vielen zu werden, wie diese Kinder, und dabei war sein Leben viel elender und ärmer gewesen als das ihre, denn ihre Ziele waren nicht die seinen, noch ihre Sorgen, diese ganze Welt der Kamaswami-Menschen war ihm ja nur ein Spiel gewesen, ein Tanz, dem man zusieht, eine Komödie. Einzig Kamala war ihm lieb, war ihm wertvoll gewesen--aber war sie es noch? Brauchte er sie noch, oder sie ihn? Spielten sie nicht ein Spiel ohne Ende? War es notwendig, dafür zu leben? Nein, es war nicht notwendig! Dieses Spiel hieß Sansara, ein Spiel für Kinder, ein Spiel, vielleicht hold zu spielen, einmal, zweimal, zehnmal--aber immer und immer wieder?

Da wußte Siddhartha, daß das Spiel zu Ende war, daß er es nicht mehr spielen könne. Ein Schauder lief ihm über den Leib, in seinem Innern, so fühlte er, war etwas gestorben.

Jenen ganzen Tag saß er unter dem Mangobaume, seines Vaters gedenkend, Govindas gedenkend, Gotamas gedenkend. Hatte er diese verlassen müssen, um ein Kamaswami zu werden? Er saß noch, als die Nacht angebrochen war. Als er aufschauend die Sterne erblickte, dachte er: "Hier sitze ich unter meinem Mangobaume, in meinem Lustgarten." Er lächelte ein wenig--war es denn notwendig, war es richtig, war es nicht ein törichtes Spiel, daß er einen Mangobaum, daß er einen Garten besaß?

Auch damit schloß er ab, auch das starb in ihm. Er erhob sich, nahm Abschied vom Mangobaum, Abschied vom Lustgarten. Da er den Tag ohne Speise geblieben war, fühlte er heftigen Hunger, und gedachte an sein Haus in der Stadt, an sein Gemach und Bett, an den Tisch mit den Speisen. Er lächelte müde, schüttelte sich und nahm Abschied von diesen Dingen.

In derselben Nachtstunde verließ Siddhartha seinen Garten, verließ die Stadt und kam niemals wieder. Lange ließ Kamaswami nach ihm suchen, der ihn in Räuberhand gefallen glaubte. Kamala ließ nicht nach ihm suchen. Als sie erfuhr, daß Siddhartha verschwunden sei, wunderte sie sich nicht. Hatte sie es nicht immer erwartet? War er nicht ein Samana, ein Heimloser, ein Pilger? Und am meisten hatte sie dies beim letzten Zusammensein gefühlt, und sie freute sich mitten im Schmerz des Verlustes, daß sie ihn dieses letzte Mal noch so innig an ihr Herz gezogen sich noch einmal so ganz von ihm besessen und durchdrungen gefühlt hatte.

Als sie die erste Nachricht von Siddharthas Verschwinden bekam, trat sie ans Fenster, wo sie in einem goldenen Käfig einen seltenen Singvogel gefangen hielt. Sie öffnete die Tür des Käfigs, nahm den Vogel heraus und ließ ihn fliegen. Lange sah sie ihm nach, dem fliegenden Vogel. Sie empfing von diesem Tage an keine Besucher mehr, und hielt ihr Haus verschlossen. Nach einiger Zeit aber ward sie inne, daß sie von dem letzten Zusammensein mit Siddhartha schwanger sei.

AM FLUSSE

Siddhartha wanderte im Walde, schon fern von der Stadt, und wußte nichts als das eine, daß er nicht mehr zurück konnte, daß dies Leben, wie er es nun viele Jahre lang geführt, vorüber und dahin und bis zum Ekel ausgekostet und ausgesogen war. Tot war der Singvogel, von dem er geträumt. Tot war der Vogel in seinem Herzen. Tief war er in Sansara verstrickt, Ekel und Tod hatte er von allen Seiten in sich eingesogen, wie ein Schwamm Wasser einsaugt, bis er voll ist. Voll war er von Überdruß, voll von Elend, voll von Tod, nichts mehr gab es in der Welt, das ihn locken, das ihn freuen, das ihn trösten konnte.

Sehnlich wünschte er, nichts mehr von sich zu wissen, Ruhe zu haben, tot zu sein. Käme doch ein Blitz und erschlüge ihn! Käme doch ein Tiger und fräße ihn! Gäbe es doch einen Wein, ein Gift, das ihm Betäubung brächte, Vergessen und Schlaf, und kein Erwachen mehr! Gab es denn noch irgendeinen Schmutz, mit dem er sich nicht beschmutzt hatte, eine Sünde und Torheit, die er

nicht begangen, eine Seelenöde, die er nicht auf sich geladen hatte? War es denn noch möglich, zu leben? War es möglich, nochmals und nochmals wieder Atem zu ziehen, Atem auszustoßen, Hunger zu fühlen, wieder zu essen, wieder zu schlafen, wieder beim Weibe zu liegen? War dieser Kreislauf nicht für ihn erschöpft und abgeschlossen?

Siddhartha gelangte an den großen Fluß im Walde, an denselben Fluß, über welchen ihn einst, als er noch ein junger Mann war und von der Stadt des Gotama kam, ein Fährmann geführt hatte. An diesem Flusse machte er Halt, blieb zögernd beim Ufer stehen. Müdigkeit und Hunger hatten ihn geschwächt, und wozu auch sollte er weitergehen, wohin denn, zu welchem Ziel? Nein, es gab keine Ziele mehr, es gab nichts mehr als die tiefe, leidvolle Sehnsucht, diesen ganzen wüsten Traum von sich zu schütteln, diesen schalen Wein von sich zu speien, diesem jämmerlichen und schmachvollen Leben ein Ende zu machen.

Über das Flußufer hing ein Baum gebeugt, ein Kokosbaum, an dessen Stamm lehnte sich Siddhartha mit der Schulter, legte den Arm um den Stamm und blickte in das grüne Wasser hinab, das unter ihm zog und zog, blickte hinab und fand sich ganz und gar von dem Wunsche erfüllt, sich loszulassen und in diesem Wasser unterzugehen. Eine schauerliche Leere spiegelte ihm aus dem Wasser entgegen, welcher die furchtbare Leere in seiner Seele Antwort gab. Ja, er war am Ende. Nichts mehr gab es für ihn, als sich auszulöschen, als das mißlungene Gebilde seines Lebens zu zerschlagen, es wegzuwerfen, hohnlachenden Göttern vor die Füße. Dies war das große Erbrechen, nach dem er sich gesehnt hatte: der Tod, das Zerschlagen der Form, die er haßte! Mochten ihn die Fische fressen, diesen Hund von Siddhartha, diesen Irrsinnigen, diesen verdorbenen und verfaulten Leib, diese erschlaffte und mißbrauchte Seele! Mochten die Fische und Krokodile ihn fressen, mochten die Dämonen ihn zerstücken!

Mit verzerrtem Gesichte starrte er ins Wasser, sah sein Gesicht gespiegelt und spie danach. In tiefer Müdigkeit löste er den Arm vom Baumstamme und drehte sich ein wenig, um sich senkrecht hinabfallen zu lassen, um endlich unterzugehen. Er sank, mit geschlossenen Augen, dem Tod entgegen.

Da zuckte aus entlegenen Bezirken seiner Seele, aus Vergangenheiten seines ermüdeten Lebens her ein Klang. Es war ein Wort, eine Silbe, die er ohne Gedanken mit lallender Stimme vor sich hinsprach, das alte Anfangswort und Schlußwort aller brahmanischen Gebete, das heilige "OM", das so viel bedeutet wie "das Vollkommene" oder "die Vollendung". Und im Augenblick, da der Klang "Om" Siddharthas Ohr berührte, erwachte sein entschlummerter Geist plötzlich, und erkannte die Torheit seines Tuns.

Siddhartha erschrak tief. So also stand es um ihn, so verloren war er, so verirrt und von allem Wissen verlassen, daß er den Tod hatte suchen können, daß dieser Wunsch, dieser Kinderwunsch in ihm hatte groß werden können: Ruhe zu finden, indem er seinen Leib auslöschte! Was alle Qual dieser letzten Zeiten, alle Ernüchterung, alle Verzweiflung nicht bewirkt hatte, das bewirkte dieser Augenblick, da das Om in sein Bewußtsein drang: daß er sich in seinem Elend und in seiner Irrsal erkannte.

Om! sprach er vor sich hin: Om! Und wußte um Brahman, wußte um die Unzerstörbarkeit des Lebens, wußte um alles Göttliche wieder, das er vergessen hatte.

Doch war dies nur ein Augenblick, ein Blitz. Am Fuß des Kokosbaumes sank Siddhartha nieder, von der Ermüdung hingestreckt, Om murmelnd, legte sein Haupt auf die Wurzel des Baumes und sank in tiefen Schlaf.

Tief war sein Schlaf und frei von Träumen, seit langer Zeit hatte er einen solchen Schlaf nicht mehr gekannt. Als er nach manchen Stunden erwachte, war ihm, als seien zehn Jahre vergangen, er hörte das leise Strömen des Wassers, wußte nicht, wo er sei und wer ihn hierher gebracht habe, schlug die Augen auf, sah mit Verwunderung Bäume und Himmel über sich, und erinnerte sich, wo er wäre und wie er hierher gekommen sei. Doch bedurfte er hierzu einer langen Weile, und das Vergangene erschien ihm wie von einem Schleier überzogen, unendlich fern, unendlich weit weg gelegen, unendlich gleichgültig. Er wußte nur, daß er sein früheres Leben (im ersten Augenblick der Besinnung erschien ihm dies frühere Leben wie eine weit zurückliegende, einstige Verkörperung, wie eine frühe Vorgeburt seines jetzigen Ich)--daß er sein früheres Leben verlassen habe, daß er voll Ekel und Elend sogar sein Leben habe wegwerfen wollen, daß er aber an einem Flusse, unter einem Kokosbaume, zu sich gekommen sei, das heilige Wort Om auf den Lippen, dann entschlummert sei, und nun erwacht als ein neuer Mensch in die Welt blicke. Leise sprach er das Wort Om vor sich hin, über welchem er eingeschlafen war, und ihm schien sein ganzer langer Schlaf sei nichts als ein langes, versunkenes Om-Sprechen gewesen, ein Om-Denken, ein Untertauchen und völliges Eingehen in Om, in das Namenlose, Vollendete.

Was für ein wunderbarer Schlaf war dies doch gewesen! Niemals hatte ein Schlaf ihn so erfrischt, so erneut, so verjüngt! Vielleicht war er wirklich gestorben, war untergegangen und in einer neuen Gestalt wiedergeboren? Aber nein, er kannte sich, er kannte

seine Hand und seine Füße, kannte den Ort, an dem er lag, kannte dies Ich in seiner Brust, diesen Siddhartha, den Eigenwilligen, den Seltsamen, aber dieser Siddhartha war dennoch verwandelt, war erneut, war merkwürdig ausgeschlafen, merkwürdig wach, freudig und neugierig.

Siddhartha richtete sich empor, da sah er sich gegenüber einen Menschen sitzen, einen fremden Mann, einen Mönch in gelbem Gewande mit rasiertem Kopfe, in der Stellung des Nachdenkens. Er betrachtete den Mann, der weder Haupthaar noch Bart an sich hatte, und nicht lange hatte er ihn betrachtet, da erkannte er in diesem Mönche Govinda, den Freund seiner Jugend, Govinda, der seine Zuflucht zum erhabenen Buddha genommen hatte. Govinda war gealtert, auch er, aber noch immer trug sein Gesicht die alten Züge, sprach von Eifer, von Treue, von Suchen, von Ängstlichkeit. Als nun aber Govinda, seinen Blick fühlend, das Auge aufschlug und ihn anschaute, sah Siddhartha, daß Govinda ihn nicht erkenne. Govinda freute sich, ihn wach zu finden, offenbar hatte er lange hier gesessen und auf sein Erwachen gewartet, obwohl er ihn nicht kannte.

"Ich habe geschlafen," sagte Siddhartha. "Wie bist denn du hierher gekommen?"

"Du hast geschlafen," antwortete Govinda. "Es ist nicht gut, an solchen Orten zu schlafen, wo häufig Schlangen sind und die Tiere des Waldes ihre Wege haben. Ich, o Herr, bin ein Jünger des erhabenen Gotama, des Buddha, des Sakyamuni, und bin mit einer Zahl der Unsrigen diesen Weg gepilgert, da sah ich dich liegen und schlafen an einem Orte, wo es gefährlich ist zu schlafen. Darum suchte ich dich zu wecken, o Herr, und da ich sah, daß dein Schlaf sehr tief war, blieb ich hinter den Meinigen zurück und saß bei dir. Und dann, so scheint es, bin ich selbst eingeschlafen, der ich deinen Schlaf bewachen wollte. Schlecht habe ich meinen Dienst versehen, Müdigkeit hat mich übermannt. Aber nun, da du ja wach bist, laß mich gehen, damit ich meine Brüder einhole."

"Ich danke dir, Samana, daß du meinen Schlaf behütet hast," sprach Siddhartha. "Freundlich seid Ihr Jünger des Erhabenen. Nun magst du denn gehen."

"Ich gehe, Herr. Möge der Herr sich immer wohl befinden."

"Ich danke dir, Samana."

Govinda machte das Zeichen des Grußes und sagte: "Lebe wohl."

"Lebe wohl, Govinda," sagte Siddhartha.

Der Mönch blieb stehen.

"Erlaube, Herr, woher kennst du meinen Namen?"

Da lächelte Siddhartha.

"Ich kenne dich, o Govinda, aus der Hütte deines Vaters, und aus der Brahmanenschule, und von den Opfern, und von unsrem Gang zu den Samanas, und von jener Stunde, da du im Hain Jetavana deine Zuflucht zum Erhabenen nahmest."

"Du bist Siddhartha!" rief Govinda laut. "Jetzt erkenne ich dich, und begreife nicht mehr, wie ich dich nicht sogleich erkennen konnte. Sei willkommen, Siddhartha, groß ist meine Freude, dich wiederzusehen."

"Auch mich erfreut es, dich wiederzusehen. Du bist der Wächter meines Schlafes gewesen, nochmals danke ich dir dafür, obwohl ich keines Wächters bedurft hätte. Wohin gehst du, o Freund?"

"Nirgendshin gehe ich. Immer sind wir Mönche unterwegs, solange nicht Regenzeit ist, immer ziehen wir von Ort zu Ort, leben nach der Regel, verkündigen die Lehre, nehmen Almosen, ziehen weiter. Immer ist es so. Du aber, Siddhartha, wo gehst du hin?"

Sprach Siddhartha: "Auch mit mir steht es so, Freund, wie mit dir. Ich gehe nirgendhin. Ich bin nur unterwegs. Ich pilgere."

Govinda sprach: "Du sagst: du pilgerst, und ich glaube dir. Doch verzeih, o Siddhartha, nicht wie ein Pilger siehst du aus. Du trägst das Kleid eines Reichen, du trägst die Schuhe eines Vornehmen, und dein Haar, das nach wohlriechendem Wasser duftet, ist nicht das Haar eines Pilgers, nicht das Haar eines Samanas."

"Wohl, Lieber, gut hast du beobachtet, alles sieht dein scharfes Auge. Doch habe ich nicht zu dir gesagt, daß ich ein Samana sei. Ich sagte: ich pilgere. Und so ist es: ich pilgere."

"Du pilgerst," sagte Govinda. "Aber wenige pilgern in solchem Kleide, wenige in solchen Schuhen, wenige mit solchen Haaren. Nie habe ich, der ich schon viele Jahre pilgere, solch einen Pilger angetroffen."

"Ich glaube es dir, mein Govinda. Aber nun, heute, hast du eben einen solchen Pilger angetroffen, in solchen Schuhen, mit solchem Gewande. Erinnere dich, Lieber: Vergänglich ist die Welt der Gestaltungen, vergänglich, höchst vergänglich sind unsere Gewänder, und die Tracht unserer Haare, und unsere Haare und Körper selbst. Ich trage die Kleider eines Reichen, da hast du recht gesehen. Ich trage sie, denn ich bin ein Reicher gewesen, und trage das Haar wie die Weltleute und Lüstlinge, denn einer von ihnen bin ich gewesen."

"Und jetzt, Siddhartha, was bist du jetzt?"

"Ich weiß es nicht, ich weiß es so wenig wie du. Ich bin unterwegs. Ich war ein Reicher, und bin es nicht mehr; und was ich morgen sein werde, weiß ich nicht."

"Du hast deinen Reichtum verloren?"

"Ich habe ihn verloren, oder er mich. Er ist mir abhanden gekommen. Schnell dreht sich das Rad der Gestaltungen, Govinda. Wo ist der Brahmane Siddhartha? Wo ist der Samana Siddhartha? Wo ist der Reiche Siddhartha? Schnell wechselt das Vergängliche, Govinda, du weißt es."

Govinda blickte den Freund seiner Jugend lange an, Zweifel im Auge. Darauf grüßte er ihn, wie man Vornehme grüßt, und ging seines Weges.

Mit lächelndem Gesicht schaute Siddhartha ihm nach, er liebte ihn noch immer, diesen Treuen, diesen Ängstlichen. Und wie hätte er, in diesem Augenblick, in dieser herrlichen Stunde nach seinem wunderbaren Schlafe, durchdrungen von Om, irgend jemand und irgend etwas nicht lieben sollen! Eben darin bestand die Verzauberung, welche im Schlafe und durch das Om in ihm geschehen war, daß er alles liebte, daß er voll froher Liebe war zu allem, was er sah. Und eben daran, so schien es ihm jetzt, war er vorher so sehr krank gewesen, daß er nichts und niemand hatte lieben können.

Mit lächelndem Gesichte schaute Siddhartha dem hinweggehenden Mönche nach. Der Schlaf hatte ihn sehr gestärkt, sehr aber quälte ihn der Hunger, denn er hatte nun zwei Tage nichts gegessen, und lange war die Zeit vorüber, da er hart gegen den Hunger gewesen war. Mit Kummer, und doch auch mit Lachen, gedachte er jener Zeit. Damals, so erinnerte er sich, hatte er sich vor Kamala dreier Dinge gerühmt, hatte drei edle und unüberwindliche Künste gekonnt: Fasten--Warten--Denken. Dies war sein Besitz gewesen, seine Macht und Kraft, sein fester Stab, in den fleißigen, mühseligen Jahren seiner Jugend hatte er diese drei Künste gelernt, nichts anderes. Und nun hatten sie ihn verlassen, keine von ihnen war mehr sein, nicht Fasten, nicht Warten, nicht Denken. Um das Elendeste hatte er sie hingegeben, um das Vergänglichste, um Sinnenlust, um Wohlleben, um Reichtum! Seltsam war es ihm in der Tat ergangen. Und jetzt, so schien es, jetzt war er wirklich ein Kindermensch geworden.

Siddhartha dachte über seine Lage nach. Schwer fiel ihm das Denken, er hatte im Grunde keine Lust dazu, doch zwang er sich.

Nun, dachte er, da alle diese vergänglichsten Dinge mir wieder entglitten sind, nun stehe ich wieder unter der Sonne, wie ich einst als kleines Kind gestanden bin, nichts ist mein, nichts kann ich, nichts vermag ich, nichts habe ich gelernt. Wie ist dies wunderlich! Jetzt, wo ich nicht mehr jung bin, wo meine Haare schon halb grau sind, wo die Kräfte nachlassen, jetzt fange ich wieder von vorn und beim Kinde an! Wieder mußte er lächeln. Ja, seltsam war sein Geschick! Es ging abwärts mit ihm, und nun stand er wieder leer und nackt und dumm in der Welt. Aber Kummer darüber konnte er nicht empfinden, nein, er fühlte sogar großen Anreiz zum Lachen, zum Lachen über sich, zum Lachen über diese seltsame, törichte Welt.

"Abwärts geht es mit dir!" sagte er zu sich selber, und lachte dazu, und wie er es sagte, fiel sein Blick auf den Fluß, und auch den Fluß sah er abwärts gehen, immer abwärts wandern, und dabei singen und fröhlich sein. Das gefiel ihm wohl, freundlich lächelte er dem Flusse zu. War dies nicht der Fluß, in welchem er sich hatte ertränken wollen, einst, vor hundert Jahren, oder hatte er das geträumt?

Wunderlich in der Tat war mein Leben, so dachte er, wunderliche Umwege hat es genommen. Als Knabe habe ich nur mit Göttern und Opfern zu tun gehabt. Als Jüngling habe ich nur mit Askese, mit Denken und Versenkung zu tun gehabt, war auf der Suche nach Brahman, verehrte das Ewige im Atman. Als junger Mann aber zog ich den Büßern nach, lebte im Walde, litt Hitze und Frost, lernte hungern, lehrte meinen Leib absterben. Wunderbar kam mir alsdann in der Lehre des großen Buddha Erkenntnis entgegen, ich fühlte Wissen um die Einheit der Welt in mir kreisen wie mein eigenes Blut. Aber auch von Buddha und von dem großen Wissen

mußte ich wieder fort. Ich ging und lernte bei Kamala die Liebeslust, lernte bei Kamaswami den Handel, häufte Geld, vertat Geld, lernte meinen Magen lieben, lernte meinen Sinnen schmeicheln. Viele Jahre mußte ich damit hinbringen, den Geist zu verlieren, das Denken wieder zu verlernen, die Einheit zu vergessen. Ist es nicht so, als sei ich langsam und auf großen Umwegen aus einem Mann ein Kind geworden, aus einem Denker ein Kindermensch? Und doch ist dieser Weg sehr gut gewesen, und doch ist der Vogel in meiner Brust nicht gestorben. Aber welch ein Weg war das! Ich habe durch so viel Dummheit, durch so viel Laster, durch so viel Irrtum, durch so viel Ekel und Enttäuschung und Jammer hindurchgehen müssen, bloß um wieder ein Kind zu werden und neu anfangen zu können. Aber es war richtig so, mein Herz sagt Ja dazu, meine Augen lachen dazu. Ich habe Verzweiflung erleben müssen, ich habe hinabsinken müssen bis zum törichtesten aller Gedanken, zum Gedanken des Selbstmordes, um Gnade erleben zu können, um wieder Om zu vernehmen, um wieder richtig schlafen und richtig erwachen zu können. Ich habe ein Tor werden müssen, um Atman wieder in mir zu finden. Ich habe sündigen müssen, um wieder leben zu können. Wohin noch mag mein Weg mich führen? Närrisch ist er, dieser Weg, er geht in Schleifen, er geht vielleicht im Kreise. Mag er gehen, wie er will, ich will ihn gehen.

Wunderbar fühlte er in seiner Brust die Freude wallen.

Woher denn, fragte er sein Herz, woher hast du diese Fröhlichkeit? Kommt sie wohl aus diesem langen, guten Schlafe her, der mir so sehr wohlgetan hat? Oder von dem Worte Om, das ich aussprach? Oder davon, daß ich entronnen bin, daß meine Flucht vollzogen ist, daß ich endlich wieder frei bin und wie ein Kind unter dem Himmel stehe? O wie gut ist dies Geflohensein, dies Freigewordensein! Wie rein und schön ist hier die Luft, wie gut zu atmen! Dort, von wo ich entlief, dort roch alles nach Salbe, nach Gewürzen, nach Wein, nach Überfluß, nach Trägheit. Wie haßte ich diese Welt der Reichen, der Schlemmer, der Spieler! Wie habe ich mich selbst gehaßt, daß ich so lang in dieser schrecklichen Welt geblieben bin! Wie habe ich mich gehaßt, habe mich beraubt, vergiftet, gepeinigt, habe mich alt und böse gemacht! Nein, nie mehr werde ich, wie ich es einst so gerne tat, mir einbilden, daß Siddhartha weise sei! Dies aber habe ich gut gemacht, dies gefällt mir, dies muß ich loben, daß es nun ein Ende hat mit jenem Haß gegen mich selber, mit jenem törichten und öden Leben! Ich lobe dich, Siddharta, nach soviel Jahren der Torheit hast du wieder einmal einen Einfall gehabt, hast etwas getan, hast den Vogel in deiner Brust singen hören und bist ihm gefolgt!

So lobte er sich, hatte Freude an sich, hörte neugierig seinem Magen zu, der vor Hunger knurrte. Ein Stück Leid, ein Stück Elend hatte er nun, so fühlte er, in diesen letzten Zeiten und Tagen ganz und gar durchgekostet und ausgespien, bis zur Verzweiflung und bis zum Tode ausgefressen. So war es gut. Lange noch hätte er bei Kamaswami bleiben können, Geld erwerben, Geld vergeuden, seinen Bauch mästen und seine Seele verdursten lassen, lange noch hätte er in dieser sanften, wohlgepolsterten Hölle wohnen können, wäre dies nicht gekommen: der Augenblick der vollkommenen Trostlosigkeit und Verzweiflung, jener äußerste Augenblick, da er über dem strömenden Wasser hing und bereit war, sich zu vernichten. Daß er diese Verzweiflung, diesen tiefsten Ekel gefühlt hatte, und daß er ihm nicht erlegen war, daß der Vogel, die frohe Quelle und Stimme in ihm doch noch lebendig war, darüber fühlte er diese Freude, darüber lachte er, darüber strahlte sein Gesicht unter den ergrauten Haaren.

"Es ist gut," dachte er, "alles selber zu kosten, was man zu wissen nötig hat. Daß Weltlust und Reichtum nicht vom Guten sind, habe ich schon als Kind gelernt. Gewußt habe ich es lange, erlebt habe ich es erst jetzt. Und nun weiß ich es, weiß es nicht nur mit dem Gedächtnis, sondern mit meinen Augen, mit meinem Herzen, mit meinem Magen. Wohl mir, daß ich es weiß!"

Lange sann er nach über seine Verwandlung, lauschte dem Vogel, wie er vor Freude sang. War nicht dieser Vogel in ihm gestorben, hatte er nicht seinen Tod gefühlt? Nein, etwas anderes in ihm war gestorben, etwas, das schon, lange sich nach Sterben gesehnt hatte. War es nicht das, was er einst in seinen glühenden Büßerjahren hatte abtöten wollen? War es nicht sein Ich, sein kleines, banges und stolzes Ich, mit dem er so viele Jahre gekämpft hatte, das ihn immer wieder besiegt hatte, das nach jeder Abtötung wieder da war, Freude verbot, Furcht empfand? War es nicht dies, was heute endlich seinen Tod gefunden hatte, hier im Walde an diesem lieblichen Flusse? War es nicht dieses Todes wegen, daß er jetzt wie ein Kind war, so voll Vertrauen, so ohne Furcht, so voll Freude?

Nun auch ahnte Siddhartha, warum er als Brahmane, als Büßer vergeblich mit diesem Ich gekämpft hatte. Zu viel Wissen hatte ihn gehindert, zu viel heilige Verse, zu viel Opferregeln, zu viel Kasteiung, zu viel Tun und Streben! Voll Hochmut war er gewesen, immer der Klügste, immer der Eifrigste, immer allen um einen Schritt voran, immer der Wissende und Geistige, immer der Priester oder Weise. In dies Priestertum, in diesen Hochmut, in diese Geistigkeit hinein hatte sein Ich sich verkrochen, dort saß es fest und wuchs, während er es mit Fasten und Buße zu töten meinte. Nun sah er es, und sah, daß die heimliche Stimme Recht gehabt hatte, daß kein Lehrer ihn je hätte erlösen können. Darum hatte er in die Welt gehen müssen, sich an Lust und Macht, an Weib und Geld verlieren müssen, hatte ein Händler, ein Würfelspieler, Trinker und Habgieriger werden müssen, bis der Priester und Samana

in ihm tot war. Darum hatte er weiter diese häßlichen Jahre ertragen müssen, den Ekel ertragen, die Leere, die Sinnlosigkeit eines öden und verlorenen Lebens, bis zum Ende, bis zur bittern Verzweiflung, bis auch der Lüstling Siddhartha, der Habgierige Siddhartha sterben konnte. Er war gestorben, ein neuer Siddhartha war aus dem Schlaf erwacht. Auch er würde alt werden, auch er würde einst sterben müssen, vergänglich war Siddhartha, vergänglich war jede Gestaltung. Heute aber war er jung, war ein Kind, der neue Siddhartha, und war voll Freude.

Diese Gedanken dachte er, lauschte lächelnd auf seinen Magen, hörte dankbar einer summenden Biene zu. Heiter blickte er in den strömenden Fluß, nie hatte ihm ein Wasser so wohl gefallen wie dieses, nie hatte er Stimme und Gleichnis des ziehenden Wassers so stark und schön vernommen. Ihm schien, es habe der Fluß ihm etwas Besonderes zu sagen, etwas, das er noch nicht wisse, das noch auf ihn warte. In diesem Fluß hatte sich Siddhartha ertränken wollen, in ihm war der alte, müde, verzweifelte Siddhartha heute ertrunken. Der neue Siddhartha aber fühlte eine tiefe Liebe zu diesem strömenden Wasser, und beschloß bei sich, es nicht so bald wieder zu verlassen.

DER FÄHRMANN

An diesem Fluß will ich bleiben, dachte Siddhartha, es ist der selbe, über den ich einstmals auf dem Wege zu den Kindermenschen gekommen bin, ein freundlicher Fährmann hat mich damals geführt, zu ihm will ich gehen, von seiner Hütte aus führte mich einst mein Weg in ein neues Leben, das nun alt geworden und tot ist--möge auch mein jetziger Weg, mein jetziges neues Leben dort seinen Ausgang nehmen!

Zärtlich blickte er in das strömende Wasser, in das durchsichtige Grün, in die kristallenen Linien seiner geheimnisreichen Zeichnung. Lichte Perlen sah er aus der Tiefe steigen, stille Luftblasen auf dem Spiegel schwimmen, Himmelsbläue darin abgebildet. Mit tausend Augen blickte der Fluß ihn an, mit grünen, mit weißen, mit kristallnen, mit himmelblauen. Wie liebte er dies Wasser, wie entzückte es ihn, wie war er ihm dankbar! Im Herzen hörte er die Stimme sprechen, die neu erwachte, und sie sagte ihm: Liebe dies Wasser! Bleibe bei ihm! Lerne von ihm! O ja, er wollte von ihm lernen, er wollte ihm zuhören. Wer dies Wasser und seine Geheimnisse verstünde, so schien ihm, der würde auch viel anderes verstehen, viele Geheimnisse, alle Geheimnisse.

Von den Geheimnissen des Flusses aber sah er heute nur eines, das ergriff seine Seele. Er sah: dies Wasser lief und lief, immerzu lief es, und war doch immer da, war immer und allezeit dasselbe und doch jeden Augenblick neu! O wer dies faßte, dies verstünde! Er verstand und faßte es nicht, fühlte nur Ahnung sich regen, ferne Erinnerung, göttliche Stimmen.

Siddhartha erhob sich, unerträglich wurde das Treiben des Hungers in seinem Leibe. Hingenommen wanderte er weiter, den Uferpfad hinan, dem Strom entgegen, lauschte auf die Strömung, lauschte auf den knurrenden Hunger in seinem Leibe.

Als er die Fähre erreichte, lag eben das Boot bereit, und derselbe Fährmann, welcher einst den jungen Samana über den Fluß gesetzt hatte, stand im Boot, Siddhartha erkannte ihn wieder, auch er war stark gealtert.

"Willst du mich übersetzen?" fragte er.

Der Fährmann, erstaunt, einen so vornehmen Mann allein und zu Fuße wandern zu sehen, nahm ihn ins Boot und stieß ab.

"Ein schönes Leben hast du dir erwählt," sprach der Gast. "Schön muß es sein, jeden Tag an diesem Wasser zu leben und auf ihm zu fahren."

Lächelnd wiegte sich der Ruderer: "Es ist schön, Herr, es ist, wie du sagst. Aber ist nicht jedes Leben, ist nicht jede Arbeit schön?"

"Es mag wohl sein. Dich aber beneide ich um die Deine."

"Ach, du möchtest bald die Lust an ihr verlieren. Das ist nichts für Leute in feinen Kleidern."

Siddhartha lachte. "Schon einmal bin ich heute um meiner Kleider willen betrachtet worden, mit Mißtrauen betrachtet. Willst du nicht, Fährmann, diese Kleider, die mir lästig sind, von mir annehmen? Denn du mußt wissen, ich habe kein Geld, dir einen Fährlohn zu zahlen."

"Der Herr scherzt," lachte der Fährmann.

"Ich scherze nicht, Freund. Sieh, schon einmal hast du mich in deinem Boot über dies Wasser gefahren, um Gotteslohn. So tue es auch heute, und nimm meine Kleider dafür an."

"Und will der Herr ohne Kleider weiterreisen?"

"Ach, am liebsten wollte ich gar nicht weiterreisen. Am liebsten wäre es mir, Fährmann, wenn du mir eine alte Schürze gäbest und behieltest mich als deinen Gehilfen bei dir, vielmehr als deinen Lehrling, denn erst muß ich lernen, mit dem Boot umzugehen."

Lange blickte der Fährmann den Fremden an, suchend.

"Jetzt erkenne ich dich," sagte er endlich. "Einst hast du in meiner Hütte geschlafen, lange ist es her, wohl mehr als zwanzig Jahre mag das her sein, und bist von mir über den Fluß gebracht worden, und wir nahmen Abschied voneinander wie gute Freunde. Warst du nicht ein Samana? Deines Namens kann ich mich nicht mehr entsinnen."

"Ich heiße Siddhartha, und ich war ein Samana, als du mich zuletzt gesehen hast."

"So sei willkommen, Siddhartha. Ich heiße Vasudeva. Du wirst, so hoffe ich, auch heute mein Gast sein und in meiner Hütte schlafen, und mir erzählen, woher du kommst, und warum deine schönen Kleider dir so lästig sind."

Sie waren in die Mitte des Flusses gelangt, und Vasudeva legte sich stärker ins Ruder, um gegen die Strömung anzukommen. Ruhig arbeitete er, den Blick auf der Bootspitze, mit kräftigen Armen. Siddhartha saß und sah ihm zu, und erinnerte sich, wie schon einstmals, an jenem letzten Tage seiner Samana-Zeit, Liebe zu diesem Manne sich in seinem Herzen geregt hatte. Dankbar nahm er Vasudevas Einladung an. Als sie am Ufer anlegten, half er ihm das Boot an den Pflöcken festbinden, darauf bat ihn der Fährmann, in die Hütte zu treten, bot ihm Brot und Wasser, und Siddhartha aß mit Lust, und aß mit Lust auch von den Mangofrüchten, die ihm Vasudeva anbot.

Danach setzten sie sich, es ging gegen Sonnenuntergang, auf einem Baumstamm am Ufer, und Siddhartha erzählte dem Fährmann seine Herkunft und sein Leben, wie er es heute, in jener Stunde der Verzweiflung, vor seinen Augen gesehen hatte. Bis tief in die Nacht währte sein Erzählen.

Vasudeva hörte mit großer Aufmerksamkeit zu. Alles nahm er lauschend in sich auf, Herkunft und Kindheit, all das Lernen, all das Suchen, alle Freude, alle Not. Dies war unter des Fährmanns Tugenden eine der größten: er verstand wie wenige das Zuhören. Ohne daß er ein Wort gesprochen hätte, empfand der Sprechende, wie Vasudeva seine Worte in sich einließ, still, offen, wartend, wie er keines verlor, keines mit Ungeduld erwartete, nicht Lob noch Tadel daneben stellte, nur zuhörte. Siddhartha empfand, welches Glück es ist, einem solchen Zuhörer sich zu bekennen, in sein Herz das eigene Leben zu versenken, das eigene Suchen, das eigene Leiden.

Gegen das Ende von Siddharthas Erzählung aber, als er von dem Baum am Flusse sprach, und von seinem tiefen Fall, vom heiligen Om, und wie er nach seinem Schlummer eine solche Liebe zu dem Flusse gefühlt hatte, da lauschte der Fährmann mit verdoppelter Aufmerksamkeit, ganz und völlig hingegeben, mit geschloßnem Auge.

Als aber Siddhartha schwieg, und eine lange Stille gewesen war, da sagte Vasudeva: "Es ist so, wie ich dachte. Der Fluß hat zu dir gesprochen. Auch dir ist er Freund, auch zu dir spricht er. Das ist gut, das ist sehr gut. Bleibe bei mir, Siddhartha, mein Freund. Ich hatte einst eine Frau, ihr Lager war neben dem meinen, doch ist sie schon lange gestorben, lange habe ich allein gelebt. Lebe nun du mit mir, es ist Raum und Essen für beide vorhanden."

"Ich danke dir," sagte Siddhartha, "ich danke dir und nehme an. Und auch dafür danke ich dir, Vasudeva, daß du mir so gut zugehört hast! Selten sind die Menschen, welche das Zuhören verstehen. Und keinen traf ich, der es verstand wie du. Auch hierin werde ich von dir lernen."

"Du wirst es lernen," sprach Vasudeva, "aber nicht von mir. Das Zuhören hat mich der Fluß gelehrt, von ihm wirst auch du es lernen. Er weiß alles, der Fluß, alles kann man von ihm lernen. Sieh, auch das hast du schon vom Wasser gelernt, daß es gut ist, nach unten zu streben, zu sinken, die Tiefe zu suchen. Der reiche und vornehme Siddhartha wird ein Ruderknecht, der gelehrte Brahmane Siddhartha wird ein Fährmann: auch dies ist dir vom Fluß gesagt worden. Du wirst auch das andere von ihm lernen."

Sprach Siddhartha, nach einer langen Pause: "Welches andere, Vasudeva?"

Vasudeva erhob sich. "Spät ist es geworden," sagte er, "laß uns schlafen gehen. Ich kann dir das andere nicht sagen, o Freund. Du wirst es lernen, vielleicht auch weißt du es schon. Sieh, ich bin kein Gelehrter, ich verstehe nicht zu sprechen, ich verstehe auch nicht zu denken. Ich verstehe nur zuzuhören und fromm zu sein, sonst habe ich nichts gelernt. Könnte ich es sagen und lehren, so wäre ich vielleicht ein Weiser, so aber bin ich nur ein Fährmann, und meine Aufgabe ist es, Menschen über diesen Fluß zu setzen.

Viele habe ich übergesetzt, Tausende, und ihnen allen ist mein Fluß nichts anderes gewesen als ein Hindernis auf ihren Reisen. Sie reisten nach Geld und Geschäften, und zu Hochzeiten, und zu Wallfahrten, und der Fluß war ihnen im Wege, und der Fährmann war dazu da, sie schnell über das Hindernis hinweg zubringen. Einige unter den Tausenden aber, einige wenige, vier oder fünf, denen hat der Fluß aufgehört, ein Hindernis zu sein, sie haben seine Stimme gehört, sie haben ihm zugehört, und der Fluß ist ihnen heilig geworden, wie er es mir geworden ist. Laß uns nun zur Ruhe gehen, Siddhartha."

Siddhartha blieb bei dem Fährmann und lernte das Boot bedienen, und wenn nichts an der Fähre zu tun war, arbeitete er mit Vasudeva im Reisfelde, sammelte Holz, pflückte die Früchte der Pisangbäume. Er lernte ein Ruder zimmern, und lernte das Boot ausbessern, und Körbe flechten, und war fröhlich über alles, was er lernte, und die Tage und Monate liefen schnell hinweg. Mehr aber, als Vasudeva ihn lehren konnte, lehrte ihn der Fluß. Von ihm lernte er unaufhörlich. Vor allem lernte er von ihm das Zuhören, das Lauschen mit stillem Herzen, mit wartender, geöffneter Seele, ohne Leidenschaft, ohne Wunsch, ohne Urteil, ohne Meinung.

Freundlich lebte er neben Vasudeva, und zuweilen tauschten sie Worte miteinander, wenige und lang bedachte Worte. Vasudeva war kein Freund der Worte, selten gelang es Siddhartha, ihn zum Sprechen zu bewegen.

"Hast du," so fragte er ihn einst, "hast auch du vom Flusse jenes Geheime gelernt: daß es keine Zeit gibt?"

Vasudevas Gesicht überzog sich mit hellem Lächeln.

"Ja, Siddhartha," sprach er. "Es ist doch dieses, was du meinst: daß der Fluß überall zugleich ist, am Ursprung und an der Mündung, am Wasserfall, an der Fähre, an der Stromschnelle, im Meer, im Gebirge, überall, zugleich, und daß es für ihn nur Gegenwart gibt, nicht den Schatten Vergangenheit, nicht den Schatten Zukunft?"

"Dies ist es," sagte Siddhartha. "Und als ich es gelernt hatte, da sah ich mein Leben an, und es war auch ein Fluß, und es war der Knabe Siddhartha vom Manne Siddhartha und vom Greis Siddhartha nur durch Schatten getrennt, nicht durch Wirkliches. Es waren auch Siddharthas frühere Geburten keine Vergangenheit, und sein Tod und seine Rückkehr zu Brahma keine Zukunft. Nichts war, nichts wird sein; alles ist, alles hat Wesen und Gegenwart."

Siddhartha sprach mit Entzücken, tief hatte diese Erleuchtung ihn beglückt. O, war denn nicht alles Leiden Zeit, war nicht alles Sichquälen und Sichfürchten Zeit, war nicht alles Schwere, alles Feindliche in der Welt weg und überwunden, sobald man die Zeit überwunden hatte, sobald man die Zeit wegdenken konnte? Entzückt hatte er gesprochen, Vasudeva aber lächelte ihn strahlend an und nickte Bestätigung, schweigend nickte er, strich mit der Hand über Siddharthas Schulter, wandte sich zu seiner Arbeit zurück.

Und wieder einmal, als eben der Fluß in der Regenzeit geschwollen war und mächtig rauschte, da sagte Siddhartha: "Nicht wahr, o Freund, der Fluß hat viele Stimmen, sehr viele Stimmen? Hat er nicht die Stimme eines Königs, und eines Kriegers, und eines Stieres, und eines Nachtvogels, und einer Gebärenden, und eines Seufzenden, und noch tausend andere Stimmen?"

"Es ist so," nickte Vasudeva, "alle Stimmen der Geschöpfe sind in seiner Stimme."

"Und weißt du," fuhr Siddhartha fort, "welches Wort er spricht, wenn es dir gelingt, alle seine zehntausend Stimmen zugleich zu hören?"

Glücklich lachte Vasudevas Gesicht, er neigte sich gegen Siddhartha und sprach ihm das heilige Om ins Ohr. Und eben dies war es, was auch Siddhartha gehört hatte.

Und von Mal zu Mal ward sein Lächeln dem des Fährmanns ähnlicher, ward beinahe ebenso strahlend, beinahe ebenso von Glück durchglänzt, ebenso aus tausend kleinen Falten leuchtend, ebenso kindlich, ebenso greisenhaft. Viele Reisende, wenn sie die beiden Fährmänner sahen, hielten sie für Brüder. Oft saßen sie am Abend gemeinsam beim Ufer auf dem Baumstamm, schwiegen und hörten beide dem Wasser zu, welches für sie kein Wasser war, sondern die Stimme des Lebens, die Stimme des Seienden, des ewig Werdenden. Und es geschah zuweilen, daß beide beim Anhören des Flusses an dieselben Dinge dachten, an ein Gespräch von vorgestern, an einen ihrer Reisenden, dessen Gesicht und Schicksal sie beschäftigte, an den Tod, an ihre Kindheit, und daß sie beide im selben Augenblick, wenn der Fluß ihnen etwas Gutes gesagt hatte, einander anblickten, beide genau dasselbe denkend, beide beglückt über dieselbe Antwort auf dieselbe Frage.

Es ging von der Fähre und von den beiden Fährleuten etwas aus, das manche von den Reisenden spürten. Es geschah zuweilen, daß ein Reisender, nachdem er in das Gesicht eines der Fährmänner geblickt hatte, sein Leben zu erzählen begann, Leid erzählte,

Böses bekannte, Trost und Rat erbat. Es geschah zuweilen, daß einer um Erlaubnis bat, einen Abend bei ihnen zu verweilen, um dem Flusse zuzuhören. Es geschah auch, daß Neugierige kamen, welchen erzählt worden war, an dieser Fähre lebten zwei Weise, oder Zauberer, oder Heilige. Die Neugierigen stellten viele Fragen, aber sie bekamen keine Antworten, und sie fanden weder Zauberer noch Weise, sie fanden nur zwei alte freundliche Männlein, welche stumm zu sein und etwas sonderbar und verblödet' schienen. Und die Neugierigen lachten, und unterhielten sich darüber, wie töricht und leichtgläubig doch das Volk solche leere Gerüchte verbreite.

Die Jahre gingen hin und keiner zählte sie. Da kamen einst Mönche gepilgert, Anhänger des Gotama, des Buddha, welche baten, sie über den Fluß zu setzen, und von ihnen erfuhren die Fährmänner, daß sie eiligst zu ihrem großen Lehrer zurück wanderten, denn es habe sich die Nachricht verbreitet, der Erhabene sei todkrank und werde bald seinen letzten Menschentod sterben, um zur Erlösung einzugehen. Nicht lange, so kam eine neue Schar Mönche gepilgert, und wieder eine, und sowohl die Mönche wie die meisten der übrigen Reisenden und Wanderer sprachen von nichts anderem als von Gotama und seinem nahen Tode. Und wie zu einem Kriegszug oder zur Krönung eines Königs von überall und allen Seiten her die Menschen strömen und sich gleich Ameisen in Scharen sammeln, so strömten sie, wie von einem Zauber gezogen, dahin, wo der große Buddha seinen Tod erwartete, wo das Ungeheure geschehen und der große Vollendete eines Weltalters zur Herrlichkeit eingehen sollte.

Viel gedachte Siddhartha in dieser Zeit des sterbenden Weisen, des großen Lehrers, dessen Stimme Völker ermahnt und Hunderttausende erweckt hatte, dessen Stimme auch er einst vernommen, dessen heiliges Antlitz auch er einst mit Ehrfurcht geschaut hatte. Freundlich gedachte er seiner, sah seinen Weg der Vollendung vor Augen, und erinnerte sich mit Lächeln der Worte, welche er einst als junger Mann an ihn, den Erhabenen, gerichtet hatte. Es waren, so schien ihm, stolze und altkluge Worte gewesen, lächelnd erinnerte er sich ihrer. Längst wußte er sich nicht mehr von Gotama getrennt, dessen Lehre er doch nicht hatte annehmen können. Nein, keine Lehre konnte ein wahrhaft Suchender annehmen, einer, der wahrhaft finden wollte. Der aber, der gefunden hat, der konnte jede, jede Lehre gutheißen, jeden Weg, jedes Ziel, ihn trennte nichts mehr von all den tausend anderen, welche im Ewigen lebten, welche das Göttliche atmeten.

An einem dieser Tage, da so viele zum sterbenden Buddha pilgerten, pilgerte zu ihm auch Kamala, einst die schönste der Kurtisanen. Längst hatte sie sich aus ihrem vorigen Leben zurückgezogen, hatte ihren Garten den Mönchen Gotamas geschenkt, hatte ihre Zuflucht zur Lehre genommen, gehörte zu den Freundinnen und Wohltäterinnen der Pilgernden. Zusammen mit dem Knaben Siddhartha, ihrem Sohne, hatte sie auf die Nachricht vom nahen Tode Gotamas hin sich auf den Weg gemacht, in einfachem Kleide, zu Fuß. Mit ihrem Söhnlein war sie am Flusse unterwegs; der Knabe aber war bald ermüdet, begehrte nach Hause zurück, begehrte zu rasten, begehrte zu essen, wurde trotzig und weinerlich.

Kamala mußte häufig mit ihm rasten, er war gewohnt, seinen Willen gegen sie zu behaupten, sie mußte ihn füttern, mußte ihn trösten, mußte ihn schelten. Er begriff nicht, warum er mit seiner Mutter diese mühsame und traurige Pilgerschaft habe antreten müssen, an einen unbekannten Ort, zu einem fremden Manne, welcher heilig war und welcher im Sterben lag. Mochte er sterben, was ging dies den Knaben an?

Die Pilgernden waren nicht mehr ferne von Vasudevas Fähre, als der kleine Siddhartha abermals seine Mutter zu einer Rast nötigte. Auch sie selbst, Kamala, war ermüdet, und während der Knabe an einer Banane kaute, kauerte sie sich am Boden nieder, schloß ein wenig die Augen und ruhte. Plötzlich aber stieß sie einen klagenden Schrei aus, der Knabe sah sie erschrocken an und sah ihr Gesicht von Entsetzen gebleicht, und unter ihrem Kleide hervor entwich eine kleine schwarze Schlange, von welcher Kamala gebissen war.

Eilig liefen sie nun beide des Weges, um zu Menschen zu kommen, und kamen bis in die Nähe der Fähre, dort sank Kamala zusammen, und vermochte nicht weiter zu gehen. Der Knabe aber erhob ein klägliches Geschrei, dazwischen küßte und umhalste er seine Mutter, und auch sie stimmte in seine lauten Hilferufe ein, bis die Töne Vasudevas Ohr erreichten, der bei der Fähre stand. Schnell kam er gegangen, nahm die Frau auf die Arme, trug sie ins Boot, der Knabe lief mit, und bald kamen sie alle in der Hütte an, wo Siddhartha am Herde stand und eben Feuer machte. Er blickte auf und sah zuerst das Gesicht des Knaben, das ihn wunderlich erinnerte, an Vergessenes mahnte. Dann sah er Kamala, die er alsbald erkannte, obwohl sie besinnungslos im Arm des Fährmanns lag, und nun wußte er, daß es sein eigner Sohn sei, dessen Gesicht ihn so sehr gemahnt hatte, und das Herz bewegte sich in seiner Brust.

Kamalas Wunde wurde gewaschen, war aber schon schwarz und ihr Leib angeschwollen, ein Heiltrank wurde ihr eingeflößt. Ihr Bewußtsein kehrte zurück, sie lag auf Siddharthas Lager in der Hütte, Und über sie gebeugt stand Siddhartha, der sie einst so sehr

geliebt hatte. Es schien ihr ein Traum zu sein, lächelnd blickte sie in ihres Freundes Gesicht, nur langsam erkannte sie ihre Lage, erinnerte sich des Bisses, rief ängstlich nach dem Knaben.

"Er ist bei dir, sei ohne Sorge," sagte Siddhartha.

Kamala blickte in seine Augen. Sie sprach mit schwerer Zunge, vom Gift gelähmt. "Du bist alt geworden, Lieber," sagte sie, "grau bist du geworden. Aber du gleichst dem jungen Samana, der einst ohne Kleider mit staubigen Füßen zu mir in den Garten kam. Du gleichst ihm viel mehr, als du ihm damals glichest, da du mich und Kamaswami verlassen hast. In den Augen gleichst du ihm, Siddhartha. Ach, auch ich bin alt geworden, alt--kanntest du mich denn noch?"

Siddhartha lächelte: "Sogleich kannte ich dich, Kamala, Liebe."

Kamala deutete auf ihren Knaben und sagte: "Kanntest du auch ihn? Er ist dein Sohn."

Ihre Augen wurden irr und fielen zu. Der Knabe weinte, Siddhartha nahm ihn auf seine Knie, ließ ihn weinen, streichelte sein Haar, und beim Anblick des Kindergesichtes fiel ein brahmanisches Gebet ihm ein, das er einst gelernt hatte, als er selbst ein kleiner Knabe war. Langsam, mit singender Stimme, begann er es zu sprechen, aus der Vergangenheit und Kindheit her kamen ihm die Worte geflossen. Und unter seinem Singsang wurde der Knabe ruhig, schluchzte noch hin und wieder auf und schlief ein. Siddhartha legte ihn auf Vasudevas Lager. Vasudeva stand am Herd und kochte Reis. Siddhartha warf ihm einen Blick zu, den er lächelnd erwiderte.

"Sie wird sterben," sagte Siddhartha leise.

Vasudeva nickte, über sein freundliches Gesicht lief der Feuerschein vom Herde.

Nochmals erwachte Kamala zum Bewußtsein. Schmerz verzog ihr Gesicht, Siddharthas Auge las das Leiden auf ihrem Munde, auf ihren erblaßten Wangen. Stille las er es, aufmerksam, wartend, in ihr Leiden versenkt. Kamala fühlte es, ihr Blick suchte sein Auge.

Ihn anblickend, sagte sie: "Nun sehe ich, daß auch deine Augen sich verändert haben. Ganz anders sind sie geworden. Woran doch erkenne ich noch, daß du Siddhartha bist? Du bist es, und bist es nicht."

Siddhartha sprach nicht, still blickten seine Augen in die ihren.

"Du hast es erreicht?" fragte sie. "Du hast Friede gefunden?"

Er lächelte, und legte seine Hand auf ihre.

"Ich sehe es," sagte sie, "ich sehe es. Auch ich werde Friede finden."

"Du hast ihn gefunden," sprach Siddhartha flüsternd.

Kamala blickte ihm unverwandt in die Augen. Sie dachte daran, daß sie zu Gotama hatte pilgern wollen, um das Gesicht eines Vollendeten zu sehen, um seinen Frieden zu atmen, und daß sie statt seiner nun ihn gefunden, und daß es gut war, ebenso gut, als wenn sie jenen gesehen hätte. Sie wollte es ihm sagen, aber die Zunge gehorchte ihrem Willen nicht mehr. Schweigend sah sie ihn an, und er sah in ihren Augen das Leben erlöschen. Als der letzte Schmerz ihr Auge erfüllte und brach, als der letzte Schauder über ihre Glieder lief, schloß sein Finger ihre Lider.

Lange saß er und blickte auf ihr entschlafenes Gesicht. Lange betrachtete er ihren Mund, ihren alten, müden Mund mit den schmal gewordenen Lippen, und erinnerte sich, daß er einst, im Frühling seiner Jahre, diesen Mund einer frisch aufgebrochenen Feige verglichen hatte. Lange saß er, las in dem bleichen Gesicht, in den müden Falten, füllte sich mit dem Anblick, sah sein eigenes Gesicht ebenso liegen, ebenso weiß, ebenso erloschen, und sah zugleich sein Gesicht und das ihre jung, mit den roten Lippen, mit dem brennenden Auge, und das Gefühl der Gegenwart und Gleichzeitigkeit durchdrang ihn völlig, das Gefühl der Ewigkeit. Tief empfand er, tiefer als jemals, in dieser Stunde die Unzerstörbarkeit jedes Lebens, die Ewigkeit jedes Augenblicks.

Da er sich erhob, hatte Vasudeva Reis für ihn bereitet. Doch aß Siddhartha nicht. Im Stall, wo ihre Ziege stand, machten sich die beiden Alten eine Streu zurecht, und Vasudeva legte sich schlafen. Siddhartha aber ging hinaus und saß die Nacht vor der Hütte, dem Flusse lauschend, von Vergangenheit umspült, von allen Zeiten seines Lebens zugleich berührt und umfangen. Zuweilen aber erhob er sich, trat an die Hüttentür und lauschte, ob der Knabe schlafe.

Früh am Morgen, noch ehe die Sonne sichtbar ward, kam Vasudeva aus dem Stalle und trat zu seinem Freunde.

"Du hast nicht geschlafen," sagte er.

"Nein, Vasudeva. Ich saß hier, ich hörte dem Flusse zu. Viel hat er mir gesagt, tief hat er mich mit dem heilsamen Gedanken erfüllt, mit dem Gedanken der Einheit."

"Du hast Leid erfahren, Siddhartha, doch ich sehe, es ist keine Traurigkeit in dein Herz gekommen."

"Nein, Lieber, wie sollte ich denn traurig sein? Ich, der ich reich und glücklich war, bin jetzt noch reicher und glücklicher geworden. Mein Sohn ist mir geschenkt worden."

"Willkommen sei dein Sohn auch mir. Nun aber, Siddhartha, laß uns an die Arbeit gehen, viel ist zu tun. Auf demselben Lager ist Kamala gestorben, auf welchem einst mein Weib gestorben ist. Auf demselben Hügel auch wollen wir Kamalas Scheiterhaufen bauen, auf welchem ich einst meines Weibes Scheiterhaufen gebaut habe."

Während der Knabe noch schlief, bauten sie den Scheiterhaufen.

DER SOHN

Scheu und weinend hatte der Knabe der Bestattung seiner Mutter beigewohnt, finster und scheu hatte er Siddhartha angehört, der ihn als seinen Sohn begrüßte und ihn bei sich in Vasudevas Hütte willkommen hieß. Bleich saß er tagelang am Hügel der Toten, mochte nicht essen, verschloß seinen Blick, verschloß sein Herz, wehrte und sträubte sich gegen das Schicksal.

Siddhartha schonte ihn und ließ ihn gewähren, er ehrte seine Trauer. Siddhartha verstand, daß sein Sohn ihn nicht kenne, daß er ihn nicht lieben könne wie einen Vater. Langsam sah und verstand er auch, daß der Elfjährige ein verwöhnter Knabe war, ein Mutterkind, und in Gewohnheiten des Reichtums aufgewachsen, gewohnt an feinere Speisen, an ein weiches Bett, gewohnt, Dienern zu befehlen. Siddhartha verstand, daß der Trauernde und Verwöhnte nicht plötzlich und gutwillig in der Fremde und Armut sich zufrieden geben könne. Er zwang ihn nicht, er tat manche Arbeit für ihn, suchte stets den besten Bissen für ihn aus. Langsam hoffte er ihn zu gewinnen, durch freundliche Geduld.

Reich und glücklich hatte er sich genannt, als der Knabe zu ihm gekommen war. Da indessen die Zeit hinfloß, und der Knabe fremd und finster blieb, da er ein stolzes und trotziges Herz zeigte, keine Arbeit tun wollte, den Alten keine Ehrfurcht erwies, Vasudevas Fruchtbäume beraubte, da begann Siddhartha zu verstehen, daß mit seinem Sohne nicht Glück und Friede zu ihm gekommen war, sondern Leid und Sorge. Aber er liebte ihn, und lieber war ihm Leid und Sorge der Liebe, als ihm Glück und Freude ohne den Knaben gewesen war. Seit der junge Siddhartha in der Hütte war, hatten die Alten sich in die Arbeit geteilt. Vasudeva hatte das Amt des Fährmanns wieder allein übernommen, und Siddhartha, um bei dem Sohne zu sein, die Arbeit in Hütte und Feld.

Lange Zeit, lange Monate wartete Siddhartha darauf, daß sein Sohn ihn verstehe, daß er seine Liebe annehme, daß er sie vielleicht erwidere. Lange Monate wartete Vasudeva, zusehend, wartete und schwieg. Eines Tages, als Siddhartha der Junge seinen Vater wieder sehr mit Trotz und Launen gequält und ihm beide Reisschüsseln zerbrochen hatte, nahm Vasudeva seinen Freund am Abend beiseite und sprach mit ihm.

"Entschuldige mich," sagte er, "aus freundlichem Herzen rede ich zu dir. Ich sehe, daß du dich quälst, ich sehe, daß du Kummer hast. Dein Sohn, Lieber, macht dir Sorge, und auch mir macht er Sorge. An ein anderes Leben, an ein anderes Nest ist der junge Vogel gewöhnt. Nicht wie du ist er dem Reichtum und der Stadt entlaufen aus Ekel und Überdruß, er hat wider seinen Willen dies alles dahinten lassen müssen. Ich fragte den Fluß, o Freund, vielemale habe ich ihn gefragt. Der Fluß aber lacht, er lacht mich aus, mich und dich lacht er aus, und schüttelt sich über unser Torheit. Wasser will zu Wasser, Jugend will zu Jugend, dein Sohn ist nicht an dem Orte, wo er gedeihen kann. Frage auch du den Fluß, höre auch du auf ihn!"

Bekümmert blickte Siddhartha ihm in das freundliche Gesicht, in dessen vielen Runzeln beständige Heiterkeit wohnte.

"Kann ich mich denn von ihm trennen?" sagte er leise, beschämt. "Laß mir noch Zeit, Lieber! Sieh, ich kämpfe um ihn, ich werbe um sein Herz, mit Liebe und mit freundlicher Geduld will ich es fangen. Auch zu ihm soll einst der Fluß reden, auch er ist berufen."

Vasudevas Lächeln blühte wärmer. "O ja, auch er ist berufen, auch er ist vom ewigen Leben. Aber wissen wir denn, du und ich, wozu er berufen ist, zu welchem Wege, zu welchen Taten, zu welchen Leiden? Nicht klein wird sein Leiden sein, stolz und hart ist ja sein Herz, viel müssen solche leiden, viel irren, viel Unrecht tun, sich viel Sünde aufladen. Sage mir, mein Lieber: du erziehst

deinen Sohn nicht? Du zwingst ihn nicht? Schlägst ihn nicht? Strafst ihn nicht?"

"Nein, Vasudeva, das tue ich alles nicht."

"Ich wußte es. Du zwingst ihn nicht, schlägst ihn nicht, befiehlst ihm nicht, weil du weißt, daß Weich stärker ist als Hart, Wasser stärker als Fels, Liebe stärker als Gewalt. Sehr gut, ich lobe dich. Aber ist es nicht ein Irrtum von dir, zu meinen, daß du ihn nicht zwingest, nicht strafest? Bindest du ihn nicht in Bande mit deiner Liebe? Beschämst du ihn nicht täglich, und machst es ihm noch schwerer, mit deiner Güte und Geduld? Zwingst du ihn nicht, den hochmütigen und verwöhnten Knaben, in einer Hütte bei zwei alten Bananenessern zu leben, welchen schon Reis ein Leckerbissen ist, deren Gedanken nicht seine sein können, deren Herz alt und still ist und anderen Gang hat als das seine? Ist er mit alledem nicht gezwungen, nicht gestraft?"

Betroffen blickte Siddhartha zur Erde. Leise fragte er: "Was, meinst du, soll ich tun?"

Sprach Vasudeva: "Bring ihn zur Stadt, bringe ihn in seiner Mutter Haus, es werden noch Diener dort sein, denen gib ihn. Und wenn keine mehr da sind, so bringe ihn einem Lehrer, nicht der Lehre wegen, aber daß er zu anderen Knaben komme, und zu Mädchen, und in die Welt, welche die seine ist. Hast du daran nie gedacht?"

"Du siehst in mein Herz," sprach Siddhartha traurig. "Oft habe ich daran gedacht. Aber sieh, wie soll ich ihn, der ohnehin kein sanftes Herz hat, in diese Welt geben? Wird er nicht üppig werden, wird er nicht sich an Lust und Macht verlieren, wird er nicht alle Irrtümer seines Vaters wiederholen, wird er nicht vielleicht ganz und gar in Sansara verloren gehen?"

Hell strahlte des Fährmanns Lächeln auf; er berührte zart Siddharthas Arm und sagte: "Frage den Fluß darüber, Freund! Höre ihn darüber lachen! Glaubst du denn wirklich, daß du deine Torheiten begangen habest, um sie dem Sohn zu ersparen? Und kannst du denn deinen Sohn vor Sansara schützen? Wie denn? Durch Lehre, durch Gebet, durch Ermahnung? Lieber, hast du jene Geschichte denn ganz vergessen, jene lehrreiche Geschichte vom Brahmanensohn Siddhartha, die du mir einst hier an dieser Stelle erzählt hast? Wer hat den Samana Siddhartha vor Sansara bewahrt, vor Sünde, vor Habsucht, vor Torheit? Hat seines Vaters Frömmigkeit, seiner Lehrer Ermahnung, hat sein eigenes Wissen, sein eigenes Suchen ihn bewahren können? Welcher Vater, welcher Lehrer hat ihn davor schützen können, selbst das Leben zu leben, selbst sich mit dem Leben zu beschmutzen, selbst Schuld auf sich zu laden, selbst den bitteren Trank zu trinken, selber seinen Weg zu finden?

Glaubst du denn, Lieber, dieser Weg bleibe irgend jemandem vielleicht erspart? Vielleicht deinem Söhnchen, weil du es liebst, weil du ihm gern Leid und Schmerz und Enttäuschung ersparen möchtest? Aber auch wenn du zehnmal für ihn stürbest, würdest du ihm nicht den kleinsten Teil seines Schicksals damit abnehmen können."

Noch niemals hatte Vasudeva so viele Worte gesprochen. Freundlich dankte ihm Siddhartha, ging bekümmert in die Hütte, fand lange keinen Schlaf. Vasudeva hatte ihm nichts gesagt, das er nicht selbst schon gedacht und gewußt hätte. Aber es war ein Wissen, das er nicht tun konnte, stärker als das Wissen war seine Liebe zu dem Knaben, stärker seine Zärtlichkeit, seine Angst, ihn zu verlieren. Hatte er denn jemals an irgend etwas so sehr sein Herz verloren, hatte er je irgendeinen Menschen so geliebt, so blind, so leidend, so erfolglos, und doch so glücklich?

Siddhartha konnte seines Freundes Rat nicht befolgen, er konnte den Sohn nicht hergeben. Er ließ sich von dem Knaben befehlen, er ließ sich von ihm mißachten. Er schwieg und wartete, begann täglich den stummen Kampf der Freundlichkeit, den lautlosen Krieg der Geduld. Auch Vasudeva schwieg und wartete, freundlich, wissend, langmütig. In der Geduld waren sie beide Meister.

Einst, als des Knaben Gesicht ihn sehr an Kamala erinnerte, mußte Siddhartha plötzlich eines Wortes gedenken, das Kamala vor Zeiten, in den Tagen der Jugend, einmal zu ihm gesagt hatte. "Du kannst nicht lieben," hatte sie ihm gesagt, und er hatte ihr Recht gegeben und hatte sich mit einem Stern, die Kindermenschen aber mit fallendem Laub verglichen, und dennoch hatte er in jenem Wort auch einen Vorwurf gespürt. In der Tat hatte er niemals sich an einen anderen Menschen ganz verlieren und hingeben können, sich selbst vergessen, Torheiten der Liebe eines anderen wegen begehen; nie hatte er das gekonnt, und dies war, wie ihm damals schien, der große Unterschied gewesen, der ihn von den Kindermenschen trennte. Nun aber, seit sein Sohn da war, nun war auch er, Siddhartha, vollends ein Kindermensch geworden, eines Menschen wegen leidend, einen Menschen liebend, an eine Liebe verloren, einer Liebe wegen ein Tor geworden. Nun fühlte auch er, spät, einmal im Leben diese stärkste und seltsamste Leidenschaft, litt an ihr, litt kläglich, und war doch beseligt, war doch um etwas erneuert, um etwas reicher.

Wohl spürte er, daß diese Liebe, diese blinde Liebe zu seinem Sohn eine Leidenschaft, etwas sehr Menschliches, daß sie Sansara sei, eine trübe Quelle, ein dunkles Wasser. Dennoch, so fühlte er gleichzeitig, war sie nicht wertlos, war sie notwendig, kam aus

seinem eigenen Wesen. Auch diese Lust wollte gebüßt, auch diese Schmerzen wollten gekostet sein, auch diese Torheiten begangen.

Der Sohn indessen ließ ihn seine Torheiten begehen, ließ ihn werben, ließ ihn täglich sich vor seinen Launen demütigen. Dieser Vater hatte nichts, was ihn entzückt, und nichts, was er gefürchtet hätte. Er war ein guter Mann, dieser Vater, ein guter, gütiger, sanfter Mann, vielleicht ein sehr frommer Mann, vielleicht ein Heiliger--dies alles waren nicht Eigenschaften, welche den Knaben gewinnen konnten. Langweilig war ihm dieser Vater, der ihn da in seiner elenden Hütte gefangen hielt, langweilig war er ihm, und daß er jede Unart mit Lächeln, jeden Schimpf mit Freundlichkeit, jede Bosheit mit Güte beantwortete, das eben war die verhaßteste List dieses alten Schleichers. Viel lieber wäre der Knabe von ihm bedroht, von ihm mißhandelt worden.

Es kam ein Tag, an welchem des jungen Siddhartha Sinn zum Ausbruch kam und sich offen gegen seinen Vater wandte. Der hatte ihm einen Auftrag erteilt, er hatte ihn Reisig sammeln geheißen. Der Knabe ging aber nicht aus der Hütte, er blieb trotzig und wütend stehen, stampfte den Boden, ballte die Fäuste, und schrie in gewaltigem Ausbruch seinem Vater Haß und Verachtung ins Gesicht.

"Hole du selber dein Reisig!" rief er schäumend, "ich bin nicht dein Knecht. Ich weiß ja, daß du mich nicht schlägst, du wagst es ja nicht; ich weiß ja, daß du mich mit deiner Frömmigkeit und deiner Nachsicht beständig strafen und klein machen willst. Du willst, daß ich werden soll wie du, auch so fromm, auch so sanft, auch so weise! Ich aber, höre, ich will, dir zu Leide, lieber ein Straßenräuber und Mörder werden und zur Hölle fahren, als so werden wie du! Ich hasse dich, du bist nicht mein Vater, und wenn du zehnmal meiner Mutter Buhle gewesen bist!"

Zorn und Gram liefen in ihm über, schäumten in hundert wüsten und bösen Worten dem Vater entgegen. Dann lief der Knabe davon und kam erst spät am Abend wieder.

Am andern Morgen aber war er verschwunden. Verschwunden war auch ein kleiner, aus zweifarbigem Bast geflochtener Korb, in welchem die Fährleute jene Kupfer- und Silbermünzen aufbewahrten, welche sie als Fährlohn erhielten. Verschwunden war auch das Boot, Siddhartha sah es am jenseitigen Ufer liegen. Der Knabe war entlaufen.

"Ich muß ihm folgen," sagte Siddhartha, der seit jenen gestrigen Schimpfreden des Knaben vor Jammer zitterte. "Ein Kind kann nicht allein durch den Wald gehen. Er wird umkommen. Wir müssen ein Floß bauen, Vasudeva, um übers Wasser zu kommen."

"Wir werden ein Floß bauen," sagte Vasudeva, "um unser Boot wieder zu holen, das der Junge entführt hat. Ihn aber solltest du laufen lassen, Freund, er ist kein Kind mehr, er weiß sich zu helfen. Er sucht den Weg nach der Stadt, und er hat Recht, vergiß das nicht. Er tut das, was du selbst zu tun versäumt hast. Er sorgt für sich, er geht seine Bahn. Ach, Siddhartha, ich sehe dich leiden, aber du leidest Schmerzen, über die man lachen möchte, über die du selbst bald lachen wirst."

Siddhartha antwortete nicht. Er hielt schon das Beil in Händen, und begann ein Floß aus Bambus zu machen, und Vasudeva half ihm, die Stämme mit Grasseilen zuzammen zu binden. Dann fuhren sie hinüber, wurden weit abgetrieben, zogen das Floß am jenseitigen Ufer flußauf.

"Warum hast du das Beil mitgenommen?" fragte Siddhartha.

Vasudeva sagte: "Es könnte sein, daß das Ruder unsres Bootes verloren gegangen wäre."

Siddhartha aber wußte, was sein Freund dachte. Er dachte, der Knabe werde das Ruder weggeworfen oder zerbrochen haben, um sich zu rächen und um sie an der Verfolgung zu hindern. Und wirklich war kein Ruder mehr im Boote. Vasudeva wies auf den Boden des Bootes, und sah den Freund mit Lächeln an, als wollte er sagen; "Siehst du nicht, was dein Sohn dir sagen will? Siehst du nicht, daß er nicht verfolgt sein will?" Doch sagte er dies nicht mit Worten. Er machte sich daran, ein neues Ruder zu zimmern. Siddhartha aber nahm Abschied, um nach dem Entflohenen zu suchen. Vasudeva hinderte ihn nicht.

Als Siddhartha schon lange im Walde unterwegs war, kam ihm der Gedanke, daß sein Suchen nutzlos sei. Entweder, so dachte er, war der Knabe längst voraus und schon in der Stadt angelangt, oder, wenn er noch unterwegs sein sollte, würde er vor ihm, dem Verfolgenden, sich verborgen halten. Da er weiter dachte, fand er auch, daß er selbst nicht in Sorge um seinen Sohn war, daß er im Innersten wußte, er sei weder umgekommen, noch drohe ihm im Walde Gefahr. Dennoch lief er ohne Rast, nicht mehr, um ihn zu retten, nur aus Verlangen, nur um ihn vielleicht nochmals zu sehen. Und er lief bis vor die Stadt.

Als er nahe bei der Stadt auf die breite Straße gelangte, blieb er stehen, am Eingang des schönen Lustgartens, der einst Kamala gehört hatte, wo er sie einst, in der Sänfte, zum erstenmal gesehen hatte. Das Damalige stand in seiner Seele auf, wieder sah er sich dort stehen, jung, ein bärtiger nackter Samana, das Haar voll Staub. Lange stand Siddhartha und blickte durch das offne Tor in den Garten, Mönche in gelben Kutten sah er unter den schönen Bäumen gehen.

Lange stand er, nachdenkend, Bilder sehend, der Geschichte seines Lebens lauschend. Lange stand er, blickte nach den Mönchen, sah statt ihrer den jungen Siddhartha, sah die junge Kamala unter den hohen Bäumen gehen. Deutlich sah er sich, wie er von Kamala bewirtet ward, wie er ihren ersten Kuß empfing, wie er stolz und verächtlich auf sein Brahmanentum zurückblickte, stolz und verlangend sein Weltleben begann. Er sah Kamaswami, sah die Diener, die Gelage, die Würfelspieler, die Musikanten, sah Kamalas Singvogel im Käfig, lebte dies alles nochmals, atmete Sansara, war nochmals alt und müde, fühlte nochmals den Ekel, fühlte nochmals den Wunsch, sich auszulöschen, genas nochmals am heiligen Om.

Nachdem er lange beim Tor des Gartens gestanden war, sah Siddhartha ein, daß das Verlangen töricht war, das ihn bis zu dieser Stätte getrieben hatte, daß er seinem Sohne nicht helfen konnte, daß er sich nicht an ihn hängen durfte. Tief fühlte er die Liebe zu dem Entflohenen im Herzen, wie eine Wunde, und fühlte zugleich, daß ihm die Wunde nicht gegeben war, um in ihr zu wühlen, daß sie zur Blüte werden und strahlen müsse.

Daß die Wunde zu dieser Stunde noch nicht blühte, noch nicht strahlte, machte ihn traurig. An der Stelle des Wunschzieles, das ihn hierher und dem entflohenen Sohne nachgezogen hatte, stand nun Leere. Traurig setzte er sich nieder, fühlte etwas in seinem Herzen sterben, empfand Leere, sah keine Freude mehr, kein Ziel. Er saß versunken, und wartete. Dies hatte er am Flusse gelernt, dies eine: warten, Geduld haben, lauschen. Und er saß und lauschte, im Staub der Straße, lauschte seinem Herzen, wie es müd und traurig ging, wartete auf eine Stimme. Manche Stunde kauerte er lauschend, sah keine Bilder mehr, sank in die Leere, ließ sich sinken, ohne einen Weg zu sehen. Und wenn er die Wunde brennen fühlte, sprach er lautlos das Om, füllte sich mit Om. Die Mönche im Garten sahen ihn, und da er viele Stunden kauerte, und auf seinen grauen Haaren der Staub sich sammelte, kam einer gegangen und legte zwei Pisangfrüchte vor ihm nieder. Der Alte sah ihn nicht.

Aus dieser Erstarrung weckte ihn eine Hand, welche seine Schulter berührte. Alsbald erkannte er diese Berührung, die zarte, schamhafte, und kam zu sich. Er erhob sich und begrüßte Vasudeva, welcher ihm nachgegangen war. Und da er in Vasudevas freundliches Gesicht schaute, in die kleinen, wie mit lauter Lächeln ausgefüllten Falten, in die heiteren Augen, da lächelte auch er. Er sah nun die Pisangfrüchte vor sich liegen, hob sie auf, gab eine dem Fährmann, aß selbst die andere. Darauf ging er schweigend mit Vasudeva in den Wald zurück, kehrte zur Fähre heim. Keiner sprach von dem, was heute geschehen war, keiner nannte den Namen des Knaben, keiner sprach von seiner Flucht, keiner sprach von der Wunde. In der Hütte legte sich Siddhartha auf sein Lager, und da nach einer Weile Vasudeva zu Ihm trat, um ihm eine Schale Kokosmilch anzubieten, fand er ihn schon schlafend.

OM

Lange noch brannte die Wunde. Manchen Reisenden mußte Siddhartha über den Fluß setzen, der einen Sohn oder eine Tochter bei sich hatte, und keinen von ihnen sah er, ohne daß er ihn beneidete, ohne daß er dachte: "So viele, so viel Tausende besitzen dies holdeste Glück--warum ich nicht? Auch böse Menschen, auch Diebe, und Räuber haben Kinder, und lieben sie, und werden von ihnen geliebt, nur ich nicht." So einfach, so ohne Verstand dachte er nun, so ähnlich war er den Kindermenschen geworden.

Anders sah er jetzt die Menschen an als früher, weniger klug, weniger stolz, dafür wärmer, dafür neugieriger, beteiligter. Wenn er Reisende der gewöhnlichen Art übersetzte, Kindermenschen, Geschäftsleute, Krieger, Weibervolk, so erschienen diese Leute ihm nicht fremd wie einst: er verstand sie, er verstand und teilte ihr nicht von Gedanken und Einsichten, sondern einzig von Trieben und Wünschen geleitetes Leben, er fühlte sich wie sie. Obwohl er nahe der Vollendung war, und an seiner letzten Wunde trug, schien ihm doch, diese Kindermenschen seien seine Brüder, ihre Eitelkeiten, Begehrlichkeiten und Lächerlichkeiten verloren das Lächerliche für ihn, wurden begreiflich, wurden liebenswert, wurden ihm sogar verehrungswürdig. Die blinde Liebe einer Mutter zu ihrem Kind, den dummen, blinden Stolz eines eingebildeten Vaters auf sein einziges Söhnlein, das blinde, wilde Streben nach Schmuck und nach bewundernden Männeraugen bei einem jungen, eitlen Weibe, alle diese Triebe, alle diese Kindereien, alle diese einfachen, törichten, aber ungeheuer starken, stark lebenden, stark sich durchsetzenden Triebe und Begehrlichkeiten waren für Siddhartha jetzt keine Kindereien mehr, er sah um ihretwillen die Menschen leben, sah sie um ihretwillen Unendliches leisten, Reisen tun, Kriege führen, Unendliches leiden, Unendliches ertragen, und er konnte sie dafür lieben, er sah das Leben, das Lebendige, das Unzerstörbare, das Brahman in jeder ihrer Leidenschaften, jeder ihrer Taten. Liebenswert und bewundernswert

waren diese Menschen in ihrer blinden Treue, ihrer blinden Stärke und Zähigkeit. Nichts fehlte ihnen, nichts hatte der Wissende und Denker vor ihnen voraus als eine einzige Kleinigkeit, eine einzige winzig kleine Sache: das Bewußtsein, den bewußten Gedanken der Einheit alles Lebens. Und Siddhartha zweifelte sogar zu mancher Stunde, ob dies Wissen, dieser Gedanke so sehr hoch zu werten, ob nicht auch er vielleicht eine Kinderei der Denkmenschen, der Denk-Kindermenschen sein möchte. In allem andern waren die Weltmenschen dem Weisen ebenbürtig, waren ihm oft weit überlegen, wie ja auch Tiere in ihrem zähen, unbeirrten Tun des Notwendigen in manchen Augenblicken den Menschen überlegen scheinen können.

Langsam blühte, langsam reifte in Siddhartha die Erkenntnis, das Wissen darum, was eigentlich Weisheit sei, was seines langen Suchens Ziel sei. Es war nichts als eine Bereitschaft der Seele, eine Fähigkeit, eine geheime Kunst, jeden Augenblick, mitten im Leben, den Gedanken der Einheit denken, die Einheit fühlen und einatmen zu können. Langsam blühte dies in ihm auf, strahlte ihm aus Vasudevas altem Kindergesicht wider: Harmonie, Wissen um die ewige Vollkommenheit der Welt, Lächeln, Einheit.

Die Wunde aber brannte noch, sehnlich und bitter gedachte Siddhartha seines Sohnes, pflegte seine Liebe und Zärtlichkeit im Herzen, ließ den Schmerz an sich fressen, beging alle Torheiten der Liebe. Nicht von selbst erlosch diese Flamme.

Und eines Tages, als die Wunde heftig brannte, fuhr Siddhartha über den Fluß, gejagt von Sehnsucht, stieg aus und war Willens, nach der Stadt zu gehen und seinen Sohn zu suchen. Der Fluß floß sanft und leise, es war in der trockenen Jahreszeit, aber seine Stimme klang sonderbar: sie lachte! Sie lachte deutlich. Der Fluß lachte, er lachte hell und klar den alten Fährmann aus. Siddhartha blieb stehen, er beugte sich übers Wasser, um noch besser zu hören, und im still ziehenden Wasser sah er sein Gesicht gespiegelt, und in diesem gespiegelten Gesicht war etwas, das ihn erinnerte, etwas Vergessenes, und da er sich besann, fand er es: dies Gesicht glich einem andern, das er einst gekannt und geliebt und auch gefürchtet hatte. Es glich dem Gesicht seines Vaters, des Brahmanen. Und er erinnerte sich, wie er vor Zeiten, ein Jüngling, seinen Vater gezwungen hatte, ihn zu den Büßern gehen zu lassen, wie er Abschied von ihm genommen hatte, wie er gegangen und nie mehr wiedergekommen war. Hatte nicht auch sein Vater um ihn dasselbe Leid gelitten, wie er es nun um seinen Sohn litt? War nicht sein Vater längst gestorben, allein, ohne seinen Sohn wiedergesehen zu haben? Mußte er selbst nicht dies selbe Schicksal erwarten? War es nicht eine Komödie, eine seltsame und dumme Sache, diese Wiederholung, dieses Laufen in einem verhängnisvollen Kreise?

Der Fluß lachte. Ja, es war so, es kam alles wieder, was nicht bis zu Ende gelitten und gelöst ward, es wurden immer wieder dieselben Leiden gelitten. Siddhartha aber stieg wieder in das Boot und fuhr zu der Hütte zurück, seines Vaters gedenkend, seines Sohnes gedenkend, vom Flusse verlacht, mit sich selbst im Streit, geneigt zur Verzweiflung, und nicht minder geneigt, über sich und die ganze Welt laut mitzulachen. Ach, noch blühte die Wunde nicht, noch wehrte sein Herz sich wider das Schicksal, noch strahlte nicht Heiterkeit und Sieg aus seinem Leide. Doch fühlte er Hoffnung, und da er zur Hütte zurückgekehrt war, spürte er ein unbesiegbares Verlangen, sich vor Vasudeva zu öffnen, ihm alles zu zeigen, ihm, dem Meister des Zuhörens, alles zu sagen.

Vasudeva saß in der Hütte und flocht an einem Korbe. Er fuhr nicht mehr mit dem Fährboot, seine Augen begannen schwach zu werden, und nicht nur seine Augen; auch seine Arme und Hände. Unverändert und blühend war nur die Freude und das heitere Wohlwollen seines Gesichtes.

Siddhartha setzte sich zu dem Greise, langsam begann er zu sprechen. Worüber sie niemals gesprochen hatten, davon erzählte er jetzt, von seinem Gange zur Stadt, damals, von der brennenden Wunde, von seinem Neid beim Anblick glücklicher Väter, von seinem Wissen um die Torheit solcher Wünsche, von seinem vergeblichen Kampf wider sie. Alles berichtete er, alles konnte er sagen, auch das Peinlichste, alles ließ sich sagen, alles sich zeigen, alles konnte er erzählen. Er zeigte seine Wunde dar, erzählte auch seine heutige Flucht, wie er übers Wasser gefahren sei, kindischer Flüchtling, willens nach der Stadt zu wandern, wie der Fluß gelacht habe.

Während er sprach, lange sprach, während Vasudeva mit stillem Gesicht lauschte, empfand Siddhartha dies Zuhören Vasudevas stärker, als er es jemals gefühlt hatte, er spürte, wie seine Schmerzen, seine Beängstigungen hinüberflossen, wie seine heimliche Hoffnung hinüberfloß, ihm von drüben wieder entgegenkam. Diesem Zuhörer seine Wunde zu zeigen, war dasselbe, wie sie im Flusse baden, bis sie kühl und mit dem Flusse eins wurde. Während er immer noch sprach, immer noch bekannte und beichtete, fühlte Siddhartha mehr und mehr, daß dies nicht mehr Vasudeva, nicht mehr ein Mensch war, der ihm zuhörte, daß dieser regungslos Lauschende seine Beichte in sich einsog wie ein Baum den Regen, daß dieser Regungslose der Fluß selbst, daß er Gott selbst, daß er das Ewige selbst war. Und während Siddhartha aufhörte, an sich und an seine Wunde zu denken, nahm diese Erkenntnis vom veränderten Wesen des Vasudeva von ihm Besitz, und je mehr er es empfand und darein eindrang, desto weniger wunderlich wurde es, desto mehr sah er ein, daß alles in Ordnung und natürlich war, daß Vasudeva schon lange, beinahe schon

immer so gewesen sei, daß nur er selbst es nicht ganz erkannt hatte, ja daß er selbst von jenem kaum noch verschieden sei. Er empfand, daß er den alten Vasudeva nun so sehe, wie das Volk die Götter sieht, und daß dies nicht von Dauer sein könne; er begann im Herzen von Vasudeva Abschied zu nehmen. Dabei sprach er immer fort.

Als er zu Ende gesprochen hatte, richtete Vasudeva seinen freundlichen, etwas schwach gewordenen Blick auf ihn, sprach nicht, strahlte ihm schweigend Liebe und Heiterkeit entgegen, Verständnis und Wissen. Er nahm Siddharthas Hand, führte ihn zum Sitz am Ufer, setzte sich mit ihm nieder, lächelte dem Flusse zu.

"Du hast ihn lachen hören," sagte er. "Aber du hast nicht alles gehört. Laß uns lauschen, du wirst mehr hören."

Sie lauschten. Sanft klang der vielstimmige Gesang des Flusses. Siddhartha schaute ins Wasser, und im ziehenden Wasser erschienen ihm Bilder: sein Vater erschien, einsam, um den Sohn trauernd; er selbst erschien, einsam, auch er mit den Banden der Sehnsucht an den fernen Sohn gebunden; es erschien sein Sohn, einsam auch er, der Knabe, begehrlich auf der brennenden Bahn seiner jungen Wünsche stürmend, jeder auf sein Ziel gerichtet, jeder vom Ziel besessen, jeder leidend. Der Fluß sang mit einer Stimme des Leidens, sehnlich sang er, sehnlich floß er seinem Ziele zu, klagend klang seine Stimme.

"Hörst du?" fragte Vasudevas stummer Blick. Siddhartha nickte.

"Höre besser!" flüsterte Vasudeva.

Siddhartha bemühte sich, besser zu hören. Das Bild des Vaters, sein eigenes Bild, das Bild des Sohnes flossen ineinander, auch Kamalas Bild erschien und zerfloß, und das Bild Govindas, und andre Bilder, und flossen ineinander über, wurden alle zum Fluß, strebten alle als Fluß dem Ziele zu, sehnlich, begehrend, leidend, und des Flusses Stimme klang voll Sehnsucht, voll von brennendem Weh, voll von unstillbarem Verlangen. Zum Ziele strebte der Fluß, Siddhartha sah ihn eilen, den Fluß, der aus ihm und den Seinen und aus allen Menschen bestand, die er je gesehen hatte, alle die Wellen und Wasser eilten, leidend, Zielen zu, vielen Zielen, dem Wasserfall, dem See, der Stromschnelle, dem Meere, und alle Ziele wurden erreicht, und jedem folgte ein neues, und aus dem Wasser ward Dampf und stieg in den Himmel, ward Regen und stürzte aus dem Himmel herab, ward Quelle, ward Bach, ward Fluß, strebte aufs Neue, floß aufs Neue. Aber die sehnliche Stimme hatte sich verändert. Noch tönte sie, leidvoll, suchend, aber andre Stimmen gesellten sich zu ihr, Stimmen der Freude und des Leides, gute und böse Stimmen, lachende und trauernde, hundert Stimmen, tausend Stimmen.

Siddhartha lauschte. Er war nun ganz Lauscher, ganz ins Zuhören vertieft, ganz leer, ganz einsaugend, er fühlte, daß er nun das Lauschen zu Ende gelernt habe. Oft schon hatte er all dies gehört, diese vielen Stimmen im Fluß, heute klang es neu. Schon konnte er die vielen Stimmen nicht mehr unterscheiden, nicht frohe von weinenden, nicht kindliche von männlichen, sie gehörten alle zusammen, Klage der Sehnsucht und Lachen des Wissenden, Schrei des Zorns und Stöhnen der Sterbenden, alles war eins, alles war ineinander verwoben und verknüpft, tausendfach verschlungen. Und alles zusammen, alle Stimmen, alle Ziele, alles Sehnen, alle Leiden, alle Lust, alles Gute und Böse, alles zusammen war die Welt. Alles zusammen war der Fluß des Geschehens, war die Musik des Lebens. Und wenn Siddhartha aufmerksam diesem Fluß, diesem tausendstimmigen Liede lauschte, wenn er nicht auf das Leid noch auf das Lachen hörte, wenn er seine Seele nicht an irgendeine Stimme band und mit seinem Ich in sie einging, sondern alle hörte, das Ganze, die Einheit vernahm, dann bestand das große Lied der tausend Stimmen aus einem einzigen Worte, das hieß Om: die Vollendung.

"Hörst du," fragte wieder Vasudevas Blick.

Hell glänzte Vasudevas Lächeln, über all den Runzeln seines alten Antlitzes schwebte es leuchtend, wie über all den Stimmen des Flusses das Om schwebte. Hell glänzte sein Lächeln, als er den Freund anblickte, und hell glänzte nun auch auf Siddharthas Gesicht dasselbe Lächeln auf. Seine Wunde blühte, sein Leid strahlte, sein Ich war in die Einheit geflossen.

In dieser Stunde hörte Siddhartha auf, mit dem Schicksal zu kämpfen, hörte auf zu leiden. Auf seinem Gesicht blühte die Heiterkeit des Wissens, dem kein Wille mehr entgegensteht, das die Vollendung kennt, das einverstanden ist mit dem Fluß des Geschehens, mit dem Strom des Lebens, voll Mitleid, voll Mitlust, dem Strömen hingegeben, der Einheit zugehörig.

Als Vasudeva sich von dem Sitz am Ufer erhob, als er in Siddharthas Augen blickte und die Heiterkeit des Wissens darin strahlen sah, berührte er dessen Schulter leise mit der Hand, in seiner behutsamen und zarten Weise, und sagte: "Ich habe auf diese Stunde gewartet, Lieber. Nun sie gekommen ist, laß mich gehen. Lange habe ich auf diese Stunde gewartet, lange bin ich der Fährmann Vasudeva gewesen. Nun ist es genug. Lebe wohl, Hütte, lebe wohl, Fluß, lebe wohl, Siddhartha!"

Siddhartha verneigte sich tief vor dem Abschiednehmenden.

"Ich habe es gewußt," sagte er leise. "Du wirst in die Wälder gehen?"

"Ich gehe in die Wälder, ich gehe in die Einheit," sprach Vasudeva strahlend.

Strahlend ging er hinweg; Siddhartha blickte ihm nach. Mit tiefer Freude, mit tiefem Ernst blickte er ihm nach, sah seine Schritte voll Frieden, sah sein Haupt voll Glanz, sah seine Gestalt voll Licht.

GOVINDA

Mit anderen Mönchen weilte Govinda einst während einer Rastzeit in dem Lusthain, welchen die Kurtisane Kamala den Jüngern des Gotama geschenkt hatte. Er hörte von einem alten Fährmanne sprechen, welcher eine Tagereise entfernt vom Hain am Flusse wohne, und der von vielen für einen Weisen gehalten werde. Als Govinda des Weges weiterzog, wählte er den Weg zur Fähre, begierig diesen Fährmann zu sehen. Denn ob er wohl sein Leben lang nach der Regel gelebt hatte, auch von den Jungeren Mönchen seines Alters und seiner Bescheidenheit wegen mit Ehrfurcht angesehen wurde, war doch in seinem Herzen die Unruhe und das Suchen nicht erloschen.

Er kam zum Flüsse, er bat den Alten um überfahrt, und da sie drüben aus dem Boot stiegen, sagte er zum Alten: "Viel Gutes erweisest du uns Mönchen und Pilgern, viele von uns hast du schon übergesetzt. Bist nicht auch du, Fährmann, ein Sucher nach dem rechten Pfade?"

Sprach Siddhartha, aus den alten Augen lächelnd: "Nennst du dich einen Sucher, o Ehrwürdiger, und bist doch schon hoch in den Jahren, und trägst das Gewand der Mönche Gotamas?"

"Wohl bin ich alt," sprach Govinda, "zu suchen aber habe ich nicht aufgehört. Nie werde ich aufhören zu suchen, dies scheint meine Bestimmung. Auch du, so scheint es mir, hast gesucht. Willst du mir ein Wort sagen, Verehrter?"

Sprach Siddhartha: "Was sollte ich dir, Ehrwürdiger, wohl zu sagen haben? Vielleicht das, daß du allzu viel suchst? Daß du vor Suchen nicht zum Finden kommst?"

"Wie denn?" fragte Govinda.

"Wenn jemand sucht," sagte Siddhartha, "dann geschieht es leicht, daß sein Auge nur noch das Ding sieht, das er sucht, daß er nichts zu finden, nichts in sich einzulassen vermag, weil er nur immer an das Gesuchte denkt, weil er ein Ziel hat, weil er vom Ziel besessen ist. Suchen heißt: ein Ziel haben. Finden aber heißt: frei sein, offen stehen, kein Ziel haben. Du, Ehrwürdiger, bist vielleicht in der Tat ein Sucher, denn, deinem Ziel nachstrebend, siehst du manches nicht, was nah vor deinen Augen steht."

"Noch verstehe ich nicht ganz," bat Govinda, "wie meinst du das?"

Sprach Siddhartha: "Einst, o Ehrwürdiger, vor manchen Jahren, bist du schon einmal an diesem Flusse gewesen, und hast am Fluß einen Schlafenden gefunden, und hast dich zu ihm gesetzt, um seinen Schlaf zu behüten. Erkannt aber, o Govinda, hast du den Schlafenden nicht."

Staunend, wie ein Bezauberter, blickte der Mönch in des Fährmanns Augen.

"Bist du Siddhartha?" fragte er mit scheuer Stimme. "Ich hätte dich auch diesesmal nicht erkannt! Herzlich grüße ich dich, Siddhartha, herzlich freue ich mich, dich nochmals zu sehen! Du hast dich sehr verändert, Freund.--Und nun bist du also ein Fährmann geworden?"

Freundlich lachte Siddhartha. "Ein Fährmann, ja. Manche, Govinda, müssen sich viel verändern, müssen allerlei Gewand tragen, ihrer einer bin ich, Lieber. Sei willkommen, Govinda, und bleibe die Nacht in meiner Hütte."

Govinda blieb die Nacht in der Hütte und schlief auf dem Lager, das einst Vasudevas Lager gewesen war. Viele Fragen richtete er an den Freund seiner Jugend, vieles mußte ihm Siddhartha aus seinem Leben erzählen.

Als es am andern Morgen Zeit war, die Tageswanderung anzutreten, da sagte Govinda, nicht ohne Zögern, die Worte: "Ehe ich meinen Weg fortsetze, Siddhartha, erlaube mir noch eine Frage. Hast du eine Lehre? Hast du einen Glauben, oder ein Wissen, dem du folgst, das dir leben und rechttun hilft?"

Sprach Siddhartha: "Du weißt, Lieber, daß ich schon als junger Mann, damals, als wir bei den Büßern im Walde lebten, dazu kam, den Lehren und Lehrern zu mißtrauen und ihnen den Rücken zu wenden. Ich bin dabei geblieben. Dennoch habe ich seither viele Lehrer gehabt. Eine schöne Kurtisane ist lange Zeit meine Lehrerin gewesen, und ein reicher Kaufmann war mein Lehrer, und einige Würfelspieler. Einmal ist auch ein wandernder Jünger Buddhas mein Lehrer gewesen; er saß bei mir, als ich im Walde eingeschlafen war, auf der Pilgerschaft. Auch von ihm habe ich gelernt, auch ihm bin ich dankbar, sehr dankbar. Am meisten aber habe ich hier von diesem Flusse gelernt, und von meinem Vorgänger, dem Fährmann Vasudeva. Es war ein sehr einfacher Mensch, Vasudeva, er war kein Denker, aber er wußte das Notwendige so gut wie Gotama, er war ein Vollkommener, ein Heiliger."

Govinda sagte: "Noch immer, o Siddhartha, liebst du ein wenig den Spott, wie mir scheint. Ich glaube dir und weiß es, daß du nicht einem Lehrer gefolgt bist. Aber hast nicht du selbst, wenn auch nicht eine Lehre, so doch gewisse Gedanken, gewisse Erkenntnisse gefunden, welche dein eigen sind und die dir leben helfen? Wenn du mir von diesen etwas sagen möchtest, würdest du mir das Herz erfreuen."

Sprach Siddhartha: "Ich habe Gedanken gehabt, ja, und Erkenntnisse, je und je. Ich habe manchmal, für eine Stunde oder für einen Tag, Wissen in mir gefühlt, so wie man Leben in seinem Herzen fühlt. Manche Gedanken waren es, aber schwer wäre es für mich, sie dir mitzuteilen. Sieh, mein Govinda, dies ist einer meiner Gedanken, die ich gefunden habe: Weisheit ist nicht mitteilbar. Weisheit, welche ein Weiser mitzuteilen versucht, klingt immer wie Narrheit."

"Scherzest du?" fragte Govinda.

"Ich scherze nicht. Ich sage, was ich gefunden habe. Wissen kann man mitteilen, Weisheit aber nicht. Man kann sie finden, man kann sie leben, man kann von ihr getragen werden, man kann mit ihr Wunder tun, aber sagen und lehren kann man sie nicht. Dies war es, was ich schon als Jüngling manchmal ahnte, was mich von den Lehrern fortgetrieben hat. Ich habe einen Gedanken gefunden, Govinda, den du wieder für Scherz oder für Narrheit halten wirst, der aber mein bester Gedanke ist. Er heißt: Von jeder Wahrheit ist das Gegenteil ebenso wahr! Nämlich so: eine Wahrheit läßt sich immer nur aussprechen und in Worte hüllen, wenn sie einseitig ist. Einseitig ist alles, was mit Gedanken gedacht und mit Worten gesagt werden kann, alles einseitig, alles halb, alles entbehrt der Ganzheit, des Runden, der Einheit. Wenn der erhabene Gotama lehrend von der Welt sprach, so mußte er sie teilen in Sansara und Nirvana, in Täuschung und Wahrheit, in Leid und Erlösung. Man kann nicht anders, es gibt keinen andern Weg für den, der lehren will. Die Welt selbst aber, das Seiende um uns her und in uns innen, ist nie einseitig. Nie ist ein Mensch, oder eine Tat, ganz Sansara oder ganz Nirvana, nie ist ein Mensch ganz heilig oder ganz sündig. Es scheint ja so, weil wir der Täuschung unterworfen sind, daß Zeit etwas Wirkliches sei. Zeit ist nicht wirklich, Govinda, ich habe dies oft und oft erfahren. Und wenn Zeit nicht wirklich ist, so ist die Spanne, die zwischen Welt und Ewigkeit, zwischen Leid und Seligkeit, zwischen Böse und Gut zu liegen scheint, auch eine Täuschung."

"Wie das?" fragte Govinda ängstlich.

"Höre gut, Lieber, höre gut! Der Sünder, der ich bin und der du bist, der ist Sünder, aber er wird einst wieder Brahma sein, er wird einst Nirvana erreichen, wird Buddha sein--und nun siehe: dies 'Einst' ist Täuschung, ist nur Gleichnis! Der Sünder ist nicht auf dem Weg zur Buddhaschaft unterwegs, er ist nicht in einer Entwickelung begriffen, obwohl unser Denken sich die Dinge nicht anders vorzustellen weiß. Nein, in dem Sünder ist, ist jetzt und heute schon der künftige Buddha, seine Zukunft ist alle schon da, du hast in ihm, in dir, in jedem den werdenden, den möglichen, den verborgenen Buddha zu verehren. Die Welt, Freund Govinda, ist nicht unvollkommen, oder auf einem langsamen Wege zur Vollkommenheit begriffen: nein, sie ist in jedem Augenblick vollkommen, alle Sünde trägt schon die Gnade in sich, alle kleinen Kinder haben schon den Greis in sich, alle Säuglinge den Tod, alle Sterbenden das ewige Leben. Es ist keinem Menschen möglich, vom anderen zu sehen, wie weit er auf seinem Wege sei, im Räuber und Würfelspieler wartet Buddha, im Brahmanen wartet der Räuber. Es gibt, in der tiefen Meditation, die Möglichkeit, die Zeit aufzuheben, alles gewesene, seiende und sein werdende Leben als gleichzeitig zu sehen, und da ist alles gut, alles vollkommen, alles ist Brahman. Darum scheint mir das, was ist, gut, es scheint mir Tod wie Leben, Sünde wie Heiligkeit, Klugheit wie Torheit, alles muß so sein, alles bedarf nur meiner Zustimmung, nur meiner Willigkeit, meines liebenden Einverständnisses, so ist es für mich gut, kann mich nur fördern, kann mir nie schaden. Ich habe an meinem Leibe und an meiner Seele erfahren, daß ich der Sünde sehr bedurfte, ich bedurfte der Wollust, des Strebens nach Gütern, der Eitelkeit, und bedurfte der schmählichsten Verzweiflung, um das Widerstreben aufgeben zu lernen, um die Welt lieben zu lernen, um sie nicht mehr mit irgendeiner von mir gewünschten, von mir eingebildeten Welt zu vergleichen, einer von mir ausgedachten Art der Vollkommenheit, sondern sie zu lassen, wie sie ist, und sie zu lieben, und ihr gerne anzugehören.--Dies, o Govinda, sind einige, von den Gedanken, die mir in den Sinn gekommen sind."

Siddhartha bückte sich, hob einen Stein vom Erdbodene auf und wog ihn in der Hand.

"Dies hier," sagte er spielend, "ist ein Stein, und er wird in einer bestimmten Zeit vielleicht Erde sein, und wird aus Erde Pflanze werden, oder Tier oder Mensch. Früher nun hätte ich gesagt: Dieser Stein ist bloß ein Stein, er ist wertlos, er gehört der Welt der Maja an; aber weil er vielleicht im Kreislauf der Verwandlungen auch Mensch und Geist werden kann, darum schenke ich auch ihm Geltung. So hätte ich früher vielleicht gedacht. Heute aber denke ich: dieser Stein ist Stein, er ist auch Tier, er ist auch Gott, er ist auch Buddha, ich verehre und liebe ihn nicht, weil er einstmals dies oder jenes werden könnte, sondern weil er alles längst und immer ist--und gerade dies, daß er Stein ist, daß er mir jetzt und heute als Stein erscheint, gerade darum liebe ich ihn, und sehe Wert und Sinn in jeder von seinen Adern und Höhlungen, in dem Gelb, in dem Grau, in der Härte, im Klang, den er von sich gibt, wenn ich ihn beklopfe, in der Trockenheit oder Feuchtigkeit seiner Oberfläche. Es gibt Steine, die fühlen sich wie Öl oder wie Seife an, und andre wie Blätter, andre wie Sand, und jeder ist besonders und betet das Om auf seine Weise, jeder ist Brahman, zugleich aber und ebensosehr ist er Stein, ist ölig oder saftig, und gerade das gefällt mir und scheint mir wunderbar und der Anbetung würdig.--Aber mehr laß mich davon nicht sagen. Die Worte tun dem geheimen Sinn nicht gut, es wird immer alles gleich ein wenig anders, wenn man es ausspricht, ein wenig verfälscht, ein wenig närrisch--ja, und auch das ist sehr gut und gefällt mir sehr, auch damit bin ich sehr einverstanden, daß das, was eines Menschen Schatz und Weisheit ist, dem andern immer wie Narrheit klingt."

Schweigend lauschte Govinda.

"Warum hast du mir das von dem Steine gesagt?" fragte er nach einer Pause zögernd.

"Es geschah ohne Absicht. Oder vielleicht war es so gemeint, daß ich eben den Stein, und den Fluß, und alle diese Dinge, die wir betrachten und von denen wir lernen können, liebe. Einen Stein kann ich lieben, Govinda, und auch einen Baum oder ein Stück Rinde. Das sind Dinge, und Dinge kann man lieben. Worte aber kann ich nicht lieben. Darum sind Lehren nichts für mich, sie haben keine Härte, keine Weiche, keine Farben, keine Kanten, keinen Geruch, keinen Geschmack, sie haben nichts als Worte. Vielleicht ist es dies, was dich hindert, den Frieden zu finden, vielleicht sind es die vielen Worte. Denn auch Erlösung und Tugend, auch Sansara und Nirvana sind bloße Worte, Govinda. Es gibt kein Ding, das Nirvana wäre; es gibt nur das Wort Nirvana."

Sprach Govinda: "Nicht nur ein Wort, Freund, ist Nirvana. Es ist ein Gedanke."

Siddhartha fuhr fort: "Ein Gedanke, es mag so sein. Ich muß dir gestehen, Lieber: ich unterscheide zwischen Gedanken und Worten nicht sehr. Offen gesagt, halte ich auch von Gedanken nicht viel. Ich halte von Dingen mehr. Hier auf diesem Fährboot zum Beispiel war ein Mann mein Vorgänger und Lehrer, ein heiliger Mann, der hat manche Jahre lang einfach an den Fluß geglaubt, sonst an nichts. Er hatte gemerkt, daß des Flusses Stimme zu ihm sprach, von ihr lernte er, sie erzog und lehrte ihn, der Fluß schien ihm ein Gott, viele Jahre lang wußte er nicht, daß jeder Wind, jede Wolke, jeder Vogel, jeder Käfer genau so göttlich ist und ebensoviel weiß und lehren kann wie der verehrte Fluß. Als dieser Heilige aber in die Wälder ging, da wußte er alles, wußte mehr als du und ich, ohne Lehrer, ohne Bücher, nur weil er an den Fluß geglaubt hatte."

Govinda sagte: "Aber ist das, was du 'Dinge' nennst, denn etwas Wirkliches, etwas Wesenhaftes? Ist das nicht nur Trug der Maja, nur Bild und Schein? Dein Stein, dein Baum, dein Fluß--sind sie denn Wirklichkeiten?"

"Auch dies," sprach Siddhartha, "bekümmert mich nicht sehr. Mögen die Dinge Schein sein oder nicht, auch ich bin alsdann ja Schein, und so sind sie stets meinesgleichen. Das ist es, was sie mir so lieb und verehrenswert macht: sie sind meinesgleichen. Darum kann ich sie lieben. Und dies ist nun eine Lehre, über welche du lachen wirst: die Liebe, o Govinda, scheint mir von allem die Hauptsache zu sein. Die Welt zu durchschauen, sie zu erklären, sie zu verachten, mag großer Denker Sache sein. Mir aber liegt einzig daran, die Welt lieben zu können, sie nicht zu verachten, sie und mich nicht zu hassen, sie und mich und alle Wesen mit Liebe und Bewunderung und Ehrfurcht betrachten zu können."

"Dies verstehe ich," sprach Govinda. "Aber eben dies hat er, der Erhabene, als Trug erkannt. Er gebietet Wohlwollen, Schonung, Mitleid, Duldung, nicht aber Liebe; er verbot uns, unser Herz in Liebe an Irdisches zu fesseln."

"Ich weiß es", sagte Siddhartha; sein Lächeln strahlte golden. "Ich weiß es, Govinda. Und siehe, da sind wir mitten im Dickicht der Meinungen drin, im Streit um Worte. Denn ich kann nicht leugnen, meine Worte von der Liebe stehen im Widerspruch, im scheinbaren Widerspruch zu Gotamas Worten. Eben darum mißtraue ich den Worten so sehr, denn ich weiß, dieser Widerspruch ist Täuschung. Ich weiß, daß ich mit Gotama einig bin. Wie sollte denn auch Er die Liebe nicht kennen, Er, der alles Menschensein in seiner Vergänglichkeit, in seiner Nichtigkeit erkannt hat, und dennoch die Menschen so sehr liebte, daß er ein langes, mühevolles Leben einzig darauf verwendet hat, ihnen zu helfen, sie zu lehren! Auch bei ihm, auch bei deinem großen Lehrer, ist

mir das Ding lieber als die Worte, sein Tun und Leben wichtiger als sein Reden, die Gebärde seiner Hand wichtiger als seine Meinungen. Nicht im Reden, nicht im Denken sehe ich seine Größe, nur im Tun, im Leben."

Lange schwiegen die beiden alten Männer. Dann sprach Govinda, indem er sich zum Abschied verneigte: "Ich danke dir, Siddhartha, daß du mir etwas von deinen Gedanken gesagt hast. Es sind zum Teil seltsame Gedanken, nicht alle sind mir sofort verständlich geworden. Dies möge sein, wie es wolle, ich danke dir, und ich wünsche dir ruhige Tage."

(Heimlich bei sich aber dachte er: Dieser Siddhartha ist ein wunderlicher Mensch, wunderliche Gedanken spricht er aus, närrisch klingt seine Lehre. Anders klingt des Erhabenen reine Lehre, klarer, reiner, verständlicher, nichts Seltsames, Närrisches oder Lächerliches ist in ihr enthalten. Aber anders als seine Gedanken scheinen mir Siddharthas Hände und Füße, seine Augen, seine Stirn, sein Atmen, sein Lächeln, sein Gruß, sein Gang. Nie mehr, seit unser erhabener Gotama in Nirvana einging, nie mehr habe ich einen Menschen angetroffen, von dem ich fühlte: dies ist ein Heiliger. Einzig ihn, diesen Siddhartha, habe ich so gefunden. Mag seine Lehre seltsam sein, mögen seine Worte närrisch klingen, sein Blick und seine Hand, seine Haut und sein Haar, alles an ihm strahlt eine Reinheit, strahlt eine Ruhe, strahlt eine Heiterkeit und Milde und Heiligkeit aus, welche ich an keinem anderen Menschen seit dem letzten Tode unseres erhabenen Lehrers gesehen habe.)

Indem Govinda also dachte, und ein Widerstreit in seinem Herzen war, neigte er sich nochmals zu Siddhartha, von Liebe gezogen. Tief verneigte er sich vor dem ruhig Sitzenden.

"Siddhartha", sprach er, "wir sind alte Männer geworden. Schwerlich wird einer von uns den andern in dieser Gestalt wiedersehen. Ich sehe, Geliebter, daß du den Frieden gefunden hast. Ich bekenne, ihn nicht gefunden zu haben. Sage mir, Verehrter, noch ein Wort, gib mir etwas mit, das ich fassen, das ich verstehen kann! Gib mir etwas mit auf meinen Weg. Er ist oft beschwerlich, mein Weg, oft finster, Siddhartha."

Siddhartha schwieg und blickte ihn mit dem immer gleichen, stillen Lächeln an. Starr blickte ihm Govinda ins Gesicht, mit Angst, mit Sehnsucht, Leid und ewiges Suchen stand in seinem Blick geschrieben, ewiges Nichtfinden.

Siddhartha sah es, und lächelte.

"Neige dich zu mir!" flüsterte er leise in Govindas Ohr. "Neige dich zu mir her! So, noch näher! Ganz nahe! Küsse mich auf die Stirn, Govinda!"

Während aber Govinda verwundert, und dennoch von großer Liebe und Ahnung gezogen, seinen Worten gehorchte, sich nahe zu ihm neigte und seine Stirn mit den Lippen berührte, geschah ihm etwas Wunderbares. Während seine Gedanken noch bei Siddharthas wunderlichen Worten verweilten, während er sich noch vergeblich und mit Widerstreben bemühte, sich die Zeit hinwegzudenken, sich Nirvana und Sansara als Eines vorzustellen, während sogar eine gewisse Verachtung für die Worte des Freundes in ihm mit einer ungeheuren Liebe und Ehrfurcht stritt, geschah ihm dieses:

Er sah seines Freundes Siddhartha Gesicht nicht mehr, er sah statt dessen andre Gesichter, viele, eine lange Reihe, einen strömenden Fluß von Gesichtern, von hunderten, von tausenden, welche alle kamen und vergingen, und doch alle zugleich dazusein schienen, welche alle sich beständig veränderten und erneuerten, und welche doch alle Siddhartha waren. Er sah das Gesicht eines Fisches, eines Karpfens, mit unendlich schmerzvoll geöffnetem Maule, eines sterbenden Fisches, mit brechenden Augen--er sah das Gesicht eines neugeborenen Kindes, rot und voll Falten, zum Weinen verzogen--er sah das Gesicht eines Mörders, sah ihn ein Messer in den Leib eines Menschen stechen--er sah, zur selben Sekunde, diesen Verbrecher gefesselt knien und sein Haupt vom Henker mit einem Schwertschlag abgeschlagen werden--er sah die Körper von Männern und Frauen nackt in Stellungen und Kämpfen rasender Liebe--er sah Leichen ausgestreckt, still, kalt, leer--er sah Tierköpfe, von Ebern, von Krokodilen, von Elefanten, von Stieren, von Vögeln--er sah Götter, sah Krischna, sah Agni--er sah alle diese Gestalten und Gesichter in tausend Beziehungen zueinander, jede der andern helfend, sie liebend, sie hassend, sie vernichtend, sie neu gebärend, jede war ein Sterbenwollen, ein leidenschaftlich schmerzliches Bekenntnis der Vergänglichkeit, und keine starb doch, jede verwandelte sich nur, wurde stets neu geboren, bekam stets ein neues Gesicht, ohne daß doch zwischen einem und dem anderen Gesicht Zeit gelegen wäre--und alle diese Gestalten und Gesichter ruhten, flossen, erzeugten sich, schwammen dahin und strömten ineinander, und über alle war beständig etwas Dünnes, Wesenloses, dennoch Seiendes, wie ein dünnes Glas oder Eis gezogen, wie eine durchsichtige Haut, eine Schale oder Form oder Maske von Wasser, und diese Maske lächelte, und diese Maske war Siddharthas lächelndes Gesicht, das er, Govinda, in eben diesem selben Augenblick mit den Lippen berührte. Und, so sah Govinda, dies Lächeln der Maske, dies Lächeln der Einheit über den strömenden Gestaltungen, dies Lächeln der Gleichzeitigkeit über den

tausend Geburten und Toten, dies Lächeln Siddharthas war genau dasselbe, war genau das gleiche, stille, feine, undurchdringliche, vielleicht gütige, vielleicht spöttische, weise, tausendfältige Lächeln Gotamas, des Buddha, wie er selbst es hundertmal mit Ehrfurcht gesehen hatte. So, das wußte Govinda, lächelten die Vollendeten.

Nicht mehr wissend ob es Zeit gebe, ob diese Schauung eine Sekunde oder hundert Jahre gewährt habe, nicht mehr wissend, ob es einen Siddhartha, ob es einen Gotama, ob es Ich und Du gebe, im Innersten wie von einem göttlichen Pfeile verwundet, dessen Verwundung süß schmeckt, im Innersten verzaubert und aufgelöst, stand Govinda noch eine kleine Weile, über Siddharthas stilles Gesicht gebeugt, das er soeben geküßt hatte, das soeben Schauplatz aller Gestaltungen, alles Werdens, alles Seins gewesen war. Das Antlitz war unverändert, nachdem unter seiner Oberfläche die Tiefe der Tausendfältigkeit sich wieder geschlossen hatte, er lächelte still, lächelte leise und sanft, vielleicht sehr gütig, vielleicht sehr spöttisch, genau, wie er gelächelt hatte, der Erhabene.

Tief verneigte sich Govinda, Tränen liefen, von welchen er nichts wußte, über sein altes Gesicht, wie ein Feuer brannte das Gefühl der innigsten Liebe, der demütigsten Verehrung in seinem Herzen. Tief verneigte er sich, bis zur Erde, vor dem regungslos Sitzenden, dessen Lächeln ihn an alles erinnerte, was er in seinem Leben jemals geliebt hatte, was jemals in seinem Leben ihm wert und heilig gewesen war.

Siddhartha

An Indian Tale

by Herman Hesse

Contents

FIRST PART THE SON OF THE BRAHMAN WITH THE SAMANAS GOTAMA AWAKENING

SECOND PART KAMALA WITH THE CHILDLIKE PEOPLE SANSARA BY THE RIVER THE FERRYMAN THE SON OM GOVINDA

FIRST PART

To Romain Rolland, my dear friend

THE SON OF THE BRAHMAN

In the shade of the house, in the sunshine of the riverbank near the boats, in the shade of the Sal-wood forest, in the shade of the fig tree is where Siddhartha grew up, the handsome son of the Brahman, the young falcon, together with his friend Govinda, son of a Brahman. The sun tanned his light shoulders by the banks of the river when bathing, performing the sacred ablutions, the sacred offerings. In the mango grove, shade poured into his black eyes, when playing as a boy, when his mother sang, when the sacred offerings were made, when his father, the scholar, taught him, when the wise men talked. For a long time, Siddhartha had been partaking in the discussions of the wise men, practising debate with Govinda, practising with Govinda the art of reflection, the service of meditation. He already knew how to speak the Om silently, the word of words, to speak it silently into himself while inhaling, to speak it silently out of himself while exhaling, with all the concentration of his soul, the forehead surrounded by the glow of the clear-thinking spirit. He already knew to feel Atman in the depths of his being, indestructible, one with the universe.

Joy leapt in his father’s heart for his son who was quick to learn, thirsty for knowledge; he saw him growing up to become great wise man and priest, a prince among the Brahmans.

Bliss leapt in his mother’s breast when she saw him, when she saw him walking, when she saw him sit down and get up, Siddhartha, strong, handsome, he who was walking on slender legs, greeting her with perfect respect.

Love touched the hearts of the Brahmans’ young daughters when Siddhartha walked through the lanes of the town with the luminous forehead, with the eye of a king, with his slim hips.

But more than all the others he was loved by Govinda, his friend, the son of a Brahman. He loved Siddhartha’s eye and sweet voice, he loved his walk and the perfect decency of his movements, he loved everything Siddhartha did and said and what he loved most was his spirit, his transcendent, fiery thoughts, his ardent will, his high calling. Govinda knew: he would not become a common Brahman, not a lazy official in charge of offerings; not a greedy merchant with magic spells; not a vain, vacuous speaker; not a mean, deceitful priest; and also not a decent, stupid sheep in the herd of the many. No, and he, Govinda, as well did not want to become one of those, not one of those tens of thousands of Brahmans. He wanted to follow Siddhartha, the beloved, the splendid. And in days to come, when Siddhartha would become a god, when he would join the glorious, then Govinda wanted to follow him as his friend, his companion, his servant, his spear-carrier, his shadow.

Siddhartha was thus loved by everyone. He was a source of joy for everybody, he was a delight for them all.

But he, Siddhartha, was not a source of joy for himself, he found no delight in himself. Walking the rosy paths of the fig tree garden, sitting in the bluish shade of the grove of contemplation, washing his limbs daily in the bath of repentance, sacrificing in the dim shade of the mango forest, his gestures of perfect decency, everyone's love and joy, he still lacked all joy in his heart. Dreams and restless thoughts came into his mind, flowing from the water of the river, sparkling from the stars of the night, melting from the beams of the sun, dreams came to him and a restlessness of the soul, fuming from the sacrifices, breathing forth from the verses of the Rig-Veda, being infused into him, drop by drop, from the teachings of the old Brahmans.

Siddhartha had started to nurse discontent in himself, he had started to feel that the love of his father and the love of his mother, and also the love of his friend, Govinda, would not bring him joy for ever and ever, would not nurse him, feed him, satisfy him. He had started to suspect that his venerable father and his other teachers, that the wise Brahmans had already revealed to him the most and best of their wisdom, that they had already filled his expecting vessel with their richness, and the vessel was not full, the spirit was not content, the soul was not calm, the heart was not satisfied. The ablutions were good, but they were water, they did not wash off the sin, they did not heal the spirit's thirst, they did not relieve the fear in his heart. The sacrifices and the invocation of the gods were excellent—but was that all? Did the sacrifices give a happy fortune? And what about the gods? Was it really Prajapati who had created the world? Was it not the Atman, He, the only one, the singular one? Were the gods not creations, created like me and you, subject to time, mortal? Was it therefore good, was it right, was it meaningful and the highest occupation to make offerings to the gods? For whom else were offerings to be made, who else was to be worshipped but Him, the only one, the Atman? And where was Atman to be found, where did He reside, where did his eternal heart beat, where else but in one's own self, in its innermost part, in its indestructible part, which everyone had in himself? But where, where was this self, this innermost part, this ultimate part? It was not flesh and bone, it was neither thought nor consciousness, thus the wisest ones taught. So, where, where was it? To reach this place, the self, myself, the Atman, there was another way, which was worthwhile looking for? Alas, and nobody showed this way, nobody knew it, not the father, and not the teachers and wise men, not the holy sacrificial songs! They knew everything, the Brahmans and their holy books, they knew everything, they had taken care of everything and of more than everything, the creation of the world, the origin of speech, of food, of inhaling, of exhaling, the arrangement of the senses, the acts of the gods, they knew infinitely much—but was it valuable to know all of this, not knowing that one and only thing, the most important thing, the solely important thing?

Surely, many verses of the holy books, particularly in the Upanishades of Samaveda, spoke of this innermost and ultimate thing, wonderful verses. "Your soul is the whole world", was written there, and it was written that man in his sleep, in his deep sleep, would meet with his innermost part and would reside in the Atman. Marvellous wisdom was in these verses, all knowledge of the wisest ones had been collected here in magic words, pure as honey collected by bees. No, not to be looked down upon was the tremendous amount of enlightenment which lay here collected and preserved by innumerable generations of wise Brahmans.—But where were the Brahmans, where the priests, where the wise men or penitents, who had succeeded in not just knowing this deepest of all knowledge but also to live it? Where was the knowledgeable one who wove his spell to bring his familiarity with the Atman out of the sleep into the state of being awake, into the life, into every step of the way, into word and deed? Siddhartha knew many venerable Brahmans, chiefly his father, the pure one, the scholar, the most venerable one. His father was to be admired, quiet and noble were his manners, pure his life, wise his words, delicate and noble thoughts lived behind its brow—but even he, who knew so much, did he live in blissfulness, did he have peace, was he not also just a searching man, a thirsty man? Did he not, again and again, have to drink from holy sources, as a thirsty man, from the offerings, from the books, from the disputes of the Brahmans? Why did he, the irreproachable one, have to wash off sins every day, strive for a cleansing every day, over and over every day? Was not Atman in him, did not the pristine source spring from his heart? It had to be found, the pristine source in one's own self, it had to be possessed! Everything else was searching, was a detour, was getting lost.

Thus were Siddhartha's thoughts, this was his thirst, this was his suffering.

Often he spoke to himself from a Chandogya-Upanishad the words: "Truly, the name of the Brahman is satyam—verily, he who knows such a thing, will enter the heavenly world every day." Often, it seemed near, the heavenly world, but never he had reached it completely, never he had quenched the ultimate thirst. And among all the wise and wisest men, he knew and whose instructions he had received, among all of them there was no one, who had reached it completely, the heavenly world, who had quenched it completely, the eternal thirst.

"Govinda," Siddhartha spoke to his friend, "Govinda, my dear, come with me under the Banyan tree, let's practise meditation."

They went to the Banyan tree, they sat down, Siddhartha right here, Govinda twenty paces away. While putting himself down, ready to speak the Om, Siddhartha repeated murmuring the verse:

Om is the bow, the arrow is soul, The Brahman is the arrow's target, That one should incessantly hit.

After the usual time of the exercise in meditation had passed, Govinda rose. The evening had come, it was time to perform the evening's ablution. He called Siddhartha's name. Siddhartha did not answer. Siddhartha sat there lost in thought, his eyes were rigidly focused towards a very distant target, the tip of his tongue was protruding a little between the teeth, he seemed not to breathe. Thus sat he, wrapped up in contemplation, thinking Om, his soul sent after the Brahman as an arrow.

Once, Samanas had travelled through Siddhartha's town, ascetics on a pilgrimage, three skinny, withered men, neither old nor young, with dusty and bloody shoulders, almost naked, scorched by the sun, surrounded by loneliness, strangers and enemies to the world, strangers and lank jackals in the realm of humans. Behind them blew a hot scent of quiet passion, of destructive service, of merciless self-denial.

In the evening, after the hour of contemplation, Siddhartha spoke to Govinda: "Early tomorrow morning, my friend, Siddhartha will go to the Samanas. He will become a Samana."

Govinda turned pale, when he heard these words and read the decision in the motionless face of his friend, unstoppable like the arrow shot from the bow. Soon and with the first glance, Govinda realized: Now it is beginning, now Siddhartha is taking his own way, now his fate is beginning to sprout, and with his, my own. And he turned pale like a dry banana-skin.

"O Siddhartha," he exclaimed, "will your father permit you to do that?"

Siddhartha looked over as if he was just waking up. Arrow-fast he read in Govinda's soul, read the fear, read the submission.

"O Govinda," he spoke quietly, "let's not waste words. Tomorrow, at daybreak I will begin the life of the Samanas. Speak no more of it."

Siddhartha entered the chamber, where his father was sitting on a mat of bast, and stepped behind his father and remained standing there, until his father felt that someone was standing behind him. Quoth the Brahman: "Is that you, Siddhartha? Then say what you came to say."

Quoth Siddhartha: "With your permission, my father. I came to tell you that it is my longing to leave your house tomorrow and go to the ascetics. My desire is to become a Samana. May my father not oppose this."

The Brahman fell silent, and remained silent for so long that the stars in the small window wandered and changed their relative positions, 'ere the silence was broken. Silent and motionless stood the son with his arms folded, silent and motionless sat the father on the mat, and the stars traced their paths in the sky. Then spoke the father: "Not proper it is for a Brahman to speak harsh and angry words. But indignation is in my heart. I wish not to hear this request for a second time from your mouth."

Slowly, the Brahman rose; Siddhartha stood silently, his arms folded.

"What are you waiting for?" asked the father.

Quoth Siddhartha: "You know what."

Indignant, the father left the chamber; indignant, he went to his bed and lay down.

After an hour, since no sleep had come over his eyes, the Brahman stood up, paced to and fro, and left the house. Through the small window of the chamber he looked back inside, and there he saw Siddhartha standing, his arms folded, not moving from his spot. Pale shimmered his bright robe. With anxiety in his heart, the father returned to his bed.

After another hour, since no sleep had come over his eyes, the Brahman stood up again, paced to and fro, walked out of the house and saw that the moon had risen. Through the window of the chamber he looked back inside; there stood Siddhartha, not moving from his spot, his arms folded, moonlight reflecting from his bare shins. With worry in his heart, the father went back to bed.

And he came back after an hour, he came back after two hours, looked through the small window, saw Siddhartha standing, in the moon light, by the light of the stars, in the darkness. And he came back hour after hour, silently, he looked into the chamber, saw him standing in the same place, filled his heart with anger, filled his heart with unrest, filled his heart with anguish, filled it with

sadness.

And in the night's last hour, before the day began, he returned, stepped into the room, saw the young man standing there, who seemed tall and like a stranger to him.

"Siddhartha," he spoke, "what are you waiting for?"

"You know what."

"Will you always stand that way and wait, until it'll becomes morning, noon, and evening?"

"I will stand and wait."

"You will become tired, Siddhartha."

"I will become tired."

"You will fall asleep, Siddhartha."

"I will not fall asleep."

"You will die, Siddhartha."

"I will die."

"And would you rather die, than obey your father?"

"Siddhartha has always obeyed his father."

"So will you abandon your plan?"

"Siddhartha will do what his father will tell him to do."

The first light of day shone into the room. The Brahman saw that Siddhartha was trembling softly in his knees. In Siddhartha's face he saw no trembling, his eyes were fixed on a distant spot. Then his father realized that even now Siddhartha no longer dwelt with him in his home, that he had already left him.

The Father touched Siddhartha's shoulder.

"You will," he spoke, "go into the forest and be a Samana. When you'll have found blissfulness in the forest, then come back and teach me to be blissful. If you'll find disappointment, then return and let us once again make offerings to the gods together. Go now and kiss your mother, tell her where you are going to. But for me it is time to go to the river and to perform the first ablution."

He took his hand from the shoulder of his son and went outside. Siddhartha wavered to the side, as he tried to walk. He put his limbs back under control, bowed to his father, and went to his mother to do as his father had said.

As he slowly left on stiff legs in the first light of day the still quiet town, a shadow rose near the last hut, who had crouched there, and joined the pilgrim—Govinda.

"You have come," said Siddhartha and smiled.

"I have come," said Govinda.

WITH THE SAMANAS

In the evening of this day they caught up with the ascetics, the skinny Samanas, and offered them their companionship and—obedience. They were accepted.

Siddhartha gave his garments to a poor Brahman in the street. He wore nothing more than the loincloth and the earth-coloured, unsown cloak. He ate only once a day, and never something cooked. He fasted for fifteen days. He fasted for twenty-eight days. The flesh waned from his thighs and cheeks. Feverish dreams flickered from his enlarged eyes, long nails grew slowly on his parched fingers and a dry, shaggy beard grew on his chin. His glance turned to ice when he encountered women; his mouth

twitched with contempt, when he walked through a city of nicely dressed people. He saw merchants trading, princes hunting, mourners wailing for their dead, whores offering themselves, physicians trying to help the sick, priests determining the most suitable day for seeding, lovers loving, mothers nursing their children—and all of this was not worthy of one look from his eye, it all lied, it all stank, it all stank of lies, it all pretended to be meaningful and joyful and beautiful, and it all was just concealed putrefaction. The world tasted bitter. Life was torture.

A goal stood before Siddhartha, a single goal: to become empty, empty of thirst, empty of wishing, empty of dreams, empty of joy and sorrow. Dead to himself, not to be a self any more, to find tranquility with an emptied heart, to be open to miracles in unselfish thoughts, that was his goal. Once all of my self was overcome and had died, once every desire and every urge was silent in the heart, then the ultimate part of me had to awake, the innermost of my being, which is no longer my self, the great secret.

Silently, Siddhartha exposed himself to burning rays of the sun directly above, glowing with pain, glowing with thirst, and stood there, until he neither felt any pain nor thirst any more. Silently, he stood there in the rainy season, from his hair the water was dripping over freezing shoulders, over freezing hips and legs, and the penitent stood there, until he could not feel the cold in his shoulders and legs any more, until they were silent, until they were quiet. Silently, he cowered in the thorny bushes, blood dripped from the burning skin, from festering wounds dripped pus, and Siddhartha stayed rigidly, stayed motionless, until no blood flowed any more, until nothing stung any more, until nothing burned any more.

Siddhartha sat upright and learned to breathe sparingly, learned to get along with only few breathes, learned to stop breathing. He learned, beginning with the breath, to calm the beat of his heart, learned to reduce the beats of his heart, until they were only a few and almost none.

Instructed by the oldest of the Samanas, Siddhartha practised self-denial, practised meditation, according to a new Samana rules. A heron flew over the bamboo forest—and Siddhartha accepted the heron into his soul, flew over forest and mountains, was a heron, ate fish, felt the pangs of a heron's hunger, spoke the heron's croak, died a heron's death. A dead jackal was lying on the sandy bank, and Siddhartha's soul slipped inside the body, was the dead jackal, lay on the banks, got bloated, stank, decayed, was dismembered by hyaenas, was skinned by vultures, turned into a skeleton, turned to dust, was blown across the fields. And Siddhartha's soul returned, had died, had decayed, was scattered as dust, had tasted the gloomy intoxication of the cycle, awaited in new thirst like a hunter in the gap, where he could escape from the cycle, where the end of the causes, where an eternity without suffering began. He killed his senses, he killed his memory, he slipped out of his self into thousands of other forms, was an animal, was carrion, was stone, was wood, was water, and awoke every time to find his old self again, sun shone or moon, was his self again, turned round in the cycle, felt thirst, overcame the thirst, felt new thirst.

Siddhartha learned a lot when he was with the Samanas, many ways leading away from the self he learned to go. He went the way of self-denial by means of pain, through voluntarily suffering and overcoming pain, hunger, thirst, tiredness. He went the way of self-denial by means of meditation, through imagining the mind to be void of all conceptions. These and other ways he learned to go, a thousand times he left his self, for hours and days he remained in the non-self. But though the ways led away from the self, their end nevertheless always led back to the self. Though Siddhartha fled from the self a thousand times, stayed in nothingness, stayed in the animal, in the stone, the return was inevitable, inescapable was the hour, when he found himself back in the sunshine or in the moonlight, in the shade or in the rain, and was once again his self and Siddhartha, and again felt the agony of the cycle which had been forced upon him.

By his side lived Govinda, his shadow, walked the same paths, undertook the same efforts. They rarely spoke to one another, than the service and the exercises required. Occasionally the two of them went through the villages, to beg for food for themselves and their teachers.

"How do you think, Govinda," Siddhartha spoke one day while begging this way, "how do you think did we progress? Did we reach any goals?"

Govinda answered: "We have learned, and we'll continue learning. You'll be a great Samana, Siddhartha. Quickly, you've learned every exercise, often the old Samanas have admired you. One day, you'll be a holy man, oh Siddhartha."

Quoth Siddhartha: "I can't help but feel that it is not like this, my friend. What I've learned, being among the Samanas, up to this day, this, oh Govinda, I could have learned more quickly and by simpler means. In every tavern of that part of a town where the whorehouses are, my friend, among carters and gamblers I could have learned it."

Quoth Govinda: “Siddhartha is putting me on. How could you have learned meditation, holding your breath, insensitivity against hunger and pain there among these wretched people?”

And Siddhartha said quietly, as if he was talking to himself: “What is meditation? What is leaving one’s body? What is fasting? What is holding one’s breath? It is fleeing from the self, it is a short escape of the agony of being a self, it is a short numbing of the senses against the pain and the pointlessness of life. The same escape, the same short numbing is what the driver of an ox-cart finds in the inn, drinking a few bowls of rice-wine or fermented coconut-milk. Then he won’t feel his self any more, then he won’t feel the pains of life any more, then he finds a short numbing of the senses. When he falls asleep over his bowl of rice-wine, he’ll find the same what Siddhartha and Govinda find when they escape their bodies through long exercises, staying in the non-self. This is how it is, oh Govinda.”

Quoth Govinda: “You say so, oh friend, and yet you know that Siddhartha is no driver of an ox-cart and a Samana is no drunkard. It’s true that a drinker numbs his senses, it’s true that he briefly escapes and rests, but he’ll return from the delusion, finds everything to be unchanged, has not become wiser, has gathered no enlightenment,—has not risen several steps.”

And Siddhartha spoke with a smile: “I do not know, I’ve never been a drunkard. But that I, Siddhartha, find only a short numbing of the senses in my exercises and meditations and that I am just as far removed from wisdom, from salvation, as a child in the mother’s womb, this I know, oh Govinda, this I know.”

And once again, another time, when Siddhartha left the forest together with Govinda, to beg for some food in the village for their brothers and teachers, Siddhartha began to speak and said: “What now, oh Govinda, might we be on the right path? Might we get closer to enlightenment? Might we get closer to salvation? Or do we perhaps live in a circle—we, who have thought we were escaping the cycle?”

Quoth Govinda: “We have learned a lot, Siddhartha, there is still much to learn. We are not going around in circles, we are moving up, the circle is a spiral, we have already ascended many a level.”

Siddhartha answered: “How old, would you think, is our oldest Samana, our venerable teacher?”

Quoth Govinda: “Our oldest one might be about sixty years of age.”

And Siddhartha: “He has lived for sixty years and has not reached the nirvana. He’ll turn seventy and eighty, and you and me, we will grow just as old and will do our exercises, and will fast, and will meditate. But we will not reach the nirvana, he won’t and we won’t. Oh Govinda, I believe out of all the Samanas out there, perhaps not a single one, not a single one, will reach the nirvana. We find comfort, we find numbness, we learn feats, to deceive others. But the most important thing, the path of paths, we will not find.”

“If you only,” spoke Govinda, “wouldn’t speak such terrible words, Siddhartha! How could it be that among so many learned men, among so many Brahmans, among so many austere and venerable Samanas, among so many who are searching, so many who are eagerly trying, so many holy men, no one will find the path of paths?”

But Siddhartha said in a voice which contained just as much sadness as mockery, with a quiet, a slightly sad, a slightly mocking voice: “Soon, Govinda, your friend will leave the path of the Samanas, he has walked along your side for so long. I’m suffering of thirst, oh Govinda, and on this long path of a Samana, my thirst has remained as strong as ever. I always thirsted for knowledge, I have always been full of questions. I have asked the Brahmans, year after year, and I have asked the holy Vedas, year after year, and I have asked the devote Samanas, year after year. Perhaps, oh Govinda, it had been just as well, had been just as smart and just as profitable, if I had asked the hornbill-bird or the chimpanzee. It took me a long time and am not finished learning this yet, oh Govinda: that there is nothing to be learned! There is indeed no such thing, so I believe, as what we refer to as ‘learning’. There is, oh my friend, just one knowledge, this is everywhere, this is Atman, this is within me and within you and within every creature. And so I’m starting to believe that this knowledge has no worser enemy than the desire to know it, than learning.”

At this, Govinda stopped on the path, rose his hands, and spoke: “If you, Siddhartha, only would not bother your friend with this kind of talk! Truly, you words stir up fear in my heart. And just consider: what would become of the sanctity of prayer, what of the venerability of the Brahmans’ caste, what of the holiness of the Samanas, if it was as you say, if there was no learning?! What, oh Siddhartha, what would then become of all of this what is holy, what is precious, what is venerable on earth?!”

And Govinda mumbled a verse to himself, a verse from an Upanishad:

He who ponderingly, of a purified spirit, loses himself in the meditation of Atman, unexpressable by words is his blissfulness of his heart.

But Siddhartha remained silent. He thought about the words which Govinda had said to him and thought the words through to their end.

Yes, he thought, standing there with his head low, what would remain of all that which seemed to us to be holy? What remains? What can stand the test? And he shook his head.

At one time, when the two young men had lived among the Samanas for about three years and had shared their exercises, some news, a rumour, a myth reached them after being retold many times: A man had appeared, Gotama by name, the exalted one, the Buddha, he had overcome the suffering of the world in himself and had halted the cycle of rebirths. He was said to wander through the land, teaching, surrounded by disciples, without possession, without home, without a wife, in the yellow cloak of an ascetic, but with a cheerful brow, a man of bliss, and Brahmans and princes would bow down before him and would become his students.

This myth, this rumour, this legend resounded, its fragrance rose up, here and there; in the towns, the Brahmans spoke of it and in the forest, the Samanas; again and again, the name of Gotama, the Buddha reached the ears of the young men, with good and with bad talk, with praise and with defamation.

It was as if the plague had broken out in a country and news had been spreading around that in one or another place there was a man, a wise man, a knowledgeable one, whose word and breath was enough to heal everyone who had been infected with the pestilence, and as such news would go through the land and everyone would talk about it, many would believe, many would doubt, but many would get on their way as soon as possible, to seek the wise man, the helper, just like this myth ran through the land, that fragrant myth of Gotama, the Buddha, the wise man of the family of Sakya. He possessed, so the believers said, the highest enlightenment, he remembered his previous lives, he had reached the nirvana and never returned into the cycle, was never again submerged in the murky river of physical forms. Many wonderful and unbelievable things were reported of him, he had performed miracles, had overcome the devil, had spoken to the gods. But his enemies and disbelievers said, this Gotama was a vain seducer, who spent his days in luxury, scorned the offerings, was without learning, and knew neither exercises nor self-castigation.

The myth of Buddha sounded sweet. The scent of magic flowed from these reports. After all, the world was sick, life was hard to bear—and behold, here a source seemed to spring forth, here a messenger seemed to call out, comforting, mild, full of noble promises. Everywhere where the rumour of Buddha was heard, everywhere in the lands of India, the young men listened up, felt a longing, felt hope, and among the Brahmans' sons of the towns and villages every pilgrim and stranger was welcome, when he brought news of him, the exalted one, the Sakyamuni.

The myth had also reached the Samanas in the forest, and also Siddhartha, and also Govinda, slowly, drop by drop, every drop laden with hope, every drop laden with doubt. They rarely talked about it, because the oldest one of the Samanas did not like this myth. He had heard that this alleged Buddha used to be an ascetic before and had lived in the forest, but had then turned back to luxury and worldly pleasures, and he had no high opinion of this Gotama.

"Oh Siddhartha," Govinda spoke one day to his friend. "Today, I was in the village, and a Brahman invited me into his house, and in his house, there was the son of a Brahman from Magadha, who has seen the Buddha with his own eyes and has heard him teach. Verily, this made my chest ache when I breathed, and thought to myself: If only I would too, if only we both would too, Siddhartha and me, live to see the hour when we will hear the teachings from the mouth of this perfected man! Speak, friend, wouldn't we want to go there too and listen to the teachings from the Buddha's mouth?"

Quoth Siddhartha: "Always, oh Govinda, I had thought, Govinda would stay with the Samanas, always I had believed his goal was to live to be sixty and seventy years of age and to keep on practising those feats and exercises, which are becoming a Samana. But behold, I had not known Govinda well enough, I knew little of his heart. So now you, my faithful friend, want to take a new path and go there, where the Buddha spreads his teachings."

Quoth Govinda: "You're mocking me. Mock me if you like, Siddhartha! But have you not also developed a desire, an eagerness, to hear these teachings? And have you not at one time said to me, you would not walk the path of the Samanas for much longer?"

At this, Siddhartha laughed in his very own manner, in which his voice assumed a touch of sadness and a touch of mockery, and said: "Well, Govinda, you've spoken well, you've remembered correctly. If you only remembered the other thing as well, you've

heard from me, which is that I have grown distrustful and tired against teachings and learning, and that my faith in words, which are brought to us by teachers, is small. But let's do it, my dear, I am willing to listen to these teachings—though in my heart I believe that we've already tasted the best fruit of these teachings."

Quoth Govinda: "Your willingness delights my heart. But tell me, how should this be possible? How should the Gotama's teachings, even before we have heard them, have already revealed their best fruit to us?"

Quoth Siddhartha: "Let us eat this fruit and wait for the rest, oh Govinda! But this fruit, which we already now received thanks to the Gotama, consisted in him calling us away from the Samanas! Whether he has also other and better things to give us, oh friend, let us await with calm hearts."

On this very same day, Siddhartha informed the oldest one of the Samanas of his decision, that he wanted to leave him. He informed the oldest one with all the courtesy and modesty becoming to a younger one and a student. But the Samana became angry, because the two young men wanted to leave him, and talked loudly and used crude swearwords.

Govinda was startled and became embarrassed. But Siddhartha put his mouth close to Govinda's ear and whispered to him: "Now, I want to show the old man that I've learned something from him."

Positioning himself closely in front of the Samana, with a concentrated soul, he captured the old man's glance with his glances, deprived him of his power, made him mute, took away his free will, subdued him under his own will, commanded him, to do silently, whatever he demanded him to do. The old man became mute, his eyes became motionless, his will was paralysed, his arms were hanging down; without power, he had fallen victim to Siddhartha's spell. But Siddhartha's thoughts brought the Samana under their control, he had to carry out, what they commanded. And thus, the old man made several bows, performed gestures of blessing, spoke stammeringly a godly wish for a good journey. And the young men returned the bows with thanks, returned the wish, went on their way with salutations.

On the way, Govinda said: "Oh Siddhartha, you have learned more from the Samanas than I knew. It is hard, it is very hard to cast a spell on an old Samana. Truly, if you had stayed there, you would soon have learned to walk on water."

"I do not seek to walk on water," said Siddhartha. "Let old Samanas be content with such feats!"

GOTAMA

In the town of Savathi, every child knew the name of the exalted Buddha, and every house was prepared to fill the alms-dish of Gotama's disciples, the silently begging ones. Near the town was Gotama's favourite place to stay, the grove of Jetavana, which the rich merchant Anathapindika, an obedient worshipper of the exalted one, had given him and his people for a gift.

All tales and answers, which the two young ascetics had received in their search for Gotama's abode, had pointed them towards this area. And arriving at Savathi, in the very first house, before the door of which they stopped to beg, food has been offered to them, and they accepted the food, and Siddhartha asked the woman, who handed them the food:

"We would like to know, oh charitable one, where the Buddha dwells, the most venerable one, for we are two Samanas from the forest and have come, to see him, the perfected one, and to hear the teachings from his mouth."

Quoth the woman: "Here, you have truly come to the right place, you Samanas from the forest. You should know, in Jetavana, in the garden of Anathapindika is where the exalted one dwells. There you pilgrims shall spend the night, for there is enough space for the innumerable, who flock here, to hear the teachings from his mouth."

This made Govinda happy, and full of joy he exclaimed: "Well so, thus we have reached our destination, and our path has come to an end! But tell us, oh mother of the pilgrims, do you know him, the Buddha, have you seen him with your own eyes?"

Quoth the woman: "Many times I have seen him, the exalted one. On many days, I have seen him, walking through the alleys in silence, wearing his yellow cloak, presenting his alms-dish in silence at the doors of the houses, leaving with a filled dish."

Delightedly, Govinda listened and wanted to ask and hear much more. But Siddhartha urged him to walk on. They thanked and left and hardly had to ask for directions, for rather many pilgrims and monks as well from Gotama's community were on their way to the Jetavana. And since they reached it at night, there were constant arrivals, shouts, and talk of those who sought shelter and got it.

The two Samanas, accustomed to life in the forest, found quickly and without making any noise a place to stay and rested there until the morning.

At sunrise, they saw with astonishment what a large crowd of believers and curious people had spent the night here. On all paths of the marvellous grove, monks walked in yellow robes, under the trees they sat here and there, in deep contemplation—or in a conversation about spiritual matters, the shady gardens looked like a city, full of people, bustling like bees. The majority of the monks went out with their alms-dish, to collect food in town for their lunch, the only meal of the day. The Buddha himself, the enlightened one, was also in the habit of taking this walk to beg in the morning.

Siddhartha saw him, and he instantly recognised him, as if a god had pointed him out to him. He saw him, a simple man in a yellow robe, bearing the alms-dish in his hand, walking silently.

“Look here!” Siddhartha said quietly to Govinda. “This one is the Buddha.”

Attentively, Govinda looked at the monk in the yellow robe, who seemed to be in no way different from the hundreds of other monks. And soon, Govinda also realized: This is the one. And they followed him and observed him.

The Buddha went on his way, modestly and deep in his thoughts, his calm face was neither happy nor sad, it seemed to smile quietly and inwardly. With a hidden smile, quiet, calm, somewhat resembling a healthy child, the Buddha walked, wore the robe and placed his feet just as all of his monks did, according to a precise rule. But his face and his walk, his quietly lowered glance, his quietly dangling hand and even every finger of his quietly dangling hand expressed peace, expressed perfection, did not search, did not imitate, breathed softly in an unwhithering calm, in an unwhithering light, an untouchable peace.

Thus Gotama walked towards the town, to collect alms, and the two Samanas recognised him solely by the perfection of his calm, by the quietness of his appearance, in which there was no searching, no desire, no imitation, no effort to be seen, only light and peace.

“Today, we’ll hear the teachings from his mouth,” said Govinda.

Siddhartha did not answer. He felt little curiosity for the teachings, he did not believe that they would teach him anything new, but he had, just as Govinda had, heard the contents of this Buddha’s teachings again and again, though these reports only represented second- or third-hand information. But attentively he looked at Gotama’s head, his shoulders, his feet, his quietly dangling hand, and it seemed to him as if every joint of every finger of this hand was of these teachings, spoke of, breathed of, exhaled the fragrant of, glistened of truth. This man, this Buddha was truthful down to the gesture of his last finger. This man was holy. Never before, Siddhartha had venerated a person so much, never before he had loved a person as much as this one.

They both followed the Buddha until they reached the town and then returned in silence, for they themselves intended to abstain from on this day. They saw Gotama returning—what he ate could not even have satisfied a bird’s appetite, and they saw him retiring into the shade of the mango-trees.

But in the evening, when the heat cooled down and everyone in the camp started to bustle about and gathered around, they heard the Buddha teaching. They heard his voice, and it was also perfected, was of perfect calmness, was full of peace. Gotama taught the teachings of suffering, of the origin of suffering, of the way to relieve suffering. Calmly and clearly his quiet speech flowed on. Suffering was life, full of suffering was the world, but salvation from suffering had been found: salvation was obtained by him who would walk the path of the Buddha. With a soft, yet firm voice the exalted one spoke, taught the four main doctrines, taught the eightfold path, patiently he went the usual path of the teachings, of the examples, of the repetitions, brightly and quietly his voice hovered over the listeners, like a light, like a starry sky.

When the Buddha—night had already fallen—ended his speech, many a pilgrim stepped forward and asked to be accepted into the community, sought refuge in the teachings. And Gotama accepted them by speaking: “You have heard the teachings well, it has come to you well. Thus join us and walk in holiness, to put an end to all suffering.”

Behold, then Govinda, the shy one, also stepped forward and spoke: “I also take my refuge in the exalted one and his teachings,” and he asked to be accepted into the community of his disciples and was accepted.

Right afterwards, when the Buddha had retired for the night, Govinda turned to Siddhartha and spoke eagerly: “Siddhartha, it is not my place to scold you. We have both heard the exalted one, we have both perceived the teachings. Govinda has heard the

teachings, he has taken refuge in it. But you, my honoured friend, don't you also want to walk the path of salvation? Would you want to hesitate, do you want to wait any longer?"

Siddhartha awakened as if he had been asleep, when he heard Govinda's words. For a long time, he looked into Govinda's face. Then he spoke quietly, in a voice without mockery: "Govinda, my friend, now you have taken this step, now you have chosen this path. Always, oh Govinda, you've been my friend, you've always walked one step behind me. Often I have thought: Won't Govinda for once also take a step by himself, without me, out of his own soul? Behold, now you've turned into a man and are choosing your path for yourself. I wish that you would go it up to its end, oh my friend, that you shall find salvation!"

Govinda, not completely understanding it yet, repeated his question in an impatient tone: "Speak up, I beg you, my dear! Tell me, since it could not be any other way, that you also, my learned friend, will take your refuge with the exalted Buddha!"

Siddhartha placed his hand on Govinda's shoulder: "You failed to hear my good wish for you, oh Govinda. I'm repeating it: I wish that you would go this path up to its end, that you shall find salvation!"

In this moment, Govinda realized that his friend had left him, and he started to weep.

"Siddhartha!" he exclaimed lamentingly.

Siddhartha kindly spoke to him: "Don't forget, Govinda, that you are now one of the Samanas of the Buddha! You have renounced your home and your parents, renounced your birth and possessions, renounced your free will, renounced all friendship. This is what the teachings require, this is what the exalted one wants. This is what you wanted for yourself. Tomorrow, oh Govinda, I'll leave you."

For a long time, the friends continued walking in the grove; for a long time, they lay there and found no sleep. And over and over again, Govinda urged his friend, he should tell him why he would not want to seek refuge in Gotama's teachings, what fault he would find in these teachings. But Siddhartha turned him away every time and said: "Be content, Govinda! Very good are the teachings of the exalted one, how could I find a fault in them?"

Very early in the morning, a follower of Buddha, one of his oldest monks, went through the garden and called all those to him who had as novices taken their refuge in the teachings, to dress them up in the yellow robe and to instruct them in the first teachings and duties of their position. Then Govinda broke loose, embraced once again his childhood friend and left with the novices.

But Siddhartha walked through the grove, lost in thought.

Then he happened to meet Gotama, the exalted one, and when he greeted him with respect and the Buddha's glance was so full of kindness and calm, the young man summoned his courage and asked the venerable one for the permission to talk to him. Silently the exalted one nodded his approval.

Quoth Siddhartha: "Yesterday, oh exalted one, I had been privileged to hear your wondrous teachings. Together with my friend, I had come from afar, to hear your teachings. And now my friend is going to stay with your people, he has taken his refuge with you. But I will again start on my pilgrimage."

"As you please," the venerable one spoke politely.

"Too bold is my speech," Siddhartha continued, "but I do not want to leave the exalted one without having honestly told him my thoughts. Does it please the venerable one to listen to me for one moment longer?"

Silently, the Buddha nodded his approval.

Quoth Siddhartha: "One thing, oh most venerable one, I have admired in your teachings most of all. Everything in your teachings is perfectly clear, is proven; you are presenting the world as a perfect chain, a chain which is never and nowhere broken, an eternal chain the links of which are causes and effects. Never before, this has been seen so clearly; never before, this has been presented so irrefutably; truly, the heart of every Brahman has to beat stronger with love, once he has seen the world through your teachings perfectly connected, without gaps, clear as a crystal, not depending on chance, not depending on gods. Whether it may be good or bad, whether living according to it would be suffering or joy, I do not wish to discuss, possibly this is not essential—but the uniformity of the world, that everything which happens is connected, that the great and the small things are all encompassed by the same forces of time, by the same law of causes, of coming into being and of dying, this is what shines brightly out of your exalted

teachings, oh perfected one. But according to your very own teachings, this unity and necessary sequence of all things is nevertheless broken in one place, through a small gap, this world of unity is invaded by something alien, something new, something which had not been there before, and which cannot be demonstrated and cannot be proven: these are your teachings of overcoming the world, of salvation. But with this small gap, with this small breach, the entire eternal and uniform law of the world is breaking apart again and becomes void. Please forgive me for expressing this objection."

Quietly, Gotama had listened to him, unmoved. Now he spoke, the perfected one, with his kind, with his polite and clear voice: "You've heard the teachings, oh son of a Brahman, and good for you that you've thought about it thus deeply. You've found a gap in it, an error. You should think about this further. But be warned, oh seeker of knowledge, of the thicket of opinions and of arguing about words. There is nothing to opinions, they may be beautiful or ugly, smart or foolish, everyone can support them or discard them. But the teachings, you've heard from me, are no opinion, and their goal is not to explain the world to those who seek knowledge. They have a different goal; their goal is salvation from suffering. This is what Gotama teaches, nothing else."

"I wish that you, oh exalted one, would not be angry with me," said the young man. "I have not spoken to you like this to argue with you, to argue about words. You are truly right, there is little to opinions. But let me say this one more thing: I have not doubted in you for a single moment. I have not doubted for a single moment that you are Buddha, that you have reached the goal, the highest goal towards which so many thousands of Brahmans and sons of Brahmans are on their way. You have found salvation from death. It has come to you in the course of your own search, on your own path, through thoughts, through meditation, through realizations, through enlightenment. It has not come to you by means of teachings! And—thus is my thought, oh exalted one,—nobody will obtain salvation by means of teachings! You will not be able to convey and say to anybody, oh venerable one, in words and through teachings what has happened to you in the hour of enlightenment! The teachings of the enlightened Buddha contain much, it teaches many to live righteously, to avoid evil. But there is one thing which these so clear, these so venerable teachings do not contain: they do not contain the mystery of what the exalted one has experienced for himself, he alone among hundreds of thousands. This is what I have thought and realized, when I have heard the teachings. This is why I am continuing my travels—not to seek other, better teachings, for I know there are none, but to depart from all teachings and all teachers and to reach my goal by myself or to die. But often, I'll think of this day, oh exalted one, and of this hour, when my eyes beheld a holy man."

The Buddha's eyes quietly looked to the ground; quietly, in perfect equanimity his inscrutable face was smiling.

"I wish," the venerable one spoke slowly, "that your thoughts shall not be in error, that you shall reach the goal! But tell me: Have you seen the multitude of my Samanas, my many brothers, who have taken refuge in the teachings? And do you believe, oh stranger, oh Samana, do you believe that it would be better for them all the abandon the teachings and to return into the life the world and of desires?"

"Far is such a thought from my mind," exclaimed Siddhartha. "I wish that they shall all stay with the teachings, that they shall reach their goal! It is not my place to judge another person's life. Only for myself, for myself alone, I must decide, I must chose, I must refuse. Salvation from the self is what we Samanas search for, oh exalted one. If I merely were one of your disciples, oh venerable one, I'd fear that it might happen to me that only seemingly, only deceptively my self would be calm and be redeemed, but that in truth it would live on and grow, for then I had replaced my self with the teachings, my duty to follow you, my love for you, and the community of the monks!"

With half of a smile, with an unwavering openness and kindness, Gotama looked into the stranger's eyes and bid him to leave with a hardly noticeable gesture.

"You are wise, oh Samana," the venerable one spoke. "You know how to talk wisely, my friend. Be aware of too much wisdom!"

The Buddha turned away, and his glance and half of a smile remained forever etched in Siddhartha's memory.

I have never before seen a person glance and smile, sit and walk this way, he thought; truly, I wish to be able to glance and smile, sit and walk this way, too, thus free, thus venerable, thus concealed, thus open, thus childlike and mysterious. Truly, only a person who has succeeded in reaching the innermost part of his self would glance and walk this way. Well so, I also will seek to reach the innermost part of my self.

I saw a man, Siddhartha thought, a single man, before whom I would have to lower my glance. I do not want to lower my glance before any other, not before any other. No teachings will entice me any more, since this man's teachings have not enticed me.

I am deprived by the Buddha, thought Siddhartha, I am deprived, and even more he has given to me. He has deprived me of my friend, the one who had believed in me and now believes in him, who had been my shadow and is now Gotama's shadow. But he has given me Siddhartha, myself.

AWAKENING

When Siddhartha left the grove, where the Buddha, the perfected one, stayed behind, where Govinda stayed behind, then he felt that in this grove his past life also stayed behind and parted from him. He pondered about this sensation, which filled him completely, as he was slowly walking along. He pondered deeply, like diving into a deep water he let himself sink down to the ground of the sensation, down to the place where the causes lie, because to identify the causes, so it seemed to him, is the very essence of thinking, and by this alone sensations turn into realizations and are not lost, but become entities and start to emit like rays of light what is inside of them.

Slowly walking along, Siddhartha pondered. He realized that he was no youth any more, but had turned into a man. He realized that one thing had left him, as a snake is left by its old skin, that one thing no longer existed in him, which had accompanied him throughout his youth and used to be a part of him: the wish to have teachers and to listen to teachings. He had also left the last teacher who had appeared on his path, even him, the highest and wisest teacher, the most holy one, Buddha, he had left him, had to part with him, was not able to accept his teachings.

Slower, he walked along in his thoughts and asked himself: "But what is this, what you have sought to learn from teachings and from teachers, and what they, who have taught you much, were still unable to teach you?" And he found: "It was the self, the purpose and essence of which I sought to learn. It was the self, I wanted to free myself from, which I sought to overcome. But I was not able to overcome it, could only deceive it, could only flee from it, only hide from it. Truly, no thing in this world has kept my thoughts thus busy, as this my very own self, this mystery of me being alive, of me being one and being separated and isolated from all others, of me being Siddhartha! And there is no thing in this world I know less about than about me, about Siddhartha!"

Having been pondering while slowly walking along, he now stopped as these thoughts caught hold of him, and right away another thought sprang forth from these, a new thought, which was: "That I know nothing about myself, that Siddhartha has remained thus alien and unknown to me, stems from one cause, a single cause: I was afraid of myself, I was fleeing from myself! I searched Atman, I searched Brahman, I was willing to dissect my self and peel off all of its layers, to find the core of all peels in its unknown interior, the Atman, life, the divine part, the ultimate part. But I have lost myself in the process."

Siddhartha opened his eyes and looked around, a smile filled his face and a feeling of awakening from long dreams flowed through him from his head down to his toes. And it was not long before he walked again, walked quickly like a man who knows what he has got to do.

"Oh," he thought, taking a deep breath, "now I would not let Siddhartha escape from me again! No longer, I want to begin my thoughts and my life with Atman and with the suffering of the world. I do not want to kill and dissect myself any longer, to find a secret behind the ruins. Neither Yoga-Veda shall teach me any more, nor Atharva-Veda, nor the ascetics, nor any kind of teachings. I want to learn from myself, want to be my student, want to get to know myself, the secret of Siddhartha."

He looked around, as if he was seeing the world for the first time. Beautiful was the world, colourful was the world, strange and mysterious was the world! Here was blue, here was yellow, here was green, the sky and the river flowed, the forest and the mountains were rigid, all of it was beautiful, all of it was mysterious and magical, and in its midst was he, Siddhartha, the awakening one, on the path to himself. All of this, all this yellow and blue, river and forest, entered Siddhartha for the first time through the eyes, was no longer a spell of Mara, was no longer the veil of Maya, was no longer a pointless and coincidental diversity of mere appearances, despicable to the deeply thinking Brahman, who scorns diversity, who seeks unity. Blue was blue, river was river, and if also in the blue and the river, in Siddhartha, the singular and divine lived hidden, so it was still that very divinity's way and purpose, to be here yellow, here blue, there sky, there forest, and here Siddhartha. The purpose and the essential properties were not somewhere behind the things, they were in them, in everything.

"How deaf and stupid have I been!" he thought, walking swiftly along. "When someone reads a text, wants to discover its meaning, he will not scorn the symbols and letters and call them deceptions, coincidence, and worthless hull, but he will read them, he will study and love them, letter by letter. But I, who wanted to read the book of the world and the book of my own being, I have, for the sake of a meaning I had anticipated before I read, scorned the symbols and letters, I called the visible world a deception, called my

eyes and my tongue coincidental and worthless forms without substance. No, this is over, I have awakened, I have indeed awakened and have not been born before this very day.”

In thinking these thoughts, Siddhartha stopped once again, suddenly, as if there was a snake lying in front of him on the path.

Because suddenly, he had also become aware of this: He, who was indeed like someone who had just woken up or like a new-born baby, he had to start his life anew and start again at the very beginning. When he had left in this very morning from the grove Jetavana, the grove of that exalted one, already awakening, already on the path towards himself, he had every intention, regarded as natural and took for granted, that he, after years as an ascetic, would return to his home and his father. But now, only in this moment, when he stopped as if a snake was lying on his path, he also awoke to this realization: “But I am no longer the one I was, I am no ascetic any more, I am not a priest any more, I am no Brahman any more. Whatever should I do at home and at my father’s place? Study? Make offerings? Practise meditation? But all this is over, all of this is no longer alongside my path.”

Motionless, Siddhartha remained standing there, and for the time of one moment and breath, his heart felt cold, he felt a cold in his chest, as a small animal, a bird or a rabbit, would when seeing how alone he was. For many years, he had been without home and had felt nothing. Now, he felt it. Still, even in the deepest meditation, he had been his father’s son, had been a Brahman, of a high caste, a cleric. Now, he was nothing but Siddhartha, the awoken one, nothing else was left. Deeply, he inhaled, and for a moment, he felt cold and shivered. Nobody was thus alone as he was. There was no nobleman who did not belong to the noblemen, no worker that did not belong to the workers, and found refuge with them, shared their life, spoke their language. No Brahman, who would not be regarded as Brahmans and lived with them, no ascetic who would not find his refuge in the caste of the Samanas, and even the most forlorn hermit in the forest was not just one and alone, he was also surrounded by a place he belonged to, he also belonged to a caste, in which he was at home. Govinda had become a monk, and a thousand monks were his brothers, wore the same robe as he, believed in his faith, spoke his language. But he, Siddhartha, where did he belong to? With whom would he share his life? Whose language would he speak?

Out of this moment, when the world melted away all around him, when he stood alone like a star in the sky, out of this moment of a cold and despair, Siddhartha emerged, more a self than before, more firmly concentrated. He felt: This had been the last tremor of the awakening, the last struggle of this birth. And it was not long until he walked again in long strides, started to proceed swiftly and impatiently, heading no longer for home, no longer to his father, no longer back.

SECOND PART

Dedicated to Wilhelm Gundert, my cousin in Japan

KAMALA

Siddhartha learned something new on every step of his path, for the world was transformed, and his heart was enchanted. He saw the sun rising over the mountains with their forests and setting over the distant beach with its palm-trees. At night, he saw the stars in the sky in their fixed positions and the crescent of the moon floating like a boat in the blue. He saw trees, stars, animals, clouds, rainbows, rocks, herbs, flowers, stream and river, the glistening dew in the bushes in the morning, distant high mountains which were blue and pale, birds sang and bees, wind silverishly blew through the rice-field. All of this, a thousand-fold and colourful, had always been there, always the sun and the moon had shone, always rivers had roared and bees had buzzed, but in former times all of this had been nothing more to Siddhartha than a fleeting, deceptive veil before his eyes, looked upon in distrust, destined to be penetrated and destroyed by thought, since it was not the essential existence, since this essence lay beyond, on the other side of, the visible. But now, his liberated eyes stayed on this side, he saw and became aware of the visible, sought to be at home in this world, did not search for the true essence, did not aim at a world beyond. Beautiful was this world, looking at it thus, without searching, thus simply, thus childlike. Beautiful were the moon and the stars, beautiful was the stream and the banks, the forest and the rocks, the goat and the gold-beetle, the flower and the butterfly. Beautiful and lovely it was, thus to walk through the world, thus childlike, thus awoken, thus open to what is near, thus without distrust. Differently the sun burnt the head, differently the shade of the forest cooled him down, differently the stream and the cistern, the pumpkin and the banana tasted. Short were the days, short the nights, every hour sped swiftly away like a sail on the sea, and under the sail was a ship full of treasures, full of joy. Siddhartha saw a group of apes moving through the high canopy of the forest, high in the branches, and heard their savage, greedy song. Siddhartha saw a male sheep following a female one and mating with her. In a lake of reeds, he saw the pike hungrily hunting for its dinner; propelling themselves away from it, in fear, wiggling and sparkling, the young fish jumped in droves out of the water;

the scent of strength and passion came forcefully out of the hasty eddies of the water, which the pike stirred up, impetuously hunting.

All of this had always existed, and he had not seen it; he had not been with it. Now he was with it, he was part of it. Light and shadow ran through his eyes, stars and moon ran through his heart.

On the way, Siddhartha also remembered everything he had experienced in the Garden Jetavana, the teaching he had heard there, the divine Buddha, the farewell from Govinda, the conversation with the exalted one. Again he remembered his own words, he had spoken to the exalted one, every word, and with astonishment he became aware of the fact that there he had said things which he had not really known yet at this time. What he had said to Gotama: his, the Buddha's, treasure and secret was not the teachings, but the unexpressable and not teachable, which he had experienced in the hour of his enlightenment—it was nothing but this very thing which he had now gone to experience, what he now began to experience. Now, he had to experience his self. It is true that he had already known for a long time that his self was Atman, in its essence bearing the same eternal characteristics as Brahman. But never, he had really found this self, because he had wanted to capture it in the net of thought. With the body definitely not being the self, and not the spectacle of the senses, so it also was not the thought, not the rational mind, not the learned wisdom, not the learned ability to draw conclusions and to develop previous thoughts in to new ones. No, this world of thought was also still on this side, and nothing could be achieved by killing the random self of the senses, if the random self of thoughts and learned knowledge was fattened on the other hand. Both, the thoughts as well as the senses, were pretty things, the ultimate meaning was hidden behind both of them, both had to be listened to, both had to be played with, both neither had to be scorned nor overestimated, from both the secret voices of the innermost truth had to be attentively perceived. He wanted to strive for nothing, except for what the voice commanded him to strive for, dwell on nothing, except where the voice would advise him to do so. Why had Gotama, at that time, in the hour of all hours, sat down under the bo-tree, where the enlightenment hit him? He had heard a voice, a voice in his own heart, which had commanded him to seek rest under this tree, and he had neither preferred self-castigation, offerings, ablutions, nor prayer, neither food nor drink, neither sleep nor dream, he had obeyed the voice. To obey like this, not to an external command, only to the voice, to be ready like this, this was good, this was necessary, nothing else was necessary.

In the night when he slept in the straw hut of a ferryman by the river, Siddhartha had a dream: Govinda was standing in front of him, dressed in the yellow robe of an ascetic. Sad was how Govinda looked like, sadly he asked: Why have you forsaken me? At this, he embraced Govinda, wrapped his arms around him, and as he was pulling him close to his chest and kissed him, it was not Govinda any more, but a woman, and a full breast popped out of the woman's dress, at which Siddhartha lay and drank, sweetly and strongly tasted the milk from this breast. It tasted of woman and man, of sun and forest, of animal and flower, of every fruit, of every joyful desire. It intoxicated him and rendered him unconscious.—When Siddhartha woke up, the pale river shimmered through the door of the hut, and in the forest, a dark call of an owl resounded deeply and pleasantly.

When the day began, Siddhartha asked his host, the ferryman, to get him across the river. The ferryman got him across the river on his bamboo-raft, the wide water shimmered reddishly in the light of the morning.

"This is a beautiful river," he said to his companion.

"Yes," said the ferryman, "a very beautiful river, I love it more than anything. Often I have listened to it, often I have looked into its eyes, and always I have learned from it. Much can be learned from a river."

"I thank you, my benefactor," spoke Siddhartha, disembarking on the other side of the river. "I have no gift I could give you for your hospitality, my dear, and also no payment for your work. I am a man without a home, a son of a Brahman and a Samana."

"I did see it," spoke the ferryman, "and I haven't expected any payment from you and no gift which would be the custom for guests to bear. You will give me the gift another time."

"Do you think so?" asked Siddhartha amusedly.

"Surely. This too, I have learned from the river: everything is coming back! You too, Samana, will come back. Now farewell! Let your friendship be my reward. Commemorate me, when you'll make offerings to the gods."

Smiling, they parted. Smiling, Siddhartha was happy about the friendship and the kindness of the ferryman. "He is like Govinda," he thought with a smile, "all I meet on my path are like Govinda. All are thankful, though they are the ones who would have a right to receive thanks. All are submissive, all would like to be friends, like to obey, think little. Like children are all people."

At about noon, he came through a village. In front of the mud cottages, children were rolling about in the street, were playing with pumpkin-seeds and sea-shells, screamed and wrestled, but they all timidly fled from the unknown Samana. In the end of the village, the path led through a stream, and by the side of the stream, a young woman was kneeling and washing clothes. When Siddhartha greeted her, she lifted her head and looked up to him with a smile, so that he saw the white in her eyes glistening. He called out a blessing to her, as it is the custom among travellers, and asked how far he still had to go to reach the large city. Then she got up and came to him, beautifully her wet mouth was shimmering in her young face. She exchanged humorous banter with him, asked whether he had eaten already, and whether it was true that the Samanas slept alone in the forest at night and were not allowed to have any women with them. While talking, she put her left foot on his right one and made a movement as a woman does who would want to initiate that kind of sexual pleasure with a man, which the textbooks call “climbing a tree”. Siddhartha felt his blood heating up, and since in this moment he had to think of his dream again, he bend slightly down to the woman and kissed with his lips the brown nipple of her breast. Looking up, he saw her face smiling full of lust and her eyes, with contracted pupils, begging with desire.

Siddhartha also felt desire and felt the source of his sexuality moving; but since he had never touched a woman before, he hesitated for a moment, while his hands were already prepared to reach out for her. And in this moment he heard, shuddering with awe, the voice of his innermost self, and this voice said No. Then, all charms disappeared from the young woman’s smiling face, he no longer saw anything else but the damp glance of a female animal in heat. Politely, he petted her cheek, turned away from her and disappeared away from the disappointed woman with light steps into the bamboo-wood.

On this day, he reached the large city before the evening, and was happy, for he felt the need to be among people. For a long time, he had lived in the forests, and the straw hut of the ferryman, in which he had slept that night, had been the first roof for a long time he had had over his head.

Before the city, in a beautifully fenced grove, the traveller came across a small group of servants, both male and female, carrying baskets. In their midst, carried by four servants in an ornamental sedan-chair, sat a woman, the mistress, on red pillows under a colourful canopy. Siddhartha stopped at the entrance to the pleasure-garden and watched the parade, saw the servants, the maids, the baskets, saw the sedan-chair and saw the lady in it. Under black hair, which made to tower high on her head, he saw a very fair, very delicate, very smart face, a brightly red mouth, like a freshly cracked fig, eyebrows which were well tended and painted in a high arch, smart and watchful dark eyes, a clear, tall neck rising from a green and golden garment, resting fair hands, long and thin, with wide golden bracelets over the wrists.

Siddhartha saw how beautiful she was, and his heart rejoiced. He bowed deeply, when the sedan-chair came closer, and straightening up again, he looked at the fair, charming face, read for a moment in the smart eyes with the high arcs above, breathed in a slight fragrant, he did not know. With a smile, the beautiful woman nodded for a moment and disappeared into the grove, and then the servants as well.

Thus I am entering this city, Siddhartha thought, with a charming omen. He instantly felt drawn into the grove, but he thought about it, and only now he became aware of how the servants and maids had looked at him at the entrance, how despicable, how distrustful, how rejecting.

I am still a Samana, he thought, I am still an ascetic and beggar. I must not remain like this, I will not be able to enter the grove like this. And he laughed.

The next person who came along this path he asked about the grove and for the name of the woman, and was told that this was the grove of Kamala, the famous courtesan, and that, aside from the grove, she owned a house in the city.

Then, he entered the city. Now he had a goal.

Pursuing his goal, he allowed the city to suck him in, drifted through the flow of the streets, stood still on the squares, rested on the stairs of stone by the river. When the evening came, he made friends with barber’s assistant, whom he had seen working in the shade of an arch in a building, whom he found again praying in a temple of Vishnu, whom he told about stories of Vishnu and the Lakshmi. Among the boats by the river, he slept this night, and early in the morning, before the first customers came into his shop, he had the barber’s assistant shave his beard and cut his hair, comb his hair and anoint it with fine oil. Then he went to take his bath in the river.

When late in the afternoon, beautiful Kamala approached her grove in her sedan-chair, Siddhartha was standing at the entrance, made a bow and received the courtesan's greeting. But that servant who walked at the very end of her train he motioned to him and asked him to inform his mistress that a young Brahman would wish to talk to her. After a while, the servant returned, asked him, who had been waiting, to follow him, conducted him, who was following him, without a word into a pavilion, where Kamala was lying on a couch, and left him alone with her.

"Weren't you already standing out there yesterday, greeting me?" asked Kamala.

"It's true that I've already seen and greeted you yesterday."

"But didn't you yesterday wear a beard, and long hair, and dust in your hair?"

"You have observed well, you have seen everything. You have seen Siddhartha, the son of a Brahman, who has left his home to become a Samana, and who has been a Samana for three years. But now, I have left that path and came into this city, and the first one I met, even before I had entered the city, was you. To say this, I have come to you, oh Kamala! You are the first woman whom Siddhartha is not addressing with his eyes turned to the ground. Never again I want to turn my eyes to the ground, when I'm coming across a beautiful woman."

Kamala smiled and played with her fan of peacocks' feathers. And asked: "And only to tell me this, Siddhartha has come to me?"

"To tell you this and to thank you for being so beautiful. And if it doesn't displease you, Kamala, I would like to ask you to be my friend and teacher, for I know nothing yet of that art which you have mastered in the highest degree."

At this, Kamala laughed aloud.

"Never before this has happened to me, my friend, that a Samana from the forest came to me and wanted to learn from me! Never before this has happened to me, that a Samana came to me with long hair and an old, torn loincloth! Many young men come to me, and there are also sons of Brahmans among them, but they come in beautiful clothes, they come in fine shoes, they have perfume in their hair and money in their pouches. This is, oh Samana, how the young men are like who come to me."

Quoth Siddhartha: "Already I am starting to learn from you. Even yesterday, I was already learning. I have already taken off my beard, have combed the hair, have oil in my hair. There is little which is still missing in me, oh excellent one: fine clothes, fine shoes, money in my pouch. You shall know, Siddhartha has set harder goals for himself than such trifles, and he has reached them. How shouldn't I reach that goal, which I have set for myself yesterday: to be your friend and to learn the joys of love from you! You'll see that I'll learn quickly, Kamala, I have already learned harder things than what you're supposed to teach me. And now let's get to it: You aren't satisfied with Siddhartha as he is, with oil in his hair, but without clothes, without shoes, without money?"

Laughing, Kamala exclaimed: "No, my dear, he doesn't satisfy me yet. Clothes are what he must have, pretty clothes, and shoes, pretty shoes, and lots of money in his pouch, and gifts for Kamala. Do you know it now, Samana from the forest? Did you mark my words?"

"Yes, I have marked your words," Siddhartha exclaimed. "How should I not mark words which are coming from such a mouth! Your mouth is like a freshly cracked fig, Kamala. My mouth is red and fresh as well, it will be a suitable match for yours, you'll see.—But tell me, beautiful Kamala, aren't you at all afraid of the Samana from the forest, who has come to learn how to make love?"

"Whatever for should I be afraid of a Samana, a stupid Samana from the forest, who is coming from the jackals and doesn't even know yet what women are?"

"Oh, he's strong, the Samana, and he isn't afraid of anything. He could force you, beautiful girl. He could kidnap you. He could hurt you."

"No, Samana, I am not afraid of this. Did any Samana or Brahman ever fear, someone might come and grab him and steal his learning, and his religious devotion, and his depth of thought? No, for they are his very own, and he would only give away from those whatever he is willing to give and to whomever he is willing to give. Like this it is, precisely like this it is also with Kamala and with the pleasures of love. Beautiful and red is Kamala's mouth, but just try to kiss it against Kamala's will, and you will not obtain a single drop of sweetness from it, which knows how to give so many sweet things! You are learning easily, Siddhartha, thus you should also learn this: love can be obtained by begging, buying, receiving it as a gift, finding it in the street, but it cannot be stolen. In this, you have come up with the wrong path. No, it would be a pity, if a pretty young man like you would want to tackle it in such a

wrong manner.”

Siddhartha bowed with a smile. “It would be a pity, Kamala, you are so right! It would be such a great pity. No, I shall not lose a single drop of sweetness from your mouth, nor you from mine! So it is settled: Siddhartha will return, once he’ll have what he still lacks: clothes, shoes, money. But speak, lovely Kamala, couldn’t you still give me one small advice?”

“An advice? Why not? Who wouldn’t like to give an advice to a poor, ignorant Samana, who is coming from the jackals of the forest?”

“Dear Kamala, thus advise me where I should go to, that I’ll find these three things most quickly?”

“Friend, many would like to know this. You must do what you’ve learned and ask for money, clothes, and shoes in return. There is no other way for a poor man to obtain money. What might you be able to do?”

“I can think. I can wait. I can fast.”

“Nothing else?”

“Nothing. But yes, I can also write poetry. Would you like to give me a kiss for a poem?”

“I would like to, if I’ll like your poem. What would be its title?”

Siddhartha spoke, after he had thought about it for a moment, these verses:

Into her shady grove stepped the pretty Kamala, At the grove’s entrance stood the brown Samana. Deeply, seeing the lotus’s blossom, Bowed that man, and smiling Kamala thanked. More lovely, thought the young man, than offerings for gods, More lovely is offering to pretty Kamala.

Kamala loudly clapped her hands, so that the golden bracelets clanged.

“Beautiful are your verses, oh brown Samana, and truly, I’m losing nothing when I’m giving you a kiss for them.”

She beckoned him with her eyes, he tilted his head so that his face touched hers and placed his mouth on that mouth which was like a freshly cracked fig. For a long time, Kamala kissed him, and with a deep astonishment Siddhartha felt how she taught him, how wise she was, how she controlled him, rejected him, lured him, and how after this first one there was to be a long, a well ordered, well tested sequence of kisses, every one different from the others, he was still to receive. Breathing deeply, he remained standing where he was, and was in this moment astonished like a child about the cornucopia of knowledge and things worth learning, which revealed itself before his eyes.

“Very beautiful are your verses,” exclaimed Kamala, “if I was rich, I would give you pieces of gold for them. But it will be difficult for you to earn thus much money with verses as you need. For you need a lot of money, if you want to be Kamala’s friend.”

“The way you’re able to kiss, Kamala!” stammered Siddhartha.

“Yes, this I am able to do, therefore I do not lack clothes, shoes, bracelets, and all beautiful things. But what will become of you? Aren’t you able to do anything else but thinking, fasting, making poetry?”

“I also know the sacrificial songs,” said Siddhartha, “but I do not want to sing them any more. I also know magic spells, but I do not want to speak them any more. I have read the scriptures—”

“Stop,” Kamala interrupted him. “You’re able to read? And write?”

“Certainly, I can do this. Many people can do this.”

“Most people can’t. I also can’t do it. It is very good that you’re able to read and write, very good. You will also still find use for the magic spells.”

In this moment, a maid came running in and whispered a message into her mistress’s ear.

“There’s a visitor for me,” exclaimed Kamala. “Hurry and get yourself away, Siddhartha, nobody may see you in here, remember this! Tomorrow, I’ll see you again.”

But to the maid she gave the order to give the pious Brahman white upper garments. Without fully understanding what was happening to him, Siddhartha found himself being dragged away by the maid, brought into a garden-house avoiding the direct path, being given upper garments as a gift, led into the bushes, and urgently admonished to get himself out of the grove as soon as possible without being seen.

Contently, he did as he had been told. Being accustomed to the forest, he managed to get out of the grove and over the hedge without making a sound. Contently, he returned to the city, carrying the rolled up garments under his arm. At the inn, where travellers stay, he positioned himself by the door, without words he asked for food, without a word he accepted a piece of rice-cake. Perhaps as soon as tomorrow, he thought, I will ask no one for food any more.

Suddenly, pride flared up in him. He was no Samana any more, it was no longer becoming to him to beg. He gave the rice-cake to a dog and remained without food.

“Simple is the life which people lead in this world here,” thought Siddhartha. “It presents no difficulties. Everything was difficult, toilsome, and ultimately hopeless, when I was still a Samana. Now, everything is easy, easy like that lesson in kissing, which Kamala is giving me. I need clothes and money, nothing else; these are small, near goals, they won’t make a person lose any sleep.”

He had already discovered Kamala’s house in the city long before, there he turned up the following day.

“Things are working out well,” she called out to him. “They are expecting you at Kamaswami’s, he is the richest merchant of the city. If he’ll like you, he’ll accept you into his service. Be smart, brown Samana. I had others tell him about you. Be polite towards him, he is very powerful. But don’t be too modest! I do not want you to become his servant, you shall become his equal, or else I won’t be satisfied with you. Kamaswami is starting to get old and lazy. If he’ll like you, he’ll entrust you with a lot.”

Siddhartha thanked her and laughed, and when she found out that he had not eaten anything yesterday and today, she sent for bread and fruits and treated him to it.

“You’ve been lucky,” she said when they parted, “I’m opening one door after another for you. How come? Do you have a spell?”

Siddhartha said: “Yesterday, I told you I knew how to think, to wait, and to fast, but you thought this was of no use. But it is useful for many things, Kamala, you’ll see. You’ll see that the stupid Samanas are learning and able to do many pretty things in the forest, which the likes of you aren’t capable of. The day before yesterday, I was still a shaggy beggar, as soon as yesterday I have kissed Kamala, and soon I’ll be a merchant and have money and all those things you insist upon.”

“Well yes,” she admitted. “But where would you be without me? What would you be, if Kamala wasn’t helping you?”

“Dear Kamala,” said Siddhartha and straightened up to his full height, “when I came to you into your grove, I did the first step. It was my resolution to learn love from this most beautiful woman. From that moment on when I had made this resolution, I also knew that I would carry it out. I knew that you would help me, at your first glance at the entrance of the grove I already knew it.”

“But what if I hadn’t been willing?”

“You were willing. Look, Kamala: When you throw a rock into the water, it will speed on the fastest course to the bottom of the water. This is how it is when Siddhartha has a goal, a resolution. Siddhartha does nothing, he waits, he thinks, he fasts, but he passes through the things of the world like a rock through water, without doing anything, without stirring; he is drawn, he lets himself fall. His goal attracts him, because he doesn’t let anything enter his soul which might oppose the goal. This is what Siddhartha has learned among the Samanas. This is what fools call magic and of which they think it would be effected by means of the daemons. Nothing is effected by daemons, there are no daemons. Everyone can perform magic, everyone can reach his goals, if he is able to think, if he is able to wait, if he is able to fast.”

Kamala listened to him. She loved his voice, she loved the look from his eyes.

“Perhaps it is so,” she said quietly, “as you say, friend. But perhaps it is also like this: that Siddhartha is a handsome man, that his glance pleases the women, that therefore good fortune is coming towards him.”

With one kiss, Siddhartha bid his farewell. “I wish that it should be this way, my teacher; that my glance shall please you, that always good fortune shall come to me out of your direction!”

WITH THE CHILDLIKE PEOPLE

Siddhartha went to Kamaswami the merchant, he was directed into a rich house, servants led him between precious carpets into a chamber, where he awaited the master of the house.

Kamaswami entered, a swiftly, smoothly moving man with very gray hair, with very intelligent, cautious eyes, with a greedy mouth. Politely, the host and the guest greeted one another.

“I have been told,” the merchant began, “that you were a Brahman, a learned man, but that you seek to be in the service of a merchant. Might you have become destitute, Brahman, so that you seek to serve?”

“No,” said Siddhartha, “I have not become destitute and have never been destitute. You should know that I’m coming from the Samanas, with whom I have lived for a long time.”

“If you’re coming from the Samanas, how could you be anything but destitute? Aren’t the Samanas entirely without possessions?”

“I am without possessions,” said Siddhartha, “if this is what you mean. Surely, I am without possessions. But I am so voluntarily, and therefore I am not destitute.”

“But what are you planning to live of, being without possessions?”

“I haven’t thought of this yet, sir. For more than three years, I have been without possessions, and have never thought about of what I should live.”

“So you’ve lived of the possessions of others.”

“Presumable this is how it is. After all, a merchant also lives of what other people own.”

“Well said. But he wouldn’t take anything from another person for nothing; he would give his merchandise in return.”

“So it seems to be indeed. Everyone takes, everyone gives, such is life.”

“But if you don’t mind me asking: being without possessions, what would you like to give?”

“Everyone gives what he has. The warrior gives strength, the merchant gives merchandise, the teacher teachings, the farmer rice, the fisher fish.”

“Yes indeed. And what is it now what you’ve got to give? What is it that you’ve learned, what you’re able to do?”

“I can think. I can wait. I can fast.”

“That’s everything?”

“I believe, that’s everything!”

“And what’s the use of that? For example, the fasting—what is it good for?”

“It is very good, sir. When a person has nothing to eat, fasting is the smartest thing he could do. When, for example, Siddhartha hadn’t learned to fast, he would have to accept any kind of service before this day is up, whether it may be with you or wherever, because hunger would force him to do so. But like this, Siddhartha can wait calmly, he knows no impatience, he knows no emergency, for a long time he can allow hunger to besiege him and can laugh about it. This, sir, is what fasting is good for.”

“You’re right, Samana. Wait for a moment.”

Kamaswami left the room and returned with a scroll, which he handed to his guest while asking: “Can you read this?”

Siddhartha looked at the scroll, on which a sales-contract had been written down, and began to read out its contents.

“Excellent,” said Kamaswami. “And would you write something for me on this piece of paper?”

He handed him a piece of paper and a pen, and Siddhartha wrote and returned the paper.

Kamaswami read: “Writing is good, thinking is better. Being smart is good, being patient is better.”

“It is excellent how you’re able to write,” the merchant praised him. “Many a thing we will still have to discuss with one another. For today, I’m asking you to be my guest and to live in this house.”

Siddhartha thanked and accepted, and lived in the dealer’s house from now on. Clothes were brought to him, and shoes, and every day, a servant prepared a bath for him. Twice a day, a plentiful meal was served, but Siddhartha only ate once a day, and ate neither meat nor did he drink wine. Kamaswami told him about his trade, showed him the merchandise and storage-rooms, showed him calculations. Siddhartha got to know many new things, he heard a lot and spoke little. And thinking of Kamala’s words, he was never subservient to the merchant, forced him to treat him as an equal, yes even more than an equal. Kamaswami conducted his business with care and often with passion, but Siddhartha looked upon all of this as if it was a game, the rules of which he tried hard to learn precisely, but the contents of which did not touch his heart.

He was not in Kamaswami’s house for long, when he already took part in his landlord’s business. But daily, at the hour appointed by her, he visited beautiful Kamala, wearing pretty clothes, fine shoes, and soon he brought her gifts as well. Much he learned from her red, smart mouth. Much he learned from her tender, supple hand. Him, who was, regarding love, still a boy and had a tendency to plunge blindly and insatiably into lust like into a bottomless pit, him she taught, thoroughly starting with the basics, about that school of thought which teaches that pleasure cannot be taken without giving pleasure, and that every gesture, every caress, every touch, every look, every spot of the body, however small it was, had its secret, which would bring happiness to those who know about it and unleash it. She taught him, that lovers must not part from one another after celebrating love, without one admiring the other, without being just as defeated as they have been victorious, so that none of them should start feeling fed up or bored and get that evil feeling of having abused or having been abused. Wonderful hours he spent with the beautiful and smart artist, became her student, her lover, her friend. Here with Kamala was the worth and purpose of his present life, not with the business of Kamaswami.

The merchant passed duties of writing important letters and contracts on to him and got into the habit of discussing all important affairs with him. He soon saw that Siddhartha knew little about rice and wool, shipping and trade, but that he acted in a fortunate manner, and that Siddhartha surpassed him, the merchant, in calmness and equanimity, and in the art of listening and deeply understanding previously unknown people. “This Brahman,” he said to a friend, “is no proper merchant and will never be one, there is never any passion in his soul when he conducts our business. But he has that mysterious quality of those people to whom success comes all by itself, whether this may be a good star of his birth, magic, or something he has learned among Samanas. He always seems to be merely playing with our business-affairs, they never fully become a part of him, they never rule over him, he is never afraid of failure, he is never upset by a loss.”

The friend advised the merchant: “Give him from the business he conducts for you a third of the profits, but let him also be liable for the same amount of the losses, when there is a loss. Then, he’ll become more zealous.”

Kamaswami followed the advice. But Siddhartha cared little about this. When he made a profit, he accepted it with equanimity; when he made losses, he laughed and said: “Well, look at this, so this one turned out badly!”

It seemed indeed, as if he did not care about the business. At one time, he travelled to a village to buy a large harvest of rice there. But when he got there, the rice had already been sold to another merchant. Nevertheless, Siddhartha stayed for several days in that village, treated the farmers for a drink, gave copper-coins to their children, joined in the celebration of a wedding, and returned extremely satisfied from his trip. Kamaswami held against him that he had not turned back right away, that he had wasted time and money. Siddhartha answered: “Stop scolding, dear friend! Nothing was ever achieved by scolding. If a loss has occurred, let me bear that loss. I am very satisfied with this trip. I have gotten to know many kinds of people, a Brahman has become my friend, children have sat on my knees, farmers have shown me their fields, nobody knew that I was a merchant.”

“That’s all very nice,” exclaimed Kamaswami indignantly, “but in fact, you are a merchant after all, one ought to think! Or might you have only travelled for your amusement?”

“Surely,” Siddhartha laughed, “surely I have travelled for my amusement. For what else? I have gotten to know people and places, I have received kindness and trust, I have found friendship. Look, my dear, if I had been Kamaswami, I would have travelled back, being annoyed and in a hurry, as soon as I had seen that my purchase had been rendered impossible, and time and money would indeed have been lost. But like this, I’ve had a few good days, I’ve learned, had joy, I’ve neither harmed myself nor others by annoyance and hastiness. And if I’ll ever return there again, perhaps to buy an upcoming harvest, or for whatever purpose it might be, friendly people will receive me in a friendly and happy manner, and I will praise myself for not showing any hurry and displeasure at that time. So, leave it as it is, my friend, and don’t harm yourself by scolding! If the day will come, when you will see:

this Siddhartha is harming me, then speak a word and Siddhartha will go on his own path. But until then, let's be satisfied with one another."

Futile were also the merchant's attempts, to convince Siddhartha that he should eat his bread. Siddhartha ate his own bread, or rather they both ate other people's bread, all people's bread. Siddhartha never listened to Kamaswami's worries and Kamaswami had many worries. Whether there was a business-deal going on which was in danger of failing, or whether a shipment of merchandise seemed to have been lost, or a debtor seemed to be unable to pay, Kamaswami could never convince his partner that it would be useful to utter a few words of worry or anger, to have wrinkles on the forehead, to sleep badly. When, one day, Kamaswami held against him that he had learned everything he knew from him, he replied: "Would you please not kid me with such jokes! What I've learned from you is how much a basket of fish costs and how much interest may be charged on loaned money. These are your areas of expertise. I haven't learned to think from you, my dear Kamaswami, you ought to be the one seeking to learn from me."

Indeed his soul was not with the trade. The business was good enough to provide him with the money for Kamala, and it earned him much more than he needed. Besides from this, Siddhartha's interest and curiosity was only concerned with the people, whose businesses, crafts, worries, pleasures, and acts of foolishness used to be as alien and distant to him as the moon. However easily he succeeded in talking to all of them, in living with all of them, in learning from all of them, he was still aware that there was something which separated him from them and this separating factor was him being a Samana. He saw mankind going through life in a childlike or animallike manner, which he loved and also despised at the same time. He saw them toiling, saw them suffering, and becoming gray for the sake of things which seemed to him entirely unworthy of this price, for money, for little pleasures, for being slightly honoured, he saw them scolding and insulting each other, he saw them complaining about pain at which a Samana would only smile, and suffering because of deprivations which a Samana would not feel.

He was open to everything these people brought his way. Welcome was the merchant who offered him linen for sale, welcome was the debtor who sought another loan, welcome was the beggar who told him for one hour the story of his poverty and who was not half as poor as any given Samana. He did not treat the rich foreign merchant any different than the servant who shaved him and the street-vendor whom he let cheat him out of some small change when buying bananas. When Kamaswami came to him, to complain about his worries or to reproach him concerning his business, he listened curiously and happily, was puzzled by him, tried to understand him, consented that he was a little bit right, only as much as he considered indispensable, and turned away from him, towards the next person who would ask for him. And there were many who came to him, many to do business with him, many to cheat him, many to draw some secret out of him, many to appeal to his sympathy, many to get his advice. He gave advice, he pitied, he made gifts, he let them cheat him a bit, and this entire game and the passion with which all people played this game occupied his thoughts just as much as the gods and Brahmans used to occupy them.

At times he felt, deep in his chest, a dying, quiet voice, which admonished him quietly, lamented quietly; he hardly perceived it. And then, for an hour, he became aware of the strange life he was leading, of him doing lots of things which were only a game, of, though being happy and feeling joy at times, real life still passing him by and not touching him. As a ball-player plays with his balls, he played with his business-deals, with the people around him, watched them, found amusement in them; with his heart, with the source of his being, he was not with them. The source ran somewhere, far away from him, ran and ran invisibly, had nothing to do with his life any more. And at several times he suddenly became scared on account of such thoughts and wished that he would also be gifted with the ability to participate in all of these childlike-naive occupations of the daytime with passion and with his heart, really to live, really to act, really to enjoy and to live instead of just standing by as a spectator. But again and again, he came back to beautiful Kamala, learned the art of love, practised the cult of lust, in which more than in anything else giving and taking becomes one, chatted with her, learned from her, gave her advice, received advice. She understood him better than Govinda used to understand him, she was more similar to him.

Once, he said to her: "You are like me, you are different from most people. You are Kamala, nothing else, and inside of you, there is a peace and refuge, to which you can go at every hour of the day and be at home at yourself, as I can also do. Few people have this, and yet all could have it."

"Not all people are smart," said Kamala.

"No," said Siddhartha, "that's not the reason why. Kamaswami is just as smart as I, and still has no refuge in himself. Others have it, who are small children with respect to their mind. Most people, Kamala, are like a falling leaf, which is blown and is turning around

through the air, and wavers, and tumbles to the ground. But others, a few, are like stars, they go on a fixed course, no wind reaches them, in themselves they have their law and their course. Among all the learned men and Samanas, of which I knew many, there was one of this kind, a perfected one, I'll never be able to forget him. It is that Gotama, the exalted one, who is spreading those teachings. Thousands of followers are listening to his teachings every day, follow his instructions every hour, but they are all falling leaves, not in themselves they have teachings and a law."

Kamala looked at him with a smile. "Again, you're talking about him," she said, "again, you're having a Samana's thoughts."

Siddhartha said nothing, and they played the game of love, one of the thirty or forty different games Kamala knew. Her body was flexible like that of a jaguar and like the bow of a hunter; he who had learned from her how to make love, was knowledgeable of many forms of lust, many secrets. For a long time, she played with Siddhartha, enticed him, rejected him, forced him, embraced him: enjoyed his masterful skills, until he was defeated and rested exhausted by her side.

The courtesan bent over him, took a long look at his face, at his eyes, which had grown tired.

"You are the best lover," she said thoughtfully, "I ever saw. You're stronger than others, more supple, more willing. You've learned my art well, Siddhartha. At some time, when I'll be older, I'd want to bear your child. And yet, my dear, you've remained a Samana, and yet you do not love me, you love nobody. Isn't it so?"

"It might very well be so," Siddhartha said tiredly. "I am like you. You also do not love—how else could you practise love as a craft? Perhaps, people of our kind can't love. The childlike people can; that's their secret."

SANSARA

For a long time, Siddhartha had lived the life of the world and of lust, though without being a part of it. His senses, which he had killed off in hot years as a Samana, had awoken again, he had tasted riches, had tasted lust, had tasted power; nevertheless he had still remained in his heart for a long time a Samana; Kamala, being smart, had realized this quite right. It was still the art of thinking, of waiting, of fasting, which guided his life; still the people of the world, the childlike people, had remained alien to him as he was alien to them.

Years passed by; surrounded by the good life, Siddhartha hardly felt them fading away. He had become rich, for quite a while he possessed a house of his own and his own servants, and a garden before the city by the river. The people liked him, they came to him, whenever they needed money or advice, but there was nobody close to him, except Kamala.

That high, bright state of being awake, which he had experienced that one time at the height of his youth, in those days after Gotama's sermon, after the separation from Govinda, that tense expectation, that proud state of standing alone without teachings and without teachers, that supple willingness to listen to the divine voice in his own heart, had slowly become a memory, had been fleeting; distant and quiet, the holy source murmured, which used to be near, which used to murmur within himself. Nevertheless, many things he had learned from the Samanas, he had learned from Gotama, he had learned from his father the Brahman, had remained within him for a long time afterwards: moderate living, joy of thinking, hours of meditation, secret knowledge of the self, of his eternal entity, which is neither body nor consciousness. Many a part of this he still had, but one part after another had been submerged and had gathered dust. Just as a potter's wheel, once it has been set in motion, will keep on turning for a long time and only slowly lose its vigour and come to a stop, thus Siddhartha's soul had kept on turning the wheel of asceticism, the wheel of thinking, the wheel of differentiation for a long time, still turning, but it turned slowly and hesitantly and was close to coming to a standstill. Slowly, like humidity entering the dying stem of a tree, filling it slowly and making it rot, the world and sloth had entered Siddhartha's soul, slowly it filled his soul, made it heavy, made it tired, put it to sleep. On the other hand, his senses had become alive, there was much they had learned, much they had experienced.

Siddhartha had learned to trade, to use his power over people, to enjoy himself with a woman, he had learned to wear beautiful clothes, to give orders to servants, to bathe in perfumed waters. He had learned to eat tenderly and carefully prepared food, even fish, even meat and poultry, spices and sweets, and to drink wine, which causes sloth and forgetfulness. He had learned to play with dice and on a chess-board, to watch dancing girls, to have himself carried about in a sedan-chair, to sleep on a soft bed. But still he had felt different from and superior to the others; always he had watched them with some mockery, some mocking disdain, with the same disdain which a Samana constantly feels for the people of the world. When Kamaswami was ailing, when he was annoyed, when he felt insulted, when he was vexed by his worries as a merchant, Siddhartha had always watched it with mockery.

Just slowly and imperceptibly, as the harvest seasons and rainy seasons passed by, his mockery had become more tired, his superiority had become more quiet. Just slowly, among his growing riches, Siddhartha had assumed something of the childlike people's ways for himself, something of their childlikeness and of their fearfulness. And yet, he envied them, envied them just the more, the more similar he became to them. He envied them for the one thing that was missing from him and that they had, the importance they were able to attach to their lives, the amount of passion in their joys and fears, the fearful but sweet happiness of being constantly in love. These people were all of the time in love with themselves, with women, with their children, with honours or money, with plans or hopes. But he did not learn this from them, this out of all things, this joy of a child and this foolishness of a child; he learned from them out of all things the unpleasant ones, which he himself despised. It happened more and more often that, in the morning after having had company the night before, he stayed in bed for a long time, felt unable to think and tired. It happened that he became angry and impatient, when Kamaswami bored him with his worries. It happened that he laughed just too loud when he lost a game of dice. His face was still smarter and more spiritual than others, but it rarely laughed, and assumed, one after another, those features which are so often found in the faces of rich people, those features of discontent, of sickliness, of ill-humour, of sloth, of a lack of love. Slowly the disease of the soul, which rich people have, grabbed hold of him.

Like a veil, like a thin mist, tiredness came over Siddhartha, slowly, getting a bit denser every day, a bit murkier every month, a bit heavier every year. As a new dress becomes old in time, loses its beautiful colour in time, gets stains, gets wrinkles, gets worn off at the seams, and starts to show threadbare spots here and there, thus Siddhartha's new life, which he had started after his separation from Govinda, had grown old, lost colour and splendour as the years passed by, was gathering wrinkles and stains, and hidden at bottom, already showing its ugliness here and there, disappointment and disgust were waiting. Siddhartha did not notice it. He only noticed that this bright and reliable voice inside of him, which had awoken in him at that time and had ever guided him in his best times, had become silent.

He had been captured by the world, by lust, covetousness, sloth, and finally also by that vice which he had used to despise and mock the most as the most foolish one of all vices: greed. Property, possessions, and riches also had finally captured him; they were no longer a game and trifles to him, had become a shackle and a burden. In a strange and devious way, Siddhartha had gotten into this final and most base of all dependencies, by means of the game of dice. It was since that time, when he had stopped being a Samana in his heart, that Siddhartha began to play the game for money and precious things, which he at other times only joined with a smile and casually as a custom of the childlike people, with an increasing rage and passion. He was a feared gambler, few dared to take him on, so high and audacious were his stakes. He played the game due to a pain of his heart, losing and wasting his wretched money in the game brought him an angry joy, in no other way he could demonstrate his disdain for wealth, the merchants' false god, more clearly and more mockingly. Thus he gambled with high stakes and mercilessly, hating himself, mocking himself, won thousands, threw away thousands, lost money, lost jewelry, lost a house in the country, won again, lost again. That fear, that terrible and petrifying fear, which he felt while he was rolling the dice, while he was worried about losing high stakes, that fear he loved and sought to always renew it, always increase it, always get it to a slightly higher level, for in this feeling alone he still felt something like happiness, something like an intoxication, something like an elevated form of life in the midst of his saturated, lukewarm, dull life.

And after each big loss, his mind was set on new riches, pursued the trade more zealously, forced his debtors more strictly to pay, because he wanted to continue gambling, he wanted to continue squandering, continue demonstrating his disdain of wealth. Siddhartha lost his calmness when losses occurred, lost his patience when he was not paid on time, lost his kindness towards beggars, lost his disposition for giving away and loaning money to those who petitioned him. He, who gambled away tens of thousands at one roll of the dice and laughed at it, became more strict and more petty in his business, occasionally dreaming at night about money! And whenever he woke up from this ugly spell, whenever he found his face in the mirror at the bedroom's wall to have aged and become more ugly, whenever embarrassment and disgust came over him, he continued fleeing, fleeing into a new game, fleeing into a numbing of his mind brought on by sex, by wine, and from there he fled back into the urge to pile up and obtain possessions. In this pointless cycle he ran, growing tired, growing old, growing ill.

Then the time came when a dream warned him. He had spent the hours of the evening with Kamala, in her beautiful pleasure-garden. They had been sitting under the trees, talking, and Kamala had said thoughtful words, words behind which a sadness and tiredness lay hidden. She had asked him to tell her about Gotama, and could not hear enough of him, how clear his eyes, how still and beautiful his mouth, how kind his smile, how peaceful his walk had been. For a long time, he had to tell her about the exalted Buddha, and Kamala had sighed and had said: "One day, perhaps soon, I'll also follow that Buddha. I'll give him my pleasure-garden for a gift and take my refuge in his teachings." But after this, she had aroused him, and had tied him to her in

the act of making love with painful fervour, biting and in tears, as if, once more, she wanted to squeeze the last sweet drop out of this vain, fleeting pleasure. Never before, it had become so strangely clear to Siddhartha, how closely lust was akin to death. Then he had lain by her side, and Kamala's face had been close to him, and under her eyes and next to the corners of her mouth he had, as clearly as never before, read a fearful inscription, an inscription of small lines, of slight grooves, an inscription reminiscent of autumn and old age, just as Siddhartha himself, who was only in his forties, had already noticed, here and there, gray hairs among his black ones. Tiredness was written on Kamala's beautiful face, tiredness from walking a long path, which has no happy destination, tiredness and the beginning of withering, and concealed, still unsaid, perhaps not even conscious anxiety: fear of old age, fear of the autumn, fear of having to die. With a sigh, he had bid his farewell to her, the soul full of reluctance, and full of concealed anxiety.

Then, Siddhartha had spent the night in his house with dancing girls and wine, had acted as if he was superior to them, towards the fellow-members of his caste, though this was no longer true, had drunk much wine and gone to bed a long time after midnight, being tired and yet excited, close to weeping and despair, and had for a long time sought to sleep in vain, his heart full of misery which he thought he could not bear any longer, full of a disgust which he felt penetrating his entire body like the lukewarm, repulsive taste of the wine, the just too sweet, dull music, the just too soft smile of the dancing girls, the just too sweet scent of their hair and breasts. But more than by anything else, he was disgusted by himself, by his perfumed hair, by the smell of wine from his mouth, by the flabby tiredness and listlessness of his skin. Like when someone, who has eaten and drunk far too much, vomits it back up again with agonising pain and is nevertheless glad about the relief, thus this sleepless man wished to free himself of these pleasures, these habits and all of this pointless life and himself, in an immense burst of disgust. Not until the light of the morning and the beginning of the first activities in the street before his city-house, he had slightly fallen asleep, had found for a few moments a half unconsciousness, a hint of sleep. In those moments, he had a dream:

Kamala owned a small, rare singing bird in a golden cage. Of this bird, he dreamt. He dreamt: this bird had become mute, who at other times always used to sing in the morning, and since this arose his attention, he stepped in front of the cage and looked inside; there the small bird was dead and lay stiff on the ground. He took it out, weighed it for a moment in his hand, and then threw it away, out in the street, and in the same moment, he felt terribly shocked, and his heart hurt, as if he had thrown away from himself all value and everything good by throwing out this dead bird.

Starting up from this dream, he felt encompassed by a deep sadness. Worthless, so it seemed to him, worthless and pointless was the way he had been going through life; nothing which was alive, nothing which was in some way delicious or worth keeping he had left in his hands. Alone he stood there and empty like a castaway on the shore.

With a gloomy mind, Siddhartha went to the pleasure-garden he owned, locked the gate, sat down under a mango-tree, felt death in his heart and horror in his chest, sat and sensed how everything died in him, withered in him, came to an end in him. By and by, he gathered his thoughts, and in his mind, he once again went the entire path of his life, starting with the first days he could remember. When was there ever a time when he had experienced happiness, felt a true bliss? Oh yes, several times he had experienced such a thing. In his years as a boy, he had had a taste of it, when he had obtained praise from the Brahmans, he had felt it in his heart: "There is a path in front of the one who has distinguished himself in the recitation of the holy verses, in the dispute with the learned ones, as an assistant in the offerings." Then, he had felt it in his heart: "There is a path in front of you, you are destined for, the gods are awaiting you." And again, as a young man, when the ever rising, upward fleeing, goal of all thinking had ripped him out of and up from the multitude of those seeking the same goal, when he wrestled in pain for the purpose of Brahman, when every obtained knowledge only kindled new thirst in him, then again he had, in the midst of the thirst, in the midst of the pain felt this very same thing: "Go on! Go on! You are called upon!" He had heard this voice when he had left his home and had chosen the life of a Samana, and again when he had gone away from the Samanas to that perfected one, and also when he had gone away from him to the uncertain. For how long had he not heard this voice any more, for how long had he reached no height any more, how even and dull was the manner in which his path had passed through life, for many long years, without a high goal, without thirst, without elevation, content with small lustful pleasures and yet never satisfied! For all of these many years, without knowing it himself, he had tried hard and longed to become a man like those many, like those children, and in all this, his life had been much more miserable and poorer than theirs, and their goals were not his, nor their worries; after all, that entire world of the Kamaswami-people had only been a game to him, a dance he would watch, a comedy. Only Kamala had been dear, had been valuable to him—but was she still thus? Did he still need her, or she him? Did they not play a game without an ending? Was it necessary to live for this? No, it was not necessary! The name of this game was Sansara, a game for children, a game which was perhaps enjoyable to play once, twice, ten times—but for ever and ever over again?

Then, Siddhartha knew that the game was over, that he could not play it any more. Shivers ran over his body, inside of him, so he felt, something had died.

That entire day, he sat under the mango-tree, thinking of his father, thinking of Govinda, thinking of Gotama. Did he have to leave them to become a Kamaswami? He still sat there, when the night had fallen. When, looking up, he caught sight of the stars, he thought: “Here I’m sitting under my mango-tree, in my pleasure-garden.” He smiled a little—was it really necessary, was it right, was it not as foolish game, that he owned a mango-tree, that he owned a garden?

He also put an end to this, this also died in him. He rose, bid his farewell to the mango-tree, his farewell to the pleasure-garden. Since he had been without food this day, he felt strong hunger, and thought of his house in the city, of his chamber and bed, of the table with the meals on it. He smiled tiredly, shook himself, and bid his farewell to these things.

In the same hour of the night, Siddhartha left his garden, left the city, and never came back. For a long time, Kamaswami had people look for him, thinking that he had fallen into the hands of robbers. Kamala had no one look for him. When she was told that Siddhartha had disappeared, she was not astonished. Did she not always expect it? Was he not a Samana, a man who was at home nowhere, a pilgrim? And most of all, she had felt this the last time they had been together, and she was happy, in spite of all the pain of the loss, that she had pulled him so affectionately to her heart for this last time, that she had felt one more time to be so completely possessed and penetrated by him.

When she received the first news of Siddhartha’s disappearance, she went to the window, where she held a rare singing bird captive in a golden cage. She opened the door of the cage, took the bird out and let it fly. For a long time, she gazed after it, the flying bird. From this day on, she received no more visitors and kept her house locked. But after some time, she became aware that she was pregnant from the last time she was together with Siddhartha.

BY THE RIVER

Siddhartha walked through the forest, was already far from the city, and knew nothing but that one thing, that there was no going back for him, that this life, as he had lived it for many years until now, was over and done away with, and that he had tasted all of it, sucked everything out of it until he was disgusted with it. Dead was the singing bird he had dreamt of. Dead was the bird in his heart. Deeply, he had been entangled in Sansara, he had sucked up disgust and death from all sides into his body, like a sponge sucks up water until it is full. And full he was, full of the feeling of been sick of it, full of misery, full of death, there was nothing left in this world which could have attracted him, given him joy, given him comfort.

Passionately he wished to know nothing about himself anymore, to have rest, to be dead. If there only was a lightning-bolt to strike him dead! If there only was a tiger to devour him! If there only was a wine, a poison which would numb his senses, bring him forgetfulness and sleep, and no awakening from that! Was there still any kind of filth he had not soiled himself with, a sin or foolish act he had not committed, a dreariness of the soul he had not brought upon himself? Was it still at all possible to be alive? Was it possible to breathe in again and again, to breathe out, to feel hunger, to eat again, to sleep again, to sleep with a woman again? Was this cycle not exhausted and brought to a conclusion for him?

Siddhartha reached the large river in the forest, the same river over which a long time ago, when he had still been a young man and came from the town of Gotama, a ferryman had conducted him. By this river he stopped, hesitantly he stood at the bank. Tiredness and hunger had weakened him, and whatever for should he walk on, wherever to, to which goal? No, there were no more goals, there was nothing left but the deep, painful yearning to shake off this whole desolate dream, to spit out this stale wine, to put an end to this miserable and shameful life.

A hang bent over the bank of the river, a coconut-tree; Siddhartha leaned against its trunk with his shoulder, embraced the trunk with one arm, and looked down into the green water, which ran and ran under him, looked down and found himself to be entirely filled with the wish to let go and to drown in these waters. A frightening emptiness was reflected back at him by the water, answering to the terrible emptiness in his soul. Yes, he had reached the end. There was nothing left for him, except to annihilate himself, except to smash the failure into which he had shaped his life, to throw it away, before the feet of mockingly laughing gods. This was the great vomiting he had longed for: death, the smashing to bits of the form he hated! Let him be food for fishes, this dog Siddhartha, this lunatic, this depraved and rotten body, this weakened and abused soul! Let him be food for fishes and crocodiles, let him be chopped to bits by the daemons!

With a distorted face, he stared into the water, saw the reflection of his face and spit at it. In deep tiredness, he took his arm away from the trunk of the tree and turned a bit, in order to let himself fall straight down, in order to finally drown. With his eyes closed, he slipped towards death.

Then, out of remote areas of his soul, out of past times of his now weary life, a sound stirred up. It was a word, a syllable, which he, without thinking, with a slurred voice, spoke to himself, the old word which is the beginning and the end of all prayers of the Brahmans, the holy “Om”, which roughly means “that what is perfect” or “the completion”. And in the moment when the sound of “Om” touched Siddhartha’s ear, his dormant spirit suddenly woke up and realized the foolishness of his actions.

Siddhartha was deeply shocked. So this was how things were with him, so doomed was he, so much he had lost his way and was forsaken by all knowledge, that he had been able to seek death, that this wish, this wish of a child, had been able to grow in him: to find rest by annihilating his body! What all agony of these recent times, all sobering realizations, all desperation had not brought about, this was brought on by this moment, when the Om entered his consciousness: he became aware of himself in his misery and in his error.

Om! he spoke to himself: Om! and again he knew about Brahman, knew about the indestructibility of life, knew about all that is divine, which he had forgotten.

But this was only a moment, flash. By the foot of the coconut-tree, Siddhartha collapsed, struck down by tiredness, mumbling Om, placed his head on the root of the tree and fell into a deep sleep.

Deep was his sleep and without dreams, for a long time he had not known such a sleep any more. When he woke up after many hours, he felt as if ten years had passed, he heard the water quietly flowing, did not know where he was and who had brought him here, opened his eyes, saw with astonishment that there were trees and the sky above him, and he remembered where he was and how he got here. But it took him a long while for this, and the past seemed to him as if it had been covered by a veil, infinitely distant, infinitely far away, infinitely meaningless. He only knew that his previous life (in the first moment when he thought about it, this past life seemed to him like a very old, previous incarnation, like an early pre-birth of his present self)—that his previous life had been abandoned by him, that, full of disgust and wretchedness, he had even intended to throw his life away, but that by a river, under a coconut-tree, he had come to his senses, the holy word Om on his lips, that then he had fallen asleep and had now woken up and was looking at the world as a new man. Quietly, he spoke the word Om to himself, speaking which he had fallen asleep, and it seemed to him as if his entire long sleep had been nothing but a long meditative recitation of Om, a thinking of Om, a submergence and complete entering into Om, into the nameless, the perfected.

What a wonderful sleep had this been! Never before by sleep, he had been thus refreshed, thus renewed, thus rejuvenated! Perhaps, he had really died, had drowned and was reborn in a new body? But no, he knew himself, he knew his hands and his feet, knew the place where he lay, knew this self in his chest, this Siddhartha, the eccentric, the weird one, but this Siddhartha was nevertheless transformed, was renewed, was strangely well rested, strangely awake, joyful and curious.

Siddhartha straightened up, then he saw a person sitting opposite to him, an unknown man, a monk in a yellow robe with a shaven head, sitting in the position of pondering. He observed the man, who had neither hair on his head nor a beard, and he had not observed him for long when he recognised this monk as Govinda, the friend of his youth, Govinda who had taken his refuge with the exalted Buddha. Govinda had aged, he too, but still his face bore the same features, expressed zeal, faithfulness, searching, timidness. But when Govinda now, sensing his gaze, opened his eyes and looked at him, Siddhartha saw that Govinda did not recognise him. Govinda was happy to find him awake; apparently, he had been sitting here for a long time and been waiting for him to wake up, though he did not know him.

“I have been sleeping,” said Siddhartha. “However did you get here?”

“You have been sleeping,” answered Govinda. “It is not good to be sleeping in such places, where snakes often are and the animals of the forest have their paths. I, oh sir, am a follower of the exalted Gotama, the Buddha, the Sakyamuni, and have been on a pilgrimage together with several of us on this path, when I saw you lying and sleeping in a place where it is dangerous to sleep. Therefore, I sought to wake you up, oh sir, and since I saw that your sleep was very deep, I stayed behind from my group and sat with you. And then, so it seems, I have fallen asleep myself, I who wanted to guard your sleep. Badly, I have served you, tiredness has overwhelmed me. But now that you’re awake, let me go to catch up with my brothers.”

“I thank you, Samana, for watching out over my sleep,” spoke Siddhartha. “You’re friendly, you followers of the exalted one. Now you may go then.”

“I’m going, sir. May you, sir, always be in good health.”

“I thank you, Samana.”

Govinda made the gesture of a salutation and said: “Farewell.”

“Farewell, Govinda,” said Siddhartha.

The monk stopped.

“Permit me to ask, sir, from where do you know my name?”

Now, Siddhartha smiled.

“I know you, oh Govinda, from your father’s hut, and from the school of the Brahmans, and from the offerings, and from our walk to the Samanas, and from that hour when you took your refuge with the exalted one in the grove Jetavana.”

“You’re Siddhartha,” Govinda exclaimed loudly. “Now, I’m recognising you, and don’t comprehend any more how I couldn’t recognise you right away. Be welcome, Siddhartha, my joy is great, to see you again.”

“It also gives me joy, to see you again. You’ve been the guard of my sleep, again I thank you for this, though I wouldn’t have required any guard. Where are you going to, oh friend?”

“I’m going nowhere. We monks are always travelling, whenever it is not the rainy season, we always move from one place to another, live according to the rules of the teachings passed on to us, accept alms, move on. It is always like this. But you, Siddhartha, where are you going to?”

Quoth Siddhartha: “With me too, friend, it is as it is with you. I’m going nowhere. I’m just travelling. I’m on a pilgrimage.”

Govinda spoke: “You’re saying: you’re on a pilgrimage, and I believe you. But, forgive me, oh Siddhartha, you do not look like a pilgrim. You’re wearing a rich man’s garments, you’re wearing the shoes of a distinguished gentleman, and your hair, with the fragrance of perfume, is not a pilgrim’s hair, not the hair of a Samana.”

“Right so, my dear, you have observed well, your keen eyes see everything. But I haven’t said to you that I was a Samana. I said: I’m on a pilgrimage. And so it is: I’m on a pilgrimage.”

“You’re on a pilgrimage,” said Govinda. “But few would go on a pilgrimage in such clothes, few in such shoes, few with such hair. Never I have met such a pilgrim, being a pilgrim myself for many years.”

“I believe you, my dear Govinda. But now, today, you’ve met a pilgrim just like this, wearing such shoes, such a garment. Remember, my dear: Not eternal is the world of appearances, not eternal, anything but eternal are our garments and the style of our hair, and our hair and bodies themselves. I’m wearing a rich man’s clothes, you’ve seen this quite right. I’m wearing them, because I have been a rich man, and I’m wearing my hair like the worldly and lustful people, for I have been one of them.”

“And now, Siddhartha, what are you now?”

“I don’t know it, I don’t know it just like you. I’m travelling. I was a rich man and am no rich man any more, and what I’ll be tomorrow, I don’t know.”

“You’ve lost your riches?”

“I’ve lost them or they me. They somehow happened to slip away from me. The wheel of physical manifestations is turning quickly, Govinda. Where is Siddhartha the Brahman? Where is Siddhartha the Samana? Where is Siddhartha the rich man? Non-eternal things change quickly, Govinda, you know it.”

Govinda looked at the friend of his youth for a long time, with doubt in his eyes. After that, he gave him the salutation which one would use on a gentleman and went on his way.

With a smiling face, Siddhartha watched him leave, he loved him still, this faithful man, this fearful man. And how could he not have loved everybody and everything in this moment, in the glorious hour after his wonderful sleep, filled with Om! The enchantment, which had happened inside of him in his sleep and by means of the Om, was this very thing that he loved everything, that he was full of joyful love for everything he saw. And it was this very thing, so it seemed to him now, which had been his sickness before, that he was not able to love anybody or anything.

With a smiling face, Siddhartha watched the leaving monk. The sleep had strengthened him much, but hunger gave him much pain, for by now he had not eaten for two days, and the times were long past when he had been tough against hunger. With sadness, and yet also with a smile, he thought of that time. In those days, so he remembered, he had boasted of three things to Kamala, had been able to do three noble and undefeatable feats: fasting—waiting—thinking. These had been his possessions, his power and strength, his solid staff; in the busy, laborious years of his youth, he had learned these three feats, nothing else. And now, they had abandoned him, none of them was his any more, neither fasting, nor waiting, nor thinking. For the most wretched things, he had given them up, for what fades most quickly, for sensual lust, for the good life, for riches! His life had indeed been strange. And now, so it seemed, now he had really become a childlike person.

Siddhartha thought about his situation. Thinking was hard on him, he did not really feel like it, but he forced himself.

Now, he thought, since all these most easily perishing things have slipped from me again, now I'm standing here under the sun again just as I have been standing here a little child, nothing is mine, I have no abilities, there is nothing I could bring about, I have learned nothing. How wondrous is this! Now, that I'm no longer young, that my hair is already half gray, that my strength is fading, now I'm starting again at the beginning and as a child! Again, he had to smile. Yes, his fate had been strange! Things were going downhill with him, and now he was again facing the world void and naked and stupid. But he could not feel sad about this, no, he even felt a great urge to laugh, to laugh about himself, to laugh about this strange, foolish world.

"Things are going downhill with you!" he said to himself, and laughed about it, and as he was saying it, he happened to glance at the river, and he also saw the river going downhill, always moving on downhill, and singing and being happy through it all. He liked this well, kindly he smiled at the river. Was this not the river in which he had intended to drown himself, in past times, a hundred years ago, or had he dreamed this?

Wondrous indeed was my life, so he thought, wondrous detours it has taken. As a boy, I had only to do with gods and offerings. As a youth, I had only to do with asceticism, with thinking and meditation, was searching for Brahman, worshipped the eternal in the Atman. But as a young man, I followed the penitents, lived in the forest, suffered of heat and frost, learned to hunger, taught my body to become dead. Wonderfully, soon afterwards, insight came towards me in the form of the great Buddha's teachings, I felt the knowledge of the oneness of the world circling in me like my own blood. But I also had to leave Buddha and the great knowledge. I went and learned the art of love with Kamala, learned trading with Kamaswami, piled up money, wasted money, learned to love my stomach, learned to please my senses. I had to spend many years losing my spirit, to unlearn thinking again, to forget the oneness. Isn't it just as if I had turned slowly and on a long detour from a man into a child, from a thinker into a childlike person? And yet, this path has been very good; and yet, the bird in my chest has not died. But what a path has this been! I had to pass through so much stupidity, through so much vice, through so many errors, through so much disgust and disappointments and woe, just to become a child again and to be able to start over. But it was right so, my heart says "Yes" to it, my eyes smile to it. I've had to experience despair, I've had to sink down to the most foolish one of all thoughts, to the thought of suicide, in order to be able to experience divine grace, to hear Om again, to be able to sleep properly and awake properly again. I had to become a fool, to find Atman in me again. I had to sin, to be able to live again. Where else might my path lead me to? It is foolish, this path, it moves in loops, perhaps it is going around in a circle. Let it go as it likes, I want to take it.

Wonderfully, he felt joy rolling like waves in his chest.

Wherever from, he asked his heart, where from did you get this happiness? Might it come from that long, good sleep, which has done me so good? Or from the word Om, which I said? Or from the fact that I have escaped, that I have completely fled, that I am finally free again and am standing like a child under the sky? Oh how good is it to have fled, to have become free! How clean and beautiful is the air here, how good to breathe! There, where I ran away from, there everything smelled of ointments, of spices, of wine, of excess, of sloth. How I hated this world of the rich, of those who revel in fine food, of the gamblers! How I hated myself for staying in this terrible world for so long! How I hated myself, have deprived, poisoned, tortured myself, have made myself old and evil! No, never again I will, as I used to like doing so much, delude myself into thinking that Siddhartha was wise! But this one thing I

have done well, this I like, this I must praise, that there is now an end to that hatred against myself, to that foolish and dreary life! I praise you, Siddhartha, after so many years of foolishness, you have once again had an idea, have done something, have heard the bird in your chest singing and have followed it!

Thus he praised himself, found joy in himself, listened curiously to his stomach, which was rumbling with hunger. He had now, so he felt, in these recent times and days, completely tasted and spit out, devoured up to the point of desperation and death, a piece of suffering, a piece of misery. Like this, it was good. For much longer, he could have stayed with Kamaswami, made money, wasted money, filled his stomach, and let his soul die of thirst; for much longer he could have lived in this soft, well upholstered hell, if this had not happened: the moment of complete hopelessness and despair, that most extreme moment, when he hung over the rushing waters and was ready to destroy himself. That he had felt this despair, this deep disgust, and that he had not succumbed to it, that the bird, the joyful source and voice in him was still alive after all, this was why he felt joy, this was why he laughed, this was why his face was smiling brightly under his hair which had turned gray.

“It is good,” he thought, “to get a taste of everything for oneself, which one needs to know. That lust for the world and riches do not belong to the good things, I have already learned as a child. I have known it for a long time, but I have experienced only now. And now I know it, don’t just know it in my memory, but in my eyes, in my heart, in my stomach. Good for me, to know this!”

For a long time, he pondered his transformation, listened to the bird, as it sang for joy. Had not this bird died in him, had he not felt its death? No, something else from within him had died, something which already for a long time had yearned to die. Was it not this what he used to intend to kill in his ardent years as a penitent? Was this not his self, his small, frightened, and proud self, he had wrestled with for so many years, which had defeated him again and again, which was back again after every killing, prohibited joy, felt fear? Was it not this, which today had finally come to its death, here in the forest, by this lovely river? Was it not due to this death, that he was now like a child, so full of trust, so without fear, so full of joy?

Now Siddhartha also got some idea of why he had fought this self in vain as a Brahman, as a penitent. Too much knowledge had held him back, too many holy verses, too many sacrificial rules, to much self-castigation, so much doing and striving for that goal! Full of arrogance, he had been, always the smartest, always working the most, always one step ahead of all others, always the knowing and spiritual one, always the priest or wise one. Into being a priest, into this arrogance, into this spirituality, his self had retreated, there it sat firmly and grew, while he thought he would kill it by fasting and penance. Now he saw it and saw that the secret voice had been right, that no teacher would ever have been able to bring about his salvation. Therefore, he had to go out into the world, lose himself to lust and power, to woman and money, had to become a merchant, a dice-gambler, a drinker, and a greedy person, until the priest and Samana in him was dead. Therefore, he had to continue bearing these ugly years, bearing the disgust, the teachings, the pointlessness of a dreary and wasted life up to the end, up to bitter despair, until Siddhartha the lustful, Siddhartha the greedy could also die. He had died, a new Siddhartha had woken up from the sleep. He would also grow old, he would also eventually have to die, mortal was Siddhartha, mortal was every physical form. But today he was young, was a child, the new Siddhartha, and was full of joy.

He thought these thoughts, listened with a smile to his stomach, listened gratefully to a buzzing bee. Cheerfully, he looked into the rushing river, never before he had liked a water so well as this one, never before he had perceived the voice and the parable of the moving water thus strongly and beautifully. It seemed to him, as if the river had something special to tell him, something he did not know yet, which was still awaiting him. In this river, Siddhartha had intended to drown himself, in it the old, tired, desperate Siddhartha had drowned today. But the new Siddhartha felt a deep love for this rushing water, and decided for himself, not to leave it very soon.

THE FERRYMAN

By this river I want to stay, thought Siddhartha, it is the same which I have crossed a long time ago on my way to the childlike people, a friendly ferryman had guided me then, he is the one I want to go to, starting out from his hut, my path had led me at that time into a new life, which had now grown old and is dead—my present path, my present new life, shall also take its start there!

Tenderly, he looked into the rushing water, into the transparent green, into the crystal lines of its drawing, so rich in secrets. Bright pearls he saw rising from the deep, quiet bubbles of air floating on the reflecting surface, the blue of the sky being depicted in it. With a thousand eyes, the river looked at him, with green ones, with white ones, with crystal ones, with sky-blue ones. How did he love this water, how did it delight him, how grateful was he to it! In his heart he heard the voice talking, which was newly awaking,

and it told him: Love this water! Stay near it! Learn from it! Oh yes, he wanted to learn from it, he wanted to listen to it. He who would understand this water and its secrets, so it seemed to him, would also understand many other things, many secrets, all secrets.

But out of all secrets of the river, he today only saw one, this one touched his soul. He saw: this water ran and ran, incessantly it ran, and was nevertheless always there, was always at all times the same and yet new in every moment! Great be he who would grasp this, understand this! He understood and grasped it not, only felt some idea of it stirring, a distant memory, divine voices.

Siddhartha rose, the workings of hunger in his body became unbearable. In a daze he walked on, up the path by the bank, upriver, listened to the current, listened to the rumbling hunger in his body.

When he reached the ferry, the boat was just ready, and the same ferryman who had once transported the young Samana across the river, stood in the boat, Siddhartha recognised him, he had also aged very much.

“Would you like to ferry me over?” he asked.

The ferryman, being astonished to see such an elegant man walking along and on foot, took him into his boat and pushed it off the bank.

“It’s a beautiful life you have chosen for yourself,” the passenger spoke. “It must be beautiful to live by this water every day and to cruise on it.”

With a smile, the man at the oar moved from side to side: “It is beautiful, sir, it is as you say. But isn’t every life, isn’t every work beautiful?”

“This may be true. But I envy you for yours.”

“Ah, you would soon stop enjoying it. This is nothing for people wearing fine clothes.”

Siddhartha laughed. “Once before, I have been looked upon today because of my clothes, I have been looked upon with distrust. Wouldn’t you, ferryman, like to accept these clothes, which are a nuisance to me, from me? For you must know, I have no money to pay your fare.”

“You’re joking, sir,” the ferryman laughed.

“I’m not joking, friend. Behold, once before you have ferried me across this water in your boat for the immaterial reward of a good deed. Thus, do it today as well, and accept my clothes for it.”

“And do you, sir, intent to continue travelling without clothes?”

“Ah, most of all I wouldn’t want to continue travelling at all. Most of all I would rather you, ferryman, gave me an old loincloth and kept me with you as your assistant, or rather as your trainee, for I’ll have to learn first how to handle the boat.”

For a long time, the ferryman looked at the stranger, searching.

“Now I recognise you,” he finally said. “At one time, you’ve slept in my hut, this was a long time ago, possibly more than twenty years ago, and you’ve been ferried across the river by me, and we parted like good friends. Haven’t you been a Samana? I can’t think of your name any more.”

“My name is Siddhartha, and I was a Samana, when you’ve last seen me.”

“So be welcome, Siddhartha. My name is Vasudeva. You will, so I hope, be my guest today as well and sleep in my hut, and tell me, where you’re coming from and why these beautiful clothes are such a nuisance to you.”

They had reached the middle of the river, and Vasudeva pushed the oar with more strength, in order to overcome the current. He worked calmly, his eyes fixed in on the front of the boat, with brawny arms. Siddhartha sat and watched him, and remembered, how once before, on that last day of his time as a Samana, love for this man had stirred in his heart. Gratefully, he accepted Vasudeva’s invitation. When they had reached the bank, he helped him to tie the boat to the stakes; after this, the ferryman asked him to enter the hut, offered him bread and water, and Siddhartha ate with eager pleasure, and also ate with eager pleasure of the mango fruits Vasudeva offered him.

Afterwards, it was almost the time of the sunset, they sat on a log by the bank, and Siddhartha told the ferryman about where he originally came from and about his life, as he had seen it before his eyes today, in that hour of despair. Until late at night, lasted his tale.

Vasudeva listened with great attention. Listening carefully, he let everything enter his mind, birthplace and childhood, all that learning, all that searching, all joy, all distress. This was among the ferryman's virtues one of the greatest: like only a few, he knew how to listen. Without him having spoken a word, the speaker sensed how Vasudeva let his words enter his mind, quiet, open, waiting, how he did not lose a single one, awaited not a single one with impatience, did not add his praise or rebuke, was just listening. Siddhartha felt, what a happy fortune it is, to confess to such a listener, to bury in his heart his own life, his own search, his own suffering.

But in the end of Siddhartha's tale, when he spoke of the tree by the river, and of his deep fall, of the holy Om, and how he had felt such a love for the river after his slumber, the ferryman listened with twice the attention, entirely and completely absorbed by it, with his eyes closed.

But when Siddhartha fell silent, and a long silence had occurred, then Vasudeva said: "It is as I thought. The river has spoken to you. It is your friend as well, it speaks to you as well. That is good, that is very good. Stay with me, Siddhartha, my friend. I used to have a wife, her bed was next to mine, but she has died a long time ago, for a long time, I have lived alone. Now, you shall live with me, there is space and food for both."

"I thank you," said Siddhartha, "I thank you and accept. And I also thank you for this, Vasudeva, for listening to me so well! These people are rare who know how to listen. And I did not meet a single one who knew it as well as you did. I will also learn in this respect from you."

"You will learn it," spoke Vasudeva, "but not from me. The river has taught me to listen, from it you will learn it as well. It knows everything, the river, everything can be learned from it. See, you've already learned this from the water too, that it is good to strive downwards, to sink, to seek depth. The rich and elegant Siddhartha is becoming an oarsman's servant, the learned Brahman Siddhartha becomes a ferryman: this has also been told to you by the river. You'll learn that other thing from it as well."

Quoth Siddhartha after a long pause: "What other thing, Vasudeva?"

Vasudeva rose. "It is late," he said, "let's go to sleep. I can't tell you that other thing, oh friend. You'll learn it, or perhaps you know it already. See, I'm no learned man, I have no special skill in speaking, I also have no special skill in thinking. All I'm able to do is to listen and to be godly, I have learned nothing else. If I was able to say and teach it, I might be a wise man, but like this I am only a ferryman, and it is my task to ferry people across the river. I have transported many, thousands; and to all of them, my river has been nothing but an obstacle on their travels. They travelled to seek money and business, and for weddings, and on pilgrimages, and the river was obstructing their path, and the ferryman's job was to get them quickly across that obstacle. But for some among thousands, a few, four or five, the river has stopped being an obstacle, they have heard its voice, they have listened to it, and the river has become sacred to them, as it has become sacred to me. Let's rest now, Siddhartha."

Siddhartha stayed with the ferryman and learned to operate the boat, and when there was nothing to do at the ferry, he worked with Vasudeva in the rice-field, gathered wood, plucked the fruit off the banana-trees. He learned to build an oar, and learned to mend the boat, and to weave baskets, and was joyful because of everything he learned, and the days and months passed quickly. But more than Vasudeva could teach him, he was taught by the river. Incessantly, he learned from it. Most of all, he learned from it to listen, to pay close attention with a quiet heart, with a waiting, opened soul, without passion, without a wish, without judgement, without an opinion.

In a friendly manner, he lived side by side with Vasudeva, and occasionally they exchanged some words, few and at length thought about words. Vasudeva was no friend of words; rarely, Siddhartha succeeded in persuading him to speak.

"Did you," so he asked him at one time, "did you too learn that secret from the river: that there is no time?"

Vasudeva's face was filled with a bright smile.

"Yes, Siddhartha," he spoke. "It is this what you mean, isn't it: that the river is everywhere at once, at the source and at the mouth, at the waterfall, at the ferry, at the rapids, in the sea, in the mountains, everywhere at once, and that there is only the present time for it, not the shadow of the past, not the shadow of the future?"

“This it is,” said Siddhartha. “And when I had learned it, I looked at my life, and it was also a river, and the boy Siddhartha was only separated from the man Siddhartha and from the old man Siddhartha by a shadow, not by something real. Also, Siddhartha’s previous births were no past, and his death and his return to Brahma was no future. Nothing was, nothing will be; everything is, everything has existence and is present.”

Siddhartha spoke with ecstasy; deeply, this enlightenment had delighted him. Oh, was not all suffering time, were not all forms of tormenting oneself and being afraid time, was not everything hard, everything hostile in the world gone and overcome as soon as one had overcome time, as soon as time would have been put out of existence by one’s thoughts? In ecstatic delight, he had spoken, but Vasudeva smiled at him brightly and nodded in confirmation; silently he nodded, brushed his hand over Siddhartha’s shoulder, turned back to his work.

And once again, when the river had just increased its flow in the rainy season and made a powerful noise, then said Siddhartha: “Isn’t it so, oh friend, the river has many voices, very many voices? Hasn’t it the voice of a king, and of a warrior, and of a bull, and of a bird of the night, and of a woman giving birth, and of a sighing man, and a thousand other voices more?”

“So it is,” Vasudeva nodded, “all voices of the creatures are in its voice.”

“And do you know,” Siddhartha continued, “what word it speaks, when you succeed in hearing all of its ten thousand voices at once?”

Happily, Vasudeva’s face was smiling, he bent over to Siddhartha and spoke the holy Om into his ear. And this had been the very thing which Siddhartha had also been hearing.

And time after time, his smile became more similar to the ferryman’s, became almost just as bright, almost just as thoroughly glowing with bliss, just as shining out of thousand small wrinkles, just as alike to a child’s, just as alike to an old man’s. Many travellers, seeing the two ferrymen, thought they were brothers. Often, they sat in the evening together by the bank on the log, said nothing and both listened to the water, which was no water to them, but the voice of life, the voice of what exists, of what is eternally taking shape. And it happened from time to time that both, when listening to the river, thought of the same things, of a conversation from the day before yesterday, of one of their travellers, the face and fate of whom had occupied their thoughts, of death, of their childhood, and that they both in the same moment, when the river had been saying something good to them, looked at each other, both thinking precisely the same thing, both delighted about the same answer to the same question.

There was something about this ferry and the two ferrymen which was transmitted to others, which many of the travellers felt. It happened occasionally that a traveller, after having looked at the face of one of the ferrymen, started to tell the story of his life, told about pains, confessed evil things, asked for comfort and advice. It happened occasionally that someone asked for permission to stay for a night with them to listen to the river. It also happened that curious people came, who had been told that there were two wise men, or sorcerers, or holy men living by that ferry. The curious people asked many questions, but they got no answers, and they found neither sorcerers nor wise men, they only found two friendly little old men, who seemed to be mute and to have become a bit strange and gaga. And the curious people laughed and were discussing how foolishly and gullibly the common people were spreading such empty rumours.

The years passed by, and nobody counted them. Then, at one time, monks came by on a pilgrimage, followers of Gotama, the Buddha, who were asking to be ferried across the river, and by them the ferrymen were told that they were most hurriedly walking back to their great teacher, for the news had spread the exalted one was deadly sick and would soon die his last human death, in order to become one with the salvation. It was not long, until a new flock of monks came along on their pilgrimage, and another one, and the monks as well as most of the other travellers and people walking through the land spoke of nothing else than of Gotama and his impending death. And as people are flocking from everywhere and from all sides, when they are going to war or to the coronation of a king, and are gathering like ants in droves, thus they flocked, like being drawn on by a magic spell, to where the great Buddha was awaiting his death, where the huge event was to take place and the great perfected one of an era was to become one with the glory.

Often, Siddhartha thought in those days of the dying wise man, the great teacher, whose voice had admonished nations and had awoken hundreds of thousands, whose voice he had also once heard, whose holy face he had also once seen with respect. Kindly, he thought of him, saw his path to perfection before his eyes, and remembered with a smile those words which he had once, as a young man, said to him, the exalted one. They had been, so it seemed to him, proud and precocious words; with a smile, he

remembered them. For a long time he knew that there was nothing standing between Gotama and him any more, though he was still unable to accept his teachings. No, there was no teaching a truly searching person, someone who truly wanted to find, could accept. But he who had found, he could approve of any teachings, every path, every goal, there was nothing standing between him and all the other thousand any more who lived in that what is eternal, who breathed what is divine.

On one of these days, when so many went on a pilgrimage to the dying Buddha, Kamala also went to him, who used to be the most beautiful of the courtesans. A long time ago, she had retired from her previous life, had given her garden to the monks of Gotama as a gift, had taken her refuge in the teachings, was among the friends and benefactors of the pilgrims. Together with Siddhartha the boy, her son, she had gone on her way due to the news of the near death of Gotama, in simple clothes, on foot. With her little son, she was travelling by the river; but the boy had soon grown tired, desired to go back home, desired to rest, desired to eat, became disobedient and started whining.

Kamala often had to take a rest with him, he was accustomed to having his way against her, she had to feed him, had to comfort him, had to scold him. He did not comprehend why he had to go on this exhausting and sad pilgrimage with his mother, to an unknown place, to a stranger, who was holy and about to die. So what if he died, how did this concern the boy?

The pilgrims were getting close to Vasudeva's ferry, when little Siddhartha once again forced his mother to rest. She, Kamala herself, had also become tired, and while the boy was chewing a banana, she crouched down on the ground, closed her eyes a bit, and rested. But suddenly, she uttered a wailing scream, the boy looked at her in fear and saw her face having grown pale from horror; and from under her dress, a small, black snake fled, by which Kamala had been bitten.

Hurriedly, they now both ran along the path, in order to reach people, and got near to the ferry, there Kamala collapsed, and was not able to go any further. But the boy started crying miserably, only interrupting it to kiss and hug his mother, and she also joined his loud screams for help, until the sound reached Vasudeva's ears, who stood at the ferry. Quickly, he came walking, took the woman on his arms, carried her into the boat, the boy ran along, and soon they all reached the hut, where Siddhartha stood by the stove and was just lighting the fire. He looked up and first saw the boy's face, which wondrously reminded him of something, like a warning to remember something he had forgotten. Then he saw Kamala, whom he instantly recognised, though she lay unconscious in the ferryman's arms, and now he knew that it was his own son, whose face had been such a warning reminder to him, and the heart stirred in his chest.

Kamala's wound was washed, but had already turned black and her body was swollen, she was made to drink a healing potion. Her consciousness returned, she lay on Siddhartha's bed in the hut and bent over her stood Siddhartha, who used to love her so much. It seemed like a dream to her; with a smile, she looked at her friend's face; just slowly she, realized her situation, remembered the bite, called timidly for the boy.

"He's with you, don't worry," said Siddhartha.

Kamala looked into his eyes. She spoke with a heavy tongue, paralysed by the poison. "You've become old, my dear," she said, "you've become gray. But you are like the young Samana, who at one time came without clothes, with dusty feet, to me into the garden. You are much more like him than you were like him at that time when you had left me and Kamaswami. In the eyes, you're like him, Siddhartha. Alas, I have also grown old, old—could you still recognise me?"

Siddhartha smiled: "Instantly, I recognised you, Kamala, my dear."

Kamala pointed to her boy and said: "Did you recognise him as well? He is your son."

Her eyes became confused and fell shut. The boy wept, Siddhartha took him on his knees, let him weep, petted his hair, and at the sight of the child's face, a Brahman prayer came to his mind, which he had learned a long time ago, when he had been a little boy himself. Slowly, with a singing voice, he started to speak; from his past and childhood, the words came flowing to him. And with that singsong, the boy became calm, was only now and then uttering a sob and fell asleep. Siddhartha placed him on Vasudeva's bed. Vasudeva stood by the stove and cooked rice. Siddhartha gave him a look, which he returned with a smile.

"She'll die," Siddhartha said quietly.

Vasudeva nodded; over his friendly face ran the light of the stove's fire.

Once again, Kamala returned to consciousness. Pain distorted her face, Siddhartha's eyes read the suffering on her mouth, on her pale cheeks. Quietly, he read it, attentively, waiting, his mind becoming one with her suffering. Kamala felt it, her gaze sought his eyes.

Looking at him, she said: "Now I see that your eyes have changed as well. They've become completely different. By what do I still recognise that you're Siddhartha? It's you, and it's not you."

Siddhartha said nothing, quietly his eyes looked at hers.

"You have achieved it?" she asked. "You have found peace?"

He smiled and placed his hand on hers.

"I'm seeing it," she said, "I'm seeing it. I too will find peace."

"You have found it," Siddhartha spoke in a whisper.

Kamala never stopped looking into his eyes. She thought about her pilgrimage to Gotama, which she wanted to take, in order to see the face of the perfected one, to breathe his peace, and she thought that she had now found him in his place, and that it was good, just as good, as if she had seen the other one. She wanted to tell this to him, but the tongue no longer obeyed her will. Without speaking, she looked at him, and he saw the life fading from her eyes. When the final pain filled her eyes and made them grow dim, when the final shiver ran through her limbs, his finger closed her eyelids.

For a long time, he sat and looked at her peacefully dead face. For a long time, he observed her mouth, her old, tired mouth, with those lips, which had become thin, and he remembered, that he used to, in the spring of his years, compare this mouth with a freshly cracked fig. For a long time, he sat, read in the pale face, in the tired wrinkles, filled himself with this sight, saw his own face lying in the same manner, just as white, just as quenched out, and saw at the same time his face and hers being young, with red lips, with fiery eyes, and the feeling of this both being present and at the same time real, the feeling of eternity, completely filled every aspect of his being. Deeply he felt, more deeply than ever before, in this hour, the indestructibility of every life, the eternity of every moment.

When he rose, Vasudeva had prepared rice for him. But Siddhartha did not eat. In the stable, where their goat stood, the two old men prepared beds of straw for themselves, and Vasudeva lay himself down to sleep. But Siddhartha went outside and sat this night before the hut, listening to the river, surrounded by the past, touched and encircled by all times of his life at the same time. But occasionally, he rose, stepped to the door of the hut and listened, whether the boy was sleeping.

Early in the morning, even before the sun could be seen, Vasudeva came out of the stable and walked over to his friend.

"You haven't slept," he said.

"No, Vasudeva. I sat here, I was listening to the river. A lot it has told me, deeply it has filled me with the healing thought, with the thought of oneness."

"You've experienced suffering, Siddhartha, but I see: no sadness has entered your heart."

"No, my dear, how should I be sad? I, who have been rich and happy, have become even richer and happier now. My son has been given to me."

"Your son shall be welcome to me as well. But now, Siddhartha, let's get to work, there is much to be done. Kamala has died on the same bed on which my wife had died a long time ago. Let us also build Kamala's funeral pile on the same hill on which I had then built my wife's funeral pile."

While the boy was still asleep, they built the funeral pile.

THE SON

Timid and weeping, the boy had attended his mother's funeral; gloomy and shy, he had listened to Siddhartha, who greeted him as his son and welcomed him at his place in Vasudeva's hut. Pale, he sat for many days by the hill of the dead, did not want to eat, gave no open look, did not open his heart, met his fate with resistance and denial.

Siddhartha spared him and let him do as he pleased, he honoured his mourning. Siddhartha understood that his son did not know him, that he could not love him like a father. Slowly, he also saw and understood that the eleven-year-old was a pampered boy, a mother's boy, and that he had grown up in the habits of rich people, accustomed to finer food, to a soft bed, accustomed to giving orders to servants. Siddhartha understood that the mourning, pampered child could not suddenly and willingly be content with a life among strangers and in poverty. He did not force him, he did many a chore for him, always picked the best piece of the meal for him. Slowly, he hoped to win him over, by friendly patience.

Rich and happy, he had called himself, when the boy had come to him. Since time had passed on in the meantime, and the boy remained a stranger and in a gloomy disposition, since he displayed a proud and stubbornly disobedient heart, did not want to do any work, did not pay his respect to the old men, stole from Vasudeva's fruit-trees, then Siddhartha began to understand that his son had not brought him happiness and peace, but suffering and worry. But he loved him, and he preferred the suffering and worries of love over happiness and joy without the boy. Since young Siddhartha was in the hut, the old men had split the work. Vasudeva had again taken on the job of the ferryman all by himself, and Siddhartha, in order to be with his son, did the work in the hut and the field.

For a long time, for long months, Siddhartha waited for his son to understand him, to accept his love, to perhaps reciprocate it. For long months, Vasudeva waited, watching, waited and said nothing. One day, when Siddhartha the younger had once again tormented his father very much with spite and an unsteadiness in his wishes and had broken both of his rice-bowls, Vasudeva took in the evening his friend aside and talked to him.

"Pardon me," he said, "from a friendly heart, I'm talking to you. I'm seeing that you are tormenting yourself, I'm seeing that you're in grief. Your son, my dear, is worrying you, and he is also worrying me. That young bird is accustomed to a different life, to a different nest. He has not, like you, run away from riches and the city, being disgusted and fed up with it; against his will, he had to leave all this behind. I asked the river, oh friend, many times I have asked it. But the river laughs, it laughs at me, it laughs at you and me, and is shaking with laughter at our foolishness. Water wants to join water, youth wants to join youth, your son is not in the place where he can prosper. You too should ask the river; you too should listen to it!"

Troubled, Siddhartha looked into his friendly face, in the many wrinkles of which there was incessant cheerfulness.

"How could I part with him?" he said quietly, ashamed. "Give me some more time, my dear! See, I'm fighting for him, I'm seeking to win his heart, with love and with friendly patience I intend to capture it. One day, the river shall also talk to him, he also is called upon."

Vasudeva's smile flourished more warmly. "Oh yes, he too is called upon, he too is of the eternal life. But do we, you and me, know what he is called upon to do, what path to take, what actions to perform, what pain to endure? Not a small one, his pain will be; after all, his heart is proud and hard, people like this have to suffer a lot, err a lot, do much injustice, burden themselves with much sin. Tell me, my dear: you're not taking control of your son's upbringing? You don't force him? You don't beat him? You don't punish him?"

"No, Vasudeva, I don't do anything of this."

"I knew it. You don't force him, don't beat him, don't give him orders, because you know that 'soft' is stronger than 'hard', water stronger than rocks, love stronger than force. Very good, I praise you. But aren't you mistaken in thinking that you wouldn't force him, wouldn't punish him? Don't you shackle him with your love? Don't you make him feel inferior every day, and don't you make it even harder on him with your kindness and patience? Don't you force him, the arrogant and pampered boy, to live in a hut with two old banana-eaters, to whom even rice is a delicacy, whose thoughts can't be his, whose hearts are old and quiet and beat in a different pace than his? Isn't he forced, isn't he punished by all this?"

Troubled, Siddhartha looked to the ground. Quietly, he asked: "What do you think should I do?"

Quoth Vasudeva: "Bring him into the city, bring him into his mother's house, there'll still be servants around, give him to them. And when there aren't any around any more, bring him to a teacher, not for the teachings' sake, but so that he shall be among other boys, and among girls, and in the world which is his own. Have you never thought of this?"

"You're seeing into my heart," Siddhartha spoke sadly. "Often, I have thought of this. But look, how shall I put him, who had no tender heart anyhow, into this world? Won't he become exuberant, won't he lose himself to pleasure and power, won't he repeat all

of his father's mistakes, won't he perhaps get entirely lost in Sansara?"

Brightly, the ferryman's smile lit up; softly, he touched Siddhartha's arm and said: "Ask the river about it, my friend! Hear it laugh about it! Would you actually believe that you had committed your foolish acts in order to spare your son from committing them too? And could you in any way protect your son from Sansara? How could you? By means of teachings, prayer, admonition? My dear, have you entirely forgotten that story, that story containing so many lessons, that story about Siddhartha, a Brahman's son, which you once told me here on this very spot? Who has kept the Samana Siddhartha safe from Sansara, from sin, from greed, from foolishness? Were his father's religious devotion, his teacher's warnings, his own knowledge, his own search able to keep him safe? Which father, which teacher had been able to protect him from living his life for himself, from soiling himself with life, from burdening himself with guilt, from drinking the bitter drink for himself, from finding his path for himself? Would you think, my dear, anybody might perhaps be spared from taking this path? That perhaps your little son would be spared, because you love him, because you would like to keep him from suffering and pain and disappointment? But even if you would die ten times for him, you would not be able to take the slightest part of his destiny upon yourself."

Never before, Vasudeva had spoken so many words. Kindly, Siddhartha thanked him, went troubled into the hut, could not sleep for a long time. Vasudeva had told him nothing he had not already thought and known for himself. But this was a knowledge he could not act upon, stronger than the knowledge was his love for the boy, stronger was his tenderness, his fear to lose him. Had he ever lost his heart so much to something, had he ever loved any person thus, thus blindly, thus sufferingly, thus unsuccessfully, and yet thus happily?

Siddhartha could not heed his friend's advice, he could not give up the boy. He let the boy give him orders, he let him disregard him. He said nothing and waited; daily, he began the mute struggle of friendliness, the silent war of patience. Vasudeva also said nothing and waited, friendly, knowing, patient. They were both masters of patience.

At one time, when the boy's face reminded him very much of Kamala, Siddhartha suddenly had to think of a line which Kamala a long time ago, in the days of their youth, had once said to him. "You cannot love," she had said to him, and he had agreed with her and had compared himself with a star, while comparing the childlike people with falling leaves, and nevertheless he had also sensed an accusation in that line. Indeed, he had never been able to lose or devote himself completely to another person, to forget himself, to commit foolish acts for the love of another person; never he had been able to do this, and this was, as it had seemed to him at that time, the great distinction which set him apart from the childlike people. But now, since his son was here, now he, Siddhartha, had also become completely a childlike person, suffering for the sake of another person, loving another person, lost to a love, having become a fool on account of love. Now he too felt, late, once in his lifetime, this strongest and strangest of all passions, suffered from it, suffered miserably, and was nevertheless in bliss, was nevertheless renewed in one respect, enriched by one thing.

He did sense very well that this love, this blind love for his son, was a passion, something very human, that it was Sansara, a murky source, dark waters. Nevertheless, he felt at the same time, it was not worthless, it was necessary, came from the essence of his own being. This pleasure also had to be atoned for, this pain also had to be endured, these foolish acts also had to be committed.

Through all this, the son let him commit his foolish acts, let him court for his affection, let him humiliate himself every day by giving in to his moods. This father had nothing which would have delighted him and nothing which he would have feared. He was a good man, this father, a good, kind, soft man, perhaps a very devout man, perhaps a saint, all these were no attributes which could win the boy over. He was bored by this father, who kept him prisoner here in this miserable hut of his, he was bored by him, and for him to answer every naughtiness with a smile, every insult with friendliness, every viciousness with kindness, this very thing was the hated trick of this old sneak. Much more the boy would have liked it if he had been threatened by him, if he had been abused by him.

A day came when what young Siddhartha had on his mind came bursting forth, and he openly turned against his father. The latter had given him a task, he had told him to gather brushwood. But the boy did not leave the hut, in stubborn disobedience and rage he stayed where he was, thumped on the ground with his feet, clenched his fists, and screamed in a powerful outburst his hatred and contempt into his father's face.

"Get the brushwood for yourself!" he shouted, foaming at the mouth, "I'm not your servant. I do know that you won't hit me, you don't dare; I do know that you constantly want to punish me and put me down with your religious devotion and your indulgence. You want me to become like you, just as devout, just as soft, just as wise! But I, listen up, just to make you suffer, I rather want to

become a highway-robber and murderer, and go to hell, than to become like you! I hate you, you're not my father, and if you've ten times been my mother's fornicator!"

Rage and grief boiled over in him, foamed at the father in a hundred savage and evil words. Then the boy ran away and only returned late at night.

But the next morning, he had disappeared. What had also disappeared was a small basket, woven out of bast of two colours, in which the ferrymen kept those copper and silver coins which they received as a fare. The boat had also disappeared, Siddhartha saw it lying by the opposite bank. The boy had run away.

"I must follow him," said Siddhartha, who had been shivering with grief since those ranting speeches the boy had made yesterday. "A child can't go through the forest all alone. He'll perish. We must build a raft, Vasudeva, to get over the water."

"We will build a raft," said Vasudeva, "to get our boat back, which the boy has taken away. But him, you shall let run along, my friend, he is no child any more, he knows how to get around. He's looking for the path to the city, and he is right, don't forget that. He's doing what you've failed to do yourself. He's taking care of himself, he's taking his course. Alas, Siddhartha, I see you suffering, but you're suffering a pain at which one would like to laugh, at which you'll soon laugh for yourself."

Siddhartha did not answer. He already held the axe in his hands and began to make a raft of bamboo, and Vasudeva helped him to tie the canes together with ropes of grass. Then they crossed over, drifted far off their course, pulled the raft upriver on the opposite bank.

"Why did you take the axe along?" asked Siddhartha.

Vasudeva said: "It might have been possible that the oar of our boat got lost."

But Siddhartha knew what his friend was thinking. He thought, the boy would have thrown away or broken the oar in order to get even and in order to keep them from following him. And in fact, there was no oar left in the boat. Vasudeva pointed to the bottom of the boat and looked at his friend with a smile, as if he wanted to say: "Don't you see what your son is trying to tell you? Don't you see that he doesn't want to be followed?" But he did not say this in words. He started making a new oar. But Siddhartha bid his farewell, to look for the run-away. Vasudeva did not stop him.

When Siddhartha had already been walking through the forest for a long time, the thought occurred to him that his search was useless. Either, so he thought, the boy was far ahead and had already reached the city, or, if he should still be on his way, he would conceal himself from him, the pursuer. As he continued thinking, he also found that he, on his part, was not worried for his son, that he knew deep inside that he had neither perished nor was in any danger in the forest. Nevertheless, he ran without stopping, no longer to save him, just to satisfy his desire, just to perhaps see him one more time. And he ran up to just outside of the city.

When, near the city, he reached a wide road, he stopped, by the entrance of the beautiful pleasure-garden, which used to belong to Kamala, where he had seen her for the first time in her sedan-chair. The past rose up in his soul, again he saw himself standing there, young, a bearded, naked Samana, the hair full of dust. For a long time, Siddhartha stood there and looked through the open gate into the garden, seeing monks in yellow robes walking among the beautiful trees.

For a long time, he stood there, pondering, seeing images, listening to the story of his life. For a long time, he stood there, looked at the monks, saw young Siddhartha in their place, saw young Kamala walking among the high trees. Clearly, he saw himself being served food and drink by Kamala, receiving his first kiss from her, looking proudly and disdainfully back on his Brahmanism, beginning proudly and full of desire his worldly life. He saw Kamaswami, saw the servants, the orgies, the gamblers with the dice, the musicians, saw Kamala's song-bird in the cage, lived through all this once again, breathed Sansara, was once again old and tired, felt once again disgust, felt once again the wish to annihilate himself, was once again healed by the holy Om.

After having been standing by the gate of the garden for a long time, Siddhartha realised that his desire was foolish, which had made him go up to this place, that he could not help his son, that he was not allowed to cling to him. Deeply, he felt the love for the run-away in his heart, like a wound, and he felt at the same time that this wound had not been given to him in order to turn the knife in it, that it had to become a blossom and had to shine.

That this wound did not blossom yet, did not shine yet, at this hour, made him sad. Instead of the desired goal, which had drawn him here following the run-away son, there was now emptiness. Sadly, he sat down, felt something dying in his heart, experienced

emptiness, saw no joy any more, no goal. He sat lost in thought and waited. This he had learned by the river, this one thing: waiting, having patience, listening attentively. And he sat and listened, in the dust of the road, listened to his heart, beating tiredly and sadly, waited for a voice. Many an hour he crouched, listening, saw no images any more, fell into emptiness, let himself fall, without seeing a path. And when he felt the wound burning, he silently spoke the Om, filled himself with Om. The monks in the garden saw him, and since he crouched for many hours, and dust was gathering on his gray hair, one of them came to him and placed two bananas in front of him. The old man did not see him.

From this petrified state, he was awoken by a hand touching his shoulder. Instantly, he recognised this touch, this tender, bashful touch, and regained his senses. He rose and greeted Vasudeva, who had followed him. And when he looked into Vasudeva's friendly face, into the small wrinkles, which were as if they were filled with nothing but his smile, into the happy eyes, then he smiled too. Now he saw the bananas lying in front of him, picked them up, gave one to the ferryman, ate the other one himself. After this, he silently went back into the forest with Vasudeva, returned home to the ferry. Neither one talked about what had happened today, neither one mentioned the boy's name, neither one spoke about him running away, neither one spoke about the wound. In the hut, Siddhartha lay down on his bed, and when after a while Vasudeva came to him, to offer him a bowl of coconut-milk, he already found him asleep.

OM

For a long time, the wound continued to burn. Many a traveller Siddhartha had to ferry across the river who was accompanied by a son or a daughter, and he saw none of them without envying him, without thinking: "So many, so many thousands possess this sweetest of good fortunes—why don't I? Even bad people, even thieves and robbers have children and love them, and are being loved by them, all except for me." Thus simply, thus without reason he now thought, thus similar to the childlike people he had become.

Differently than before, he now looked upon people, less smart, less proud, but instead warmer, more curious, more involved. When he ferried travellers of the ordinary kind, childlike people, businessmen, warriors, women, these people did not seem alien to him as they used to: he understood them, he understood and shared their life, which was not guided by thoughts and insight, but solely by urges and wishes, he felt like them. Though he was near perfection and was bearing his final wound, it still seemed to him as if those childlike people were his brothers, their vanities, desires for possession, and ridiculous aspects were no longer ridiculous to him, became understandable, became lovable, even became worthy of veneration to him. The blind love of a mother for her child, the stupid, blind pride of a conceited father for his only son, the blind, wild desire of a young, vain woman for jewelry and admiring glances from men, all of these urges, all of this childish stuff, all of these simple, foolish, but immensely strong, strongly living, strongly prevailing urges and desires were now no childish notions for Siddhartha any more, he saw people living for their sake, saw them achieving infinitely much for their sake, travelling, conducting wars, suffering infinitely much, bearing infinitely much, and he could love them for it, he saw life, that what is alive, the indestructible, the Brahman in each of their passions, each of their acts. Worthy of love and admiration were these people in their blind loyalty, their blind strength and tenacity. They lacked nothing, there was nothing the knowledgeable one, the thinker, had to put him above them except for one little thing, a single, tiny, small thing: the consciousness, the conscious thought of the oneness of all life. And Siddhartha even doubted in many an hour, whether this knowledge, this thought was to be valued thus highly, whether it might not also perhaps be a childish idea of the thinking people, of the thinking and childlike people. In all other respects, the worldly people were of equal rank to the wise men, were often far superior to them, just as animals too can, after all, in some moments, seem to be superior to humans in their tough, unrelenting performance of what is necessary.

Slowly blossomed, slowly ripened in Siddhartha the realisation, the knowledge, what wisdom actually was, what the goal of his long search was. It was nothing but a readiness of the soul, an ability, a secret art, to think every moment, while living his life, the thought of oneness, to be able to feel and inhale the oneness. Slowly this blossomed in him, was shining back at him from Vasudeva's old, childlike face: harmony, knowledge of the eternal perfection of the world, smiling, oneness.

But the wound still burned, longingly and bitterly Siddhartha thought of his son, nurtured his love and tenderness in his heart, allowed the pain to gnaw at him, committed all foolish acts of love. Not by itself, this flame would go out.

And one day, when the wound burned violently, Siddhartha ferried across the river, driven by a yearning, got off the boat and was willing to go to the city and to look for his son. The river flowed softly and quietly, it was the dry season, but its voice sounded strange: it laughed! It laughed clearly. The river laughed, it laughed brightly and clearly at the old ferryman. Siddhartha stopped, he

bent over the water, in order to hear even better, and he saw his face reflected in the quietly moving waters, and in this reflected face there was something, which reminded him, something he had forgotten, and as he thought about it, he found it: this face resembled another face, which he used to know and love and also fear. It resembled his father's face, the Brahman. And he remembered how he, a long time ago, as a young man, had forced his father to let him go to the penitents, how he had bid his farewell to him, how he had gone and had never come back. Had his father not also suffered the same pain for him, which he now suffered for his son? Had his father not long since died, alone, without having seen his son again? Did he not have to expect the same fate for himself? Was it not a comedy, a strange and stupid matter, this repetition, this running around in a fateful circle?

The river laughed. Yes, so it was, everything came back, which had not been suffered and solved up to its end, the same pain was suffered over and over again. But Siddhartha went back into the boat and ferried back to the hut, thinking of his father, thinking of his son, laughed at by the river, at odds with himself, tending towards despair, and not less tending towards laughing along at himself and the entire world.

Alas, the wound was not blossoming yet, his heart was still fighting his fate, cheerfulness and victory were not yet shining from his suffering. Nevertheless, he felt hope, and once he had returned to the hut, he felt an undefeatable desire to open up to Vasudeva, to show him everything, the master of listening, to say everything.

Vasudeva was sitting in the hut and weaving a basket. He no longer used the ferry-boat, his eyes were starting to get weak, and not just his eyes; his arms and hands as well. Unchanged and flourishing was only the joy and the cheerful benevolence of his face.

Siddhartha sat down next to the old man, slowly he started talking. What they had never talked about, he now told him of, of his walk to the city, at that time, of the burning wound, of his envy at the sight of happy fathers, of his knowledge of the foolishness of such wishes, of his futile fight against them. He reported everything, he was able to say everything, even the most embarrassing parts, everything could be said, everything shown, everything he could tell. He presented his wound, also told how he fled today, how he ferried across the water, a childish run-away, willing to walk to the city, how the river had laughed.

While he spoke, spoke for a long time, while Vasudeva was listening with a quiet face, Vasudeva's listening gave Siddhartha a stronger sensation than ever before, he sensed how his pain, his fears flowed over to him, how his secret hope flowed over, came back at him from his counterpart. To show his wound to this listener was the same as bathing it in the river, until it had cooled and become one with the river. While he was still speaking, still admitting and confessing, Siddhartha felt more and more that this was no longer Vasudeva, no longer a human being who was listening to him, that this motionless listener was absorbing his confession into himself like a tree the rain, that this motionless man was the river itself, that he was God himself, that he was the eternal itself. And while Siddhartha stopped thinking of himself and his wound, this realisation of Vasudeva's changed character took possession of him, and the more he felt it and entered into it, the less wondrous it became, the more he realised that everything was in order and natural, that Vasudeva had already been like this for a long time, almost forever, that only he had not quite recognised it, yes, that he himself had almost reached the same state. He felt, that he was now seeing old Vasudeva as the people see the gods, and that this could not last; in his heart, he started bidding his farewell to Vasudeva. Throughout all this, he talked incessantly.

When he had finished talking, Vasudeva turned his friendly eyes, which had grown slightly weak, at him, said nothing, let his silent love and cheerfulness, understanding and knowledge, shine at him. He took Siddhartha's hand, led him to the seat by the bank, sat down with him, smiled at the river.

"You've heard it laugh," he said. "But you haven't heard everything. Let's listen, you'll hear more."

They listened. Softly sounded the river, singing in many voices. Siddhartha looked into the water, and images appeared to him in the moving water: his father appeared, lonely, mourning for his son; he himself appeared, lonely, he also being tied with the bondage of yearning to his distant son; his son appeared, lonely as well, the boy, greedily rushing along the burning course of his young wishes, each one heading for his goal, each one obsessed by the goal, each one suffering. The river sang with a voice of suffering, longingly it sang, longingly, it flowed towards its goal, lamentingly its voice sang.

"Do you hear?" Vasudeva's mute gaze asked. Siddhartha nodded.

"Listen better!" Vasudeva whispered.

Siddhartha made an effort to listen better. The image of his father, his own image, the image of his son merged, Kamala's image also appeared and was dispersed, and the image of Govinda, and other images, and they merged with each other, turned all into

the river, headed all, being the river, for the goal, longing, desiring, suffering, and the river's voice sounded full of yearning, full of burning woe, full of unsatisfiable desire. For the goal, the river was heading, Siddhartha saw it hurrying, the river, which consisted of him and his loved ones and of all people he had ever seen, all of these waves and waters were hurrying, suffering, towards goals, many goals, the waterfall, the lake, the rapids, the sea, and all goals were reached, and every goal was followed by a new one, and the water turned into vapour and rose to the sky, turned into rain and poured down from the sky, turned into a source, a stream, a river, headed forward once again, flowed on once again. But the longing voice had changed. It still resounded, full of suffering, searching, but other voices joined it, voices of joy and of suffering, good and bad voices, laughing and sad ones, a hundred voices, a thousand voices.

Siddhartha listened. He was now nothing but a listener, completely concentrated on listening, completely empty, he felt, that he had now finished learning to listen. Often before, he had heard all this, these many voices in the river, today it sounded new. Already, he could no longer tell the many voices apart, not the happy ones from the weeping ones, not the ones of children from those of men, they all belonged together, the lamentation of yearning and the laughter of the knowledgeable one, the scream of rage and the moaning of the dying ones, everything was one, everything was intertwined and connected, entangled a thousand times. And everything together, all voices, all goals, all yearning, all suffering, all pleasure, all that was good and evil, all of this together was the world. All of it together was the flow of events, was the music of life. And when Siddhartha was listening attentively to this river, this song of a thousand voices, when he neither listened to the suffering nor the laughter, when he did not tie his soul to any particular voice and submerged his self into it, but when he heard them all, perceived the whole, the oneness, then the great song of the thousand voices consisted of a single word, which was Om: the perfection.

"Do you hear," Vasudeva's gaze asked again.

Brightly, Vasudeva's smile was shining, floating radiantly over all the wrinkles of his old face, as the Om was floating in the air over all the voices of the river. Brightly his smile was shining, when he looked at his friend, and brightly the same smile was now starting to shine on Siddhartha's face as well. His wound blossomed, his suffering was shining, his self had flown into the oneness.

In this hour, Siddhartha stopped fighting his fate, stopped suffering. On his face flourished the cheerfulness of a knowledge, which is no longer opposed by any will, which knows perfection, which is in agreement with the flow of events, with the current of life, full of sympathy for the pain of others, full of sympathy for the pleasure of others, devoted to the flow, belonging to the oneness.

When Vasudeva rose from the seat by the bank, when he looked into Siddhartha's eyes and saw the cheerfulness of the knowledge shining in them, he softly touched his shoulder with his hand, in this careful and tender manner, and said: "I've been waiting for this hour, my dear. Now that it has come, let me leave. For a long time, I've been waiting for this hour; for a long time, I've been Vasudeva the ferryman. Now it's enough. Farewell, but, farewell, river, farewell, Siddhartha!"

Siddhartha made a deep bow before him who bid his farewell.

"I've known it," he said quietly. "You'll go into the forests?"

"I'm going into the forests, I'm going into the oneness," spoke Vasudeva with a bright smile.

With a bright smile, he left; Siddhartha watched him leaving. With deep joy, with deep solemnity he watched him leave, saw his steps full of peace, saw his head full of lustre, saw his body full of light.

GOVINDA

Together with other monks, Govinda used to spend the time of rest between pilgrimages in the pleasure-grove, which the courtesan Kamala had given to the followers of Gotama for a gift. He heard talk of an old ferryman, who lived one day's journey away by the river, and who was regarded as a wise man by many. When Govinda went back on his way, he chose the path to the ferry, eager to see the ferryman. Because, though he had lived his entire life by the rules, though he was also looked upon with veneration by the younger monks on account of his age and his modesty, the restlessness and the searching still had not perished from his heart.

He came to the river and asked the old man to ferry him over, and when they got off the boat on the other side, he said to the old man: "You're very good to us monks and pilgrims, you have already ferried many of us across the river. Aren't you too, ferryman, a searcher for the right path?"

Quoth Siddhartha, smiling from his old eyes: “Do you call yourself a searcher, oh venerable one, though you are already well on in years and are wearing the robe of Gotama’s monks?”

“It’s true, I’m old,” spoke Govinda, “but I haven’t stopped searching. Never I’ll stop searching, this seems to be my destiny. You too, so it seems to me, have been searching. Would you like to tell me something, oh honourable one?”

Quoth Siddhartha: “What should I possibly have to tell you, oh venerable one? Perhaps that you’re searching far too much? That in all that searching, you don’t find the time for finding?”

“How come?” asked Govinda.

“When someone is searching,” said Siddhartha, “then it might easily happen that the only thing his eyes still see is that what he searches for, that he is unable to find anything, to let anything enter his mind, because he always thinks of nothing but the object of his search, because he has a goal, because he is obsessed by the goal. Searching means: having a goal. But finding means: being free, being open, having no goal. You, oh venerable one, are perhaps indeed a searcher, because, striving for your goal, there are many things you don’t see, which are directly in front of your eyes.”

“I don’t quite understand yet,” asked Govinda, “what do you mean by this?”

Quoth Siddhartha: “A long time ago, oh venerable one, many years ago, you’ve once before been at this river and have found a sleeping man by the river, and have sat down with him to guard his sleep. But, oh Govinda, you did not recognise the sleeping man.”

Astonished, as if he had been the object of a magic spell, the monk looked into the ferryman’s eyes.

“Are you Siddhartha?” he asked with a timid voice. “I wouldn’t have recognised you this time as well! From my heart, I’m greeting you, Siddhartha; from my heart, I’m happy to see you once again! You’ve changed a lot, my friend.—And so you’ve now become a ferryman?”

In a friendly manner, Siddhartha laughed. “A ferryman, yes. Many people, Govinda, have to change a lot, have to wear many a robe, I am one of those, my dear. Be welcome, Govinda, and spend the night in my hut.”

Govinda stayed the night in the hut and slept on the bed which used to be Vasudeva’s bed. Many questions he posed to the friend of his youth, many things Siddhartha had to tell him from his life.

When in the next morning the time had come to start the day’s journey, Govinda said, not without hesitation, these words: “Before I’ll continue on my path, Siddhartha, permit me to ask one more question. Do you have a teaching? Do you have a faith or a knowledge you follow, which helps you to live and to do right?”

Quoth Siddhartha: “You know, my dear, that I already as a young man, in those days when we lived with the penitents in the forest, started to distrust teachers and teachings and to turn my back to them. I have stuck with this. Nevertheless, I have had many teachers since then. A beautiful courtesan has been my teacher for a long time, and a rich merchant was my teacher, and some gamblers with dice. Once, even a follower of Buddha, travelling on foot, has been my teacher; he sat with me when I had fallen asleep in the forest, on the pilgrimage. I’ve also learned from him, I’m also grateful to him, very grateful. But most of all, I have learned here from this river and from my predecessor, the ferryman Vasudeva. He was a very simple person, Vasudeva, he was no thinker, but he knew what is necessary just as well as Gotama, he was a perfect man, a saint.”

Govinda said: “Still, oh Siddhartha, you love a bit to mock people, as it seems to me. I believe in you and know that you haven’t followed a teacher. But haven’t you found something by yourself, though you’ve found no teachings, you still found certain thoughts, certain insights, which are your own and which help you to live? If you would like to tell me some of these, you would delight my heart.”

Quoth Siddhartha: “I’ve had thoughts, yes, and insight, again and again. Sometimes, for an hour or for an entire day, I have felt knowledge in me, as one would feel life in one’s heart. There have been many thoughts, but it would be hard for me to convey them to you. Look, my dear Govinda, this is one of my thoughts, which I have found: wisdom cannot be passed on. Wisdom which a wise man tries to pass on to someone always sounds like foolishness.”

“Are you kidding?” asked Govinda.

“I’m not kidding. I’m telling you what I’ve found. Knowledge can be conveyed, but not wisdom. It can be found, it can be lived, it is possible to be carried by it, miracles can be performed with it, but it cannot be expressed in words and taught. This was what I, even as a young man, sometimes suspected, what has driven me away from the teachers. I have found a thought, Govinda, which you’ll again regard as a joke or foolishness, but which is my best thought. It says: The opposite of every truth is just as true! That’s like this: any truth can only be expressed and put into words when it is one-sided. Everything is one-sided which can be thought with thoughts and said with words, it’s all one-sided, all just one half, all lacks completeness, roundness, oneness. When the exalted Gotama spoke in his teachings of the world, he had to divide it into Sansara and Nirvana, into deception and truth, into suffering and salvation. It cannot be done differently, there is no other way for him who wants to teach. But the world itself, what exists around us and inside of us, is never one-sided. A person or an act is never entirely Sansara or entirely Nirvana, a person is never entirely holy or entirely sinful. It does really seem like this, because we are subject to deception, as if time was something real. Time is not real, Govinda, I have experienced this often and often again. And if time is not real, then the gap which seems to be between the world and the eternity, between suffering and blissfulness, between evil and good, is also a deception.”

“How come?” asked Govinda timidly.

“Listen well, my dear, listen well! The sinner, which I am and which you are, is a sinner, but in times to come he will be Brahma again, he will reach the Nirvana, will be Buddha—and now see: these ‘times to come’ are a deception, are only a parable! The sinner is not on his way to become a Buddha, he is not in the process of developing, though our capacity for thinking does not know how else to picture these things. No, within the sinner is now and today already the future Buddha, his future is already all there, you have to worship in him, in you, in everyone the Buddha which is coming into being, the possible, the hidden Buddha. The world, my friend Govinda, is not imperfect, or on a slow path towards perfection: no, it is perfect in every moment, all sin already carries the divine forgiveness in itself, all small children already have the old person in themselves, all infants already have death, all dying people the eternal life. It is not possible for any person to see how far another one has already progressed on his path; in the robber and dice-gambler, the Buddha is waiting; in the Brahman, the robber is waiting. In deep meditation, there is the possibility to put time out of existence, to see all life which was, is, and will be as if it was simultaneous, and there everything is good, everything is perfect, everything is Brahman. Therefore, I see whatever exists as good, death is to me like life, sin like holiness, wisdom like foolishness, everything has to be as it is, everything only requires my consent, only my willingness, my loving agreement, to be good for me, to do nothing but work for my benefit, to be unable to ever harm me. I have experienced on my body and on my soul that I needed sin very much, I needed lust, the desire for possessions, vanity, and needed the most shameful despair, in order to learn how to give up all resistance, in order to learn how to love the world, in order to stop comparing it to some world I wished, I imagined, some kind of perfection I had made up, but to leave it as it is and to love it and to enjoy being a part of it.—These, oh Govinda, are some of the thoughts which have come into my mind.”

Siddhartha bent down, picked up a stone from the ground, and weighed it in his hand.

“This here,” he said playing with it, “is a stone, and will, after a certain time, perhaps turn into soil, and will turn from soil into a plant or animal or human being. In the past, I would have said: This stone is just a stone, it is worthless, it belongs to the world of the Maya; but because it might be able to become also a human being and a spirit in the cycle of transformations, therefore I also grant it importance. Thus, I would perhaps have thought in the past. But today I think: this stone is a stone, it is also animal, it is also god, it is also Buddha, I do not venerate and love it because it could turn into this or that, but rather because it is already and always everything—and it is this very fact, that it is a stone, that it appears to me now and today as a stone, this is why I love it and see worth and purpose in each of its veins and cavities, in the yellow, in the gray, in the hardness, in the sound it makes when I knock at it, in the dryness or wetness of its surface. There are stones which feel like oil or soap, and others like leaves, others like sand, and every one is special and prays the Om in its own way, each one is Brahman, but simultaneously and just as much it is a stone, is oily or juicy, and this is the very fact which I like and regard as wonderful and worthy of worship.—But let me speak no more of this. The words are not good for the secret meaning, everything always becomes a bit different, as soon as it is put into words, gets distorted a bit, a bit silly—yes, and this is also very good, and I like it a lot, I also very much agree with this, that this what is one man’s treasure and wisdom always sounds like foolishness to another person.”

Govinda listened silently.

“Why have you told me this about the stone?” he asked hesitantly after a pause.

“I did it without any specific intention. Or perhaps what I meant was, that I love this very stone, and the river, and all these things we are looking at and from which we can learn. I can love a stone, Govinda, and also a tree or a piece of bark. These are things, and things can be loved. But I cannot love words. Therefore, teachings are no good for me, they have no hardness, no softness, no colours, no edges, no smell, no taste, they have nothing but words. Perhaps it is these which keep you from finding peace, perhaps it is the many words. Because salvation and virtue as well, Sansara and Nirvana as well, are mere words, Govinda. There is no thing which would be Nirvana; there is just the word Nirvana.”

Quoth Govinda: “Not just a word, my friend, is Nirvana. It is a thought.”

Siddhartha continued: “A thought, it might be so. I must confess to you, my dear: I don’t differentiate much between thoughts and words. To be honest, I also have no high opinion of thoughts. I have a better opinion of things. Here on this ferry-boat, for instance, a man has been my predecessor and teacher, a holy man, who has for many years simply believed in the river, nothing else. He had noticed that the river spoke to him, he learned from it, it educated and taught him, the river seemed to be a god to him, for many years he did not know that every wind, every cloud, every bird, every beetle was just as divine and knows just as much and can teach just as much as the worshipped river. But when this holy man went into the forests, he knew everything, knew more than you and me, without teachers, without books, only because he had believed in the river.”

Govinda said: “But is that what you call ‘things’, actually something real, something which has existence? Isn’t it just a deception of the Maya, just an image and illusion? Your stone, your tree, your river—are they actually a reality?”

“This too,” spoke Siddhartha, “I do not care very much about. Let the things be illusions or not, after all I would then also be an illusion, and thus they are always like me. This is what makes them so dear and worthy of veneration for me: they are like me. Therefore, I can love them. And this is now a teaching you will laugh about: love, oh Govinda, seems to me to be the most important thing of all. To thoroughly understand the world, to explain it, to despise it, may be the thing great thinkers do. But I’m only interested in being able to love the world, not to despise it, not to hate it and me, to be able to look upon it and me and all beings with love and admiration and great respect.”

“This I understand,” spoke Govinda. “But this very thing was discovered by the exalted one to be a deception. He commands benevolence, clemency, sympathy, tolerance, but not love; he forbade us to tie our heart in love to earthly things.”

“I know it,” said Siddhartha; his smile shone golden. “I know it, Govinda. And behold, with this we are right in the middle of the thicket of opinions, in the dispute about words. For I cannot deny, my words of love are in a contradiction, a seeming contradiction with Gotama’s words. For this very reason, I distrust in words so much, for I know, this contradiction is a deception. I know that I am in agreement with Gotama. How should he not know love, he, who has discovered all elements of human existence in their transitoriness, in their meaninglessness, and yet loved people thus much, to use a long, laborious life only to help them, to teach them! Even with him, even with your great teacher, I prefer the thing over the words, place more importance on his acts and life than on his speeches, more on the gestures of his hand than his opinions. Not in his speech, not in his thoughts, I see his greatness, only in his actions, in his life.”

For a long time, the two old men said nothing. Then spoke Govinda, while bowing for a farewell: “I thank you, Siddhartha, for telling me some of your thoughts. They are partially strange thoughts, not all have been instantly understandable to me. This being as it may, I thank you, and I wish you to have calm days.”

(But secretly he thought to himself: This Siddhartha is a bizarre person, he expresses bizarre thoughts, his teachings sound foolish. So differently sound the exalted one’s pure teachings, clearer, purer, more comprehensible, nothing strange, foolish, or silly is contained in them. But different from his thoughts seemed to me Siddhartha’s hands and feet, his eyes, his forehead, his breath, his smile, his greeting, his walk. Never again, after our exalted Gotama has become one with the Nirvana, never since then have I met a person of whom I felt: this is a holy man! Only him, this Siddhartha, I have found to be like this. May his teachings be strange, may his words sound foolish; out of his gaze and his hand, his skin and his hair, out of every part of him shines a purity, shines a calmness, shines a cheerfulness and mildness and holiness, which I have seen in no other person since the final death of our exalted teacher.)

As Govinda thought like this, and there was a conflict in his heart, he once again bowed to Siddhartha, drawn by love. Deeply he bowed to him who was calmly sitting.

“Siddhartha,” he spoke, “we have become old men. It is unlikely for one of us to see the other again in this incarnation. I see, beloved, that you have found peace. I confess that I haven’t found it. Tell me, oh honourable one, one more word, give me something on my way which I can grasp, which I can understand! Give me something to be with me on my path. It is often hard, my path, often dark, Siddhartha.”

Siddhartha said nothing and looked at him with the ever unchanged, quiet smile. Govinda stared at his face, with fear, with yearning, suffering, and the eternal search was visible in his look, eternal not-finding.

Siddhartha saw it and smiled.

“Bend down to me!” he whispered quietly in Govinda’s ear. “Bend down to me! Like this, even closer! Very close! Kiss my forehead, Govinda!”

But while Govinda with astonishment, and yet drawn by great love and expectation, obeyed his words, bent down closely to him and touched his forehead with his lips, something miraculous happened to him. While his thoughts were still dwelling on Siddhartha’s wondrous words, while he was still struggling in vain and with reluctance to think away time, to imagine Nirvana and Sansara as one, while even a certain contempt for the words of his friend was fighting in him against an immense love and veneration, this happened to him:

He no longer saw the face of his friend Siddhartha, instead he saw other faces, many, a long sequence, a flowing river of faces, of hundreds, of thousands, which all came and disappeared, and yet all seemed to be there simultaneously, which all constantly changed and renewed themselves, and which were still all Siddhartha. He saw the face of a fish, a carp, with an infinitely painfully opened mouth, the face of a dying fish, with fading eyes—he saw the face of a new-born child, red and full of wrinkles, distorted from crying—he saw the face of a murderer, he saw him plunging a knife into the body of another person—he saw, in the same second, this criminal in bondage, kneeling and his head being chopped off by the executioner with one blow of his sword—he saw the bodies of men and women, naked in positions and cramps of frenzied love—he saw corpses stretched out, motionless, cold, void—he saw the heads of animals, of boars, of crocodiles, of elephants, of bulls, of birds—he saw gods, saw Krishna, saw Agni—he saw all of these figures and faces in a thousand relationships with one another, each one helping the other, loving it, hating it, destroying it, giving re-birth to it, each one was a will to die, a passionately painful confession of transitoriness, and yet none of them died, each one only transformed, was always reborn, received evermore a new face, without any time having passed between the one and the other face—and all of these figures and faces rested, flowed, generated themselves, floated along and merged with each other, and they were all constantly covered by something thin, without individuality of its own, but yet existing, like a thin glass or ice, like a transparent skin, a shell or mold or mask of water, and this mask was smiling, and this mask was Siddhartha’s smiling face, which he, Govinda, in this very same moment touched with his lips. And, Govinda saw it like this, this smile of the mask, this smile of oneness above the flowing forms, this smile of simultaneousness above the thousand births and deaths, this smile of Siddhartha was precisely the same, was precisely of the same kind as the quiet, delicate, impenetrable, perhaps benevolent, perhaps mocking, wise, thousand-fold smile of Gotama, the Buddha, as he had seen it himself with great respect a hundred times. Like this, Govinda knew, the perfected ones are smiling.

Not knowing any more whether time existed, whether the vision had lasted a second or a hundred years, not knowing any more whether there existed a Siddhartha, a Gotama, a me and a you, feeling in his innermost self as if he had been wounded by a divine arrow, the injury of which tasted sweet, being enchanted and dissolved in his innermost self, Govinda still stood for a little while bent over Siddhartha’s quiet face, which he had just kissed, which had just been the scene of all manifestations, all transformations, all existence. The face was unchanged, after under its surface the depth of the thousand-foldness had closed up again, he smiled silently, smiled quietly and softly, perhaps very benevolently, perhaps very mockingly, precisely as he used to smile, the exalted one.

Deeply, Govinda bowed; tears he knew nothing of, ran down his old face; like a fire burned the feeling of the most intimate love, the humblest veneration in his heart. Deeply, he bowed, touching the ground, before him who was sitting motionlessly, whose smile reminded him of everything he had ever loved in his life, what had ever been valuable and holy to him in his life.

THE ANALYSIS OF MIND

By Bertrand Russell

1921

MUIRHEAD LIBRARY OF PHILOSOPHY

An admirable statement of the aims of the Library of Philosophy was provided by the first editor, the late Professor J. H. Muirhead, in his description of the original programme printed in Erdmann's History of Philosophy under the date 1890. This was slightly modified in subsequent volumes to take the form of the following statement:

"The Muirhead Library of Philosophy was designed as a contribution to the History of Modern Philosophy under the heads: first of Different Schools of Thought--Sensationalist, Realist, Idealist, Intuitivist; secondly of different Subjects--Psychology, Ethics, Aesthetics, Political Philosophy, Theology. While much had been done in England in tracing the course of evolution in nature, history, economics, morals and religion, little had been done in tracing the development of thought on these subjects. Yet 'the evolution of opinion is part of the whole evolution'.

"By the co-operation of different writers in carrying out this plan it was hoped that a thoroughness and completeness of treatment, otherwise unattainable, might be secured. It was believed also that from writers mainly British and American fuller consideration of English Philosophy than it had hitherto received might be looked for. In the earlier series of books containing, among others, Bosanquet's "History of Aesthetic," Pfleiderer's "Rational Theology since Kant," Albee's "History of English Utilitarianism," Bonar's "Philosophy and Political Economy," Brett's "History of Psychology," Ritchie's "Natural Rights," these objects were to a large extent effected.

"In the meantime original work of a high order was being produced both in England and America by such writers as Bradley, Stout, Bertrand Russell, Baldwin, Urban, Montague, and others, and a new interest in foreign works, German, French and Italian, which had either become classical or were attracting public attention, had developed. The scope of the Library thus became extended into something more international, and it is entering on the fifth decade of its existence in the hope that it may contribute to that mutual understanding between countries which is so pressing a need of the present time."

The need which Professor Muirhead stressed is no less pressing to-day, and few will deny that philosophy has much to do with enabling us to meet it, although no one, least of all Muirhead himself, would regard that as the sole, or even the main, object of philosophy. As Professor Muirhead continues to lend the distinction of his name to the Library of Philosophy it seemed not inappropriate to allow him to recall us to these aims in his own words. The emphasis on the history of thought also seemed to me very timely; and the number of important works promised for the Library in the very near future augur well for the continued fulfilment, in this and other ways, of the expectations of the original editor.

H. D. Lewis

PREFACE

This book has grown out of an attempt to harmonize two different tendencies, one in psychology, the other in physics, with both of which I find myself in sympathy, although at first sight they might seem inconsistent. On the one hand, many psychologists, especially those of the behaviourist school, tend to adopt what is essentially a materialistic position, as a matter of method if not of metaphysics. They make psychology increasingly dependent on physiology and external observation, and tend to think of matter as something much more solid and indubitable than mind. Meanwhile the physicists, especially Einstein and other exponents of the

theory of relativity, have been making "matter" less and less material. Their world consists of "events," from which "matter" is derived by a logical construction. Whoever reads, for example, Professor Eddington's "Space, Time and Gravitation" (Cambridge University Press, 1920), will see that an old-fashioned materialism can receive no support from modern physics. I think that what has permanent value in the outlook of the behaviourists is the feeling that physics is the most fundamental science at present in existence. But this position cannot be called materialistic, if, as seems to be the case, physics does not assume the existence of matter.

The view that seems to me to reconcile the materialistic tendency of psychology with the anti-materialistic tendency of physics is the view of William James and the American new realists, according to which the "stuff" of the world is neither mental nor material, but a "neutral stuff," out of which both are constructed. I have endeavoured in this work to develop this view in some detail as regards the phenomena with which psychology is concerned.

My thanks are due to Professor John B. Watson and to Dr. T. P. Nunn for reading my MSS. at an early stage and helping me with many valuable suggestions; also to Mr. A. Wohlgemuth for much very useful information as regards important literature. I have also to acknowledge the help of the editor of this Library of Philosophy, Professor Muirhead, for several suggestions by which I have profited.

The work has been given in the form of lectures both in London and Peking, and one lecture, that on Desire, has been published in the Athenaeum.

There are a few allusions to China in this book, all of which were written before I had been in China, and are not intended to be taken by the reader as geographically accurate. I have used "China" merely as a synonym for "a distant country," when I wanted illustrations of unfamiliar things.

Peking, January 1921.

THE ANALYSIS OF MIND

LECTURE I. RECENT CRITICISMS OF "CONSCIOUSNESS"

There are certain occurrences which we are in the habit of calling "mental." Among these we may take as typical BELIEVING and DESIRING. The exact definition of the word "mental" will, I hope, emerge as the lectures proceed; for the present, I shall mean by it whatever occurrences would commonly be called mental.

I wish in these lectures to analyse as fully as I can what it is that really takes place when we, e.g. believe or desire. In this first lecture I shall be concerned to refute a theory which is widely held, and which I formerly held myself: the theory that the essence of everything mental is a certain quite peculiar something called "consciousness," conceived either as a relation to objects, or as a pervading quality of psychical phenomena.

The reasons which I shall give against this theory will be mainly derived from previous authors. There are two sorts of reasons, which will divide my lecture into two parts:

(1) Direct reasons, derived from analysis and its difficulties;

(2) Indirect reasons, derived from observation of animals (comparative psychology) and of the insane and hysterical (psycho-analysis).

Few things are more firmly established in popular philosophy than the distinction between mind and matter. Those who are not professional metaphysicians are willing to confess that they do not know what mind actually is, or how matter is constituted; but they remain convinced that there is an impassable gulf between the two, and that both belong to what actually exists in the world.

Philosophers, on the other hand, have maintained often that matter is a mere fiction imagined by mind, and sometimes that mind is a mere property of a certain kind of matter. Those who maintain that mind is the reality and matter an evil dream are called "idealists"--a word which has a different meaning in philosophy from that which it bears in ordinary life. Those who argue that matter is the reality and mind a mere property of protoplasm are called "materialists." They have been rare among philosophers, but common, at certain periods, among men of science. Idealists, materialists, and ordinary mortals have been in agreement on one point: that they knew sufficiently what they meant by the words "mind" and "matter" to be able to conduct their debate intelligently. Yet it was just in this point, as to which they were at one, that they seem to me to have been all alike in error.

The stuff of which the world of our experience is composed is, in my belief, neither mind nor matter, but something more primitive than either. Both mind and matter seem to be composite, and the stuff of which they are compounded lies in a sense between the two, in a sense above them both, like a common ancestor. As regards matter, I have set forth my reasons for this view on former occasions,* and I shall not now repeat them. But the question of mind is more difficult, and it is this question that I propose to discuss in these lectures. A great deal of what I shall have to say is not original; indeed, much recent work, in various fields, has tended to show the necessity of such theories as those which I shall be advocating. Accordingly in this first lecture I shall try to give a brief description of the systems of ideas within which our investigation is to be carried on.

* "Our Knowledge of the External World" (Allen & Unwin), Chapters III and IV. Also "Mysticism and Logic," Essays VII and VIII.

If there is one thing that may be said, in the popular estimation, to characterize mind, that one thing is "consciousness." We say that we are "conscious" of what we see and hear, of what we remember, and of our own thoughts and feelings. Most of us believe that tables and chairs are not "conscious." We think that when we sit in a chair, we are aware of sitting in it, but it is not aware of being sat in. It cannot for a moment be doubted that we are right in believing that there is SOME difference between us and the chair in this respect: so much may be taken as fact, and as a datum for our inquiry. But as soon as we try to say what exactly the difference is, we become involved in perplexities. Is "consciousness" ultimate and simple, something to be merely accepted and contemplated? Or is it something complex, perhaps consisting in our way of behaving in the presence of objects, or, alternatively, in the existence in us of things called "ideas," having a certain relation to objects, though different from them, and only symbolically representative of them? Such questions are not easy to answer; but until they are answered we cannot profess to know what we mean by saying that we are possessed of "consciousness."

Before considering modern theories, let us look first at consciousness from the standpoint of conventional psychology, since this embodies views which naturally occur when we begin to reflect upon the subject. For this purpose, let us as a preliminary consider different ways of being conscious.

First, there is the way of PERCEPTION. We "perceive" tables and chairs, horses and dogs, our friends, traffic passing in the street--in short, anything which we recognize through the senses. I leave on one side for the present the question whether pure sensation is to be regarded as a form of consciousness: what I am speaking of now is perception, where, according to conventional psychology, we go beyond the sensation to the "thing" which it represents. When you hear a donkey bray, you not only hear a noise, but realize that it comes from a donkey. When you see a table, you not only see a coloured surface, but realize that it is hard. The addition of these elements that go beyond crude sensation is said to constitute perception. We shall have more to say about this at a later stage. For the moment, I am merely concerned to note that perception of objects is one of the most obvious examples of what is called "consciousness." We are "conscious" of anything that we perceive.

We may take next the way of MEMORY. If I set to work to recall what I did this morning, that is a form of consciousness different from perception, since it is concerned with the past. There are various problems as to how we can be conscious now of what no longer exists. These will be dealt with incidentally when we come to the analysis of memory.

From memory it is an easy step to what are called "ideas"--not in the Platonic sense, but in that of Locke, Berkeley and Hume, in which they are opposed to "impressions." You may be conscious of a friend either by seeing him or by "thinking" of him; and by "thought" you can be conscious of objects which cannot be seen, such as the human race, or physiology. "Thought" in the narrower sense is that form of consciousness which consists in "ideas" as opposed to impressions or mere memories.

We may end our preliminary catalogue with BELIEF, by which I mean that way of being conscious which may be either true or false. We say that a man is "conscious of looking a fool," by which we mean that he believes he looks a fool, and is not mistaken in this belief. This is a different form of consciousness from any of the earlier ones. It is the form which gives "knowledge" in the strict sense, and also error. It is, at least apparently, more complex than our previous forms of consciousness; though we shall find that

they are not so separable from it as they might appear to be.

Besides ways of being conscious there are other things that would ordinarily be called "mental," such as desire and pleasure and pain. These raise problems of their own, which we shall reach in Lecture III. But the hardest problems are those that arise concerning ways of being "conscious." These ways, taken together, are called the "cognitive" elements in mind, and it is these that will occupy us most during the following lectures.

There is one element which SEEMS obviously in common among the different ways of being conscious, and that is, that they are all directed to OBJECTS. We are conscious "of" something. The consciousness, it seems, is one thing, and that of which we are conscious is another thing. Unless we are to acquiesce in the view that we can never be conscious of anything outside our own minds, we must say that the object of consciousness need not be mental, though the consciousness must be. (I am speaking within the circle of conventional doctrines, not expressing my own beliefs.) This direction towards an object is commonly regarded as typical of every form of cognition, and sometimes of mental life altogether. We may distinguish two different tendencies in traditional psychology. There are those who take mental phenomena naively, just as they would physical phenomena. This school of psychologists tends not to emphasize the object. On the other hand, there are those whose primary interest is in the apparent fact that we have KNOWLEDGE, that there is a world surrounding us of which we are aware. These men are interested in the mind because of its relation to the world, because knowledge, if it is a fact, is a very mysterious one. Their interest in psychology is naturally centred in the relation of consciousness to its object, a problem which, properly, belongs rather to theory of knowledge. We may take as one of the best and most typical representatives of this school the Austrian psychologist Brentano, whose "Psychology from the Empirical Standpoint,"* though published in 1874, is still influential and was the starting-point of a great deal of interesting work. He says (p. 115):

* "Psychologie vom empirischen Standpunkte," vol. i, 1874. (The second volume was never published.)

"Every psychical phenomenon is characterized by what the scholastics of the Middle Ages called the intentional (also the mental) inexistence of an object, and what we, although with not quite unambiguous expressions, would call relation to a content, direction towards an object (which is not here to be understood as a reality), or immanent objectivity. Each contains something in itself as an object, though not each in the same way. In presentation something is presented, in judgment something is acknowledged or rejected, in love something is loved, in hatred hated, in desire desired, and so on.

"This intentional inexistence is exclusively peculiar to psychical phenomena. No physical phenomenon shows anything similar. And so we can define psychical phenomena by saying that they are phenomena which intentionally contain an object in themselves."

The view here expressed, that relation to an object is an ultimate irreducible characteristic of mental phenomena, is one which I shall be concerned to combat. Like Brentano, I am interested in psychology, not so much for its own sake, as for the light that it may throw on the problem of knowledge. Until very lately I believed, as he did, that mental phenomena have essential reference to objects, except possibly in the case of pleasure and pain. Now I no longer believe this, even in the case of knowledge. I shall try to make my reasons for this rejection clear as we proceed. It must be evident at first glance that the analysis of knowledge is rendered more difficult by the rejection; but the apparent simplicity of Brentano's view of knowledge will be found, if I am not mistaken, incapable of maintaining itself either against an analytic scrutiny or against a host of facts in psycho-analysis and animal psychology. I do not wish to minimize the problems. I will merely observe, in mitigation of our prospective labours, that thinking, however it is to be analysed, is in itself a delightful occupation, and that there is no enemy to thinking so deadly as a false simplicity. Travelling, whether in the mental or the physical world, is a joy, and it is good to know that, in the mental world at least, there are vast countries still very imperfectly explored.

The view expressed by Brentano has been held very generally, and developed by many writers. Among these we may take as an example his Austrian successor Meinong.* According to him there are three elements involved in the thought of an object. These three he calls the act, the content and the object. The act is the same in any two cases of the same kind of consciousness; for instance, if I think of Smith or think of Brown, the act of thinking, in itself, is exactly similar on both occasions. But the content of my thought, the particular event that is happening in my mind, is different when I think of Smith and when I think of Brown. The content, Meinong argues, must not be confounded with the object, since the content must exist in my mind at the moment when I have the thought, whereas the object need not do so. The object may be something past or future; it may be physical, not mental; it may be something abstract, like equality for example; it may be something imaginary, like a golden mountain; or it may even be something self-contradictory, like a round square. But in all these cases, so he contends, the content exists when the thought exists, and is

what distinguishes it, as an occurrence, from other thoughts.

* See, e.g. his article: "Ueber Gegenstande hoherer Ordnung und deren Verhaltniss zur inneren Wahrnehmung," "Zeitschrift fur Psychologie and Physiologie der Sinnesorgane," vol. xxi, pp. 182-272 (1899), especially pp. 185-8.

To make this theory concrete, let us suppose that you are thinking of St. Paul's. Then, according to Meinong, we have to distinguish three elements which are necessarily combined in constituting the one thought. First, there is the act of thinking, which would be just the same whatever you were thinking about. Then there is what makes the character of the thought as contrasted with other thoughts; this is the content. And finally there is St. Paul's, which is the object of your thought. There must be a difference between the content of a thought and what it is about, since the thought is here and now, whereas what it is about may not be; hence it is clear that the thought is not identical with St. Paul's. This seems to show that we must distinguish between content and object. But if Meinong is right, there can be no thought without an object: the connection of the two is essential. The object might exist without the thought, but not the thought without the object: the three elements of act, content and object are all required to constitute the one single occurrence called "thinking of St. Paul's."

The above analysis of a thought, though I believe it to be mistaken, is very useful as affording a schema in terms of which other theories can be stated. In the remainder of the present lecture I shall state in outline the view which I advocate, and show how various other views out of which mine has grown result from modifications of the threefold analysis into act, content and object.

The first criticism I have to make is that the ACT seems unnecessary and fictitious. The occurrence of the content of a thought constitutes the occurrence of the thought. Empirically, I cannot discover anything corresponding to the supposed act; and theoretically I cannot see that it is indispensable. We say: "_I_ think so-and-so," and this word "I" suggests that thinking is the act of a person. Meinong's "act" is the ghost of the subject, or what once was the full-blooded soul. It is supposed that thoughts cannot just come and go, but need a person to think them. Now, of course it is true that thoughts can be collected into bundles, so that one bundle is my thoughts, another is your thoughts, and a third is the thoughts of Mr. Jones. But I think the person is not an ingredient in the single thought: he is rather constituted by relations of the thoughts to each other and to the body. This is a large question, which need not, in its entirety, concern us at present. All that I am concerned with for the moment is that the grammatical forms "I think," "you think," and "Mr. Jones thinks," are misleading if regarded as indicating an analysis of a single thought. It would be better to say "it thinks in me," like "it rains here"; or better still, "there is a thought in me." This is simply on the ground that what Meinong calls the act in thinking is not empirically discoverable, or logically deducible from what we can observe.

The next point of criticism concerns the relation of content and object. The reference of thoughts to objects is not, I believe, the simple direct essential thing that Brentano and Meinong represent it as being. It seems to me to be derivative, and to consist largely in BELIEFS: beliefs that what constitutes the thought is connected with various other elements which together make up the object. You have, say, an image of St. Paul's, or merely the word "St. Paul's" in your head. You believe, however vaguely and dimly, that this is connected with what you would see if you went to St. Paul's, or what you would feel if you touched its walls; it is further connected with what other people see and feel, with services and the Dean and Chapter and Sir Christopher Wren. These things are not mere thoughts of yours, but your thought stands in a relation to them of which you are more or less aware. The awareness of this relation is a further thought, and constitutes your feeling that the original thought had an "object." But in pure imagination you can get very similar thoughts without these accompanying beliefs; and in this case your thoughts do not have objects or seem to have them. Thus in such instances you have content without object. On the other hand, in seeing or hearing it would be less misleading to say that you have object without content, since what you see or hear is actually part of the physical world, though not matter in the sense of physics. Thus the whole question of the relation of mental occurrences to objects grows very complicated, and cannot be settled by regarding reference to objects as of the essence of thoughts. All the above remarks are merely preliminary, and will be expanded later.

Speaking in popular and unphilosophical terms, we may say that the content of a thought is supposed to be something in your head when you think the thought, while the object is usually something in the outer world. It is held that knowledge of the outer world is constituted by the relation to the object, while the fact that knowledge is different from what it knows is due to the fact that knowledge comes by way of contents. We can begin to state the difference between realism and idealism in terms of this opposition of contents and objects. Speaking quite roughly and approximately, we may say that idealism tends to suppress the object, while realism tends to suppress the content. Idealism, accordingly, says that nothing can be known except thoughts, and all the reality that we know is mental; while realism maintains that we know objects directly, in sensation certainly, and perhaps also in memory and thought. Idealism does not say that nothing can be known beyond the present thought, but it maintains that the

context of vague belief, which we spoke of in connection with the thought of St. Paul's, only takes you to other thoughts, never to anything radically different from thoughts. The difficulty of this view is in regard to sensation, where it seems as if we came into direct contact with the outer world. But the Berkeleian way of meeting this difficulty is so familiar that I need not enlarge upon it now. I shall return to it in a later lecture, and will only observe, for the present, that there seem to me no valid grounds for regarding what we see and hear as not part of the physical world.

Realists, on the other hand, as a rule, suppress the content, and maintain that a thought consists either of act and object alone, or of object alone. I have been in the past a realist, and I remain a realist as regards sensation, but not as regards memory or thought. I will try to explain what seem to me to be the reasons for and against various kinds of realism.

Modern idealism professes to be by no means confined to the present thought or the present thinker in regard to its knowledge; indeed, it contends that the world is so organic, so dove-tailed, that from any one portion the whole can be inferred, as the complete skeleton of an extinct animal can be inferred from one bone. But the logic by which this supposed organic nature of the world is nominally demonstrated appears to realists, as it does to me, to be faulty. They argue that, if we cannot know the physical world directly, we cannot really know any thing outside our own minds: the rest of the world may be merely our dream. This is a dreary view, and they there fore seek ways of escaping from it. Accordingly they maintain that in knowledge we are in direct contact with objects, which may be, and usually are, outside our own minds. No doubt they are prompted to this view, in the first place, by bias, namely, by the desire to think that they can know of the existence of a world outside themselves. But we have to consider, not what led them to desire the view, but whether their arguments for it are valid.

There are two different kinds of realism, according as we make a thought consist of act and object, or of object alone. Their difficulties are different, but neither seems tenable all through. Take, for the sake of definiteness, the remembering of a past event. The remembering occurs now, and is therefore necessarily not identical with the past event. So long as we retain the act, this need cause no difficulty. The act of remembering occurs now, and has on this view a certain essential relation to the past event which it remembers. There is no LOGICAL objection to this theory, but there is the objection, which we spoke of earlier, that the act seems mythical, and is not to be found by observation. If, on the other hand, we try to constitute memory without the act, we are driven to a content, since we must have something that happens NOW, as opposed to the event which happened in the past. Thus, when we reject the act, which I think we must, we are driven to a theory of memory which is more akin to idealism. These arguments, however, do not apply to sensation. It is especially sensation, I think, which is considered by those realists who retain only the object.* Their views, which are chiefly held in America, are in large measure derived from William James, and before going further it will be well to consider the revolutionary doctrine which he advocated. I believe this doctrine contains important new truth, and what I shall have to say will be in a considerable measure inspired by it.

* This is explicitly the case with Mach's "Analysis of Sensations," a book of fundamental importance in the present connection. (Translation of fifth German edition, Open Court Co., 1914. First German edition, 1886.)

William James's view was first set forth in an essay called "Does 'consciousness' exist?"* In this essay he explains how what used to be the soul has gradually been refined down to the "transcendental ego," which, he says, "attenuates itself to a thoroughly ghostly condition, being only a name for the fact that the 'content' of experience IS KNOWN. It loses personal form and activity--these passing over to the content--and becomes a bare Bewusstheit or Bewusstsein uberhaupt, of which in its own right absolutely nothing can be said. I believe (he continues) that 'consciousness,' when once it has evaporated to this estate of pure diaphaneity, is on the point of disappearing altogether. It is the name of a nonentity, and has no right to a place among first principles. Those who still cling to it are clinging to a mere echo, the faint rumour left behind by the disappearing 'soul' upon the air of philosophy"(p. 2).

* "Journal of Philosophy, Psychology and Scientific Methods," vol. i, 1904. Reprinted in "Essays in Radical Empiricism" (Longmans, Green & Co., 1912), pp. 1-38, to which references in what follows refer.

He explains that this is no sudden change in his opinions. "For twenty years past," he says, "I have mistrusted 'consciousness' as an entity; for seven or eight years past I have suggested its non-existence to my students, and tried to give them its pragmatic equivalent in realities of experience. It seems to me that the hour is ripe for it to be openly and universally discarded"(p. 3).

His next concern is to explain away the air of paradox, for James was never wilfully paradoxical. "Undeniably," he says, "'thoughts' do exist." "I mean only to deny that the word stands for an entity, but to insist most emphatically that it does stand for a function.

There is, I mean, no aboriginal stuff or quality of being, contrasted with that of which material objects are made, out of which our thoughts of them are made; but there is a function in experience which thoughts perform, and for the performance of which this quality of being is invoked. That function is KNOWING"(pp. 3-4).

James's view is that the raw material out of which the world is built up is not of two sorts, one matter and the other mind, but that it is arranged in different patterns by its inter-relations, and that some arrangements may be called mental, while others may be called physical.

"My thesis is," he says, "that if we start with the supposition that there is only one primal stuff or material in the world, a stuff of which everything is composed, and if we call that stuff 'pure experience,' then knowing can easily be explained as a particular sort of relation towards one another into which portions of pure experience may enter. The relation itself is a part of pure experience; one of its 'terms' becomes the subject or bearer of the knowledge, the knower, the other becomes the object known"(p. 4).

After mentioning the duality of subject and object, which is supposed to constitute consciousness, he proceeds in italics: "EXPERIENCE, I BELIEVE, HAS NO SUCH INNER DUPLICITY; AND THE SEPARATION OF IT INTO CONSCIOUSNESS AND CONTENT COMES, NOT BY WAY OF SUBTRACTION, BUT BY WAY OF ADDITION"(p. 9).

He illustrates his meaning by the analogy of paint as it appears in a paint-shop and as it appears in a picture: in the one case it is just "saleable matter," while in the other it "performs a spiritual function. Just so, I maintain (he continues), does a given undivided portion of experience, taken in one context of associates, play the part of a knower, of a state of mind, of 'consciousness'; while in a different context the same undivided bit of experience plays the part of a thing known, of an objective 'content.' In a word, in one group it figures as a thought, in another group as a thing"(pp. 9-10).

He does not believe in the supposed immediate certainty of thought. "Let the case be what it may in others," he says, "I am as confident as I am of anything that, in myself, the stream of thinking (which I recognize emphatically as a phenomenon) is only a careless name for what, when scrutinized, reveals itself to consist chiefly of the stream of my breathing. The 'I think' which Kant said must be able to accompany all my objects, is the 'I breathe' which actually does accompany them"(pp. 36-37).

The same view of "consciousness" is set forth in the succeeding essay, "A World of Pure Experience" (ib., pp. 39-91). The use of the phrase "pure experience" in both essays points to a lingering influence of idealism. "Experience," like "consciousness," must be a product, not part of the primary stuff of the world. It must be possible, if James is right in his main contentions, that roughly the same stuff, differently arranged, would not give rise to anything that could be called "experience." This word has been dropped by the American realists, among whom we may mention specially Professor R. B. Perry of Harvard and Mr. Edwin B. Holt. The interests of this school are in general philosophy and the philosophy of the sciences, rather than in psychology; they have derived a strong impulsion from James, but have more interest than he had in logic and mathematics and the abstract part of philosophy. They speak of "neutral" entities as the stuff out of which both mind and matter are constructed. Thus Holt says: "If the terms and propositions of logic must be substantialized, they are all strictly of one substance, for which perhaps the least dangerous name is neutral-stuff. The relation of neutral-stuff to matter and mind we shall have presently to consider at considerable length." *

* "The Concept of Consciousness" (Geo. Allen & Co., 1914), p. 52.

My own belief--for which the reasons will appear in subsequent lectures--is that James is right in rejecting consciousness as an entity, and that the American realists are partly right, though not wholly, in considering that both mind and matter are composed of a neutral-stuff which, in isolation, is neither mental nor material. I should admit this view as regards sensations: what is heard or seen belongs equally to psychology and to physics. But I should say that images belong only to the mental world, while those occurrences (if any) which do not form part of any "experience" belong only to the physical world. There are, it seems to me, prima facie different kinds of causal laws, one belonging to physics and the other to psychology. The law of gravitation, for example, is a physical law, while the law of association is a psychological law. Sensations are subject to both kinds of laws, and are therefore truly "neutral" in Holt's sense. But entities subject only to physical laws, or only to psychological laws, are not neutral, and may be called respectively purely material and purely mental. Even those, however, which are purely mental will not have that intrinsic reference to objects which Brentano assigns to them and which constitutes the essence of "consciousness" as ordinarily understood. But it is now time to pass on to other modern tendencies, also hostile to "consciousness."

There is a psychological school called "Behaviourists," of whom the protagonist is Professor John B. Watson,* formerly of the Johns Hopkins University. To them also, on the whole, belongs Professor John Dewey, who, with James and Dr. Schiller, was one

of the three founders of pragmatism. The view of the "behaviourists" is that nothing can be known except by external observation. They deny altogether that there is a separate source of knowledge called "introspection," by which we can know things about ourselves which we could never observe in others. They do not by any means deny that all sorts of things MAY go on in our minds: they only say that such things, if they occur, are not susceptible of scientific observation, and do not therefore concern psychology as a science. Psychology as a science, they say, is only concerned with BEHAVIOUR, i.e. with what we DO; this alone, they contend, can be accurately observed. Whether we think meanwhile, they tell us, cannot be known; in their observation of the behaviour of human beings, they have not so far found any evidence of thought. True, we talk a great deal, and imagine that in so doing we are showing that we can think; but behaviourists say that the talk they have to listen to can be explained without supposing that people think. Where you might expect a chapter on "thought processes" you come instead upon a chapter on "The Language Habit." It is humiliating to find how terribly adequate this hypothesis turns out to be.

* See especially his "Behavior: an Introduction to Comparative Psychology," New York, 1914.

Behaviourism has not, however, sprung from observing the folly of men. It is the wisdom of animals that has suggested the view. It has always been a common topic of popular discussion whether animals "think." On this topic people are prepared to take sides without having the vaguest idea what they mean by "thinking." Those who desired to investigate such questions were led to observe the behaviour of animals, in the hope that their behaviour would throw some light on their mental faculties. At first sight, it might seem that this is so. People say that a dog "knows" its name because it comes when it is called, and that it "remembers" its master, because it looks sad in his absence, but wags its tail and barks when he returns. That the dog behaves in this way is matter of observation, but that it "knows" or "remembers" anything is an inference, and in fact a very doubtful one. The more such inferences are examined, the more precarious they are seen to be. Hence the study of animal behaviour has been gradually led to abandon all attempt at mental interpretation. And it can hardly be doubted that, in many cases of complicated behaviour very well adapted to its ends, there can be no prevision of those ends. The first time a bird builds a nest, we can hardly suppose it knows that there will be eggs to be laid in it, or that it will sit on the eggs, or that they will hatch into young birds. It does what it does at each stage because instinct gives it an impulse to do just that, not because it foresees and desires the result of its actions.*

* An interesting discussion of the question whether instinctive actions, when first performed, involve any prevision, however vague, will be found in Lloyd Morgan's "Instinct and Experience" (Methuen, 1912), chap. ii.

Careful observers of animals, being anxious to avoid precarious inferences, have gradually discovered more and more how to give an account of the actions of animals without assuming what we call "consciousness." It has seemed to the behaviourists that similar methods can be applied to human behaviour, without assuming anything not open to external observation. Let us give a crude illustration, too crude for the authors in question, but capable of affording a rough insight into their meaning. Suppose two children in a school, both of whom are asked "What is six times nine?" One says fifty-four, the other says fifty-six. The one, we say, "knows" what six times nine is, the other does not. But all that we can observe is a certain language-habit. The one child has acquired the habit of saying "six times nine is fifty-four"; the other has not. There is no more need of "thought" in this than there is when a horse turns into his accustomed stable; there are merely more numerous and complicated habits. There is obviously an observable fact called "knowing" such-and-such a thing; examinations are experiments for discovering such facts. But all that is observed or discovered is a certain set of habits in the use of words. The thoughts (if any) in the mind of the examinee are of no interest to the examiner; nor has the examiner any reason to suppose even the most successful examinee capable of even the smallest amount of thought.

Thus what is called "knowing," in the sense in which we can ascertain what other people "know," is a phenomenon exemplified in their physical behaviour, including spoken and written words. There is no reason--so Watson argues--to suppose that their knowledge IS anything beyond the habits shown in this behaviour: the inference that other people have something nonphysical called "mind" or "thought" is therefore unwarranted.

So far, there is nothing particularly repugnant to our prejudices in the conclusions of the behaviourists. We are all willing to admit that other people are thoughtless. But when it comes to ourselves, we feel convinced that we can actually perceive our own thinking. "Cogito, ergo sum" would be regarded by most people as having a true premiss. This, however, the behaviourist denies. He maintains that our knowledge of ourselves is no different in kind from our knowledge of other people. We may see MORE, because our own body is easier to observe than that of other people; but we do not see anything radically unlike what we see of others. Introspection, as a separate source of knowledge, is entirely denied by psychologists of this school. I shall discuss this question at length in a later lecture; for the present I will only observe that it is by no means simple, and that, though I believe the

behaviourists somewhat overstate their case, yet there is an important element of truth in their contention, since the things which we can discover by introspection do not seem to differ in any very fundamental way from the things which we discover by external observation.

So far, we have been principally concerned with knowing. But it might well be maintained that desiring is what is really most characteristic of mind. Human beings are constantly engaged in achieving some end they feel pleasure in success and pain in failure. In a purely material world, it may be said, there would be no opposition of pleasant and unpleasant, good and bad, what is desired and what is feared. A man's acts are governed by purposes. He decides, let us suppose, to go to a certain place, whereupon he proceeds to the station, takes his ticket and enters the train. If the usual route is blocked by an accident, he goes by some other route. All that he does is determined--or so it seems--by the end he has in view, by what lies in front of him, rather than by what lies behind. With dead matter, this is not the case. A stone at the top of a hill may start rolling, but it shows no pertinacity in trying to get to the bottom. Any ledge or obstacle will stop it, and it will exhibit no signs of discontent if this happens. It is not attracted by the pleasantness of the valley, as a sheep or cow might be, but propelled by the steepness of the hill at the place where it is. In all this we have characteristic differences between the behaviour of animals and the behaviour of matter as studied by physics.

Desire, like knowledge, is, of course, in one sense an observable phenomenon. An elephant will eat a bun, but not a mutton chop; a duck will go into the water, but a hen will not. But when we think of our own desires, most people believe that we can know them by an immediate self-knowledge which does not depend upon observation of our actions. Yet if this were the case, it would be odd that people are so often mistaken as to what they desire. It is matter of common observation that "so-and-so does not know his own motives," or that "A is envious of B and malicious about him, but quite unconscious of being so." Such people are called self-deceivers, and are supposed to have had to go through some more or less elaborate process of concealing from themselves what would otherwise have been obvious. I believe that this is an entire mistake. I believe that the discovery of our own motives can only be made by the same process by which we discover other people's, namely, the process of observing our actions and inferring the desire which could prompt them. A desire is "conscious" when we have told ourselves that we have it. A hungry man may say to himself: "Oh, I do want my lunch." Then his desire is "conscious." But it only differs from an "unconscious" desire by the presence of appropriate words, which is by no means a fundamental difference.

The belief that a motive is normally conscious makes it easier to be mistaken as to our own motives than as to other people's. When some desire that we should be ashamed of is attributed to us, we notice that we have never had it consciously, in the sense of saying to ourselves, "I wish that would happen." We therefore look for some other interpretation of our actions, and regard our friends as very unjust when they refuse to be convinced by our repudiation of what we hold to be a calumny. Moral considerations greatly increase the difficulty of clear thinking in this matter. It is commonly argued that people are not to blame for unconscious motives, but only for conscious ones. In order, therefore, to be wholly virtuous it is only necessary to repeat virtuous formulas. We say: "I desire to be kind to my friends, honourable in business, philanthropic towards the poor, public-spirited in politics." So long as we refuse to allow ourselves, even in the watches of the night, to avow any contrary desires, we may be bullies at home, shady in the City, skinflints in paying wages and profiteers in dealing with the public; yet, if only conscious motives are to count in moral valuation, we shall remain model characters. This is an agreeable doctrine, and it is not surprising that men are un willing to abandon it. But moral considerations are the worst enemies of the scientific spirit and we must dismiss them from our minds if we wish to arrive at truth.

I believe--as I shall try to prove in a later lecture--that desire, like force in mechanics, is of the nature of a convenient fiction for describing shortly certain laws of behaviour. A hungry animal is restless until it finds food; then it becomes quiescent. The thing which will bring a restless condition to an end is said to be what is desired. But only experience can show what will have this sedative effect, and it is easy to make mistakes. We feel dissatisfaction, and think that such and-such a thing would remove it; but in thinking this, we are theorizing, not observing a patent fact. Our theorizing is often mistaken, and when it is mistaken there is a difference between what we think we desire and what in fact will bring satisfaction. This is such a common phenomenon that any theory of desire which fails to account for it must be wrong.

What have been called "unconscious" desires have been brought very much to the fore in recent years by psycho-analysis. Psycho-analysis, as every one knows, is primarily a method of understanding hysteria and certain forms of insanity*; but it has been found that there is much in the lives of ordinary men and women which bears a humiliating resemblance to the delusions of the insane. The connection of dreams, irrational beliefs and foolish actions with unconscious wishes has been brought to light, though with some exaggeration, by Freud and Jung and their followers. As regards the nature of these unconscious wishes, it

seems to me--though as a layman I speak with diffidence--that many psycho-analysts are unduly narrow; no doubt the wishes they emphasize exist, but others, e.g. for honour and power, are equally operative and equally liable to concealment. This, however, does not affect the value of their general theories from the point of view of theoretic psychology, and it is from this point of view that their results are important for the analysis of mind.

* There is a wide field of "unconscious" phenomena which does not depend upon psycho-analytic theories. Such occurrences as automatic writing lead Dr. Morton Prince to say: "As I view this question of the subconscious, far too much weight is given to the point of awareness or not awareness of our conscious processes. As a matter of fact, we find entirely identical phenomena, that is, identical in every respect but one-that of awareness in which sometimes we are aware of these conscious phenomena and sometimes not"(p. 87 of "Subconscious Phenomena," by various authors, Rebman). Dr. Morton Price conceives that there may be "consciousness" without "awareness." But this is a difficult view, and one which makes some definition of "consciousness" imperative. For nay part, I cannot see how to separate consciousness from awareness.

What, I think, is clearly established, is that a man's actions and beliefs may be wholly dominated by a desire of which he is quite unconscious, and which he indignantly repudiates when it is suggested to him. Such a desire is generally, in morbid cases, of a sort which the patient would consider wicked; if he had to admit that he had the desire, he would loathe himself. Yet it is so strong that it must force an outlet for itself; hence it becomes necessary to entertain whole systems of false beliefs in order to hide the nature of what is desired. The resulting delusions in very many cases disappear if the hysteric or lunatic can be made to face the facts about himself. The consequence of this is that the treatment of many forms of insanity has grown more psychological and less physiological than it used to be. Instead of looking for a physical defect in the brain, those who treat delusions look for the repressed desire which has found this contorted mode of expression. For those who do not wish to plunge into the somewhat repulsive and often rather wild theories of psychoanalytic pioneers, it will be worth while to read a little book by Dr. Bernard Hart on "The Psychology of Insanity."* On this question of the mental as opposed to the physiological study of the causes of insanity, Dr. Hart says:

* Cambridge, 1912; 2nd edition, 1914. The following references are to the second edition.

"The psychological conception [of insanity] is based on the view that mental processes can be directly studied without any reference to the accompanying changes which are presumed to take place in the brain, and that insanity may therefore be properly attacked from the standpoint of psychology"(p. 9).

This illustrates a point which I am anxious to make clear from the outset. Any attempt to classify modern views, such as I propose to advocate, from the old standpoint of materialism and idealism, is only misleading. In certain respects, the views which I shall be setting forth approximate to materialism; in certain others, they approximate to its opposite. On this question of the study of delusions, the practical effect of the modern theories, as Dr. Hart points out, is emancipation from the materialist method. On the other hand, as he also points out (pp. 38-9), imbecility and dementia still have to be considered physiologically, as caused by defects in the brain. There is no inconsistency in this If, as we maintain, mind and matter are neither of them the actual stuff of reality, but different convenient groupings of an underlying material, then, clearly, the question whether, in regard to a given phenomenon, we are to seek a physical or a mental cause, is merely one to be decided by trial. Metaphysicians have argued endlessly as to the interaction of mind and matter. The followers of Descartes held that mind and matter are so different as to make any action of the one on the other impossible. When I will to move my arm, they said, it is not my will that operates on my arm, but God, who, by His omnipotence, moves my arm whenever I want it moved. The modern doctrine of psychophysical parallelism is not appreciably different from this theory of the Cartesian school. Psycho-physical parallelism is the theory that mental and physical events each have causes in their own sphere, but run on side by side owing to the fact that every state of the brain coexists with a definite state of the mind, and vice versa. This view of the reciprocal causal independence of mind and matter has no basis except in metaphysical theory.* For us, there is no necessity to make any such assumption, which is very difficult to harmonize with obvious facts. I receive a letter inviting me to dinner: the letter is a physical fact, but my apprehension of its meaning is mental. Here we have an effect of matter on mind. In consequence of my apprehension of the meaning of the letter, I go to the right place at the right time; here we have an effect of mind on matter. I shall try to persuade you, in the course of these lectures, that matter is not so material and mind not so mental as is generally supposed. When we are speaking of matter, it will seem as if we were inclining to idealism; when we are speaking of mind, it will seem as if we were inclining to materialism. Neither is the truth. Our world is to be constructed out of what the American realists call "neutral" entities, which have neither the hardness and indestructibility of matter, nor the reference to objects which is supposed to characterize mind.

* It would seem, however, that Dr. Hart accepts this theory as 8 methodological precept. See his contribution to "Subconscious Phenomena" (quoted above), especially pp. 121-2.

There is, it is true, one objection which might be felt, not indeed to the action of matter on mind, but to the action of mind on matter. The laws of physics, it may be urged, are apparently adequate to explain everything that happens to matter, even when it is matter in a man's brain. This, however, is only a hypothesis, not an established theory. There is no cogent empirical reason for supposing that the laws determining the motions of living bodies are exactly the same as those that apply to dead matter. Sometimes, of course, they are clearly the same. When a man falls from a precipice or slips on a piece of orange peel, his body behaves as if it were devoid of life. These are the occasions that make Bergson laugh. But when a man's bodily movements are what we call "voluntary," they are, at any rate prima facie, very different in their laws from the movements of what is devoid of life. I do not wish to say dogmatically that the difference is irreducible; I think it highly probable that it is not. I say only that the study of the behaviour of living bodies, in the present state of our knowledge, is distinct from physics. The study of gases was originally quite distinct from that of rigid bodies, and would never have advanced to its present state if it had not been independently pursued. Nowadays both the gas and the rigid body are manufactured out of a more primitive and universal kind of matter. In like manner, as a question of methodology, the laws of living bodies are to be studied, in the first place, without any undue haste to subordinate them to the laws of physics. Boyle's law and the rest had to be discovered before the kinetic theory of gases became possible. But in psychology we are hardly yet at the stage of Boyle's law. Meanwhile we need not be held up by the bogey of the universal rigid exactness of physics. This is, as yet, a mere hypothesis, to be tested empirically without any preconceptions. It may be true, or it may not. So far, that is all we can say.

Returning from this digression to our main topic, namely, the criticism of "consciousness," we observe that Freud and his followers, though they have demonstrated beyond dispute the immense importance of "unconscious" desires in determining our actions and beliefs, have not attempted the task of telling us what an "unconscious" desire actually is, and have thus invested their doctrine with an air of mystery and mythology which forms a large part of its popular attractiveness. They speak always as though it were more normal for a desire to be conscious, and as though a positive cause had to be assigned for its being unconscious. Thus "the unconscious" becomes a sort of underground prisoner, living in a dungeon, breaking in at long intervals upon our daylight respectability with dark groans and maledictions and strange atavistic lusts. The ordinary reader, almost inevitably, thinks of this underground person as another consciousness, prevented by what Freud calls the "censor" from making his voice heard in company, except on rare and dreadful occasions when he shouts so loud that every one hears him and there is a scandal. Most of us like the idea that we could be desperately wicked if only we let ourselves go. For this reason, the Freudian "unconscious" has been a consolation to many quiet and well-behaved persons.

I do not think the truth is quite so picturesque as this. I believe an "unconscious" desire is merely a causal law of our behaviour,* namely, that we remain restlessly active until a certain state of affairs is realized, when we achieve temporary equilibrium If we know beforehand what this state of affairs is, our desire is conscious; if not, unconscious. The unconscious desire is not something actually existing, but merely a tendency to a certain behaviour; it has exactly the same status as a force in dynamics. The unconscious desire is in no way mysterious; it is the natural primitive form of desire, from which the other has developed through our habit of observing and theorizing (often wrongly). It is not necessary to suppose, as Freud seems to do, that every unconscious wish was once conscious, and was then, in his terminology, "repressed" because we disapproved of it. On the contrary, we shall suppose that, although Freudian "repression" undoubtedly occurs and is important, it is not the usual reason for unconsciousness of our wishes. The usual reason is merely that wishes are all, to begin with, unconscious, and only become known when they are actively noticed. Usually, from laziness, people do not notice, but accept the theory of human nature which they find current, and attribute to themselves whatever wishes this theory would lead them to expect. We used to be full of virtuous wishes, but since Freud our wishes have become, in the words of the Prophet Jeremiah, "deceitful above all things and desperately wicked." Both these views, in most of those who have held them, are the product of theory rather than observation, for observation requires effort, whereas repeating phrases does not.

* Cf. Hart, "The Psychology of Insanity," p. 19.

The interpretation of unconscious wishes which I have been advocating has been set forth briefly by Professor John B. Watson in an article called "The Psychology of Wish Fulfilment," which appeared in "The Scientific Monthly" in November, 1916. Two quotations will serve to show his point of view:

"The Freudians (he says) have made more or less of a 'metaphysical entity' out of the censor. They suppose that when wishes are repressed they are repressed into the 'unconscious,' and that this mysterious censor stands at the trapdoor lying between the conscious and the unconscious. Many of us do not believe in a world of the unconscious (a few of us even have grave doubts about the usefulness of the term consciousness), hence we try to explain censorship along ordinary biological lines. We believe that one group of habits can 'down' another group of habits--or instincts. In this case our ordinary system of habits--those which we call expressive of our 'real selves'--inhibit or quench (keep inactive or partially inactive) those habits and instinctive tendencies which belong largely in the past"(p. 483).

Again, after speaking of the frustration of some impulses which is involved in acquiring the habits of a civilized adult, he continues:

"It is among these frustrated impulses that I would find the biological basis of the unfulfilled wish. Such 'wishes' need never have been 'conscious,' and NEED NEVER HAVE BEEN SUPPRESSED INTO FREUD'S REALM OF THE UNCONSCIOUS. It may be inferred from this that there is no particular reason for applying the term 'wish' to such tendencies"(p. 485).

One of the merits of the general analysis of mind which we shall be concerned with in the following lectures is that it removes the atmosphere of mystery from the phenomena brought to light by the psycho-analysts. Mystery is delightful, but unscientific, since it depends upon ignorance. Man has developed out of the animals, and there is no serious gap between him and the amoeba. Something closely analogous to knowledge and desire, as regards its effects on behaviour, exists among animals, even where what we call "consciousness" is hard to believe in; something equally analogous exists in ourselves in cases where no trace of "consciousness" can be found. It is therefore natural to suppose that, what ever may be the correct definition of "consciousness," "consciousness" is not the essence of life or mind. In the following lectures, accordingly, this term will disappear until we have dealt with words, when it will re-emerge as mainly a trivial and unimportant outcome of linguistic habits.

LECTURE II. INSTINCT AND HABIT

In attempting to understand the elements out of which mental phenomena are compounded, it is of the greatest importance to remember that from the protozoa to man there is nowhere a very wide gap either in structure or in behaviour. From this fact it is a highly probable inference that there is also nowhere a very wide mental gap. It is, of course, POSSIBLE that there may be, at certain stages in evolution, elements which are entirely new from the standpoint of analysis, though in their nascent form they have little influence on behaviour and no very marked correlatives in structure. But the hypothesis of continuity in mental development is clearly preferable if no psychological facts make it impossible. We shall find, if I am not mistaken, that there are no facts which refute the hypothesis of mental continuity, and that, on the other hand, this hypothesis affords a useful test of suggested theories as to the nature of mind.

The hypothesis of mental continuity throughout organic evolution may be used in two different ways. On the one hand, it may be held that we have more knowledge of our own minds than those of animals, and that we should use this knowledge to infer the existence of something similar to our own mental processes in animals and even in plants. On the other hand, it may be held that animals and plants present simpler phenomena, more easily analysed than those of human minds; on this ground it may be urged that explanations which are adequate in the case of animals ought not to be lightly rejected in the case of man. The practical effects of these two views are diametrically opposite: the first leads us to level up animal intelligence with what we believe ourselves to know about our own intelligence, while the second leads us to attempt a levelling down of our own intelligence to something not too remote from what we can observe in animals. It is therefore important to consider the relative justification of the two ways of applying the principle of continuity.

It is clear that the question turns upon another, namely, which can we know best, the psychology of animals or that of human beings? If we can know most about animals, we shall use this knowledge as a basis for inference about human beings; if we can know most about human beings, we shall adopt the opposite procedure. And the question whether we can know most about the psychology of human beings or about that of animals turns upon yet another, namely: Is introspection or external observation the surer method in psychology? This is a question which I propose to discuss at length in Lecture VI; I shall therefore content myself now with a statement of the conclusions to be arrived at.

We know a great many things concerning ourselves which we cannot know nearly so directly concerning animals or even other people. We know when we have a toothache, what we are thinking of, what dreams we have when we are asleep, and a host of other occurrences which we only know about others when they tell us of them, or otherwise make them inferable by their behaviour.

Thus, so far as knowledge of detached facts is concerned, the advantage is on the side of self-knowledge as against external observation.

But when we come to the analysis and scientific understanding of the facts, the advantages on the side of self-knowledge become far less clear. We know, for example, that we have desires and beliefs, but we do not know what constitutes a desire or a belief. The phenomena are so familiar that it is difficult to realize how little we really know about them. We see in animals, and to a lesser extent in plants, behaviour more or less similar to that which, in us, is prompted by desires and beliefs, and we find that, as we descend in the scale of evolution, behaviour becomes simpler, more easily reducible to rule, more scientifically analysable and predictable. And just because we are not misled by familiarity we find it easier to be cautious in interpreting behaviour when we are dealing with phenomena remote from those of our own minds: Moreover, introspection, as psychoanalysis has demonstrated, is extraordinarily fallible even in cases where we feel a high degree of certainty. The net result seems to be that, though self-knowledge has a definite and important contribution to make to psychology, it is exceedingly misleading unless it is constantly checked and controlled by the test of external observation, and by the theories which such observation suggests when applied to animal behaviour. On the whole, therefore, there is probably more to be learnt about human psychology from animals than about animal psychology from human beings; but this conclusion is one of degree, and must not be pressed beyond a point.

It is only bodily phenomena that can be directly observed in animals, or even, strictly speaking, in other human beings. We can observe such things as their movements, their physiological processes, and the sounds they emit. Such things as desires and beliefs, which seem obvious to introspection, are not visible directly to external observation. Accordingly, if we begin our study of psychology by external observation, we must not begin by assuming such things as desires and beliefs, but only such things as external observation can reveal, which will be characteristics of the movements and physiological processes of animals. Some animals, for example, always run away from light and hide themselves in dark places. If you pick up a mossy stone which is lightly embedded in the earth, you will see a number of small animals scuttling away from the unwonted daylight and seeking again the darkness of which you have deprived them. Such animals are sensitive to light, in the sense that their movements are affected by it; but it would be rash to infer that they have sensations in any way analogous to our sensations of sight. Such inferences, which go beyond the observable facts, are to be avoided with the utmost care.

It is customary to divide human movements into three classes, voluntary, reflex and mechanical. We may illustrate the distinction by a quotation from William James ("Psychology," i, 12):

"If I hear the conductor calling 'all aboard' as I enter the depot, my heart first stops, then palpitates, and my legs respond to the air-waves falling on my tympanum by quickening their movements. If I stumble as I run, the sensation of falling provokes a movement of the hands towards the direction of the fall, the effect of which is to shield the body from too sudden a shock. If a cinder enter my eye, its lids close forcibly and a copious flow of tears tends to wash it out.

"These three responses to a sensational stimulus differ, however, in many respects. The closure of the eye and the lachrymation are quite involuntary, and so is the disturbance of the heart. Such involuntary responses we know as 'reflex' acts. The motion of the arms to break the shock of falling may also be called reflex, since it occurs too quickly to be deliberately intended. Whether it be instinctive or whether it result from the pedestrian education of childhood may be doubtful; it is, at any rate, less automatic than the previous acts, for a man might by conscious effort learn to perform it more skilfully, or even to suppress it altogether. Actions of this kind, with which instinct and volition enter upon equal terms, have been called 'semi-reflex.' The act of running towards the train, on the other hand, has no instinctive element about it. It is purely the result of education, and is preceded by a consciousness of the purpose to be attained and a distinct mandate of the will. It is a 'voluntary act.' Thus the animal's reflex and voluntary performances shade into each other gradually, being connected by acts which may often occur automatically, but may also be modified by conscious intelligence.

"An outside observer, unable to perceive the accompanying consciousness, might be wholly at a loss to discriminate between the automatic acts and those which volition escorted. But if the criterion of mind's existence be the choice of the proper means for the attainment of a supposed end, all the acts alike seem to be inspired by intelligence, for APPROPRIATENESS characterizes them all alike."

There is one movement, among those that James mentions at first, which is not subsequently classified, namely, the stumbling. This is the kind of movement which may be called "mechanical"; it is evidently of a different kind from either reflex or voluntary movements, and more akin to the movements of dead matter. We may define a movement of an animal's body as "mechanical"

when it proceeds as if only dead matter were involved. For example, if you fall over a cliff, you move under the influence of gravitation, and your centre of gravity describes just as correct a parabola as if you were already dead. Mechanical movements have not the characteristic of appropriateness, unless by accident, as when a drunken man falls into a waterbutt and is sobered. But reflex and voluntary movements are not ALWAYS appropriate, unless in some very recondite sense. A moth flying into a lamp is not acting sensibly; no more is a man who is in such a hurry to get his ticket that he cannot remember the name of his destination. Appropriateness is a complicated and merely approximate idea, and for the present we shall do well to dismiss it from our thoughts.

As James states, there is no difference, from the point of view of the outside observer, between voluntary and reflex movements. The physiologist can discover that both depend upon the nervous system, and he may find that the movements which we call voluntary depend upon higher centres in the brain than those that are reflex. But he cannot discover anything as to the presence or absence of "will" or "consciousness," for these things can only be seen from within, if at all. For the present, we wish to place ourselves resolutely in the position of outside observers; we will therefore ignore the distinction between voluntary and reflex movements. We will call the two together "vital" movements. We may then distinguish "vital" from mechanical movements by the fact that vital movements depend for their causation upon the special properties of the nervous system, while mechanical movements depend only upon the properties which animal bodies share with matter in general.

There is need for some care if the distinction between mechanical and vital movements is to be made precise. It is quite likely that, if we knew more about animal bodies, we could deduce all their movements from the laws of chemistry and physics. It is already fairly easy to see how chemistry reduces to physics, i.e. how the differences between different chemical elements can be accounted for by differences of physical structure, the constituents of the structure being electrons which are exactly alike in all kinds of matter. We only know in part how to reduce physiology to chemistry, but we know enough to make it likely that the reduction is possible. If we suppose it effected, what would become of the difference between vital and mechanical movements?

Some analogies will make the difference clear. A shock to a mass of dynamite produces quite different effects from an equal shock to a mass of steel: in the one case there is a vast explosion, while in the other case there is hardly any noticeable disturbance. Similarly, you may sometimes find on a mountain-side a large rock poised so delicately that a touch will set it crashing down into the valley, while the rocks all round are so firm that only a considerable force can dislodge them What is analogous in these two cases is the existence of a great store of energy in unstable equilibrium ready to burst into violent motion by the addition of a very slight disturbance. Similarly, it requires only a very slight expenditure of energy to send a post-card with the words "All is discovered; fly!" but the effect in generating kinetic energy is said to be amazing. A human body, like a mass of dynamite, contains a store of energy in unstable equilibrium, ready to be directed in this direction or that by a disturbance which is physically very small, such as a spoken word. In all such cases the reduction of behaviour to physical laws can only be effected by entering into great minuteness; so long as we confine ourselves to the observation of comparatively large masses, the way in which the equilibrium will be upset cannot be determined. Physicists distinguish between macroscopic and microscopic equations: the former determine the visible movements of bodies of ordinary size, the latter the minute occurrences in the smallest parts. It is only the microscopic equations that are supposed to be the same for all sorts of matter. The macroscopic equations result from a process of averaging out, and may be different in different cases. So, in our instance, the laws of macroscopic phenomena are different for mechanical and vital movements, though the laws of microscopic phenomena may be the same.

We may say, speaking somewhat roughly, that a stimulus applied to the nervous system, like a spark to dynamite, is able to take advantage of the stored energy in unstable equilibrium, and thus to produce movements out of proportion to the proximate cause. Movements produced in this way are vital movements, while mechanical movements are those in which the stored energy of a living body is not involved. Similarly dynamite may be exploded, thereby displaying its characteristic properties, or may (with due precautions) be carted about like any other mineral. The explosion is analogous to vital movements, the carting about to mechanical movements.

Mechanical movements are of no interest to the psychologist, and it has only been necessary to define them in order to be able to exclude them. When a psychologist studies behaviour, it is only vital movements that concern him. We shall, therefore, proceed to ignore mechanical movements, and study only the properties of the remainder.

The next point is to distinguish between movements that are instinctive and movements that are acquired by experience. This distinction also is to some extent one of degree. Professor Lloyd Morgan gives the following definition of "instinctive behaviour":

"That which is, on its first occurrence, independent of prior experience; which tends to the well-being of the individual and the preservation of the race; which is similarly performed by all members of the same more or less restricted group of animals; and which may be subject to subsequent modification under the guidance of experience." *

* "Instinct and Experience" (Methuen, 1912) p. 5.

This definition is framed for the purposes of biology, and is in some respects unsuited to the needs of psychology. Though perhaps unavoidable, allusion to "the same more or less restricted group of animals" makes it impossible to judge what is instinctive in the behaviour of an isolated individual. Moreover, "the well-being of the individual and the preservation of the race" is only a usual characteristic, not a universal one, of the sort of movements that, from our point of view, are to be called instinctive; instances of harmful instincts will be given shortly. The essential point of the definition, from our point of view, is that an instinctive movement is in dependent of prior experience.

We may say that an "instinctive" movement is a vital movement performed by an animal the first time that it finds itself in a novel situation; or, more correctly, one which it would perform if the situation were novel.* The instincts of an animal are different at different periods of its growth, and this fact may cause changes of behaviour which are not due to learning. The maturing and seasonal fluctuation of the sex-instinct affords a good illustration. When the sex-instinct first matures, the behaviour of an animal in the presence of a mate is different from its previous behaviour in similar circumstances, but is not learnt, since it is just the same if the animal has never previously been in the presence of a mate.

* Though this can only be decided by comparison with other members of the species, and thus exposes us to the need of comparison which we thought an objection to Professor Lloyd Morgan's definition.

On the other hand, a movement is "learnt," or embodies a "habit," if it is due to previous experience of similar situations, and is not what it would be if the animal had had no such experience.

There are various complications which blur the sharpness of this distinction in practice. To begin with, many instincts mature gradually, and while they are immature an animal may act in a fumbling manner which is very difficult to distinguish from learning. James ("Psychology," ii, 407) maintains that children walk by instinct, and that the awkwardness of their first attempts is only due to the fact that the instinct has not yet ripened. He hopes that "some scientific widower, left alone with his offspring at the critical moment, may ere long test this suggestion on the living subject." However this may be, he quotes evidence to show that "birds do not LEARN to fly," but fly by instinct when they reach the appropriate age (ib., p. 406). In the second place, instinct often gives only a rough outline of the sort of thing to do, in which case learning is necessary in order to acquire certainty and precision in action. In the third place, even in the clearest cases of acquired habit, such as speaking, some instinct is required to set in motion the process of learning. In the case of speaking, the chief instinct involved is commonly supposed to be that of imitation, but this may be questioned. (See Thorndike's "Animal Intelligence," p. 253 ff.)

In spite of these qualifications, the broad distinction between instinct and habit is undeniable. To take extreme cases, every animal at birth can take food by instinct, before it has had opportunity to learn; on the other hand, no one can ride a bicycle by instinct, though, after learning, the necessary movements become just as automatic as if they were instinctive.

The process of learning, which consists in the acquisition of habits, has been much studied in various animals.* For example: you put a hungry animal, say a cat, in a cage which has a door that can be opened by lifting a latch; outside the cage you put food. The cat at first dashes all round the cage, making frantic efforts to force a way out. At last, by accident, the latch is lifted and the cat pounces on the food. Next day you repeat the experiment, and you find that the cat gets out much more quickly than the first time, although it still makes some random movements. The third day it gets out still more quickly, and before long it goes straight to the latch and lifts it at once. Or you make a model of the Hampton Court maze, and put a rat in the middle, assaulted by the smell of food on the outside. The rat starts running down the passages, and is constantly stopped by blind alleys, but at last, by persistent attempts, it gets out. You repeat this experiment day after day; you measure the time taken by the rat in reaching the food; you find that the time rapidly diminishes, and that after a while the rat ceases to make any wrong turnings. It is by essentially similar processes that we learn speaking, writing, mathematics, or the government of an empire.

* The scientific study of this subject may almost be said to begin with Thorndike's "Animal Intelligence" (Macmillan, 1911).

Professor Watson ("Behavior," pp. 262-3) has an ingenious theory as to the way in which habit arises out of random movements. I think there is a reason why his theory cannot be regarded as alone sufficient, but it seems not unlikely that it is partly correct.

Suppose, for the sake of simplicity, that there are just ten random movements which may be made by the animal--say, ten paths down which it may go--and that only one of these leads to food, or whatever else represents success in the case in question. Then the successful movement always occurs during the animal's attempts, whereas each of the others, on the average, occurs in only half the attempts. Thus the tendency to repeat a previous performance (which is easily explicable without the intervention of "consciousness") leads to a greater emphasis on the successful movement than on any other, and in time causes it alone to be performed. The objection to this view, if taken as the sole explanation, is that on improvement ought to set in till after the SECOND trial, whereas experiment shows that already at the second attempt the animal does better than the first time. Something further is, therefore, required to account for the genesis of habit from random movements; but I see no reason to suppose that what is further required involves "consciousness."

Mr. Thorndike (op. cit., p. 244) formulates two "provisional laws of acquired behaviour or learning," as follows:

"The Law of Effect is that: Of several responses made to the same situation, those which are accompanied or closely followed by satisfaction to the animal will, other things being equal, be more firmly connected with the situation, so that, when it recurs, they will be more likely to recur; those which are accompanied or closely followed by discomfort to the animal will, other things being equal, have their connections with that situation weakened, so that, when it recurs, they will be less likely to occur. The greater the satisfaction or discomfort, the greater the strengthening or weakening of the bond.

"The Law of Exercise is that: Any response to a situation will, other things being equal, be more strongly connected with the situation in proportion to the number of times it has been connected with that situation and to the average vigour and duration of the connections."

With the explanation to be presently given of the meaning of "satisfaction" and "discomfort," there seems every reason to accept these two laws.

What is true of animals, as regards instinct and habit, is equally true of men. But the higher we rise in the evolutionary scale, broadly speaking, the greater becomes the power of learning, and the fewer are the occasions when pure instinct is exhibited unmodified in adult life. This applies with great force to man, so much so that some have thought instinct less important in the life of man than in that of animals. This, however, would be a mistake. Learning is only possible when instinct supplies the driving-force. The animals in cages, which gradually learn to get out, perform random movements at first, which are purely instinctive. But for these random movements, they would never acquire the experience which afterwards enables them to produce the right movement. (This is partly questioned by Hobhouse*--wrongly, I think.) Similarly, children learning to talk make all sorts of sounds, until one day the right sound comes by accident. It is clear that the original making of random sounds, without which speech would never be learnt, is instinctive. I think we may say the same of all the habits and aptitudes that we acquire in all of them there has been present throughout some instinctive activity, prompting at first rather inefficient movements, but supplying the driving force while more and more effective methods are being acquired. A cat which is hungry smells fish, and goes to the larder. This is a thoroughly efficient method when there is fish in the larder, and it is often successfully practised by children. But in later life it is found that merely going to the larder does not cause fish to be there; after a series of random movements it is found that this result is to be caused by going to the City in the morning and coming back in the evening. No one would have guessed a priori that this movement of a middle-aged man's body would cause fish to come out of the sea into his larder, but experience shows that it does, and the middle-aged man therefore continues to go to the City, just as the cat in the cage continues to lift the latch when it has once found it. Of course, in actual fact, human learning is rendered easier, though psychologically more complex, through language; but at bottom language does not alter the essential character of learning, or of the part played by instinct in promoting learning. Language, however, is a subject upon which I do not wish to speak until a later lecture.

* "Mind in Evolution" (Macmillan, 1915), pp. 236-237.

The popular conception of instinct errs by imagining it to be infallible and preternaturally wise, as well as incapable of modification. This is a complete delusion. Instinct, as a rule, is very rough and ready, able to achieve its result under ordinary circumstances, but easily misled by anything unusual. Chicks follow their mother by instinct, but when they are quite young they will follow with equal readiness any moving object remotely resembling their mother, or even a human being (James, "Psychology," ii, 396). Bergson, quoting Fabre, has made play with the supposed extraordinary accuracy of the solitary wasp Ammophila, which lays its eggs in a caterpillar. On this subject I will quote from Drever's "Instinct in Man," p. 92:

"According to Fabre's observations, which Bergson accepts, the Ammophila stings its prey EXACTLY and UNERRINGLY in EACH of the nervous centres. The result is that the caterpillar is paralyzed, but not immediately killed, the advantage of this being that the larva cannot be injured by any movement of the caterpillar, upon which the egg is deposited, and is provided with fresh meat when the time comes.

"Now Dr. and Mrs. Peckham have shown that the sting of the wasp is NOT UNERRING, as Fabre alleges, that the number of stings is NOT CONSTANT, that sometimes the caterpillar is NOT PARALYZED, and sometimes it is KILLED OUTRIGHT, and that THE DIFFERENT CIRCUMSTANCES DO NOT APPARENTLY MAKE ANY DIFFERENCE TO THE LARVA, which is not injured by slight movements of the caterpillar, nor by consuming food decomposed rather than fresh caterpillar."

This illustrates how love of the marvellous may mislead even so careful an observer as Fabre and so eminent a philosopher as Bergson.

In the same chapter of Dr. Drever's book there are some interesting examples of the mistakes made by instinct. I will quote one as a sample:

"The larva of the Lomechusa beetle eats the young of the ants, in whose nest it is reared. Nevertheless, the ants tend the Lomechusa larvae with the same care they bestow on their own young. Not only so, but they apparently discover that the methods of feeding, which suit their own larvae, would prove fatal to the guests, and accordingly they change their whole system of nursing" (loc. cit., p. 106).

Semon ("Die Mneme," pp. 207-9) gives a good illustration of an instinct growing wiser through experience. He relates how hunters attract stags by imitating the sounds of other members of their species, male or female, but find that the older a stag becomes the more difficult it is to deceive him, and the more accurate the imitation has to be. The literature of instinct is vast, and illustrations might be multiplied indefinitely. The main points as regards instinct, which need to be emphasized as against the popular conceptions of it, are:

(1) That instinct requires no prevision of the biological end which it serves;

(2) That instinct is only adapted to achieve this end in the usual circumstances of the animal in question, and has no more precision than is necessary for success AS A RULE;

(3) That processes initiated by instinct often come to be performed better after experience;

(4) That instinct supplies the impulses to experimental movements which are required for the process of learning;

(5) That instincts in their nascent stages are easily modifiable, and capable of being attached to various sorts of objects.

All the above characteristics of instinct can be established by purely external observation, except the fact that instinct does not require prevision. This, though not strictly capable of being PROVED by observation, is irresistibly suggested by the most obvious phenomena. Who can believe, for example, that a new-born baby is aware of the necessity of food for preserving life? Or that insects, in laying eggs, are concerned for the preservation of their species? The essence of instinct, one might say, is that it provides a mechanism for acting without foresight in a manner which is usually advantageous biologically. It is partly for this reason that it is so important to understand the fundamental position of instinct in prompting both animal and human behaviour.

LECTURE III. DESIRE AND FEELING

Desire is a subject upon which, if I am not mistaken, true views can only be arrived at by an almost complete reversal of the ordinary unreflecting opinion. It is natural to regard desire as in its essence an attitude towards something which is imagined, not actual; this something is called the END or OBJECT of the desire, and is said to be the PURPOSE of any action resulting from the desire. We think of the content of the desire as being just like the content of a belief, while the attitude taken up towards the content is different. According to this theory, when we say: "I hope it will rain," or "I expect it will rain," we express, in the first case, a desire, and in the second, a belief, with an identical content, namely, the image of rain. It would be easy to say that, just as belief is one kind of feeling in relation to this content, so desire is another kind. According to this view, what comes first in desire is something imagined, with a specific feeling related to it, namely, that specific feeling which we call "desiring" it. The discomfort associated with unsatisfied desire, and the actions which aim at satisfying desire, are, in this view, both of them effects of the desire. I think it is fair to say that this is a view against which common sense would not rebel; nevertheless, I believe it to be radically mistaken. It cannot

be refuted logically, but various facts can be adduced which make it gradually less simple and plausible, until at last it turns out to be easier to abandon it wholly and look at the matter in a totally different way.

The first set of facts to be adduced against the common sense view of desire are those studied by psycho-analysis. In all human beings, but most markedly in those suffering from hysteria and certain forms of insanity, we find what are called "unconscious" desires, which are commonly regarded as showing self-deception. Most psycho-analysts pay little attention to the analysis of desire, being interested in discovering by observation what it is that people desire, rather than in discovering what actually constitutes desire. I think the strangeness of what they report would be greatly diminished if it were expressed in the language of a behaviourist theory of desire, rather than in the language of every-day beliefs. The general description of the sort of phenomena that bear on our present question is as follows: A person states that his desires are so-and-so, and that it is these desires that inspire his actions; but the outside observer perceives that his actions are such as to realize quite different ends from those which he avows, and that these different ends are such as he might be expected to desire. Generally they are less virtuous than his professed desires, and are therefore less agreeable to profess than these are. It is accordingly supposed that they really exist as desires for ends, but in a subconscious part of the mind, which the patient refuses to admit into consciousness for fear of having to think ill of himself. There are no doubt many cases to which such a supposition is applicable without obvious artificiality. But the deeper the Freudians delve into the underground regions of instinct, the further they travel from anything resembling conscious desire, and the less possible it becomes to believe that only positive self-deception conceals from us that we really wish for things which are abhorrent to our explicit life.

In the cases in question we have a conflict between the outside observer and the patient's consciousness. The whole tendency of psycho-analysis is to trust the outside observer rather than the testimony of introspection. I believe this tendency to be entirely right, but to demand a re-statement of what constitutes desire, exhibiting it as a causal law of our actions, not as something actually existing in our minds.

But let us first get a clearer statement of the essential characteristic of the phenomena.

A person, we find, states that he desires a certain end A, and that he is acting with a view to achieving it. We observe, however, that his actions are such as are likely to achieve a quite different end B, and that B is the sort of end that often seems to be aimed at by animals and savages, though civilized people are supposed to have discarded it. We sometimes find also a whole set of false beliefs, of such a kind as to persuade the patient that his actions are really a means to A, when in fact they are a means to B. For example, we have an impulse to inflict pain upon those whom we hate; we therefore believe that they are wicked, and that punishment will reform them. This belief enables us to act upon the impulse to inflict pain, while believing that we are acting upon the desire to lead sinners to repentance. It is for this reason that the criminal law has been in all ages more severe than it would have been if the impulse to ameliorate the criminal had been what really inspired it. It seems simple to explain such a state of affairs as due to "self-deception," but this explanation is often mythical. Most people, in thinking about punishment, have had no more need to hide their vindictive impulses from themselves than they have had to hide the exponential theorem. Our impulses are not patent to a casual observation, but are only to be discovered by a scientific study of our actions, in the course of which we must regard ourselves as objectively as we should the motions of the planets or the chemical reactions of a new element.

The study of animals reinforces this conclusion, and is in many ways the best preparation for the analysis of desire. In animals we are not troubled by the disturbing influence of ethical considerations. In dealing with human beings, we are perpetually distracted by being told that such-and-such a view is gloomy or cynical or pessimistic: ages of human conceit have built up such a vast myth as to our wisdom and virtue that any intrusion of the mere scientific desire to know the facts is instantly resented by those who cling to comfortable illusions. But no one cares whether animals are virtuous or not, and no one is under the delusion that they are rational. Moreover, we do not expect them to be so "conscious," and are prepared to admit that their instincts prompt useful actions without any prevision of the ends which they achieve. For all these reasons, there is much in the analysis of mind which is more easily discovered by the study of animals than by the observation of human beings.

We all think that, by watching the behaviour of animals, we can discover more or less what they desire. If this is the case--and I fully agree that it is--desire must be capable of being exhibited in actions, for it is only the actions of animals that we can observe. They MAY have minds in which all sorts of things take place, but we can know nothing about their minds except by means of inferences from their actions; and the more such inferences are examined, the more dubious they appear. It would seem, therefore, that actions alone must be the test of the desires of animals. From this it is an easy step to the conclusion that an animal's desire is nothing but a characteristic of a certain series of actions, namely, those which would be commonly regarded as inspired by the

desire in question. And when it has been shown that this view affords a satisfactory account of animal desires, it is not difficult to see that the same explanation is applicable to the desires of human beings.

We judge easily from the behaviour of an animal of a familiar kind whether it is hungry or thirsty, or pleased or displeased, or inquisitive or terrified. The verification of our judgment, so far as verification is possible, must be derived from the immediately succeeding actions of the animal. Most people would say that they infer first something about the animal's state of mind--whether it is hungry or thirsty and so on--and thence derive their expectations as to its subsequent conduct. But this detour through the animal's supposed mind is wholly unnecessary. We can say simply: The animal's behaviour during the last minute has had those characteristics which distinguish what is called "hunger," and it is likely that its actions during the next minute will be similar in this respect, unless it finds food, or is interrupted by a stronger impulse, such as fear. An animal which is hungry is restless, it goes to the places where food is often to be found, it sniffs with its nose or peers with its eyes or otherwise increases the sensitiveness of its sense-organs; as soon as it is near enough to food for its sense-organs to be affected, it goes to it with all speed and proceeds to eat; after which, if the quantity of food has been sufficient, its whole demeanour changes it may very likely lie down and go to sleep. These things and others like them are observable phenomena distinguishing a hungry animal from one which is not hungry. The characteristic mark by which we recognize a series of actions which display hunger is not the animal's mental state, which we cannot observe, but something in its bodily behaviour; it is this observable trait in the bodily behaviour that I am proposing to call "hunger," not some possibly mythical and certainly unknowable ingredient of the animal's mind.

Generalizing what occurs in the case of hunger, we may say that what we call a desire in an animal is always displayed in a cycle of actions having certain fairly well marked characteristics. There is first a state of activity, consisting, with qualifications to be mentioned presently, of movements likely to have a certain result; these movements, unless interrupted, continue until the result is achieved, after which there is usually a period of comparative quiescence. A cycle of actions of this sort has marks by which it is broadly distinguished from the motions of dead matter. The most notable of these marks are--(1) the appropriateness of the actions for the realization of a certain result; (2) the continuance of action until that result has been achieved. Neither of these can be pressed beyond a point. Either may be (a) to some extent present in dead matter, and (b) to a considerable extent absent in animals, while vegetable are intermediate, and display only a much fainter form of the behaviour which leads us to attribute desire to animals. (a) One might say rivers "desire" the sea water, roughly speaking, remains in restless motion until it reaches either the sea or a place from which it cannot issue without going uphill, and therefore we might say that this is what it wishes while it is flowing. We do not say so, because we can account for the behaviour of water by the laws of physics; and if we knew more about animals, we might equally cease to attribute desires to them, since we might find physical and chemical reactions sufficient to account for their behaviour. (b) Many of the movements of animals do not exhibit the characteristics of the cycles which seem to embody desire. There are first of all the movements which are "mechanical," such as slipping and falling, where ordinary physical forces operate upon the animal's body almost as if it were dead matter. An animal which falls over a cliff may make a number of desperate struggles while it is in the air, but its centre of gravity will move exactly as it would if the animal were dead. In this case, if the animal is killed at the end of the fall, we have, at first sight, just the characteristics of a cycle of actions embodying desire, namely, restless movement until the ground is reached, and then quiescence. Nevertheless, we feel no temptation to say that the animal desired what occurred, partly because of the obviously mechanical nature of the whole occurrence, partly because, when an animal survives a fall, it tends not to repeat the experience.

There may be other reasons also, but of them I do not wish to speak yet. Besides mechanical movements, there are interrupted movements, as when a bird, on its way to eat your best peas, is frightened away by the boy whom you are employing for that purpose. If interruptions are frequent and completion of cycles rare, the characteristics by which cycles are observed may become so blurred as to be almost unrecognizable. The result of these various considerations is that the differences between animals and dead matter, when we confine ourselves to external unscientific observation of integral behaviour, are a matter of degree and not very precise. It is for this reason that it has always been possible for fanciful people to maintain that even stocks and stones have some vague kind of soul. The evidence that animals have souls is so very shaky that, if it is assumed to be conclusive, one might just as well go a step further and extend the argument by analogy to all matter. Nevertheless, in spite of vagueness and doubtful cases, the existence of cycles in the behaviour of animals is a broad characteristic by which they are prima facie distinguished from ordinary matter; and I think it is this characteristic which leads us to attribute desires to animals, since it makes their behaviour resemble what we do when (as we say) we are acting from desire.

I shall adopt the following definitions for describing the behaviour of animals:

A "behaviour-cycle" is a series of voluntary or reflex movements of an animal, tending to cause a certain result, and continuing until that result is caused, unless they are interrupted by death, accident, or some new behaviour-cycle. (Here "accident" may be defined as the intervention of purely physical laws causing mechanical movements.)

The "purpose" of a behaviour-cycle is the result which brings it to an end, normally by a condition of temporary quiescence-provided there is no interruption.

An animal is said to "desire" the purpose of a behaviour cycle while the behaviour-cycle is in progress.

I believe these definitions to be adequate also to human purposes and desires, but for the present I am only occupied with animals and with what can be learnt by external observation. I am very anxious that no ideas should be attached to the words "purpose" and "desire" beyond those involved in the above definitions.

We have not so far considered what is the nature of the initial stimulus to a behaviour-cycle. Yet it is here that the usual view of desire seems on the strongest ground. The hungry animal goes on making movements until it gets food; it seems natural, therefore, to suppose that the idea of food is present throughout the process, and that the thought of the end to be achieved sets the whole process in motion. Such a view, however, is obviously untenable in many cases, especially where instinct is concerned. Take, for example, reproduction and the rearing of the young. Birds mate, build a nest, lay eggs in it, sit on the eggs, feed the young birds, and care for them until they are fully grown. It is totally impossible to suppose that this series of actions, which constitutes one behaviour-cycle, is inspired by any prevision of the end, at any rate the first time it is performed.* We must suppose that the stimulus to the performance of each act is an impulsion from behind, not an attraction from the future. The bird does what it does, at each stage, because it has an impulse to that particular action, not because it perceives that the whole cycle of actions will contribute to the preservation of the species. The same considerations apply to other instincts. A hungry animal feels restless, and is led by instinctive impulses to perform the movements which give it nourishment; but the act of seeking food is not sufficient evidence from which to conclude that the animal has the thought of food in its "mind."

* For evidence as to birds' nests, cf. Semon, "Die Mneme," pp. 209, 210.

Coming now to human beings, and to what we know about our own actions, it seems clear that what, with us, sets a behaviour-cycle in motion is some sensation of the sort which we call disagreeable. Take the case of hunger: we have first an uncomfortable feeling inside, producing a disinclination to sit still, a sensitiveness to savoury smells, and an attraction towards any food that there may be in our neighbourhood. At any moment during this process we may become aware that we are hungry, in the sense of saying to ourselves, "I am hungry"; but we may have been acting with reference to food for some time before this moment. While we are talking or reading, we may eat in complete unconsciousness; but we perform the actions of eating just as we should if we were conscious, and they cease when our hunger is appeased. What we call "consciousness" seems to be a mere spectator of the process; even when it issues orders, they are usually, like those of a wise parent, just such as would have been obeyed even if they had not been given. This view may seem at first exaggerated, but the more our so-called volitions and their causes are examined, the more it is forced upon us. The part played by words in all this is complicated, and a potent source of confusions; I shall return to it later. For the present, I am still concerned with primitive desire, as it exists in man, but in the form in which man shows his affinity to his animal ancestors.

Conscious desire is made up partly of what is essential to desire, partly of beliefs as to what we want. It is important to be clear as to the part which does not consist of beliefs.

The primitive non-cognitive element in desire seems to be a push, not a pull, an impulsion away from the actual, rather than an attraction towards the ideal. Certain sensations and other mental occurrences have a property which we call discomfort; these cause such bodily movements as are likely to lead to their cessation. When the discomfort ceases, or even when it appreciably diminishes, we have sensations possessing a property which we call PLEASURE. Pleasurable sensations either stimulate no action at all, or at most stimulate such action as is likely to prolong them. I shall return shortly to the consideration of what discomfort and pleasure are in themselves; for the present, it is their connection with action and desire that concerns us. Abandoning momentarily the standpoint of behaviourism, we may presume that hungry animals experience sensations involving discomfort, and stimulating such movements as seem likely to bring them to the food which is outside the cages. When they have reached the food and eaten it, their discomfort ceases and their sensations become pleasurable. It SEEMS, mistakenly, as if the animals had had this situation in mind throughout, when in fact they have been continually pushed by discomfort. And when an animal is reflective, like some men, it comes to think that it had the final situation in mind throughout; sometimes it comes to know

what situation will bring satisfaction, so that in fact the discomfort does bring the thought of what will allay it. Nevertheless the sensation involving discomfort remains the prime mover.

This brings us to the question of the nature of discomfort and pleasure. Since Kant it has been customary to recognize three great divisions of mental phenomena, which are typified by knowledge, desire and feeling, where "feeling" is used to mean pleasure and discomfort. Of course, "knowledge" is too definite a word: the states of mind concerned are grouped together as "cognitive," and are to embrace not only beliefs, but perceptions, doubts, and the understanding of concepts. "Desire," also, is narrower than what is intended: for example, WILL is to be included in this category, and in fact every thing that involves any kind of striving, or "conation" as it is technically called. I do not myself believe that there is any value in this threefold division of the contents of mind. I believe that sensations (including images) supply all the "stuff" of the mind, and that everything else can be analysed into groups of sensations related in various ways, or characteristics of sensations or of groups of sensations. As regards belief, I shall give grounds for this view in later lectures. As regards desires, I have given some grounds in this lecture. For the present, it is pleasure and discomfort that concern us. There are broadly three theories that might be held in regard to them. We may regard them as separate existing items in those who experience them, or we may regard them as intrinsic qualities of sensations and other mental occurrences, or we may regard them as mere names for the causal characteristics of the occurrences which are uncomfortable or pleasant. The first of these theories, namely, that which regards discomfort and pleasure as actual contents in those who experience them, has, I think, nothing conclusive to be said in its favour.* It is suggested chiefly by an ambiguity in the word "pain," which has misled many people, including Berkeley, whom it supplied with one of his arguments for subjective idealism. We may use "pain" as the opposite of "pleasure," and "painful" as the opposite of "pleasant," or we may use "pain" to mean a certain sort of sensation, on a level with the sensations of heat and cold and touch. The latter use of the word has prevailed in psychological literature, and it is now no longer used as the opposite of "pleasure." Dr. H. Head, in a recent publication, has stated this distinction as follows:**

* Various arguments in its favour are advanced by A. Wohlgemuth, "On the feelings and their neural correlate, with an examination of the nature of pain," "British Journal of Psychology," viii, 4. (1917). But as these arguments are largely a reductio ad absurdum of other theories, among which that which I am advocating is not included, I cannot regard them as establishing their contention.

** "Sensation and the Cerebral Cortex," "Brain," vol. xli, part ii (September, 1918), p. 90. Cf. also Wohlgemuth, loc. cit. pp. 437, 450.

"It is necessary at the outset to distinguish clearly between 'discomfort' and 'pain.' Pain is a distinct sensory quality equivalent to heat and cold, and its intensity can be roughly graded according to the force expended in stimulation. Discomfort, on the other hand, is that feeling-tone which is directly opposed to pleasure. It may accompany sensations not in themselves essentially painful; as for instance that produced by tickling the sole of the foot. The reaction produced by repeated pricking contains both these elements; for it evokes that sensory quality known as pain, accompanied by a disagreeable feeling-tone, which we have called discomfort. On the other hand, excessive pressure, except when applied directly over some nerve-trunk, tends to excite more discomfort than pain."

The confusion between discomfort and pain has made people regard discomfort as a more substantial thing than it is, and this in turn has reacted upon the view taken of pleasure, since discomfort and pleasure are evidently on a level in this respect. As soon as discomfort is clearly distinguished from the sensation of pain, it becomes more natural to regard discomfort and pleasure as properties of mental occurrences than to regard them as separate mental occurrences on their own account. I shall therefore dismiss the view that they are separate mental occurrences, and regard them as properties of such experiences as would be called respectively uncomfortable and pleasant.

It remains to be examined whether they are actual qualities of such occurrences, or are merely differences as to causal properties. I do not myself see any way of deciding this question; either view seems equally capable of accounting for the facts. If this is true, it is safer to avoid the assumption that there are such intrinsic qualities of mental occurrences as are in question, and to assume only the causal differences which are undeniable. Without condemning the intrinsic theory, we can define discomfort and pleasure as consisting in causal properties, and say only what will hold on either of the two theories. Following this course, we shall say:

"Discomfort" is a property of a sensation or other mental occurrence, consisting in the fact that the occurrence in question stimulates voluntary or reflex movements tending to produce some more or less definite change involving the cessation of the occurrence.

"Pleasure" is a property of a sensation or other mental occurrence, consisting in the fact that the occurrence in question either does not stimulate any voluntary or reflex movement, or, if it does, stimulates only such as tend to prolong the occurrence in question.*

* Cf. Thorndike, op. cit., p. 243.

"Conscious" desire, which we have now to consider, consists of desire in the sense hitherto discussed, together with a true belief as to its "purpose," i.e. as to the state of affairs that will bring quiescence with cessation of the discomfort. If our theory of desire is correct, a belief as to its purpose may very well be erroneous, since only experience can show what causes a discomfort to cease. When the experience needed is common and simple, as in the case of hunger, a mistake is not very probable. But in other cases--e.g. erotic desire in those who have had little or no experience of its satisfaction--mistakes are to be expected, and do in fact very often occur. The practice of inhibiting impulses, which is to a great extent necessary to civilized life, makes mistakes easier, by preventing experience of the actions to which a desire would otherwise lead, and by often causing the inhibited impulses themselves to be unnoticed or quickly forgotten. The perfectly natural mistakes which thus arise constitute a large proportion of what is, mistakenly in part, called self-deception, and attributed by Freud to the "censor."

But there is a further point which needs emphasizing, namely, that a belief that something is desired has often a tendency to cause the very desire that is believed in. It is this fact that makes the effect of "consciousness" on desire so complicated.

When we believe that we desire a certain state of affairs, that often tends to cause a real desire for it. This is due partly to the influence of words upon our emotions, in rhetoric for example, and partly to the general fact that discomfort normally belongs to the belief that we desire such-and-such a thing that we do not possess. Thus what was originally a false opinion as to the object of a desire acquires a certain truth: the false opinion generates a secondary subsidiary desire, which nevertheless becomes real. Let us take an illustration. Suppose you have been jilted in a way which wounds your vanity. Your natural impulsive desire will be of the sort expressed in Donne's poem:

When by thy scorn, O Murderess, I am dead,

in which he explains how he will haunt the poor lady as a ghost, and prevent her from enjoying a moment's peace. But two things stand in the way of your expressing yourself so naturally: on the one hand, your vanity, which will not acknowledge how hard you are hit; on the other hand, your conviction that you are a civilized and humane person, who could not possibly indulge so crude a desire as revenge. You will therefore experience a restlessness which will at first seem quite aimless, but will finally resolve itself in a conscious desire to change your profession, or go round the world, or conceal your identity and live in Putney, like Arnold Bennett's hero. Although the prime cause of this desire is a false judgment as to your previous unconscious desire, yet the new conscious desire has its own derivative genuineness, and may influence your actions to the extent of sending you round the world. The initial mistake, however, will have effects of two kinds. First, in uncontrolled moments, under the influence of sleepiness or drink or delirium, you will say things calculated to injure the faithless deceiver. Secondly, you will find travel disappointing, and the East less fascinating than you had hoped--unless, some day, you hear that the wicked one has in turn been jilted. If this happens, you will believe that you feel sincere sympathy, but you will suddenly be much more delighted than before with the beauties of tropical islands or the wonders of Chinese art. A secondary desire, derived from a false judgment as to a primary desire, has its own power of influencing action, and is therefore a real desire according to our definition. But it has not the same power as a primary desire of bringing thorough satisfaction when it is realized; so long as the primary desire remains unsatisfied, restlessness continues in spite of the secondary desire's success. Hence arises a belief in the vanity of human wishes: the vain wishes are those that are secondary, but mistaken beliefs prevent us from realizing that they are secondary.

What may, with some propriety, be called self-deception arises through the operation of desires for beliefs. We desire many things which it is not in our power to achieve: that we should be universally popular and admired, that our work should be the wonder of the age, and that the universe should be so ordered as to bring ultimate happiness to all, though not to our enemies until they have repented and been purified by suffering. Such desires are too large to be achieved through our own efforts. But it is found that a considerable portion of the satisfaction which these things would bring us if they were realized is to be achieved by the much easier operation of believing that they are or will be realized. This desire for beliefs, as opposed to desire for the actual facts, is a particular case of secondary desire, and, like all secondary desire its satisfaction does not lead to a complete cessation of the initial discomfort. Nevertheless, desire for beliefs, as opposed to desire for facts, is exceedingly potent both individually and socially. According to the form of belief desired, it is called vanity, optimism, or religion. Those who have sufficient power usually imprison or put to death any one who tries to shake their faith in their own excellence or in that of the universe; it is for this reason that seditious

libel and blasphemy have always been, and still are, criminal offences.

It is very largely through desires for beliefs that the primitive nature of desire has become so hidden, and that the part played by consciousness has been so confusing and so exaggerated.

We may now summarize our analysis of desire and feeling.

A mental occurrence of any kind--sensation, image, belief, or emotion--may be a cause of a series of actions, continuing, unless interrupted, until some more or less definite state of affairs is realized. Such a series of actions we call a "behaviour-cycle." The degree of definiteness may vary greatly: hunger requires only food in general, whereas the sight of a particular piece of food raises a desire which requires the eating of that piece of food. The property of causing such a cycle of occurrences is called "discomfort"; the property of the mental occurrences in which the cycle ends is called "pleasure." The actions constituting the cycle must not be purely mechanical, i.e. they must be bodily movements in whose causation the special properties of nervous tissue are involved. The cycle ends in a condition of quiescence, or of such action as tends only to preserve the status quo. The state of affairs in which this condition of quiescence is achieved is called the "purpose" of the cycle, and the initial mental occurrence involving discomfort is called a "desire" for the state of affairs that brings quiescence. A desire is called "conscious" when it is accompanied by a true belief as to the state of affairs that will bring quiescence; otherwise it is called "unconscious." All primitive desire is unconscious, and in human beings beliefs as to the purposes of desires are often mistaken. These mistaken beliefs generate secondary desires, which cause various interesting complications in the psychology of human desire, without fundamentally altering the character which it shares with animal desire.

LECTURE IV. INFLUENCE OF PAST HISTORY ON PRESENT OCCURRENCES IN LIVING ORGANISMS

In this lecture we shall be concerned with a very general characteristic which broadly, though not absolutely, distinguishes the behaviour of living organisms from that of dead matter. The characteristic in question is this:

The response of an organism to a given stimulus is very often dependent upon the past history of the organism, and not merely upon the stimulus and the HITHERTO DISCOVERABLE present state of the organism.

This characteristic is embodied in the saying "a burnt child fears the fire." The burn may have left no visible traces, yet it modifies the reaction of the child in the presence of fire. It is customary to assume that, in such cases, the past operates by modifying the structure of the brain, not directly. I have no wish to suggest that this hypothesis is false; I wish only to point out that it is a hypothesis. At the end of the present lecture I shall examine the grounds in its favour. If we confine ourselves to facts which have been actually observed, we must say that past occurrences, in addition to the present stimulus and the present ascertainable condition of the organism, enter into the causation of the response.

The characteristic is not wholly confined to living organisms. For example, magnetized steel looks just like steel which has not been magnetized, but its behaviour is in some ways different. In the case of dead matter, however, such phenomena are less frequent and important than in the case of living organisms, and it is far less difficult to invent satisfactory hypotheses as to the microscopic changes of structure which mediate between the past occurrence and the present changed response. In the case of living organisms, practically everything that is distinctive both of their physical and of their mental behaviour is bound up with this persistent influence of the past. Further, speaking broadly, the change in response is usually of a kind that is biologically advantageous to the organism.

Following a suggestion derived from Semon ("Die Mneme," Leipzig, 1904; 2nd edition, 1908, English translation, Allen & Unwin, 1921; "Die mnemischen Empfindungen," Leipzig, 1909), we will give the name of "mnemic phenomena" to those responses of an organism which, so far as hitherto observed facts are concerned, can only be brought under causal laws by including past occurrences in the history of the organism as part of the causes of the present response. I do not mean merely--what would always be the case--that past occurrences are part of a CHAIN of causes leading to the present event. I mean that, in attempting to state the PROXIMATE cause of the present event, some past event or events must be included, unless we take refuge in hypothetical modifications of brain structure. For example: you smell peat-smoke, and you recall some occasion when you smelt it before. The cause of your recollection, so far as hitherto observable phenomena are concerned, consists both of the peat smoke (present stimulus) and of the former occasion (past experience). The same stimulus will not produce the same recollection in another man who did not share your former experience, although the former experience left no OBSERVABLE traces in the structure of the brain. According to the maxim "same cause, same effect," we cannot therefore regard the peat-smoke alone as the cause of your

recollection, since it does not have the same effect in other cases. The cause of your recollection must be both the peat-smoke and the past occurrence. Accordingly your recollection is an instance of what we are calling "mnemic phenomena."

Before going further, it will be well to give illustrations of different classes of mnemic phenomena.

(a) ACQUIRED HABITS.--In Lecture II we saw how animals can learn by experience how to get out of cages or mazes, or perform other actions which are useful to them but not provided for by their instincts alone. A cat which is put into a cage of which it has had experience behaves differently from the way in which it behaved at first. We can easily invent hypotheses, which are quite likely to be true, as to connections in the brain caused by past experience, and themselves causing the different response. But the observable fact is that the stimulus of being in the cage produces differing results with repetition, and that the ascertainable cause of the cat's behaviour is not merely the cage and its own ascertainable organization, but also its past history in regard to the cage. From our present point of view, the matter is independent of the question whether the cat's behaviour is due to some mental fact called "knowledge," or displays a merely bodily habit. Our habitual knowledge is not always in our minds, but is called up by the appropriate stimuli. If we are asked "What is the capital of France?" we answer "Paris," because of past experience; the past experience is as essential as the present question in the causation of our response. Thus all our habitual knowledge consists of acquired habits, and comes under the head of mnemic phenomena.

(b) IMAGES.--I shall have much to say about images in a later lecture; for the present I am merely concerned with them in so far as they are "copies" of past sensations. When you hear New York spoken of, some image probably comes into your mind, either of the place itself (if you have been there), or of some picture of it (if you have not). The image is due to your past experience, as well as to the present stimulus of the words "New York." Similarly, the images you have in dreams are all dependent upon your past experience, as well as upon the present stimulus to dreaming. It is generally believed that all images, in their simpler parts, are copies of sensations; if so, their mnemic character is evident. This is important, not only on its own account, but also because, as we shall see later, images play an essential part in what is called "thinking."

(c) ASSOCIATION.--The broad fact of association, on the mental side, is that when we experience something which we have experienced before, it tends to call up the context of the former experience. The smell of peat-smoke recalling a former scene is an instance which we discussed a moment ago. This is obviously a mnemic phenomenon. There is also a more purely physical association, which is indistinguishable from physical habit. This is the kind studied by Mr. Thorndike in animals, where a certain stimulus is associated with a certain act. This is the sort which is taught to soldiers in drilling, for example. In such a case there need not be anything mental, but merely a habit of the body. There is no essential distinction between association and habit, and the observations which we made concerning habit as a mnemic phenomenon are equally applicable to association.

(d) NON-SENSATIONAL ELEMENTS IN PERCEPTION.--When we perceive any object of a familiar kind, much of what appears subjectively to be immediately given is really derived from past experience. When we see an object, say a penny, we seem to be aware of its "real" shape we have the impression of something circular, not of something elliptical. In learning to draw, it is necessary to acquire the art of representing things according to the sensation, not according to the perception. And the visual appearance is filled out with feeling of what the object would be like to touch, and so on. This filling out and supplying of the "real" shape and so on consists of the most usual correlates of the sensational core in our perception. It may happen that, in the particular case, the real correlates are unusual; for example, if what we are seeing is a carpet made to look like tiles. If so, the non-sensational part of our perception will be illusory, i.e. it will supply qualities which the object in question does not in fact have. But as a rule objects do have the qualities added by perception, which is to be expected, since experience of what is usual is the cause of the addition. If our experience had been different, we should not fill out sensation in the same way, except in so far as the filling out is instinctive, not acquired. It would seem that, in man, all that makes up space perception, including the correlation of sight and touch and so on, is almost entirely acquired. In that case there is a large mnemic element in all the common perceptions by means of which we handle common objects. And, to take another kind of instance, imagine what our astonishment would be if we were to hear a cat bark or a dog mew. This emotion would be dependent upon past experience, and would therefore be a mnemic phenomenon according to the definition.

(e) MEMORY AS KNOWLEDGE.--The kind of memory of which I am now speaking is definite knowledge of some past event in one's own experience. From time to time we remember things that have happened to us, because something in the present reminds us of them. Exactly the same present fact would not call up the same memory if our past experience had been different. Thus our remembering is caused by--

(1) The present stimulus,

(2) The past occurrence.

It is therefore a mnemic phenomenon according to our definition. A definition of "mnemic phenomena" which did not include memory would, of course, be a bad one. The point of the definition is not that it includes memory, but that it includes it as one of a class of phenomena which embrace all that is characteristic in the subject matter of psychology.

(f) EXPERIENCE.--The word "experience" is often used very vaguely. James, as we saw, uses it to cover the whole primal stuff of the world, but this usage seems objection able, since, in a purely physical world, things would happen without there being any experience. It is only mnemic phenomena that embody experience. We may say that an animal "experiences" an occurrence when this occurrence modifies the animal's subsequent behaviour, i.e. when it is the mnemic portion of the cause of future occurrences in the animal's life. The burnt child that fears the fire has "experienced" the fire, whereas a stick that has been thrown on and taken off again has not "experienced" anything, since it offers no more resistance than before to being thrown on. The essence of "experience" is the modification of behaviour produced by what is experienced. We might, in fact, define one chain of experience, or one biography, as a series of occurrences linked by mnemic causation. I think it is this characteristic, more than any other, that distinguishes sciences dealing with living organisms from physics.

The best writer on mnemic phenomena known to me is Richard Semon, the fundamental part of whose theory I shall endeavour to summarize before going further:

When an organism, either animal or plant, is subjected to a stimulus, producing in it some state of excitement, the removal of the stimulus allows it to return to a condition of equilibrium. But the new state of equilibrium is different from the old, as may be seen by the changed capacity for reaction. The state of equilibrium before the stimulus may be called the "primary indifference-state"; that after the cessation of the stimulus, the "secondary indifference-state." We define the "engraphic effect" of a stimulus as the effect in making a difference between the primary and secondary indifference-states, and this difference itself we define as the "engram" due to the stimulus. "Mnemic phenomena" are defined as those due to engrams; in animals, they are specially associated with the nervous system, but not exclusively, even in man.

When two stimuli occur together, one of them, occurring afterwards, may call out the reaction for the other also. We call this an "ekphoric influence," and stimuli having this character are called "ekphoric stimuli." In such a case we call the engrams of the two stimuli "associated." All simultaneously generated engrams are associated; there is also association of successively aroused engrams, though this is reducible to simultaneous association. In fact, it is not an isolated stimulus that leaves an engram, but the totality of the stimuli at any moment; consequently any portion of this totality tends, if it recurs, to arouse the whole reaction which was aroused before. Semon holds that engrams can be inherited, and that an animal's innate habits may be due to the experience of its ancestors; on this subject he refers to Samuel Butler.

Semon formulates two "mnemic principles." The first, or "Law of Engraphy," is as follows: "All simultaneous excitements in an organism form a connected simultaneous excitement-complex, which as such works engraphically, i.e. leaves behind a connected engram-complex, which in so far forms a whole" ("Die mnemischen Empfindungen," p. 146). The second mnemic principle, or "Law of Ekphory," is as follows: "The partial return of the energetic situation which formerly worked engraphically operates ekphorically on a simultaneous engram-complex" (ib., p. 173). These two laws together represent in part a hypothesis (the engram), and in part an observable fact. The observable fact is that, when a certain complex of stimuli has originally caused a certain complex of reactions, the recurrence of part of the stimuli tends to cause the recurrence of the whole of the reactions.

Semon's applications of his fundamental ideas in various directions are interesting and ingenious. Some of them will concern us later, but for the present it is the fundamental character of mnemic phenomena that is in question.

Concerning the nature of an engram, Semon confesses that at present it is impossible to say more than that it must consist in some material alteration in the body of the organism ("Die mnemischen Empfindungen," p. 376). It is, in fact, hypothetical, invoked for theoretical uses, and not an outcome of direct observation. No doubt physiology, especially the disturbances of memory through lesions in the brain, affords grounds for this hypothesis; nevertheless it does remain a hypothesis, the validity of which will be discussed at the end of this lecture.

I am inclined to think that, in the present state of physiology, the introduction of the engram does not serve to simplify the account of mnemic phenomena. We can, I think, formulate the known laws of such phenomena in terms, wholly, of observable facts, by

recognizing provisionally what we may call "mnemic causation." By this I mean that kind of causation of which I spoke at the beginning of this lecture, that kind, namely, in which the proximate cause consists not merely of a present event, but of this together with a past event. I do not wish to urge that this form of causation is ultimate, but that, in the present state of our knowledge, it affords a simplification, and enables us to state laws of behaviour in less hypothetical terms than we should otherwise have to employ.

The clearest instance of what I mean is recollection of a past event. What we observe is that certain present stimuli lead us to recollect certain occurrences, but that at times when we are not recollecting them, there is nothing discoverable in our minds that could be called memory of them. Memories, as mental facts, arise from time to time, but do not, so far as we can see, exist in any shape while they are "latent." In fact, when we say that they are "latent," we mean merely that they will exist under certain circumstances. If, then, there is to be some standing difference between the person who can remember a certain fact and the person who cannot, that standing difference must be, not in anything mental, but in the brain. It is quite probable that there is such a difference in the brain, but its nature is unknown and it remains hypothetical. Everything that has, so far, been made matter of observation as regards this question can be put together in the statement: When a certain complex of sensations has occurred to a man, the recurrence of part of the complex tends to arouse the recollection of the whole. In like manner, we can collect all mnemic phenomena in living organisms under a single law, which contains what is hitherto verifiable in Semon's two laws. This single law is:

IF A COMPLEX STIMULUS A HAS CAUSED A COMPLEX REACTION B IN AN ORGANISM, THE OCCURRENCE OF A PART OF A ON A FUTURE OCCASION TENDS TO CAUSE THE WHOLE REACTION B.

This law would need to be supplemented by some account of the influence of frequency, and so on; but it seems to contain the essential characteristic of mnemic phenomena, without admixture of anything hypothetical.

Whenever the effect resulting from a stimulus to an organism differs according to the past history of the organism, without our being able actually to detect any relevant difference in its present structure, we will speak of "mnemic causation," provided we can discover laws embodying the influence of the past. In ordinary physical causation, as it appears to common sense, we have approximate uniformities of sequence, such as "lightning is followed by thunder," "drunkenness is followed by headache," and so on. None of these sequences are theoretically invariable, since something may intervene to disturb them. In order to obtain invariable physical laws, we have to proceed to differential equations, showing the direction of change at each moment, not the integral change after a finite interval, however short. But for the purposes of daily life many sequences are to all in tents and purposes invariable. With the behaviour of human beings, however, this is by no means the case. If you say to an Englishman, "You have a smut on your nose," he will proceed to remove it, but there will be no such effect if you say the same thing to a Frenchman who knows no English. The effect of words upon the hearer is a mnemic phenomena, since it depends upon the past experience which gave him understanding of the words. If there are to be purely psychological causal laws, taking no account of the brain and the rest of the body, they will have to be of the form, not "X now causes Y now," but--

"A, B, C,... in the past, together with X now, cause Y now." For it cannot be successfully maintained that our understanding of a word, for example, is an actual existent content of the mind at times when we are not thinking of the word. It is merely what may be called a "disposition," i.e. it is capable of being aroused whenever we hear the word or happen to think of it. A "disposition" is not something actual, but merely the mnemic portion of a mnemic causal law.

In such a law as "A, B, C,... in the past, together with X now, cause Y now," we will call A, B, C,... the mnemic cause, X the occasion or stimulus, and Y the reaction. All cases in which experience influences behaviour are instances of mnemic causation.

Believers in psycho-physical parallelism hold that psychology can theoretically be freed entirely from all dependence on physiology or physics. That is to say, they believe that every psychical event has a psychical cause and a physical concomitant. If there is to be parallelism, it is easy to prove by mathematical logic that the causation in physical and psychical matters must be of the same sort, and it is impossible that mnemic causation should exist in psychology but not in physics. But if psychology is to be independent of physiology, and if physiology can be reduced to physics, it would seem that mnemic causation is essential in psychology. Otherwise we shall be compelled to believe that all our knowledge, all our store of images and memories, all our mental habits, are at all times existing in some latent mental form, and are not merely aroused by the stimuli which lead to their display. This is a very difficult hypothesis. It seems to me that if, as a matter of method rather than metaphysics, we desire to obtain as much independence for psychology as is practically feasible, we shall do better to accept mnemic causation in psychology

protem, and therefore reject parallelism, since there is no good ground for admitting mnemic causation in physics.

It is perhaps worth while to observe that mnemic causation is what led Bergson to deny that there is causation at all in the psychical sphere. He points out, very truly, that the same stimulus, repeated, does not have the same consequences, and he argues that this is contrary to the maxim, "same cause, same effect." It is only necessary, however, to take account of past occurrences and include them with the cause, in order to re-establish the maxim, and the possibility of psychological causal laws. The metaphysical conception of a cause lingers in our manner of viewing causal laws: we want to be able to FEEL a connection between cause and effect, and to be able to imagine the cause as "operating." This makes us unwilling to regard causal laws as MERELY observed uniformities of sequence; yet that is all that science has to offer. To ask why such-and-such a kind of sequence occurs is either to ask a meaningless question, or to demand some more general kind of sequence which includes the one in question. The widest empirical laws of sequence known at any time can only be "explained" in the sense of being subsumed by later discoveries under wider laws; but these wider laws, until they in turn are subsumed, will remain brute facts, resting solely upon observation, not upon some supposed inherent rationality.

There is therefore no a priori objection to a causal law in which part of the cause has ceased to exist. To argue against such a law on the ground that what is past cannot operate now, is to introduce the old metaphysical notion of cause, for which science can find no place. The only reason that could be validly alleged against mnemic causation would be that, in fact, all the phenomena can be explained without it. They are explained without it by Semon's "engram," or by any theory which regards the results of experience as embodied in modifications of the brain and nerves. But they are not explained, unless with extreme artificiality, by any theory which regards the latent effects of experience as psychical rather than physical. Those who desire to make psychology as far as possible independent of physiology would do well, it seems to me, if they adopted mnemic causation. For my part, however, I have no such desire, and I shall therefore endeavour to state the grounds which occur to me in favour of some such view as that of the "engram."

One of the first points to be urged is that mnemic phenomena are just as much to be found in physiology as in psychology. They are even to be found in plants, as Sir Francis Darwin pointed out (cf. Semon, "Die Mneme," 2nd edition, p. 28 n.). Habit is a characteristic of the body at least as much as of the mind. We should, therefore, be compelled to allow the intrusion of mnemic causation, if admitted at all, into non-psychological regions, which ought, one feels, to be subject only to causation of the ordinary physical sort. The fact is that a great deal of what, at first sight, distinguishes psychology from physics is found, on examination, to be common to psychology and physiology; this whole question of the influence of experience is a case in point. Now it is possible, of course, to take the view advocated by Professor J. S. Haldane, who contends that physiology is not theoretically reducible to physics and chemistry.* But the weight of opinion among physiologists appears to be against him on this point; and we ought certainly to require very strong evidence before admitting any such breach of continuity as between living and dead matter. The argument from the existence of mnemic phenomena in physiology must therefore be allowed a certain weight against the hypothesis that mnemic causation is ultimate.

* See his "The New Physiology and Other Addresses," Griffin, 1919, also the symposium, "Are Physical, Biological and Psychological Categories Irreducible?" in "Life and Finite Individuality," edited for the Aristotelian Society, with an Introduction. By H. Wildon Carr, Williams & Norgate, 1918.

The argument from the connection of brain-lesions with loss of memory is not so strong as it looks, though it has also, some weight. What we know is that memory, and mnemic phenomena generally, can be disturbed or destroyed by changes in the brain. This certainly proves that the brain plays an essential part in the causation of memory, but does not prove that a certain state of the brain is, by itself, a sufficient condition for the existence of memory. Yet it is this last that has to be proved. The theory of the engram, or any similar theory, has to maintain that, given a body and brain in a suitable state, a man will have a certain memory, without the need of any further conditions. What is known, however, is only that he will not have memories if his body and brain are not in a suitable state. That is to say, the appropriate state of body and brain is proved to be necessary for memory, but not to be sufficient. So far, therefore, as our definite knowledge goes, memory may require for its causation a past occurrence as well as a certain present state of the brain.

In order to prove conclusively that mnemic phenomena arise whenever certain physiological conditions are fulfilled, we ought to be able actually to see differences between the brain of a man who speaks English and that of a man who speaks French, between the brain of a man who has seen New York and can recall it, and that of a man who has never seen that city. It may be that the time will come when this will be possible, but at present we are very far removed from it. At present, there is, so far as I am aware, no

good evidence that every difference between the knowledge possessed by A and that possessed by B is paralleled by some difference in their brains. We may believe that this is the case, but if we do, our belief is based upon analogies and general scientific maxims, not upon any foundation of detailed observation. I am myself inclined, as a working hypothesis, to adopt the belief in question, and to hold that past experience only affects present behaviour through modifications of physiological structure. But the evidence seems not quite conclusive, so that I do not think we ought to forget the other hypothesis, or to reject entirely the possibility that mnemic causation may be the ultimate explanation of mnemic phenomena. I say this, not because I think it LIKELY that mnemic causation is ultimate, but merely because I think it POSSIBLE, and because it often turns out important to the progress of science to remember hypotheses which have previously seemed improbable.

LECTURE V. PSYCHOLOGICAL AND PHYSICAL CAUSAL LAWS

The traditional conception of cause and effect is one which modern science shows to be fundamentally erroneous, and requiring to be replaced by a quite different notion, that of LAWS OF CHANGE. In the traditional conception, a particular event A caused a particular event B, and by this it was implied that, given any event B, some earlier event A could be discovered which had a relation to it, such that--

(1) Whenever A occurred, it was followed by B;

(2) In this sequence, there was something "necessary," not a mere de facto occurrence of A first and then B.

The second point is illustrated by the old discussion as to whether it can be said that day causes night, on the ground that day is always followed by night. The orthodox answer was that day could not be called the cause of night, because it would not be followed by night if the earth's rotation were to cease, or rather to grow so slow that one complete rotation would take a year. A cause, it was held, must be such that under no conceivable circumstances could it fail to be followed by its effect.

As a matter of fact, such sequences as were sought by believers in the traditional form of causation have not so far been found in nature. Everything in nature is apparently in a state of continuous change,* so that what we call one "event" turns out to be really a process. If this event is to cause another event, the two will have to be contiguous in time; for if there is any interval between them, something may happen during that interval to prevent the expected effect. Cause and effect, therefore, will have to be temporally contiguous processes. It is difficult to believe, at any rate where physical laws are concerned, that the earlier part of the process which is the cause can make any difference to the effect, so long as the later part of the process which is the cause remains unchanged. Suppose, for example, that a man dies of arsenic poisoning, we say that his taking arsenic was the cause of death. But clearly the process by which he acquired the arsenic is irrelevant: everything that happened before he swallowed it may be ignored, since it cannot alter the effect except in so far as it alters his condition at the moment of taking the dose. But we may go further: swallowing arsenic is not really the proximate cause of death, since a man might be shot through the head immediately after taking the dose, and then it would not be of arsenic that he would die. The arsenic produces certain physiological changes, which take a finite time before they end in death. The earlier parts of these changes can be ruled out in the same way as we can rule out the process by which the arsenic was acquired. Proceeding in this way, we can shorten the process which we are calling the cause more and more. Similarly we shall have to shorten the effect. It may happen that immediately after the man's death his body is blown to pieces by a bomb. We cannot say what will happen after the man's death, through merely knowing that he has died as the result of arsenic poisoning. Thus, if we are to take the cause as one event and the effect as another, both must be shortened indefinitely. The result is that we merely have, as the embodiment of our causal law, a certain direction of change at each moment. Hence we are brought to differential equations as embodying causal laws. A physical law does not say "A will be followed by B," but tells us what acceleration a particle will have under given circumstances, i.e. it tells us how the particle's motion is changing at each moment, not where the particle will be at some future moment.

* The theory of quanta suggests that the continuity is only apparent. If so, we shall be able theoretically to reach events which are not processes. But in what is directly observable there is still apparent continuity, which justifies the above remarks for the prevent.

Laws embodied in differential equations may possibly be exact, but cannot be known to be so. All that we can know empirically is approximate and liable to exceptions; the exact laws that are assumed in physics are known to be somewhere near the truth, but are not known to be true just as they stand. The laws that we actually know empirically have the form of the traditional causal laws, except that they are not to be regarded as universal or necessary. "Taking arsenic is followed by death" is a good empirical generalization; it may have exceptions, but they will be rare. As against the professedly exact laws of physics, such empirical

generalizations have the advantage that they deal with observable phenomena. We cannot observe infinitesimals, whether in time or space; we do not even know whether time and space are infinitely divisible. Therefore rough empirical generalizations have a definite place in science, in spite of not being exact of universal. They are the data for more exact laws, and the grounds for believing that they are USUALLY true are stronger than the grounds for believing that the more exact laws are ALWAYS true.

Science starts, therefore, from generalizations of the form, "A is usually followed by B." This is the nearest approach that can be made to a causal law of the traditional sort. It may happen in any particular instance that A is ALWAYS followed by B, but we cannot know this, since we cannot foresee all the perfectly possible circumstances that might make the sequence fail, or know that none of them will actually occur. If, however, we know of a very large number of cases in which A is followed by B, and few or none in which the sequence fails, we shall in PRACTICE be justified in saying "A causes B," provided we do not attach to the notion of cause any of the metaphysical superstitions that have gathered about the word.

There is another point, besides lack of universality and necessity, which it is important to realize as regards causes in the above sense, and that is the lack of uniqueness. It is generally assumed that, given any event, there is some one phenomenon which is THE cause of the event in question. This seems to be a mere mistake. Cause, in the only sense in which it can be practically applied, means "nearly invariable antecedent." We cannot in practice obtain an antecedent which is QUITE invariable, for this would require us to take account of the whole universe, since something not taken account of may prevent the expected effect. We cannot distinguish, among nearly invariable antecedents, one as THE cause, and the others as merely its concomitants: the attempt to do this depends upon a notion of cause which is derived from will, and will (as we shall see later) is not at all the sort of thing that it is generally supposed to be, nor is there any reason to think that in the physical world there is anything even remotely analogous to what will is supposed to be. If we could find one antecedent, and only one, that was QUITE invariable, we could call that one THE cause without introducing any notion derived from mistaken ideas about will. But in fact we cannot find any antecedent that we know to be quite invariable, and we can find many that are nearly so. For example, men leave a factory for dinner when the hooter sounds at twelve o'clock. You may say the hooter is THE cause of their leaving. But innumerable other hooters in other factories, which also always sound at twelve o'clock, have just as good a right to be called the cause. Thus every event has many nearly invariable antecedents, and therefore many antecedents which may be called its cause.

The laws of traditional physics, in the form in which they deal with movements of matter or electricity, have an apparent simplicity which somewhat conceals the empirical character of what they assert. A piece of matter, as it is known empirically, is not a single existing thing, but a system of existing things. When several people simultaneously see the same table, they all see something different; therefore "the" table, which they are supposed all to see, must be either a hypothesis or a construction. "The" table is to be neutral as between different observers: it does not favour the aspect seen by one man at the expense of that seen by another. It was natural, though to my mind mistaken, to regard the "real" table as the common cause of all the appearances which the table presents (as we say) to different observers. But why should we suppose that there is some one common cause of all these appearances? As we have just seen, the notion of "cause" is not so reliable as to allow us to infer the existence of something that, by its very nature, can never be observed.

Instead of looking for an impartial source, we can secure neutrality by the equal representation of all parties. Instead of supposing that there is some unknown cause, the "real" table, behind the different sensations of those who are said to be looking at the table, we may take the whole set of these sensations (together possibly with certain other particulars) as actually BEING the table. That is to say, the table which is neutral as between different observers (actual and possible) is the set of all those particulars which would naturally be called "aspects" of the table from different points of view. (This is a first approximation, modified later.)

It may be said: If there is no single existent which is the source of all these "aspects," how are they collected together? The answer is simple: Just as they would be if there were such a single existent. The supposed "real" table underlying its appearances is, in any case, not itself perceived, but inferred, and the question whether such-and-such a particular is an "aspect" of this table is only to be settled by the connection of the particular in question with the one or more particulars by which the table is defined. That is to say, even if we assume a "real" table, the particulars which are its aspects have to be collected together by their relations to each other, not to it, since it is merely inferred from them. We have only, therefore, to notice how they are collected together, and we can then keep the collection without assuming any "real" table as distinct from the collection. When different people see what they call the same table, they see things which are not exactly the same, owing to difference of point of view, but which are sufficiently alike to be described in the same words, so long as no great accuracy or minuteness is sought. These closely similar particulars are collected together by their similarity primarily and, more correctly, by the fact that they are related to each other approximately according to the laws of perspective and of reflection and diffraction of light. I suggest, as a first approximation, that these

particulars, together with such correlated others as are unperceived, jointly ARE the table; and that a similar definition applies to all physical objects.*

*See "Our Knowledge of the External World" (Allen & Unwin), chaps. iii and iv.

In order to eliminate the reference to our perceptions, which introduces an irrelevant psychological suggestion, I will take a different illustration, namely, stellar photography. A photographic plate exposed on a clear night reproduces the appearance of the portion of the sky concerned, with more or fewer stars according to the power of the telescope that is being used. Each separate star which is photographed produces its separate effect on the plate, just as it would upon ourselves if we were looking at the sky. If we assume, as science normally does, the continuity of physical processes, we are forced to conclude that, at the place where the plate is, and at all places between it and a star which it photographs, SOMETHING is happening which is specially connected with that star. In the days when the aether was less in doubt, we should have said that what was happening was a certain kind of transverse vibration in the aether. But it is not necessary or desirable to be so explicit: all that we need say is that SOMETHING happens which is specially connected with the star in question. It must be something specially connected with that star, since that star produces its own special effect upon the plate. Whatever it is must be the end of a process which starts from the star and radiates outwards, partly on general grounds of continuity, partly to account for the fact that light is transmitted with a certain definite velocity. We thus arrive at the conclusion that, if a certain star is visible at a certain place, or could be photographed by a sufficiently sensitive plate at that place, something is happening there which is specially connected with that star. Therefore in every place at all times a vast multitude of things must be happening, namely, at least one for every physical object which can be seen or photographed from that place. We can classify such happenings on either of two principles:

(1) We can collect together all the happenings in one place, as is done by photography so far as light is concerned;

(2) We can collect together all the happenings, in different places, which are connected in the way that common sense regards as being due to their emanating from one object.

Thus, to return to the stars, we can collect together either--

(1) All the appearances of different stars in a given place, or,

(2) All the appearances of a given star in different places.

But when I speak of "appearances," I do so only for brevity: I do not mean anything that must "appear" to somebody, but only that happening, whatever it may be, which is connected, at the place in question, with a given physical object--according to the old orthodox theory, it would be a transverse vibration in the aether. Like the different appearances of the table to a number of simultaneous observers, the different particulars that belong to one physical object are to be collected together by continuity and inherent laws of correlation, not by their supposed causal connection with an unknown assumed existent called a piece of matter, which would be a mere unnecessary metaphysical thing in itself. A piece of matter, according to the definition that I propose, is, as a first approximation,* the collection of all those correlated particulars which would normally be regarded as its appearances or effects in different places. Some further elaborations are desirable, but we can ignore them for the present. I shall return to them at the end of this lecture.

*The exact definition of a piece of matter as a construction will be given later.

According to the view that I am suggesting, a physical object or piece of matter is the collection of all those correlated particulars which would be regarded by common sense as its effects or appearances in different places. On the other hand, all the happenings in a given place represent what common sense would regard as the appearances of a number of different objects as viewed from that place. All the happenings in one place may be regarded as the view of the world from that place. I shall call the view of the world from a given place a "perspective." A photograph represents a perspective. On the other hand, if photographs of the stars were taken in all points throughout space, and in all such photographs a certain star, say Sirius, were picked out whenever it appeared, all the different appearances of Sirius, taken together, would represent Sirius. For the understanding of the difference between psychology and physics it is vital to understand these two ways of classifying particulars, namely:

(1) According to the place where they occur;

(2) According to the system of correlated particulars in different places to which they belong, such system being defined as a physical object.

Given a system of particulars which is a physical object, I shall define that one of the system which is in a given place (if any) as the "appearance of that object in that place."

When the appearance of an object in a given place changes, it is found that one or other of two things occurs. The two possibilities may be illustrated by an example. You are in a room with a man, whom you see: you may cease to see him either by shutting your eyes or by his going out of the room. In the first case, his appearance to other people remains unchanged; in the second, his appearance changes from all places. In the first case, you say that it is not he who has changed, but your eyes; in the second, you say that he has changed. Generalizing, we distinguish--

(1) Cases in which only certain appearances of the object change, while others, and especially appearances from places very near to the object, do not change;

(2) Cases where all, or almost all, the appearances of the object undergo a connected change.

In the first case, the change is attributed to the medium between the object and the place; in the second, it is attributed to the object itself.*

* The application of this distinction to motion raises complications due to relativity, but we may ignore these for our present purposes.

It is the frequency of the latter kind of change, and the comparatively simple nature of the laws governing the simultaneous alterations of appearances in such cases, that have made it possible to treat a physical object as one thing, and to overlook the fact that it is a system of particulars. When a number of people at a theatre watch an actor, the changes in their several perspectives are so similar and so closely correlated that all are popularly regarded as identical with each other and with the changes of the actor himself. So long as all the changes in the appearances of a body are thus correlated there is no pressing prima facie need to break up the system of appearances, or to realize that the body in question is not really one thing but a set of correlated particulars. It is especially and primarily such changes that physics deals with, i.e. it deals primarily with processes in which the unity of a physical object need not be broken up because all its appearances change simultaneously according to the same law--or, if not all, at any rate all from places sufficiently near to the object, with in creasing accuracy as we approach the object.

The changes in appearances of an object which are due to changes in the intervening medium will not affect, or will affect only very slightly, the appearances from places close to the object. If the appearances from sufficiently neighbouring places are either wholly un changed, or changed to a diminishing extent which has zero for its limit, it is usually found that the changes can be accounted for by changes in objects which are between the object in question and the places from which its appearance has changed appreciably. Thus physics is able to reduce the laws of most changes with which it deals to changes in physical objects, and to state most of its fundamental laws in terms of matter. It is only in those cases in which the unity of the system of appearances constituting a piece of matter has to be broken up, that the statement of what is happening cannot be made exclusively in terms of matter. The whole of psychology, we shall find, is included among such cases; hence their importance for our purposes.

We can now begin to understand one of the fundamental differences between physics and psychology. Physics treats as a unit the whole system of appearances of a piece of matter, whereas psychology is interested in certain of these appearances themselves. Confining ourselves for the moment to the psychology of perceptions, we observe that perceptions are certain of the appearances of physical objects. From the point of view that we have been hitherto adopting, we might define them as the appearances of objects at places from which sense-organs and the suitable parts of the nervous system form part of the intervening medium. Just as a photographic plate receives a different impression of a cluster of stars when a telescope is part of the intervening medium, so a brain receives a different impression when an eye and an optic nerve are part of the intervening medium. An impression due to this sort of intervening medium is called a perception, and is interesting to psychology on its own account, not merely as one of the set of correlated particulars which is the physical object of which (as we say) we are having a perception.

We spoke earlier of two ways of classifying particulars. One way collects together the appearances commonly regarded as a given object from different places; this is, broadly speaking, the way of physics, leading to the construction of physical objects as sets of such appearances. The other way collects together the appearances of different objects from a given place, the result being what we call a perspective. In the particular case where the place concerned is a human brain, the perspective belonging to the place consists of all the perceptions of a certain man at a given time. Thus classification by perspectives is relevant to psychology, and is essential in defining what we mean by one mind.

I do not wish to suggest that the way in which I have been defining perceptions is the only possible way, or even the best way. It is the way that arose naturally out of our present topic. But when we approach psychology from a more introspective standpoint, we have to distinguish sensations and perceptions, if possible, from other mental occurrences, if any. We have also to consider the psychological effects of sensations, as opposed to their physical causes and correlates. These problems are quite distinct from those with which we have been concerned in the present lecture, and I shall not deal with them until a later stage.

It is clear that psychology is concerned essentially with actual particulars, not merely with systems of particulars. In this it differs from physics, which, broadly speaking, is concerned with the cases in which all the particulars which make up one physical object can be treated as a single causal unit, or rather the particulars which are sufficiently near to the object of which they are appearances can be so treated. The laws which physics seeks can, broadly speaking, be stated by treating such systems of particulars as causal units. The laws which psychology seeks cannot be so stated, since the particulars themselves are what interests the psychologist. This is one of the fundamental differences between physics and psychology; and to make it clear has been the main purpose of this lecture.

I will conclude with an attempt to give a more precise definition of a piece of matter. The appearances of a piece of matter from different places change partly according to intrinsic laws (the laws of perspective, in the case of visual shape), partly according to the nature of the intervening medium--fog, blue spectacles, telescopes, microscopes, sense-organs, etc. As we approach nearer to the object, the effect of the intervening medium grows less. In a generalized sense, all the intrinsic laws of change of appearance may be called "laws of perspective." Given any appearance of an object, we can construct hypothetically a certain system of appearances to which the appearance in question would belong if the laws of perspective alone were concerned. If we construct this hypothetical system for each appearance of the object in turn, the system corresponding to a given appearance x will be independent of any distortion due to the medium beyond x, and will only embody such distortion as is due to the medium between x and the object. Thus, as the appearance by which our hypothetical system is defined is moved nearer and nearer to the object, the hypothetical system of appearances defined by its means embodies less and less of the effect of the medium. The different sets of appearances resulting from moving x nearer and nearer to the object will approach to a limiting set, and this limiting set will be that system of appearances which the object would present if the laws of perspective alone were operative and the medium exercised no distorting effect. This limiting set of appearances may be defined, for purposes of physics, as the piece of matter concerned.

LECTURE VI. INTROSPECTION

One of the main purposes of these lectures is to give grounds for the belief that the distinction between mind and matter is not so fundamental as is commonly supposed. In the preceding lecture I dealt in outline with the physical side of this problem. I attempted to show that what we call a material object is not itself a substance, but is a system of particulars analogous in their nature to sensations, and in fact often including actual sensations among their number. In this way the stuff of which physical objects are composed is brought into relation with the stuff of which part, at least, of our mental life is composed.

There is, however, a converse task which is equally necessary for our thesis, and that is, to show that the stuff of our mental life is devoid of many qualities which it is commonly supposed to have, and is not possessed of any attributes which make it incapable of forming part of the world of matter. In the present lecture I shall begin the arguments for this view.

Corresponding to the supposed duality of matter and mind, there are, in orthodox psychology, two ways of knowing what exists. One of these, the way of sensation and external perception, is supposed to furnish data for our knowledge of matter, the other, called "introspection," is supposed to furnish data for knowledge of our mental processes. To common sense, this distinction seems clear and easy. When you see a friend coming along the street, you acquire knowledge of an external, physical fact; when you realize that you are glad to meet him, you acquire knowledge of a mental fact. Your dreams and memories and thoughts, of which you are often conscious, are mental facts, and the process by which you become aware of them SEEMS to be different from sensation. Kant calls it the "inner sense"; sometimes it is spoken of as "consciousness of self"; but its commonest name in modern English psychology is "introspection." It is this supposed method of acquiring knowledge of our mental processes that I wish to analyse and examine in this lecture.

I will state at the outset the view which I shall aim at establishing. I believe that the stuff of our mental life, as opposed to its relations and structure, consists wholly of sensations and images. Sensations are connected with matter in the way that I tried to explain in Lecture V, i.e. each is a member of a system which is a certain physical object. Images, though they USUALLY have certain characteristics, especially lack of vividness, that distinguish them from sensations, are not INVARIABLY so distinguished,

and cannot therefore be defined by these characteristics. Images, as opposed to sensations, can only be defined by their different causation: they are caused by association with a sensation, not by a stimulus external to the nervous system--or perhaps one should say external to the brain, where the higher animals are concerned. The occurrence of a sensation or image does not in itself constitute knowledge but any sensation or image may come to be known if the conditions are suitable. When a sensation--like the hearing of a clap of thunder--is normally correlated with closely similar sensations in our neighbours, we regard it as giving knowledge of the external world, since we regard the whole set of similar sensations as due to a common external cause. But images and bodily sensations are not so correlated. Bodily sensations can be brought into a correlation by physiology, and thus take their place ultimately among sources of knowledge of the physical world. But images cannot be made to fit in with the simultaneous sensations and images of others. Apart from their hypothetical causes in the brain, they have a causal connection with physical objects, through the fact that they are copies of past sensations; but the physical objects with which they are thus connected are in the past, not in the present. These images remain private in a sense in which sensations are not. A sensation SEEMS to give us knowledge of a present physical object, while an image does not, except when it amounts to a hallucination, and in this case the seeming is deceptive. Thus the whole context of the two occurrences is different. But in themselves they do not differ profoundly, and there is no reason to invoke two different ways of knowing for the one and for the other. Consequently introspection as a separate kind of knowledge disappears.

The criticism of introspection has been in the main the work of American psychologists. I will begin by summarizing an article which seems to me to afford a good specimen of their arguments, namely, "The Case against Introspection," by Knight Dunlap ("Psychological Review," vol xix, No. 5, pp. 404-413, September, 1912). After a few historical quotations, he comes to two modern defenders of introspection, Stout and James. He quotes from Stout such statements as the following: "Psychical states as such become objects only when we attend to them in an introspective way. Otherwise they are not themselves objects, but only constituents of the process by which objects are recognized" ("Manual," 2nd edition, p. 134. The word "recognized" in Dunlap's quotation should be "cognized.") "The object itself can never be identified with the present modification of the individual's consciousness by which it is cognized" (ib. p. 60). This is to be true even when we are thinking about modifications of our own consciousness; such modifications are to be always at least partially distinct from the conscious experience in which we think of them.

At this point I wish to interrupt the account of Knight Dunlap's article in order to make some observations on my own account with reference to the above quotations from Stout. In the first place, the conception of "psychical states" seems to me one which demands analysis of a somewhat destructive character. This analysis I shall give in later lectures as regards cognition; I have already given it as regards desire. In the second place, the conception of "objects" depends upon a certain view as to cognition which I believe to be wholly mistaken, namely, the view which I discussed in my first lecture in connection with Brentano. In this view a single cognitive occurrence contains both content and object, the content being essentially mental, while the object is physical except in introspection and abstract thought. I have already criticized this view, and will not dwell upon it now, beyond saying that "the process by which objects are cognized" appears to be a very slippery phrase. When we "see a table," as common sense would say, the table as a physical object is not the "object" (in the psychological sense) of our perception. Our perception is made up of sensations, images and beliefs, but the supposed "object" is something inferential, externally related, not logically bound up with what is occurring in us. This question of the nature of the object also affects the view we take of self-consciousness. Obviously, a "conscious experience" is different from a physical object; therefore it is natural to assume that a thought or perception whose object is a conscious experience must be different from a thought or perception whose object is a physical object. But if the relation to the object is inferential and external, as I maintain, the difference between two thoughts may bear very little relation to the difference between their objects. And to speak of "the present modification of the individual's consciousness by which an object is cognized" is to suggest that the cognition of objects is a far more direct process, far more intimately bound up with the objects, than I believe it to be. All these points will be amplified when we come to the analysis of knowledge, but it is necessary briefly to state them now in order to suggest the atmosphere in which our analysis of "introspection" is to be carried on.

Another point in which Stout's remarks seem to me to suggest what I regard as mistakes is his use of "consciousness." There is a view which is prevalent among psychologists, to the effect that one can speak of "a conscious experience" in a curious dual sense, meaning, on the one hand, an experience which is conscious of something, and, on the other hand, an experience which has some intrinsic nature characteristic of what is called "consciousness." That is to say, a "conscious experience" is characterized on the one hand by relation to its object and on the other hand by being composed of a certain peculiar stuff, the stuff of "consciousness." And in many authors there is yet a third confusion: a "conscious experience," in this third sense, is an experience of which we are conscious. All these, it seems to me, need to be clearly separated. To say that one occurrence is "conscious" of another is, to my

mind, to assert an external and rather remote relation between them. I might illustrate it by the relation of uncle and nephew a man becomes an uncle through no effort of his own, merely through an occurrence elsewhere. Similarly, when you are said to be "conscious" of a table, the question whether this is really the case cannot be decided by examining only your state of mind: it is necessary also to ascertain whether your sensation is having those correlates which past experience causes you to assume, or whether the table happens, in this case, to be a mirage. And, as I explained in my first lecture, I do not believe that there is any "stuff" of consciousness, so that there is no intrinsic character by which a "conscious" experience could be distinguished from any other.

After these preliminaries, we can return to Knight Dunlap's article. His criticism of Stout turns on the difficulty of giving any empirical meaning to such notions as the "mind" or the "subject"; he quotes from Stout the sentence: "The most important drawback is that the mind, in watching its own workings, must necessarily have its attention divided between two objects," and he concludes: "Without question, Stout is bringing in here illicitly the concept of a single observer, and his introspection does not provide for the observation of this observer; for the process observed and the observer are distinct" (p. 407). The objections to any theory which brings in the single observer were considered in Lecture I, and were acknowledged to be cogent. In so far, therefore, as Stout's theory of introspection rests upon this assumption, we are compelled to reject it. But it is perfectly possible to believe in introspection without supposing that there is a single observer.

William James's theory of introspection, which Dunlap next examines, does not assume a single observer. It changed after the publication of his "Psychology," in consequence of his abandoning the dualism of thought and things. Dunlap summarizes his theory as follows:

"The essential points in James's scheme of consciousness are SUBJECT, OBJECT, and a KNOWING of the object by the subject. The difference between James's scheme and other schemes involving the same terms is that James considers subject and object to be the same thing, but at different times In order to satisfy this requirement James supposes a realm of existence which he at first called 'states of consciousness' or 'thoughts,' and later, 'pure experience,' the latter term including both the 'thoughts' and the 'knowing.' This scheme, with all its magnificent artificiality, James held on to until the end, simply dropping the term consciousness and the dualism between the thought and an external reality"(p. 409).

He adds: "All that James's system really amounts to is the acknowledgment that a succession of things are known, and that they are known by something. This is all any one can claim, except for the fact that the things are known together, and that the knower for the different items is one and the same" (ib.).

In this statement, to my mind, Dunlap concedes far more than James did in his later theory. I see no reason to suppose that "the knower for different items is one and the same," and I am convinced that this proposition could not possibly be ascertained except by introspection of the sort that Dunlap rejects. The first of these points must wait until we come to the analysis of belief: the second must be considered now. Dunlap's view is that there is a dualism of subject and object, but that the subject can never become object, and therefore there is no awareness of an awareness. He says in discussing the view that introspection reveals the occurrence of knowledge: "There can be no denial of the existence of the thing (knowing) which is alleged to be known or observed in this sort of 'introspection.' The allegation that the knowing is observed is that which may be denied. Knowing there certainly is; known, the knowing certainly is not"(p. 410). And again: "I am never aware of an awareness" (ib.). And on the next page: "It may sound paradoxical to say that one cannot observe the process (or relation) of observation, and yet may be certain that there is such a process: but there is really no inconsistency in the saying. How do I know that there is awareness? By being aware of something. There is no meaning in the term 'awareness' which is not expressed in the statement 'I am aware of a colour (or what-not).'"

But the paradox cannot be so lightly disposed of. The statement "I am aware of a colour" is assumed by Knight Dunlap to be known to be true, but he does not explain how it comes to be known. The argument against him is not conclusive, since he may be able to show some valid way of inferring our awareness. But he does not suggest any such way. There is nothing odd in the hypothesis of beings which are aware of objects, but not of their own awareness; it is, indeed, highly probable that young children and the higher animals are such beings. But such beings cannot make the statement "I am aware of a colour," which WE can make. We have, therefore, some knowledge which they lack. It is necessary to Knight Dunlap's position to maintain that this additional knowledge is purely inferential, but he makes no attempt to show how the inference is possible. It may, of course, be possible, but I cannot see how. To my mind the fact (which he admits) that we know there is awareness, is ALL BUT decisive against his theory, and in favour of the view that we can be aware of an awareness.

Dunlap asserts (to return to James) that the real ground for James's original belief in introspection was his belief in two sorts of objects, namely, thoughts and things. He suggests that it was a mere inconsistency on James's part to adhere to introspection after abandoning the dualism of thoughts and things. I do not wholly agree with this view, but it is difficult to disentangle the difference as to introspection from the difference as to the nature of knowing. Dunlap suggests (p. 411) that what is called introspection really consists of awareness of "images," visceral sensations, and so on. This view, in essence, seems to me sound. But then I hold that knowing itself consists of such constituents suitably related, and that in being aware of them we are sometimes being aware of instances of knowing. For this reason, much as I agree with his view as to what are the objects of which there is awareness, I cannot wholly agree with his conclusion as to the impossibility of introspection.

The behaviourists have challenged introspection even more vigorously than Knight Dunlap, and have gone so far as to deny the existence of images. But I think that they have confused various things which are very commonly confused, and that it is necessary to make several distinctions before we can arrive at what is true and what false in the criticism of introspection.

I wish to distinguish three distinct questions, any one of which may be meant when we ask whether introspection is a source of knowledge. The three questions are as follows:

(1) Can we observe anything about ourselves which we cannot observe about other people, or is everything we can observe PUBLIC, in the sense that another could also observe it if suitably placed?

(2) Does everything that we can observe obey the laws of physics and form part of the physical world, or can we observe certain things that lie outside physics?

(3) Can we observe anything which differs in its intrinsic nature from the constituents of the physical world, or is everything that we can observe composed of elements intrinsically similar to the constituents of what is called matter?

Any one of these three questions may be used to define introspection. I should favour introspection in the sense of the first question, i.e. I think that some of the things we observe cannot, even theoretically, be observed by any one else. The second question, tentatively and for the present, I should answer in favour of introspection; I think that images, in the actual condition of science, cannot be brought under the causal laws of physics, though perhaps ultimately they may be. The third question I should answer adversely to introspection I think that observation shows us nothing that is not composed of sensations and images, and that images differ from sensations in their causal laws, not intrinsically. I shall deal with the three questions successively.

(1) PUBLICITY OR PRIVACY OF WHAT IS OBSERVED. Confining ourselves, for the moment, to sensations, we find that there are different degrees of publicity attaching to different sorts of sensations. If you feel a toothache when the other people in the room do not, you are in no way surprised; but if you hear a clap of thunder when they do not, you begin to be alarmed as to your mental condition. Sight and hearing are the most public of the senses; smell only a trifle less so; touch, again, a trifle less, since two people can only touch the same spot successively, not simultaneously. Taste has a sort of semi-publicity, since people seem to experience similar taste-sensations when they eat similar foods; but the publicity is incomplete, since two people cannot eat actually the same piece of food.

But when we pass on to bodily sensations--headache, toothache, hunger, thirst, the feeling of fatigue, and so on--we get quite away from publicity, into a region where other people can tell us what they feel, but we cannot directly observe their feeling. As a natural result of this state of affairs, it has come to be thought that the public senses give us knowledge of the outer world, while the private senses only give us knowledge as to our own bodies. As regards privacy, all images, of whatever sort, belong with the sensations which only give knowledge of our own bodies, i.e. each is only observable by one observer. This is the reason why images of sight and hearing are more obviously different from sensations of sight and hearing than images of bodily sensations are from bodily sensations; and that is why the argument in favour of images is more conclusive in such cases as sight and hearing than in such cases as inner speech.

The whole distinction of privacy and publicity, however, so long as we confine ourselves to sensations, is one of degree, not of kind. No two people, there is good empirical reason to think, ever have exactly similar sensations related to the same physical object at the same moment; on the other hand, even the most private sensation has correlations which would theoretically enable another observer to infer it.

That no sensation is ever completely public, results from differences of point of view. Two people looking at the same table do not get the same sensation, because of perspective and the way the light falls. They get only correlated sensations. Two people

listening to the same sound do not hear exactly the same thing, because one is nearer to the source of the sound than the other, one has better hearing than the other, and so on. Thus publicity in sensations consists, not in having PRECISELY similar sensations, but in having more or less similar sensations correlated according to ascertainable laws. The sensations which strike us as public are those where the correlated sensations are very similar and the correlations are very easy to discover. But even the most private sensations have correlations with things that others can observe. The dentist does not observe your ache, but he can see the cavity which causes it, and could guess that you are suffering even if you did not tell him. This fact, however, cannot be used, as Watson would apparently wish, to extrude from science observations which are private to one observer, since it is by means of many such observations that correlations are established, e.g. between toothaches and cavities. Privacy, therefore does not by itself make a datum unamenable to scientific treatment. On this point, the argument against introspection must be rejected.

(2) DOES EVERYTHING OBSERVABLE OBEY THE LAWS OF PHYSICS? We come now to the second ground of objection to introspection, namely, that its data do not obey the laws of physics. This, though less emphasized, is, I think, an objection which is really more strongly felt than the objection of privacy. And we obtain a definition of introspection more in harmony with usage if we define it as observation of data not subject to physical laws than if we define it by means of privacy. No one would regard a man as introspective because he was conscious of having a stomach ache. Opponents of introspection do not mean to deny the obvious fact that we can observe bodily sensations which others cannot observe. For example, Knight Dunlap contends that images are really muscular contractions,* and evidently regards our awareness of muscular contractions as not coming under the head of introspection. I think it will be found that the essential characteristic of introspective data, in the sense which now concerns us, has to do with LOCALIZATION: either they are not localized at all, or they are localized, like visual images, in a place already physically occupied by something which would be inconsistent with them if they were regarded as part of the physical world. If you have a visual image of your friend sitting in a chair which in fact is empty, you cannot locate the image in your body, because it is visual, nor (as a physical phenomenon) in the chair, because the chair, as a physical object, is empty. Thus it seems to follow that the physical world does not include all that we are aware of, and that images, which are introspective data, have to be regarded, for the present, as not obeying the laws of physics; this is, I think, one of the chief reasons why an attempt is made to reject them. I shall try to show in Lecture VIII that the purely empirical reasons for accepting images are overwhelming. But we cannot be nearly so certain that they will not ultimately be brought under the laws of physics. Even if this should happen, however, they would still be distinguishable from sensations by their proximate causal laws, as gases remain distinguishable from solids.

* "Psychological Review," 1916, "Thought-Content and Feeling," p. 59. See also ib., 1912, "The Nature of Perceived Relations," where he says: "'Introspection,' divested of its mythological suggestion of the observing of consciousness, is really the observation of bodily sensations (sensibles) and feelings (feelables)"(p. 427 n.).

(3) CAN WE OBSERVE ANYTHING INTRINSICALLY DIFFERENT FROM SENSATIONS? We come now to our third question concerning introspection. It is commonly thought that by looking within we can observe all sorts of things that are radically different from the constituents of the physical world, e.g. thoughts, beliefs, desires, pleasures, pains and emotions. The difference between mind and matter is increased partly by emphasizing these supposed introspective data, partly by the supposition that matter is composed of atoms or electrons or whatever units physics may at the moment prefer. As against this latter supposition, I contend that the ultimate constituents of matter are not atoms or electrons, but sensations, and other things similar to sensations as regards extent and duration. As against the view that introspection reveals a mental world radically different from sensations, I propose to argue that thoughts, beliefs, desires, pleasures, pains and emotions are all built up out of sensations and images alone, and that there is reason to think that images do not differ from sensations in their intrinsic character. We thus effect a mutual rapprochement of mind and matter, and reduce the ultimate data of introspection (in our second sense) to images alone. On this third view of the meaning of introspection, therefore, our decision is wholly against it.

There remain two points to be considered concerning introspection. The first is as to how far it is trustworthy; the second is as to whether, even granting that it reveals no radically different STUFF from that revealed by what might be called external perception, it may not reveal different RELATIONS, and thus acquire almost as much importance as is traditionally assigned to it.

To begin with the trustworthiness of introspection. It is common among certain schools to regard the knowledge of our own mental processes as incomparably more certain than our knowledge of the "external" world; this view is to be found in the British philosophy which descends from Hume, and is present, somewhat veiled, in Kant and his followers. There seems no reason whatever to accept this view. Our spontaneous, unsophisticated beliefs, whether as to ourselves or as to the outer world, are always extremely rash and very liable to error. The acquisition of caution is equally necessary and equally difficult in both directions. Not only are we often un aware of entertaining a belief or desire which exists in us; we are often actually mistaken. The

fallibility of introspection as regards what we desire is made evident by psycho-analysis; its fallibility as to what we know is easily demonstrated. An autobiography, when confronted by a careful editor with documentary evidence, is usually found to be full of obviously inadvertent errors. Any of us confronted by a forgotten letter written some years ago will be astonished to find how much more foolish our opinions were than we had remembered them as being. And as to the analysis of our mental operations--believing, desiring, willing, or what not--introspection unaided gives very little help: it is necessary to construct hypotheses and test them by their consequences, just as we do in physical science. Introspection, therefore, though it is one among our sources of knowledge, is not, in isolation, in any degree more trustworthy than "external" perception.

I come now to our second question: Does introspection give us materials for the knowledge of relations other than those arrived at by reflecting upon external perception? It might be contended that the essence of what is "mental" consists of relations, such as knowing for example, and that our knowledge concerning these essentially mental relations is entirely derived from introspection. If "knowing" were an unanalysable relation, this view would be incontrovertible, since clearly no such relation forms part of the subject matter of physics. But it would seem that "knowing" is really various relations, all of them complex. Therefore, until they have been analysed, our present question must remain unanswered I shall return to it at the end of the present course of lectures.

LECTURE VII. THE DEFINITION OF PERCEPTION

In Lecture V we found reason to think that the ultimate constituents* of the world do not have the characteristics of either mind or matter as ordinarily understood: they are not solid persistent objects moving through space, nor are they fragments of "consciousness." But we found two ways of grouping particulars, one into "things" or "pieces of matter," the other into series of "perspectives," each series being what may be called a "biography." Before we can define either sensations or images, it is necessary to consider this twofold classification in somewhat greater detail, and to derive from it a definition of perception. It should be said that, in so far as the classification assumes the whole world of physics (including its unperceived portions), it contains hypothetical elements. But we will not linger on the grounds for admitting these, which belong to the philosophy of physics rather than of psychology.

* When I speak of "ultimate constituents," I do not mean necessarily such as are theoretically incapable of analysis, but only such as, at present, we can see no means of analysing. I speak of such constituents as "particulars," or as "RELATIVE particulars" when I wish to emphasize the fact that they may be themselves complex.

The physical classification of particulars collects together all those that are aspects of one "thing." Given any one particular, it is found often (we do not say always) that there are a number of other particulars differing from this one in gradually increasing degrees. Those (or some of those) that differ from it only very slightly will be found to differ approximately according to certain laws which may be called, in a generalized sense, the laws of "perspective"; they include the ordinary laws of perspective as a special case. This approximation grows more and more nearly exact as the difference grows less; in technical language, the laws of perspective account for the differences to the first order of small quantities, and other laws are only required to account for second-order differences. That is to say, as the difference diminishes, the part of the difference which is not according to the laws of perspective diminishes much more rapidly, and bears to the total difference a ratio which tends towards zero as both are made smaller and smaller. By this means we can theoretically collect together a number of particulars which may be defined as the "aspects" or "appearances" of one thing at one time. If the laws of perspective were sufficiently known, the connection between different aspects would be expressed in differential equations.

This gives us, so far, only those particulars which constitute one thing at one time. This set of particulars may be called a "momentary thing." To define that series of "momentary things" that constitute the successive states of one thing is a problem involving the laws of dynamics. These give the laws governing the changes of aspects from one time to a slightly later time, with the same sort of differential approximation to exactness as we obtained for spatially neighbouring aspects through the laws of perspective. Thus a momentary thing is a set of particulars, while a thing (which may be identified with the whole history of the thing) is a series of such sets of particulars. The particulars in one set are collected together by the laws of perspective; the successive sets are collected together by the laws of dynamics. This is the view of the world which is appropriate to traditional physics.

The definition of a "momentary thing" involves problems concerning time, since the particulars constituting a momentary thing will not be all simultaneous, but will travel outward from the thing with the velocity of light (in case the thing is in vacuo). There are complications connected with relativity, but for our present purpose they are not vital, and I shall ignore them.

Instead of first collecting together all the particulars constituting a momentary thing, and then forming the series of successive sets, we might have first collected together a series of successive aspects related by the laws of dynamics, and then have formed the set of such series related by the laws of perspective. To illustrate by the case of an actor on the stage: our first plan was to collect together all the aspects which he presents to different spectators at one time, and then to form the series of such sets. Our second plan is first to collect together all the aspects which he presents successively to a given spectator, and then to do the same thing for the other spectators, thus forming a set of series instead of a series of sets. The first plan tells us what he does; the second the impressions he produces. This second way of classifying particulars is one which obviously has more relevance to psychology than the other. It is partly by this second method of classification that we obtain definitions of one "experience" or "biography" or "person." This method of classification is also essential to the definition of sensations and images, as I shall endeavour to prove later on. But we must first amplify the definition of perspectives and biographies.

In our illustration of the actor, we spoke, for the moment, as though each spectator's mind were wholly occupied by the one actor. If this were the case, it might be possible to define the biography of one spectator as a series of successive aspects of the actor related according to the laws of dynamics. But in fact this is not the case. We are at all times during our waking life receiving a variety of impressions, which are aspects of a variety of things. We have to consider what binds together two simultaneous sensations in one person, or, more generally, any two occurrences which forte part of one experience. We might say, adhering to the standpoint of physics, that two aspects of different things belong to the same perspective when they are in the same place. But this would not really help us, since a "place" has not yet been defined. Can we define what is meant by saying that two aspects are "in the same place," without introducing anything beyond the laws of perspective and dynamics?

I do not feel sure whether it is possible to frame such a definition or not; accordingly I shall not assume that it is possible, but shall seek other characteristics by which a perspective or biography may be defined.

When (for example) we see one man and hear another speaking at the same time, what we see and what we hear have a relation which we can perceive, which makes the two together form, in some sense, one experience. It is when this relation exists that two occurrences become associated. Semon's "engram" is formed by all that we experience at one time. He speaks of two parts of this total as having the relation of "Nebeneinander" (M. 118; M.E. 33 ff.), which is reminiscent of Herbart's "Zusammen." I think the relation may be called simply "simultaneity." It might be said that at any moment all sorts of things that are not part of my experience are happening in the world, and that therefore the relation we are seeking to define cannot be merely simultaneity. This, however, would be an error--the sort of error that the theory of relativity avoids. There is not one universal time, except by an elaborate construction; there are only local times, each of which may be taken to be the time within one biography. Accordingly, if I am (say) hearing a sound, the only occurrences that are, in any simple sense, simultaneous with my sensation are events in my private world, i.e. in my biography. We may therefore define the "perspective" to which the sensation in question belongs as the set of particulars that are simultaneous with this sensation. And similarly we may define the "biography" to which the sensation belongs as the set of particulars that are earlier or later than, or simultaneous with, the given sensation. Moreover, the very same definitions can be applied to particulars which are not sensations. They are actually required for the theory of relativity, if we are to give a philosophical explanation of what is meant by "local time" in that theory The relations of simultaneity and succession are known to us in our own experience; they may be analysable, but that does not affect their suitability for defining perspectives and biographies. Such time-relations as can be constructed between events in different biographies are of a different kind: they are not experienced, and are merely logical, being designed to afford convenient ways of stating the correlations between different biographies.

It is not only by time-relations that the parts of one biography are collected together in the case of living beings. In this case there are the mnemic phenomena which constitute the unity of one "experience," and transform mere occurrences into "experiences." I have already dwelt upon the importance of mnemic phenomena for psychology, and shall not enlarge upon them now, beyond observing that they are what transforms a biography (in our technical sense) into a life. It is they that give the continuity of a "person" or a "mind." But there is no reason to suppose that mnemic phenomena are associated with biographies except in the case of animals and plants.

Our two-fold classification of particulars gives rise to the dualism of body and biography in regard to everything in the universe, and not only in regard to living things. This arises as follows. Every particular of the sort considered by physics is a member of two groups (1) The group of particulars constituting the other aspects of the same physical object; (2) The group of particulars that have direct time-relations to the given particular.

Each of these is associated with a place. When I look at a star, my sensation is (1) A member of the group of particulars which is the star, and which is associated with the place where the star is; (2) A member of the group of particulars which is my biography, and which is associated with the place where I am.*

*I have explained elsewhere the manner in which space is constructed on this theory, and in which the position of a perspective is brought into relation with the position of a physical object ("Our Knowledge of the External World," Lecture III, pp. 90, 91).

The result is that every particular of the kind relevant to physics is associated with TWO places; e.g. my sensation of the star is associated with the place where I am and with the place where the star is. This dualism has nothing to do with any "mind" that I may be supposed to possess; it exists in exactly the same sense if I am replaced by a photographic plate. We may call the two places the active and passive places respectively.* Thus in the case of a perception or photograph of a star, the active place is the place where the star is, while the passive place is the place where the percipient or photographic plate is.

* I use these as mere names; I do not want to introduce any notion of "activity."

We can thus, without departing from physics, collect together all the particulars actively at a given place, or all the particulars passively at a given place. In our own case, the one group is our body (or our brain), while the other is our mind, in so far as it consists of perceptions. In the case of the photographic plate, the first group is the plate as dealt with by physics, the second the aspect of the heavens which it photographs. (For the sake of schematic simplicity, I am ignoring various complications connected with time, which require some tedious but perfectly feasible elaborations.) Thus what may be called subjectivity in the point of view is not a distinctive peculiarity of mind: it is present just as much in the photographic plate. And the photographic plate has its biography as well as its "matter." But this biography is an affair of physics, and has none of the peculiar characteristics by which "mental" phenomena are distinguished, with the sole exception of subjectivity.

Adhering, for the moment, to the standpoint of physics, we may define a "perception" of an object as the appearance of the object from a place where there is a brain (or, in lower animals, some suitable nervous structure), with sense-organs and nerves forming part of the intervening medium. Such appearances of objects are distinguished from appearances in other places by certain peculiarities, namely:

(1) They give rise to mnemic phenomena;

(2) They are themselves affected by mnemic phenomena.

That is to say, they may be remembered and associated or influence our habits, or give rise to images, etc., and they are themselves different from what they would have been if our past experience had been different--for example, the effect of a spoken sentence upon the hearer depends upon whether the hearer knows the language or not, which is a question of past experience. It is these two characteristics, both connected with mnemic phenomena, that distinguish perceptions from the appearances of objects in places where there is no living being.

Theoretically, though often not practically, we can, in our perception of an object, separate the part which is due to past experience from the part which proceeds without mnemic influences out of the character of the object. We may define as "sensation" that part which proceeds in this way, while the remainder, which is a mnemic phenomenon, will have to be added to the sensation to make up what is called the "perception." According to this definition, the sensation is a theoretical core in the actual experience; the actual experience is the perception. It is obvious that there are grave difficulties in carrying out these definitions, but we will not linger over them. We have to pass, as soon as we can, from the physical standpoint, which we have been hitherto adopting, to the standpoint of psychology, in which we make more use of introspection in the first of the three senses discussed in the preceding lecture.

But before making the transition, there are two points which must be made clear. First: Everything outside my own personal biography is outside my experience; therefore if anything can be known by me outside my biography, it can only be known in one of two ways:

(1) By inference from things within my biography, or

(2) By some a priori principle independent of experience.

I do not myself believe that anything approaching certainty is to be attained by either of these methods, and therefore whatever lies outside my personal biography must be regarded, theoretically, as hypothesis. The theoretical argument for adopting the

hypothesis is that it simplifies the statement of the laws according to which events happen in our experience. But there is no very good ground for supposing that a simple law is more likely to be true than a complicated law, though there is good ground for assuming a simple law in scientific practice, as a working hypothesis, if it explains the facts as well as another which is less simple. Belief in the existence of things outside my own biography exists antecedently to evidence, and can only be destroyed, if at all, by a long course of philosophic doubt. For purposes of science, it is justified practically by the simplification which it introduces into the laws of physics. But from the standpoint of theoretical logic it must be regarded as a prejudice, not as a well-grounded theory. With this proviso, I propose to continue yielding to the prejudice.

The second point concerns the relating of our point of view to that which regards sensations as caused by stimuli external to the nervous system (or at least to the brain), and distinguishes images as "centrally excited," i.e. due to causes in the brain which cannot be traced back to anything affecting the sense-organs. It is clear that, if our analysis of physical objects has been valid, this way of defining sensations needs reinterpretation. It is also clear that we must be able to find such a new interpretation if our theory is to be admissible.

To make the matter clear, we will take the simplest possible illustration. Consider a certain star, and suppose for the moment that its size is negligible. That is to say, we will regard it as, for practical purposes, a luminous point. Let us further suppose that it exists only for a very brief time, say a second. Then, according to physics, what happens is that a spherical wave of light travels outward from the star through space, just as, when you drop a stone into a stagnant pond, ripples travel outward from the place where the stone hit the water. The wave of light travels with a certain very nearly constant velocity, roughly 300,000 kilometres per second. This velocity may be ascertained by sending a flash of light to a mirror, and observing how long it takes before the reflected flash reaches you, just as the velocity of sound may be ascertained by means of an echo.

What it is that happens when a wave of light reaches a given place we cannot tell, except in the sole case when the place in question is a brain connected with an eye which is turned in the right direction. In this one very special case we know what happens: we have the sensation called "seeing the star." In all other cases, though we know (more or less hypothetically) some of the correlations and abstract properties of the appearance of the star, we do not know the appearance itself. Now you may, for the sake of illustration, compare the different appearances of the star to the conjugation of a Greek verb, except that the number of its parts is really infinite, and not only apparently so to the despairing schoolboy. In vacuo, the parts are regular, and can be derived from the (imaginary) root according to the laws of grammar, i.e. of perspective. The star being situated in empty space, it may be defined, for purposes of physics, as consisting of all those appearances which it presents in vacuo, together with those which, according to the laws of perspective, it would present elsewhere if its appearances elsewhere were regular. This is merely the adaptation of the definition of matter which I gave in an earlier lecture. The appearance of a star at a certain place, if it is regular, does not require any cause or explanation beyond the existence of the star. Every regular appearance is an actual member of the system which is the star, and its causation is entirely internal to that system. We may express this by saying that a regular appearance is due to the star alone, and is actually part of the star, in the sense in which a man is part of the human race.

But presently the light of the star reaches our atmosphere. It begins to be refracted, and dimmed by mist, and its velocity is slightly diminished. At last it reaches a human eye, where a complicated process takes place, ending in a sensation which gives us our grounds for believing in all that has gone before. Now, the irregular appearances of the star are not, strictly speaking, members of the system which is the star, according to our definition of matter. The irregular appearances, however, are not merely irregular: they proceed according to laws which can be stated in terms of the matter through which the light has passed on its way. The sources of an irregular appearance are therefore twofold:

(1) The object which is appearing irregularly;

2) The intervening medium.

It should be observed that, while the conception of a regular appearance is perfectly precise, the conception of an irregular appearance is one capable of any degree of vagueness. When the distorting influence of the medium is sufficiently great, the resulting particular can no longer be regarded as an appearance of an object, but must be treated on its own account. This happens especially when the particular in question cannot be traced back to one object, but is a blend of two or more. This case is normal in perception: we see as one what the microscope or telescope reveals to be many different objects. The notion of perception is therefore not a precise one: we perceive things more or less, but always with a very considerable amount of vagueness and confusion.

In considering irregular appearances, there are certain very natural mistakes which must be avoided. In order that a particular may count as an irregular appearance of a certain object, it is not necessary that it should bear any resemblance to the regular appearances as regard its intrinsic qualities. All that is necessary is that it should be derivable from the regular appearances by the laws which express the distorting influence of the medium. When it is so derivable, the particular in question may be regarded as caused by the regular appearances, and therefore by the object itself, together with the modifications resulting from the medium. In other cases, the particular in question may, in the same sense, be regarded as caused by several objects together with the medium; in this case, it may be called a confused appearance of several objects. If it happens to be in a brain, it may be called a confused perception of these objects. All actual perception is confused to a greater or less extent.

We can now interpret in terms of our theory the distinction between those mental occurrences which are said to have an external stimulus, and those which are said to be "centrally excited," i.e. to have no stimulus external to the brain. When a mental occurrence can be regarded as an appearance of an object external to the brain, however irregular, or even as a confused appearance of several such objects, then we may regard it as having for its stimulus the object or objects in question, or their appearances at the sense-organ concerned. When, on the other hand, a mental occurrence has not sufficient connection with objects external to the brain to be regarded as an appearance of such objects, then its physical causation (if any) will have to be sought in the brain. In the former case it can be called a perception; in the latter it cannot be so called. But the distinction is one of degree, not of kind. Until this is realized, no satisfactory theory of perception, sensation, or imagination is possible.

LECTURE VIII. SENSATIONS AND IMAGES

The dualism of mind and matter, if we have been right so far, cannot be allowed as metaphysically valid. Nevertheless, we seem to find a certain dualism, perhaps not ultimate, within the world as we observe it. The dualism is not primarily as to the stuff of the world, but as to causal laws. On this subject we may again quote William James. He points out that when, as we say, we merely "imagine" things, there are no such effects as would ensue if the things were what we call "real." He takes the case of imagining a fire.

"I make for myself an experience of blazing fire; I place it near my body; but it does not warm me in the least. I lay a stick upon it and the stick either burns or remains green, as I please. I call up water, and pour it on the fire, and absolutely no difference ensues. I account for all such facts by calling this whole train of experiences unreal, a mental train. Mental fire is what won't burn real sticks; mental water is what won't necessarily (though of course it may) put out even a mental fire.... With 'real' objects, on the contrary, consequences always accrue; and thus the real experiences get sifted from the mental ones, the things from our thoughts of them, fanciful or true, and precipitated together as the stable part of the whole experience--chaos, under the name of the physical world."*

* "Essays in Radical Empiricism," pp. 32-3.

In this passage James speaks, by mere inadvertence, as though the phenomena which he is describing as "mental" had NO effects. This is, of course, not the case: they have their effects, just as much as physical phenomena do, but their effects follow different laws. For example, dreams, as Freud has shown, are just as much subject to laws as are the motions of the planets. But the laws are different: in a dream you may be transported from one place to another in a moment, or one person may turn into another under your eyes. Such differences compel you to distinguish the world of dreams from the physical world.

If the two sorts of causal laws could be sharply distinguished, we could call an occurrence "physical" when it obeys causal laws appropriate to the physical world, and "mental" when it obeys causal laws appropriate to the mental world. Since the mental world and the physical world interact, there would be a boundary between the two: there would be events which would have physical causes and mental effects, while there would be others which would have mental causes and physical effects. Those that have physical causes and mental effects we should define as "sensations." Those that have mental causes and physical effects might perhaps be identified with what we call voluntary movements; but they do not concern us at present.

These definitions would have all the precision that could be desired if the distinction between physical and psychological causation were clear and sharp. As a matter of fact, however, this distinction is, as yet, by no means sharp. It is possible that, with fuller knowledge, it will be found to be no more ultimate than the distinction between the laws of gases and the laws of rigid bodies. It also suffers from the fact that an event may be an effect of several causes according to several causal laws we cannot, in general, point to anything unique as THE cause of such-and-such an event. And finally it is by no means certain that the peculiar causal laws which govern mental events are not really physiological. The law of habit, which is one of the most distinctive, may be fully

explicable in terms of the peculiarities of nervous tissue, and these peculiarities, in turn, may be explicable by the laws of physics. It seems, therefore, that we are driven to a different kind of definition. It is for this reason that it was necessary to develop the definition of perception. With this definition, we can define a sensation as the non-mnemic elements in a perception.

When, following our definition, we try to decide what elements in our experience are of the nature of sensations, we find more difficulty than might have been expected. Prima facie, everything is sensation that comes to us through the senses: the sights we see, the sounds we hear, the smells we smell, and so on; also such things as headache or the feeling of muscular strain. But in actual fact so much interpretation, so much of habitual correlation, is mixed with all such experiences, that the core of pure sensation is only to be extracted by careful investigation. To take a simple illustration: if you go to the theatre in your own country, you seem to hear equally well in the stalls or the dress circle; in either case you think you miss nothing. But if you go in a foreign country where you have a fair knowledge of the language, you will seem to have grown partially deaf, and you will find it necessary to be much nearer the stage than you would need to be in your own country. The reason is that, in hearing our own language spoken, we quickly and unconsciously fill out what we really hear with inferences to what the man must be saying, and we never realize that we have not heard the words we have merely inferred. In a foreign language, these inferences are more difficult, and we are more dependent upon actual sensation. If we found ourselves in a foreign world, where tables looked like cushions and cushions like tables, we should similarly discover how much of what we think we see is really inference. Every fairly familiar sensation is to us a sign of the things that usually go with it, and many of these things will seem to form part of the sensation. I remember in the early days of motor-cars being with a friend when a tyre burst with a loud report. He thought it was a pistol, and supported his opinion by maintaining that he had seen the flash. But of course there had been no flash. Nowadays no one sees a flash when a tyre bursts.

In order, therefore, to arrive at what really is sensation in an occurrence which, at first sight, seems to contain nothing else, we have to pare away all that is due to habit or expectation or interpretation. This is a matter for the psychologist, and by no means an easy matter. For our purposes, it is not important to determine what exactly is the sensational core in any case; it is only important to notice that there certainly is a sensational core, since habit, expectation and interpretation are diversely aroused on diverse occasions, and the diversity is clearly due to differences in what is presented to the senses. When you open your newspaper in the morning, the actual sensations of seeing the print form a very minute part of what goes on in you, but they are the starting-point of all the rest, and it is through them that the newspaper is a means of information or mis-information. Thus, although it may be difficult to determine what exactly is sensation in any given experience, it is clear that there is sensation, unless, like Leibniz, we deny all action of the outer world upon us.

Sensations are obviously the source of our knowledge of the world, including our own body. It might seem natural to regard a sensation as itself a cognition, and until lately I did so regard it. When, say, I see a person I know coming towards me in the street, it SEEMS as though the mere seeing were knowledge. It is of course undeniable that knowledge comes THROUGH the seeing, but I think it is a mistake to regard the mere seeing itself as knowledge. If we are so to regard it, we must distinguish the seeing from what is seen: we must say that, when we see a patch of colour of a certain shape, the patch of colour is one thing and our seeing of it is another. This view, however, demands the admission of the subject, or act, in the sense discussed in our first lecture. If there is a subject, it can have a relation to the patch of colour, namely, the sort of relation which we might call awareness. In that case the sensation, as a mental event, will consist of awareness of the colour, while the colour itself will remain wholly physical, and may be called the sense-datum, to distinguish it from the sensation. The subject, however, appears to be a logical fiction, like mathematical points and instants. It is introduced, not because observation reveals it, but because it is linguistically convenient and apparently demanded by grammar. Nominal entities of this sort may or may not exist, but there is no good ground for assuming that they do. The functions that they appear to perform can always be performed by classes or series or other logical constructions, consisting of less dubious entities. If we are to avoid a perfectly gratuitous assumption, we must dispense with the subject as one of the actual ingredients of the world. But when we do this, the possibility of distinguishing the sensation from the sense-datum vanishes; at least I see no way of preserving the distinction. Accordingly the sensation that we have when we see a patch of colour simply is that patch of colour, an actual constituent of the physical world, and part of what physics is concerned with. A patch of colour is certainly not knowledge, and therefore we cannot say that pure sensation is cognitive. Through its psychological effects, it is the cause of cognitions, partly by being itself a sign of things that are correlated with it, as e.g. sensations of sight and touch are correlated, and partly by giving rise to images and memories after the sensation is faded. But in itself the pure sensation is not cognitive.

In the first lecture we considered the view of Brentano, that "we may define psychical phenomena by saying that they are phenomena which intentionally contain an object." We saw reasons to reject this view in general; we are now concerned to show

that it must be rejected in the particular case of sensations. The kind of argument which formerly made me accept Brentano's view in this case was exceedingly simple. When I see a patch of colour, it seemed to me that the colour is not psychical, but physical, while my seeing is not physical, but psychical. Hence I concluded that the colour is something other than my seeing of the colour. This argument, to me historically, was directed against idealism: the emphatic part of it was the assertion that the colour is physical, not psychical. I shall not trouble you now with the grounds for holding as against Berkeley that the patch of colour is physical; I have set them forth before, and I see no reason to modify them. But it does not follow that the patch of colour is not also psychical, unless we assume that the physical and the psychical cannot overlap, which I no longer consider a valid assumption. If we admit--as I think we should--that the patch of colour may be both physical and psychical, the reason for distinguishing the sense-datum from the sensation disappears, and we may say that the patch of colour and our sensation in seeing it are identical.

This is the view of William James, Professor Dewey, and the American realists. Perceptions, says Professor Dewey, are not per se cases of knowledge, but simply natural events with no more knowledge status than (say) a shower. "Let them [the realists] try the experiment of conceiving perceptions as pure natural events, not cases of awareness or apprehension, and they will be surprised to see how little they miss."* I think he is right in this, except in supposing that the realists will be surprised. Many of them already hold the view he is advocating, and others are very sympathetic to it. At any rate, it is the view which I shall adopt in these lectures.

* Dewey, "Essays in Experimental Logic," pp. 253, 262.

The stuff of the world, so far as we have experience of it, consists, on the view that I am advocating, of innumerable transient particulars such as occur in seeing, hearing, etc., together with images more or less resembling these, of which I shall speak shortly. If physics is true, there are, besides the particulars that we experience, others, probably equally (or almost equally) transient, which make up that part of the material world that does not come into the sort of contact with a living body that is required to turn it into a sensation. But this topic belongs to the philosophy of physics, and need not concern us in our present inquiry.

Sensations are what is common to the mental and physical worlds; they may be defined as the intersection of mind and matter. This is by no means a new view; it is advocated, not only by the American authors I have mentioned, but by Mach in his Analysis of Sensations, which was published in 1886. The essence of sensation, according to the view I am advocating, is its independence of past experience. It is a core in our actual experiences, never existing in isolation except possibly in very young infants. It is not itself knowledge, but it supplies the data for our knowledge of the physical world, including our own bodies.

There are some who believe that our mental life is built up out of sensations alone. This may be true; but in any case I think the only ingredients required in addition to sensations are images. What images are, and how they are to be defined, we have now to inquire.

The distinction between images and sensations might seem at first sight by no means difficult. When we shut our eyes and call up pictures of familiar scenes, we usually have no difficulty, so long as we remain awake, in discriminating between what we are imagining and what is really seen. If we imagine some piece of music that we know, we can go through it in our mind from beginning to end without any discoverable tendency to suppose that we are really hearing it. But although such cases are so clear that no confusion seems possible, there are many others that are far more difficult, and the definition of images is by no means an easy problem.

To begin with: we do not always know whether what we are experiencing is a sensation or an image. The things we see in dreams when our eyes are shut must count as images, yet while we are dreaming they seem like sensations. Hallucinations often begin as persistent images, and only gradually acquire that influence over belief that makes the patient regard them as sensations. When we are listening for a faint sound--the striking of a distant clock, or a horse's hoofs on the road--we think we hear it many times before we really do, because expectation brings us the image, and we mistake it for sensation. The distinction between images and sensations is, therefore, by no means always obvious to inspection.*

* On the distinction between images and sensation, cf. Semon, "Die mnemischen Empfindungen," pp. 19-20.

We may consider three different ways in which it has been sought to distinguish images from sensations, namely:

(1) By the less degree of vividness in images;

(2) By our absence of belief in their "physical reality";

(3) By the fact that their causes and effects are different from those of sensations.

I believe the third of these to be the only universally applicable criterion. The other two are applicable in very many cases, but cannot be used for purposes of definition because they are liable to exceptions. Nevertheless, they both deserve to be carefully considered.

(1) Hume, who gives the names "impressions" and "ideas" to what may, for present purposes, be identified with our "sensations" and "images," speaks of impressions as "those perceptions which enter with most force and violence" while he defines ideas as "the faint images of these (i.e. of impressions) in thinking and reasoning." His immediately following observations, however, show the inadequacy of his criteria of "force" and "faintness." He says:

"I believe it will not be very necessary to employ many words in explaining this distinction. Every one of himself will readily perceive the difference betwixt feeling and thinking. The common degrees of these are easily distinguished, though it is not impossible but in particular instances they may very nearly approach to each other. Thus in sleep, in a fever, in madness, or in any very violent emotions of soul, our ideas may approach to our impressions; as, on the other hand, it sometimes happens, that our impressions are so faint and low that we cannot distinguish them from our ideas. But notwithstanding this near resemblance in a few instances, they are in general so very different, that no one can make a scruple to rank them under distinct heads, and assign to each a peculiar name to mark the difference" ("Treatise of Human Nature," Part I, Section I).

I think Hume is right in holding that they should be ranked under distinct heads, with a peculiar name for each. But by his own confession in the above passage, his criterion for distinguishing them is not always adequate. A definition is not sound if it only applies in cases where the difference is glaring: the essential purpose of a definition is to provide a mark which is applicable even in marginal cases--except, of course, when we are dealing with a conception, like, e.g. baldness, which is one of degree and has no sharp boundaries. But so far we have seen no reason to think that the difference between sensations and images is only one of degree.

Professor Stout, in his "Manual of Psychology," after discussing various ways of distinguishing sensations and images, arrives at a view which is a modification of Hume's. He says (I quote from the second edition):

"Our conclusion is that at bottom the distinction between image and percept, as respectively faint and vivid states, is based on a difference of quality. The percept has an aggressiveness which does not belong to the image. It strikes the mind with varying degrees of force or liveliness according to the varying intensity of the stimulus. This degree of force or liveliness is part of what we ordinarily mean by the intensity of a sensation. But this constituent of the intensity of sensations is absent in mental imagery"(p. 419).

This view allows for the fact that sensations may reach any degree of faintness--e.g. in the case of a just visible star or a just audible sound--without becoming images, and that therefore mere faintness cannot be the characteristic mark of images. After explaining the sudden shock of a flash of lightning or a steam-whistle, Stout says that "no mere image ever does strike the mind in this manner"(p. 417). But I believe that this criterion fails in very much the same instances as those in which Hume's criterion fails in its original form. Macbeth speaks of--

that suggestion Whose horrid image doth unfix my hair And make my seated heart knock at my ribs Against the use of nature.

The whistle of a steam-engine could hardly have a stronger effect than this. A very intense emotion will often bring with it--especially where some future action or some undecided issue is involved--powerful compelling images which may determine the whole course of life, sweeping aside all contrary solicitations to the will by their capacity for exclusively possessing the mind. And in all cases where images, originally recognized as such, gradually pass into hallucinations, there must be just that "force or liveliness" which is supposed to be always absent from images. The cases of dreams and fever-delirium are as hard to adjust to Professor Stout's modified criterion as to Hume's. I conclude therefore that the test of liveliness, however applicable in ordinary instances, cannot be used to define the differences between sensations and images.

(2) We might attempt to distinguish images from sensations by our absence of belief in the "physical reality" of images. When we are aware that what we are experiencing is an image, we do not give it the kind of belief that we should give to a sensation: we do not think that it has the same power of producing knowledge of the "external world." Images are "imaginary"; in SOME sense they are "unreal." But this difference is hard to analyse or state correctly. What we call the "unreality" of images requires interpretation it cannot mean what would be expressed by saying "there's no such thing." Images are just as truly part of the actual world as sensations are. All that we really mean by calling an image "unreal" is that it does not have the concomitants which it would have if

it were a sensation. When we call up a visual image of a chair, we do not attempt to sit in it, because we know that, like Macbeth's dagger, it is not "sensible to feeling as to sight"--i.e. it does not have the correlations with tactile sensations which it would have if it were a visual sensation and not merely a visual image. But this means that the so-called "unreality" of images consists merely in their not obeying the laws of physics, and thus brings us back to the causal distinction between images and sensations.

This view is confirmed by the fact that we only feel images to be "unreal" when we already know them to be images. Images cannot be defined by the FEELING of unreality, because when we falsely believe an image to be a sensation, as in the case of dreams, it FEELS just as real as if it were a sensation. Our feeling of unreality results from our having already realized that we are dealing with an image, and cannot therefore be the definition of what we mean by an image. As soon as an image begins to deceive us as to its status, it also deceives us as to its correlations, which are what we mean by its "reality."
